Taketomi Island in Okinawa Prefecture is one of the outer islands near the southwest border of Japan. Its islanders have suffered two-fold inequalities for years. The area of Okinawa Prefecture was a small independent nation until 1879. This nation was defeated by Japan and subsequently annexed by the national government. Afterward, mainland Japanese, especially uneducated ones, began to regard these islanders with contempt as defeated people. Another source of inequality was the location of the island, which was peripheral, even during its era as a small nation; the people of this small nation considered Taketomi islanders as non-cultured people. This tendency continued even after Taketomi's incorporation into Japan.

However, the "historic environment" that Taketomi islanders have preserved and created through an active movement in the last 30 years has changed their dismal situation dramatically. Preserving historic sites did not affect the situational changes per se, but it elicited widespread discussion of common shared values and examination of the daily lives of islanders. As such, Taketomi residents have created peculiar historic environments, which attract many visitors and tourists.

#### *Critics of Time in Modernity By Yusuke Maki*

This presentation thematizes the series of works of Yusuke Maki, which is the pen name of Munesuke Mita. He is one of the most prominent sociologists in Japan. In this presentation, I would like to focus on the works of Yusuke Maki, and to define their significance and limitations.

For the abovementioned purpose, first of all, I will try to consider Yusuke Maki's series of works as a unified process in which his project of critics about "time in modernity (characterized as irreversibility and linearity; Newton's absolute time)" has been gradually deepening. Maki's critics of his initial works were based on Marxism, or strictly speaking, on theory of reification. For example, in *Gendaisyokai-no-Sonnritsu-Kouzou* (*Existential Structures of Contemporary Society*) (1977), Maki carefully examined Marx, and in *Ninngen-Kaihou-no-Riron-no-Tameni* (*Toward The Theory of Human Liberation*) (1971), he criticized the difficulties of an-

alytical reason on the basis of theory of reification. However, after that, the color of Marxism had gradually faded away from his works and he employed the perspective called "comparative sociology". As a result, it seems to us that his critics of time in modernity became more and more consistent. It is simply illustrated in the fact that he thoroughly relativizes even the Marxism view of time, depended on which his initial works were written, which is obvious in his *Jikan-no-Hikaku-Syakaigaku* (*Comparative Sociology of Time*) (1981), which is a fruition of his inquiry from the perspective of comparative sociology.

Furthermore, I would like to examine the terminal point of Maki's inquiry. In doing so, I will employ the view of time of "vertically accumulating time", which has been developed in phenomenological perspectives. This process aims to articulate the significance and limitations of Maki's works, and to find a way of developing his insight.

#### *The Network Dynamics of Status Construction: An Agent-Oriented Modeling Approach*

Social Status is broadly understood as the position in a social hierarchy that results from accumulated acts of deference. In this paper we conceive the construction process of status as based on individual acts of deference driven by dynamic network dependencies. We suggest that status hierarchies are produced – and reinforced – by the accumulation of acts of deference all happening at the dyadic level. We adopt Stochastic Actor-Oriented Models (SAOM) to examine the *micro-foundation* of status ordering by looking at dyadic relations of deference and by linking mechanisms of status emergence and reinforcement to testable dynamic network patterns. To this purpose we develop and test a model of status allocation that accounts for the unfolding of dyadic acts of deference as well as the resulting status dynamics in a group of individuals. We provide empirical estimates for our model using a longitudinal dataset that we have collected on a cohort of students enrolled in a professional management degree. We report empirical evidence that status hierarchies can be conceived as partially ordered sets structured by a tendency toward asymmetry and transitivity as well as perpetuated by status competition among the higher-ranking actors. We also confirm the results of previous work showing that both a socially endogenous inference mechanism (underlying the effect of an actors' previous deference position on their future deference rewards) and a socially endogenous investment mechanism (underlying the feedback loop between status and performance), contribute to the self-reproducing and self-reinforcing character of status hierarchies.

**TORREJON, MARIA-JOSE\*** (University of British Columbia, [mjtorrejon@gmail.com](mailto:mjtorrejon@gmail.com))

#### *Navigating the Institutional Context in Late Life: The Function of Social Capital in Chilean Older People*

Some authors indicate that we should understand the macro processes affecting the social relations of older people in the context of the 'accentuated modernization', which makes reference to the loss of influence of traditional social structures and communities in individuals' lives and the greater responsibility that the individual has in shaping her or his life course. This description is in line with what has been defined as 'individualization' of modern society. In an individualized society individuals must constantly make decisions to conduct their biographies, which are no more—or at least not only—constrained by traditional and unquestionable assumptions and values. However, these biographies do not completely rest in free decisions because individuals can and must choose within the guidelines and norms imposed by the state, the market, law, education, etc. in order to manage risk. Some variants of this theory have mentioned the importance of personal ties in developing countries since they operate as key resources to be re-embedded into society and even as a central mechanism for social inclusion. Taking some elements of the New Institutional Analysis to analyze the current Chilean social policy on aging and in-depth interviews with Chilean people of 60-75 years old living in the city of Santiago, I examine how older people use their personal relationships to navigate their institutional context. I investigate whether the social policy on aging is related to the needs and resources of the older population and how individuals solve the gaps using the social capital embedded within their personal networks. This social capital can be used, for instance, to access to different types of support that are not provided by the policy instruments and to obtain help and information to negotiate with the public organizations.

### RC06-131.3

**TORREJON, MARIA-JOSE\*** (University of British Columbia, [mjtorrejon@gmail.com](mailto:mjtorrejon@gmail.com))

### *Social Capital in Late Life: The Case of Chilean Older People*

Chile is experiencing an accelerated process of population aging. People aged 60 and older currently constitute 13% of the population. This proportion is projected to reach 28% in 2050. In this context, questions have raised about the quantity and quality of older people's social capital due to the decrease in family size and changes at the value level related to more individualized societies. The theory of individualization proposed by Beck and Beck-Gernsheim states that in today's society people are less bounded by traditional forms of representation and control. At the level of personal ties, this means that family members would relate to and help one another because they 'want' and not because they 'must' do so. However, the latter does not necessarily implies negative consequences on older people's social capital, but rather it may produce a change of scenario. That personal ties can be developed based on voluntariness also means that older people can invest in relationships outside their nuclear family. From this stance, the practical and emotional help required by older people could be also sought in friendship relations and weak ties. Drawing on in-depth interviews with people between 60 and 75 years old living in the city of Santiago and secondary analysis of focus groups I aim to investigate whether the nuclear family is still the predominant source of social capital or, instead, older people are replacing and/or complementing family resources with other types of ties (e.g. friend, neighbors and/or state).

### *Gender and Education: Differences and Similarities in the Trajectories of Young Men and Women*

The preliminary results of a longitudinal study, which has surveyed the same individuals at 13, 17 and 21 years old, indicate that there are convergences and divergences in the practices and attitudes of young women and men. Young women do better in school but, at the age of 13, they also report more depressive symptoms. On the other hand, at the age of 17 and 21, the trajectories of youngsters of both sexes are reshaped showing differentiations in some respects and similarities in others. Accordingly, young women's initial educational advantages may not have promising effects, culminating, sometimes, in early interruptions or corresponding, afterwards, to precarious experiences in the labour market.

Drawing on a theoretical framework which combines an intersectional gender approach with sociology of education, this presentation seeks to explain youngsters' trajectories and the differences and similarities found. In order to do so, we will analyze the ways in which the trajectories of young people are influenced by factors, such as social background and class, parenting styles, networks of sociability, leisure-time, subjective well-being and physical and mental health, body image and risk behaviours. These relationships will be analyzed with descriptive and multivariate analysis.

EPITeen, the study on which this presentation is based, was launched in 2003-2004 by the Institute of Public Health of the University of Oporto (ISPUP) and collects data from individuals who were born in 1990, in a total of 2 943 research participants. When the study began, respondents were 13 years old and attended the public and private schools in Oporto, which is the second largest city in Portugal. With the collaboration of the Institute for Social and Political Science of the University of Lisbon (ISCSP), a new wave will be carried out in 2014 when the youngsters will be at the age of 24.

### *Cash for Care Schemes and Older Migrants: Perspectives from Needs Assessment Practice*

The ethnic and cultural diversity of older care recipients around Europe has increased over the past decade posing new challenges to the elderly care sector. In some parts of Europe, requests for cash for care schemes have increased as a result of the fact that the elderly care services that are offered by different welfare states are believed to be ill-equipped to meet the needs that this diversity creates. In this presentation we will explore how care managers who perform needs assessments for elderly care handle increased requests for cash for care schemes from migrant families. This presentation will address how they experience these requests and the challenges that they face when handling them within the course of needs assessment regulations in Sweden. The data is comprised of 12 focus group interviews with 60 needs assessors from seven municipalities in Sweden and 202 case documents (101 concerning cases with older migrants and 101 with older Swedish-born). The material has been analyzed through thematic analysis (focus groups) and content analysis (case documents). The findings show that assessing the needs of older migrants is challenging especially when one is dealing with late-in-life migrants' requests for cash for care arrangements. The fact that these migrants' care preferences are very different from the individualist care understandings that lay at the core of needs assessment regulation in Sweden poses numerous challenges to needs assessment practice. The challenges are augmented by the fact that these migrants' younger relatives lack a foothold in the labor market and regard the formalization of their informal caregiving duties through these schemes as a potential source of income. The presentation will problematize the taken for granted assumptions about care that lay at the core of Swedish need assessment practice and the understandings of filial obligation from which care managers depart.

### *New Perspectives of Economic and Institutional Sociology. Local Agri-Food Systems and Territorial Development*

This paper adds to the debate of Marshallian economic-industrial sociology and the reintroduction of Becattini's Industrial Districts theory. It aims to situate - within the context of territorial development - a Local Agri-Food Systems (LAFS) perspective, which highlights the profound relationship between food and territory, as well as the importance of collective action, rural agro-industry, local know how, the environment and food quality, among other issues.

The paper is divided in three parts: the first part addresses the theoretical-methodological development from a sociological perspective, but one that incorporates other disciplines such as new human geography, anthropology, complexity sciences and agronomy, all of which enable and form part of a LAFS perspective. The second part of the paper contrasts case studies from Mexico and other Latin America countries that were undertaken as part of research project funded by the Mexican National Council of Science and Technology (Conacyt), the National Autonomous University of Mexico (UNAM) and the European Union (EU). The final part of paper concludes that LAFS can potentially contribute solid arguments to implement public policies for territorial development that would enable rural peasant families to earn higher incomes and help overcome rural poverty.

### *Resistance to New Technologies: The Information and Communication Technologies Case in Spain*

This paper summarises a study that analyses the surveys of different data bank containing data about social representations on science and technology in Spain, and specifically on Information and Communication Technologies (ICTs). Based on these previous studies we conclude that, contrary to traditional theories of a uniform, positive image, there is significant ambivalence towards technoscience among citizens in advanced contemporary societies. This theory was confirmed both for social representations of technoscience in general and for ICTs in particular. On these results, our paper will show the precise mechanism that these technophobic or ambivalent social representations intervene in processes of individual appropriation of Information and Communication Technologies and its implications for the creation of the digital divide. Without denying the relevance of sociodemographic and psychological usual variables, the paper will highlight the importance of such social images about the technoscience and ICTs in the genesis and development of digital divide. In addition to the surveys of different

data bank, we will also provide empirical evidence from a study about Spanish citizenship which have used both qualitative methods (with in-depth interviews and focus groups) and quantitative methods (using a representative survey). Finally, we will consider the consequences of this new explanatory approach to the use of ICT and the digital divide has for the processes of social exclusion in contemporary information and knowledge societies.

#### *Trust As Indicator of Social Consciousness in Russia*

Social consciousness has always included many indicators: results of activity, needs, motives, values, interests and other indicatives. Among them the significant place takes up the trust, which always reflects one of the main forms of comprehending existing social relations, and at the same time, level of knowledge, awareness and evaluation of the ongoing changes in the socioeconomics.

Role and place of trust in this sphere were studied in process of All-Russian comparative research of 1989 and 2012. The main goal was the comparison between the situation in the last period of Soviet time, when the market relations were beginning, and situation in Russia after 25-year realization of these reforms.

Data of this study showed, that there are the different tendencies in the development of trust. In connection with the division of levels of social organizations - All-Russian, regional, enterprises and personal - the researchers tried to analyze the specific features of trust on these levels.

This study showed that on the level of Russian society the trust to political, social, economic institutes to a great extent decreased. On the regional level the trust has the contradictory character in depending in situation in region: the reach or poor, agricultural or industrial, political activity and ethnical specifics.

Trust in enterprises depends from the forms of property - state or private, municipal or public company.

On the personal level the trust has increased and played the leading role among the kinds of trust existed all over the places.

#### *Party Membership in Turkey and Members' Participation during Local Elections in 2014*

##### **Party membership in Turkey and members' participation during local elections in 2014**

Scholars agree that since the 1980's there is a widespread disengagement from parties and party politics especially in many long-established European democracies, both at the electorate and voluntary party members' level. They also agree that decline both in terms of numbers and members' activities depends on different socio-economic and political factors explained by supply-side and demand led explanations.

This study is intended to present an overview of party membership levels and of participation in party activities during the local elections which will take part in March 2014 in Turkey. In this presentation we will evaluate "Party and membership decline" thesis and observe the current situation in Turkish case since 1980's. We will compare the number of party membership by using the official data which are registered in the Supreme Court of the Republican Attorney Generalship and observe the fluctuations or decline in each 5 years period between 1983-2013.

According to the scholars, there is a decline not only in numbers of the members, but also in members' levels of activism in long established democracies. In order to see and understand the current levels of activism of the members, we will conduct a survey with different party members during local elections period in Izmir, which is the third biggest city with its population. We also plan to discuss the results of the survey and see whether there is a decrease in member's level of

activism. Some issues guide our survey: Firstly socio-economic and demographic characteristics members have. Secondly why citizens enroll in parties and the third how they participate in party activities and to what extent they use new information technologies as participation methods during local elections in 2014.

#### *Screening the 2001 G8 Summit in Genoa: An Italian Cultural Trauma*

The paper is based on some results of a research project started in 2012 on the attack of the Diaz school in Genoa by the Italian police during the 2001 G8 summit. The school building was the temporary headquarter of the Genoa Social Forum. On July 21, 2001, shortly before midnight, mobile divisions of the State Police attacked the buildings. The police indiscriminately attacked the building's occupants, resulting in the arrest of 93 protesters. During the raid the police violently attacked those who were in the school, injuring 82 people out of a total of 93 arrested. 63 arrested were taken to hospital and 19 were taken to the police station of Bolzaneto, where they were tortured. According to Amnesty International these events represent: "The most serious suspension of democratic rights in a Western country since the Second World War". The raid resulted in the trial of 125 policemen. However, none of the accused police officers were punished, due to delays in the investigation and incompleteness of Italian laws under which torture is not recognized. The design of the research includes 50 depth interviews to the victims, to the victims' relatives, to the journalists, to Genoa citizens and to policemen of the State Police of Genoa. Moreover, it includes an analysis of all the cultural and media artifacts related to this case. In this paper the focus will be especially on the relation between cinema and the representation of this event in the national public discourse.

"Diaz. Don't clean up this blood", a 2012 Italian-French-Romania film directed by Daniele Vicari, focuses on the attack of the Diaz school and on what happened in Bolzaneto. It is based on the testimonies and reports from judicial processes. The paper analyses how the film reconstructs the event.

#### *Old Managerialism and New Professionalism? Social Professions Vs. Healthcare Professions*

The aim of the paper is to discuss the tensions between the managerial and the professional logics, both at the theoretical and the empirical level. Original evidence comes from two qualitative studies (interviews) carried out in the Turin area: one on different occupations engaged in social work, and the other one on professionals engaged in healthcare-social team work. We move from a discussion of the nature of the managerial logic, seen as a complex puzzle stemming both from classical organizational theory (Scientific Management) and from the new institutional economics (Public Choice). Our findings suggest that in social work an "old" version of managerialism has been implemented, in which the managerial logic is reduced to hierarchical control. We then analyze professionals' strategies adopted to cope with managerialism, as they result from ours and other studies on social workers and healthcare professionals. One strategy (cooperation) stands as a non-zero sum game in which professionals act proactively to include managerial tasks within their activities and shows that the managerial and the professional logics can be reconciled, though social workers seem to be less eager and/or less capable to adopt it than healthcare professionals. The significance of this for a new concept of professionalism is finally discussed.

### *Medical tourism as national economic development in Asia: comparative case study of Singapore and Thailand, versus Japan and Taiwan*

Medical tourism development has been put on the national economic development agenda by a number of Asian countries in the last fifteen years. Beginning with the forerunners of Singapore, Thailand and Malaysia, subsequently other countries, notably India, the Philippines and South Korea, joined the fray. Most recently, Japan and Taiwan also declared that they would promote medical tourism. The governments of these countries seem to share a common policy goal in developing medical tourism, i.e. to increase foreign exchange earnings, expand medical and other ancillary services, and generate employment opportunities. However, each country has developed different strategies in targeting specific niches in the international healthcare markets. In this paper we compare state strategies and market formation of two "early wave" countries, namely Thailand and Singapore, with the two most recent "later wave" countries, Japan and Taiwan. In their marketing strategies, Thailand and Singapore target diverse countries across the globe. In contrast, Japan and Taiwan have focused their strategies to solely target the emerging market in China. We explore the roots of these differences in the character of the states and the nature of domestic health policy. While Thailand and Singapore can be characterised as developmental states (or have come from such a historical background) with strong mandates to pursue aggressive economic development and growth strategies, Japan and Taiwan, being East Asian welfare states, have to be more cautious in balancing citizens' rights and private interest. By teasing out the differences in the medical tourism development policies of these countries and tracing their linkages to the characteristics of the states, we aim to contribute to deepening our understanding of changing public health policies in the context of globalization.

## RC11-207.4

**TRABUT, LOÏC\*** (INED, [loic.trabut@ined.fr](mailto:loic.trabut@ined.fr))

### *Intergenerational Dependencies: Retirement and Old Age in the Prism of Family Geography*

If the family is a determining element at every age in life, it is even more at old age. At the same time retirement and old age are more and more dissociated. What form does the family take for retired and ageing persons? How does the social constraint in family apply on its members?

The research undertaken until today has focused mainly on the one hand on the structural modifications affecting the households rather than the family and on the other hand on the residential mobility of the persons themselves rather than in the evolution of their environment. The aim of this research is to try to observe the spatial configurations and thus the places, not the individual or his household, but of his non co-resident family. When retiring, do individuals change their place of residence? Do they take advantage to move closer to their family? What about the following years when the individuals are ageing?

Based on a transversal approach we will choose three life periods (the active individuals aged over 55, the retired aged under 65 and the retired aged over 75) to observe which spatial family forms are dominating and if it is possible to establish a link between the life steps after 55 years of age. This work obliges us to take into account social and demographic characteristics of individuals and their families as their mobility and family geography depends on it.

This work builds on the survey « Famille et Logement 2011 », which collected data from 369 000 individuals of both sex aged 18 and over. The survey gives information on the different places of residence of the children and parents of the individual questioned and thus allows for a mapping of the families of individuals at different age.

### *Revisiting the Boy Who Cried Wolf: Tornadoes and the False Alarm Effect*

While the origin of the story is not clear, the 1867 publication of *Aesops Fables* brought "The Boy Who Cried Wolf" into the homes and hearts of many families. The story is simple and the message clear. It tells of a shepherd boy who lies to his community about a dangerous wolf to make people run to his assistance for his entertainment. The moral of the story is "if you don't tell the truth people won't believe you when you need them to." Its appeal is massive and cultures around the globe use it to extol the moral virtues of truth, honesty, and honor. It is somewhat unsurprising then that building on the very same logic, academics and practitioners have long debated the "cry wolf" or more often the false alarm effects of warnings. The question is simple: Are we somehow acting like that little boy and "crying (insert some weather phenomenon)" too often. Using a playful reference to the original fable, this analysis breaks down the key moral elements of the classic story and reinterprets their connection to current tornado prediction and patterns of risk perception as a way to help illustrate the range of complexities in need of targeted scientific research. We go on then to provide sociologically based quantitative analysis of false alarm, public perception of false alarm, and behavioral response to a series of tornadoes that occurred between 2007 and 2010. Contrary to most existing research, we do find a statistically significant false alarm effect among other important predictors. Conclusions discuss the importance and limits of these results and suggest further research needs.

### *Internet-Mediated Cooperative Norm Setting: In Search of Institutional and Organizational Success Factors*

Norms are an essential mean of any social group, organization or society to solve the problems of social life and to accomplish common goals. In a lot of social contexts norms are the results of formal processes, in which representatives, authorities or experts develop and impose norms on their recipients (e.g. parliamentary legislation or acts of authoritative imposing of norms in organizations). Current developments show an increasing demand for direct involvement in the process of collective decision making. The demand for direct participation is mostly justified with reference to democratic ideals, but there are also empirical evidences that the "quality" of norms increase if affected individuals take part in their development (Ostrom 1990, 2009). With the term "internet-mediated cooperative norm setting" we (a research group located at the University of Düsseldorf /Germany) define a process of drafting, discussing and deciding on norms that are binding for a group and in which all members of this group can participate in.

For a successful implementation of an internet-mediated cooperative norm setting two challenges are to be met: First, the individual contributions must be aggregated to an outcome. Second, people need to be motivated to take part in a process which might eventually be longsome and cost-intensive. If these challenges can be solved, is dependent on context factors like the institutional embedding and on design factors like the forms of participation and the modes of decision making offered.

In the contribution, I will first outline the concept of an internet-mediated cooperative norm setting. Second, I will present a framework for the analysis of the institutional design. Third, I will present results of an empirical evaluation of a project of internet-mediated cooperative norm setting which was realized in the summer of 2013.

### *Concern Over Climate Change Among Young Australians*

A large survey of young people in Queensland, Australia, indicates the majority believe that climate change is occurring, that the planet is warming because of greenhouse gas emissions and that anthropogenic global warming poses a serious risk to Australia. Parental education has an important influence upon the development of environmental attitudes among young people, with the children of tertiary educated parents much more likely than others to be concerned about planetary warming. A strong gender divide is also apparent, with young women consistently more concerned about 'the environment' than young men are. Political party identification has an important influence upon environmental concerns even among these 16-17 year olds, with young conservative party identifiers far less likely than Greens or Labor identifiers to believe that global warming will pose a serious risk in their lifetime, after controlling for beliefs in human induced climate change. The party identification findings point to an emerging support base of young Australians for parties that adopt a progressive stance on climate change among.

### *Loose Ties? Determinants of Father-Child Contact after Separation in Germany*

Growing separation and divorce rates have shaped the image of the family in the new century. As a consequence of this development, parents are increasingly at risk of becoming single parents or of living separated from their children at some point in their life courses. Despite the fact that the share of lone fatherhood has increased in some countries, the overwhelming majority of children co-reside with their mothers after separation. Thus, non-resident fathers have become a growing group in all European countries. This raises the question of how the relationship between the child and the non-resident father develops after separation. The contact that these fathers keep with their children is a policy relevant issue which has been intensively addressed in prior studies for English-speaking countries mainly. We add to this research by investigating the determinants of father-child contact in Germany, a continental European country with a slowly changing legal framework towards more paternal rights. Newly available data from the German family panel are used for our analyses. Preliminary results indicate that non-residential fatherhood is more prevalent in the eastern than in the western states of Germany. In both parts of the country, non-resident fathers are less educated and more often unemployed than resident fathers. Fathers who were married at childbirth more regularly see their children than cohabiting fathers or fathers in less institutionalized relationships, like living apart together relationships (LAT). However, after accounting for joint custody, we do no longer find differences in father-child contact by union status at birth. The union and fertility history of the father, in particular whether he has children with a new partner, is another important factor which impacts the frequency of contact between non-resident fathers and their minor children.

### *Stratification and Differentiation of Tertiary-Level Vocational Education in Switzerland: How Does It Affect Social Inequality?*

Vocational education plays an important role in Switzerland. Two thirds of all adolescents enter upper-secondary-level vocational training. After completion they have the option to continue their education at the vocational tertiary level.

Over the last decade tertiary vocational education has been newly established on two levels: the ISCED 5A-level includes universities of applied science, the ISCED 5B-level professional colleges, which have lower entry requirements. Tertiary vocational education has thus become more differentiated but also more stratified.

Previous research has shown that highly stratified systems are more selective and lead to more social inequality. A high degree of differentiation, on the other hand, facilitates labour market entry also for low-achieving individuals (Shavit et al. 2007, Pfeffer 2008; Kerckhoff 1995). Whether this also holds for the vocational tertiary-level has, to our knowledge, been rarely investigated. Against this

background - and by using the large group of vocational healthcare students, our paper examines whether access to the ISCED A and B-level of tertiary-education differs by social background, gender and academic achievement.

The analyses are based on a longitudinal survey of a full sample of healthcare assistant students (n=953). The data were collected at two time points: (1) at the end of upper-secondary (apprenticeship) training and (2) one year after its completion. Educational choices were analyzed using multinomial logistic regressions.

Results show that access to the more stratified and thus more selective ISCED 5A-level education depends more strongly on social background and gender, facilitating the transition for men and students from affluent families. Academic achievement plays a similar role in the transition to both options. Given that access to ISCED 5A-level education seems to increase social inequality, future research should ask how entry barriers, particularly for women and individuals from lower social origins, may be lowered.

### *The Modernization of Man By Numbers: Measures and Excess of the "Knowledge Society" (1945-2012). a Sociological Critique of Quantification*

The starting point of this study is the adoption by the European Union in 2000 of numerical indicators and benchmarks to compare and stimulate the performance of the education systems of Member States. It looks closely at the processing of this statistical information during both fabrication and diffusion. These tools for government have been developed within the international institutions created after the Second World War (UNESCO, OECD) in an attempt to combine material well being and social harmony by shaping education to meet the challenges of the industrial world. This policy of reliance on numbers has created an increasingly voluminous structure, in permanent expansion as it generates new data. Its growth has been fuelled by new technologies that facilitate the direct collection of data in schools and classrooms. Because they increase the traceability of school careers and allow for more regular evaluation of schools and students, these tools are used by both management and social science researchers to improve education and administration. Presented as teaching aids, they are designed to improve teachers' performance by allowing them to evaluate, classify and grade both their students and their difficulties. The phenomenon of quantification, by which we mean the activity of giving numerical expression to realities not previously expressed in this way, is considered here from three points of view - administrative, scientific and industrial - in order to provide an understanding of the origins and the effects of the avalanche of numbers on the vitality of our democracies and their inhabitants.

### *The Relationship Between Social Status and Health: A Conceptual Review*

Although "health disparities" have been a long standing interest of public health researchers, the complex relationship between social status and health has only recently captured the attention of sociological students of social inequality. Indeed, the first appearance of a session on health at an RC 28 meeting was in 2003 in Tokyo. However, interest in this topic is expanding rapidly and it clearly is an important direction for future research by our community. The current paper reviews what is known about the relationships between indicators of inequality (primarily social origins, education, occupational status, and income) and health outcomes and also about the effect of health on subsequent socioeconomic status. The evidence regarding many of these relationships is equivocal. But, more important, even when empirical relationships are well established, the social processes that generate them are often under-theorized. In this paper I attempt to lay out the theoretical basis for expecting particular relationships with the intent of encouraging new research.

Research topics I will focus on include the following:

- The effect of trauma experienced in pregnancy on education, adult socioeconomic outcomes, and adult health.
- The effect of childhood illness and injury on education, adult socioeconomic outcomes, and adult health.
- The role of education in affecting health behaviors and health outcomes.
- The effect of social rank on health behaviors and health outcomes.

- The effect of income on health behaviors and health outcomes.
- The role of poverty as an added detriment to health.
- The effect of health on socioeconomic achievement.
- Methodological issues:
  - Getting adequate retrospective data to measure childhood illness and injury in surveys of adults.
  - Improving subjective health assessments through anchoring and other techniques.
  - How useful are biometric measurements, including blood and saliva samples, in general population surveys?

*Making Global Inequalities Racial and Making Racial Inequalities Global*

In the first instance, race was an invention of Western imperialists who sought to justify their conquest of land and people, and racial thinking accompanied the capitalist accumulation that eventually engulfed the globe. Today, the philosophy and science of race has expanded beyond its role as justification and has become a means of accumulation itself. Indeed, the very purpose of race is to determine who gets privilege and who is deprived of rights and resources. Bashi Treitler, in this paper, constructs an anatomy of race, or more precisely, establishes a theory of racial paradigms. This theory is empirically applied to racial thinking in distinctive historical times and geographic spaces, to demonstrate paradigmatic continuities among varied historical, national, and regional racial contexts. The idea is to explain how humans project racial thinking born 500 years ago into today's modern age, thereby perpetuating global racial inequalities.

*Between Empowerment and Paranoia: The Role of Social Media within the #YoSoy132 Mexican Social Movement*

In May 2012 the #YoSoy132 movement emerged as a strong political actor, asking for the democratization of Mexican media and criticizing the strategy of the PRI Party and its candidate, Enrique Peña Nieto. The available literature on the movement has repeatedly stressed the importance played by social media platforms, but few have problematized and nuanced the uses and the appropriations of these digital technologies. Drawing on an extensive review of the literature, on group and individual interviews with activists of the movement, as well as on digital and offline ethnography, in this article I explore the use of social media platforms by actors of the #YoSoy132 movement. The findings of the investigation point out the pivotal role that digital media played in the formation of collective identities, the organization of resistance and the viralization of critical information. However, social media were also the origin of several conflicts and struggles within the movement, in relation to issues of surveillance, privacy and ownership. In conclusion, the article highlights that other (digital) communicative practices were more important for activist of the movement, and therefore urges to avoid "social media centrism" and insert their activities in a broad process of youth agency, empowerment and self-determination against the manipulation of Mexican mainstream media.

*Resistance Against the Narco-Machine: An Analysis of the Mexican Movement for Peace with Justice and Dignity*

Violence in Mexico has increased exponentially, especially since the decision of former president Calderón to start the 'war on drugs' in 2006. During the six years of the Calderón government (2006-2012), victims of the narco-war were treated as simple numbers, 'collateral damages' of a necessary war to protect the 'security' of the Mexican people. The Movement for Peace with Justice and Dignity (MPJD) emerged in 2011 to expose the inconsistencies of the war against drug-trafficking, criticize the official discourse of the government and the media, and restore the dignity of thousands of victims of the narco-machine. Even if the MPJD represents one of the most important movement emerged in Latin America in the last decade, there has been a considerable lack of academic attention, in particular outside of Mexico, towards its practices and its achievements. Drawing on an extensive review of the literature and on in-depth interviews with key actors of the movement, this article aims to fill this gap by providing an analysis of its emergence, its repertoire of contention, its communication practices and the central role played by the victims.

*Governance and Public Security In Brazil: An Analysis Of State Departments Of Public Security -- CANCELLED*

As in other areas, the public security policies have faced institutional, organizational and cultural obstacles. Sometimes are the limitations and conflicts of jurisdiction that hinder the implementation of new policies. On other occasions are the internal structures of the institutions of public security and criminal justice that hinder innovation. Moreover, the organizational culture permeated by mistrust and prejudice has hindered quite the implementation of new public security policies.

In Brazil, the State Departments of Public Security play an important role in the coordination and articulation of the actions of the various institutions that compose the criminal justice system. Its structure varies in each state, as well as the profile of the professionals who work there. Furthermore, there are significant differences with regard to their political status vis-à-vis the police. There are cases that the police are formally subordinate to the secretaries of public security. In other situations, police chiefs have the same powers of the secretaries. These differences ultimately reflect on the capacity of these departments to formulate and implement public security policies.

In this paper, we analyze the governance capacity of the Brazilian State Departments of Public Security. That is, the ability of these departments formulating and coordinating policies in the area of security.

*Evaluating the Contribution of Schools to Pupils' Progress in Educational Outcomes through a Bivariate Multilevel Model*

In the last few decades, school value-added studies have largely demonstrated the effects of socio-economic and demographic characteristics of schools and pupils on standardised tests performance. Traditionally, contextualised value-added models (CVA) have been employed to assess variation arising from the schools and pupils in standardised tests of Mathematics, Language, Science, etc. in separate univariate models. However, recent studies show analyses of schools' and pupils' performance significantly benefit from additional model complexity, including the specification of unexplored levels of variation, either nested or non-hierarchical, such as between classrooms or teachers, between neighbourhoods and local authorities, as well as carry-over effects from primary schools.

Using data from the 2004 and 2006 SIMCE database (Chilean National Pupil Database), an extended 5-level bivariate cross-classified CVA model estimating simultaneously the variation in Mathematics and Spanish Language between primary schools, between classrooms (within secondary schools) and between local authorities was implemented. This is in addition to the variation between pupils and secondary schools. This extended CVA model for progress in Mathematics and Spanish Language proved effective in reducing bias present in the traditional univariate value-added models, while controlling for the correlation between the two subjects. The model also controls for the fixed effects of prior attainment, household income, gender, grade repetition, school type and average school socio-economic status, as well as the random effects of prior attainment and gender.

This research intends to contribute to school value-added modelling by analysing additional relevant structural effects and by considering the relationship between two of the most relevant educational outcomes. The analysis of these data shows that using school averages or even 2-level CVA model is incomplete for the purposes of informing school-level effects, and therefore parental choice and school accountability due to overestimation of school effects and pupils' heterogeneity.

*Historic Heritage and Petitioning in the Context of the Run-up to International Summits in Russia*

Neoliberalism entangles all states, including liberal democratic ones, in capitalist market economies. This restricts citizens indirect action—voting, petitioning, influencing public opinion, participating in public hearings, and protesting (Warren, 2002). I consider the ways in which in Russia, after the mass protests against the unfair elections and, more generally, the Putin regime of 2011–2012 were suppressed, society resorted to on-line petitioning. In particular, I look at the public response to the international summits held in many cities. Events-related social and cultural policy becomes a contested issue in the context of closely entangled economic development and political representation functions. If some summits

held in the West provoked fierce street protests, the summits held in Russia are widely and critically discussed online. Some intellectuals actively resist being complicit in the entrepreneurial discourse in their work and alternative discourses emerge. These discourses emerge by way of petitioning authorities. The lack of regulations regarding the predicament of evicted citizens; the absence of a program for the preservation of the cultural heritage of the city; an urgent remapping of the so-called "guarded zones" to accommodate the summits-related pressure to have enough vacant lots; and "a mess" (the metaphor of one of the interviewees) instead of systematic and logical administrative law making—all these factors contribute to an increased "client-patron mentality" among active citizens. By "client-patron mentality" I mean the active citizens' and political activists' reliance on petitioning as the way for themselves to be heard and to get things done. Whether it is the only effective means to prompt the patrons to share a piece of the state budget pie or a quite efficient way to engage more public into discussions, petitioning prompts us to more closely look at the ambiguities behind genuine citizen participation.

### *The Dialectic of Rationality and Irrationality of Urban Growth in Post-Socialist Urban Development and the "Classic" Capitalist One*

It was during the 1970s that urban studies scholars began to analytically investigate the dialectic of rationality and irrationality related to urban growth. These pioneering analyses were a response to the early stage of the post-Fordist transition of major Western economies and the emergence of consumption-based economic development. Having admitted "the general irrationality of the present urban system" (1978: 329), Molotch described the American urban system of the second half of the twentieth century, in which cities retained relative autonomy from the central government. For his part, David Harvey called cities "the irrational rationalizers" within the capitalist mode of production (1976: 112) and demonstrated why "the capitalist laws of accumulation" remain, for the time being, the only known laws of history. While both scholars emphasize a recurrent reconfiguration of urban alliances in order to cope with difficulties in financing the development of cities, Harvey, in his later work, described how neoliberal urban policies found a strong friend in the central state via neoliberalization of the state itself. Drawing on these path-breaking scholars, I argue that it is an irrational rationality which unites postsocialist urban development and the "classic" capitalist one. Today it is neoliberalism that figures as the global political rationality. It promotes market logic across all spheres of life. Part of this rationality is the expansion of state institutions. These act to broaden their administration into the practices of all societal spheres. Urban growth machines in Russia and elsewhere have embraced neoliberal policies and promoted global, market-led urban development. Since these processes have recently unfolded in the context of the global financial crisis, the growth machines often go awry. Yet this does not impede authorities at any level from investing, symbolically and economically, in the new iconic projects—by continually putting forward the rhetoric of efficiency and growth.

**RICO, MARIA NIEVES** (UN ECLAC)

### *Education and Future Well Being of Latin American Adolescents*

Latin America has shown great progress in average education attainments during the past few decades. An increased participation of women in the education system occurred together with this education expansion. On average and in most countries, there are more girls attending school at all educational levels than boys. Women's participation in post secondary education is also higher than men's.

In spite of this regional panorama favorable for women, there still are educational challenges to be confronted. This higher education level achieved by women is not being reflected later in their labor market insertion. Young women have a lower labor participation rate than men, higher unemployment levels, and a labor insertion in less protected sectors (with higher levels of informality, less productive, and with worse income trajectories).

Although this paradox is probably associated with labor markets' historic discrimination factors, this paper seeks to identify elements from the education system that help to explain this fact. It concludes that although access barriers to the education system have been overcome by women, there is still a lot to be done in relation to the mechanisms that perpetuate the traditional socialization forms. That is, the process by which unequal and discriminatory gender stereotypes are still formed within the teaching-learning process, interfering with the prospects of equal labor opportunities. The paper also takes into account the gender differences within the reasons for aborting school early and how that impacts the design of appropriate social policies.

### *Education and Inequality in Latin America*

Latin America has shown great progress in average education attainments during the past few decades. Most countries are close to achieving universal access to primary education and some of them have the majority of the younger generations entering the secondary level. However, these same developments in education coverage and access have driven to an important stratification of learning achievements and attainments within the education systems. In spite of the enormous expectations associated with education as the principal mean for social mobility, this region of the world has not been able to transform the education system in a strong mechanism to equalize opportunities. This is partly related to the importance that household social and economic conditions have in determining educational achievements. Most of the time, this inequality is also reflected in a marked segmentation of the quality and efficiency of the education offer.

This paper examines the development of the main education indicators in the past decade among Latin American countries. Data from the countries' household surveys is used to describe the main attainment indicators (coverage and conclusion by education levels and social groups); and data from some international standardized tests (such as PISA and ICCS) is used to discuss learning achievement inequalities. The document identifies the main challenges Latin American countries have in terms of education development and the reduction of inequality.

### *Disaster Capitalism and the Chilean Earthquake and Tsunami of 27 February 2010*

This paper addresses the earthquake and tsunami that hit Chile in the early morning of 27 February 2010. It analyzes the responses of the neoliberal state, the private and public press, and the large economic conglomerates to discursively, politically and economically profit from the catastrophe despite the weaknesses that appeared in the neoliberal state's ability to prepare for the earthquake and for mitigating its consequences. It shows that a discourse of anomie and chaos fuelled by the press allowed for criminalizing the population, in particular the poor, and for occupying militarily vast regions of the country. It also discusses the deployment of charity as a means for the large monopolistic companies that dominate the Chilean economy to advertise their products and clean their images tainted by their practices during decades of neoliberalism. It finally addresses the resilience, solidarity and resistance of the population.

### *Reconfiguring Outer Space Policy: Vulnerabilities and Responsibilities in Humanizing the Universe*

Space exploration programs launched by emergent spacefaring countries such as China and India, together with private attempts to democratize space for the

masses (e.g., space tourism offered by Virgin Galactic) are growing quickly despite difficult economic times. These processes together with the increasing technological apparatus at the geostationary orbit are deemed as examples of the 'humanization of the universe' (Dickens and Ormrod, 2007). That is, the many ways humans may affect non-human cosmic bodies (e.g. potential environmental impacts of space exploration). Space and its exploration are subjects with "contemporary resonances in popular culture, frontier capitalism, and the restructuring of superpower status in the coming century" (Parker and Bell, 2009: 4). In this paper we aim at critically reflecting about some of the future consequences of space exploration by unpacking and extending the concept of planetary protection. This concept, located in space policy literature, is mainly confined to risks of biological contamination when transporting objects and people to outer space. We identify its primary limitations such as the damage caused to non-biological features and address some of its shortcomings through a multidisciplinary approach with a critical reading of the sustainable development literature. The paper suggests that there are a variety of important reasons for expanding the concept of planetary protection to include contemporary ethical approaches to the environment that will enable mitigation of possible future impacts.

[atruo034@uottawa.ca](mailto:atruo034@uottawa.ca))

### *From Play to Career: Redefining the Value of Cultural Practices*

Japan's transition into the 1990s was marked by the collapse of its bubble economy, putting a term to the long period of economic growth and prosperity which had come to characterize the post-war context. As social and economic structures began to change, so did their articulation with culture - a process which participated in slowly redefining the role and the importance of said culture inside of contemporary Japan. Although questions pertaining to culture had most often concerned discourses on Japanese identity (*nihonjinron*) in earlier years, many policy makers and academicians now turned their eyes to *Cool Japan*, and its potentially profitable popular culture. Indeed, even though it became increasingly difficult for young adults to find regular employment and adhere to social scripts institutionalized before the 1990s, play seemed to be saving the day.

To better understand the articulation of culture with both socio-economic structures and individuals' life paths, I look at a particular set of leisure practices which characterize both contemporary forms of play in Japan (*asobi*) and its popular culture - practices identified as *kosupure* and which revolve around costume play (e.g., 'cosplay'). Following over two years of fieldwork in Tokyo, my research aims to better define how these cultural practices articulate participants' identities and how they interact with other significant aspects of their daily lives. For some, play became a 'career' - in both the literal and subjective sense of the word. In this presentation, I aim to better define the role and the importance of leisure practices and culture in a social and economic context perceived by participants as uncertain, and in which value has become an increasing concern; be it for Japan's economy, to better understand opportunities and constraints linked to access and participation in said practices, and for contemporary selfhood in general.

## RC14-248.6

**TRUONG, ALEXIS\*** (University of Ottawa,  
[atruo034@uottawa.ca](mailto:atruo034@uottawa.ca))

### *Self and Others in Transitions: How Moving from One(s) Self to the Next Isn't Being Done Alone*

Up until the early 1990s, the Japanese post-war period was marked by important economic growth and the implementation of social reforms that set the stage for the standardization of many social scripts and the institutionalization of often gendered and classed life-courses. Following the collapse of the bubble economy, individuals were faced with new challenges in the course of their daily lives, adjusting to these changing socio-economic structures; young adults were particularly affected, as transitions that had become the norm in past periods became uncertain. Such changes are well documented, and include amongst other examples the increased difficulty to find regular employment after finishing education as well as changes in contemporary family structures. As such, young adults' experiences have become increasingly out of sync with formal and tacit expectations of what their lives 'should', or 'could' be.

In stark contrast, popular culture in 'Cool Japan' has continued to expand, gaining positive and negative criticism alike for policy makers and academicians. On one hand, it has proved profitable to the economy; on the other, the effects of practices associated with it have been said to have negative effects on fans (e.g., *otaku*), and especially on their social skills, attitudes and values (e.g., *hikikomori*).

Following over forty interviews and more than two years of participant observation, my presentation aims to better define how cultural practices known as *kosupure* (e.g., *cosplay*) are actually fostering new forms of sociabilities through the use of the body, definition of self, recognition, social distance and intimacy, and the creation of selective social networks through interactions. In other words, I aim to look at culture's mediating effect on the opportunities and constraints that

come to articulate the subjective experiences and trajectories of young adults facing an uncertain, and unequal world.

### *Inside the French Hoods. Revisiting Juvenile Delinquency in Urban Relegated Districts*

This paper aims to explore the constructed reality of the 'rising of juvenile delinquency in housing projects' social problem in France through the narratives told by the story of 3 chosen insiders, part of a larger population of teenagers studied in a longitudinal ethnographic fieldwork conducted for 6 years. This topic has been at the centre of the national political debates since the 2005 *banlieue* riots and has generated effective and consensual typifications categorizing the *banlieue* youth and its commitment with delinquent activities. Those typifications associated to these teenagers - mainly separating the 'good ones' who are going to school and the 'bad ones' who are hanging around on street corners - does not only suffer from a very biased empirical material but also fails to explain the social, symbolic and economical significance of juvenile delinquent practices. The key separating outsiders from insiders on this particular topic is the way *time* is - or is not - taken into account. Outsiders do not consider delinquent activities within an historical and biographical process but as an illegal and immoral activity to be eradicated. On the opposite, listening to insiders allows us to understand that illegal activities have to be understood in relation to social *trajectories* and, hence, have to be considered as significant and inclusive *moments* rather than outcasted and outcasting states of being. Underlying behind this issue is a wider reflection about the way the French society has structured the relationships between its ethnic and social minorities and 'the majority'. Focusing on 3 cases allow to contemplate 'dense' ethnographical material which appears to be a potent sociological strategy to deconstruct engraved typifications. This paper is issued from my latest book : *Des capuches et des hommes. Trajectoires de « jeunes de banlieue »*, Paris, Buchet-Chastel, 2013.

### *THE DISCIPLINE OF CHOICE. How students 'choose' further education in French priority education zones*

Through an intensive, participant and longitudinal ethnographic fieldwork conducted during 6 years, this paper raises the issue of further education's choices of French highschool pupils in priority education zones ("*Zone d'Education Prioritaire*"), in the northern outskirts from Paris. Studied pupils statistically concentrate social properties that lead them to be objectively and subjectively placed at the bottom of the social structure as well as being less likely to have academic 'success'. The study will focus on pupils following the academic track who are about to pass the *baccalauréat*, hence having to start to select the aspired and expected curriculum in the higher education system they forecast to enter into. Contrary to the official discourse of "free choice" held by the institution, it shows the constitution amongst pupils of a *discipline of choice* (Truong, 2013) - a set of social rules for considering options and deciding between alternatives (Reay and Ball, 1997), as well as finding relative information to do so. This *discipline of choice* acts as a common rationale for subaltern students who remain undecided about their future, showing the importance of territorial stigma (Wacquant, 2007) and the rejection of university (Beaud, 2002) - vs. the praise of a more highly supervised type of further studies - in choices. This rationale leads to ambivalent and contradictory attempts to escape or dis-identify (Skeggs, 1997) - from a set of intertwined illegitimate categories (working class group, immigrant background and race, residency in housing projects and stigmatised *banlieue*, 'muslim community' etc.) within a society promoting access to higher education for all by offering a complex, heterogeneous and hierarchical system designed for masses. It illustrates how the possible, the probable, the desirable and the acceptable are articulated in changeable patterns which have been produced by and against the school, underlining its very own internal contradictions.

### *Globalization and Higher Education in India*

The globalization is a process which is now transforming every sphere of our social, cultural and political life both in the developing and developed countries. Transnational flow of the capital, commodities and people is an essential feature of the globalization. This creates homogenization of higher education although

in a very limited sense to enable the mobility of the potential population of the countries who opened their economy for global trade in last few decades. This requires the standardization of the education system in terms of content and quality of education throughout the world. In India, the system of higher education is highly fragmented and stratified and produces students of different qualities. A large number of students having different social background and different type of schooling up to secondary level also vary in their educational attainments as well as in their career graph. They usually fall short to the national and international standards. Only few institutions of higher learning have the capacity to produce the students who have potential to compete in the global job market. Thus, globalization poses a new challenge to make necessary structural and qualitative changes in the institutions of higher learning in order to cope with the changes taking place in the globalized economy of the country. The present paper analyses various dimensions of the intricate relationship between globalization and higher education in a developing society like India.

#### *Exchange and Life Satisfaction: Intergenerational Reciprocations in East Asia*

Exchange plays a key role in affecting level of well-being. This study aims to develop a fundamental typology of exchanges across generations. By focusing on exchange of finance and household services between adult children and their parents (and parents-in-law), four types of exchanges can be identified: balanced, credited, indebted, and self-reliance. We then investigate if different types of exchange affect life satisfaction and marital satisfaction. Empirical data are drawn from the East Asian Social Survey, which allows a comparative study of Japan, South Korea, Taiwan and China.

#### *Land Grabbing in Taiwan: The Crisis of Food Security and Land Justice*

Since the 1980s Taiwan had adopted liberalism economic policy and given up the principle of food self-sufficiency. The importance of agriculture had decreased and the land had been seen as valuable asset rather than the means of production. These changes together contribute an over-dependence on imported food in the local market and the loss of food sovereignty of the consumers and farmers. As a result, the food self-sufficiency rate has been extremely low in Taiwan (33%), far lower than China (95%), France (122%), the U.S. (128%), and even Japan (40%). In recent years, the implementation of neo-liberalism in agricultural policy has further worsened the practices of farming and the ways of land use in the rural areas. Since several local governments aim to promote rapid development in the high-tech industry, many farmers and rural residents have been forced to leave their farmland and assets. Over the past decade, Taiwan has consequently lost 4,000 hectares of farmland per year and totally lost 109,652 hectares in the last 30 years equated around 12% of farmland. In reality, the legalized land exploitation which in the name of scientific and industrial park and various developmental projects could be seen as a new form of land grabbing. In this paper, we present two case studies and explore how the recent land exploitation has changed the agricultural practices and social context in the rural areas and the long-term effect on the food security of the whole society. The two cases cover the events and outcomes which have happened in Dapu District of Miaoli County and Siangshihliao of Changhua County, the former representing the form of anti-land-grabbing and the latter of as anti-water-grabbing one. Finally, we will attempt to discuss the impact of land grabbing on the food security and the possible citizenship aspires to food sovereignty.

#### *Genetic Science in Identity Making: The Rediscovery of Taiwanese Origin and Ancestry*

The global development of genetic science and technology has its various manifestations in different local political and cultural contexts. The government of Taiwan began to support the development of biotechnology by funding projects during the 1980s, when this country underwent dramatic transition from authoritarian rule to democracy, emergence of ethnic politics, and conflict of national identity. After the rule by martial law ended, scientific research on the

origin and the genetic background of Taiwanese began to emerge in the 1990s. Taking for example the research findings and scientific discourse of the team led by Professor Marie Lin, M.D., widely known as "the mother of the research of Taiwanese blood," my article aims to explore the particular process of co-production between genetic research and identity politics in Taiwan. Since the 1990s, she has devoted herself to unveiling the mystery of the origins of the ethnic groups in Taiwan by finding scientific evidences of blood attributes and genes. Based on the research findings of her team over the recent two decades, Lin argues that 1) 85 percent of Taiwanese have aboriginal genes; 2) the Han Taiwanese people (Hoklo and Hakka ethnic groups) are mainly the descendants of the Yue people from southern China; 3) a major part of blood attributes of the Han Taiwanese people is derived from plain aboriginal people and 4) aboriginal peoples in Taiwan have multiple origins. These arguments pose a radical challenge to the dominant Chinese nationalist ideology of the period of the authoritarian rule, which is still lingering on now. My article analyzes how the genetic research on Taiwanese origin and ancestry represented by Lin and her team's has been shaped by social, political, and cultural factors in the context of democratization and ethnic identity. My analysis also shows clearly how science and politics are mutually constitutive.

#### *Efficiency of Information Influence: Features of Measurement*

Moscow is overloaded with outdoor advertisement that's why analysis of advertising campaigns efficiency becomes an extremely actual matter. We use tracking to solve a lot of research tasks, such as determination of the population percentage attracted by any advertisement, correlation between advertising images kept in mind and number of brands or company names recognized, poster attractiveness for target groups of any products or services, etc. In spite of considerable measurements, regular sociological surveys in this sphere were only conducted in England and Australia.

*Espar Analyst Research Agency* has conducted the first monthly tracking surveys in the outdoor advising market in Russia. The objects of its research are advertising posters within the territory of Moscow and the matters are brands and companies.

The goal of the research is to determine an efficiency rate of an outdoor advertising campaign. Efficiency means here the rate of poster penetration and brand recognition. This goal may be achieved in case if the main task of measuring general parameter for evaluation of each outdoor advertising campaign's efficiency is resolved.

The following factors shall be considered in the analysis of the data obtained:

- number, type and location of advertising media;
- duration;
- other media used for advertising the brand;
- creative solution;
- advertised product category.

One of the most important results of tracking campaigns is an opportunity to form a limited indicator basis for each group of products and services, which would allow to compare the campaigns and bring their characteristics into correlation with average indicators for different product categories or formats used. Such surveys are aimed at renewal the empirical basis of social sciences, which study the influence of different format advertising images of human consciousness that is extremely important when the so called visual culture is developed.

#### *Quality of Life As Local-Global Reflection*

The changing world exacerbates so many contradictions of economic, social and environmental issues what affects the quality of life of the inhabitants of modern cities and villages. This kind of problem is especially perceptible for the most vulnerable socio-economically disadvantaged groups such as young people and the elderly.

Using this approach, according to which a QoL refers to a comprehensive well-being, that takes into account the various aspects of human life, the Department of Sociology of Russian State University for the Humanities conducted research using questionnaires in October 2012 and September 2013. It represented the adult population and distinguished four main studying groups: youth, senior citizens, urban and rural population of working age.

In the result, we obtained not only an idea of the self-perception of different socio-demographic groups representatives in relation to the assessment of individual aspects of life (personal economic status, social status, personal security, availability of education, social welfare and medical services, maternal and child welfare, employment, leisure etc.), but also identified mechanisms to increase self-perception of QoL.

The first one (objective) defines QoL as a result of combinations of different statistics. The second model is based on affirmation that the real sense of QoL is reflected in subjective feelings of individuals, which are formed on the basis

of system developments level of individual, his life experience, emotional status, etc. The objective indicators (measures) include following main groups: natural, economic and social. Subjective ones are represented by life satisfaction, the feeling of happiness and depression, social support, personal competence, anxiety, stress, etc. This non-linear relation between the objective and subjective indicators allows to find a paradoxicalness of public consciousness and offers an original mechanisms to overcome the negative trend in QoL.

All these aspects will be considered as Local-Global reflection.

### *Regional Development and Social Inequality in the Age of Globalization: The Case of Taiwan*

Modern societies all face a fast-developing and fast-changing global world. Recent development of tighter connection among Asian countries, especially with Chinese economy has brought significant impacts on the regional development and local life of these countries. It is expected that the emergence of the Pan Asian economy might have changed the class structure and social distributions in Taiwan. The paper proposes to study the changes of Taiwan's social class as well as occupational structures during the last twenty years. Further analysis might show the extent of the restructuring of Taiwan's occupational structure. In addition to occupational structure changes, this paper will also focus on the trend of economic development. To compete with other economies, Taiwan government has pursued a series of large-scale urban development and regional reorganization, during the years of fast globalization, which might have caused an unbalanced development among regions and skyrockets the housing price in urban areas and thus further exacerbates the income inequality. I will analyze both macro and micro data to test the hypotheses whether the regional development either in a national scale or within the national territory has affected the degree of social stratification in terms of social classes and the inequality of distribution.

Keywords: Class Structure, Social Inequality, Regional Development, Globalization

### *Inclusion Or Illusion: The Romance and Reality Of Integrating Students With Special Education Needs In Hong Kong*

Integrating students with special education needs (SEN) into ordinary schools is a widespread movement towards "Education for All" in many developed countries. In principle, a shift from allowing students with disabilities to be educated in segregated special schools to providing them with opportunities to be educated in ordinary schools is justified on educational and normative grounds. Following the proclamation of the Salamanca Statement as advocated by the United Nations, the Hong Kong Government initiated a pilot project in 1997, and promoted a whole school approach to integrated education in full scale starting from 2004. Despite its goodwill on the part of the Government, many difficulties and problems have arisen along the moves towards greater inclusion in the Hong Kong education system. For example, the practices of integration education are under criticism as many students with SEN are not properly cared or taught, and some are even bullied by fellow students. Provision of sufficient resources and support to ordinary schools or teachers is another matter of grave concern. Teachers also face with problems in maintaining classroom discipline and ambivalence in meeting the competing demands of academic excellence on the one hand and equality and inclusion on the other. Inclusive education is one of the most controversial education policies in Hong Kong. The progress of inclusion will be examined in the dimensions of access (the extent to which students with SEN attending mainstream classes); acceptance (the extent to which all students are treated as full school members); participation (the extent to which all students contribute actively in school's activities) and achievement in terms of academic, social and emotional development. Values dilemmas and paradoxes resulted from the integrated education measures will be examined with a focus on accommodating diversity, quality, equity and fairness, as well as reducing or enhancing social inequality.

### *Silenced Controversies: The Professionalization of Psychiatry and the Biomedicalization of ADHD in Taiwan*

ADHD (Attention Deficit/Hyperactivity Disorder), the most common mental disorder among children and adolescents in Taiwan, does not seem to be as controversial in terms of its entity, diagnosis and medical safety among local professional groups as it is in some Western countries such as the United States. This is not to say that Taiwanese psychiatrists uniformly embrace the biomedical model of ADHD. However, alternative paradigms and practices of psychiatry are excluded

from the public sphere and discouraged by the National Health Insurance. Besides, the strategic alliance among psychiatrists, teachers and parents for dealing with various learning difficulties effectively justifies the medical framework of children's deviant behaviors. By analyzing the archives of the professionalization of Taiwanese psychiatry, and by conducting interviews with psychiatrists, relevant medical professionals, teachers, and the main parents organization, I unravel the interrelated processes of the development of the medical subspecialty, the publication of health services and the medicalization of education, in order to elaborate that the biomedicalization of ADHD in Taiwan is not a necessary achievement of advancement in psychiatry, but a co-production with various social and political conditions. In particular, the "biomedical evidences" and "gearing to the international norms" constitute the driving rationality and emotion of the professionalization of Taiwanese psychiatry in a latecomer context; moreover, as a late-developing medical specialty, Taiwanese psychiatry lacks a sufficiently powerful legacy of the psycho-dynamic approach, which dominated Euro-American psychiatry before the 1980s and has thus far provided competition for the biomedical approach. Furthermore, Taiwanese child and adolescent psychiatrists are too few in number to encourage multi-paradigms. Therefore, although controversies and alternative practices concerning ADHD exist, they do not originate from the psychiatric in-group and thus find it difficult to shake the mainstream practices. Consequently, the biomedical discourses and treatment of ADHD have been stabilized and reproduced in Taiwanese psychiatry.

### *Digital Inclusion or Digital Exclusion? The Second Order Divide in Taiwan*

The study of digital divide has shifted its focuses from unequal access to ICTs to the second digital divide that addresses the inequality resulting from the different ways people use ICT technologies. The shift to ICT usage is important because of its implication for social inclusion that ICTs play a critical role in all aspects of the new economy and information society. By including online activities in their measurement of digital exclusion, the studies of Oxford Internet Institute distinguished three levels of digital activities and found that individuals with specific disadvantages appear to be excluded from the digital activities that could help them most. This study, by employing secondary and longitudinal data of national Individual and Household Digital Divide Survey in Taiwan, aims at examining the barriers of second order digital divide and understanding the social implication of digital inequality in the information society. The results suggest that despite of the closing gaps of ICTs access across groups and declining usage gaps in basic internet activities (e.g. information searching, communication, entertainment), persistent or widening gaps are found across groups in intermediate and advanced internet activities, such as usages of online finance, e-government and civic engagement. These results imply that social inequality might accelerate in the information society for those well privileged groups take uneven advantages and benefits from effectively use of online activities in the social, economic, and political spheres, while lack of usage in needed digital resources will make groups that are already socially disadvantaged fall farther behind. Without proper intervention, the wider array of ICT usages in information society becomes the potent tools to deepen social divides.

### *Vavilicious Scandal: The Politics of Sexual Harassment in Post-Apartheid South African Trade Unions*

#### **Vavilicious Scandal: The politics of sexual harassment in post-apartheid South African trade unions**

In July 2013 the General Secretary of the Congress of South African Trade Unions (COSATU) (the largest trade union federation in South Africa), Zwelinzima Vavi was accused of rape and sexual harassment of a junior female colleague. While the rape allegations were later withdrawn by the accused, Vavi was subsequently suspended and investigations into the allegations of sexual harassment are being conducted by the federation. Much focus from the South African media is on the power struggles within COSATU and attempts by Vavi's enemies to capitalize on the scandal to remove him from his position. However, the significance of the incident for this paper is that it highlighted the patriarchal, unequal and hierarchical gender relations dominant in the South African trade union movement (Scott, 1986). Unions are organizations of power, which is often defined in masculine terms.

The incident also reminded us of the need to publicly acknowledge the importance of sexuality in organizations (Acker 1990:139), where women and men are perceived differently and assigned roles according to how they are perceived. The Vavi scandal has brought to the fore the embeddedness of sexual harassment within the masculine organizational culture of the federation and its affiliated unions. The paper aims to discuss the politics of sexual harassment in the

post-apartheid South African unions, where women continue to be marginalized from leadership positions in spite of constituting almost half (48 per cent) of the union membership (COSATU 2011). The paper seeks to understand the significance of women's composition in COSATU unions in terms of raising their voices and challenging dominant patriarchal practices. What is the significance of the increase in women's membership in terms of their struggles to reconfigure the dominant masculine culture of trade unions?

THANOPOULOU, MARIA (National Centre for Social Research - Greece)

#### *Women Academics Under Crisis: A New Field for Reflexivity*

Research data show that the present economic crisis has worsened women's position in society. New categories of women become vulnerable to the impact of this crisis. To the traditional categories of vulnerable women (migrants, single-parent families, women victims of domestic violence, unemployed young women etc.) are now added women coming from middle and upper-middle class ladders of society (women entrepreneurs, women of high educational and employment credentials, women owners of big properties etc.). Women belonging to these new categories seem to be threatened by the risk of status degradation and the risk of impoverishment.

This paper focuses on the impact of crisis on women of high credentials. Such is the case of women academics that work in universities and research centers in Greece, a category of women of hitherto recognized social status and established high position in social hierarchy.

Our presentation is based on qualitative data coming out of the living experiences of women academics facing the impact of crisis in their professional and personal life. Initial results indicate the gravity of the present economic crisis as it expands also to include women holding highly privileged academic positions in the social hierarchy. Austerity measures have not only diminished the income of academic women but also have enormously affected their living standards and worsened their working conditions. Moreover it is to be noted that the economic crisis seems to have brought into surface latent aspects of social crisis resulting from pre-existing social transformations which in turn also affect academic women's lives.

Thus our attempt is to develop a reflexive account on the living experiences of women academics as well as to discuss the impact of the present economic crisis on processes of women's downward social mobility.

### RC26-453.1

**TSIGANOU, JOANNA\*** (National Centre for Social Research - Greece, [jtiganou@ekke.gr](mailto:jtiganou@ekke.gr))

#### *Young People in Social Disadvantage: Opportunities and Threats in Local Environments*

The arguments advanced in the proposed paper are based on the analysis of data concerning the means and ways of combating social exclusion of young people in social disadvantage at local communities by means of suitable educational and training programs.

In fact, in an era of globalization of economic and social relations, the employment structures may not be understandable on the basis neither of the model of "technocratic advancement" nor of the model of "specialization". If such is the case, there is an urgent need for the employment of other forms of "capital" in order to combat marginalization of those young people that suffer multiple social disadvantages. The question is how detached are modern societies from traditional forms of education, training and employment especially under conditions of austerity. Another issue for serious consideration is whether local environments possess new capacities for training and job opportunities for young people in social disadvantage. It is to be discussed also whether the local versus the global (i.e. in the sector of enterprises) may possess more opportunities than threats in combating unemployment and exclusion.

**TSOBANOGLU, GEORGEOS\*** (University of the Aegean, [g.tsobanoglou@soc.aegean.gr](mailto:g.tsobanoglou@soc.aegean.gr))

#### *The Systemic Crisis of Greek Labor*

##### **Abstract**

The current crisis in Greece has brought to the surface the employment security aspect of the Greek "labour system". The employment relationship seems to be embedded upon a bifurcated system whereby labour is separated institutionally in a) a secured salaried public sector and b) a private sector defined by precarious labour conditions that are characterised by the technical separation of work from its social security (mainly pensions) relationship. The two systems have been cou-

pled with separate health care systems developing separately (recent attempts to unify are in process). The paper explores this hidden reality by defining the organisation of the labour system in Greece, its politico-administrative controls that formulate a binary legal system (public/private) that does not allow for the emergence of the not-for-profit-law institutions.

The "social" reproduction of private labour is based upon the formally established private and "commercialised" interests that practice "trade" in basic needs (health, education). As a result, communities rely on the family, the Church, self-help and ... out-migration. By focusing on this anachronistic and discriminatory system of political order for labour we may be able to unlock the reasons for the weakness of labour social economy organisations in Greece and the acute unemployment rates (the highest in the Eurozone). This approach will aid our understanding of the Greek crisis as a failure of Euro-Zone's public policy.

##### **Key words**

Greek institutional crisis; labour fragmentation; Euro-Zone, social development

#### *Octopus Man and Tiger Woman - Why the Chinese Are Bad for Australian Nationhood*

Historically Australia has considered itself a white, Christian and British bastion in the South Pacific region. The main threat to this status was conceived of as coming from the east, particularly from the 'hordes' of Chinese who would sweep down and over run the nation. These discourses were prominent during the Gold Rushes when Chinese men were constructed as a threat and represented as an octopus of evil. Immigration policies were instigated to stop the 'yellow peril'. While the so-called White Australia Policy was formally rescinded in the 1970s those from Asian are still constructed as a threat.

Most recently it is Chinese students who are 'taking over' the most desirable government schools. Because of their hard work and diligence they are excelling at entry exams and providing little incentive for mainstream Australian students to compete or be schooled in environments dominated by Asian students. Tiger mothers are represented as standing over their children, ensuring they work hard enough to achieve well. The work ethic associated with the Chinese is a form of racism. In contemporary discourses this is associated with rote learning for exams rather than independent thought.

In this paper historical depictions of Chinese men represented as an octopus ready to seduce Australian women, including through the provision of heroin, will be contrasted to depictions of Chinese women as Tiger mothers who stand behind their children ready to wield 'tough love' towards success. What does the promulgation of such representations in the media tell us about Australian nationhood and its reliance on gendered forms of racism for meaning?

#### *Sakyadhita and the International Movement for Gender Equity in Buddhism*

During the 1980s, the glaring discrepancies between opportunities for women and men in Buddhist institutions and societies caught the attention of a small group of women living in different countries and practicing in different Buddhist traditions. Communicating by post, they decided to gather to discuss what could be done to address these inequalities. In 1987, at the conclusion of this first gathering in Bodhgaya, India, an international association of Buddhist women called Sakyadhita was founded. Since then, Sakyadhita has received scant attention from the academic community, but the consequences for women in Buddhist societies have resounded around the world. For twenty-five years, Sakyadhita has organized a series of biennial conferences and issued numerous publications that have educated Buddhists in the new global ethic of gender justice. The path to gender equity in Buddhist communities and institutions has not always been smooth, however. Consciously or unconsciously, entrenched interest groups continue their efforts to maintain the imbalance of power that disenfranchises women.

This paper explores how a small grassroots movement to improve conditions for neglected and undereducated women, especially nuns, has grown into a global movement to challenge inequalities on a structural and institutional level, recounting landmarks in the history and development of Sakyadhita and the international Buddhist women's movement from its inception until the present. In the first section, I describe the objectives of Sakyadhita and the key personalities who have helped propel the global movement for gender equity in Buddhist societies. Second, I explore the setbacks and obstacles that Buddhist women have faced over the years and continue to face in their struggle for gender justice today. Third, I trace the major achievements of the international Buddhist women's movement precipitated and explore potential directions and strategies that Sakyadhita has mapped out for the future.

[kuniorome@yahoo.co.jp](mailto:kuniorome@yahoo.co.jp))

*A Study on the Costs and Demand for Foreign Nurses/Care Workers in Japan – from the Angle of Hospitals and Care Facilities*

Many consider that the international migration of nurses and care workers is driven largely by economic factors. Wage and cost differentials should work as a 'push factor' in sending countries and a 'pull' factor in receiving countries, though rules and regulations may partly hinder it. Japan opened the gate for foreign nurses and care givers under the Economic Partnership Agreements for the first time in 2009. It was anticipated that application and entry would rise sharply because wage gaps with other Asian countries remained high and the rapid aging of Japan's society badly needed more nurses and care workers. However, the actual entry of such personnel has been on a declining trend in recent years, despite government efforts for reducing entry barriers. This study has attempted to analyze the pull factor, i.e. the economic costs that accrued in the hospitals and care facilities based on a survey conducted. The analysis revealed no statistically significant correlation between the economic considerations and the willingness to hire nurse candidates, implying the existence of non-economic reasons for the reduced entry of such workers. For the care givers, economic considerations seem to have had some impact on the willingness of care facilities to receive additional foreign workers. It would be imperative for the government to address institutional impediments for the nurses and pay more attention to the economic incentives for the care facilities in order to increase the number of foreign nurses and care givers in Japan.

**TSUCHIDA, KUMIKO\*** (Tohoku University,  
[kumitsuchi@msi.biglobe.ne.jp](mailto:kumitsuchi@msi.biglobe.ne.jp))

*Organizing Immigrants in Rural Areas in Japan: Case Studies of the Tsunami-Devastated Areas*

This study examines the process of organizing immigrant groups in rural areas in Tohoku, Japan, especially the 3.11 tsunami-devastated areas. In recent decades, Japan has witnessed the entrance of many more immigrants. Along with this influx of newcomers, their relationships with Japanese society and their social mobility have drawn attentions. Although previous studies tend to focus on the cases of labor immigrants in urbanized or highly industrialized areas, few studies have been conducted with a focus on the immigrants in rural areas that lack a concentration of immigrant populations, such as the Tohoku region.

Many of immigrants in the Tohoku region are female immigrants as spouses of Japanese nationals, who are mostly dispersed throughout small towns and villages. They tended to be marginalized from their local society and given the limited understandings and supports from the local government.

The Great East Japan earthquake that devastated many areas of the Tohoku region seriously affected these immigrants as well as Japanese nationals. The disaster and its aftermath consequently led them to form groups to help support each other and to change their social surroundings. How did they attempt to grapple with the difficulties after the disaster? To what extent did their organizational efforts contribute to changing their relationships with their local society?

With a focus on these questions, this study analyzes the process of organizing immigrants in the Tohoku region. The findings from my interviews with the actors and participatory observations suggest how they obtain resources inside and outside their community on the recovering process after the disaster, and the social issues they face to continue living in rural society. This study contributes to considering the possibilities and issues of "bottom-up" approach for immigrants to change their social surroundings in rural society in Japan.

*Healthy Aging and Concerns Among Japanese Elderly People*

Background: Japan is facing an unprecedented aging society. In 2011, 23.3% of total population in Japan was elderly people 65 years old and older. One third of the population in Japan will be at least 65 years old in 2035. Healthy aging is a crucial key for public health and society in Japan. However, under budget limitation of social security, policies and frequent policy changes have posed a great uncertainty and concerns on that elderly population. Given these circumstances, we conducted questionnaire surveys in 2010 to examine concerns in this age group. Method: In 2010, we sent questionnaires to university graduates 65 years old and older randomly selected from lists of graduates from 11 universities. The questionnaires were open-ended and asked them to write any concerns that they had about health care, health policy, health systems and their future. Results: We

received 331 (Age 73.18±4.43) responses. Among those who responded, 84.9% (281 respondents) said that they had concerns. We conducted text analysis (PASW Text Analytics for Surveys 3.0.1) and extracted keywords from their Responses. The keywords that were extracted frequently were; Doctor, Hospitals, Health care, Japanese Government Policies, Expensive, Health care cost, Medical expenditure, Cost of medical care, Doctor scarcity, Prevention, Health insurance system for those 65 years and older, Quality of care, Long term care and others. Discussion: In this study, many elderly people in Japan have concerned about health care expenditure, health care systems and health policies. This may be caused by frequent health policy changes and uncertainties due to frequent administration changes such as unclearness of a raise of out of pocket payment rate from 10% to 20% for elderly people under budget constraint in Japan. Correct policy-making and determination are necessary for healthy aging by removing concerns from this vulnerable population in Japan.

*Discussion of Factors That Drive Regenerative Science and Assisted Reproductive Technology*

One of hottest ethical arguments in regenerative science is whether creating human eggs and sperm from iPS cells or ES cells should be permitted. Then whether to permit these eggs and sperm to be fertilized and to develop into babies. In 2012, Japanese scientists created primordial germ cells, which can develop into germ cells, both sperm and eggs from skin cells of mice. Another team in Japan has also created mouse sperm and egg cells from iPS cells and used them to grow young mice within the past year.

A guideline of Ministry of Education, Science and Technology in Japan requires prior notification of all efforts to generate sperm and egg cells from human iPS cells, but fertilization is prohibited. Two teams have already started the research.

We would like to consider the issue by logical steps through analyzing narratives of scientists and patients in assisted reproductive technologies. First, we would like to focus on how scientists explain the necessity for the research. What is purpose of the research? What do scientists recognize as advantages and disadvantages? Second, we would like to consider how patients in assisted reproductive technologies react to the news? What do they think about the technology and ethics? Third, we would like to show what a council which regulates the technique discusses. Through interviewing scientists in regenerative medicine and patients in fertility treatment, and analyzing conference minutes of the council, we will point out the driving force and the justifiable reasons of regenerative science and assisted reproductive technologies.

*Changes in Friendship Relations of Japanese Youth*

This study aims at revealing the changes in friendship relations of Japanese youth. In their everyday life, friendship relations are becoming more and more important.

According to a recent report, "In response to questioning about when they feel their life is fulfilling, the largest percentage of Japanese youth answered "When I am with friends or companions" (74.6%)". This is also the largest percentage among the other five countries (South Korea: 58.1%, U.S.A.: 64.7%, U.K.: 45.1%, France: 68.2%), and that have basically increased from past years (1977-78: 50.1%, 1983: 59.2%, 1988: 62.0%, 1993: 70.8%, 1998: 74.0%, 2003: 72.5%, 2007: 74.6%). But in recent years, there are some interesting changes. The percentages giving "When I am by myself without being annoyed by anyone" (13.8% in 2003 to 19.8% in 2007) increased over the previous survey. (Naikaku-fu, 2009, "The JAPANESE YOUTH :In Comparison with the Youth of the World, A Summary Report of the Eighth World Youth Survey, <http://www8.cao.go.jp/youth/english/worldyouth8-e/html/mokuji-e.html>).

This is so complex situation that is difficult to be understood, and our recent research also shows the same situation.

In this study, there are two ways of approach. Firstly, I would like to review the hypotheses about the changes in friendship relations (e.g. the dilution hypothesis, the selective hypothesis and the homogenization hypothesis). Secondly, I would like to analyze the quantitative data, and reveal the present situation and the changes. The data was collected in Tokyo and Kobe in 2002 and 2012. Respondents were randomly sampled. Their age ranges from 16 to 29.

In conclusion, it is revealed that the number of friends are increased but the diversity of that is reduced. It suggests that the friendship relations of Japanese youth have been homogenized.

### *Examining the Chain Relationship from Initial Contact to Classical Music to Socio-Economic Status Via Music Preference*

This paper examines the effect of the initial contact to classical music on the music preference, and the effect of the music preference on the socio-economic status, in Japan. Especially, as in Bourdieu's reproduction theory, whether people's "orthodox" music preference from family affects their income is examined.

A questionnaire was handed to 2,000 audiences of Saito Kinen Festival in 2012. 594 audiences answered. The questionnaire included the questions of initial contact to classical music, preferences to 20 composers, and household income.

By latent class analysis of the initial contact, four types were found: (1) vague, or no particular initiation, the effect of (2) family, (3) eye-opening experiences, and (4) various sources and experiences.

By latent class analysis of the composer preferences, five types were found: (a) shallow listeners, who do not know many composers, (b) orthodox maestro devotees, (c) hardheaded devotees, who love orthodox maestros but dislike contemporary composers, (d) overarching lovers, and (e) contemporary music lovers.

Crossing the types of initial contact and the types of music preference, the following was found.

1. Those with vague initial music experience tend to be shallow listeners.
2. Those who are affected by family do not have a particular preference.
3. Those who had eye-opening experience are not shallow listeners.
4. Those who received various effects are not shallow listeners, not hardheaded, but overarching lovers.

OLS on the equivalent household income reveals the following. Those whose preferences were affected by family tend to have higher income than those with eye-opening experience. The orthodox maestro devotees have higher income than those with vague preference or hardheaded. However, as seen above, there is not an effect of family on orthodox preference. Therefore, we should conclude that there is no clear evidence for the chain relationship in Japan.

### *Food Aesthetics and the Unintended Construction of Civility in Peru*

Peruvian food had always had important elements that connected it to national identity. However, in the last 10 years, food has acquired new meanings that pertained to a strong sense of national pride, and new understandings of what it means to be Peruvian, which are reflected particularly in media and politics. In Peru's biggest city, Lima (where 35% of its population live), culture and cuisine reflect the diversity of its population through years of internal and external immigration processes since the times of the Spanish colony. In this paper I argue that, in great part, the "aestheticization" of food in Peru—a focus on aesthetics rather than just on flavor—was pivotal to the transformation of its social meanings during the mid 2000s. In the early 2000s, chefs and tourism operators considered this process of "aestheticization" essential for the promotion of Peruvian food and, consequently, for the promotion of tourism and the increase of economic revenue to Peru. An unintended consequence of the success of this process was that the newly named "novo Andean" cuisine became a central element of an invigorated Peruvian pride. Additionally, this pride in Peruvian cuisine, in great part, allowed for emergence of new spaces of social "civility" based on weak links in a society that historically has been strongly divided by differences of class, socioeconomic status, race, etc. This "aestheticization" of food took place almost exclusively in the biggest urban centers of Peru, mostly because of the intrinsic characteristics of Peruvian media, the economic configurations of the country, and the importance of spaces of social communication in cities. These publics allow different people to discuss and experience food in big cities directly or indirectly (through conversations or food television shows, for instance), as opposed to the "immediacy" of food outside of these urban spaces.

### *Indirect Reciprocity in Intergenerational Support in Japan*

Intergenerational familial support is a fundamental aspect of family relationships. It has critical effects on the welfare of family members and reflects the distribution of social capital in the family. This study focuses on the elderly over 50 years old as providers of non-monetary support to their adult children, and assesses how their own parents' support has affected their propensity to provide caregiving to their grown children. While directly reciprocal relationships in intergenerational support between parents and their children have been reported in the U.S. and Japan, we tested for the presence of indirect reciprocity from parents to children to grandchildren in Japan. The main research question is: Do the elderly who received more support from their parents tend to give more non-financial support to their adult children?

Models are examined with data from the National Survey of Middle- and Old-aged People's Life conducted in August 2010. The sample consists of 5,648 elderly people who were 50-84 years old with at least one child over 18 years

old. To detect the indirect reciprocal association between from-parent-to-respondent support and from-respondent-to-children caregiving, some regression models are applied. The outcome variable is the number of types of non-monetary support that respondents gave to their first child within the year prior to the interview. The controls are socioeconomic status of the respondents and their first children, and the support exchanged between them.

We found that receiving greater non-financial support from parents raised the propensity to offer caregiving to children, after controlling for other relevant factors. This result offers some rationale for the indirect reciprocity model of intergenerational support.

### *The Current Situation and Future Tasks of Community Service Actions Conducted By Local Sport Clubs □ | a Case Study of Local Football Clubs in Shikoku, JAPAN □ |*

In recent years there's been impressive growth in sport team volunteering to local community service. The purpose of this study was to examine the current situation and future tasks of community service actions conducted by local football clubs in Shikoku, JAPAN. A survey was conducted using interviews, questionnaire and fieldwork from July in 2011 to July in 2013. Data of the questionnaire were collected from a sample of 104 clubs, while the return rate was 49.8%. The main findings were as follows : 1) About twenty five percent of local football club conducted local community service actions, 2) human communication related to unity of sport competition and promoting mutual friendship was important to local football clubs. It was characteristic for local football clubs to have human network closely related to local community, 3) sixty percent of local football clubs intended to continue or start the local community service actions. There were discouraged factors of the local community service actions, while members of local football clubs didn't know what to do. Moreover they didn't have enough money to conduct the local community service actions. This indicated that the share information and financial aid could seed potential local community service actions and 4) local community service actions deeply related to proper leader and frequency of practice. It was quite important to have good connections with outside the club like sponsor or football school. It is necessary to examine the assessment of people living in local community and differences of income between local football clubs.

### *Constructing Social Cleavage Indicators Using the Mixed-Effects Model*

This study demonstrates how we can construct national indicators by analyzing comparative surveys using mixed-effects (ME) model. ME model, also known as multilevel analysis, is usually understood as a method to analyze nested data. Few studies pay attention to its unique ability to estimate individual (or random) effects.

Estimating individual effects, country-specific effects in the case of national comparison, using ME model has two distinct advantages that existing methods do not have.

One is that we can "estimate" indicators with statistical confidence, not just "compose" them by adding up or averaging relevant figures. This merit addresses the problem of composing indicators using unbalanced comparative data. A comparison of attitudes between a country with sample size of 1,000 and one with sample size of 10 would be questionable if we just calculate means of several attitude values for both countries, because the value of a country with small sample size lack reliability. Estimating individual effects using ME method can avoid this problem by introducing "shrinkage estimator".

Another merit of ME estimation is that we can eliminate the effects derived from differential composition among countries. An indicator value of attitudes or happiness could be different because of different distributions of social groups such as gender, age, and classes. Also, simple averaging of different level of attitude among social groups can suffer from bias, because one social attribute (such as educational background) correlates with others (such as age or gender). ME method can deal with this problem because it uses linear regression technique.

This study applies ME method to compose "Attitudinal Divide Indicator" (ADI). ADI can be interpreted as indicating how an attitude toward government roles differs by social groups. A country with high ADI can be understood as a country where there is a sharp divide of opinion among people.

### *Rebuild a Trust Relationship Between Doctors and Patients-- Informal Exchange in Chinese Health Sector*

Trust lies at the heart of effective patient-doctor relationship. Chinese health sector is facing a trust crisis between patients and doctors as shown in the rising numbers of conflicts and dissensions. In seeking an accountable health care, patients widely employ informal exchange by giving gifts and red-packets to doctors, seeking connections and acquaintance relationship (guanxi) to get health care. The gift exchange and guanxi network involve the cultivation of emotion (renqing, ganqing, the emotional feelings of indebtedness and obligation), through which a trustworthy relationship is emergent and negotiated. However, in the changing moral context of China today, trust is very fragile amidst the inherent uncertainties of medical care. The individual efforts of gift-exchange and guanxi networking sometimes could not secure a trustworthy relationship, and patients frequently become the targets of defrauding, extortion and abuse of power. The paper, setting the context in the post-socialist China, shows how people try to counter the rising uncertainty in daily life and to secure a trustworthy doctor-patient relationship. It is about how trust is practiced, dismantled, and rebuilt in daily medical encounter. The paper recognizes the limits of individual informal exchange in building trust, and suggests more works to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

### *Gendered 'living Like The Other' In Turkey*

Some tourists, those who decide to stay a longer while than other tourists in a place they like, might 'fetishise the idea of 'living like the locals' (Davidson 2005: 46). One of the ways Davidson suggests they might do this is through 'integrating themselves within and among local, indigenous communities, learning from them forms of experience and knowledge rejected and repressed by the West' (2005:51). Some might even enunciate their sense of belonging by becoming tourism entrepreneurs and playing the role of host to tourist guests.

Related to this, Soares (1998) talks about globalization as increasing the opportunities for copying which may be related to a desire to perform one's own fantasies about the 'other'. Soares adds that, therefore, 'mimicry can be a weapon against the political reification of identities' because 'the experience of being something else challenges reified identities and brings the possibility of circulating, shifting, and changing to the forefront of social and cultural life' (1998: 295). Such mimicry is riddled with paradox and contradiction, however, because it is never possible to fully *become* the other.

This paper considers the gendered dimensions of such tourist attempts at 'living like the other', at belonging and at becoming 'other'. Drawing on my long-term ethnographic study of tourism relationships in Göreme, Turkey, the paper discusses the different ways in which foreign (yabancı) women and men experience and negotiate their attempts at 'living like the locals'. The discussion will focus on the variable paradoxes and contradictions which foreign women and men face when attempting to live in Göreme for an extended period, as well as on how the paradox of it never being possible to fully *become* the other is different for each.

### *The Triple Role of Social Media: A Case Study*

The Arab Spring's 'Facebook dimension' has already received unprecedented attention. New technology was presented as an instrument used by protesters to build extensive networks, create social capital, organize political action locally and nationally, and put in place transnational links. A debate ensued between the views of 'cyber-enthusiasts' and those of 'cyber-skeptics' (or 'digital evangelists' and 'techno-realists'). A common element, however, is that very little of this research integrates political variables into its analysis. Moreover, the literature provides a rather fragmented picture of this complex phenomenon, with many scholars focusing on relatively narrow social media-related sub-fields. The present paper tries to overcome this division. Its goal is twofold. First, it argues that the full

understanding of the impact of social media on Arab Spring regime change processes is possible only through the analysis of the key role played by this media at three interrelated levels that, until now, seldom have been studied together: as a tactical tool of mobilization, communication, and coordination; as an instrument of domestic and international revolutionary contagion; and, critically, as a means of enhancing pan-Arab consciousness which, in turn, was fertile soil for that contagion. The paper's second goal is to strongly anchor the analysis of social media in the political - and, more specifically, revolutionary - dimension of the Arab Spring. Social media may have been highly influential from many points of view. Still, one should not forget that the Middle Eastern process it influenced was fundamentally a revolutionary wave. As such, the role of social media needs to be addressed within the analytical framework of revolutionary contagion, which until now rarely has been done explicitly.

### *Comparing Different Styles of (Vernacular) Video Analysis*

The paper presents the outcomes of a project that focuses on activities of interpretation of video recordings. The interpretation/analysis of visual data is not only performed within sociology but in a growing number of professional fields and everyday situations ("**Vernacular video analysis**" [1]). My presentation draws on a focused ethnographic study of interpretation practices. I have done ethnographic fieldwork in three fields and recorded practitioners at their interpretation work.

The three fields each highlight different aspects of interpretation work.

In 1) **Police Work** the identification of actors and their ("criminal") actions is the police officials' main concern, in

2) **Football Training** the aspect of instruction is most important and in

3) **Market Research** the interpretation of eye tracking video is distributed and organized via means of information technology.

By itself **reflexively** applying Videography [2] onto the practices of video analysis I am able not only to study those three fields and the spread of visual analysis as a communicative form of generation of knowledge, but am also presenting a reflexive form of videography that allows for the reflection of our situated practices and knowledge that has been criticized as missing in the use of video in interaction research.

[turhan.ozden@gmail.com](mailto:turhan.ozden@gmail.com))

### *Sociological Approach on the ART of Using Drugs By Patients Suffering of Oncological and Psychiatric Diseases*

This study aims to analyze the strategies and tactics used by patients suffering of oncological and psychiatric diseases on the scale of social classes. This study would help to analyze and discuss the most comprehensive questions about the subject at hand.

- Which are the factors that determine the choice of the patient when he takes a medicine?

- Which are the motivations that characterize the behavior of the patients when they take a medicine?
- How the norms established by the public health instances influence the perception of the patients when they take a medicine?
- Basing my assumptions on how the patients take the medicine, I will investigate how the way of taking medicine is influenced by their belonging to a specific social class and which are the cultural factors that determine the way they take their medicine?

Pretti-Wettel and Moatti<sup>[1]</sup> uphold that the patient is not only the subject of his illness but at the same time assumes an active role with his illness by investigating it and by taking part in his healing process. In that context I will investigate the factors which determine the way the patients take their drugs taking into consideration the influence of the media on them, their belonging to a social class, their dwelling environment, their gender, their profession, their educational background, the relation between them and their physician. With this study I hope to be able to assert that there is a similarity in the tactics of taking medicine by patients belonging to different socio-economic and cultural classes and that the practices of public health in Turkey play a unifying role between the various social classes in question.

### *Stigmatizing Discourses in the Legitimization of Renewal Projects in Informal Housing Areas and the Historic Urban Center in Istanbul, Turkey*

This paper aims to evaluate how discourses and accompanying interventions on the housing areas of the urban poor have evolved since the 1950s in Turkey, exemplified in the case of Istanbul. After 1950s, the import-substitution industrialization necessitated low-paid labor force in industrial establishments located in a few cities, including Istanbul. The governments directly or indirectly supported the development of informal housing areas, which served to decrease the cost of reproduction as well as state expenditure on housing. Those housing areas also helped building survival strategies for the urban poor through embedded social networks and mutual help mechanisms.

Since the mid 1990s, the vision of Istanbul as a center of international finance and tourism has guided the new urban policies, based on the development of real-estate and construction sectors. Therefore, urban regeneration/ renewal practices have become the major tool of urban policies, leading to an intensified pressure on the housing areas of low-income population in central locations. In the last decades, this pressure was coupled with disinformation and stigmatizing discourses, prevalent among the members of a hegemonic urban coalition, consisting of central and local governments, state institutions as well as developers, land owners, professionals, and the leading media. These discourses try to legitimize the clearance of those informal housing areas by stigmatizing the inhabitants as "invaders" or "criminals".

In this paper, the findings of the research made in six urban regeneration/ renewal areas will be utilized together with a comprehensive study of the leading media to analyze the changing discourses of prominent actors on the housing problem of the urban poor. This analysis will also cover the accompanying laws, regulations and implementations, which have led to the displacement or eviction of disadvantaged segments of population in most cases, as well as social movements for the right to housing and the city.

### *Post-Westphalian America? Religious Conservatism and American Exceptionalism*

In the sociology of globalization there has been much talk of porous borders, the effects of the international flow of labour, legal pluralism, the fragmentation of civil society by multiculturalism, and the decline of state sovereignty. America however appears, as ever, to be an exception. After 9/11 and the Patriot Act, there has been considerable emphasis on the securitization of society as a whole. The focus of national security is echoed in the agenda of the Republican Party which has opposed the naturalization of illegal migrants, supported a hawkish foreign policy, warned against the dangers of creeping Shari'a, and rejected cuts to the Pentagon budget. Despite its ideological opposition to 'big government', the Tea Party has driven the GOP further to the right over national security and defence expenditure. While the rightward drift of Republican Christians is consistent with traditional millenarianism and Christian Zionism in America, it is reinforced by fears of American decline. Confronted by economic weakness foreign policy now faces a dilemma: isolationism versus confrontation. The foreign policy of Chris-

tian conservatism in the United States was famously captured by Sarah Palin in her recommendation 'Let Allah sort it out'. Despite the cultural divisions, there is however little evidence of any post-Westphalian erosion of American state sovereignty.

### *Incarceration and Household Wealth*

A large literature documents the deleterious economic consequences of incarceration. But little is known about the consequences of incarceration for household wealth, an indicator of economic wellbeing that may be especially important to the survival of low-income families for whom incarceration is common. In this article, we use individual-level data (from the Fragile Families and Child Wellbeing Study) and state-level panel data (from 1985 to 2005) to examine how incarceration is associated with asset accumulation and asset loss among formerly incarcerated men, their romantic partners, and their communities. Results from the individual-level data, which pay careful attention to the social forces that select individuals into incarceration, document that incarceration is negatively associated with vehicle and bank account ownership among men and that these associations are concentrated among men who previously held such assets. In addition, the economic consequences of incarceration spill over to the romantic partners of these men, especially those living with men prior to their incarceration, who report a lower likelihood of home and vehicle ownership. Results from the state-level data document that incarceration rates diminish homeownership rates among Blacks and, in doing so, widen Black-white inequalities in homeownership. Taken together, the results show that the considerable collateral consequences of incarceration may increase inequality in household wealth.

### *Online Environments in Children's Everyday Life: Children's, Parents' and Teachers' Points of View*

Online environments, which cover broadly all websites, are a pervasive part of many children's lives today. More than 90 percent of children and young people in America and Europe use the online environments (Madden et al. 2013; Livingstone et al. 2011). This has led to a public debate about the role of online environments in children's everyday life and about the ways childhood is being transformed by virtual worlds (Plowman et al. 2010). On the one hand, children are seen as experts of the online environments. On the other hand, the online environments are often regarded as a threat for children, because the opportunity to act anonymously causes misbehavior (Livingstone et al. 2011).

The paper explores the role of online environments in children's everyday life. By analyzing 27 interviews with Finnish children aged 11-13, parents and teachers, we examine and compare the viewpoints of both children and adults. We analyse the self-perceived effect of online environments on children's everyday life and particularly focus on the opportunities and risks of the online environments. As a result of our study, we found five types of perceived effects that represent opportunities and risks: learning and socialization, sense of community and empowerment, antisocial behavior, overuse and threat to security.

To our informants, the online environments represent a new form of community and friendship, which helps children to maintain their social relationships. There are positive effects of the online environments, such as enhancing the users' sense of community, social capital and learning (e.g. Wellman et al. 2001). On the other hand, the online environments may decrease social interaction between people in the "real" life. Another reverse side of this "online communality" is social pressure: in order to avoid being bullied, some children used Facebook before they were old enough.

### *University and Its Societal Environment: Reflections on the Triple Helix Model and Ways Forward*

Universities are central institutions in the current knowledge society. Their role is to provide new scientific and technological knowledge, to educate people to serve the society and to alleviate societal problems of various kinds. To these ends universities have been streamlined to perform more efficiently. Simultaneously, the separate institutional spheres of science, university, government,

industry and the civil society have intermingled giving rise to many theoretical interpretations that underline the professed radical change of universities and sciences. Of these theories, the current article focuses on the triple-helix of university-industry-government relations. The model claims that intensified interaction between university, industry and government has given rise to a new kind of research, which not only seeks to advance knowledge but also tries to attain commercially viable products. As a normative policy model, triple helix might be transporting into analysis certain understanding of the developmental role of scientific research. The present paper summarizes the major viewpoints of this theory and reflects on the commentary given to it. To better understand the vices and virtues of the model, it also analyses the model's distinct theoretical status and claims that it is ambiguous, as it combines three types of sociological theory, i.e., diagnosis of an era, general sociological theory and research theory. After assessing the status of triple helix, the paper contributes to the discussion about the model by probing different theoretical avenues that research associated with the concept might proceed. Of central importance here is systems theory by Niklas Luhmann, as major protagonists of triple helix have frequently used his ideas in discussing the model. The current paper draws concepts from Luhmann's theory to specify ways in which empirical research associated with triple helix could be made more responsive to the multi-functional and internally contradictory character of the contemporary research university.

#### *Dress and the Embodiment of Age in Everyday Life*

Clothes lie on the interface between the body and its social presentation. Getting dressed is an everyday body practice, one of the ways in which bodies are made social, given identity and meaning. When we get dressed, however, we do so within the bounds of a culture and its norms; and these include ones in relation to age – as they do gender also. The presentation which draws on an ESRC project published as *Fashion and Age: Dress, the Body and Later Life*, Bloomsbury, explores the role of dress in the day to day performance of aged – and gendered – identities.

#### *The Challenge of Cultural Gerontology: New Directions, Critical Perspectives*

This introductory paper will explore the principal intellectual and social developments that underlie the emergence of cultural gerontology. Opening with a critical review of the sources and scope of the approach, it will trace from where these new impulses came, the theoretical traditions that inform them, and the challenges they present. The paper will draw together the key themes informing the forthcoming *Routledge Handbook of Cultural Gerontology*.

#### *New Approaches to Inequality Patterns in Education Science and Childhood Sociology*

##### **New approaches to inequality patterns in education science and childhood sociology**

From a perspective that considers children as social agents we analyze how socialization- and learning environments are designed, processed and have an influence on children's self-orientation and autonomous learning. By using an interdisciplinary approach that combines sociological and pedagogical theories different dimensions of the 'self' are put into the center of attention. Thereby we aspire to gain new insights into causes of inequalities.

This article uses data provided by the (longitudinal) study "SEBI – Self-orientation and Self-directed Learning: An Analysis of Socialization and Learning Environments of Primary School Children". First quantitative results of the ongoing study assessed the importance of parenting for children's self-confidence in primary school. A perceived parental interest in the own personality – associated with parental interest in the child's specific hobbies, activities and interests – can be seen as central for the academic self-concept. However, a perceived parental emphasis on efforts for the child's academic success does not have such a significant effect. Further, these findings could not be related to social class or ethnicity, which makes a difference to common findings of the majority of socialization studies. Thus, this study contributes to an extended view on inequalities in education by focusing on different socialization practices in families and institutions and how these interrelate to the child's academic self-concept and performance. The per-

spective gained by these findings can be supplemented by qualitative interviews concerning aspirations, parental practices and children's perspectives on school and family life with parents and children across various social backgrounds.

Based on this multi-method way of proceeding we aim to identify different patterns of inequality in socialization related to the self as a central variable. In how far this is a track worth following will be shown by presenting relevant data.

**TYURINA, IRINA\*** (Russian Academy of Sciences, [director@isras.ru](mailto:director@isras.ru))

#### *Consolidation of Russia and Characteristics of Russians' Identities*

Under conditions of globalization the national identity takes on special significance. Globalization creates unprecedented opportunities for the cultural convergence, expansion of the communicative space, lifestyle enrichment. However it causes many challenges and destructive tendencies, including a trend which is defined as «identity crisis». Ambivalence and ambiguity of globalization practices affecting not only the outer structure of social relations, but also individuals' inner world reinforce the need to define their own national and cultural identity. This need is global. However in every society it has its specific manifestations and gives rise to different social consequences. Russia isn't unique in the fact that it experiences the problem of identity. As elsewhere Russians are rethinking, comparing themselves and the world, trying to understand the general and the particular in their identification characteristics. Problems of transformation of Russian identity assume ever greater importance. They mediate the future of the country, its ability to face the challenges of modern world as well as to carry out cultural, economic, social and political modernization. The images which will dominate in mass consciousness will affect the prospects for civil society in Russia, the functioning of political institutions, the social climate of the society. At the same time the Russians' perception of themselves, of their own place in the world and of the others affects the formation of political, social and cultural orientation, which mediates the mass sense of place and role of Russia in the modern world, people's attitude to the Western countries, institutions and values.

#### *Geopolitics, Identity Politics and Sociology in Taiwan, Hong Kong and Singapore*

The paper compares the traditions of sociology in Taiwan, Hong Kong and Singapore based on a systemic bibliographic review, and relates the findings with the identity politics of the three places which reflect their respective roles within a broader context of post-war geopolitics. Four categories of literature that are considered essential to defining the domestic sociological tradition were reviewed: domestic journals or paper series, writings about domestic history of sociology, normative-epistemological debates, and edited collections of domestic social studies. To make sense of the findings, the concept "domestic disciplinary identity" was developed with three forms of 'subjectivities' distinguished: *domestic disciplinary subjectivity*, the degree to which sociologists of a particular locale were considered (or acted) as if they belonged to one bounded community; *domestic empirical subjectivity*, the degree to which a geographical territory was seen as a legitimate epistemological subject; and *civilizational subjectivity*, the degree to which sociologists perceived that they belonged to a culture distinctive from the Western civilizational frame in sociology. The patterns are further associated with the post-War geopolitical statuses and identity politics of the three places: the 'imposed Chinese nationalism' in Cold-War Taiwan and its challenge from the rising indigenous identity after the 1980s; the 'colonial denationalisation' policies in Hong Kong and the ambivalence toward the reunion with China in 1997; the 'multi-racial nation making' project in Singapore following its unexpected independence in 1965.

#### *Internet-Facilitated Social Activism in Taiwan: Modes and Constraints*

On 3th Aug 2013, a group of 39 anonymous 'netizens' mobilised, largely via the internet, a crowd of estimated 250,000 people in front of Taiwan's President Office to mourn for the man-made death of a military corporal, Mr Hung Chung-Chiu, and to protest against how the government responded to the case. The pressure forced the government to concede, agreeing to abolish the distrusted military judicial system during peace time.

The 803 protest marked a new mode of the internet-facilitated social activism in Taiwan. Its sudden surge and the much-acclaimed 'success' drove many veter-

an social activists and oppositional politicians into self-questioning why they had failed to stage a rally at a comparable scale in recent years—even with the help of internet. The question calls for a comparative analysis of this incident and other internet-facilitated social movements.

Drawing from literature review, interviews and some participant observations, this paper surveyed the existing practices of internet-facilitated social movement in Taiwan—a young democracy known for its strength in computing and communication technologies. Four ideal-typical categories are identified and discussed: (1) online activism of conventional advocacy/concern groups, (2) communication platform aimed at facilitating public deliberation and social empowering, (3) issue-specific protest initiated in a decentralised, less consolidated fashion among concerned 'netizens' and (4) various 'open access' projects initiated within an IT-savvy community (e.g. the 'g0v,' zero time government project).

A model will be theorized from the comparative analysis to account for the varying scales of public participation with three factors: emotional epidemic factor, cognitive entry barrier and technological entry barrier. At last, a normative ethic on *managing* the scale of activism will be developed with the 'public attention' considered as a scarce public resource. The various modes of internet-facilitated activism will be critically evaluated with the ethics in mind.

### *A Comparative Study on the Inter-Professional Collaboration Among Actors Involved in Active Ageing Programmes: Lessons from Denmark and Taiwan*

This research aims to investigate the inter-professional collaboration among actors involved in the collective actions of Active Ageing campaigns, from NPOs to the state, the media, political parties, and commercial companies. It asks how do actors interact with each other and to what extent can inequality be eliminated? Denmark and Taiwan, with their differences in welfare regime, population ageing process, development of democracy and union movement, can be good cases to be compared. With the theoretical framework developed by Nahapiet and Ghoshal (1998), this study examines the relational dimension of inter-organizational social capital. Strikingly, three patterns of perceived relational social capital can be concluded in both the Danish and Taiwanese organizational fields, and each has its implication of obstacles to collaboration.

In Pattern 1 where actors continuously measure who needs whom more and for what, an unequal power relation can be noticed. Actors at a more disadvantageous position are more vulnerable to collaboration availability and they identify with their partners in exchange of their trust. Moreover, when a collaboration project is accepted, actors' identification of being in the same community is formed. However, with numerous back-and-forth circumambulations, actors keep asking if they should trust their partners. This is the Pattern 2 in this study and its kinetics can be categorized as follows: a) toward mutual trust because of complementary needs and ideal type of identification; b) toward distrust with problems of obligations and expectations as the crucial reason; c) toward distrust with imperfection in norms as the basic problem. Last but not least, Pattern 3, which features in harmony and stabilization, differentiates itself from other two patterns by harmonized conflict of interests among actors and a shared enemy—usually the state. Overall, embedded trust, which is weighted with identification, functions as the key mechanism in shaping such inter-professional collaboration.

### *It's Time to Change: How Does Kid-Focused Business Survive and Benefit from Population Ageing?*

Ageing is a dynamic process involving responses at both individual and societal levels. Theoretically, the existence of an organization is a consequence of temporal societal demands. This study asks why and how kid-focused business can survive and benefit from our ageing society. Particular emphasis is on their strategy in terms of legitimacy and organizational social capital. Japan and Taiwan, with their similarities in filial piety and inter-generational solidarity, can be good cases to study this issue. Various methods, such as in-depth interviews and content analysis of publications and government statistics, are applied to identify the underlying governance structures.

Social innovation across institutional boundaries can be recognized. Charities for the elderly and cram schools both recruit senior volunteers to teach children after school hours. Institutional re-design can also facilitate social innovation. Examples include kindergarten and nursing homes to be set in the same building, and public school campus turning into tourism resort. Vague vision is another

strategy for actors to find legitimacy and incorporate as many projects as possible. Moreover, institutional reframing based on institutional reproduction but with actors' minor modification due to institutional leaks and personal interests, can create alternatives for those whose jurisdiction is territorially defined. A good example is public schools in the cities with students changing their household registration from the countryside but in reality commute everyday.

To sum up, actors' agency and conditioning of institutions can both pave the way for kid-focused business. The concept of New Institutionalism can explain actions within a given institutional environment while the notions of organizational social network and social capital can help to understand why Active Ageing campaigns are widely utilized. This study ends with suggestions for re-thinking the meaning of Active Ageing campaigns and if the elderly are hence empowered or exploited.

### *How to Include Material Elements in the Analysis of Life Stories? Applying Actor-Network Theory to the Analysis of Autobiographical Narratives on Alcohol Dependence*

Often the aim in the analysis of life stories is to identify cultural meaning structures that tell about the values and norms that regulate people's life choices and give purpose to their aspirations. Hence, the life stories are often approached, for example, by applying Vladimir Propp's theory on narrative functions or William Labov's theory on narrative categories.

By applying actor-network theory (ANT) to the analysis of autobiographical narratives on alcohol dependence, the paper shows how the methods that focus on the identification of cultural meaning structures have a tendency to detach action described in life stories from its material and bodily mediations and overemphasize the importance of psycho-social and cultural factors in action. In ANT action is understood as an effect of network where both human and material elements can act by a set of links of relations. ANT offers tools to grasp how alcohol dependence, for example, is produced and mediated by a network of material, bodily, psychological, social, conceptual and cultural entities that transforms the action in an unforeseen way.

The paper uses empirical examples from the life stories on alcohol dependence to discuss how material entities, like physical spaces, material resources and bodily reactions, may trigger a dependency to alcohol, stabilize it, prevent it or abolish it as part of networks that connects human and non-human material elements. It proposes that as we follow the mediations of action and their conglomerations in many surprising sets of agencies, we should focus on situations/events and their concrete processes. That is, cultural meaning structures, like narrative functions or categories should be considered as mediators among other mediators, acting as part of complex actor networks that include also material elements.

### *Women's Responsibilities, Freedoms, and Pleasures: An Analysis of Italian, Finnish and Swedish Women's Magazines' Alcohol-Related Advertisements from the 1960S to the 2000S*

Since the 1960s, feminist movements have emphasized that men and women should be seen as equal in their roles as parents, breadwinners, and citizens. This conception is not confirmed by the images produced by advertising. The article presents an analysis of alcohol-related advertisements published in Finnish, Italian and Swedish women's magazines from the 1960s to the 2000s. The advertisements are approached as representations of gendered performances in which gender is made visible "here and now" by placing women in particular subject positions (identities, gender roles) that are related to private or public spheres and associated with specific kinds of gender expectations and norms reflecting women's shifting responsibilities, freedoms, and pleasures. The article asks what kind of drinking-related subject positions have been portrayed as desirable in women's magazine advertisements over the past few decades and how those positions have changed as we move closer to the present day. The analysis reveals both continuity and variability in alcohol-related subject positions in Finnish, Italian and Swedish women's magazine advertisements. It shows how women's responsibilities, freedoms, and pleasures have expanded from the traditional domain of the private sphere to multiple new areas as Finland, Italy and Sweden have developed from modern societies to late-modern societies. However, the expansion of women's identities has occurred differently in each geographical area. Furthermore, the analysis shows that the expansion of women's identities does not mean that the traditional gender norms have disintegrated and been replaced by equal gen-

der norms. Rather, it seems that traditional gender norms continue to be reproduced in alcohol-related advertising.

### *Changing Consuming Behaviors By Designing Eco-Efficient Green Products*

People continue to create and consume more innovative technology products in order to make life more convenience and comfortable than the past. However, huge industrial processes bring significant changes in the Earth. Natural resources are getting to dry up; ozonosphere has been destroyed; environment has been contaminated and so on. These environmental changes cause serious threats to the survival of the Earth's species.

Therefore, in recent years, environmental awareness began to be respected, and researchers explore green issues hoping to make living things can be survival sustainable. Many countries have implemented environmental protection laws to reduce the environmental impacts of industrialized society. For instance, WEEE (Waste Electrical and Electronic Equipment Directive), RoHS (Restriction of Hazardous Substances Directive) and EuP (Energy Using Product) organizations under the auspices of the European Union try to limit the environmental pollution caused by products. Laws and regulations seem to be a "pushing" force on changing consuming behaviors.

On the contrary, this research examines the possibility of a "pulling" force on changing consuming behaviors by designing eco-efficient green products. The present study attempts to integrate 39 engineering parameters of TRIZ (Theory of Inventive Problem Solving, developed by Genrich Altshuller) with 7 eco-efficient elements (Reduce material intensity; Energy intensity minimized; Dispersion of toxic substances is reduced; Undertake recycling; Capitalize on use of renewable resources; Extend product durability; Service intensity is increased. REDUCES, in short) proposed by WBCSD (World Business Council for Sustainable Development) to construct a green product design matrix, and use patents to verify the validity of this innovative green product design process. The green product design process of this research may allow designers to generate green products by improving eco-efficient elements as well as resolving conflict design issues. Hopefully, eco-efficient products may attract consumers' attention and thus unconsciously change consuming behavior, and approach sustainable goals.

### *Industrial Food Pollution: A New Perspective on Food Safety Risks Beyond the Current Legal Definition*

This study proposes a new perspective on food safety risks, with reference to the 1968 Kanemi rice bran oil poisoning in Japan. This poisoning was brought on by Polychlorinated Biphenyls and dioxins, which are hormone-disrupting chemicals. As a result, the victims had chronic illnesses and passed on the poisoning to their children. Despite the victims' ongoing need for compensation and relief, no adequate policies as yet exist.

Similar to the Kanemi case, East Asian society has experienced many other food contamination, e.g. the 1955 Morinaga arsenic milk poisoning in Japan, the 1979 Taiwan rice bran oil disease, and the contamination of food with melamine in China and Korea in the 2000s. These cases show that salient issues regarding food in East Asia have changed from security to safety. Furthermore, they indicate that this study can be applied to other contamination cases.

In contrast to neglected those cases, environmental pollution incidents such as Minamata disease - caused by the methylmercury contamination of Minamata Bay in the 1950s - were officially recognized as 'public nuisance'. The victims of them therefore received public compensation in accordance with the law. However, the government denies that serious food poisonings are 'public nuisance', leaving victims without compensation.

From the sociological perspective, the social damage structure of the Kanemi was not similar to typical cases of food poisoning. Rather, with regard to the victims' possibility of recovery, the negative effects on daily life and community, and the cause of the contamination, it was similar to 'public nuisance'.

In conclusion, I propose a new perspective of 'Industrial Food Pollution', beyond the Japanese legal definition of 'Food poisoning' and 'Environmental pollution as public nuisance'. Based on this perspective, I recommend the establishment of 'Relief Fund for Industrial Food Pollution', which institutionalize compensation systems for victims.

### *Rights and Responsibility - Investigation of the Emergence of Entitled Children and the Amendment of Juvenile Law in Japan from the 1990s into the Next Century*

In Japan during the 1990s, concepts of childhood changed, both within the domestic and international contexts. The emerging notions of self-determination, freedom, and responsibility, being debated on several fronts, were applied to children. The application of these notions extended into the functionality of juvenile law. The questions to be raised are: Is the child considered as an object in need of protection and guidance? Should the child be viewed, similar to the adult, as an independent being who has an innate ability for self-determination? How has Japanese society perceived the child? These questions form the core for investigating social, political, and legal transitions within Japanese culture in regards to its *entitled children* who newly emerged in the 1990s and started emphasizing their rights as they thought were rightfully theirs. In this research, *entitled children* are defined as those who consider themselves as an independent adult holding the rights concerning the choice of their actions. This research aims at reconsidering and reconstructing Japanese society during this time concerning the topic of *entitled children* and their degree of self-determination as conceptually developed by their observers, such as educators, psychologists, sociologists, legal professionals, and others. This research also enables the production of interdisciplinary discussions between areas of law, sociology, cultural studies, media studies, and qualitative fieldwork. Investigating the developed observations of multiple disciplines is beneficial for formulating a broader context in order to analyze and comprehend the topic (235 words).

#### *Power in Classical Sociology*

Power in Classical Sociology  
Lars Udehn, Stockholm University

This paper is an attempt to synthesize the various ideas of power that we find in classical sociology. By "classical" sociology is understood sociology from its emergence in the nineteenth century until the beginning of the 1960's. This means that it covers the writings, not only of Marx, Weber and Simmel, but also the structural-functionalism of Parsons and the exchange theories of Emerson and Blau. The paper takes the form of answers, found in classical sociology, to a number of questions, including: "What is power?, What gives power?, and How is power exercised? In answer to the first question, a distinction is made between power in a broad sense, as a capacity to influence other people, and power, in a narrow sense, as an asymmetric relation of domination. The answer to the second question is that there are two sources of power; resources and rights – the first highlighted by Marx and the second by Weber – which are analytically distinct, but usually intertwined in reality. The answer to the third question is that power is exercised in four principal ways: (1) by the promise and/or use of rewards, or *inducement*, (2) by the threat and/or use of punishments, or *coercion*, (3) by trying to make people change their minds, or *persuasion* and (4) by an appeal to their duties, or in the words of Parsons, by an *activation of commitments*.

#### *Online Disinhibition As a Predictor of Cyberbullying Among Adolescents*

Bullying in schools is a serious problem that has commanded attention from scholars the past few decades. However, with the ongoing changes and developments in technology a new dimension to the problem has emerged: cyberbullying. Research has shown that cyberbullying can lead to depression, suicidal thoughts, decreased self-esteem and academic problems among others.

This presentation addresses the issue of cyberbullying based on the results from a survey of nine-hundred and ten high school students (mean age 16.31). Various theories and approaches have been used to explain cyberbullying. One possible factor that could lead to cyberbullying is online disinhibition. Up to now there have been no studies that specifically examined the link between online disinhibition and cyberbullying. The questionnaire included the Online Disinhibition Scale (ODS), a new instrument developed to assess online disinhibition levels.

Results from logistic regression analyses revealed that those students who were more disinhibited in online environments were consequently more likely to have cyberbullied someone. Examination of individual items of the Online Disinhibition Scale showed varied results.

#### *The Coming of the New Class Society: Gender Matters*

Back in the 1960s, Daniel Bell predicted the coming of the new class society based on the knowledge and information capitalism. Assuming that gender would not matter in the knowledge society, women expected that this society would change in a more gender-equal direction. In reality social change has promoted neo-liberal reforms that have resulted in a widening class gap and decreased social mobility, wherein gender matters a great deal. Women are cast into the labor market in the name of the "equal opportunity," which handicaps by virtue of their care-burden. In addition, the rapidly ageing society added further burdens to the care-takers, mainly women. The result was extremely low fertility. Most OECD countries try to solve issues of care through public policy or markets, both of which depend heavily on migrant labor. In the absence of this solution, in Japan gender serves as the functional equivalent along with race and ethnicity. This explains why the women's status in Japan as measured by the Gender Equity index or Gender Gap Index is relatively as relation to its ranking in the Gender Development Index and the Human Development Index.

The recent disaster of the Fukushima nuclear power plant following the giant tsunami has sent out a warning that we must change our over-competitive society that places such a high value on wealth and growth. Nevertheless, the Japanese nation does not want to learn the lesson of history, despite paying an enormous price. I will argue that there is much to be learnt, both positive and negative, from the Japanese experience.

#### *Facebook Activism By Foreign Domestic Workers in Singapore*

Studies of foreign domestic workers are now numerous in the social science literature, with much attention paid to left behind families. Since new research is required to contemplate the latest change, this paper uses authentic accounts related to the current explosive growth of social networking by live-in domestic workers in Southeast Asia. Evidence was gathered through 54,000 posts on a Facebook group, most from Filipina domestic workers in Singapore. Interviews were held with Facebook group members, including a founder of the NGO responsible for starting the social network group. Findings confirm that internet technology has become integral in the lives of foreign domestic workers, enhancing their social interactions and mobilizing their self-expression. There is evidence that Facebook reduces psychological and physical costs for live-in workers, making it relatively easy for them to participate in activist social networking. Evidence suggests that, in addition to providing entertainment for foreign workers, Facebook motivates an increasing number of distantly scattered individual workers to engage in social activism.

#### *How Japan Imports Social Problems from the West: Child Abuse from Early 20th Century to the Present*

For more than a century, Japan's approach to the child abuse problem has been stimulated and shaped by developments in western countries, particular in the US. Early in the 20th century, a national discussion of child abuse was initiated by handful Japanese who had been exposed to western philanthropy. In the 1970s, Japanese medical professionals raised awareness of battered child syndrome proposed by a leading American pediatrician. Starting in the 1990's, a massive discourse on child abuse problem emerged from various professional groups who admired prevention and treatment measures from the US. Official data show that child abuse cases in Japan are most common for people of lower economic class. However, social policy on child abuse problem downplays the importance of economic stability and attributes the problem to individual families. Thus, government policy prioritizes identifying settings where there is a risk of child abuse and counseling parents instead of focusing on bringing families out of poverty. A child abuse risk assessment tool from the US is applied to every Japanese family in which there is an infant. The present study shows evidence of increased social panopticism and shows that risk technology morally penalizes mothers, leading to social exclusion.

#### *Moral Identity in Friendships Between GLB and Straight College Students*

People make moral claims about sympathizing with and providing support for stigmatized individuals, but past studies tended to focus on this type of moral identity construction within formal organizations. The present study seeks to extend the literature by identifying the process of moral identity construction in a personal setting—friendships between gay, lesbian, and bisexual (GLB) people and straight people. Analyzing data from in-depth interviews with college stu-

dents in the southeastern US, we show that straight students claimed their moral worth by emphasizing their deliberate decisions to develop and sustain friendships with GLB people and by highlighting how the friendships led them to personal enlightenment and political actions. GLB students, as a stigmatized group, also claimed moral worth by emphasizing their ability to cross the community boundary and to be accepted in the larger society. Organizational and life course contexts strongly shaped students' strategies to construct moral identity as these contexts specified constraints and resources available in their friendships.

#### *Socio-Economic Background/Women Empowerment and Maternal Health in Cross River State, Nigeria: Using Data from the Ndhs 2008*

Gender equality and women's empowerment are important indicators in development strategies that focus on poverty reduction and improved maternal health. Despite the importance of these factors to the overall wellbeing of women and the nation, research in this area is neglected. Besides the condition of women in relation to women empowerment, indicators have remained poor. The study used data from the latest national Demographic and Health Survey (nDHS, 2008) to examine the socio-economic condition of women in relation to their level of empowerment and as a correlate to maternal health outcome in Cross River State. The study utilized data of a representative sample of 735 women of age 15-49. A majority of respondents reported Poor/low socio-economic status ranging from low educational status, unskilled occupation, low income per month, seasonal employment etc and this affected the level of empowerment in all the indicators. These are women's participation in household decision making, their attitude towards wife beating and their attitude towards a wife's right to refuse sexual intercourse with her husband or partner. This condition is manifested in high maternal morbidity, mortality, inability to determine number of children, spacing and antenatal care options available to them. This is in line with the prevalent scenario in the entire country. There is therefore an urgent need for improving and enhancing women socio-economic condition as it will improve their level of empowerment and will bring about better maternal health status.

#### *Colonialism, Land Use Planning, and Indigenous Rights: Using Institutional Ethnography to Understand the Colonial Rationalities of Planning in 21st Century Chile*

This paper shares some initial findings of a theoretical and methodological exploration, in which I use institutional ethnography (IE) to examine the role played by planning in the dispossession of Indigenous peoples in Chile. Over the past fifteen years, the planning literature started to recognize the complicity of the discipline with colonial domination and imperial aspirations of territorial expansion, in particular how land use planning has been one of the main mechanisms used by European settlers to appropriate Indigenous lands. Starting from the premise that planning processes are embedded in complex and broader institutional structures, I further argue that planning has contributed to the reproduction and perpetuation of colonial injustices until this day, in part through the existence of institutional, legal, and decision-making frameworks that are colonial legacies.

Although IE has not been widely used by planning scholars, I claim that to understand how colonial rationalities are reproduced through everyday planning practice it is critical to look at how written texts – especially plans, legal documents, regulations, and policies – shape planning action and help reveal colonial ruling relations. To answer this empirical question, I draw on in-depth interviews and document reviews, discussing how the daily actions of government planners in Chile bring to life colonial visions and understandings, although in subtler and more invisible ways than in the past. I use as an example the planning and implementation of the first Consultation on Indigenous Institutions, led by the Chilean Government in 2011, which was developed in the context of the recent endorsement of ILO Convention 169 and the UN Declaration on the Rights of Indigenous Peoples. This exploration shows how the recognition of Indigenous rights challenges Indigenous/State relations and simultaneously reinforces colonial notions of state sovereignty, Lockean ideas of land use and property rights, and liberal understandings of human rights.

#### *Facing An Unequal World: The 1967-70 Civil War In Nigeria, Its Causes, Consequences and Implications On The Biafran Side Of The War In Contemporary Nigeria*

**SHORT ABSTRACT:** The paper examines the causes and effects of the 1967-70 Civil War on the Biafran side of the country, even decades after the actual war.

**LONG ABSTRACT:** Violent conflicts of inter and intra state wars of myriad conceptualization have become synonymous with post colonial states in Africa. The Nigerian-Biafra war of 1967-70 took a genocidal dimension in which the killing of people on the Biafran side of the war became a state industry. These decimations took the features of a pogrom against the "Biafrans" which resulted in millions of people of that side of the country exterminated in the war.

This paper, therefore, analyses the causative factors of the war, the consequences of the war in terms of the massive human deaths, the refugees' problems and the excruciating economic and social aftermath of the war on the then citizens of Biafra and Nigerins in general. The paper argues that even in the contemporary globalization world of today, the people from the major tribe that constituted victims of the secessionist war still suffers from unequal treatment in the present Nigerian socio-political context, being a hangover of the Nigerian-Biafra civil war of post-independence Nigeria.

**UHNÖO, SARA\*** (University of Gothenburg, [sara.uhnoo@gu.se](mailto:sara.uhnoo@gu.se))

#### *The Social Meaning of Racial Humour Among the Police*

This paper explores a controversial side of police culture: the use of ethnicized humour among the police. The empirical material consists of twenty-two interviews made in context of an assessment on the work environment for ethnic minority officers and civilians within a major Swedish police force. The qualitative analysis illustrates how officers and civilians with an ethnic minority background talk about the widespread use of racial humour within the police. On the one hand, they criticize their colleagues for using racist jokes, as it reproduces ethnic stereotypes and tends to position minority officers as 'outsiders', but, on the other hand, they contribute to the reproduction of racial jokes and consider it to be an unavoidable, quite unproblematic, part of daily police jargon. Finally, the difficulties of walking the thin line between police jargon and ethnic bullying and the problems that racial humour implies for diversity work within the police are discussed.

#### *China's Involvement in Africa: New Approaches of Solidarity in Economic and Development Policies or Just South-South Rhetoric?*

The increasing Chinese activities in African countries are often stated as different or competing against Western approaches of development aid and economic relations. Not only regarding quantity but also quality, the Chinese involvement seems to develop specific patterns of a development model, for example the principle of non-interference. This paper analyses Chinese conceptions of economic and development policies towards African states. By putting these policies and their implications in the context of historical structures and social relations of forces, the asymmetrical power relations, the counter-hegemonic potentials as well as the interests and strategies of the stakeholders involved within this "third way" between (Post)Washington Consensus and South-South-Cooperation can be identified.

However, there has not been much research on African perspectives on characteristics and patterns of Chinese involvement. Therefore, in its second part, the paper focuses on the perception of Chinese activities in Ghana and the impact on local developing role models. Being the "darling" of Western donors and simultaneously experiencing a rapidly increasing Chinese involvement on different levels of its society, Ghana presents a crucial case study with conflicting constellations of interests. According to (neo)gramscian concepts of hegemony, a sustainable impact on the local development model, manifested in reciprocally combined elements of institutions, ideas and material capabilities, must include aspects of consent (considering the specific background of the Ghanaian society by including theoretical perspectives of peripheral statehood and postcolonial approaches). Do Chinese stakeholders accomplish a broadly-based consent on their activities and therefore establish patterns of a „different“ development model in Ghana? Does the Ghanaian civil society perceive them as an alternative to the dominant (Post)Washington Consensus? Following a qualitative mixed-methods design, combining expert interviews, media analysis, and secondary analysis, the findings of three core areas of the Chinese economic and social activities will be presented and compared: construction, mining and trade.

## Gender Representations in Occupational Descriptions

The Swedish labour market is to a vast degree segregated by gender, likewise as in many other nations. Women and men work in different occupations, branches and even sectors and a majority (73 percent) work in occupations where 60 percent or more of the employees are of the same sex. Women are engaged in occupations such as nurse, social worker, teacher, assistant nurse and child minder, while men primarily work in manufacturing or with diverse technical occupations. The separation of men and women in the labour market can be explained by the structural relationship between the sexes and it contributes to stereotyped gendered images of occupations. Both tasks and occupations tend to be sex-typed and we associate them with being either female or male. "Female" occupations include different aspects of caring for other persons and thereby correspond with dispositions assumed to be held by women. "Male occupations" are associated with physical strength, technical skills and logic – dispositions traditionally associated with men. Sex-typing is an ongoing process, part of the overall gender system in society, and is related to hegemonic cultural beliefs about gender.

This paper draws on empirical data consisting of occupational descriptions produced by the Swedish Public Employment Service (Arbetsförmedlingen). It presents the results from the on-going research project that studies whether descriptions of occupations are a mechanism for social reproduction of gender, social class and ethnicity. The paper focus how gender is represented in the 30 most common occupations for women and men respectively. The aim is to find out whether these occupational descriptions reproduce stereotyped images of gender, and how. The study was conducted through a qualitative content analysis. Preliminary results reveal that they both reproduce and break stereotypes: by emphasizing that nurses need to be technical and that a janitor must have social skills.

## Information and Communication Technology (ICT) and "Isolated Child-Rearing" in Japan

This paper explores how ICT affects social movements for dealing with "isolated child-rearing" through analysis of political documents and qualitative interview data, especially focusing on the relation between ICT and neighborhood relationships or regional networks for families. In Japan today, these social movements for dealing with "isolated child-rearing" have been active. They problematize "isolated child-rearing" which result from the urbanization, the increasing number of nuclear families and the dilution of neighborhood and family relationships, mainly on the assumption that the isolation relates to "child abuse" and "child-rearing anxiety." For this reason, they try to strengthen supports for parents by neighborhood or special local agencies. On the other hand, recently some governmental ICT projects for preventing "isolated child-rearing" have been promoted, such as building a social networking service site for parents and developing e-learning environments to foster advisors on child-rearing. These projects enable parents to seek advice or to talk with other parents on their smartphone or personal computer without leaving home regardless of their regional contacts. So, how does the promotion of these ICT projects affect the need for developing a sense of community and building regional networks for preventing "isolated child-rearing"? In conclusion, the governmental ICT projects in Japan are rigidly focusing on "local community," so in the name of "community informatization," many local governments are engaged in developing ICT to strengthen neighborhood relationships and regional networks. Similarly in a real-life situation, most of the parents who replied this investigation prefer to ask for help and talk with someone they know by sight rather than only online. For these parents, the primary objective of using ICT in their child-rearing lives is to communicate with their family or neighbors. Thus, in Japan the utilization of ICT for preventing "isolated child-rearing" is directed to strengthening neighborhood relationships or regional networks.

## Producing Economic Knowledge: An Ethnography of Newsrooms in Brazil

### Producing economic knowledge: an ethnography of newsrooms in Brazil

In line with recent ethnographic research concerned to shed light on knowledge production in advertising agencies (Aritzia, 2013), trade floors (Beunza & Stark, 2010) and news agencies (Boyer 2011), this investigation considers the newsroom as site of economic knowledge production in Brazil. In particular, this paper presents the early results of a multi-site ethnography of economic news production in the mass media in Rio de Janeiro and Sao Paulo in 2013. It draws from more than fifty interviews with economic journalists, media commentators and economists, as well as from participatory observations of journalistic practices within newsrooms. The paper looks at how relationships – both competitive and collaborative – between the following four entities help create economic knowledge, and how this knowledge interacts with the generation of news. The entities in question are: 1) people (individual actors and groups, e.g. journalists, economists, commentators, editors, etc.); 2) non-human instruments (devices, models, rankings); 3) structures (classes, professions) and 4) networks (relationships between actors, instruments, structures). The paper pays special attention to how news about the economy is constructed and circulated, and how this news in turn draws upon, contests, and helps to produce economic knowledge. This research forms part of the ERC funded ECONPUBLIC project, which study how the ideas about the economy have been produced in the mass media in the UK, US, France, Argentina and Brazil in the post-war period. <http://www.econpublic.hps.cam.ac.uk>

## Democratization of Local Leadership--- the Role and Function of Local Governance in the Disaster-Processes of the Great East-Japan Earthquake and the Tsunami

The gigantic earthquake of magnitude 9.0 which occurred on 11<sup>th</sup> March, 2011 caused tremendous damage to the huge coastal area around Northeast Japan. The tsunami was of historical record in terms of its height and area affected. As of the end of March, 2012, over 20 thousand people were reported as dead or missing related to this disaster.

Moreover, serious accidents at the Fukushima Nuclear Power Plants that happened sequentially had a great impact on the huge area. The catastrophic damaged communities had been in financial difficulties with a high percentage of aged people, revealing various types of precariousness in the social structure of the communities and the vulnerability individual resident groups have.

In terms of mitigation, temporary living, restoration and reconstruction processes, the role of local political leadership that could listen to requests and meet the demand of the residents on the one hand and that could negotiate with the central and prefectural governments in order to get necessary assistance to help people in the disaster areas on the other hand, is getting more and more important. Based on the in-depth interviews to local leaders of the hard hit areas we explore the role and function of local leadership and its effectiveness, as well as the condition on which they are doing well with these jobs.

Among the democratic countries Japan has a rather centralized political and social system with a strong central government in terms of budget-control, regulation of prefectural and local government system etc. Furthermore after the earthquake we experienced the change of governing party from the Democratic Party of Japan to Liberal Democratic Party, which seemed to mean that it is necessary to consider deeply the way of the political leader, not only at national level but also at local level.

## An Ethnomethodological Explication of the Usage of Diagnostic Categories: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (2)

Through the lens of medicalization in sociology, the relations that people have with medical categories are considered subordinate to medical professions. Therefore, how individuals with autism spectrum disorder (ASD) come to terms with the category of "ASD" is considered a manifestation of that subordination (Conrad, 2007). However, this perspective prevents us from understanding actual situations in which those individuals come to terms with the diagnosis of ASD. Many studies have investigated the various relations people actually have with their diagnostic categories (Hacking, 2009; Jutel, 2011). Based on these precedent studies, this presentation examines the sessions of *tohjisha-kenkyu* (which roughly translates as "sufferers' first-person study") and explains the interactions of the settings in which participants refer to their own diagnostic categories. The Japanese word *tohjisha-kenkyu* refers to a collaborative activity in which the indi-

viduals suffering from social isolation due to their impairments talk about their troubled experiences and study the structures of these experiences in their own words. *Tohijsha-kenkyu* began in a mental patients' group in the town of Hokkaido, Japan and has since been utilized in many other groups of individuals with various impairments (Ayaya and Kumagaya, 2008; Ishihara, 2013). The sessions of *tohijsha-kenkyu* this presentation examined were for individuals with ASD and conducted by these individuals. Using ethnomethodology and analyzing audio recordings of the sessions, we focused on the following questions: (1) What is the significance and what are the roles of the participants' self-reference to diagnostic categories? (2) What relationships do these usages of diagnostic categories make possible between participants? (3) What consequences do these usages give to the meanings of these diagnostic categories?

#### *How Diagnostic Categories Influence the Self-Description of Person with a Diagnosis: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (1)*

Previous studies have revealed that there is a mutual relationship between the self-description and social cognition/interaction (Spreng and Mar, 2012; Nelson and Fivush, 2004). These studies have found that to infer the intentions, feelings and beliefs of others from their behaviors requires the structured self-description which serves as a reference frame. On the other hand, self-description is structured through the social interaction.

The persons with Autism Spectrum Disorders (ASD), the medical definition of which is qualitative deficits of social cognition/interaction, are suggested to have difficulties in semanticizing their own autobiographical memories through social interaction, which gives atypical structure of self-description (Crane et al., 2010; 2011; Bon et al., 2013; Lind et al., 2010; Williams et al., 2010; Uddin et al., 2011). However, performance of social cognition/interaction and self-description depends on 'how' to interact 'with whom', and may not be reduced to individual characteristics (Crane and Goddard, 2008; Bruck et al., 2007; Crane et al., 2012).

As a practice in which alternative self-description and social recognition/interaction are generated simultaneously, we focus on *Tohijsha-Kenkyu*. '*Tojisha*' means first-person in Japanese, and '*Kenkyu*' means research. In a nutshell, *Tohijsha-Kenkyu* is studying oneself through communication with others who share similar experiences. *Tojisha-Kenkyu* is a novel method of self-help and intellectual exploration born in Japan, which neither accepts without question nor rejects completely existing technical terms and diagnosis, but rather uses and customizes them to make more suitable descriptions for each experience.

In this presentation, the speaker, who is diagnosed with ASD and is a facilitator of *Tohijsha-Kenkyu* meetings for ASD, will introduce 7-year experiences of *Tohijsha-kenkyu*. She also talks about how she has utilized technical terms to change her own self-description, which ranges from implicit body schema to explicit self-narratives, and the relationship with others (Ayaya, 2013).

#### *Social Policy in the Context of New Global Actors: How Far Is China's Developmental Model in Africa Impacting Traditional Donors?*

China's role as an emerging donor and its conceptualization of social policy in Africa has generated polarized reactions in the West. Many argue its 'productivist' approach is driven less by notions of citizenship and social rights, and more in terms of accumulation functions. Social investment is justified for broader economic development goals in contrast to current safety-net or 'welfarist' models of western donors. While some international organisations perceive the Chinese approach as antithetical to Western goals and practice, others welcome it as an opportunity to develop new ideas about social development.

This qualitative research explores to what extent and in which direction Chinese aid to Africa is influencing Western ideas about welfare policy in developing countries. The study comprises a systematic review of Sino-African and Western policy documents and semi-structured interviews with senior Chinese, Western and African stakeholders. It investigates how social policy is conceptualized by those involved in Chinese aid to Africa, to what extent this differs from traditional Western approaches, and what it means for Western social development policy. The implications for understanding the drivers of global policy development and links between the economic and social dimensions of welfare will be explored.

#### *The Transfer of Public Schools's Management for the "Public Non-State Sector" in São Paulo, Brazil: Challenges When Education Becomes "a Care Service to the Consumer"*

An overview of the author's master's research (in progress), which discusses participation and social control specificity in "public non-state" educational services in Brazil during the last decades, after a major structural change in the country's public educational services.

It investigates how the funding architecture of state services take place after 1998, when the transition from "full public" to "public non-state" took place. It attempts to explain how the as called "financialization" and internationalization - key features in capital globalization - interfere on participation and social control in public education sector. The case study analyses a legal entity created to this end - the OSCIP - specifically the branch of education that began to operate in the first schools with public non-state management in São Paulo. Marked by incisive participation of the business community in partnership with the higher authorities of planning education (Education Departments of State and Municipality), their intention is to draw a OSCIPS school management model that copies central countries' school structure. This experience in São Paulo is crucial: it's a pilot project for all public education in Brazil. If successful, all municipalities and States should also adopt this new model and all public schools shall be run by non-state entities.

The intention is to unfold and underline the mechanisms of production of a specific kind of participation and social control over public services, which is based on the logic of "care services to the consumer". As a result, the strategies for a non-state organization, which presents itself as a nonprofit one, obtain profit arises. And, therefore, it can be said that there are private intentions supporting entrepreneurship in these supposed non-profit sectors.

#### *Social Narratives For Noble Art Collecting (Spain, 1750-1850)*

The main purpose of this paper is to study the role that collections of art works and other artifacts played in the definition and exhibition of social discourses of legitimacy and differentiation of the estates. Since noble collections embodied social theory and social legitimacy, old noble houses transformed their artistic policies in the transition between Early Modern and Modern and Contemporary Europe, as a response to the competition environment due to the new nobility and other groups climbing the social ladder. Also these old noble houses had to answer the coincidence with the institutionalization of the new artistic system represented by academies and museums. All these elements promoted the rearrangement of old collections and the display of new social narratives for their public interpretation.

This aim is intended to be pursued through the analysis of the ideological narratives on collecting deployed by Spanish ancient nobility, 1750-1850, focusing on the houses of Osuna, Alba and Medinaceli, among other families. These old noble houses had been displaying social narratives through collected objects since 16th century. Portraits, religious and historical paintings, a few masterpieces with acknowledged aesthetic value, weapons and many other different items had been collected, organized and narrated through the ideas of lineage and differentiation of social groups and estates. The analyses of the reorganization of these collections and their new discourses at the end of the Ancient Régime could offer valuable information about the social profile of these objects and their use as means of social structuration.

#### *Why Skin Color Captures Inequality Better Than Census Ethnoracial Identification in Latin America*

**Why Skin Color Captures Inequality Better than Census Ethnoracial Identification in Latin America**

Edward Telles\*, René D. Flores\* and Fernando Urrea-Giraldo\*\*

\* Princeton University

\*\* Universidad del Valle (Colombia)

For the first time in modern history and with the region's turn to multiculturalism, most Latin American censuses now ask respondents to identify by race or ethnicity. These new data allow researchers to systematically examine ethnoracial inequalities, which have long been ignored or denied. However, reliance on census ethnoracial categories could be problematic because of classification ambiguity in the region and because the categories themselves may hide racial heterogeneity. To overcome this, we modeled the relation between skin color as well as census ethnoracial categories and educational inequality, using innovative data from the 2010 America's Barometer from the Latin American Public Opinion Project (LAPOP) and 2010 surveys from the Project on Ethnicity and Race in Latin America (PERLA). We found that skin color was strongly related to educational inequality in all examined nations (Bolivia, Brazil, Colombia, Dominican Republic, Ecuador, Guatemala, Mexico and Peru), even after controlling for parental occupation and other factors. On the other hand, ethnoracial identification was a weaker and less consistent predictor.

[OUSMANOVAL@GMAIL.COM](mailto:OUSMANOVAL@GMAIL.COM))

#### *Between Europe and Asia; Cross-National Marriages in JAPAN (RUSSIAN CASE)*

The paper focuses on modern Russian diaspora in Japan and based on research conducted in 2012 in Kyoto (Japan). Although Russians in Japan have more than 100 years-history, in fact the Russian-speaking Diaspora has been formed just last decade. There were only 322 Russian (Soviet) citizens in 1985, but in 2004 the Russian community in Japan has counted more than 7 000 members. If we take in account that Russian-speaking community can include the CIS' citizens, it is understandable how many Russian-speaking foreigners in Japan now - about 10 000. All population of the Russian community in Japan could be divided into two groups: labor migrants and members of cross-national marriages. I pay attention to the second, larger group of the Russian community in Japan, because it is still studied a little. It is a marginal community, still not Diaspora in due its small and dispersed numbers. Having many problems of identification, they want to keep their transnational identity, influence on cultural environment of host country and to be a root between it and homeland, between two cultures - European and Asian. This study (interview with Russian women married Japanese men) shows us an impact on Japan of many new ethnical communities and how Japan is becoming the society of multi-cultural coexistence. So, under influence of the small Russian community, Japan will take a new identity as a multicultural state, but not homogeneous one. To prevent depopulation, Japan has to accept 17 million immigrants between 1995 and 2050, immigrants and their descendents would total from 18 up 30 percent of the total population of the country by 2050. There are two main state's coalesce policies - assimilation (melting pot) and multiculturalism (the salad bowl). In case of Russians, they don't want to assimilate and prefer the multiculturalism (diasporic) model.

#### *Japanese Teenagers' Perception of Their Mothers' Employment and What They Do in after School*

Japanese junior high school students and high school students (age 13 to 18) are rarely reported internationally regarding their behaviors after school and attitudes towards their mothers' employment. I interviewed approximately 40 these teenagers, 20 each from relatively wealthy area, Setagaya and the down town, Taito in Tokyo. The result showed that most of their mothers were working part-time regardless of their areas and this affects family supper. Some of them were suffering from neglect or somewhat of neglect by mothers particularly concerning supper. The difference was teenagers in Setagaya are more likely to complain it, while Taito counterparts were more likely to accept their severe situation in family.

In addition, comparison between this study and the result of Australian researcher, Barbara Pocock's in-depth interview of teenagers (2006) will be shown. The result was different from the Australian one and the largest gap is that almost no Japanese teenagers referred their parents' joy gained from paid work, while Australian counterparts did. Probably due to Confucianism, many of Japanese teenagers seem to thank their parents' paid work, although some of them were not provided supper. And this tendency is more obvious in down town.

Neglect of these age groups is difficult to be recognized in the society, due to their own pretense as normal and their affection or sympathy towards their parents. Also there are no DV marks on their bodies and no yelling is heard from neighbours. Therefore, these teenagers' vulnerability remains invisible. I believe this study has significant meaning in youth studies, family studies and Japanese studies.

**UYS, TINA\*** (University of Johannesburg, [tuys@uj.ac.za](mailto:tuys@uj.ac.za))

#### *Whistleblowing and Intervention: A Role For The Clinical Sociologist*

Worldwide there is a tendency to view the act of whistleblowing as making an important contribution in the fight against corporate misconduct. However, a more ambivalent attitude is often displayed towards the whistleblowers. There are global debates about whether whistleblowers should be considered as heroes or traitors and what kind of protection they should have.

Whistleblowing takes place when a present or past member of an organization discloses suspicions about organizational wrongdoing to those they believe to be in a position to take action. Whistleblowing could occur internally when the whistleblower communicates the message inside the organization (using prescribed or non-prescribed channels) or externally when the whistleblower resorts to an external agency, which could include the media. Regardless of how the disclosure is done, organizations generally regard whistleblowing as illegitimate. The disclosure of information about organizational wrongdoing, especially if it is placed in the public domain, is regarded as a form of betrayal and often leads to retaliation by the organization. Acting as 'loyal and caring' employees, whistleblowers generally do not expect the severe negative responses they receive as a result of disclosing irregularities in their places of work.

This paper discusses whistleblowing in the USA and South Africa and considers the role clinical sociologists could play in designing and/or implementing interventions that would ensure better outcomes for the whistleblower as well as the organization. Clinical sociologists attempt to improve people's quality of life by designing and/or implementing interventions based on an analysis of problem situations. In the case of whistleblowing their role could include advising the organization with regard to the implementation of confidential reporting systems that would pre-empt whistleblowing; developing support systems for whistleblowers before, during and after the disclosure is made; mediation between the organization and the whistleblower and advocacy to improve legal protection for whistleblowers.

#### *Public Religious Activities of Muslim Women in Turkey*

This paper aims to analyze the effects of Sunni Muslim women's increasing public religious activities on their everyday lives and social status within their close relationship circles such as family and neighborhood. The analysis is an account of a two-year-long ethnographic field study in two state Quran courses and one informal Quran course in Ankara and twenty six interviews with the participant pious women. Muslim women's public visibility has been increasing in the world as well as in Turkey. This is firstly due to the increasing rates of public participation of women in Turkey (there is positive development in women's employment and education rates). Since working women spend most of their time outside their homes, pious women choose to fulfill their religious obligation of daily prayer (salat) in the mosques and mesjids which are public spaces. Secondly, more and more pious women claim their right to the public religious places such as mosques which have traditionally been male spaces and public religious activities such as Friday prayer which have been dominated by men as male religious activities. As a result, more women attend public religious activities at public religious places. This paper argues that pious women reorganize their everyday lives according to their public religious activities and that pious women's public visibility elevates their social status within their families and among their neighbors and friends. They are seen as the "people in charge" of the religious affairs by their families and by their friends.

#### *Building "Ethnic Ghettos" or "Intercultural Bridges"? the Use of ICTs in Migrant Organizations in Spain*

The use of the Information and Communication Technologies (ICTs) by migrant organizations is a relevant factor for the enhancement of social cohesion. Migrant associations develop in-group solidarity, and this often generates out-group mistrust. There is a general consensus regarding the value of ICTs in maintaining both strong and weak ties, but there is not any consensus on whether ICTs are

useful in forming new ties and whether those are strong or weak. This study aims at explaining the impact of ICTs use in the migrant associations' social capital. Are migrant associations using ICTs to expand bridging social capital or to reinforce homogeneous networks? In depth interviews to the representatives of 25 immigrant associations in Spain, from five different origins, namely Romania, Morocco, Ecuador, Colombia and Bolivia, have shown that the use of ICTs is increasingly essential for their organizations. Furthermore, ICTs are used to access to information on both the origin and the host country. However, the organizations' communications, both online and offline are mainly addressing their local communities. On the other hand, there can be no doubt that the associations that use more diverse ICT tools are those who are more oriented to social cohesion. The study shows that, indeed, bonding social capital is essential for migrant associations and that the use of ICTs helps maintaining strong ties, while fostering the creation of new weak ties and political participation of their communities in the host society. In sum, ICTs come up as an opportunity for migrant associations to improve their public image, collaborate with other public, private and non-profit organizations and thus to enhance social cohesion, in general. Therefore, an effort should be done from public and private initiatives to facilitate this digitalization. This paper is part of a larger research financed by the Spanish Ministry of Economy.

### *Workplaces In Tncs: Can Green Practices Be Transported Across The Home-Workplace Border?*

Just under 50% of the world's GHG emissions in 2004 were attributable to energy supplies and industrial production (IPCC, 2007). The demand for manufactured goods is expected to rise by at least 100% by 2050 (from 2006 levels), with a consequence that industrial emissions, if unarrested will lead to a 90% increase in CO<sub>2</sub> emissions by 2050 compared to 2007. Following new EU regulations, national governments have created policy instruments designed to reduce or compensate the level of emissions of specific organizations. However, these regulations have not proved to be effective, neither in terms of production nor consumption. The research project: *Low Carbon at Work*, attempts to understand the drivers for and barriers to environmentally sustainable practices at work and at home, and recognises not only the crucial contribution of industrial production to GHG emissions, but also that consumption is an inseparable driver of production. Investigating two TNCs (vehicle production and oil industry) in Sweden and the UK, we have asked under what conditions workers and managers are encouraged to transfer "green practices" from work to home and/or vice versa. We have also investigated how relationships between managers, employees and trade unions might encourage or prevent the adoption of 'greener' production processes. Both case studies include informational and life-history interviews to understand changes at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw borders between those areas and under which conditions they become permeable and "green practices" are carried from home to work and vice versa. We have found how limited communication between hierarchical levels within companies as well as inflexible management practices discourage workers to suggest and implement environmentally valuable changes.

### *Population Ageing and Distributional Concerns*

This presentation will look at the transformation of the welfare state from the perspective of increasing spending on various elderly and health care services. One of the main arguments of the presentation is that a new distributional paradigm put forward through demographic and structural changes is emerging. The presentation has two objectives: 1) It examines the distribution of elderly and health care spending across the Finnish population with register data on the use of services in 2011. 2) With macro-level data from the EU countries, it analyses policies and social spending targeted to different age groups in the society and discusses how their balance has changed in the past two decades.

The increasing spending on elderly care services raises distributional concerns as the welfare state paradigm shifts to new forms of spending and new types of beneficiaries. Countries already display considerable imbalances in the distribution of public spending for today's young and old generations. If we spend more money on old age in-kind benefits, who benefits the most? Do all ageing citizens benefit equally and to what extent this development in spending patterns digs a gap between generations? Are there signs of proportionally more pro-elderly spending as the median voter's age increases? The topic is politically even more relevant in the midst of the current economic crisis when social budgets are being cut, welfare state policies recalibrated and intergenerational justice is emerging as a significant policy issue.

The preliminary analyses with the Finnish register data indicate that the distribution of old age in-kind benefits has a remarkably pro-poor pattern. The final article will investigate further if this is explained by the greater morbidity of the elderly in lower income classes or if the result is connected to other socioeconomic factors, such as living alone or older age.

**VAALAVUO, MARIA\*** (National Institute Health & Welfare, [Maria.Vaalavuo@thl.fi](mailto:Maria.Vaalavuo@thl.fi))

### *Welfare Dependency, Accumulation of Social Problems and Marginalization*

9.2 per cent of the population in Helsinki claimed social assistance in 2011. Media often portrays these people as a homogeneous group while the evidence tells otherwise. This presentation contributes to the development of a typology of social assistance recipients and focuses on those worst-off. Is there a new group with multiple needs that should be targeted with specific policy measures? But also, are there new claimants recruited from middle classes?

40 per cent of recipients claim social assistance for less than 3 months. These short-term recipients can hardly be called the core of destitution – especially if we consider long-term deprivation as a characteristic of destitution.

An entirely different type of subgroup includes those who receive the benefit long-time or recurrently. Indeed, long-term social assistance receipt has increased and a growing share of claimants faces many problems simultaneously. Health problems, substance abuse, long-term unemployment and housing problems often accumulate and make these people more vulnerable to marginalization.

In order to develop better policies and actions by social workers, information on the heterogeneity of clients and the depth of the various problems they face is of profound importance. Should we improve the accessibility and content of health services, to whom should the rehabilitative work be targeted and who still have the potential to re-enter the labour markets?

The presentation analyses social assistance clients in Helsinki with register data from 2006–2011. The data is complemented with information on the use of health and social services and pharmaceuticals. Using factor, latent class and descriptive analyses, the objective is to locate the core of destitution and classify clients on the basis of their background, benefit dependency and welfare problems. This categorization can facilitate the design of actions, setting of realistic objectives of policies for different subgroups, and analysing social assistance data in general.

### *Educational Inequality and Social Mobility: A Two-City Study in India*

Patterns of intergenerational social mobility provide an indication of the equality of opportunity and "openness" of a society. This paper studies the impact of educational attainment on social mobility chances in India for both women and

men. India presents a novel case to test theories of inequality and to examine social change given its diversity and the pace of recent growth that has excluded a significant proportion of the population, and due to persisting educational and gender inequalities. Specifically, large cities in India that have expanded both in terms of population and economic growth are ideal contexts for such a study of social mobility. This paper analyses primary data collected through a survey of over 1800 respondents in two cities, Delhi and Patna. In-depth interviews with some of the surveyed respondents provide the much needed context to this study of persisting inequalities.

#### *Bearing Witness to Social Suffering: The Emotional and Social Complexity of Social Documentary Photography*

There is a highly contested debate in the social sciences and the humanities about the artistic bearing of witness to social suffering. If we take the paradigmatic case of social documentary photography, does prolonged exposure of individuals to images of social suffering have de-politicizing effects, dulling empathy and leading to compassion fatigue or does it spark an empathetic imagination and ethical reflection, and thereby stimulate an active solidarity and sense of shared responsibility that constitutes a cultural pathway to an active citizenship. Although we sympathize with the latter judgment, we admit this is based more on wilful optimism than persuasive evidence because, in actual fact, there has been very little rigorous social science research investigating this debate.

We are attempting to partially redress this oversight through an ongoing research project with the Side Gallery in Newcastle, UK. For over 35 years, the Side has hosted exhibitions of social documentary photography, many of which have been dedicated to exploring large scale social and political transformations with a special focus on social suffering and hidden injuries. For each exhibition, the gallery has kept a comments book and we have coded and analysed a sample of 25 exhibitions across three decades featuring diverse forms of social suffering and distinct subjects.

We use these contemporaneous comments to trace how the images impacted on individual emotional states (what kind of emotions were triggered, whether particular images generated specific responses). We also explore whether these exhibitions acted as a force for social learning: increasing people's understanding of social complexity and power; recovering people in the photos as proper subjects, worthy of dignity in their own right; and enhancing knowledge of possible alternatives. Finally, we are interested in whether we can observe how individuals employ distinct ethical, emotional and critical judgments when encountering these kinds of images.

#### *Fatherhood and Doing Gender. How Challenging Can Institutional Changes be?*

Transition to parenthood in Switzerland takes place in a particularly gendered welfare state. It is the only European country where men do not have access to any kind of statutory parental or paternity leaves. Following a conceptualization of gender as a social structure, we consider that parenthood is shaped by social mechanisms producing difference and inequality between fathers and mothers at the institutional, interactional and individual levels. This paper investigates empirically the extent to which institutional change - such as the introduction of a paternity leave - can challenge the construction of gendered fatherhoods. It is based on a case study conducted in a public sector organization which implemented in 2010 a one-month paid paternity leave. Sequence and cluster analyses are performed on register data about the patterns of employees' leave uptake (N=95). Interpretive analysis of interviews with fathers who took paternity leave (n=22) and with managers who experienced leave uptake in their team (n=8) is conducted.

Results indicate a limited challenge of the gender structure. At the interactional level, although paternity leave enables fathers to spend more family time, a gendered division of childcare tasks is observed: fathers still have a secondary role with the newborn child. The majority of interviewees adopt a modified male breadwinner family model, similar to the dominant norm in Switzerland. As regards interactions in the workplace, paternity leave contributes to make fatherhood more visible, but informal norms about the legitimate leave pattern are observed. On the individual level, paternity leave uptake contributes to men's appropriation of their fatherhood identity and to increase their sense of competence and duty as fathers. However, their conception of fatherhood is structured according to contradictory discourses which highlight *change* in gender relations and persisting *differences* between motherhood and fatherhood.

#### *Highly Skilled Migration As a Structuration: What Is New?*

This paper examines the role of interaction between social structure and human agency in the process of international migration of the highly skilled professionals. The discussion draws from Giddens's structuration theory and Bourdieu's forms of capital. It revisits Giddens's analysis of duality of structure and relocates this in a migration field. This presentation is devoted to explore second questions: Why do highly skilled professionals migrate even they are financially satisfied? Why others do not consider migration? What kinds of forces in migration decision process do participate? This paper is based on results from twenty in-depth open ended interviews with highly skilled professionals of Lithuania in the fields of natural and technological sciences. Migration and social status is seen as end-less process constructed from set of events passed on micro, mezzo, and macro levels.

In the view of structuration theory migration is seen as recursive process formed and transformed by active agents and itself shaping and structuring subsequent social behaviour of agents. Both structural determinants in the countries of emigration and immigration and acknowledgment of migration as efficient strategy for life betterment creates new cultural element in the social structure that influences migration-decision making of other peoples. International migration is a continuous interaction between migrants and economical, political, social, and cultural contexts on macro level in the sending and receiving countries.

New insights shed light on deeper than just economic considerations layers involved in forming attitudes towards international migration. The structural and socio-cultural context where individual is acting, migration experience in parent family, seek for higher social status, personal freedom, and need for professional recognition are just several pieces of the puzzle, the outcome of which is decision to (not) migrate.

#### *Mexico: Democracy and Inequality in the States*

In Mexico only electoral democracy has been developed. There is no growth, neither social nor political important presence from social and civic organizations that show developments on social democracy and that allow an effective control of the government by the society. The elections alternation in every aspect has been a proof of the presence of electoral democracy.

México's ranked place 61st on the Human Development Index. Nevertheless, inequalities on the 32 national entities are quite evident.

This paper analyzes the evolution of the electoral democracy on the 32 Mexico's states and relates it with inequality according to the HDI.

The unit of analysis is the alternation on municipal governments during 10 years, identifying those entities with a greater percentage of municipalities with alternation in their governments and searching the relation with the evolution of the HDI and the evolution of income poverty.

#### *All Mixed up: Defining Mixed-Income in Public Housing Redevelopment*

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace trou-

bled public housing projects in the United States. Although the term is used to describe a growing number of developments, "mixed-income" has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have been redeveloped into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to projects that attempt to preserve a substantial majority of units for low-income households. In addition, we develop a new way of identifying and categorizing mixed-income developments in terms of *how* income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together roughly equal proportions of low-income and high-income families into a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace formerly all low-income communities.

*Domestic Violence As Eigenvalue in Contemporary Society: A Sociocybernetic Approach to the Construction of a Form of Gender Based Violence in Chile*

Domestic violence, including several forms of gender based violence, does not exist independently from an observer, neither is this observer limited to a domestic realm. In contemporary society, domestic violence is constructed as such in a network of operations that encompasses both private and public realms. This network involves a diversity of human and non-human agents – questionnaires, photographs, medical instruments, etc. – and coordinates public policy, legal, scientific and political criteria. As a result of these operations, experiences of violence are transformed into cases of domestic violence, which overflow into courtrooms, state agencies and other sites. In this sense, domestic violence is an Eigenvalue (Heinz von Foerster), a referential correlate of this complex network of operations.

This paper, which is based on field observations made in Santiago, Chile, describes a section of this network: the section that goes from the moment a report is made to the moment it enters a courtroom transformed into a case of domestic violence. It is stated that three problems of reference (Niklas Luhmann) give meaning to the diverse operations that are involved in this network: a) the attribution of cases of violence to the environment of the system; b) their observation as forms against a medium; c) and the constitution of chains of transformations (Bruno Latour) through which references to the lived experiences of violence are mobilized into the courtroom. Specific mechanisms that contribute to solve these problems are presented and analyzed.

Finally, two main consequences are explored. At the same time that the constructed reality of domestic violence becomes inscribed in the lives of victims and their relatives, shaping their experiences and descriptions of the world, it is shaped as a stream of facts that feed state mechanisms of population control.

[fervart@gmail.com](mailto:fervart@gmail.com))

*The Circulation of Two Epistemic Objects That Carry Social Science Knowledge: Domestic Violence and Bullying*

This presentation follows the circulation of two epistemic objects, namely domestic violence and bullying, in Chile, from their appearance in this country in the decades of 1990 and 2000, respectively. Social science knowledge plays a major role in the configuration of both epistemic objects. Also, both objects have important normative and emotional contents, making them relevant for the orientation of actors. In this manner, domestic violence and bullying are part of performative processes through which social science knowledge shapes reality.

The definitive positioning of domestic violence and bullying as part of everyday reality in Chile resulted largely from State-led processes of measurement, diffusion and regulation. Their arrival and diffusion was induced by several social processes. In the case of domestic violence, the feminist movement, with its claims during the 1980s, was a crucial lever. Bullying, instead, has a more diffuse arrival, being mass media, particularly television, its fundamental driver. International organizations such as the World Health Organizations and UNESCO played a key role in the circulation of both constructs. They have provided conceptual

and methodological tools, as well as facilitated and disseminated research and provided funding. Moreover, international organizations have incorporated in these constructions a decisive normative framing that is associated with developments in Human Rights.

Some repercussions of these processes are analyzed regarding the globalization or universalization of these realities or cognitive objects and to the respective effect of perceptual and normative shaping. The empirical study is based on interviews to relevant agents (state functionaries, policemen, educators, psychologists, physicians, etc.), ethnographic work regarding measurement and classification practices, and revision of documents related to processes of constitution of these constructs.

[leonardo.valenzuela@sydney.edu.au](mailto:leonardo.valenzuela@sydney.edu.au))

*The Atmospheres of Chilean Copper Moralities*

From ancient times copper mining has been a key element for the materialisation of the civilisation processes. From the weapons and ornaments of the Western Asian settlements 1.000 BC to the chips and wirings of contemporary hybrid cars, copper has had a privileged position advancing human capacities with its versatility. However, intensive pollution derived from copper mining has also been a prevalent issue that can be traced twenty five centuries back to the smelters of Roman Empire times, as some recent sediments analysis in Greenland have recently shown (Hong et al, 1996). Additionally, copper has been relevant in international disputes over natural resources, as can be seen in Chile in the middle of the Cold War, with a process that sought to recover national sovereignty over copper and ended up with the imposition of a dictatorship. Following an actor-network perspective, this presentation is focused on the role of copper shaping the institutional settings of Chile. The analysis is mainly based on the negotiation of air quality standards and emissions caps that lasted for more than twelve years (between the late 1990's until 2012), and explores the different copper ontologies related to health, pollution, energy, and globalisation among others, mobilised during that process. Reviewing the proceedings of the expert panels and public statements made by the bodies involved in these negotiations, the agencies of copper are rendered visible as well as the dependency and subordination of Chilean institutions to the needs of the currently in place copper production schemes. This refers not just to the local schemes, but to its intimate connections with the global copper dynamics, which are currently dominated to a great extent by China. It is argued that a way out of this entanglement should be designed, cutting across the cause-effect relations that compose current Chilean copper moralities.

*Contemporary Family and Human Development*

Human development is the expansion of people's opportunities live long, healthy and creative lives; to advance other goals that are valuable for themselves and the entire society. Human development implies that people engage actively in expanding equity and respect for human rights.

Family is not only an institutional cell but also is a micro-social basis of human development and its reproduction. It is a family where the key elements of human development (health, education, well-being etc.) originate from. The potential of these elements predetermine perspectives of socio-economic, scientific and cultural development of the country and ultimately of the person himself.

It is a family where a person should be brought up to respect fundamental principles of equity, recognize human rights, interests and needs of other family members and people around. Family is the only social institution providing for retranslation of values and norms to the following generations; ensuring succession, stability and sustainability of human development.

At present in many countries the family institution experience crisis, which is intensified by discrepant and often negative demographic processes. These tendencies affected Russia as well. Along with decrease in birth rates, there have been negative changes in marriage and family structure; in the number of incomplete families and illegitimacy. The most common feature of the Russian families is poverty, which is deepened with every subsequent child.

Responding to contemporary challenges in marriage and family processes the governments of developed countries realize explicit family policies. In Russia family-oriented measures were always regarded as a part of social and demographic policies. But nowadays National family policy, its statements, principles and priorities are being conceptualized. This is reflected in the work of experts' and scientists' communities; in broad public discussions of the draft project of the National Family Policy Concept.

**VALIAKHMETOVA, GULDAR\*** (Russian Society of Sociologists, [baimur@mail.ru](mailto:baimur@mail.ru))

*A New Global Approach to Pursue Global Justice and Development*

The liberalization of economy and global economy formation have fundamentally changed the mode of interaction between government, employers and employees; have greatly affected the employment structure, labor markets and socio-labor relations. Uncontrolled world capital markets, and as a consequence, risen instability, uncertainty and inequality in society have led to a weakened sense of common purpose of social partners in labor sphere.

At the same time, understanding that stability and considerable culture in socio-labor relations guarantee social and economic well-being, determined the need in a new base for consensus between tripartite partners in global scale. This role is performed by Decent Work (DW) concept, presented by Director General of The International labor organization (ILO) in 1999. In accordance with definition, DW involves opportunities for work that is productive and delivers a fair income, security in the workplace and social protection for families, better prospects for personal development and social integration, freedom for people to express their concerns, organize and participate in the decisions that affect their lives and [equality of opportunity](#) and treatment for all women and men.

Decent Work has become leading course of international and national policies, which is proved to be effective programmatic approach allowing to solve simultaneously a series of socio-economic problems and responding challenges of contemporary world. Nowadays DC programs are being realized in more than 40 countries. In Russia it is implemented through the cooperation program between ILO and Russian Federation. The timeliness and urgency of DC idea is proved also by The European Union's Post Lisbon Strategy. The European network of 53 NGOs "SOLIDAR", working to advance social justice in Europe and worldwide wrote: «We would like to see the quality jobs and decent work agenda translated into European legislation, policies and programs, with its key components and objectives reflected in the Post-Lisbon Strategy».

**VALLE, TRINIDAD\*** (Fordham University, [valle@fordham.edu](mailto:valle@fordham.edu))

*The Resistance of Bare Life: Media Narratives on Mapuche Hunger Strikes in Chile*

The current Mapuche movement emerges in the context of processes of globalization and modernization affecting Latin America. Since the 1990s conflicts have arisen between Mapuche communities and private companies, due to the development of economic mega-projects in Mapuche territory. The government role has been contradictory: while they promote politics of recognition in education and culture; politics of repression are used to suffocate Mapuche protests regarding those mega-projects.

The mainstream media narratives have constructed a particular framing of the conflict. Due to the lack of plurality of Chilean mainstream media, a critical discourse analysis of media discourses is fundamental to deconstruct how a particular narrative is imposed as the unique *regime of truth*. An alternative discourse has been developed by the ethnic media, which emphasizes an historical and contextualized reading of these confrontations and its consequences for Mapuche communities.

The paper compares the discursive formations underlining ethnic and media narratives regarding the Mapuche hunger strikes of 2008 and 2010. The media coverage of those hunger strikes provided a space for contestation of notions of ethnic and national identity. The analysis of these narratives brings to the forefront the concept of bare life (Agamben, 1998). The management of the 'bare life' of the Mapuche is at the core of the modern politics. The hunger strike becomes

the only mechanism of resistance of those subjects reduced to the category of bare life. The application of the anti-terrorist legislation locates the Mapuche body outside the realm of law by creating this state of exception (Agamben, 2005) where bare life can be scrutinized and managed.

The comparison of the mainstream and ethnic media narratives shows how the Mapuche hunger strike has been constructed in contradictory terms. A critical discourse analysis problematizes notions of power, legitimacy, ethnic and national identity, involved in those media narratives.

**VALLEJO, ELIZABETH\*** (Pontificia Universidad Católica, [vallejo.er@pucp.edu.pe](mailto:vallejo.er@pucp.edu.pe))

*La Violencia Invisible: Acoso Sexual Callejero a Mujeres En Lima Metropolitana*

El acoso sexual callejero comprende un conjunto de prácticas cotidianas como frases, gestos, silbidos, sonidos de besos, tocamientos, masturbación pública, exhibicionismo, seguimientos, entre otras, con un manifiesto carácter sexual. Estas prácticas revelan relaciones de poder entre géneros, pues son realizadas sobre todo por hombres y recaen fundamentalmente sobre mujeres, en la mayoría de casos desconocidas para ellos. Las realizan hombres solos o en grupo. No se trata de una relación consentida, sino de la imposición de los deseos de uno (s) por sobre los de la(s) otra(s). Se realizan en la vía pública o en (desde) el transporte público o privado, de manera rápida e intempestiva. Pese a tener impactos en la libertad sexual y el derecho al libre tránsito, estas prácticas han sido normalizadas y hasta justificadas en nuestra sociedad.

Esta ponencia mostrará los resultados preliminares de una investigación en curso sobre el tema, realizada gracias al financiamiento de la Pontificia Universidad Católica del Perú (PUCP). Los resultados de la Encuesta Nacional de Género 2012 realizada por la PUCP muestran una mayor incidencia en Lima y Callao que en otros ámbitos del país, lo cual revela su carácter fundamentalmente urbano. Asimismo, el segmento más joven de mujeres (18-29 años) es el más afectado, lo que revela que estas relaciones de poder entre géneros tienen un componente de edad: a mayor juventud, mayor probabilidad de ser afectada. A nivel cualitativo hemos podido recoger también discursos que justifican estas prácticas.

La ponencia presentará también la experiencia del proyecto que dirijo: "*Paremos el acoso callejero*", que desde el 2012 ha colocado el tema en la agenda pública peruana, logrando que medios de comunicación, municipios e, inclusive el Ministerio de la Mujer, se hayan pronunciado y estén realizando acciones para combatir el problema.

*Territorial Politics and the Emergence of Sub-National Welfare Models in Italy, Spain and Great Britain: Regionalist Mobilization, Institutional Asymmetries and Left-Wing Partisanship*

This paper investigates the relationship between sub-national politics and the emergence of region-specific models of welfare governance in Italy, Spain and Great Britain. Data on spending, legislation and implementation of social policies in all the regions of these countries have been collected and analyzed. The main finding is that in all three countries territorial mobilization – through the creation of regionalist parties – has been an important factor in the development of well-structured and distinctive welfare models at the sub-national level. In countries with relatively flexible constitutional arrangements (Spain and, especially, Great Britain), regionalist parties have promoted distinctive models of welfare governance by engaging in bilateral bargaining with central authorities and obtaining *special* formal powers for the regions they represent. In the absence of constitutional flexibility (the Italian case), the intervening effect of formal institutional asymmetry is less relevant and what really matters is the fact that regionalist parties have used *standard* self-governing authority in distinctive and 'creative' ways. In this paper I also consider the 'welfare effect' of left-wing mobilization and I show that its importance varies depending on the role that mainstream centre-left parties play in national policy making and on their relationship with regionalist movements. In Italy the Left has been excluded from central government for many decades and has therefore acted as a 'regionally-focused' political force, which, despite not representing regional minorities, has used the regional arena to promote distinctive social policies. On the contrary, in Spain, the main party of the Left, the PSOE, has been a dominant force in central government and has therefore mainly focused on the promotion of state-wide, standardized social policies. In Great Britain, left-wing mobilization and 'sub-state nationalism' have been closely linked in recent decades, thus having a combined effect on welfare development in Scotland and Wales.

*E-Justice in the Lowlands*

It seems rather odd that in today's network society, with its increasing penetration of information technology, online administration of justice and online dispute resolution (ODR) mechanisms appear to be fairly absent in Belgium and the Netherlands. Drawing on empirical exploration, the pervasiveness and forms of existence of so called e-justice initiatives are mapped. Next, an attempt is made to explain the current situation. The contribution will be rounded off with an in-depth investigation into the opportunities and limits of e-justice in the context of contemporary welfare and Rule of Law regimes. More specifically, we ask ourselves to which degree such online initiatives could improve various aspects of access to justice, while at the same time safeguarding deeply rooted procedural and democratic principles such as due process and equality of parties. From this exploration of opportunities and limits flows a set of principles that might inform policy making in the cutting edge field of the online administration of justice and ODR.

*Religion That Heals or Harms? an Examination of the Association Between Religion and Gender Differences in Depression*

Gender differences exist in religious involvement and depression, with women reporting significantly higher levels in both. Most research finds that women benefit more from religion than men, as they are more involved than men in many facets of religion. Research has for example shown that prayer offsets the noxious effects of stress on well-being for women, but not men. Other research showed that women are more likely than men to make use of supportive religious networks through church attendance and other religious activities, and are therefore more likely to reap the instrumental and psychological benefits with those relationships. However, in contrast a small number of studies suggest that women may face unique challenges in the church that diminish or offset the benefits of religion to mental health. Compared to men, women are more often prescribed to traditional role patterns and a subordinate role in the worship service. In addition, in secular settings, women may be confronted with the "cost of caring" by trying to maintain both extensive church-related ties while also remaining active in more secular networks.

Unfortunately, the vast majority of current research is conducted in Anglo-Saxon and non-secular settings. In the current study, we aim to examine the association between gender differences in depression and religion from a cross-national comparative perspective. First results based on the European Social Survey (2006-2007) showed that religion, as measured by subjective religiosity and frequency of praying is associated with higher levels of depression, in both men and women, but more pronounced in women. These findings contradict the most frequent finding that religiosity is related to fewer depressive complaints, especially among women. We intend to further investigate our results by incorporating both individual indicators such as church attendance, as well as contextual moderators, such as religious context into our model.

*Ces Rumeurs Qui Racontent Les Crises Politiques*

SourceURL:file:///localhost/Users/aurore/Documents/PropositionISA2014.doc  
L'avènement des nouvelles technologies de l'information et de la communication a contribué à la diffusion internationale et à l'accessibilité de discours informels divers, à l'éclatement et à la déhiérarchisation des pôles d'énonciation et de productions de textes et au journalisme influencé par l'utopie de l'information en direct. Dans ce cadre, de nombreuses informations non vérifiées (rumeurs, hoaxes, ragots et légendes urbaines) circulent, font ou interprètent l'actualité et, plus particulièrement, les crises.

Depuis quelques années, le mot « crise » revient quotidiennement dans les médias pour désigner une situation économique, politique, sanitaire, socioculturelle ou organisationnelle. La crise intervient dans des situations d'instabilité, d'incertitude et d'ambiguïté. Face à elle, les individus vont alors développer des techniques, des procédés pour la prévoir, l'aborder, la comprendre, lui donner un sens ou les aider à la traverser.

Les rumeurs et autres énoncés rumeurs font partie de ces procédés qui permettent d'anticiper les crises, de les créer et/ou de les évaluer collectivement. En tant que discours officieux, ce sont des informations non confirmées qui révèlent soit des informations véridiques mais non encore officialisées, soit des informations fausses, postulant une réalité non avérée ou une explication du monde alternative. Ils permettent aux individus d'évaluer leurs causes, leurs conséquences potentielles et les changements qu'elles amorceront.

Comment les rumeurs et autres énoncés rumeurs parlent-elles de la crise ? Comment la décrivent-ils ? Quelles causes lui attribuent-ils ? Proposent-ils des solutions pour l'endiguer ? Dans l'affirmative, lesquelles ? Dans cette com-

munication, nous nous focaliserons sur les rumeurs et autres énoncés rumeurs politiques, visant soit une personnalité politique, un parti, un gouvernement ou tout autre crise impliquant les autorités belges ou françaises de 2011 à 2014, et diffusés sur le Net. Nous présenterons les résultats d'une étude sémio-pragmatique de ces énoncés et des discussions qui en découlent, récoltées sur Internet.

*The Social Transmission of Religiosity to Second Generation Migrants: An Interactive Model*

In this paper, we examine the social transmission of religiosity to second generation migrants in cross-national perspective. We apply theories on cultural transmission and assess the influence of vertical interactions (i.e. through parents), horizontal interactions (i.e. through peers) and oblique interactions (i.e. through social institutions) and the religious context on the transmission of first generation religiosity to second generation co-ethnics. We use data from four waves (2-5; 2004-2010) of the European Social Survey (ESS) comprising 8,123 second generation migrants coming from 102 origin countries and living in 26 European destination countries. We apply cross-classified multilevel analyses to examine subjective religiosity and the frequency of praying. Results indicate that the social transmission of religiosity is quite successful: second generation migrants tend to be more religious the higher the religiosity among first generation co-ethnics. The transmission is more successful when interactions are favorable for this transmission process, however: when second generation migrants grew up in traditional families, are less socially integrated, have spent less time in educational institutions and in countries where religiosity is lower. Our research also shows important divergences between the transmission of subjective religiosity, which is more universal, and the frequency of praying, which is more susceptible to the influence of interactions. This could indicate a trend towards the privatization of religiosity among migrants in Europe in the long term.

*Engendering Corporate Social Histories: Reflections of White, Afrikaans-Speaking Businesswomen in Gauteng, South Africa*

Using a qualitative, gender-sensitive approach, this particular case study explores the narratives of a group of white, Afrikaans-speaking, women employed in the financial sector of Gauteng in South Africa. Based on semi-structured interviews this study has aimed to explore corporate women's political and personal experiences and how this affects their career choices and ideals on how to 'balance' work and home life. The study shows how women exude agency when they attempt to challenge out-dated but 'embedded' patriarchal norms and values. The study also illustrates how working women try to manage spending the little free time they have with family and their children and how most of them still have to assume the bulk of the responsibilities at home. This particular group's position is fairly ambiguous within contemporary South African society, since they have been known to have enjoyed certain privileges in the past relative to other groups, but they have also suffered and still suffer gender discrimination and gender inequality under patriarchy. Recently some have come to question whether white women should also benefit from Affirmative Action policies. This is not an easy question to answer since it has been widely acknowledged that women experienced discrimination and gender inequality during the apartheid era differently (Kongolo & Bojuwoye 2006: 364). Thus, it is important to understand their accounts of the past, as well as, the future.

*Dilemmas of Combatting Corruption; Afghan and Dutch Perspectives*

Dutch troops in Afghanistan are confronted with situations in which the local population violates values and norms, that the soldiers themselves take for granted and/or deem essential. As a consequence they regularly have to decide whether or not to intervene and try to stop and change undesirable behavior. This is not only a matter of operational feasibility, but also and especially of cultural and moral desirability. In Afghanistan corruption is one such ingrained practice that brings with it difficult dilemmas for soldiers.

Corruption weakens the trust in and the legitimacy of public offices and the government. Therefore, corruption has been identified as a major stumbling block to successful peace-building. As Afghanistan ranks among the most corrupt countries in the world, the abolition of its widespread corruption has grown into a main concern of the international community.

In principle ISAF is part and parcel of these efforts, but in practice it is not always self-evident how soldiers should act. Should fighting corruption be a priority in peacekeeping and training missions as well? Or should soldiers, in order to achieve their primary mission targets, sometimes tolerate it? How do Dutch soldiers solve culturally and morally critical situations in this particular area? What's more: what about their Afghan counterparts? How do they view the cultural and moral dilemmas of the foreigners? Based on recent fieldwork in Kunduz, this presentation depicts and analyzes answers and opinions from both sides.

#### *On Inequality and Physical Health: A Bio-Markers Based Test Of The Neo-Materialistic Argument In Low and Middle Income Countries*

This paper re-examines the relationship between wealth inequality and two measures of physical health: anemia status of women and of their children and the experience of women with child mortality. We test the role of individual resources (i.e., wealth) and of the countries' resources relevant to health (i.e., the level of wealth of the country, the private financing of health and the efficiency of health services) for explaining the empirical association between inequality and physical health. We use data collected between 2000 and 2011 by the Demographic and Health Survey in as much as 52 low and middle income countries. Our binary logistic multilevel models reveal that higher wealth inequality is significantly associated with worse physical health, but this relationship is weaker and ultimately statistically not significant when individual and countries' resources relevant for health are taken into account. We conclude that at least in the low and middle income countries the relationship between inequality and health is mainly explained by compositional effects while the health institutions have a limited role for improving physical health. Based on our results we cannot endorse the idea of a true contextual effect of inequality on health, at least not in the low and middle income countries or in relation to physical health measures.

#### *Are the Chinese Saving for Old Age? the Precautionary Motives of High Household Savings*

The one-child policy in China, put in force in 1979, converged with the macro-economic developments over the last two decades. The Chinese GDP increased at an annual rate of 9% between 1995 and 2010. Poverty had declined from 65 percent of the population in 1981 to about 13 percent in 2010, lifting hundreds of millions out of poverty at an unprecedented rate. The share of household savings more than doubled to almost 25% of disposable income, the highest saving rate in the world after India.

As the parents of one-child generations grow older, the steep demographic changes pose increasing insecurity. The old-age dependency ratio - number of people over 65 for every person of working age - is expected to double over the next two decades. What kind of policies the Chinese central government initiated to prevent old-age poverty and the overburdening of the middle generation? And, is the high household saving quota an indicator that the Chinese are aware of the financial risks of longevity? Though the Chinese government launched various pension programs, these payments are not yet adequate for older Chinese to make a decent living. Therefore, we assume the high household saving quota has been an indicator of the awareness of the risk of longevity, though many other theories are proposed. We analyse the correlation between pensions and savings whereby those entitled to pensions are expected to save significantly less and hypothesize that these two are more or less communicating vessels.

First we analyze China's transforming economy and household income from the perspective of the growing dependency rate. Because we are interested in the question if the Chinese are preparing for old age, we analyze the data from the China Health and Retirement Longitudinal Study (CHARLS).

#### *Active Aging in East and West Germany. Life-Course Influences in a Formerly Divided Country*

When it comes to life courses of older people in Germany it has to be taken into account that they had been living in different countries and political systems for decades. Next to highly different experiences of life in youth and midlife, people aged 60 plus nowadays have been socialized within very different cultures of old

age. Material living conditions of retirees, employment rates in later life, social images as well as social expectations towards older people were quite different in the former GDR and FRG. Whereas older people in the Western part were pictured as retirees, enjoying leisure and earned repose, elderly in the GDR were seen as veterans, who had fought against fascism and capitalism. They were continuously addressed as productive parts of the socialist society, while the living conditions were rather precarious at the same time. However, it is not just the different settings before 1989 that make a difference in people's life stories, but also the experiences following the re-unification, namely the wide-spread unemployment in the new federal states. At the same time, the Western model of early retirement and deserved disengagement has been challenging since the early 1990s, too, giving way to a re-negotiation of old age as an productive phase of life. The presentation asks, in how far the different experiences of life before and after re-unification influence how older people think of and cope with this development. Are we witnessing ongoing East-West-differences or even profoundly different age cultures? The presentation is based on empirical findings from the research project "From retirement to active aging? Images and practices of old age in the transformation of the German welfare state after reunification" - drawing on biographical interviews with elderly from the Eastern and Western part.

#### *Ageism in Times of Population Aging. Rising Awareness and New Forms of Discrimination*

Age and aging have become highly popular issues in industrialized countries recently - namely in a twofold manner: Next to doom scenarios on population aging and increasing costs, older people have been discovered as active, productive and successful citizens, which is particularly true for the non-frail and healthy elderly. Each of the notions, no matter if it comes to activity, productivity or success, revolves around the idea that older people are capable of living a self-reliant life, being able to contribute productively to the public good, serving for themselves and others. Though often instrumental with regard to elderly's resources in times of population aging, negative age-stereotypes are challenged in new ways: We establish a rising awareness towards discriminatory effects of age stereotypes as well as various political and academic endeavors to foster positive images of aging and old age. However, this attempt turns out to be at least ambivalent when it comes to ageism: Since the rising awareness is mostly about the supposed "unjustified" negative stereotyping of capable "young retirees" and older workers, discriminatory images of aging are rather deferred to dependent and deep old age than fundamentally challenged. Moreover, the strong focus on achievement, productivity and success in old age generates new constraints for those who do not fulfill these criteria and who are indeed frail or demented and dependent on care. Against this backdrop it is the aim of the presentation to debate on whether and in how far the new appreciation of capable so-called "young-old" finally produces new age inequalities. Since awareness of ageism as age-based discrimination is much more advanced in liberal Anglo-Saxon countries than in continental Europe, the presentation opens up comparative insights to this ambivalent configuration from Germany and the US.

JAFFE, RIVKE (University of Amsterdam)

#### *Normalizing Displacement: Cinematic Representations of Gentrifying Amsterdam*

Focusing on recent cinematic depictions of Amsterdam, this paper discusses the relation between the socio-spatial processes of gentrification and their popular culture representations. Formerly taken as an exemplar of inclusive, democratic urbanism, in recent years Amsterdam has been characterized by increased socio-spatial polarization. Gentrification is evident in the rapidly growing middle-class residential presence in the historical city center and in the associated assertion of consumptive and cultural middle-class practices. Drawing on popular Dutch films in which Amsterdam's city life is a central feature, we argue that these representations not only document or reflect the recent social transformations. In addition, they serve to normalize and even glamorize urban gentrification. This normalization of a classed and ethnicized urban order is produced through narrative structure and - even more forcefully - through visual techniques. In the recent productions on which this paper focuses, the city of Amsterdam plays an important role, not so much in terms of plot and decor, but as a spatial imaginary in which urban inequalities are mapped onto symbolic sites and landscapes. While the spaces and agents of gentrification are glamorized, peripheral, non-gentrifying neighborhoods and their inhabitants are visualized and stigmatized as underworld spaces of vice and squalor. The films portray middle-class, White protagonists, while Urban Others in terms of class and ethnicity serve mainly as a foil to these "normal" Amsterdammers. Parallel to the forms of physical and social displacement that gentrification causes in Amsterdam, these cinematic representations can be understood as effecting the cultural displacement of racialized

and ethnicized non-White and lower-class White residents. Studying gentrification processes in Amsterdam in light of their cinematic representation, we argue that in their celebration of urban middle-class and elite consumptive practices and life-styles, these representations serve to legitimize a newly unequal urban order.

#### *Employee Representation Regimes in Europe: Do They Exist in Practice and Have They Changed in the Crisis?*

Forms of employee representation have been legally institutionalised in most of the EU countries. These ER regimes have also been recently framed in European directives. However, there exists a great variety of institutional ER structures among the Member States: union-based or works council type; single or dual channel, complementary or exclusionary. Institutional differences exist also in the powers assigned to the ER, in particular whether the ER has not only consultation, but also co-determination rights (see for example DE). A next dimension of diversity is the role these bodies play in collective bargaining. In many systems they play only an additional role in relation to supra-company bargaining, in other countries they have a key role.

Recently theoretical classifications have been constructed to cluster these different institutional regimes. We can refer to the general typologies of Visser (2009) and Bryson et al. (2012) of IR-regimes. More specific has been the typology of Altmeyer (2005), which is also applied by Van den Berg et al. (2013). Management style, type of body, assigned powers, bargaining role are used to develop a 5-type model. However, this clustering has never been empirically tested. The paper will in a first step do this empirical test by conducting a cluster analyses on the relevant European Company Survey data of 2010. In a second step and for a country selection, the paper would compare these results with the ECS data from 2005 and investigate the effect of the crisis on the typology.

Concretely the paper would tackle the following questions:

1. A confirmatory analysis of the Altmeyer model of ER in Europe: are the country clusters statistically to distinguish?
2. Which type of companies show a different pattern in the country typology?
3. Has there been an evolution in the regime types since the start of the crisis?

**LIAGRE, PIETER** (KULeuven)

#### *Social Dialogue on Green Mobility in Belgian Enterprises: Interpreting the Results from a Social Movement Perspective*

Belgian trade unions are known for their 'social movement unionism'. Within this framework they have been picking up issues like environmental challenges and sustainable development. They obtained also legal information and consultation rights on these matters at enterprise level. Among others, the works council and health&safety committees obtained consultation rights on (sustainable) mobility issues.

The paper present empirical results of 50 in-dept cases on 'how' and 'when' these issues of green mobility are dealt with in Belgian workplace social dialogue. The paper tackles the 'how'-question by clustering first the cases in 5 types on form and content of social dialogue on green mobility. In a second part the paper investigates where and when these configurations can be distinguished. A conceptual model of 'workplace industrial relations' is used for this purpose that takes into account context, actor and process characteristics. A QCA mixed-method is adopted for this interpretation of the case data.

The results show that a specific mix of joint cultural framing and specific knowledge resources determine if a social dialogue between trade unions and management develops on green mobility and not only the creation of a political opportunity structure by assigned legal powers on the matter to the information&consultation body.

#### *Predicting Workplace Characteristics. an Inductive Research on the Influence of Country Characteristics on Workplace Characteristics in the European Union*

##### Abstract

Workplace innovation increases the quality of working life and the organizational performance (Oei e.a., 2012; Kramer e.a., 2008). Moreover, the European Economic and Social Committee (2011) underlines that workplace innovation is essential for the future of Europe. The sociotechnical theory stresses that workplace innovation need to take place by an intervention in the technical system and in the social system (De Sitter e.a., 1997). In the social system, workplace characteristics (e.g. job complexity and job autonomy) influence the quality of working life and the organizational performance (Kramer e.a., 2008). Consequently, workplace innovation needs to stimulate an optimal balance between workplace characteristics. Smith e.a. (2008) show that European countries differ in workplace characteristics.

This research examines, inductively, the conditions which cause different workplace characteristics in European countries. In addition, country level conditions such as welfare regime, union density, participation rate and varieties of capitalism will be used in the analyses. The European Working and Condition Survey will outline the aggregated workplace characteristics in the different European countries.

#### *Governing the Migration Control Predicament: Reconfiguring Sovereignty-Discipline-Government*

This paper explores the contemporary government of migration and integration and is based on an analysis of the 'strategic case' of the Netherlands. By analogy to what David Garland has called the 'crime control predicament', it describes the "migration control predicament": a problematization of the rates of migration combined with a realist position on the problems of integration and an acknowledgement of the limitation of the national state and its previous policies to deal with these issues. This predicament of control poses a challenge to three forms of power discerned by Foucault: sovereignty, discipline and government. As a response all three forms of power are mobilized in the government of migration and integration in new ways. To restore sovereignty the tactics of detection, detention, deportation and deterrence are deployed. The disciplinary techniques under the migration control predicament involve the production of the good citizen (e.g. citizenship tests) and the effective state. Finally, in terms of government, there is the introduction of a market order government, a numbers game of performance and the selection of skilled- and exclusion of risk migration. The Netherlands serves as a strategic case because an extension of the argument is possible for a variety of Western-European countries (e.g. the UK, France and Germany) as well as for developments in Australia and the US. In addition to arguments that claim divergence of state responses, it can be argued that there is a convergence in the problematization and government of migration and integration as a control predicament.

#### *The New (Biological) Culture of Control: Neoliberal Communitarianism and the Singularity of the Contemporary Homo Criminalis*

At stake in this article is an understanding of the new biological culture of control (cf. Garland 2001). It discusses the emergence of the New Homo Criminalis: the new biological subject in the government of crime (Rose 2000; cf. Rose & Abi-Rached 2013). This paper investigates the power/knowledge relations between contemporary penal government and criminological theory. Three leading questions are: 1) what conditions facilitated the re-emergence of bio-criminology, 2) how to understand bio-criminology, and, 3) what are the possible effects on the government of self, others and the state? Answering these questions the paper argues, firstly, that the last thirty years witnessed the emergence of a regime of government that can be called neoliberal communitarianism. It explicates how criminological theories can be placed in the discursive space of neoliberal communitarianism. This also implied a fundamental rupture in the assumptions of government. One of the effects of this paradigm-shift is that it made possible the re-emergence of bio-criminological approaches. The latter will be under-

stood, secondly, in its 'singularity' (Foucault 2000). It will be argued that it is not simply the re-emergence of Lombroso and Homo Criminalis because the question that should be asked is precisely how the new biocriminological approaches problematize crime, criminality and contemporary crime control in radical new ways. This singularity of the bio-criminological program will be analyzed, thirdly, by a study of the strategic case of 'neurocriminology' (Raine 2013). This paper explores its claims, assumptions and how this involves a change in the government of self, others and the state.

#### *Who Benefits from Internet Usage? the Digital Divide of Mobilized Online Resources*

Several studies have shown that the higher educated possess more or better Internet and computer related skills, such as the ability to find and process information. This implies that Internet usage should therefore also be more profitable for the higher educated, which is something that has not been studied often. We study this *profitability* of Internet usage in terms of the resources that people mobilize through their Internet usage, and we examine whether the higher educated mobilize online resources to a greater extent than the lower educated.

In order to learn more about these mobilized online resources we look at negative life events that are experienced by respondents and the way in which they dealt with those events. We analyze newly collected data from a questionnaire that was designed to test an inventory of online coping resources. This inventory consists of seven dimension of online coping (with 3 items each), such as emotional and instrumental support, active coping, and finding distraction.

We hypothesize that the higher educated mobilize online resources to a greater extent with regard to all seven dimensions. This challenges some of the insights of social capital research, which often finds the extent of emotional support to be unrelated to social status. Moreover, unlike what is normally found with regard to offline networks, the support comes from weak ties relatively often.

#### *Humans, Animals, and Morality in a Nature-Inclusive Sociology*

Disruption of natural systems and depletion of natural resources have become major concerns in society, both in their global reach and in their local impacts. Natural science insights into human behaviour - particularly from the fields of neuroscience and evolutionary biology - have increasing impact on our understanding of the social world. Sociology has to embrace these insights in its analysis, but not by abandoning its hermeneutic method. Starting from these tenets, this paper sketches principles of a nature-inclusive sociology, building on studies of Moscovici and Foucault, and on earlier work of the author. In applying and elaborating these principles it explores the social implications of the commonalities of human and animal bodies. While similarities found in evolutionary, neurological and ethological research have profound impacts on the understanding of animal and human behaviour and the ethics of animal-human relationships, they fall short in supporting the environmental morality tied to these findings by Edward O. Wilson and other conservation biologists. The paper then sets out to describe a social practices approach to human-nature relationships that gives due attention to natural science findings and natural system dynamics while leaving intact the role of human agency and responsibility in protecting our natural world.

#### *The Celebrity Logic of the Global Financial Elite*

This paper examines a particular aspect of the development of a global financial elite, its organizing around the production of particular kinds of celebrity CEOs and financial 'stars' which then intersect and form alliances with those at the peak of other elite fields such as sport, entertainment, journalism, and science. The analysis looks at the workings of what Robert Merton called the 'Matthew effect', which concerns the ongoing accumulation and leveraging of advantage, and how it works across a variety of fields including finance, to produce a global system of interlocking elites. In a sense the paper is an attempt to re-work C. Wright Mills' *The Power Elite* for the present day, looking at the performative aspects of the global financial elite and the competitive demands placed on the presentation of self and representation of elite status. The overall aim is to show how the process of 'refeudalization' outlined by Sighard Neckel has its core the production of global celebrity across a range of field, as the contemporary version of a global aristocracy.

#### *Child Benefit Reforms and Principles of Redistribution*

Child benefits systems embody objectives of horizontal redistribution (i.e. from families without to families with children) as well as vertical redistribution (from high to low incomes). These principles are reflected in the characteristics of the child benefit system: is it universal or selective, or a combination of both? In this paper, we use these principles to position the current system of child benefits in Belgium in terms of horizontal and vertical redistributive outcomes. As an indicator for vertical redistribution, we use the impact on income inequality and poverty, as well as how these benefits are distributed over income groups. We also present a measure for horizontal redistribution, trying to capture the fiscal flows from families without children to families with children, as well as between families of different sizes. Using the microsimulation tax-benefit model MEFISTO/EUROMOD, we calculate vertical redistributive effects of the current system (baseline scenario) in terms of inequality and child poverty reduction. Our approach is innovative in that we take into account actual costs of childrearing based on a normative budget standard, and not only rely on the modified-OECD scale. Next, we calculate the effects of a set of alternative scenarios of three extreme positions: a fully universal system, a strongly income selective system and a strong categorically selective system. What balance between horizontal and vertical redistribution is struck by these different scenarios, compared to the benchmark of the baseline? We conclude with the outcomes of a mixed system, and some generalizable recommendations for policy makers to combat child poverty.

#### *The Doctor-Patient Relationship: Inequality in Pain Construct*

The doctor-patient relationship refers to the quality of interaction process; also to the influence and control that role players have within the relationship. This signifies the notion of inequality of experience as well as the perceived and actual outcomes thereof. The objective of the research was to explore the assumption that there is a correlation between patient consultation and anticipated and actual levels of pain reported by males and females who were operated for knee and hip replacement in Libya. The research questioned the impact the doctor-patient relationship has on the 'pain construct' that allowed exploration of the 'divide' between the role players, amongst other variables the influence of gender and culture. Face-to-face in-depth interviews were conducted with medical doctors who undertook the surgery and with patients, while observations were carried out during doctor-patient consulting sessions. With reference to gender, more male than female patients experienced a higher level of organic pain than anticipated prior to surgery, and both male and female patients experienced higher organic pain levels who had not received 'informing consultation' prior to surgery. These findings indicate that 'inequality' of doctor-patient is still prevalent in some societies highlighting cultural factors at play, while it also poses the question to what extent congruence of 'pain construct' can be attained through a doctor-patient relationship that is characterised by actual and perceived narrowing of the divide 'traditionally defined' by control and influence.

#### *Epistemic Practices, Logics of Visualization: Migrants, Asylum-Seekers, and Deviant Subjects*

In its study of 'epistemic practices' (Lynch 1993), the field of Science and Technology Studies has displayed a sensitivity towards the local articulation of objectivity and (scientific) truths, and the deployment of optical devices and inscriptions in these practices. In this presentation, we wish to take this sensitivity with the situated 'fabrication' of truths (Latour 1999) into the study of three practices other than those of natural scientists: those of immigration officials deciding over the

acceptability of asylum applications, those of social scientists measuring immigration and integration, and those of criminal law judges deciding on verdicts.

Based on ethnographic research into these sites, we explore these practices in the following ways. First, we will focus on the precise ways differences are made and remade, focusing in particular on the taken-for-granted classifications that are not 'looked at' but 'seen through', i.e. the figure of the immigrant, that of the asylum-seeker, and that of the deviant subject (Bowker and Star 1999; Mitchell 2012). Second, we will pay attention to the techniques, instruments, and inscriptions that allow for such difference-making. In particular, we focus on the visual materials (graphs, charts, etc.) social scientists produce in their work practices, and on the visualizing technologies (case files) and truth-finding procedures (interrogations, court hearings) both judges and immigration officials deploy in their practices. Seeing and visualization, we argue here, are capacities concentrated in specific centers of expertise and are enabled by and produced in a knowledgeable engagement with the instruments and optical devices of the 'trade' (Cf. Goodwin 1994; Haraway 1988). As such, they exhibit logics of visualization.

### *The Multidimensional Spatiality of Citizenship: Understanding Tensions in a Mobile World*

While theoretical discussions generally assume citizenship to be anchored in a particular geographic community, little attention has been devoted to how the geography of citizenship should be conceptualized. This paper argues that scholarly disagreement on the basic traits of citizenship as membership has over the years displaced the question of how to think citizenship spatially. The result of this is that political sociology still silently draws on the outdated idea of citizenship as anchored in a national and homogeneous territory with clearly delineated borders. In an age of increasing cross-border mobility however, territory is no longer the only, nor necessarily the most important, spatial form citizenship can take.

In this paper I will therefore *firstly* propose a typology for understanding the multidimensional spatiality of citizenship. The typology stems from an engagement with social geography, and distinguishes four spatial forms of citizenship: territory, scale, place and network. *Secondly*, I argue that the different dimensions of citizenship as membership link up with the spatial typology. Conceived in statist terms as a legal status and rights entitlements, citizenship is structured in a territorial or scalar fashion. Understood as a practice of participation and belonging, citizenship is anchored in a place or a network. *Thirdly*, the paper ends by discussing the possible tensions derived from this multiple spatiality of citizenship. It does so by elaborating on the example of cross-border workers in the enlarged European Union. As a single space for free movement and labor, each European citizen can work wherever s/he wants on the territory. From the perspective of rights entitlements however, connections to the national level remain strong, leading to tensions between territorial mobility and scalar fixity. Simultaneously however, belonging and identification often remain grounded in a local place of origin, or become dispersed across space in networks of (ethnic) affiliation.

### *Varieties of Visual 'Europe' in Images of Illegalized Mobility*

The governmental management of mobility is a crucial way in which contemporary Europe is being made. Images are part and parcel of the increasingly elaborate network of organizations, expertise, legal codes and material infrastructures set up to manage the 'desirable' and 'undesirable' mobility across EU-borders. Visualizations of registered data, routes, maps, risks, opportunities and uncertainties are implicated in governmental attempts to gain overview, anticipate the future and authorize control. However, these images of governmental surveillance and security exist and become visible in a wider field of image production and dissemination. State institutions are far from alone in their attempts to see and disclose 'what's going on at the border'. This paper will analyze the relations between images implicated in border management and alternate visualizations of cross-border mobility. The latter concern the work being done by NGOs, advocacy groups, policy evaluations, political actors and activists. More specifically, illegalized migrants themselves work to make themselves visible in circumscribed ways, often to claim rights and gain political agency in highly precarious circumstances. How are images and the craft of making them copied, translated, disfigured and redeployed within this field of images? How can we conceptualize affinities and contradictions between different visualizations in order to assess multiple ways in which 'Europe' and 'not-Europe' can become visually enacted? Images and their interrelations may both confirm, contest and confuse existing imaginaries of 'Europe' and its 'outside'.

### *Obstacles to Housing Recovery for Socially Vulnerable Populations*

Notions of resilience indicate that more resilient communities will experience less severe shocks to systems and will return to stasis more rapidly than less resilient communities. Concepts of social vulnerability suggest that different populations within communities have varying capacities to anticipate, resist, absorb, and recover from shocks. Consequently, different populations may be expected to manifest different recovery trajectories, both in terms of the magnitude of the shock as well as the rate of return to stasis. The literature suggests differences in recovery trajectories may lead to long-term redevelopment, displacement, and demographic change in the affected communities.

We analyze these variations using longitudinal household survey data, coupled with damage assessment and tax appraisal data from Galveston, Texas collected since Hurricane Ike, which struck in September 2008, causing one of the costliest disasters and most widespread power outage in U.S. history. Previous analyses indicate substantial differences in the severity of damage incurred by socially vulnerable populations immediately after the hurricane, as well as differences in the rates of recovery of housing values.

Here, we assess the relationship between the recovery of housing values and actions taken by occupants and owners. Panel models of housing recovery are enhanced with household survey data regarding occupant characteristics, financial resources, and repair behavior. These analyses build on our previous findings to better understand the obstacles to recovery for socially vulnerable populations. Understanding the vulnerability of a community to social and physical impacts from disasters helps local governments and planners, as well as the agencies that aid them, to support the development of resilient communities that are able to respond effectively to hazard events and recover quickly after impact.

### *Inequality in Tertiary Education: The Case of Hungry Students in South Africa*

Education is seen by many people, especially in the global south, as the route out of poverty, towards development and social mobility in society. However it has become apparent that many students at South African universities do not have enough food to eat on a daily basis. Much research, mostly in North America and Europe, has focused on the role of nutrition in learning capability and learning behaviour, and it is generally acknowledged that a healthy diet contributes to successful learning and performance. On the other hand, little seems to be known about food consumption patterns and the extent of hunger among students in developing countries. Research has been conducted, within a quantitative and qualitative framework, on the phenomenon of "hungry students" at the University of Johannesburg over the past few years. Since becoming aware of the problem in 2010, the University management has launched interventions of various kinds to assist students in need, in having at least one balanced meal per day. This paper will trace certain demographic and other characteristics of "hungry" students at the University of Johannesburg campus, as well as outline the institutional interventions undertaken to alleviate the problem. At a national level, the government, while cognisant of the problems experienced by tertiary students, particularly given South Africa's apartheid history, has appointed a committee in 2010 to review the provision and conditions of student housing at South African universities. Their report included a section on a budget meal plan for students.

### *Global Vocabularies, National Outcomes: Latin American Youth Activist Strategies For Bringing Transnational Social Justice Rhetorics Home*

This paper explores how youth in Latin America draw from global vocabularies of social justice to imagine and advocate for social change at home. The globalized circulation of media, interpersonal communication, and commodities has, we argue, shifted the cultural repertoires youth use to imagine citizenship. This is a heterogeneous phenomenon, but many examples point to a cosmopolitan sense of justice and ethics among youth. Youth draw on social media to engage with transnational publics to demand rights and new definitions of citizenship. They

hybridize non-Latin and Latin musical genres to argue for pro-indigenous equality and student rights. Finally, they obtain information from global sources to argue for policy changes on issues pertaining to the environment, same-sex rights, and Latin American sovereignty.

Amidst this turn to what can be seen as globalized ethics, we draw from Latin American youth studies literatures to argue that the outcome of this transformation requires scholars to *pose young people's relationship to politics as a question* in need of investigation rather than assuming a pre-defined relationship. As youth from Latin American imagine the future from global vocabularies, they seek to transform the *national*, the *local*, and the *personal*. Rather than localities serving as a barrier to cosmopolitan outlooks, Latin American literatures on youth political activism indicate that an awareness of an unequal world is embedded in transforming the immediate spaces in which they live.

### *Life Course Pathways to Later Life Wellbeing: A Comparative Study of the Role of Socio-Economic Position in England and the U.S*

A main paradox in comparative social epidemiology is that subjective wellbeing in the U.S. tends to be higher than in England in later life, although physical health is worse by all measures (Banks, Marmot, Oldfield, & Smith, 2006; Zivin et al., 2010). One proposed mechanism, the differential distribution of education and wealth in both countries, is at the core of this paper and will be extensively tested. Multiple measures of wellbeing, such as depressive symptoms (Radloff, 1977), satisfaction with life (Diener, 1984), and more eudemonic approaches to wellbeing such as CASP (Hyde, Wiggins, Higgs, & Blane, 2003) and psychological wellbeing (Ryff & Keyes, 1995), will be considered. Using a growth curve approach that investigates not only differences between people, but also within people over time, we will investigate to what extent life course approaches to socio-economic position, such as accumulation, social mobility or latent period, explain baseline differences and rates of change in wellbeing in later life. This analysis will be conducted using multiple waves (2002-2012) of two sister studies of ageing, the U.S. Health and Retirement Study (HRS) and the English Longitudinal Study of Ageing (ELSA). Both panel studies have a large, representative sample (N~20000 for HRS and N~10000 for ELSA) of the community residing population aged 50 or more, and contain comparable information on a wide array of life circumstances, among which gender, marital status, health, and both current and childhood socio-economic circumstances will be the most important for this analysis.

TAGGART, JONATHAN (University of British Columbia)

### *In Love with Place: Off-Grid Living and Place-Making*

Why do residents of Western world live off the grid? This presentation provides answers to this question. The expression "off-the-grid," refers to the living condition of a household or a community lying outside the electricity and natural gas infrastructure, but often also denotes disconnection from other infrastructures such as municipal water conduits, natural gas pipelines, road networks, garbage and waste collection, food supply chains, and telecommunications. Drawing from and contributing to the literatures on sense of place, rural studies, and voluntary simplicity we argue that while off-gridders embrace values typical of the voluntary simplicity philosophy, their biographical and geographical trajectories reveal that living off-grid is not a clear and free choice. The performance of the mundane complexities typical of the lifestyle renders off-grid living a uniquely radical, but also contradictory and even paradoxical, constellation of practices through which new marginal spatialities are constituted. Drawing from ethnographic fragments culled from a multi-sited ethnographic project unfolding across Canada we present a thickly descriptive look into the motives and lifestyles of off-gridders.

### *Controlling the Social Cost of Local School Markets?*

Education policy is evidently in a state of change across industrialised countries. The fragmentation of modernity has manifested in a local government reforms, privatisation and agencification, whilst the core executive's capacity to steer has eroded. *In toto*, a wide variety of endeavours to move away from the firm idea of state-funded, state-controlled and state-provided compulsory education have emerged. Along that trajectory the Finnish compulsory education system shifted during the 1990s from one of the most centralised to one of the most decentralised. Consequently, segregation between municipalities, residential ar-

eas and families has emerged also in Finland, and the variation between schools, measured by PISA scores, has recently increased.

Our aim is to elaborate the Finnish local spaces for school choice, and the ways in which the negative outcomes of school choice and overall diversification are governed by contrasting three distinctive local contexts. By analysing administrative statistical and documentary data, we aim to model how local authorities respond to novel, *local* inequalities, and the demands of freedom to choose and equality of opportunity, simultaneously.

Our analysis models three different sets of policies in the municipalities in Metropolitan Area of Helsinki (approx. 1 million inhabitants). First (the municipality of Espoo), the local institutional space for school choice is constructed in favour for choice, without any current policies for positive discrimination. Second (Vantaa), school choice is more restricted, the policy is to prevent segregation by emphasising the uniformity of schools. Third model is 'very pro-choice' (Helsinki), where the policies to prevent segregation have included actions in regional policy and direct positive discrimination to schools located in sub-standard socioeconomic status neighbourhoods. By revealing the diversified policies concerning positive discrimination and other forms of control of negative externalities, we discuss about the formations and estimations of social cost for school choice.

### *Leisure in an Unequal World: Assessing Causal Relativity Between Resources and Leisure*

Leisure in the global sense is an unfamiliar phenomenon in the toil-ridden lives of the marginalized and poor women in Indian villages, where moving out of homes in groups, into the open fields for privy is a leisure activity. Leisure for them is freedom from the restrictions on mobility outside the home. The multitude of toilets built with government aid, being used as storage places for fodder prove the argument of this deliberate choice of practice of leisure by women. Examining the data collected by questionnaire categorized in four leisure activities like reading a newspaper, listening radio, watching television and sitting at the computer. Study reveals with 30 married women age group of 18 to 40 in backward villages of Bundelkhand. Findings are that nearly 78% of women do not have access to all besides most of these activities are considered leisure activities indulged by men. The resultant recurring themes were of denial and lack of resources. The data affirmed that television is most popular mode of leisure and access to computer negligible. As a gender norm women practice enormous denial: whether in food, leisure time, questions of health, desires etc... They prioritize their tasks as wives, mothers, sisters and daughters and 99% of them adhered to the retrograde practice of purdah system. All these activities were directly related to the level of education and income of the household. The study reaffirms the implication of possibility for enjoying leisure activity - as defined globally is directly proportionate to one's education and resources "instability and uncertainty that characterize the world today have their origin in the fact that an immense and vertiginous accumulation of wealth by a few has precipitated the dispossession, impoverishment and exclusion of millions of human beings in all latitudes of our planet."

SIGIRI, UNSAL (Baskent University)

### *Assessment of Managerial Skills in a PSO: The Eufor Case and Its Capacity Building Role*

The European Union (EU) launched a military operation in Bosnia and Herzegovina (BiH) in 2004 named "EUFOR - Operation Althea" to assist Bosnia by ensuring safe and secure environment and conducting capacity building and training tasks in support of the Armed Forces Bosnia and Herzegovina to facilitate their progress towards EU and Euro-Atlantic integration.

In the meantime, militaries directly and indirectly are suffering from spending cuts and efficiency and effectiveness have been core issues of defense forces. Eventually this emphasizes a better assessment of training of military personnel in peace operations. The current attention is focused on how to train prospective military personnel for asymmetric warfare. Developing management skills may help to better PO practices. The aim of this paper is to assess the managerial skills of EUFOR peacekeepers from participant perspective and to emphasize the individual capacity building role of PSO experiences in removing the training deficiencies of peacekeepers. The research will also try to discuss wide-ranging impacts of asymmetric warfare on the officer profession, military training and education.

Ten different managerial skills (leading, decision making, stress management, problem solving, team working, motivation, and conflict management etc.) under personal, interpersonal and group level are studied in this research. The data (perspectives of participants of EUFOR) were collected from the interviews with five high level military managers of EUFOR and also with the "Assessment of Managerial Skills Questionnaire" filled by 32 peacekeepers from nine differ-

ent countries including: Austria, BiH, Czech Republic, Hungary, Macedonia, The Netherlands, Romania, Spain and Turkey. The collected data was analyzed by the content analysis method and it was found that there are training gaps in some areas, there is no "one-size-fits-all" model for training in PSO's and the operational experience itself helps to fill these gaps.

**VARRIALE, ANDREA\*** (Bauhaus-University of Weimar, [andreavarriale@hotmail.it](mailto:andreavarriale@hotmail.it))

#### *The Management of Public Spaces in Naples: An Essay in Urban Legal Geography*

The main red thread crossing the debate about the disparity between Italy's northern regions and their southern counterparts is the polarity between the categories of "modern" and "pre-modern". This polarity has been used to portray the two regions as intrinsically different in their economies, politics and cultures. Although the use of this dichotomy has proved useful for emphasizing the gap between the two, this has been achieved, I argue, at the cost of exaggerating their differences: the South has been described with the categories of pre-modernity, community, informality. Symmetrically, the north has been associated to modernity, society and formality. The attributes of "developed" and "under-developed" have been assigned accordingly. I argue that a study of formality and informality can be helpful to understand how these territorial imbalances are reproduced, provided that the former are understood as simultaneous, not mutually exclusive systems of rules. To do so, I analyse how three significant public spaces in Naples, southern Italy's biggest city today and its capital in the past, are regulated via formal and informal rules. With personal observation and interviews with local authorities, planners, local activists and users, I seek to understand how the interaction of formality and informality produces these spaces. Both formal and informal regulation, it is posited, exist in the city, and neither is intrinsically desirable or conducive to development. Rather, well-functioning public spaces are posited to result from a distinct mix formality and informality, whereby the two are both present and complementing each other. An explorative case study will be carried out in January 2014. There, the two sets of indicators (measuring the relative and the absolute strength of formal and informal rules) will be tested. At the RC21 conference I wish to present that case study and an assessment of the methodology adopted.

#### *Knowledge Production, Learning and Cognition in International Relations Theory: A Case Study in Brazil*

This paper investigates the learning and the sociological production of theoretical thinking in International Relations (IR) undergraduate courses in Brazil. One of the greatest problems faced by professors in Brazil is students' inability to read and write academic texts, especially in understanding the relations between arguments and their importance to the development of scientific theories. This situation is further aggravated by the character of IR theoretical disciplines whose traditional theories – realism and liberalism – still permeate most of the curricula. However, it is assumed that these theories do not provide knowledge that is related to the context of developing country in which Brazilian students are inserted. As a result, they fail to stimulate a critical cognition among students, who tend to simply repeat concepts when producing academic texts about international politics. Thus, it is important to combine critical theories and pedagogies in the expansion of thinking spaces. The theoretical basis comprehends principles from critical pedagogy, sociology and cognitive sciences, mainly linguistics and psychology.

**VASCONCELOS OLIVEIRA, MARIA CAROLINA\*** (Universidade de São Paulo, [mcarololiveira@gmail.com](mailto:mcarololiveira@gmail.com))

#### *Consecration and Reputation Among the Independents: Reflections on the Case of Contemporary Independent Cinema in Brazil*

The communication brings some findings of the author's ongoing PhD research to discuss *consecration and legitimation among those who play "independent" roles in fields of symbolic production*. The research focuses on the social organization of contemporary independent cinema in Brazil. Mobilizing mainly elements of Bourdieusian theory but also contributions of authors such as Raymond Williams, David James and Sarah Thornton, the study analyses the main independent filmmakers' groups in Brazil, their main instances of legitimation and the principal social arrangements that make independent production possible.

Independent film production, characterized mainly by its low budgets and by the absence of a hierarchical division of labor, acquires increasing recognition by consecration instances of traditional Brazilian cinema. It is also notable a proliferation of specific instances – such as independent film festivals or distribution companies focused on independent production –, which may indicate the beginning of an autonomization process.

Here we bring empirical data to situate the contemporary independent production in the large Brazilian cinema field and especially to show *how reputation and consecration here are constructed in opposition to the values/practices of industrial cinema*. And it means not only the adoption of certain aesthetic positions, but also the adoption of some *practices* in terms of social organization of production. We also call attention to the fact that, among the independents, consecration sometimes brings the "reverse effect" of threatening the representation of independence – which is a subject of dispute.

How to understand independent agents, for which categories as dominant or dominated, established or newcomers, are all unsuitable in some extent? How to analyse the construction of consecration in a context where the many forms of institutionalization (including some kinds of recognition) may threaten the very condition of "independent"?

### RC41-698.2

**VASEY, HUW\*** (University of Manchester, [huw.vasey@manchester.ac.uk](mailto:huw.vasey@manchester.ac.uk))

#### *Diversity and Inter-Ethnic Marriage – An Agent-Based Approach*

Inter-ethnic marriage, both a cause and a consequence of immigrant integration, is generally used to imply that the social distance between groups is low and, by extension, that community cohesion is high. The decision to marry outside (or even within) one's group is often regarded as stemming from individual preferences and opportunities for contact. However, many anthropologists and sociologists have noted that culture-specific norms of kinship and reciprocity have a profound effect on who may be seen as eligible partners (Ballard 2008; Gardner 2006), echoing segmented assimilation theory's focus on the importance of community and family influences in shaping assimilation processes.

Using a descriptive agent-based modelling approach, we seek to investigate the *processes* of partner selection in diverse communities, focussing on individual preferences, opportunities for contact, and group norms to uncover how these may lead to differential rates of inter-ethnic marriage. Agent-based approaches provide an ability to study 'global' phenomena simultaneously with their causal 'local' processes (and vice-versa) in a dynamic setting. They allow us to investigate the development of population-level phenomena from a simulated 'local' social space of norms and values populated by acculturated agents familiar to sociologists, potentially providing insights into community cohesion and inter-ethnic marriage which would not be available from other sources. Whilst agent-based models of inter-ethnic marriage have been developed previously, they have overestimated rates of inter-ethnic marriage and largely ignored the group-level processes necessary for a global understanding of inter-ethnic marriage. Utilising research and evidence from quantitative and qualitative sources from across the social sciences, we thus seek to develop a complex model of emergent processes of differentiation and change in the marriage patterns and social cohesion of migrant communities.

**VASILIEVA, LESSYA\*** (docent, [lessya-vasilieva@ya.ru](mailto:lessya-vasilieva@ya.ru))

#### *The Quality of Political Elite and the World Crisis*

The quality of political institutes of society depends from qualities of *political leader as a representative* of elite or ersatz-elite. The representatives of *elite* have such mental qualities as *sophisticated cognitive intellect, diverse range of behavior and social attitudes and aims* allowing them to bring maximum benefit to the society. The *ersatz-elite* have some common qualities with elite. But its representatives haven't diverse range of behavior and their ideas of values are mainly targeted at satisfaction of personal interests not regarding public interests. The representatives of elite and ersatz-elite are presented on all levels of social hierarchical pyramid. The quality of political institutes of society depends from qualities of *political leader as a representative* of elite or ersatz-elite.

Ersatz-elite introduce or develop social mechanisms depriving people of any control over political machinery. It turns out that in political and economic spheres of society deficient motivation and deficient satisfaction of basic needs are displaying through political indifference, social and economic frustration.

The present crisis does not have only economical but mainly social roots and cultural effects. It needs to specify the term *Social Rent* with new scientific definition. An equivalent formulation may be given in terms of the social parasitizing when given such a status by government. Social rent is a form of uneconomical compulsion. It is necessary that such status must be admitted by productive, market and state forces. The power and economical monopolies are the social factors which are converted into settled rent factors. Institutionalization of social rental relationships destroys economic and social competition.

The main subject of social rentiers is the ersatz-elite. As they develop and become the ruling class, the economic and political systems either arise with seizure of new resources or destroy themselves.

#### *Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)*

##### **Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)**

The paper problematizes the literary text that becomes a subject of the sociological analysis when representing social processes and phenomena as well as social practices of certain groups. The narrative analysis reveals a deep structure of the text reflecting values, norms and social attitudes used for describing social groups and social processes. The analysis correlates with structural hermeneutics of G. Alexander implying sociocultural research of semantic structures of the modern mass literature where social myths and archetypes are updated, serving as interpretive models to explain and organize (construct) the social world.

The paper aims to show the results of the empirical research while proposing an original method of the narrative analysis of 18 American female novels, top rated in the largest specialized websites. The method synthesizes various courses in narrative analysis (event-structure analysis by D. Heise and L. Griffin), structural approach (R. Barthes, V. Propp, T. van Dijk) and K.Yung's theory. It consists in constructing a causal sequence of narrative events interpreting it in the context of the social myth. The method's steps include:

- studying the life course of the heroines;
- selecting significant events (based on structural indicators);
- narrativization of the chosen events using the grammatical approach (verbs as action highlighters);
- forming causal sequence of the events;
- detecting the general narrative structure interpreted in the context of the social myth.

The resulting narrative schemes form 3 basic archetypal female role-models within the cosmogonist myth and can be considered as interpretive patterns for describing gender roles transformation in modern American society. The results of this empirical research can be verified in the context of feminist and post-feminist theories.

#### *Modernization of Values and Its Implications*

This work is based on the understanding of culture following the lines laid out in the works of L. White, P. Bohannon, A. Montague etc. and defined, loosely, as a system of non-biological regulators of human behavior (such as values, norms, attitudes, etc.). Just a few generations ago the majority of Russian population was rural, lived in the countryside environment and was engaged in natural-subsistence economy. Their culture corresponded to the low-level technological environment. The process of modernization has changed the environment in just a few dozen years, leaving the some cultural adaptors far behind. Some people experience conflict with impacts and challenges of modernization such as new women status, political democracy, market economy etc. We can see cultural differentiation on culture modernization continuation. Two poles of the continuation axes can be found. One of them is pole of modern culture acceptance, another one is pole of modern culture rejection. The both poles are Weber's ideal types. The Likert scale was used for culture modernization measurement in our survey. The scale was validated by R. Indelhart's index and S. Schwartz's scale.

Socio-cultural types often differ according to the condition of socialization also corresponding to the generational differences. More modernized type of culture is adapted to more modernized type of social environment. New generation has an opportunity to enjoy a more modernized culture than the old one. In this work, we attempted to evaluate the cultural changes between generations and polar socio-cultural types quantitatively. This longitudinal study was mostly based on a survey response data among university students in the city of Perm (Russian Ural) since 1991 till 2013. All samples covered more than 500 students. We can compare values of modernization between last Soviet generation and first Post-Soviet generation. The study also discovers the implications of these value changes.

#### *Bringing History In: The Management Of Ethnic Diversity In The Shadow Of German Nazi-Past*

Diversity and equality concerns and patterns of disadvantage in the labour market are historically constructed, and they draw the framework of diversity agenda at the national and organizational levels. Therefore, attempting to understand the notion of managing ethnic diversity in Germany requires the acknowledgment of the importance of history in diversity management research. Drawing on data from a company case study and thirty stakeholder interviews, this article revealed the generative influence of history on the diversity management agenda. We demonstrated that the Nazi-past, and particularly the treatment of this past, casts a shadow on contemporary diversity management efforts in Germany, generating several points of resistance and blind spots in dealing with ethnic diversity of the workforce in a creative, resourceful and fair way. It is the ongoing and current treatment of history, rather than the history itself as an essential reality, which shapes how we generate meaning and frame life. We illustrated that the post-holocaust collective guilt, which must be seen as the treatment of the German Nazi-past and not as the history itself, shaped the contemporary diversity management agenda in such a way that race related issues are excluded from it. For instance, the discrimination topic is marked by a collective silence, which affects the field of diversity management as well as the organisational adoption of the diversity management concept in Germany.

**VASSILOPOULOU, JOANA\*** (University of Sussex, [j.vassilopoulou@gmail.com](mailto:j.vassilopoulou@gmail.com))

#### *Integracism At Work. The Case Of Germany*

This paper further explores the notion of integracism, which has been introduced by the author briefly in a previous paper. The notion of integracism refers to a specific interpretation of the notion of integration with implicitly racist assumptions. This racially biased and ethnocentric notion of integration frames the meanings of managing ethnic diversity in Germany. Integration policies and measures are deployed to 'aid the better integration' of ethnic minorities, who are widely seen as deficient and difficult to integrate, rather than adopting diversity management measures to foster equality, fairness and inclusion at work. In that frame, ethnic diversity is depicted as a source of potential problems.

There is a surge in the use of the concept of integration in management of immigration, not only in Germany, but also in France and in the UK in recent years. The notion of integration is the dominant concept in the management of ethnic diversity in Germany. The aim of this paper is to examine the corrosion of the notion of integration with racial bias, which undermines the overdue proposal of equal opportunities at work. Arrangements of integration for immigrants include requirements of extensive documentation, training, point based calculations based on qualifications, economic wealth and experience, citizenship rituals. Most of these requirements are highly variable, based often on racial profiling. It could be argued that these politics and practices of managing ethnic minorities and immigrants are not as innocuous as they may seem at first sight. This paper shows how ethnocentrism and racial bias influence employment practices, leading to the exclusion of highly skilled ethnic minority workers.

The paper operationalises Bourdieu's key concepts, field, habitus and symbolic violence and draws on a large qualitative study based on more than 40 interviews, a case-study, focus group as well as visual material and a research diary.

#### *Teaching Ourselves and Reviewers Institutional Ethnography in the Process of Publishing*

Methods textbooks in the United States often introduce institutional ethnography (IE) as one of a number of qualitative methodologies used by researchers, rather than as a mode of inquiry whose aim is to provide an alternative sociology. Institutional ethnography, as proposed by Smith (1987), is a much more radical departure meant to challenge "the objectified subject of knowledge" including the discursive practices of established social science discourse. This presentation focuses on how the work of institutional ethnographers differs from qualitative researchers who are often sympathetic to IE, but fail to recognize these differences in practice. Drawing on our experience of publishing our research in standard sociology journals, we explore how reviewers' comments and questions turn subjects into objects of investigation and explanation, standpoint into a subject

position or category within society, everyday world into the object of study, and generalize forms of consciousness into generalizations about people. We discuss the ways we have responded to reviewers and how this process has taught us more about the distinctive features of institutional ethnography as an alternative sociology.

#### *La Adopción De Un Modelo Organizacional Como Estrategia De Comunicación Para La Transferencia Del Conocimiento y Tecnología En Centros Públicos De Investigación*

El presente trabajo se plantea la necesidad de contar con un modelo organizacional como estrategia de comunicación institucional para la transferencia del conocimiento y de la tecnología en centros públicos de investigación de la región del Bajío, a fin de identificar la forma de comunicación mas efectiva en materia de difusión de los procesos de transferencia de conocimiento y tecnología de cada Centro. Se parte de la premisa de que el conocimiento se presenta como el activo principal para la transformación y el progreso de toda sociedad, particularmente en organizaciones que se han creado con la intención de contribuir al progreso de la sociedad a la que se debe, fortaleciendo la economía del conocimiento, a través de la transferencia del conocimiento, y de la tecnología. Se concibe a los Centros Públicos de Investigación como sistemas vivos, en permanente movimiento, cambio, adaptación y evolución. La estrategia metodológica con la que se ha realizando la investigación, es desde un enfoque cualitativo, siendo el estudio de caso como uno de los instrumentos metodológicos. En este artículo se pretende mostrar formas para una adecuada comunicación institucional de los procesos de transferencia y tecnología en Centros Públicos de Investigación.

#### *Alienation of Scientists in Post-Communist Europe*

This paper focuses on the alienations' problems of scientists: researchers in scientific institutes, centres and universities in Post-Communist Europe. This topic hasn't yet received enough attention, especially in sociological researches of these countries. After the clash of the USSR it was seen decreasing of scientific study especially in fundamental branches of science but also in humanitarian knowledge. This process was accompanied by cuts of wages of researchers, their social exclusion from decision-making process and growing alienation. From the other side many researchers went abroad from the countries of their residence and some of them begun to participate in different projects and programs of foreign countries. They didn't identify results of their researches with former Homeland but linked their achievements with the place of present residence. This situation provoked appearance of the new forms of alienation. The paper analyzes manifestations and consequences of such alienation in scientific practices. I'll try to give certain contribution to the discussion about alienation in Post-Communist Europe. How did dramatic social changes that had taken place in these countries stimulate growing alienation of scientific researchers in different Post-Communist countries? From the other side scientific cooperation contains reserved possibilities to help scientific researchers' overcoming self-estrangement. How the changes of political life in their Homeland could influence their isolation? Thus the paper focuses attention on this background of people's alienation. My analysis builds on media accounts, interviews with scientific researchers and data's of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding sources of alienation in the scientific sphere of the Post-Communist European countries and for development of the general Alienation Theory.

#### *Identities through Big Sportive Events*

This paper focuses on the identities' problems of participants of big sportive events: Olympic Games, international championships and competitions. This topic hasn't yet received enough attention, especially in sociological researches. In real practices of last years it was seen increasing of athletes who participate in different competitions as representatives of foreign countries. From the other side many fans go to the games identifying their self with sportive clubs and fan-movements and with their states. Thus the new forms of identities appeared. The paper analyzes the sources and manifestations of such new forms of identities in real sportive practices. I'll try to give certain contribution that looks into the role of national factors and local cross-national relations in the region of the residence of

big sportive events in formation of different identities. Many local places of international championships are characterized by multinational population with very long and complex history (London, Sochi, Rio de Janeiro, Tokyo and so on). How big sportive events impact on local, regional and national identities in different countries? From the other side sport contains reserved possibilities of cooperation and solidarity not only on the local and regional but also on the global levels. How the Olympic spirit and changes of political life in the Region of the residence of big sportive events could influence the choice of identities? Thus the paper focuses attention on this background of people's identification. My analysis builds on media accounts, interviews with officials from the Organizing Committees of big sportive events and data's of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional identities.

**VEENHOVEN, RUUT\*** (Erasmus University Rotterdam, [veenhoven@ese.eur.nl](mailto:veenhoven@ese.eur.nl))

#### *Why Sociological Theory of Happiness Falls Short*

Happiness in the sense of life satisfaction is a psychological phenomenon in the first place. Consequently most sociological explanations draw on psychological theory, often implicitly and with little view on its limitations. A dominant perspective in sociology is that happiness results from comparison between perceptions of life-as-it-is and standard of how-life-should-be, which view fits with the notion that happiness is a social construct and as such culturally variable. Explanations in terms of universal affective appraisals and needs are marginal in sociology, as is wider biological sociology.

Though not suited for explaining happiness as such, sociological theory is apt for explaining conditions for happiness, societal conditions in particular. Empirical research shows that conditions for happiness are quite good in modern society, where its inhabitants live now longer and happier than ever in human history. Yet most sociological theorizing is about the miseries of modern society.

Some sociological explanations for this sociological short-sightedness are discussed.

#### *Violencia, Armas De Fuego Y Mortalidad Juvenil EN Mexico*

La violencia en México ha ocasionado un alto número de víctimas -sobre todo entre los jóvenes-, muchas de ellas provocadas por el uso de armas de fuego. Objetivos: Analizar el comportamiento de la mortalidad por armas de fuego en el grupo de edad de 15 a 24 años en México en los últimos 20 años e identificar factores socioeconómicos asociados a sus variaciones interestatales de la tasa en el trienio 2009-2011. Material y Métodos: Con la información oficial sobre defunciones y población se calcularon tasas de mortalidad por armas de fuego entre 1990 y 2010 por género, edad y estado; mediante un análisis de regresión múltiple se identificaron las variables asociadas a las variaciones interestatales de la tasa en el trienio 2009-2011. Resultados: En 2011 se produjeron más de 5,000 defunciones por armas de fuego, por lo que sería la primera causa de muerte más importante del país entre los 15 y 24 años. La tasa de mortalidad por armas de fuego se incrementó en 62% entre 2000 y 2010. Las tasas más elevadas se encuentran en hombres entre 20 y 24 años. Variables relativas al narcotráfico y el consumo de alcohol están asociadas a las variaciones de la mortalidad por armas de fuego entre estados. Conclusiones: El aumento de la mortalidad por armas de fuego, especialmente entre los jóvenes, es un obstáculo para el incremento de la esperanza de vida en México. Este es un problema social y de salud pública que debe ser abordado de forma interdisciplinaria.

*Social Norms of Morbidity As Specific Factors in the Demand for Health Services*

Seeking professional medical help is caused not only by medical criteria health pathology. There is a complex system of social factors of the transition from the physical sensations of discomfort or psychological distress to get help from a professional medicine, i.e. make it socially relevant fact. This is the most important cause why the accounting treatment for medical help and he true morbidity can not match. The different access to health care for different social groups is the most actively studied, among these social factors. But there are many other social factors and in countries and cities where the network of medical institutions sufficiently developed they are more important. This result was obtained in representative survey in St. Petersburg (2007-2011). The most part of them are the social attitudes / norms which give rise to refuse treatment in medical institutions and relates to the culture of health behaviors. This culture is very contradictorily. Improving education increases the tendency of self-medication. Massive short duration diseases (e.g ARDS) are treated within the family without recourse to occupational medicine in 75% of cases. Social attitudes of non-professional care are supported by widespread corporate informal norms to continue work in diseases with partial loss of ability to work. Such practice is supported by other informal social contract employees with employers: rejection of the fixing of cases of the disease in the social insurance company. This and other identified dependencies suggest that the indices of morbidity are subject to change without unambiguous connection with the actual number of patients and the duration of their illness. Methodological conclusion: for the considered social and medical conditions the survey are necessary for the correction usual morbidity data. Conclusions on the basis of registration of patients who seek health care may reflect the actual changes of many factors

**VEIKHER, ANDREI\*** (National Research University,,  
[aveykher@hse.ru](mailto:aveykher@hse.ru))

*The Indicator of External Validity As Aggregate Criterion Quality of Survey*

The external validity criteria in sociological survey methodology and practice are used rarely. The exceptions are electoral polls. The well known Gallup and others polls obtained the trust of public and professionals due to external (predictive) validity, although the term had not yet been coined. The predictive validity is the simple and most convincing proof of the high quality of all elements and stages of the survey. But the range of sociological topics allowing simple criteria of the predictive validity is limited. Methods for assessing the external validity developed in psychology, medicine and experimental economics where in many research single target parameter and one external parameter analogue of an unbiased independent source are used. Therefore, in the most sociological survey various complex internal validity criteria are used for evaluation of survey quality. These methods allow to evaluate the common error for all variables of a survey under the condition that the sample is random. However the last few decades a number of difficulties with probability sampling have been cropping up in the expanding range of survey topics. The basis of application of the internal validity methodology has been shrinking too. The paper offers a few steps expand the application of criteria of external validity: - install for surveys on specific topics limit application of the criteria of internal validity - "unamendable nonresponse rate" (nonresponse is the main factor that makes a non-random sample); - develop and apply external validity indicators for assessing the quality of a survey on selected topics - "item external validity"; - include ancillary questions in the questionnaire, which will compare the survey data with data from independent external sources. In our surveys of social settings in Saint-Petersburg (2007-11) we used as a measure of external validity and simple distribution, and complex calculated indicator of latent social phenomena.

*The Disadvantage Position of Muslim Women in the UK Labour Market and the Formation of Religious Identity*

**The Disadvantaged Position of Muslim Women in the UK Labour market and the Formation of Religious Identity**

Among ethnic minority groups in the UK, Muslims are generally in a disadvantaged position, experiencing many social and economic inequalities. Muslim women suffer from high unemployment rates and inactivity levels compared to their male counterparts and other ethnic minority women. This is despite policies to reduce the diversity gap in the UK labour market based on gender and religious

affiliations. The disadvantaged position of Muslim women can be seen as Muslim penalty and failure of integration and social cohesion. Many of my young educated informants, belonging to second and third generations of immigrants, resonated "ontological insecurity" leading to the formation of Islamic identity. This can often be manifested by embracing visible Islamic dress, which is a conscious decision, despite the disproportionate discrimination and negative attitude towards veiled women as a result of displaying their faith in public.

Applying feminist theory and questioning Muslim women's place as a marginalized group at the centre of social inquiry, this paper explores Muslim women's experiences of work in the UK labour market and the ways in which religious and cultural norms and values are negotiated. Collected questionnaires and interviews with more than 60 Muslim women in the UK, illustrate their attitude towards religion and work, particularly paid work outside the home environment. My findings indicate a feminist consciousness within the Islamic framework, whilst searching the principles of Islam on gender issues free from cultural contaminations. They promote their interests, rights and gender equality both in the family and wider society in multifaceted and sometimes contradictory ways.

*The Occupational Challenges of Female Architects in Iran*

**The Occupational Challenges of Female Architects in Iran**

In the recent decades, Iranian women's access to educational opportunities including the professional field of architecture, urban planning and engineering has been broadened. However, despite the considerable number of professional women with qualified success and technical expertise, patterns of gender inequalities have been sustained through traditional social and cultural systems. Some of the patterns of gender inequality are related to monopolisation of managerial roles by men at senior level and job polarisation. Some are career-related experiences and authority issues in terms of practicing the profession. Traditionally architecture, building industry and construction management have been considered as male domain. When professional women enter these fields as engineering engineers, surveyors, or officials and hold the positions of power, their authority is challenged not only by un/semiskilled male workforce, but also by educated men under their management.

Having said that in the educational institutions, particularly private institutions, they receive positive discrimination compared to their male counterparts, as they do not demand high financial demands.

Research on the challenges of female architects in Iran is scarce. Based on interviews, this paper aims to reflect the social, structural, and cultural challenges that young professional women in Iran experience. The paper will also shed light on women's agency in overcoming the barriers and claiming their rights and authority within the male-dominated social structures.

*Hierarchies of Middling Transnationals: Indian IT Workers in Singapore -- CANCELLED*

This paper builds on emerging literature around 'middling transnationals' (cf Ho 2011). Drawing on empirical research among Indian IT workers in Singapore, the paper advances two propositions. It argues that there has been insufficient consideration of skilled migration in terms of national and racial hierarchies of opportunity, rights and conditions; and that so far, literature on skilled transnationals has been too receiving country centric. IT is an interesting example of a highly transnational skilled occupation that has become associated with workers from India. It is argued that IT has become associated with India in ways that naturalise precarious forms of employment and attracts less favourable conditions than occupational categories more associated with White professionals. Using the example of Singapore, we argue that conditioning occurs via four intersecting factors. First, Singapore has a long-standing tradition of visa hierarchies which situate White, European transnational elites at the apex of the occupational hierarchy, and dark skinned workers from the Indian sub-continent at the bottom. Although 'dark skinned' workers have traditionally been low waged low skilled, perceptions of the recent flow of middling transnational skilled Indians builds upon this history of racial sorting. Second, we suggest consideration needs to be given to deeper social, cultural and historical analysis of how labour has been conditioned historically and in the present era in sending countries like India and how this in turn translates into conditions in receiving countries with respect to what workers accept as 'their due' and what they consider to be normal. Third, we suggest a more global circulation of colonial era ideas of racial hierarchy continue to cast a long shadow even to the most modern of occupations like IT. Finally, IT as an industry has emerged as a quintessential post-industrial service industry characterised by highly precarious sub-contracting forms of transnational labour supply.

*The Politics of Social Policy Expansion in Latin America*

Welfare systems in Latin American countries have been significantly expanded during the twenty-first century. After decades of a social policy based on social insurance programmes which tended to cover formal sector workers and their families, new social programmes have been introduced and coverage of existing ones has been extended to reach population groups previously excluded throughout the region. This expansion processes have been explained as an outcome of the consolidation of multi-party electoral systems, since parties in government now compete for the sympathy of the electorate by introducing policies that favour the majority, notably social policies. However, even if this perspective clearly demonstrates the effects of democracy on welfare policy, it falls short of explaining the variations in the expansion models adopted in different countries. This paper aims to contribute to the existing literature on Latin American social policy by attempting to explain such differences, combining institutionalist and interpretivist approaches. The chosen case studies are Argentina, Brazil and Mexico, the three largest countries in the region, where different expansion models have been adopted. The paper examines and compares the socio-political arrangements that enabled and triggered the changes in each country. Findings show that the variations can be explained in terms of the effects of democratic transitions and the party systems that emerged from them, the degree of social mobilisation around social policy issues and the capacity of social movements to break with the neo-liberal hegemony established in the region during the last two decades of the last century. Social welfare expansion, as a consequence, contributed to temper gross inequalities as well as to displace and redefine the fault lines governing social conflict. The article concludes with an outline of the main features dominating post-liberal/corporatist social policy hegemony in the region today.

*Professional Interests, Organizational Goals and the Mobility of Football Players in Europe*

The mobility of professionals has important repercussions for organizational performance and the objective and subjective career success of the professionals involved. Within professional football, team quality is directly affected by the movements of players to and from the club. Transfers have a big impact on player careers as well, as footballers changing clubs increase their income or revitalize their career with a renewed chance on first team football. Whereas previous research examines these movements from the perspective of individual players, this study analyzes to what extent player transfers are shaped by the interaction

between institutionally embedded organizational goals and the interests of footballers.

Using event history analysis to estimate the probability that a player moves to a different team, I argue that player transfers are a function of the location of an organization in the field and the position of a footballer in his team. In general, fringe players are more likely to move. This is especially so for high status teams, where such players move to pursue their interest of first team football. Moreover, players of underachieving high status teams are bound to be transferred, as the club lets go of the players it blames for its relatively low performance

This contrasts with the transfer probabilities of players in low status teams. The key players of these teams have a higher probability to move, as they are looking to increase their career rewards by moving to a higher placed team. Moreover, key players in overachieving low status teams are particularly likely to be transferred, as such teams sell their best players to cash in on their hard earned success.

In sum, this study highlights how professional labor mobility is shaped by the interaction between the institutionally defined interests of professionals and the goals of the organizations they work for.

*Gender Asymmetry As the Barrier of Political Modernization in Russia*

Considering activity of the women organization in the context of Russian political life we establish the fact of Gender Asymmetry in Russian politics. Representatives of women in Parliament (State Duma) vary from 10% to 14%.

The main features of social context determining gender asymmetry are the following: feminization of poverty, latent labor discrimination; Social and cultural inertia accompanied with gender stereotypes; Ignoring gender interests in political sphere. As the result one can see marginalization of women in the political and economic spheres.

We consider Globalization as the factor inspiring political activity of women in Russia and analyze role of more than 1500 thousands women organization and pay attention to the positive dynamic of their activity. Most of them act in social sphere (Maternity and childhood protection (39%), The help to socially deprived groups (29%), Providing of public services and amenities to city environment (29%), Healthcare (21%) and Education (22%), Protection of social interests (13%), Human rights (10%).

Main reasons of low representative of women in Politics can be described in different terms: Peculiarities of political socialization; structural factors (unequal distribution of resources owned by men and women; situational and biographical factors. For many years even the very consideration of the Law "On guarantees of equal rights and equal opportunities for men and women" was blocking. The Law about quotas for women in the party lists also was not adopted, despite the extensive discussion in the information and the public sphere. The trend of gradual increase in the proportion of women MPs in the federal and regional legislatures is very low still.

Hidden discrimination in the political sphere restricting activity of women leads to the different problems of social sphere.

*Parliamentary Debates on Ritual Slaughter. a Contextual Discourse Analysis*

**Parliamentary Debates on Ritual Slaughter: A Contextual Discourse Analysis**

During the last three decades the visibility of religion has increased in the public sphere of many European societies. This has not only to do with the arrival and settlement of large numbers of Muslims and other non-western immigrants in these countries, government policies for managing religious and ethnic diversity, but also with political agenda setting of powerful secular forces. Illustrative for this is the political debate on ritual slaughter in the Second Chamber and the Senate of Dutch parliament in 2011, initiated by the Party for the Animals. In this presentation, the argumentation used in this debate will be analysed from the perspective of contextual discourse analysis. The arguments will be related to features of the main participants in this debate as well as to the wider context of Dutch politics in the wake of '9/11' and 'the Fortuyn revolt' in 2001. These events have attributed to a reframing of Dutch identity in cultural and secular terms. Within the new created frame religious rites such as Jewish and Islamic ritual slaughter are defined in opposition to secular Dutch identity.

*Criminalizing Inequality: The Narratives of Women Formerly on Death Row in the Philippines*

This paper delves into the pathways to prison of women who once received the death penalty in the Philippines. Drawing upon extensive participant observation at the only two existing women's prisons in the country and in-depth interviews with 27 former death row inmates, I examine how the women framed the circumstances that brought them to death row, based on their understanding of their identities, relationships, and social worlds. I analyze the link between the women's histories of victimization, social and economic marginalization, and substance abuse problems and their crimes. I also consider how the experience of deception and betrayal in close relationships, compounded by corruption in the criminal justice system, constituted a pathway to death row for the majority of the respondents. I discuss the implications of their narratives for the discourse on women and crime.

The women in my study were largely in marginalized positions in their families and relationships, at work, and in society in general. Their crimes resulted from their efforts to survive on a day-to-day basis and cope with their circumstances. Their narratives reflect many facets and social realities of low-income and working class culture in Philippine society. Their accounts of victimization, violence against specific men and even women and children, drug abuse and/or drug dealing in response to social and economic marginalization, cooperation with illegal activity as a result of relational responsibilities, corruption on the part of government and law enforcement agencies, and fatalism and passivity in the face of injustice, illuminate the contours and dynamics of their conflict-ridden world. My paper exposes the challenges to the dominant discourse on women's crime, as illustrated by their narratives—as predominantly low-income women in a postcolonial, low-income nation enmeshed in poverty and institutional corruption.

*Microblogging and Macro Weather: Climate Change Risk Discourse on Twitter*

The social web represents a new arena for local, national and global conversations and will play an increasing role in the public understanding of science and the creation of risk discourses. This paper presents an analysis of climate change social representations on Twitter, analysing over 60,000 tweets collected using a random walk method. The analysis includes a combination of web metrics, latent semantic analysis and semantic network analysis. Results indicate that most active users on climate change are distributed according to a power law distribution and that web metric indicators suggest a moderate conversation on the topic. In terms of content, there is a remarkable complex network of topics that hints to a rather multi-dimensional and complex risk discourse accounting for complex causality links between climate change and natural, social and economic consequences. Most of the tweets cluster around the domains of the effects of climate change, the measures that are proposed to adapt to it, the policy debate between policymakers and energy industry and call for actions for offline events. Moreover, the media ecology of the tweets, the web links shared in them, are from a wide set of sources with a major role played by traditional media but with a substantial presence also of scientific journals and NGOs websites.

*Psychology and Learning Difficulties*

In the context of a sociological thesis conducted in France in primary schools, the focus has been on the issue of the diagnostics and devices used to help children with learning difficulties. The purpose of this paper is to analyse the role of psychological approach in the management of academic difficulties. In the attempt to understand how the family, the mother figure in particular, are blamed for the learning difficulties of their children. It will be seen that the lifestyle and educational habits of families are analysed by teams of professionals, and that when considered as deviant, they suggest help to the family. Indeed, from the professionals perspective, these learning difficulties are due to family dysfunctions, and educational deficiencies of the parents. This would damage the mental functioning of the child and lead to difficulties in their learning. In schools where children are mainly or exclusively of modest background, it seems that these psychological remediations are nearly exclusively the methods being used. Thus, children going to these schools are more likely to be diagnosed with mental illness than in a school with students from the upper-class. This psychologising tends to put the responsibility on the family or the child for his failure, while ignoring the issue of the gap between the culture of the school and the one of children from modest backgrounds. (Bourdieu, 1964, Morel, 2012) It will be demonstrated that

the psychological approach used by teachers allow them to suggest reasons for the difficulties faced by children and to put in place solutions. Indeed from a psychological perspective, the parents are seen as 'actors' of the success or failure of their children. The challenge for schools is then to accompany parents to transform their habits and their way of parenting.

*Changing Trends In Migration Flows From Mexico To The United States*

Although some observers tend to view Mexican migrations to the United States as a common socio demographic phenomenon due to the vicinity of the two countries in the context of unequal economies, late drastic reduction in migration flows from Mexico to the United States pose several questions. In the views of some analysts this is mostly associated to the security measures practiced by the U.S. government on its southern border after September 11, however there are other indications that point out in a different direction suggesting that these changes might be associated with a set of several factors in which demographic variables along with economic, labor market and political ones are closely interconnected, or if not is the case they coexist and interact in the same political arena.

Other variations of Mexican migration flows have to do with the repatriation to Mexico of huge numbers of irregular or undocumented migrants most of whom were previously residing with their families in the U.S. On another dimension there have also been some changing characteristics in the flows of Central American migrants crossing Mexican territory on their way to the United States. This new trend has been offering a challenge to Mexican authorities with new implications to the legal Mexican political framework.

One objective of this presentation is to offer data and information related to the kind of changes that have taken place lately not only in terms of Mexican migrations to the U.S., but with respect to the different political actions in the U.S. as well as in Mexico with reference to Central American migrants crossing the country and staying in the country.

A second objective is to interpret these new modifications at the light of other general changes especially those concerning the "management" of migration flows by other governments.

*The World Bank and the Global Governance of Social Policy: A Strategic-Relational Approach to the Education Case*

The World Bank's original mandate did not include education, but its involvement in education policy and reform has grown substantially since the 1960s. Today it is widely recognized as the most powerful and hegemonic of the international organizations operating in the education for development field. The Bank is the largest single international funder of education for development in low-income countries, and its technical and knowledge-based resources tower over those of other international institutions. This paper develops a global governance approach for understanding how the World Bank's agenda and policy outcomes in the education field have been constructed and have evolved with the passage of time. According to such an approach, research on agenda settlement in international organizations (IOs) needs to focus on three main dynamics: the political opportunities created by geo-political and ideological shifts among the most powerful member governments; the IO's relationships with borrowing (or "client") countries; and finally the internal dynamics and organizational culture of the IO's own bureaucracy as it aims to reproduce itself and manage shifts in the previous two dynamics.

The paper explores how these three dynamics interact in the constitution of the Bank's educational agenda and policies in four key periods: from the 1960s to the beginning of the 1980s, when the debt crisis exploded in many developing nations; from 1981 to mid nineties, a period marked by structural adjustment lending; from the mid nineties to 2008, when the Post-Washington consensus emerged; and from 2008 to present, characterized by significant shifts in power in the world system and an accompanying rise of strategic uncertainty at different levels within the Bank.

### *Learning from Informality? A Case Study to Rethink the Misfit Between Formal Policy Strategies and Informal Tactics of Citizenship*

Dutch disadvantaged city neighbourhoods face a wide variety of policy strategies to regenerate housing and public spaces, integrate migrants, support families, and make these urban areas safer and more attractive to the middle class. Residents in these areas, however, reveal very different tactics to make their living environment more equipped for their lives. They perform tacit and informal practices to deal with experiences of threat and develop community activities from the bottom-up. Informal practices – like everyday routines, tacit use of public spaces, and interactions at a square – tell much about the urban experience. Socio-economic disadvantages and a lack of linguistic skills make it hard for residents to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the public sphere as governments hold on to formal repertoires. Recent needs for welfare cuts and a growing fear for violent escalations make local governments eager to rethink citizen's involvement. How could sociologists but also policy practitioners learn from informal performances of citizenship in relation to the dominant actors and institutions? This paper analyses the misfit between informal tactics of residents and top-down strategies of government in a neighbourhood in Utrecht. An ethnographic case study of performed interactions between citizens, welfare practitioners, and policy makers unravels how strategies to involve residents paradoxically disrupt informal mechanisms and thereby disengage residents from taking part in the political process. Latent tensions deepen in the unhandy mismatch between well-intended strategies and everyday tactics. Could local governments use tacit knowledge without 'taking over' or 'disrupting' the tacit fabric of the neighbourhood?

### *Relative Deprivation, Affirmative Status Generalization and Social Identities*

The paper is based on caste-based graded inequalities and social identities emerging from the perceived relative deprivation by the socio-economically and educationally backward castes and affirmative actions based on identification of backwardness by the State agencies in India. The emerging social identities are discussed under a new concept 'Affirmed Status', besides, Achieved and Ascribed, as explained by Ralph Lynton. The affirmed status characteristics generalization are empirically verified to reconstruct the social structure, in modern Indian context. The process of such generalization and thereby emerging identities are explained with the help of a theoretical assumption, 'Social Devolution'. Affirmed status is explained as the social identity of an individual or group (s) of individuals who has acquired a status higher than their ascribed status albeit, positively discriminated by the state in their favour but mainly because of their perceived relative deprivation. And their own achievements, at whatever level, could not have been possible without such support from the state. Thus, the social identities of the affirmed status group(s) are resultant of aspirations and achievements of individuals belonging to a group(s) but due to support of the state. The status and mobility among affirmed status group(s) required to be higher could only increase with the continuation of the policy of positive discrimination, as more and more opportunities and benefits would become available and could be redirected to them. "Social Devolution" is construed as a process of elevating social power, prestige and dignity to relatively deprived, socio-economically and educationally low status groups by way of positively discriminating them to provide opportunities by a central agency (state in the case of India) without redistributing supremacy and forwardness of so-perceived-higher -status groups which also now, aspire to achieve the affirmed status for perceived fairness given by that agency.

### *CHILD Abuse in India : Navigating the ZONES of Silence*

A growing body of text have begun to furnish information and data on the widespread pervasiveness of child abuse in India. The paradox is that the perpetrator or the offenders are often someone known to the child and more often someone from the extended family. Though in some situations it is beyond their control, but many times the family fails to protect the child from sexual abuse given to the cultural tradition of family being a 'private space' where no intercession of public into critiquing its members is implicit. Moreover social stigmas make it difficult to talk about child incest in public. However, there is still an absence of in depth understanding and empirical evidence to support general observations because of the lack of the sensitivity to the issue and the failure to acknowledge it in the first place. This paper assesses the perception of child abuse among young college students in the age group of 17-20. The focus of the paper is the in-depth case studies of 10 victims of child sexual abuse and incest. The

purpose is not only to get quantitative data on the issue as understood by young girls but also get an insight into the manifold dimensions and meaning of abuse to the victims through case studies which is mostly anecdotal. It reflects on the excessive influence of normative standards of families also looks into the long term consequences of this in the lives of the victims.

### *YOUTH , Social MEDIA and Emerging Alternative Spaces for Socio-Political Movements : Analysis of 'nirbhaya' IMPACT*

With the swelling proportion of youth population, India today is becoming one of the biggest Social Media market. The emergence of youth as new actors empowered with the technology - mobiles, facebook twitters and the like have resulted in organized demonstrations/protests developing an intercultural platform to build solidarity. This new 'youth brigade' by engaging in political conversations for collective action has not only ignited mass social movements but also challenged the academia to reposition itself on the role of youth and social media as active partners of social change. This study analyzes the role of social media as perceived by the youth in the age group of 18-30 years in the city of lucknow. The case in study is the December 2012 New Delhi Gang rape case - 'NIRBHAYA' Movement. This paper attempts to gain in depth understanding of youth activism at the intersection of multidimensional identities and their unified perception towards transformative socio-political change through social media campaigns. It also focuses on why and how the youth organize in to online social activism fearlessly and bring in a faceless movement for collective political action by actively engaging in dialogue and building public opinion thereof creating strong youth pressure. The paper examines how far such campaigns have been successful not only on focussing on punishment but challenge the cultural assumptions which creates spaces for violence against women.

### *Hospital Management and the Contribution of Non-Sector Expertise*

A belief in the value and superiority of private sector management expertise has been central to NPM reforms (Ferlie et al., 1996; Hood, 1991; Pollitt & Bouckaert, 2000), leading to concerted efforts to re-structure public organisations and recruit senior managers from the commercial sector, including accountants (Clatworthy et al., 2000; Ferlie et al., 1995). It is assumed that such expertise will have a transformative impact on public organisations, moving them away from models of professionally dominated 'custodial' or 'consensus administration'. Commercial managers will emphasise the importance of resources, the need to meet performance targets, and have the ability to implement changes.

However, while these assumptions and expectations lie at the heart of policy making worldwide, there is little research that has tested them directly. Some work has been done on the impact of senior leaders in local government (Boyne, 2004; Boyne et al., 2011) and school districts (Meier & O'Toole Jr., 2002; Moynihan & Pandey, 2005). As yet however, there continues to be a dearth of evidence supporting the assumption that diversifying the skill mix of senior managers in public organisations will lead to enhanced performance.

To address this deficiency, we focus on the impact of this non-sector specific commercial expertise on the boards of acute hospital trusts in the English NHS. Drawing on the governance literature focusing on the human (and social) capital of board members (Haynes & Hillman, 2010; Kor & Sundaramurthy, 2009), we first investigate whether a more diverse skill mix of senior managers makes a difference and if so, under what conditions. Given the dominance of clinical logics in the fields of health care (Reay & Hinings, 2005), we, then, look at the nature of performance outcomes and whether other factors, such as tenure and autonomy, mediate the impact of commercial and accounting expertise

**VERPRAET, GILLES\*** (CNRS, [verp@ehess.fr](mailto:verp@ehess.fr))

##### *Multilevel Approach of Professional Fields : Differentiation of Professional Status inside Governance*

Multilevel approach of professional groups set up a large differentiation of issues, practices and status inside the same professional groups. This approach will be developed for planners and secondary teachers in France. Local surveys frame the observation on a rich diversity of practices and capabilities. National surveys focus on the normative requirements of professional integration (certification, regulation). European survey focus on the governance models inside the convergence of professional standards (Swensson). The notion of profession can be framed inside three repertoires of issues. We recognize a differentiation of perceptions and of professional claims within the relations between qualification and autonomy for teacher, between status and recognition for knowledge workers (Larsons, Abbott)

The sociological question comes to specify the place of professional groups inside the networks of globalization. The convergence of expert knowledge standards at the global level do not mask the intense differentiation inside each professional groups (Freidson), between the level of practices and the definition of professional responsibility, between meritocracy and salarieds. The professional fields frame a tense reorganization between these different levels and different status.

##### *Human Rights As a Social Institution*

Human rights as a social institution

Contrary to legal-positivistic approaches to human rights, sociologists often argue that human rights need not be restricted to legal norms. Rights have to be seen as more than legal norms discerned by judges trained in legal reasoning. For human rights to have social meaning, they must become institutionalised socially and become embedded in people's mindsets as well as in the day-to-day workings of societal institutions such as the judiciary, the schooling system, healthcare and the family. The aim of this paper is to develop such a sociological-institutional approach to human rights, which provides an important contrast to standard legal-positivistic approach of human rights. Based on the work of a.o. Meyer and Luhmann I will argue that fundamental rights can be seen as a social institution playing a crucial role in the protection of individual agency in a modern, horizontal and heterogeneous society.

##### *Real Fantasy*

Real fantasy

As new format of the cultural industry, reality shows are usually approached from two opposite and irreconcilable views. Sometimes they are taken as a sham, ie, programs that falsify reality by pretending to reproduce it. Otherwise, they are considered the immediate exhibition of Real (in the Lacanian sense of the term) – in this case, these programs would be a kind of window that opens to the display of objects beyond the symbolic field, such as violence and intimacy. Either thinking of them as a fake, or approaching them as attractive or generator of perverse pulse – therefore, as an exceptional phenomenon –, both perspectives tend to isolate the show from the society that forged it. The purpose of this paper is to present a third perspective that takes into account the world that such format is fed and which returns as mirroring: the flexible accumulation capitalism. From this perspective, it is possible to think of reality shows as a reproduction, not of the Real, but the reality itself, understood as the fantasy that ties our daily practices. Our hypothesis is that such programs take the form of social structure to organize practices such as surveillance, selection or evaluation of performance, all central devices for labor control in contemporary capitalist enterprise. The shift in the television format approach allows us to understand, at the same time, the new organization of the cultural industry – also looking for flexibility – as well as a cultural production incapable of achieving any form of transcendence.

**VICENTE, MARA\*** (ISCTE-IUL, [maravicente@gmail.com](mailto:maravicente@gmail.com))

##### *Professionalism and Managerialism: How Do Teachers and Physicians Deal with Management Measures*

The implementation of reform measures in public administration has conducted to critical changes in the functioning of services and had a great impact on several professions. Changing to a management culture, oriented by efficiency, results control and meritocracy affected professionalism. For instance, the management measures applied in the portuguese health sector, such as corporatization of hospitals, organizational decentralization and deregulation of the labor market conflicted with the interests of the medical profession, opposing to its core values (i.e. caring and altruism) and ethos code, leaving to a loss of autonomy and power in decision making related to its duties. Besides this, the attempt to implement a performance appraisal system led to resistance from physicians, saying that the model doesn't take into account the specificities of medical profession. In the education sector, there was also specific conflicts between managers and teachers due to the application of this system. However, these two professions dealt with the same management policy in different ways. While physicians (through their main trade unions) negotiated with the government the necessary adaptations of the model and guaranteed it was not implemented before that, teachers showed a collective resistance to its implementation in schools since the beginning, and failed to get an agreement with the government.

Thus, we observe different ways of dealing with the same management measure by two different professions, and even more, we can ask if physicians hold greater bargaining power than teachers to protect the profession interests.

Despite these differences, there has been an effort of trade unions and professional associations to maintain the status and interests of the professions, resisting to NPM policies. Kindiack and Randall (2008) call it a postprofessionalization process (instead of deprofessionalization). Moreover, the management measures, although opposing to the interests of these professions, seem also to contribute to reinforce professionalism.

**VICENTE, MICHAEL\*** (University of Technology of Compiegne, [michael.vicente@utc.fr](mailto:michael.vicente@utc.fr))

##### *Free Software Workers and The Myth Of a Deterritorialized Knowledge Production*

Software and Information Technologies of Communication have an important place in the development of globalization (Castells, 1998). Since the mid 1990's, in opposition to capitalist globalization based in intellectual property, we have seen the rising of Free software (Linux, Firefox ...). This new way of producing software, thought Internet communities involve a free participation, and give the image of an happy deterritorialization of production. This social model of knowledge production is presented as having many virtues that potentially eliminate geographic and social determinants related to a territorialization. From a critical perspective, we propose first to describe the main discourse features of the actors of Free Software supporters and then from an empirical study, we will compare these theses to the quantitative study of data that we have collected. Using social network analysis on a large sample (N = 10,494) of free software developers, belonging to hundreds of different free software projects, we therefore chose to study the coupling between coordination and territoriality, including investigating the homophilies (Lazarsfeld and Merton, 1954).

While we might expect a territorial decoupling, we analyze quasi systematically homophily phenomena: territorial ones, but also in terms of skills. This setting light of homophily phenomena allows us to question the perspective and deterritorialization present in discourses.

Also, we can realize a strong embedding of these communities in the elitist academic institutions, as well as a strong professionalization of the activity.

**VICERRA, PAOLO MIGUEL\*** (Chulalongkorn University, [pmvicerra@gmail.com](mailto:pmvicerra@gmail.com))

##### *Adherence to Preventive Illness Control Among Filipino Women through an Autonomy Perspective*

The focus of this study is the capacity of women to assert themselves within the household and how it may affect the sufficiency of their utilisation of ante-natal care and which practitioner to visit. This behaviour regarding choice may well be connected, albeit affected, with relations with their partners and be the demonstration of their household autonomy. Autonomy here is inclusive of education and employment status but also considers other facets as attitude toward intimate partner violence and mobility and economic dependency within the household.

Using regression models, it is found that the usual education and employment for cash indeed affect health-related behaviour but as in Philippine context, number of children ever born affect it as well, but at differing degrees. All these mentioned have particular thresholds that may be positive or negative in effects. What is central is socioeconomic status of the household which is positive in effect.

Results support the oft considered health gradient that access is based on the perception of finances. This becomes the main barrier for women to seek sufficient antenatal care and medically-trained personnel as well. Also, seemingly counter-intuitive findings had lead to having initial interviews with mothers in selected provinces in the country. What is supported by this approach is that traditional views on healthcare shape their views but perceptions of gradients that some types of care are only suitable for those who can afford them.

[mark.vicol@sydney.edu.au](mailto:mark.vicol@sydney.edu.au))

#### *Food Security, Rural Livelihoods and Agricultural Change: Evidence from a Case Study of Potato Contract Farming in Maharashtra, India*

Despite decades of sustained economic growth, food insecurity remains a seemingly intractable problem for many households in rural India. In recent years, food security has been elevated to pre-eminence in the political discourse of India with the passage of the much-debated National Food Security Bill (2013). At the same time, there has been a growing recognition among researchers that achieving food security in rural areas is not simply about solving food production or distribution problems, but rather addressing broader questions about household livelihood security (Pritchard et al, 2013).

Concurrently, the majority of rural Indian households continue to rely on smallholder agriculture as their primary livelihood activity. The nature of agriculture, however, is changing in India, as liberalisation policies open up the sector to domestic and foreign capital. One such change has been the spread of contract-farming schemes. Where they operate, contract-farming schemes are changing the dynamics of smallholder agricultural production, as land owning households are increasingly exposed to modern inputs, technology and markets. These schemes present new opportunities for some households, yet it is unclear how these changes will influence patterns of social differentiation at various scales.

This paper discusses the nexus between household livelihoods, food security and modernising agriculture in rural India, using evidence from a case study of a potato contract-farming scheme in Maharashtra. The paper argues that by understanding agricultural change through a rural livelihoods lens, we can reveal the nuances of how rural households negotiate change specific to time and place, and who is in a position to benefit from such change. If we understand food security as primarily a livelihoods issue, then understanding how modernising agriculture is influencing patterns of social differentiation will be critical to the long-term food and livelihood security of India's most vulnerable rural households.

[lucie.vidovic@seznam.cz](mailto:lucie.vidovic@seznam.cz))

#### *Is Poverty a Key Aspect of Ageing?*

The poverty in old age is one of the most persistent stereotypical images of ageing. Due to the significant differences between income before retirement and pension benefit, there is an objective drop in the income with the retirement. However, with the individualisation of pension provision and weakening the link between statutory retirement age and labour market exit, the connection is not so straightforward anymore and the image gets even more colourful when social class and different forms of capital are taken into consideration.

Using the secondary analysis of different surveys carried out in last decade among the Czech population aged 40 years and above, I will show the attitudinal data on the role of poverty and financial exclusion in old age definition. I will address issues such as expected (sources) of income after the retirement, marginalisation in consumption, indebtedness, age discrimination in financial services provision and subjective poverty. I will use the paradigm of heterogeneity of older population to show how these differ in different age-, gender-, income-, and social capital- groups.

#### *Transferability of Successful Cooperativist Actions: The Case of Albacete's Cooperatives*

The Integrated Project INCLUD-ED (FP6 of the European Commission) identified Successful Actions (SAs) in diverse social domains. In the field of employment, the successful case of the cooperatives of Mondragon in the Basque Country was analyzed. The Mondragon Corporation (MC) has proven to be a non-capitalist alternative to the traditional organizational and governance models of capitalist firms, combining democratic principles, values of solidarity and strong competitiveness that allow it to achieve both efficiency and equity. In this organization, five successful cooperativist actions (SCAs) were identified and considered crucial in explaining these accomplishments. In order to analyze the transferability of the SCAs, some of them have been recreated in the poorest and most marginalized neighborhoods of Spain: La Estrella and La Milagrosa in Albacete. In 2011, a cooperative was created on the basis of developing the SCAs to provide decent, stable and sustainable employment to people from these neighborhoods. This paper aims to explain the success of the transferability of the latter to the cooperative in La Estrella and La Milagrosa and the ways in which this successful actions approach is contributing to overcome inequalities while contributing to generate alternatives to the capitalism. This work is developed in the framework of the international network of research on cooperativism coordinated by Erik Olin Wright and Ramon Flecha.

#### *Sustainable Consumption Practices in Brazil's "New Middle Class"*

In recent years, Brazil and other emerging economies are showing a significant change in their socio-economic composition, which highlights the increasing income of the poorest sectors of the population. Some Brazilian authors claim that such economic improvement fosters the emergence of a "new middle class", prompting a debate on such socioeconomic changes, and on the very concept of social class, as this concept is not consensual within the Brazilian social scientists.

Regardless of the classification which assigns to this stratum of the population, this represents a profound change in Brazilian society, with implications for their consumption patterns. This phenomenon occurs in a scenario where environmental issues gain public notoriety and the discourses that advocates the responsibility of the State, enterprises and non-governmental organizations to address them now include the role of the individual in their daily practices, including that related to consumption. So, it sets up a paradox between the possibility of increased levels of consumption and access to material goods by this economically emerging stratum (labeled as the "new middle class"), and the diffusion of the discourse and the proposals that advocate sustainable consumption and the need to reduce the consumption patterns as a way of coping with environmental problems.

Given this paradox, the paper will present results of an ethnographic study that aims to map the debate about the economic rise of the phenomenon of the less affluent in Brazil and the trajectory of environmental thinking until the moment this includes a concern about consumption patterns. This also aims to determine, from empirical cases, how these subjects are positioned in relation to the new morality established by discourses and proposals for sustainable consumption advocated by environmental groups, government agencies and businesses, and whether or not alter their daily consumption practices.

#### *Mortalidad Juvenil En América Latina: Factores Asociados y Desafíos Pendientes*

En las últimas dos décadas América Latina presentó importantes resultados en la reducción de la pobreza, aumento de la esperanza de vida y reducción de la mortalidad infantil. Sin embargo, el incremento de la incidencia de muertes violentas, sobretudo, entre los jóvenes en este mismo período sigue siendo un desafío pendiente. Así como ocurre con la mortalidad infantil o el embarazo adolescente, las tasas de homicidio inciden diferentemente sobre los individuos de acuerdo con su posición en la estructura social. Los estudios sociodemográficos evidencian que hay una alta selectividad en la mortalidad juvenil por sexo, color/etnia y clase social. Irónicamente, las vidas ahorradas en los primeros años de vida en las áreas más vulnerables por medio de políticas específicas de saneamiento y cuidado en la niñez continúan siendo interrumpidas prematuramente en la adolescencia o juventud por causa de la violencia. En los países latinoamericanos, la sobremortalidad masculina alcanza considerable magnitud. En muchos de nuestros países los chicos mueren de 4 hasta 6 veces más que las chicas de misma edad. Estos datos solo pueden ser comprendidos dentro del marco de una cultura que aun sostiene fuertes rasgos machistas y una visión muy arraigada de valorización de la virilidad. Este trabajo discute las relaciones existentes entre las elevadas tasas de mortalidad violenta entre los jóvenes, especialmente los homicidios, e indicadores de condición de vida. Nuestra línea investigativa enfatiza el rol de la educación. Los avances cuantitativos alcanzados en la educación no son acompañados por elevación de los niveles de calidad. La baja calidad de la educación en América Latina que se observa por medio de los bajos rendimientos en las evaluaciones internacionales, a ejemplo del PISA, está muy correlacionada con una estructura de oportunidades restrictas que en su versión más perversa se refleja en altas tasas de mortalidad juvenil.

#### *Trajectories of Risk and Uncertainty? Medical School Students and Their Vocational Choices*

In Portugal, the imposition of a *numerus clausus* system at the HE entrance has contributed to the strengthening of a hierarchy of excellence in the school system. At the same time, it has introduced an increased uncertainty regarding the possibility to accomplish future projects and ambitions.

The case of medical courses has been paradigmatic in this regard. Its high demand has fixed permanently, academic excellence as an entry requirement. The access to a medical school implies some effort and sacrifices that not every young student is willing to take. Namely, because it implies a tension between the need to invest in studying on a highly competitive basis (thus focusing on future projects) and the desire to invest in youth sociability practices, under a high peer pressure (which are rooted on the present).

Obtaining and maintaining high grades along the secondary education is a long-term process (built during the three years of secondary education), but highly *uncertain* and *risky*: a single moment (an exam, an assessment) can ruin everything.

This presentation aims to analyze the processes involving Medical School entrance in Portugal. In particular, we intend to confront students' investment on a highly competitive vocational pathway (Medicine) with their awareness of risks that may emerge along with their option.

The analysis is drawn upon data collected within the project "Failure and drop-out at the University of Lisbon: scenarios and trajectories", a recently completed research project sponsored by the Portuguese Science and Technology Foundation (Project No. PTDC/ESC/64875/2006). In particular, it will explore data from in-depth interviews conducted in the academic year 2009/2010 to the students that in the previous academic year had entered the 1st year of medical school at the University of Lisbon.

#### *Did Someone Say Cosmopolitanism? a Critical Feminist View on Cosmopolitan Citizenship, Post-Nationalism and Trans-Nationalism in Europe*

By Dr Ulrike M. Vieten (University of Sheffield, UK)

Since the early 1990s cosmopolitan visions evolved as an endeavour to transcend 20<sup>th</sup> century's understanding of national communities; the post2001 intellectual climate of some kind of hegemonic 'security and surveillance totalitarianisms' demands a serious 'reality check'.

Speaking from Europe, and witnessing a rise in nationalistic socio-economic interests and neo-fascist political orientations in various EU Member States it is difficult to uphold any ideal of post-national political communities, not even talking of cosmopolitanism.

Nonetheless, I will argue from a feminist perspective that transnational belonging and cultural hybridity are equally on the rise providing some futuristic space to envision social justice and equality encompassing a *subaltern cosmopolitanism* the plural. It seems we also live in a very rebellious civic world society; also

very much connected to structural changes of the social fabric as far as ethnicities, race and religion is concerned in metropolitan cities all over the world.

While critically analysing Habermas' and Soysal's take of the 'post-national' and turning to Young's concept of the 'social connection model', the first part of the paper proposes an alternative reading of transnational and diasporic urban political spaces. It is argued that complex diversity and social contradictions nurture intensification and widening of trans-cultural cosmopolitan habits alongside a backlash of parochial opinions.

In a second part of the paper these emerging trans-national identity containers of multi-layered belonging will be tested while introducing some research results of a comparative study on new European citizenship and vernacular cosmopolitanism with respect to different ethno-national minorities in Britain, Germany and the Netherlands.

#### *Autonomy and Heteronomy of Managerial Changes in European Judicial Systems*

For a long time reluctant towards managerialism, Dutch, Belgian, French and to a lesser extent Italian judicial systems have undergone deep changes, since the Ministry of Justice implemented new management policies and tools. In terms of professionalism, accountability procedures, new norms (a more customer- and efficiency-driven approach), the valuation of other competences than legal ones, budget restrictions modified professional practices and identities of clerks and the magistracy. New models of what constitutes "a good magistrate / clerk" emerged.

The paper will focus on the part of autonomy and heteronomy of professional groups and political actors who either decided, implemented or had to cope with those managerial changes. Ambivalence prevails regarding their promoters and impacts.

Managerialism was partly promoted by other national or international institutions (the Ministry of Finance, the Parliament...). But even when they felt reticent about this trend, hierarchy at local levels (regional court chiefs and managers, judges and clerks at the head of diverse services) also took initiatives to gain efficiency, even though it might create conflicts with the law or their colleagues. Thus they contributed to the profession's definition of relevant managerial criteria and procedures.

But this autonomy varies according to the professions and hierarchical positions. The intermediate hierarchy received increased responsibilities (in priorities definition, budget allocation...). Yet, professional identities of ordinary magistrates and clerks got somehow weakened by the priority given to productivity and by contradicting orders (both making quick court rulings and listening to citizens, reinforcing crime repression and reducing short prison sentences...).

Finally, we observe a hybridism between legal and managerial values reinforced by the recent involvement of consultants and professionals other than law professions in the judiciary.

Combining sociology of professions with public policy analysis, this research relied on an empirical study based on observations and 130 interviews with bureaucrats, lawyers and clerks.

**VIGOUR, CÉCILE\*** (CNRS, [c.vigour@sciencespobordeaux.fr](mailto:c.vigour@sciencespobordeaux.fr))

#### *Lean Production in Public Services: Selective Transfer and Jurisdictional Conflicts*

Lean production has spread to public services, even in countries and institutions for a long time reluctant towards a managerial approach. The French State agency in charge of the "modernization of the State" (DGME) perceived it as an efficient tool to implement State reforms. How understanding this focus at the French State level on lean system? How was it re-appropriated by the Ministry of Justice, where other tools (such as ISO standards) had just been experimented, so much so that lean management is about to be generalized in the civil judiciary system?

My hypothesis is that lean system was a means for transversal ministries such as the Ministry of Finance (to which the DGME reported) to reaffirm their power on specialized ministries and impulse reforms otherwise than by budget cuts.

Moreover lean production was implemented in the judiciary by emphasizing its "soft side" (considering a court ruling as a collective work) and by presenting the efficiency goal in a positive way (reducing the wastes of time to focus on the core business of clerks and lawyers). This selective transfer was facilitated by the fact that the DGME supported its cost and that there were no staff cutbacks in the Ministry of Justice.

The paper will show how the success of lean production relies on its adaptability (the selection of some characteristics), its capacity to be compatible with values of diverse professions (even though it may generate jurisdictional conflicts with consultants or between professions when the division of labor is modified), and on strategic uses made by professional groups and political actors.

Studying lean system in public services requires therefore to associate sociology of work and a political sociology perspective. This empirical study at national

and local levels is based on observations and interviews with bureaucrats, lawyers and clerks.

#### *Intimate Unions: Sex Workers' Labor Activism in Karnataka, India*

Recent scholarship has de-exceptionalized sex work and positioned it within the theoretical framework of intimate labor (Boris and Parreñas 2010). However, academic studies of sex workers' *activism* as laborers remain scarce (Jenness 1990; Kempadoo and Doezeema 1998; Hardy 2010). What tensions emerge when a labor framework for sex work serves not only as an analytic, but also as a basis for collective action?

This presentation, a scholar-activist collaboration, examines the trajectory of the Karnataka Sex Workers' Union (KSWU) in India, drawing on 8 focus group discussions, 50 in-depth interviews, and our experiences. KSWU organizes sex workers using a trade union model. Rejecting state practices that either criminalize or pathologize sex workers, especially after large-scale HIV prevention programs directed at sex workers in India, KSWU has attempted to articulate an alternative claim on the state, positioning sex workers as citizens and workers.

We argue that KSWU has provided a meaningful alternative to existing relations between sex workers and the state. It has built alliances with other informal laborers and feminist and Dalit rights groups, and developed an independent trade-union-like funding approach. However, traditional trade union models have not always been adequate in the face of stigma; dispersed spatial patterns of work; no fixed "employer"; fluid identities of those who move between sex work and other informal work; systematic violence; and differences among women, men and transgender sex workers in their relationships to sex work. Many sex workers in Karnataka prefer the safety of invisibility, but KSWU's politics pull toward greater public visibility. KSWU's experiences highlight the inseparability of claims for recognition and redistribution, and suggest the need for strategies of organizing that respond specifically to intimate labor spheres--strategies that draw on the insights of Southern labor and feminist movements and develop creative, safe spaces for solidarity.

#### *On the Work Itself: Task and Organizational Reality*

In classic organization theory, 'purpose' and 'task' were key concepts. In order to understand the situation of a particular organization and to assess the form and necessity of managerial action it was considered crucial to address the organization's basic purpose or core task. Without this, an organization could not realistically assess the strengths and weakness of its inner arrangements and the threats and opportunities posed by its 'environment'. In contemporary organization theory, 'task' or 'purpose' is no longer a natural point of departure and figures only as one among many 'aspects' of organizational life. A widespread argument for this decreased significance holds that it is no longer relevant to speak in terms of overarching purposes as organizations manoeuvre in rapidly changing environments where tasks and purposes are multiple, ambiguous and in flux. Another is that the definition of 'tasks' by management is ultimately a 'political' or 'instrumentalist' reduction of the creativity and multiplicity of an organization. Thus it has been suggested that organizations are no longer relevant to understand as total entities, but only as 'partial organizations' (Ahrne & Brunsson, 2011). In the paper, I revisit Barnard's concept of 'organizational purpose', and Miller and Rice's concept of 'the primary task', which share a number of family resemblances. I argue that the authors were aware of the challenges in sorting out the core tasks of an organization, but that they also explain and illustrate the problems of bewilderment and fragmentation arising from neglecting the issue. A bewilderment and fragmentation that also characterises contemporary organization theory as a discipline, I argue. Employing the notion of 'reality device' I conclude that understanding the core tasks of an organization is an indispensable means to register and evaluate the empirical reality of organizations and the work to be done in order to accomplish those tasks.

#### *The Discussion about the Body Between University Teachers: A Case Study*

The debate about the concepts of the body is justified by the fact that the novice is a key element for the formation of the body conception of undergraduate students, this is the first step to consolidate how to think and act in different fields. We aim to discuss the conception of body from teachers of a philanthropic University of Goiás. The research is a cross-sectional study of a descriptive nature. Made sure a case study with a questionnaire developed and validated specifically for this study. Was distributed approximately 20 questionnaires and one teacher refused to answer. The study was approved by the Ethics Committee of the PUC Goiás under No. 1256/09. Identifies the fact that 26.7% of teachers working with sporting activities, 40% with the humanities, and 33.3% with the area of biology. About the body conceptions that prevail among teachers, nine replied the question, 66.67% consider the body as a machine, or as an organism, comprising separately from other components. Was also questioned whether teachers read authors who discuss the issue, 88.9% of teachers mentioned have already read. Was also asked if teachers talk about the body in their classes and again 88.9% said yes. The completion marks the fact that teachers' conceptions of body can be considered traditional, since there was no overcoming the dualism of body and soul, or the condition of a body "thing" (machine or organism). This conception among university teachers can affect the thinking about the subject among academics, fact that is shown by other researches.

#### *Mental Health in Public Universities: A Comparison Between Brazilian and Canadian Professors*

Mental health, an important object of research in Psychology as well as Social Psychology, can be determined by the relationship between psychological well-being and psychological distress. In this context, we search to understand: How do compare mental health of professors working in public universities in an emerging country like Brazil with the one of professors working in a developed country like Canada? What are the main differences in the indicators of mental health in work domain? How Mental Health affects Work-Life Balance? To answer these questions, this paper assesses Mental Health and Work-Life Balance for professors working in these two countries and test for their differences. The sample consists of 354 Brazilian professors and 317 Canadian professors. Data were collected through an on-line questionnaire assessing the following Mental Health indicators: anxiety, depression, loss of control, general positive effectiveness and emotion ties. We compared the components of Psychological Distress and Psychological Well-Being with the indicator of Work-Life Balance to analyse their relations. Reliability analyses demonstrated that all tested components are consistent to evaluate Mental Health and Work-Life Balance. Correlation analyses showed the components of Psychological Distress are negatively related to Work-Life Balance, whereas the components of Psychological Well-Being are positively related to Work-Life Balance. There are some small mean differences between Brazilians and Canadians professors in all five components of Mental Health, but these differences are not statistically significant. Mean differences for Work-Life Balance, gender, age, and Bias of Conformity are statistically different, although the size effects are small. Linear regression analysis, step by step, controlled for Life Events, showed that General Positive Effectiveness, Anxiety and Emotion Ties predict 31.5% of the scores of Work-Life Balance. Additionally, we observed that Brazilian professors find more balance between professional and private life than do their Canadian colleagues.

#### *Higher Education: Inequalities and Globalization in Some Emergent Countries Using the Mexican Examples*

Higher education: inequalities and globalization in some emergent countries using the Mexican examples.

This paper refers to the last question suggested in the proposal of the symposium: Since data and methods to investigate inequalities mostly refer to national units, how to produce quantitative evidences of global inequalities?

I will try to explain the implications of the process of globalization of the national higher education system in Mexico, having as a background the Bologna process as one of the best examples of the intense globalization of national education systems.

The paper has three parts:

1. The first one focuses in a comparison of the imbalance regarding economic and material resources among students, in order to gain access

to higher education in some selected countries, based on international statistics.

2. The second one is based on an empirical research undertaken in six universities in Mexico City, that are classified by academic characteristics, and by the implications that these have in the process of globalization of knowledge, and will examine the material and symbolic inequalities of the students that obtain their professional degrees.
3. The third one, will consist on a reflection that, based on empirical national data versus international data, allows the design of some elements of comparison regarding the inequities experienced by the young students that succeed in finishing their degrees, in some selected emergent countries.

**VILLALON, ROBERTA\*** (St. John's University,  
[villalor@stjohns.edu](mailto:villalor@stjohns.edu))

### *Argentina's Dirty War: Counter-Hegemonic Collective Memories & Frame Analysis*

In this paper, I analyze the contentious and long-lasting collective process to document, understand and reach justice for victims of Argentina's Dirty War, based on fundamental texts produced after the end of the last military dictatorship. By looking into the Nunca Mas (Never Again) report prepared by the National Commission on the Disappearance of People (CONADEP), which included hundreds of testimonies by survivors of torture and acquaintances, reading scholarly analyses on this matter, and finding testimonies published in other venues, I discuss how this report became a master narrative from which subsequent interpretations of the Dirty War emerged. I apply Goffman's (1986) frame analysis theory to understand the complexities and nuances of processes of collective memory-making, and identify how hegemonic and counter-hegemonic frames were used to create meanings and organize experiences of the Dirty War. Then, I propose alternative frames (an "intersectional frame" and an "emotions-conscious frame") with the aim of contributing to ongoing and long-lasting collective efforts to comprehend this phase of history. While this use of frame analysis may be considered unorthodox given that scholars do not generally impose a frame on a document, I intend to demonstrate the power of framing and reframing as tools to animate what existing frames may be masking and thus reach deeper levels of understanding through furthering the production of counter-hegemonic knowledge.

### *Economic Crisis, Politics and The Menace To Battered Immigrants' Rights*

The anti-immigration measures and xenophobic sentiments that have spread since the eruption of the financial crisis in 2008 have been significantly detrimental for immigrant survivors of intimate partner violence in the United States. In common times, this group is particularly vulnerable to abuse because of the intersection of their members' gender, sexuality, nationality, race, ethnicity, language, religion, immigration status, isolation, cross-national frames of cultural and legal reference, and socioeconomic standing. All of these factors influence the way in which aggression is inflicted and endured, and affect the availability of resources for immigrants to escape and overcome abusive relationships. The economic recession, anti-immigration policies and a rising xenophobic environment have all created additional hurdles for battered immigrants given that employment opportunities have declined, exploitative work conditions have worsened, and immigration controls have increased. In this pressing context, immigrant survivors of intimate partner violence have been faced with empowered abusers whose threats of deportation became real; ambivalent law enforcement officers who instead of protecting battered immigrants may be forced to collaborate with immigration officers; and a widespread sense of fear with its paralyzing and isolating effects. At the same time, most nonprofit organizations providing services for battered immigrants have met serious budget cuts that curtailed their ability to serve the increasing number of survivors approaching them. Based on interviews with service providers across the nation, participant observation of networks of battered immigrants' advocates, and a close reading of debates around the reauthorization of the Violence Against Women Act (VAWA), I analyze how these dire circumstances have been critical for not only immigrant survivors of gender violence, but also the battered immigrants' and battered women's movements.

### *Excision and Migration : Between "Legality" and "Loyalty" in the Transmission of a Traditional Practice in Migratory Context*

Female genital mutilation (FGM) is forbidden in many countries of the North (Europe, Nord-America) and of the South (Africa). However, this traditional practice is still transmitted from generation to generation by women.

If medical and pathological consequences of FGM are well-known, the social and symbolic implications in the intergenerational process of transmission of the practice and especially in the migratory context are poorly understood. The social and symbolic universe of the countries where sexual mutilations persist, implies that women who are not excised are considered "dirty" or "obscene". Non-excised women are stigmatized in their sexual identity and within African community. On the other side, young women living in a migratory context are confronted with other sexual models and may starting to feel a sexual disability. Communication around the practice of excision is almost absent in the families where women and girls are nevertheless excised. The perpetuation of the practice is intrinsically connected to the gender system stakes and in particular to the unequal status between women and men in some of these societies (Zimmerman, on 2011). Introduction to sexuality can become one moment of distance between the parental and family standards and the social standards of the local society (Andro, Lesclingand, Pourette, on 2010).

This qualitative survey involves both social sciences and biomedicine. To seize the representations and the narratives on practices connected to sexuality and to health, a series of semi-directive detailed interviews have been conducted with ten African women living in Switzerland and have undergone FGM. On one hand, transmission of FGM on the second generation of immigrants in the migratory context, is the way for keeping memories and traditions alive. On the other hand, teenager's sexual socialization becomes a ground of resistance against the western colonization, which takes place in the field of the sexuality.

### *« J'ai Peur Du 'Kongossa' (comméragé) » : Stigmate Et Contrôle De L'information Sur Le VIH/Sida Auprès De Migrants D'origine Subsaharienne Et Séropositives En Suisse*

Trente ans après l'identification du virus du sida et l'apparition d'une nouvelle épidémie, la séropositivité reste stigmatisée et difficile à dire. Quel que soit leur statut, origine et contexte socioéconomique, les personnes concernées tendent à taire leur infection, craignant d'être discriminées (Mellini et al., 2004). Cela est particulièrement vrai pour les migrant-e-s d'origine subsaharienne qui sont souvent réticent-e-s à révéler leur séropositivité en dehors du système de santé (Anderson, Doyal, 2004 ; Calin et al. 2007 ; Dieleman, 2008).

Fondée sur une étude qualitative financée par le Fonds national suisse de la recherche scientifique portant sur 30 entretiens approfondis avec des femmes séropositives d'origine subsaharienne vivant en Suisse, cette communication montre comment le stigmate rattaché au VIH/sida place le contrôle de l'information au cœur de leur vie quotidienne et oriente leur construction des liens sociaux.

Selon les représentations de la maladie dans les différentes sphères sociales (« maladie de putes », « punition de Dieu », « sorcellerie » ou autre), les femmes choisissent de taire ou révéler leur infection. Le cloisonnement des relations sociales découle de la peur que le secret ne soit dévoilé et que le stigmate, de perçu, devienne agi (Green, 1995). Les femmes se confient peu à leurs proches, craignant le rejet. Seuls quelques membres de la famille, partenaires ou ami-e-s, sont soigneusement sélectionné-e-s. Le VIH est gardé strictement secret dans les communautés Africaines et religieuses, par peur de l'exclusion. En revanche, les hôpitaux et les associations de lutte contre le VIH/sida sont perçus comme les lieux sécurisants pour parler de l'expérience de la maladie.

Finalement, le stigmate de la séropositivité a des effets réels sur la santé et la vie sexuelle : la peur et la nécessité de se cacher augmentent la vulnérabilité des femmes subsahariennes en contexte migratoire.

### *La Cooperación Científica Entre Universidades De México y Francia: Qué Prácticas, Estrategias y Alcances Podemos Identificar*

No cabe duda que vivimos una era en que el uso de las TIC permite mayor flujo de conocimiento, donde se multiplican los acuerdos de cooperación económica entre países que muchas veces incluyen el tema de la colaboración científica y tecnológica entre universidades y centros de investigación de los países involucrados. Los Programas Marco de la Unión Europea y particularmente el 7° abrieron nuevos horizontes para la cooperación científica y el flujo de conocimiento entre investigadores de Europa con los otros continentes. En este contexto, cabe preguntarse en qué medida las universidades y centros de investigación han lo-

grado construir estrategias de cooperación científica internacional como una vía de acceso al conocimiento y para reforzar sus capacidades científicas.

La cooperación científica ha sido estudiada desde el ángulo de las co-publicaciones entre investigadores. Es un método que da cuenta de la construcción de redes de colaboración, de la emergencia de campos disciplinarios y de la densidad de flujos de conocimiento en el ámbito internacional. La movilidad estudiantil es otra forma con la que se ha analizado el flujo de conocimiento y entre países. Las copublicaciones y la movilidad de estudiantes reflejan decisiones y trayectorias de individuos, pero metodológicamente no dan cuenta de las estrategias institucionales que hay detrás, como tampoco del aprendizaje organizacional que llevan a cabo las universidades y centros de investigación.

La ponencia resume los resultados de una investigación sobre las prácticas y estrategias de cooperación científica y tecnológica entre universidades de México y Francia en los últimos 5 años. Mediante un cuestionario electrónico aplicado al personal de oficinas de relaciones internacionales en las instituciones académicas, hacemos una clasificación de los instrumentos, las prácticas y resultados disponibles. Analizamos en qué medida existen estrategias y políticas de cooperación internacional, cuáles son y qué alcances tienen.

**VINCENT, FANNY\*** (université paris dauphine, [fanny.vincent73@yahoo.fr](mailto:fanny.vincent73@yahoo.fr))

*Travailler « En 12h » à L'hôpital Public : Quand Les Politiques D'austérité De L'hôpital Public Rencontrent « L'accélération Sociale Du Temps »*

Dans nos sociétés prises dans ce que le philosophe allemand Hermut Rosa appelle l'« accélération sociale du temps », et face à la dégradation des conditions de travail dans un contexte d'austérité, maitriser son temps de travail est un enjeu. Et ce d'autant plus dans le milieu hospitalier où temps de travail est souvent synonyme de don de sa personne.

Depuis une dizaine d'années une forme de travail atypique se développe, à la limite de la légalité, dans les équipes soignantes des hôpitaux français : le travail en 12 heures d'affilée. Présenté par les directions des hôpitaux comme une solution pour pourvoir les postes vacants, le travail en 12h permet aussi à court terme d'économiser des postes en supprimant les temps de chevauchement entre les équipes.

Mais pour les soignants eux-mêmes, ne travaillant « plus que » 12 jours sur 28, les 12h permettent d'avoir plus de temps pour sa vie privée. En effet, à la différence des plannings traditionnels en 8h, travailler en 12h permet d'obtenir un roulement fixe et de dégager mécaniquement du temps pour cumuler une deuxième activité face à au gel des salaires.

Notre exposé s'appuiera sur les premières conclusions d'une enquête ethnographique de plusieurs mois menée dans divers services d'hôpitaux parisiens, ainsi que d'entretiens avec les soignants, dans le cadre d'une thèse engagée depuis octobre 2012. Nous montrerons que ce qui apparaît comme un consensus inédit entre les directions et les soignants autour d'un meilleur équilibre entre travail et famille, est en fait un moyen pour les soignants de fuir un travail qui s'est intensifié depuis que les politiques de restriction des dépenses et de maximisation de la productivité se sont imposées ces dernières années à l'hôpital : « au moins on ne revient pas travailler tous les jours ! ».

RØNNINGEN, KATRINA (Centre for Rural Research)

*Private Lands, Collective Values? Framing of Food Security in a Norwegian Land Use Conflict*

The principle of food security is in recent agricultural policy documents in Norway being used to re-legitimize increasingly neoproductivist farming policies and systems. Thus conservation of agricultural land is once again prominently positioned on the political agenda. With only very limited availability of farmland, only 3% of Norway's land area is in productive agricultural use, the issues of agricultural land conservation and food security have become more or less inseparable in Norway. Further, Norway, as a non-EU member, has insisted internationally on maintaining a very protectionist agricultural policy to meet the objective of being 50% self-sufficient in calories produced from agriculture.

A large proportion of the best quality farmland is within the vicinity of the country's major urban areas. While Norway was urbanised relatively lately by European standards, there is now a very strong centralisation tendency with in migration from rural areas. This, combined with increasing in-migration from abroad, is placing considerable pressure on the remaining farmland – particularly fertile land on the outskirts of major cities. Conflict between agricultural policy objectives for conserving farmland and an increasing financial interest following the demand for housing, roads and infrastructure is thus becoming a major issue in the public and political arenas. Based on a Norwegian case study, this paper will show how food provisioning and food security as collective goals is framed

and positioned in discursive struggles on land between financialization, climate concerns and urban growth.

*Multiple Imputation Of Squared Terms*

We propose a new multiple imputation technique for imputing squares. Current methods yield either unbiased regression estimates, or preserve data relations. No method, however, seems to deliver both, which limits researchers in the implementation of regression analysis in the presence of missing data. Besides, current methods only work under a MCAR mechanism. Our method for imputing squares uses a polynomial combination. The proposed method yields both unbiased regression estimates, whilst at the same time preserving the quadratic relations in the data for both MAR and MCAR mechanisms.

*Russian Housing Care for Orphans: Equal Rights in Unequal Opportunities*

A great number of decrees, regulating various aspects of social security for orphans (including housing), have been adopted by the Russian government in 2013, which put Russian Orphan Care among the paramount issues of social policy.

This paper analyzes the housing care laws in relation to orphans in Russia, including federal laws, regional statutory documents and case law protecting the housing rights of orphans.

At present, the Russian government has a duty to provide orphans with housing regardless of their age, which is made at the expense of both the federal budget and the resources of local authorities. At the same time, orphans are unequally allocated in regions with various levels of economy, which collides with the variety of housing needs that orphans have at various points in their lives. For example, during the period of professional studies orphans are provided with a room in the university's dormitory, thus their housing need is partly met by the funds of their educational establishment. However, after graduation orphans are required to have a permanent registration, i.e. living space of their own, in order to have a job and for other purposes.

In general, the paper combines the case study methodology with legal analysis of effective housing rights for orphans and young care leavers who are in need of housing. The study leads to the following key point: equally guaranteed rights to housing care are hampered by the lack of (i) a unified mechanism for different regions of Russia and (ii) appropriate economic resources to implement the rights.

*From Right-Wing Violence to Racist Terror – Exploring Factors of Radicalisation*

In November 2011 a racist terror group in Germany that claimed responsibility for the murder of nine migrants and one police-woman was discovered by chance. For more than thirteen years security forces had no real idea of the activities of the group, assuming that the killings were caused by criminal motives. After the existence and activities of the racist group has become known several high-ranking security and secret service officers resigned and the security apparatus is still under reconstruction.

The paper addresses the attempts by researchers to locate the factors why a terrorist group developed from a much broader racist violence-prone movement and tries to weigh up the role and actions (as well as non-actions) taken by state actors towards the extreme right in Germany in general and against the regional right-wing movement in Thuringia from which the terror cell emerged in particular. In doing so, the investigation tries to find out if in the first phase restraint by the state might have encouraged right-wing violence while in a later phase adamant decisions by public prosecutors may have contributed to a radicalisation processes resulting in racist homicide.

*The Identitarian' Movement*

In autumn 2012, the Génération Identitaire, a French group, launched a video message on Youtube declaring war on multi-culturalism. In order to gain a maximum of public attention and as an example of how the movement's performance would look like the group occupied a mosque in Poitiers, chosen for the final victory of Karl Martell against the invading Moors in 732 AD.

While, in France, the group's roots date back into the early 2000s, the occupation of the mosque quickly inspired imitators in neighboring countries like Austria and Germany. Although presenting themselves as being non-racist its ethno-pluralist approach and public statements on several issues clearly indicate that the movement belongs to the spectrum of right-wing racist populism.

The paper will outline the emergence and the development of the 'Identitarian' Movement taking the variations in several countries into account. A focus will be given on the analysis of the movement's claim of not being racist on the one hand and the de facto involvement of known right-wing protagonists on the other hand. Finally, the public performance of the movement that is web-based to a large extent is investigated. In sum, the paper offers an analysis of a new political phenomenon and situates this into a broader understanding of more recent developments of right-wing populism as a whole.

### *Gendering Responsibility: Work Practices and Institutional Responses to Intimate Partner Violence in Finland and in Russia*

This paper examines how the highly gendered phenomenon of intimate partner violence (IPV) is encountered in various institutional settings of social and health care services in Finland and in Russia. The empirical data comprise (1) 16 focus group interviews with staff members (n=73) in various social and health care units in Finland and (2) 74 interviews with staff members (n=56) and service users (n=14) in three public crisis departments and one NGO crisis center in Russia. Based on the analysis of this data corpus, it seems that one of the dominant institutional discourses is that of making the female victims responsible for dealing with the problem of IPV. According to the interviewed professionals, it is difficult or even impossible to address the topic of the responsibility of male perpetrators due to various reasons, e.g. inadequacy of existing work practices or insufficient legislation. This paper takes a closer look at the ways in which the above-mentioned discourse operates to organize work practices that result in "gendering responsibility" at the level of local activities. Following the ideas of institutional ethnography (Smith 2005), the basic assumption of this paper is that institutional discourses organize the ways of "seeing" and "knowing" the solutions to the problem of IPV in institutionally actionable ways. Of special interest here are the interconnections between the institutional processes carried out locally and those organized at state, national and even international level. In addition, this paper addresses some cultural differences between Russia and Finland in the ways in which the female victims are made responsible for dealing with the problem of IPV in the everyday work of the institutional settings under investigation.

### *Testing the Effectiveness of HRM Practices Among Expatriate Humanitarian Aid Workers*

**Abstract:** Staff turnover has become a major concern for humanitarian organizations. On the one hand this can be seen as something humanitarian organizations have to live with, but on the other hand it has also been blamed for reducing effectiveness and efficiency due to discontinuity in staffing and loss of institutional memory. The general public pressured for greater efficiency and accountability. Professionalization, and especially adopting for-profit management practices, for example regarding human resource management (HRM) was deemed to be key to achieve enhanced efficiency and accountability. In short, no sector is this dependent on the employees and their loyalty and at the same time is experiencing a very high risk of turnover. Therefore, this is the perfect setting to study the effectiveness of HRM practices. Yet, while much discussed, in-depth research on the consequences of human resources practices on attitudinal outcomes of employees, like trust in management, job satisfaction and leaving intentions in this sector has so far not been conducted. So far, most studies have been conducted in the for-profit sector and to a lesser extent in the public sector. While it is assumed that HRM practices should also be effective in humanitarian organizations empirical data was lacking in order to actually test this. To the knowledge of these authors, this is the first empirical attempt to study these issues among a sample of humanitarian workers (N=140) working for one of the largest agencies in the field: MSF. Preliminary results show that HRM practices are positively influencing individual attitudinal outcomes (job satisfaction and turnover intentions) and that

trust in management is an important factor mediating this relation. HRM practices are conducive to building trust in management, which in turn is positively related to job satisfaction and intention to remain with the organization.

### *Les Droits Pédagogiques Chez Bernstein : La Normativité Sociologique En Questions*

Cette communication visera à questionner ce qui apparaît comme le modèle normatif explicité dans la théorie de Basil Bernstein : le modèle des « droits pédagogiques » par lequel il introduit son dernier ouvrage et qui semble fonctionner une ontologie (Bernstein, 2007). Il s'agit d'un positionnement ontologique, au sens il affirme ce que sont les droits pédagogiques notamment au regard des institutions et des individus, et normatif au sens où il décrit ce que devrait être le dispositif pédagogique, et singulièrement le dispositif scolaire en rapport à son ambition démocratique. Ces deux dimensions associées permettent de poser l'enjeu d'une normativité objective. En relation avec quelques hypothèses simples permettant de penser les conditions de possibilité d'une démocratie minimale, l'auteur en vient ainsi à poser la nécessité pour les dispositifs pédagogiques d'instituer trois droits reliés entre eux : le Droit à l'Amélioration (DA), le Droit à l'Intégration (DI) et le Droit à la Participation (DP). Il est cependant possible que ce modèle ne joue pas encore totalement le rôle qu'il est appelé à jouer, et que Bernstein entend lui faire jouer dès l'introduction de son ouvrage : « un modèle auquel je pourrai comparer tout ce qui se passe dans les divers systèmes éducatifs ». Y compris dans les analyses de Bernstein lui-même, en témoigne d'ailleurs le fait que les trois droits ne sont plus jamais par la suite mentionnés tout au long de l'ouvrage. Ils semblent peu repris explicitement aussi par la communauté actuelle des bernsteiniens.

### *How Courts Must Act To Provide Democratic Access To Justice On Civil Disputes? The Experience Of Brazilian Federal Court In Slams Of Rio De Janeiro*

The aim of this communication is to discuss how could Brazilian federal court act in marginal urban communities with peacekeeping police forces units (UPPs) to promote democratic access to justice in civil disputes. A federal court in Brazil has the competence to judge the conflicts involving the Brazilian federal state, as well as their federal organs, as the mail office, the social security institute, federal banks, the national regulatory agencies and others. The field of research is the implementation of programs and projects of the federal justice in underserved communities, implemented by the federal court of Rio de Janeiro. These programs began in 2010 and last until 2013. The implementation of such policies was extremely heterogeneous and plural. Initiative began with a realization of hearings, production of expert evidence and offering agreements by the social security institute approved at the same time by the Federal Judges (judgment), and then became itinerant events to provide legal advice and assistance, and legal education for citizenship, without rendering jurisdiction in *strict sense*. Presented through the analysis of Boaventura de Sousa Santos on the relationship between law and community and the tension between regulation and emancipation, I report the experience in Cidade de Deus, Rio de Janeiro. I conclude that pedagogical access to justice, which means, legal education for citizenship can offer a third way to rethink the relation between courts and communities for dispute resolution in civil conflicts.

### *Art Works and the Production of Knowledge on Cities*

Artists work on the built environment mainly through the production of art works in the public realm. This implication has recently taken a new orientation where artists work, in some cities, on issues related to urban projects along with the project team. They contribute to the early stages of urban projects and take part in field studies. Besides the use of urban planners' and architects' know-how, they collect data in various forms - sound, images, objects, words, impressions - and they transform this data into art works which are qualified as territorial. They produce through this work and their actions, knowledge on the city, the project site and the local community.

This paper presents the results of a research project based on five case studies where artists are invited by urban professionals to work and produce knowledge on cities and project sites in France. They are digital artists, sound artists, choreographers, visual artists, actors. They work mainly through intensive field work. Site immersion and (in)formal interviews are singled out as the key elements that are used. We will first discuss in which way and to what extent artists produce knowledge that is different from that produced and used by city professionals. What kind of knowledge do artists produce? In which aspects is this knowledge different? Are these differences due to artists' specific skills? To their methods? To their unique gaze? To their capacity to represent the reality? Then we will discuss how can urban professionals use and work with this new kind of knowledge. How do they analyse it? What are the epistemological, methodological and analytical problems encountered in their understanding and their transposition in urban studies?

*Young Graduates Self Entrepreneur: Searching for Job or Creating a Company?*

Precariousness is a rising condition of high skilled and knowledge work. The implementation of new kind of work contracts is supporting this movement. In France, a new fiscal regime for self-entrepreneur had been created in 2009. This consists of lower tax rate and simplified administrative procedure for small companies (turnover under 33 000 euros).

This communication presents the results of a research on graduates (master or PhD in social sciences) who enter the labour market by creating this kind of self-entreprise. It appears that they didn't choose this scheme of work: it had been required by employers to low their labor cost, flexibly the working relationship and externalise administrative procedures. While graduates are administratively independents, their conditions of work are mainly those of salaried: in the firm, with fix schedule, prescription from the superior, etc.

In these situation that fuzzed and hybridised working regime and working conditions of independents and salaried, how are these graduates (as specific population of knowledge workers) adapted? Their working conditions, activities, projects and discourses reveal different feelings about that situation. This paper will explore these three idea-types of young self entrepreneur: subordinated, independent, or in inclusion. To what extent does this situation trained them to become entrepreneurial worker?

[mara.viveros@gmail.com](mailto:mara.viveros@gmail.com))

*Masculinities, Violence and Multiculturalism in Latin America*

Male violence has occupied a foundational place in Latin American history. Latin America's past has been marked by men's violent acts, such as the Spanish Conquest and Colonization in which not only colonized "women" were powerless within their communities, but also colonized "men" were subordinately placed within a hierarchy of masculinities. This societal structure was based on mechanisms of racial inferiority and gender subordination, which established relationships of opposition and of complicity between the people and their colonizers. The postcolonialist period manifested the consequences of such brutality and its difficult to speak about Latin-American social history where violence hasn't been present, not as a Latin-American cultural trait but as a social fact.

While I'll reference the Latin-American context generally, I'll particularly focus on the situation in Colombia, an area on which I have extensively worked. Due to the old and painful reality of the Colombian armed conflict, exceeded only by the Israeli-Palestinian and Indian-Pakistani conflicts, the need has become apparent to promote initiatives, which introduce discussion and action into the public and academic agenda on the two following issues: first, the conflict continues to differentially affect the lives of Colombian women and men because of their social place in the gender order; and second, the difficulty of dissociating the violence of masculinity, as it has been designed and constructed socially in the Colombian context.

This paper will first reflect on the relevance of social intervention programs developed with men oriented towards violence prevention. It will then address male resistance to change and the attempt to trivialize violence against women and reaffirm masculinity based on domination, in which some geopolitical and internal social hierarchical considerations are present. Finally, this paper will discuss the forceful effects that multiculturalism in the region may or may not have on gender violence and its eradication.

*La Invisibilidad o La Falsa Visibilización Del Maíz Nativo En La Cruzada Nacional Contra El Hambre*

Como base sociocultural de la alimentación de la población mexicana, es de esperarse que el maíz tenga un importante papel político en el diseño de programas contra el hambre, pues se sabe que es el cereal que ha mantenido una importancia central en las economías de subsistencias rurales. Además, por la favorable relación entre precio y valor nutricional, el maíz cobra mayor relevancia entre la población de menores ingresos. Ciertamente, en México la contribución del grano a la dieta ha disminuido en las últimas décadas por una diversificación del consumo alimentario promovido por un proceso global y voraz de la occidentalización agroalimentaria, y aunque el maíz (nativo) sigue siendo un recurso estratégico para recobrar la soberanía y de las seguridades alimentaria y nutricional, las complejas relaciones de complicidad que se han entretendido en las tres últimas décadas entre monopolios biotecnológicos agroalimentarios, programas sociales de combate a la pobreza y políticas de desarrollo agropecuario, han dado como resultado que en México cada vez exista más población en situación de pobreza extrema, donde el hambre aparece como un elemento político fácilmente explotable para vender la idea "moralista" de dar de comer a quienes menos tienen. Bajo este contexto, el gobierno federal de Peña Nieto puso en marcha a inicios de 2013 un gran proyecto para alimentar a la población en situación de hambre llamada la "Cruzada Nacional contra el Hambre" (CNH). Aparentemente hasta el mes de septiembre de 2013, el maíz nativo no ha aparecido visible ni en la campaña mediática ni en las acciones derivadas de la CNH, por lo que esta ponencia tendrá el objetivo de mostrar si se trata de una omisión estratégica para posicionar nuevos actores en la CNH, condenando la pérdida de la bioseguridad alimentaria y junto con ello profundizar las desigualdades sociales existentes.

[socd12054@soc.aegean.gr](mailto:socd12054@soc.aegean.gr))

*Fisheries Cooperatives: The Solution to Fisheries Mismanagement?*

As fisheries have a vital role in maintaining the social and economic cohesion in insular areas, where the majority of the population is employed within the fishing sector, regulation and control of the activity affect directly the fishing communities. Self-regulation has a significant impact on managing effectively Fisheries Protection Areas by gaining access to local expertise, resources and developing working relationships between the fisheries professionals and the local control and regulation authorities. In Greece, 18.8% of the territory consists of insular areas, enhancing thus the significance of fisheries communities for social cohesion. However, the notion of participation in regulation and control is still not widespread in the fishing communities as it is only practiced sporadically. Insufficient statutory control of illegal fishing heightens the need for promotion of self-regulation as a means to protect the marine resources, as well as promote local development, local employment and economic growth. Thus, creating incentives for fisheries professionals' participation in regulation and control of the fishing activity is pivotal for the realisation of self-regulation. However, providing the fishermen with incentives has its drawbacks, as they do not always guarantee the expected outcome, namely productivity coupled with sustainability. One of the most common issues with incentives is the enforcement of the legislation and the decisions. This research focuses on the potential of fisheries cooperatives as solution to the problem of legislation and decision enforcement and, thus, as promoters of self-regulation in the fish stock management sector. Through the examination of international case studies, the study gives suggestions for the promotion of fisheries cooperatives in the Greek national waters that greatly lack self-organisation and the after effects that the adoption of such a policy would have in the area under examination.

*Living with the Sea: The Satoumi Concept*

The importance of sustainable marine resource management through the Ecosystem and the Participatory approaches is widely accepted and supported by contemporary science. Fisheries management based on the internal knowledge of the local artisanal communities, which operate with traditional techniques and tools, are considered the key to sustainability and protection of the marine and coastal ecosystems. In Japan, the participation of fishermen in the decision-making process as well as the enforcement and realisation of conservation plans is being researched and promoted widely. The most promising conservation framework, the satoumi, is based upon the interaction between traditional human activity in fishing communities and ecosystem management. These ecosystems

still maintain high productivity and biodiversity, coupled with human activity. The satoumi is based upon traditional resource management techniques which aim at the protection of the targeted ecosystem. As the depletion of fish stocks and the degradation of marine habitats expand around the globe, the provisioning, regulating and cultural services that the marine ecosystems provide for the fishing communities are disappearing. Through extensive literature review, this paper explores the capacity of the satoumi concept for the sustainable use of the marine resources. The most important aspect of the research is the exploration of the significance of the implementation of the satoumi for the survival of the communities that have adopted it. The majority of these communities depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

##### *Perceptions of Rising Powers: Are Russia and China Still Brothers Forever?*

'Russia and China are brothers forever' was a popular slogan in the Soviet Union time, that perfectly shows how important it is for political science to understand differences in perceptions. While in Russian culture a brotherhood can be relationships of the equal, in mind of Chinese people an hierarchy is always formed and one of the brothers has to be elder, has to be a leader. Even though China has proclaimed a need for a new fairer international system and a new type of superpower, that relays more on soft power than on hard, it is struggling with the China Threat theory and problems of misinterpretations of the Harmony World concept. In order to predict the role of China in the future many specialists turn to its imperial past, the tribute system and roots of the strategic culture, so processes of a politization of history can be clearly observed. Thus, debates on how the rise of China is influencing this country image and relationships with other actors in the international arena are a crucial part of political discourse now, to which scientists and policymakers pay close attention.

##### *Unequal Social Participation in Later Life*

The concept of active ageing comprises the maintenance of societal participation throughout the life span into old age. 'Good' ageing in line with this activity paradigm develops into a starting point of social inequality rather than being its result. Based on the German Ageing Survey (DEAS) and on the German Survey on Volunteering (FWS) we investigate the access to volunteering and to educational activities depending on social and spatial aspects of inequality. The DEAS is a nationwide representative cross-sectional and longitudinal survey of the German population aged 40 and above, so far data was collected in four waves in the years 1996, 2002, 2008 and 2011. The FWS is a representative cross-sectional survey on voluntary work, honorary office and civic engagement of the population living in Germany aged 14 and older. Data is currently available for the years 1999, 2004 and 2009.

Societal participation is socially and spatially structured: Individuals from a lower social class are less often involved in educational activities or in volunteering. The results of our multi-level-analyses clearly support these inequalities in societal participation known from the literature among individuals in both, middle and later life. Moreover, our findings indicate that individuals living in economically disadvantaged regions are less likely to participate than in economically strong regions. Disadvantages cumulate in case that low individual resources overlap with poor economic conditions in the living area. Therefore, measures to facilitate participation should be taken on the local level to enhance opportunities for volunteering and educational activities throughout the life course and especially in later life. This should help to increase the participation of individuals from lower social classes sustainably.

##### *Environmental Attitudes before and after Fukushima*

The Fukushima Daiichi nuclear disaster revealed the dangers of nuclear power and might have changed people's attitudes towards this energy source. Therefore this paper examines whether a nuclear accident like the Fukushima accident has a long-term effect on attitudes towards nuclear energy. After we describe the overall impact and trend before and after the accident for different countries we test hypotheses about the structure of the effect. On the one hand, whether the effect is temporary or persistent; on the other, whether the average treatment effect depends on individual characteristics, like age, gender, education or nationality. According to availability heuristics (Tversky and Kahneman, 1974) we would assume a temporary effect (declining media coverage, memories fading away), classical rational choice theory (Coleman, 1990) might expect a long-term effect which is caused by an updated risk evaluation due to new information we got from the Fukushima accident (e.g. how tedious it is to stop nuclear chain-reaction or a lack of trust in authorities because of bad disaster management). Using data from the latest ISSP 2010/2011 environmental module III we design our study as a natural experiment as we have both people surveyed before and after the accident. Within the causal framework of a Regression Discontinuity Design (RDD) and a Difference-in-Difference Estimator (DiD) we assume heterogeneous treatment effects so that some individuals change their attitudes more drastically than others. Our results indicate that young people are more likely to be influenced by the accident while gender does not matter. Moreover we find different patterns between countries that need further research.

##### *Researching Youth Ethnicities in East London and in Paris Banlieues: Methodological Challenges and Explorations*

This contribution explores the methodological challenges I faced while carrying a qualitative study on ethnicity among young people (aged 15 to 25 and chosen to maximise diversity across gender, age, ethnicity, social class, education and type of housing) in the London Borough of Newham in East London and in the city of Bondy in Paris northeast *Banlieues*. The research aimed at investigating the impact of French republicanism and British multiculturalism on everyday life and identities of these young inhabitants. But how to study ethnicity, a deeply relational phenomenon, socially and symbolically violent, and often – especially in France – considered taboo?

The paper starts with positionality and how I dealt methodologically, ethically and personally with the power relationships involved in the research. As a middle-class white French female student I was perceived in opposite ways during fieldwork: a white rich middle class Parisian in Bondy; a strange, lost, and possibly East European young woman in Newham.

It then shows how both the willing to reduce symbolic violence and the choice for a constructionist approach defined my research design and the structure of my interviews. Two methods especially helped me investigate intersectionality while decreasing symbolic violence: self-portrait and mental maps. This fed a reflection over the use of categories.

At last, I discuss how each method involved specific power relationships and revealed - produced - different aspects of ethnicity: individual semi-structured interviews fostered the presentation of particular yet universal selves who rejected categorization and stressed a distinctiveness based on intimate experiences; focus groups [carried out every other week in secondary schools with the same participants for one or two semesters] politicized discourses and built collective actors defending group identities based on Us/Them dichotomies. At last, observations disclosed autonomous, playful, situational and instrumental aspects of ethnicity and discrepancies between attitudes and practices.

*Creativity & Creative Class in the Transformation of Russian Society*

Russia is a country of creative minds, rich in talents. Creativity - is a fundamentally new state of Russian society, associated with the formation of the creative class, the integrated group, which unites representatives of various professions on the basis of a demand of self-realization and service to the public good. Investigation of the conditions, the vector of development and activity of the creative class shows that, despite the spontaneity of social initiatives steady trend of actualization of potential creative class occurs, which gives us hope for a successful modernization of Russia, the qualitative renewal of all aspects of public life.

Today Russian society gets its second wind, gets rid of "post-reform fatigue syndromes and skepticism". It requires the formation of the creative person, creative education, creative management of all aspects of Russian society. It is with the growth of creative trends and shaping the creative society, a society of social creativity the future of Russia is linked. What responsibility has society and what a social dialogue should be to implement a real historical breakthrough depends on the creative class.

*Discourse of the Integration of Society in Latvian Sociology*

If sociological theory considers social integration as a universal process which involves the whole society and all types of its diversity, the public consciousness in Latvia, as well as the scientific discourse, persistently relate this term to just one dimension – ethnic. The findings presented in the article demonstrate that the scientific research on the integration processes in Latvia has become more critical towards the methodological assumptions which appeared in the 1990s, but in the theory there is a reconsideration of the values of those ideological approaches to the understanding of society integration which first were formulated in T. Parsons' conception. At the same time, the ideas of J. Habermas who considered it necessary to recognize a collective identity of ethnic minorities in the multicultural society might become a significant ideological resource for the research on society integration in Latvia. The article presents some data from the sociological research carried out in the largest city of Eastern Latvia – Daugavpils, the city with an ethnically diverse population. The data obtained in the run of the research demonstrate the possibility to reconcile the liberal conception of society integration in Latvia with the recognition of the value of a collective identity of ethnic minorities.

*The Formation Of Political Subjects*

**The Formation of Political Subjects. Tenant Protest in Berlin and New York**

A crucial point in the development of urban social movements is their ability to form coalitions to overcome the deep entrenched structural and discursive fragmentation and particularization of neoliberal societies. The urban seems to be the context in which this can be achieved. In current tenant protest in Berlin and New York, though highly specific in their issues and demands, we can see such an abstraction from personal interests making affiliations of broader political positions possible. In the process of legitimizing their right to stay put some of the protest groups go as far as to make universal claims to (represent) the common good.

But social movement research lacks concepts to fully grasp this process. To counter these shortcomings of social movement research I propose a re-thinking of social protest through the lenses of the formation of political subjects. Such an approach would offer the opportunity to overcome social movement research's one-sided focus on the actors of protest as merely strategically acting, identity-based and self-interested activists by shifting the focus to the impact of the interplay between structure and discourse on peoples subjectivity, the subject positions they shape in the process of protest and the possible links they thereby offer to others.

*The Poor As Drivers of Development – How Global Discourses Legitimised Social Cash Transfers*

Since 2005, social cash transfers (SCT) have become a legitimate and widely used instrument of global development policy. This is surprising, because development organisations have long rejected direct cash transfers, citing concerns of dependency and lacking capacity for implementation in the Global South. In this paper I attempt to explain how and why development organisations changed their position on social cash transfers. Previous research indicates that a shift in global discourses may have caused development organisations to reconsider SCT as a policy option. Therefore, using an approach of sociological discourse analysis, I check in how far changes in global discourses prior to 2005 have had an impact on the legitimisation of SCT as development policy. Indeed, I find that three global discourses have played a role in the rise of social cash transfers: One on poverty, one on development and one on human rights. Since the late 1980s, each of these discourses has shifted in specific ways which have facilitated the legitimisation of SCT in development policy. Even though the shifts in the three discourses do not seem to be causally connected, they had a joint effect: I argue that the shifts in global discourses fundamentally changed the perception of the poor in development policy. While the poor were long regarded as passive beneficiaries of development, discursive shifts during the 1990s led to their perception as potential drivers of development due to untapped economic potential. This shift in the perceptions of global actors legitimised social cash transfers, because they were successfully portrayed as a direct investment into the poor which can help to fulfil their untapped potential.

*Area Characteristics and Admission Rates of People with Schizophrenia and Affective Disorders in a German Rural Catchment Area*

**Background** Research on environmental risk factors for mental illness in rural areas is sparse, although the same risk factors as identified in urban areas may be present. Especially municipality characteristics reflecting economic uncertainties may have an impact on mental health.

**Methods** From 174 rural municipalities in the catchment area of the state psychiatric hospital in Günzburg (Bavaria – Germany), hospital admission rates from the years 2006 through 2009 were computed and combined with structural and socio-economic data. Relationships of overall and diagnosis-specific admission rates with municipality characteristics were analysed by means of negative binomial regression models.

**Results** Admission rates of patients with a diagnosis of schizophrenia and affective disorder combined decrease with increasing population growth, population density, average income and percentage of green areas, while admission rates are positively correlated with commuter balance, income inequality, unemployment rates and percentage of traffic areas. Admission rates for schizophrenia are negatively related to population growth, average income and percentage of agricultural areas, but positively related to mobility index, income inequality and unemployment rate. Admission rates for affective disorders are negatively related to population growth, population density, average income and (percentage of green areas, while higher admission rates are correlated with commuter balance, high income inequality, unemployment rate and percentage of traffic-related areas.

**Conclusions** Previously reported effects of wealth and economic inequality on psychiatric admission rates form urban areas also seem to apply to rural areas. This study once more shows that lack of financial security is a major risk factor for the occurrence of mental disorders. In contrast to findings in urban areas, the present study suggests that population density may have an ameliorating effect on mental health.

*Multiple Migrations: Who Moves On and Why? – Answers From a Biographical Informed Perspective*

Even though multiple migrations have and continue to gain in importance due to contemporary internationalization processes, to date they have hardly been subject of systematical examinations in migration research. Not only are the dimension and significance of their repeated migratory movements in the society as a whole underestimated, but also bring they out a methodological challenge for social research, especially quantitative methods. The multiple transnational paths of those onward migrants usually don't appear respectively go missing in survey statistics. Nevertheless, according to certain targeted quantitative studies a notable part of international migration can be characterized as repeat migration. Based on them limited data are available on their demographic characteristics

such as age, income, employment, educational background and country of origin. However, even less is known about their individual motivations, decision-makings and experiences. In order to contribute to an understanding of who is moving on and why, results of a qualitative, biographical oriented study on serial migrants from different national and social backgrounds are presented. Therein the underlying structures of meaning and patterns of orientation of their multiple migration movements are reconstructed and analyzed as constitutive elements of their transnational trajectories and social contexts.

#### *Prostitution and The "Law-In-Action" – A Study Of Public Administration In Germany, Poland and Czech Republic*

The talk presents the results of a qualitative-empirical research project on public administration of prostitution in Germany, Poland and Czech Republic. Therein administrative practices of both governmental institutions and civil society organizations (e.g. police force; public order, public health and tax authorities as well as social work) will be described and analysed. Using semi-structured expert interviews with organisational frontline-actors governance of prostitution is approached and investigated from a bottom-up perspective. Germany with the Regulation model on the one hand and Poland and Czech Republic with the Abolitionism type on the other hand follow different laws and policies regarding prostitution. However, concerning their "law-in-action" the role of social actors' professional habitus formations revealed to be highly significant. Moreover, it can be shown how executives' patterns of perception, thought and action have a crucial impact on legal changes and its implementation; given the circumstances the study took place after an explicit legal and political paradigm shift of governing prostitution in Germany. Based on case reconstructions and contrastive comparisons a theoretical model on prostitution governance has been developed. It enfolds the conceptualization of administrative actors' professional habitus consisting of three general dimensions: their definition of subject, definition of self and definition of environment. Furthermore, empirically emerged challenges and ambivalences of governing prostitution in terms of an everyday practice attempt to explain the relevance of professional habitus formations affecting "law-in-action".

#### *Challenging New Governance: Evaluating New Approaches To Employment Standards Enforcement In Common Law Contexts*

A mounting crisis in employment standards enforcement is prompting experimentation in common law contexts with new instruments aiming to improve workplace regulation. This experimentation across all stages of the enforcement process indicates the increasing influence of 'new governance'. Focusing on reforms in five jurisdictions, this paper raises serious cautions around 'new governance' styled enforcement mechanisms, demonstrating that, put into practice, enforcement models envisioned in the new governance literature fail to account adequately for the power dynamics of the employment relationship. Furthermore, assumptions about the inevitable collapse of state enforcement capacity are premature and can impede strategies for more effective ES regulation.

#### *What's the Best Way Forward for Immigrant Workers? the Dynamics & Efficacy of Building Unions and Building Social Movements*

In 2000, the peak association of the U.S. labor movement, the AFL-CIO, reversed its longstanding opposition to the legalization of undocumented immigrants and committed itself to organizing immigrant workers. Only a handful of its 57 affiliated unions actually heeded the call, but those that did successfully unionized immigrant workers in some key cities and states.

Yet, the number of immigrant workers involved in these unionization drives pales in comparison to the millions of immigrant workers involved in a very different kind of action: the massive nation-wide rallies for immigrant rights that took place in the United States in the spring of 2006. Here, too, a couple of labor unions played a critical role, both in the immediate lead-up to the rallies and 3 years earlier in a campaign to help build a social movement for immigrant rights. Two unions (SEIU and UNITE HERE) sponsored the Immigrant Worker Freedom Rides (IWFR). Bus rides of immigrant workers and activists were used to bring publicity to the plight of undocumented workers in the U.S. and also to foster

relationships among local labor unions, community-based organizations, and religious, student and immigrant-rights groups in the cities and towns where the buses stopped. Recent research shows that the IWFR laid much of the institutional foundations for the 2006 rallies, especially in new destination communities (Voss and Bloemraad 2011).

In this paper, I examine these very different types of campaigns—those focused on unionization and those focused on building alliances and a social movement—comparing their dynamics and effectiveness. This assessment is far from straightforward; as one has to take into account not only immediate impacts but also longer-term effects, including the backlash against immigrants in some of the new-destination communities that had rallies in 2006. Moreover, this backlash continues to be conditioned on state and local political climates.

#### *How Does Class Affiliation of Sociologists Impact Their Choice of Theoretical-Methodological Research Paradigm for Study of Social Structuration and Inequality and of Corresponding Practical -Political Strategies ?*

The paper proposes self-reflective examination of the impact of the class affiliation of sociologists on their choice of theoretical-methodological and practical-political research paradigm starting from which sociologists attempt to explain and/or understand dis/continuities in social structuration and propose corresponding strategies for conservation, mitigation or elimination of socially structured inequality.

The main hypothesis of the paper is that sociologists like other highly educated experts are affiliates of the new small bourgeoisie, incarnating contradictory class affiliation. Sociologists like other professionals, possess formal certificate of acquired specialist knowledge. Diploma makes accessible to them salaried employment and work place privileges of performing planning and commands' mediating work functions, but does not relieve from permanent worries not to lose them and fall into the ranks of the manual wage laborers in times of high unemployment. This contradictory place in the class division of labor of direct producers of legitimizing ideologies, leaves sociologists greater margin for the choice of the world view and social standpoint than to the affiliates of the main antagonistic classes.

The core finding of the paper is that from the time of institutionalization of the sociology as the academic discipline, the majority of sociologists tend to retain/improve the standpoint/interest of exploiting class of commanding managers to conserve or only to reform the existing relations of reproduction of civil society's social life and inequality, articulating simultaneously the corresponding mainstream consensus or conflict version of the positivist "old-materialistic" and / or phenomenological-hermeneutical "idealist" research paradigm of eternal hierarchical social structure/stratification. The minority chooses to attempt to come over to the standpoint/interest of the class of exploited executors, to overcome class division of labor which reproduces social inequality and to establish the relations of self-managed "socialized humanity", articulating simultaneously the corresponding critical "new-materialistically inverted dialectic" research paradigm of liberating potential of self-organized class struggle.

#### *Social Media Collaborative Storytelling: The Occupy Movement and the Narratives Constructing It*

Social Media developed in the 21st century have become tools for people to transmit and express their opinions for the global political scene. At the same time a worldwide recession and financial crisis has lead the people to make use of these technologies in means that were never intended to when they were launched. Looking specifically at the Occupy movement and the role of social media, this paper will argue that Twitter cultivated the ideal conditions for this social movement to bring together online and offline activist communities that shared common values. Considering the use of Twitter during a number of protests that adapted the 'Occupy' name, slogans or rationales, incubated in New York, London, Madrid and Athens, this paper will be premised upon the following advances. First, that this platform is increasingly evolving into means for collaborative storytelling by the social movement activists, endowing them with a collective identity and a sense of belonging. Twitter's discursive identity appoints an interactive role to the activists who use the medium as a tool to synergetically construct the movement's story. Second, that this Occupy collective identity is now traceable in an one-time system where the realization of the Occupy movement is portrayed simultaneously in the world and *inside* its networks of production, online and offline. Presenting the story of Occupy, Twitter becomes the score and the machine by the same token: the digital container of the story. A story that begins with solid social conventions, evolves through stages of dispute and crisis, and ends with a rather permanent openness or lack of resolution.

*Contrasting Young People's Personal and Political Uses of Social Media*

Recent debates have highlighted the increasingly blurred boundaries between everyday personal social media use to maintain social networks and its use for broader engagement with politics. Young people use social media extensively and many see that active use of social media by political actors will enhance young people's reconnection with formal politics. In this paper we analyse how young people themselves conceptualise the relationship between their everyday social media use, their use of it for political expression, and how both politicians and celebrities try to engage with them in politics. Most existing studies tend to treat young people's political engagement as homogenous; instead we analyse young people's attitudes towards political use of social media by comparing both active participants with non-participants, as well as those from an advantaged social-economic status with less advantaged young people. This data analysis is based on 12 asynchronous online group discussions participated in by 108 young people in Australia, UK and the USA. In each country the groups were divided into four segments: high/low participation by high/low SES to ensure that the discussion groups themselves had high homophily.

*Social Reproduction Strategies and Participation in Higher Education during the Economic Recession*

The current economic crisis in many Southern European countries has inevitably affected the number of students (male and female) progressing to higher education. The way young individuals and their families make their choices for the future is connected to the new social realities that this crisis has created. New inequalities are expected to take shape; such inequalities for example seem to arise from the unequal horizons for choice making. Middle class students and their families engage in choice-making in higher education with broader options while lower classes have restricted horizons often stemming from mechanisms of self-selection and self-exclusion. These eventually produce stratification in the educational system due to factors that are not always educationally related or connected to individual characteristics. The decision making process needs to be located in macro sociological factors that relate to the structure of available opportunities on offer.

**VRONIDES, MARIOS\*** (European University of Cyprus,  
[m.vronides@euc.ac.cy](mailto:m.vronides@euc.ac.cy))

*Experiencing Interethnic Relations in Cypriot Schools*

The aim of this paper is to examine the way teenagers experience and report interethnic relations with emphasis on interethnic violence in the school environment in Cyprus. It will report findings from a qualitative investigation from an EU funded research project titled: "Children's Voices: Exploring Interethnic Violence and Children's Rights in the School Environment". The qualitative investigation included semi-structured interviews with school teaching staff and counselors and with experts whose work was related with interethnic relations in schools. Additionally, eight focus groups with children (4 in primary and 4 in secondary schools) were conducted to explore teenagers' perspectives. Findings indicate that in Cyprus there is an environment of growing concern about the presence of migrants. People coming mostly from Asia and Eastern Europe and people of Islamic faith appear to be more vulnerable to prejudice. Overall there are mixed perceptions about interethnic tolerance in schools ranging from negative to (politically correct) positive ones. While the prevalent discourse of multiculturalism in Cyprus uses the rhetoric of integration, what appears to be happening in the Cypriot educational system is assimilation practices focusing on language acquisition. Whenever the latter is successful potential tensions tend to minimize. These findings point to interesting directions for educational policy regarding the whole gamut of interethnic relations in Cyprus at a period in time when the current economic crisis appears to have largely negative effects on multi-ethnic coexistence and to the prospects of a resolution to the prolonged ethnic conflict between the two main communities of the country.

*The Effects of School-to-Work Transition Pathways on Economic Outcomes through the Great Recession*

Whereas the term "school-to-work transition" (STW) implies a clear, discrete event, this increasingly prolonged transitional period is not always unidirectional and typically includes involvements in both school and work. Destandardization in the STW transition makes it difficult to assess the extent to which young people today "flounder" during this period. Using longitudinal data from the US Youth Development Study and hierarchical latent class analysis, this paper examines the interplay of educational and career attainment and its longer-term economic consequences. Four STW pathways were observed from age 18 to age 30: two groups that attain careers through postsecondary education (via Bachelor's or Associates/Vocational degrees) and two floundering groups that do not (those with some college and those with no postsecondary experience).

Regression models demonstrate the negative effects of floundering pathways on economic outcomes and the heightened difficulties of those pursuing these pathways during a recession. While the High School Flounders were consistently the worst off, the Some College Flounders (SCF) also experienced relatively poor economic outcomes. Both pre-recession (2005) and in 2009, respondents in the SCF pathway were less likely to have a savings account and own a home, and had more financial problems and lower job satisfaction than those who moved into the labor force with Bachelors' degrees. Even starker were their circumstances in turbulent economic times, with the SCF pathway now more likely to be unemployed, receive financial help from parents, and to have recently lost a job. The fact that most differences between the Associates/Vocational into Career group and the Bachelors into Career group were non-significant, despite their unequal educational attainments, suggests that the pathway from an Associates or Vocational degree to a career is a viable alternative. We discuss implications of these findings both for the U.S. context, as well as for transition dynamics in other countries.

*Rural Upliftment and World's Largest Welfare Scheme Mgnarega : A Sociological Learning of Southern Rajasthan in India*

Despite the preeminent efforts during the different Indian plan periods, the state of affairs of rural masses do not change significantly and the primary goals such as an increase in productivity, employment, eradication of poverty and social-cultural transformation of society remained an illusion for several years. Therefore in order to achieve the twin goals of rural development and employment, the government of India was promulgated the world's biggest welfare program entitled as Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) on December 7, 2005. It aims at enhancing livelihood and security of homes in rural areas of the country by providing 100 days' guaranteed wages in each financial year. The NREGA became operational on 2<sup>nd</sup> February 2006 and initially covered 200 most backward districts. In the second stage this scheme was further expanded in 330 backward districts and finally it made available for all the districts of the country.

As far as the impact of MGNREGA in Rajasthan is concerned it has helped the poor and needy in the villages of Rajasthan in several ways. Aside from offering jobs to the rural needy, it has been assisted in the creation of durable rural assets like plantations over degraded forest land, pasture land development, cleansing of ponds, improving the water harvesting system creation of gravel roads etc. It has helped in deepening the grass roots participatory democracy by making the system more transparent and accountable at every step. The scheme has also assisted in controlling the migration of poor villagers towards cities and towns in search of employment.

In this context, the present paper is an attempt to assess the effectiveness of implementations of MGNREGA in southern Rajasthan comprising of Bhilwara, Chittaurgarh, Partapurgarh, Udaipur, Dungarpur and Banswara districts. These districts of Rajasthan are most backward and extensively populated by scheduled tribes.

### *A Cross-National and Cross-Actor Comparative Analysis of Violent and Nonviolent Interactions Between State and Civil Society Actors*

While civil violence is almost always countered by state violence, the opposite is not true. It is unclear, according to Christian Davenport, whether state violence triggers or contains civil violence. In fact, one of the most difficult issues in the study of contentious politics is to predict civil society actors' reactions to state violence. Will those who have witnessed state repression pick up a weapon in anger or quiet down in fear and despair?

This paper tackles this repression-dissent problem. The literature on collective violence emphasizes the importance of institutional and structural contexts—e.g., political regime characteristics, state capacity, ethnic, religious, and class cleavages, levels of socioeconomic development, etc.—to understand the repression-dissent dynamics. A major stumbling block in the effort to carry out such a research agenda is methodological. On one hand, small-N case studies, while good at revealing exact processes of state and civil society interactions, cannot measure adequately the effect of multiple contextual factors. On the other, typical quantitative analyses of annual event counts, while good at estimating the contextual effects, fail to detect interactive dynamics.

By conducting a cross-national comparison of contentious event sequences, this study attempts to examine both the contextual effects and the interactive dynamics at the same time. We use a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. This unique data set records event information at a daily—instead of yearly—basis and, thus, helps us detect interactive dynamics. Moreover, we distinguish the actors who are more likely to resort to violence after state repression from the actors who are more likely to give up any further attempts to make claims by using multilevel analysis of actor-target interactions. This paper presents an original analysis of national contexts, actor characteristics, and actor-target interactive dynamics.

### *Predicting Future Action Patterns Based on the Cultural Hypothesis about Repertoires of Contention*

Contentious events—such as the collapses of socialist regimes around 1990, the Seattle anti-globalization protests in 1999, and the Arab Spring since 2010—often catch many by surprise. It appears that future contentious events are totally unpredictable. The literature of repertoires of contention, however, suggests that future actions by contentious actors are highly predictable because actors' selection of action forms is dependent upon their familiarity with these forms. In a word, people cannot perform if they do not know how. This paper explores such a cultural hypothesis about repertoires and asks to what degree we can predict future action patterns (violence, nonviolent protests, and conventional institutional actions). Specifically, we ask, what is the most important predictor of action patterns, (1) institutional regime characteristics such as degree of democracy and state capacity, as political process theorists have argued, or (2) actors' familiarity with contentious forms, as the cultural hypothesis claims? To find an answer to the question, we conduct a cross-national comparison of action patterns using a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. Using multilevel analysis, we estimate and compare the national-level effects of structural-institutional characteristics (e.g., regime characteristics, levels of development) and the actor-specific effect of cultural factor (actors' familiarity with specific forms of contention, measured by action patterns in the past years). We also uncover the conditions under which new innovations of action patterns are likely to occur. This study contributes to the study of contentious politics both theoretically and methodologically by explicitly integrating cultural dimensions—rather than by treating culture as a residual explanatory factor—into the analysis of repertoire selection. While the prediction of future events and actions is difficult and, therefore, is not a popular topic, this study makes an important step toward such a research direction.

[phil.waddell@soton.ac.uk](mailto:phil.waddell@soton.ac.uk))

### *#StopG8 - Activist Perceptions Of Social Media Use In Contemporary Global Justice Protest*

In June 2013, a group of global justice activists occupied an abandoned police training academy in central London. The building became a "convergence space" from which a series of events were organised in protest against the G8 summit that was simultaneously taking place in London. The group were known as "Stop G8" and had an online presence with a blog, facebook group and a unique hashtag (#StopG8) on Twitter, which pointed to awareness by organising members of the group regarding the value of maintaining a presence on the Web.

This paper presents an ethnographic account of a week spent with these activists in the convergence space which was carried out in order to explore the position of the Web and of social media in the real-time process of protest participation. Through participant observation and interviews with activists, a picture emerged that runs in some ways counter to the mainstream understanding of the benefits of social media towards political activism.

It became clear during this study that these situated activists had a broadly apathetic, in some cases hostile view of using the Web. Two clear concerns noted during the ethnography were; the shift in recent years from public forums and well-connected networks of committed activists to a more fragmented network of individual social media profiles, a filter bubble effect which appears to have reduced the ability of activists to create coordinated alternative media for protest events and the clear adoption of social media by not only the public at large, but corporations and governments existing within clear power structures that present little opportunity for decisive political change. It may be that the opinions of these activists are a signal of a shift within activist networks away from corporate-controlled, mainstream social media towards more ideologically suitable Web services and virtual communities.

### *The Interplay of Youth Culture, Social Media and Political Participation: New Reflections after the Arab Spring*

The recent Arab youth's rebellion offers a valuable insight into new forms of online participation, alongside the role of youth culture, for political participation. For communicating their unease, for organising protest and for mobilising themselves young people utilise social media such as Facebook, Twitter, and YouTube. Furthermore, youth culture, also communicated through social media, played an important role for acting out their vision of the world. In the paper, I will present the elements of online participation and youth cultural participation throughout the Arab Spring; questioning the media label of a 'Facebook revolution'. Our analysis (which serves as basis for a large empirical study carried out in the MENA region 2013-2014) shows that online social networks contributed to the cause of the protesters in various ways: as an organising tool, as a news source and as a public arena for building a community of like-minded activists. As organising tool social media played a powerful role in mobilising protesters onto the streets and coordinating demonstrations. When there is – as in Tunisia – a suppression of free press, Twitter, Facebook, YouTube and other local social media sites also become essential in getting news out of the country, as well as in providing a rather independent news source of the current events. Before using Facebook to bring people on to the streets, the activists also used it to articulate their political critique and to build a constituency and growing community around those ideas. Our analysis further reflects on the Middle East and Northern Africa events in demonstrating that Hip Hop cannot only be used for self-expression, but also for mobilising the (young) masses. We show how youth culture seems to be a perfect tool for reaching the young population, especially when distributed through new social media such as Facebook or YouTube.

**WAGNER, ELKE\*** (JGU Mainz, [wagnere@uni-mainz.de](mailto:wagnere@uni-mainz.de))

### *Communities, Networks, Swarms. Internet-Collectivities As Supplements for the Notion of Society?*

Sociological observations of social formations emerging with the internet have seldom pictured their object as a society; instead, there are many references to community, network, or swarm. These different notions are in many ways loose constructions and unrelated to the sociological theoretical discourse. They describe different phenomena: on the one hand, there is a sort of community feeling in online social groups. On the other hand, internet practices produce social contacts between strangers. What is referred to as "Internet communities" is fluid and diverse. They change all the time and combine different forms of networks. Thus, concepts switched to theoretical tools found in network analysis. Contem-

porary sociological writings go back to the concept of swarms to describe internet collectivities. The notion of society does hardly appear within the sociology of the internet. Instead of simply taking that as a sociological blind spot, this paper argues for an empirical perspective. Discussing different supplements (Derrida) of the notion of society within internet culture it thus addresses internet practices as societal practices. Internet practices are social practices – and within modern society there has always been a typical figuration of proximity and distance, fluidity and diversity. But at the same time the different supplements for the notion of society could indicate that societal forms are changing (through the influence of new media practices), e.g. the figuration of proximity and distance or the figuration of privacy and publicity. For the special case of the internet, this might be an instance of "writing (society) into being" (boyd). The paper discusses the sociological discourse on internet collectivities from an empirical point of view. It emphasizes that internet practices take place within society. And it works out how the new supplements to/of the notion of society could be indicators for social transformations.

### *Internet Communities As Intimate Publics*

The culture of the internet has long been described as community culture (Reingold, Wellman, Thiedeke). But what does community here actually mean? On the one hand there is a sort of community feeling and support in online social groups (Baym, Greschke). On the other hand internet communities are often communities between strangers who have never met or will never meet. Even in Social Network Sites like Facebook the Friending-Practices don't often mean true friendship but simply contacts between different addresses. Therefore Danah Boyd (2006) has suggested to describe community-building on the Internet as "writing community into being": communities don't exist per se, they have to be fabricated by writing practices. This paper wants to illustrate these community writing practices. It shows on the basis of screen-shots from Facebook and interviews with Facebook users how the special feeling of community does emerge here: On the one hand community means here an intimate sphere where contents between true friends are published. On the other hand contents remain indeterminate enough to include different friends from the contact list. Thus, community appears in Social Network Sites like Facebook as intimate publics. They are intimate because they assemble a list of close persons, but they are publics because there are different circles (Simmel) of close persons who have to be integrated in the writing practices. That is why indeterminate writing practices emerge.

### *True Finns and Non-True Finns: The Minority Rights Discourse of Populist Politics in Finland*

This paper analyses the minority rights discourse found in political statements of the populist party called the True Finns. The party won a historic electoral result in the Finnish Parliamentary Election in 2011, increasing its share of the votes from 4 to 19 per cent. A theoretical framework for this paper is provided by research about the development of political approaches to multiculturalism in western democracies. Will Kymlicka (1995) distinguishes between the minority rights of two different types of minorities in modern nation states: on the one hand, old national minorities, and on the other hand, new minorities that have emerged as a consequence of immigration. Kymlicka (2010) argues that the international so-called backlash and retreat from multiculturalism has mainly occurred in relation to the acceptance of ethnic-cultural diversity among immigrant groups. In this paper, the support for a backlash against multicultural policies is found in the minority rights statements of the political party called the True Finns. The paper argues that Kymlicka's assessment is not completely accurate in this particular case. The statements of the party are not only about policies relating to immigrants. In the political rhetoric of the party the basic principles of group-specific rights for minorities are disputed. Thus, any real or imagined minority who is not considered truly Finnish, or not considered sufficiently representing 'Finnishness', can become the target of the rhetoric.

### *Variations and Continuities of Motives for Climate Protest: A Comparison of Cop-15 Protesters in Copenhagen 2009 with Cop-19 Protesters in Warsaw 2013*

In connection with the Fifteenth Conference of the Parties to the United Nations Framework Convention on Climate Change (COP-15) in Copenhagen 2009, many activists had (at least reasonably) high hopes about successfully pushing for

a new international climate agreement. After the complete stalemate between different country positions in Copenhagen, many climate activists lost their faith in the possibilities of achieving substantially changed international climate policies through the COP meetings. Four years later, facing the COP-19 meeting in Warsaw 2013, the climate movement mobilizes protest in a political situation with ostensibly more limited political opportunities. How do participants' motives for protest and sense of efficacy vary between two equivalent climate protests when political opportunities change over time? The paper also explores shifts between the two points in time regarding what political strategies the participants in transnational climate demonstrations claim to prioritize. This is analysed based on two surveys of protest participants, one collected at the largest demonstration during the COP-15 meeting in Copenhagen 2009, and the other one at the main climate demonstration during the COP-19 meeting in Warsaw 2013. The data collection is based on a strict standardized methodology established in the international research programme CCC (Caught in the act of protest, Contextualizing Contestation) which ensures reliability as well as comparability across protest events. Inevitably, the research design not only involves comparison of cross-sections of climate protest participants over time, it is simultaneously a comparison of two national mobilizing contexts. However, these two aspects can be sufficiently disentangled by controlling for demonstrators' country of origin in the highly transnational demonstrations. The study aims to contribute to current scientific discussions about protest mobilization, as well as to tap into the contemporary developments of the (European) climate movement, from the perspective of individual climate protesters.

### *Variations of Stressful Work and Effects on Health after Labour Market Exit. Results from Share and Elsa*

Recent research has highlighted the importance of former life stages in explaining social inequalities in health at older age. In this paper, we describe working conditions during adulthood and analyse their influence on health after labour market exit. Analyses are based on two longitudinal studies with comparable information across 14 European countries: the English Longitudinal Study on Ageing (ELSA), and the Survey of Health Ageing and Retirement in Europe (SHARE). We measure working conditions in terms of psychosocial stress at work (as defined by the demand-control and the effort-reward imbalance models), as well as working careers are regrouped using sequences analyses. Moreover - given cross-national dataset - we explore the relationship between specific indicators of social and labour market policies (e.g. expenditure on active labour market policy) and working conditions. Results show important variations of working conditions according to gender, socioeconomic position and countries. In addition, results illustrate the importance of work and employment for health among older adults, where effects of stressful work and unstable careers on later health were more consistent for men.

### *Disaster Preparedness Among Older People with Long-Term Care Needs and Family Caregivers: Who Is Vulnerable and What Do They Need for Preparedness in Communities?*

**Background:** Hurricane Katrina in the U.S. highlighted the potentially fatal effects of a natural disaster on older individuals. This experience was reinforced by the Great East Japan Earthquake, where community-dwelling elderly were again at the greatest risk of mortality. Understanding the needs for and concerns of older persons with long-term care needs and their caregivers is vital to the development of public health programs for community level disaster planning.

**Purpose:** The preparedness of community-dwelling older people with long-term care needs were examined to identify characteristics of care-recipients and caregivers that are associated with worse preparedness and greater concern.

**Methods:** A self-administered survey among family caregivers of older Japanese with long-term care needs ( $n=952$ ) were conducted in 2011. Logistic regression analysis was used to identify the predictors of disaster preparedness, including evacuation plans and caregiver's concern about preparation. Data were analyzed in 2013.

**Results:** Most older people had no concrete evacuation plans, and those with dementia were 40% less likely to be prepared. Caregivers who were responsible for older persons with worse mobility, as well as those in worse health or poor financial situations, reported higher levels of anxiety about their disaster preparation. However, more experienced, wealthier, and better socially integrated caregivers in the community were more prepared.

**Conclusions:** Older people with long-term care needs are at heightened risk in disasters, and rely upon caregivers who may be ill-prepared to respond in emergencies. Education of caregivers and development of community support programs could provide important sources of assistance to this vulnerable group.

**WALBY, SYLVIA\*** (Lancaster University,  
[S.Walby@lancaster.ac.uk](mailto:S.Walby@lancaster.ac.uk))

### *What Is Justice? Gendering Visions of Equality and Justice*

Equality is key to justice. Debates on gender relations have challenged simple concepts of equality. Going beyond the static notions of equality as either equal opportunities or as equal valuation of different contributions, emergent concepts of equality depend upon visions of transformed gender relations. The paper critically engages with the limitations of Fraser's account of the cunning of history, to produce an analysis of the varieties of gender regimes, not only domestic but also public, not only neoliberal but also social democratic, not only in the economy, but also in violence, polity, and civil society. The paper goes beyond the limited Sociological engagement with violence, drawing on Gramsci to offer a stronger basis for analysis. It engages with the debates on democracy, in the tensions between statist and horizontal conceptions, offering resolutions drawn from feminist politics. The paper offers a gender lens to develop debates on justice from Harvey and Wallerstein to Esping-Andersen and Sen.

**WALBY, SYLVIA\*** (Lancaster University,  
[S.Walby@lancaster.ac.uk](mailto:S.Walby@lancaster.ac.uk))

### *Gendered Neoliberalism and the Crisis*

Much historical materialist analysis of the crisis leaves gender out of focus; while much feminist analysis focuses on culture or experience; although there are exceptions. This paper offers a re-engagement of feminist theory and historical materialism; it genders neoliberalism and materialises gender. The inequalities on which the financial crisis draws and exacerbates are not only those of class, but also of gender. The paper analyses the intersection of gender with: the deregulation of finance; the ongoing recessions (gendered changes in job loss); government expenditure cuts (tax is a feminist issue); and emergent economic growth strategies (regimes of accumulation are gendered). I argue that the conceptualisation of the crisis as either pushing women out of production into reproduction or as a process of re-familialisation is mistaken. Rather, the crisis has produced a shift from a more social democratic form of public gender regime to a more neoliberal form of public gender regime. A more neoliberal form of public gender regime is emerging out of the crisis, in which there is intensification of exploitation but not the re-domestication of women.

**WALKER, GORDON\*** (University of Alberta,  
[gordon.walker@ualberta.ca](mailto:gordon.walker@ualberta.ca))

### *Social Class, and Leisure and Paid Work Need Satisfaction, in Hong Kong*

The purpose of this study was to examine how need satisfaction during leisure and paid work varied, by class, among Hong Kong Chinese.

A Chinese-language telephone survey was conducted in Hong Kong. Potential participants had to work at least 20 hours per week in one job. Those who qualified reported: (a) their occupation and total working hours; and (b) how well their needs for autonomy, competence, and relatedness (Deci & Ryan, 2000) were satisfied during leisure and paid work

Class was determined using Florida's (2012) scheme; specifically: "super-creative" ( $n=99$ ), creative professional ( $n=110$ ), working ( $n=83$ ), and service and sales ( $n=281$ ). An ANOVA indicated that working class participants were employed significantly more hours ( $M=52.1$ ) than super-creative ( $M=46.7$ ), creative professional ( $M=47.5$ ), or service and sales ( $M=45.7$ ), employees. Dependent  $t$ -tests examined the discrepancy between each of the three needs during leisure and work, by class. Results indicated that autonomy was significantly greater during leisure regardless of class; competence was significantly greater during work regardless of class; and belongingness did not differ by class. A second series of dependent  $t$ -tests examined differences between the three needs during leisure, and during work, by class. Results indicated that: (a) during leisure, autonomy was significantly greater than belonging except for working class Chinese, and belonging was greater than competence for creative professionals and sales and service workers; and (b) during work, belonging and competence were both greater than autonomy, regardless of class.

These results are noteworthy because they: (a) do not support Florida's (2012) contention that the super-creative class's leisure and work overlap; (b) suggest that while autonomy is the primary need satisfied during leisure, it is tertiary to competence and belongingness satisfaction during work, regardless of class; and (c) are not always congruent with findings from a comparable study conducted in Canada (Walker, & Glover, 2013).

### *Behavioral Versus Questionnaire Measures of Influence*

In this project we examine the relationship between attitudinal measures of expectations and influence and a behavioral measure in an experimental setting. The attitudinal measures are typical questionnaire items regarding a study participant's views of themselves, a partner, and their task after interaction. The behavioral measure,  $P(s)$ , is the standard dependent variable for the kinds of experiments from which the data comes.  $P(s)$  reflects the participant's resistance to influence from his/her partner and is thought to reflect underlying expectations for competence. In this study we regress  $P(s)$  on the series of attitudinal questionnaire items regarding expectations, influence, and affect. Results indicate that there is a strong relationship between attitude and behavior. Further, attitudes about ability, particularly the partner's ability, are more closely associated with behavioral influence than affective sentiment is.

### *Changing Meanings of Family in Personal Relationships: A Comparative Perspective*

Personal relationships are today less dependent on marriage and blood ties, with commitments going far beyond the nuclear co-resident family to include kin, non-kin and ex-kin. The aim of this presentation is to examine the meanings of family ties by exploring the changing boundaries within kinship and a wider array of affinities, in three European countries with different historical and social pathways and characterized by distinct welfare regimes: Portugal, Lithuania and Switzerland. Drawing on a comparative survey including national representative samples of two cohorts from each country (individuals born in 1950-1955 and in 1970-1975), we begin by analysing the ties which individuals consider as "family" within their personal networks and describe the main types of family configurations. Then we examine the determinants of including non-kin as "family" and excluding kin from the family network. We intend to grasp whether family configurations reveal different levels of kinship integration, as well as the degree of fluidity in the social construction of family ties, in particular through the inclusion of friendship ties in the family setting. Do the different social and economic backgrounds that have been affecting family life in late modernity in these countries shape the patterns of family configurations? To what extent do other factors, such as the life-stage, structural conditions (gender, education), family circumstances (partnership, parenthood) or relational characteristics of the ties (duration) moderate these cohort effects? Findings reveal the salience of kinship ties, as well as greater fluidity in the social construction of family bonds, in particular through friendship. However the degree of salience of kinship ties varies across the three countries. Structural, life stage and family variables are shaping factors, but relational effects (quality of the tie), are of particular importance.

*Forgotten Estates: The Precarity of Neighbourhood Restructuring in Salford, UK*

Since the 1980s, the Northern English city of Salford has undergone intense deindustrialisation and been subject to systematic waves of urban regeneration. A key aspect of these regeneration efforts has been to rebrand and reconstitute the city and its districts from 'grimy' and 'old Salford', to dynamic and cosmopolitan. Under the aegis of the 'New Deal for Communities' policy, one specific district in the mid 2000s was earmarked for a distinct process of redevelopment entailing the demolition of public housing stock and the construction of private housing developments within newly enclosed estates and along the profitable local riverside. Ten years on and amid a challenging fiscal climate, this redevelopment vision has largely stalled resulting in an amalgam of complex neighbourhood impacts and processes encompassing partially demolished public housing estates, threats of further eviction for housing tenants, the arrival of new private owners and a severely disinvested community infrastructure. Drawing on a programme of recent qualitative research, this paper examines the impact on new and established resident experiences of this stagnated and disrupted restructuring process to unpack the damaging, but under-researched effects of a neoliberalised regeneration logic gone awry in an already severely unequal city. The findings of the research invite us to consider how spatial injustice is compounded not only by rational, unstoppable forces of eviction, erasure and gentrification, but by the limbos, uncertainties and abandonments wrought by entwined market-led dismantling and renewal agendas.

*Parody of Reality / Reality of Parody. Body Politics and Intersectional Representations of Women in Two Finnish Television Series*

This paper studies representations of women and women's bodies in multi-dimensional intersections. An intersectional approach emphasizes the multitude of factors that distinguish people from one another, such as gender, ethnicity, age, religious conviction, or social class. These differences are manifested in the human body, and by studying the representations of bodies, the embodiment – as well as the social construction – of these categories can be examined. In visual media the shaping and materialisation of these differences becomes visible through poses and gestures, costumes, make-up, staging and storytelling. Looking at the body allows one also to analyze control, the use of power, and possibilities of action and subjectivity.

We approach these questions through empirical study of two Finnish television series. 'On the skin' (Iholla) is a documentary reality-TV in which number of ordinary Finnish women film their everyday life and thoughts for six months. Season two of the series portrays Sanni, a young woman with a background in conservative Christian revivalist movement, as she struggles with her identity and the different expectations and norms of religious community and secular society. 'Wet leggings' (Märät säpikkäät) is a comedy show created by two young Sámi women. The show can be characterized as self-reflexive parody wherein the stereotypes of both indigenous Sámi ethnicity and Finnish mainstream culture are tackled with brisk humor. In these TV-shows, the cultural conceptions and conventions related to gender, the female body, ethnicity, and religiosity are made visible – as are the projects of exclusion and inclusion leading to multi-dimensional inequalities. Reality-TV and parody allow both emphasizing and re-interpreting and deconstructing established understandings of these categories. Hence emancipation from the norms becomes possible and these shows can also be seen as producing models for new types of agency for women.

*Film Screening 1: Jeppe on a Friday (2012) + Discussion: Contradictions in the Cracks: Filming with Johannesburg*

**JEPPE ON A FRIDAY (2012), DOCUMENTARY FILM (SOUTH AFRICA / CANADA), ENGLISH, ZULU**

**DIRECTED BY SHANNON WALSH & ARYA LALLOO**

**Film synopsis:** A city can be seen in news reports, crime statistics or Hollywood blockbusters. It can be explored through guided tours, from behind car windows or through history. "Jeppe on a Friday" explores a different city; the Johannesburg that exists through the men who occupy it.

**Discussion:** All visual meaning-making consists of choices: what we see and what we don't see. In our documentary project on Johannesburg, *Jeppe on a Friday*, layers form upon layers of what is seen and what is hidden. Part of this were conscious choices made for the stories we wanted to tell and the images that would reflect the city we saw in front of us. But part of the layers and visibilities were also about the way in which the city, and the neighbourhood, chose to reveal itself to us. The tensions between these various ways of seeing are present in film, and often emerge in the discussions that followed as we presented the films to different audiences. Of course all filmmaking *always* consists of making choices, but not all choices are *always* allowed. The city, then, becomes a protagonist and a storyteller. Jepestown is one more collaborator in the team of filmmakers creating this imagined, and real, portrait. What can we learn by digging up these visible and invisible traces left in the film? What can we see about our own practice as image-makers through looking more closely at what remains?

*Film Screening 2: St Henri*

On August 26th, 2010, sixteen filmmakers followed multiple stories in the Montreal neighbourhood of St-Henri. The result is a touching, funny and fascinating day-in-the-life of this eclectic community. Doris travels the streets collecting bottles; Belinda is a dynamic hair stylist from Togo; Babyface, the 15 year old Canadian feather weight boxing champion prepares for a match; Robert and Edmée enjoy their golden years together; Danielle, an urban explorer scales abandoned buildings and descends into St-Henri's sewers. These are just a few of the characters we follow in "St-Henri, the 26th of August", a film that asks what community means today, and how we inhabit our neighbourhoods.

Inspired by the 1962 ONF film "À St-Henri le 5 septembre", this unique collaborative film brings together some of the brightest talents in the contemporary Montreal documentary community to capture this story.

*Explicating Individual Training Decisions Based on Instrumentality Theory*

Participation of individuals in continuing vocational training (CVT) stagnated or even declined since the late 1990s in numerous countries. In light of the long-standing predictions of an increasing need for CVT, this development is puzzling.

Several theories exist to explain CVT participation. Nevertheless, most empirical studies use merely personal and occupational characteristics as the main predictors of CVT participation. Also, many studies scrutinize the decisions of either participants or non-participants relying on ex-post survey data. Respondents, however, may rationalize their past behavior and give distorted assessments of their ex-ante training motives. Hence, these works do not provide an integrated explanation of individual training decisions and give no answer as to why participation does not live up to scientific and political expectations.

We apply instrumentality theory to explicate individual training decisions. Based on novel German individual data, we estimate the effect of subjective expected utility (SEU) from CVT, the effect of restrictions, and the effect of personal characteristics on the willingness to pay for CVT. To construct individual SEU-scores, we confronted interviewees with a specific training scenario and gathered information on

- importance-ratings of nine potential CVT-outcomes,
- the perceived probabilities that successful training would actually help achieve each outcome
- the perceived probabilities of training success.

Our results imply that

- SEU is a main driver of training decisions.
- Financial restrictions are most decisive for persons with higher training tendencies.
- Lack of time helps explain why some individuals are entirely unwilling to participate.

- The regional infrastructure is a crucial training determinant.
- Age and vocational degree do not directly affect training decisions. Yet, persons in specific occupational settings do exhibit a lower training tendency. Also, training behavior of these persons appears to be more rigid and less likely to react to changes in their cognitive training attitudes.

*Encountering the 'Other': Interpreting Student Experiences of a Multi-Sensory Museum Exhibition*

The Immigration Museum in Melbourne, Australia launched the *Identity: Yours, Mine, Ours* (YMO) exhibition in 2011. Aimed primarily at young adults and secondary school students, this major long-term installation seeks to foster reflection on identity and belonging as well as dialogue about racism through a reflexive, empathetic and interactive museum experience. Drawing on findings from three secondary schools, this paper reflects on a multi-method approach that included narrative interviews, video diaries and focus groups with Year 11-12 students as well as key informant interviews with principals and teachers.

While focus groups were a catalyst for dialogue about everyday experiences with cultural diversity and racism, the 'identity' lens privileged in these groups could not account for the complexity of embodied experiences of belonging that were, to at least some extent, captured in narrative interviews and video diaries. For example, the narrative interviews allowed students to talk about themselves in relation to aspects of the exhibition rather than directing and framing their experience *a priori*, thus capturing a complex understanding of the students' YMO experience through an entanglement of their life worlds, at home and school.

Overall, the combination of qualitative methods revealed the ways in which an interactive and immersive museum space can support students to encounter and engage with individual stories and faces, move beyond an abstract tolerance of cultural diversity, unsettle the Self and destabilise stereotyped and prejudiced interpretations of 'the Other'. We conclude by discussing the potential of multi-method qualitative approaches to draw upon students' meaning-making, including the narrative barriers experienced in multilingual contexts, in order to provide a rich emic perspective on multi-sensory exhibitions.

*Internet Public Sphere Under Construction: A Grounded Theory Analysis to Sina Netizens' Comments on "Toilets Standard"*

The dilemma for China to construct its internet public sphere does not result from the lacking of the same physical foundation as the western world has. On the contrary, the structural constraints such as no clear boundaries between public and private, the inner-circle communication oriented caused by "*Chaxu Geju*", as well as the non-stand against as the "weapons of the weak" do matter, that finally prevent from the opinions transforming from personal to public. To break through the deduction circulation that whether the virtual or physical public spheres should make the first move, this paper try to get the answer from the induction from the Comments on "Toilets Standard" by Sina Netizens using the constructing grounded theory as a research method. It is easily to find out after a series of coding that, the public all agree that this standard has very bad operability, likely to be power rent-seek, and really approach to what we call formalism and projectism. This regulation of course didn't answer the call for putting decision-making on a more scientific and democratic basis from the central government, and couldn't solve the real problem bothered in the toilets. What's more important is the practice of online speech doesn't consider the stand as it stands. More "hidden transcripts" like mordacity, ambiguity and metonymy are conducted to pierce into the political forbidden area to make the dissent loud and clear.

*1. How Indigenous People Are Excluded from Caring Their Children?*

The "residential school" symbolizes the ultimate form of cultural violence by the state toward indigenous peoples in the Western history of child welfare, with the victims of residential school named as 'the stolen generation' by indigenous

scholars. Although residential school has never been adopted in Taiwan, I argue that similar effects of residential school policy are replicated through the social organization of child care. The case of the aboriginal community-based child care program in 2008 will be analyzed to illustrate how indigenous peoples are excluded from caring their own children and how indigenous ways of care disqualified in the bureaucratic discourses of 'safety' and 'quality' in child welfare. Choosing the experiences of community workers for indigenous communities as the standpoint of my study, the analysis shows how the definitions of safety and quality reflect the worlds of urban Taiwanese people and indigenous perspectives are excluded as 'unsafe' and 'inferior'. IE is adopted to give voices to front-line child care workers and validate indigenous perspectives in the coalition-building process among indigenous communities. Alternative discourses on safety and quality will be presented as a way to interrupt the circle of colonial relations in the context of the child welfare system.

[hlwang@sinica.edu.tw](mailto:hlwang@sinica.edu.tw))

*The (Im)Possibility of the "East Asian Community": Reflections on Nationalist Sentiments and the "Structures of Feeling" in East Asia*

The recent development in East Asia has witnessed two contradicting trends: on the one hand, there have been reviving interests in Asianism (especially inspired by Takeuchi Yoshimi) and/or the so-called "East Asian Community" in both official and intellectual discourses; on the other hand, there has been an escalation of nationalistic politics in the region, manifested in such incidents as territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called "historical consciousness" and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. Drawing on the theoretical insights from British cultural critic Raymond Williams and German social thinker Max Scheler, this paper provides a preliminary examination of what can be called "structures of feeling" in East Asia. Three dimensions of these structures are outlined for analysis: (1) grief/victimhood and the politics of memory; (2) resentment (or *ressentiment* in Scheler's terms) and value systems; and (3) power relations and the multi-layered structures of *ressentiment* in East Asia. It is argued that the true reconciliation among different people in this region has to be reached before any ideal of Asianism or East Asian Community can be carried out. Towards the end of the paper, the implications for the reconciliation in the region will be further explored.

*The Quest to "Overcome Modernity": War, State-Building and Nationalism in Japan and China*

Drawing on Japan and China as two illustrative cases, this paper intends to shed new light on our theoretical understanding of modernity by articulating the relations between war, state-building and nationalist discourse in the non-Western context. From its very burgeoning, the historical formation of modernity in East Asia has been intertwined with the experience of the defeat of war (or war threat) that, in turn, gives rise to nationalism. Moreover, understood as originating from the West, modernity to the East has been regarded as something to be achieved and overthrown at once. On the one hand, it is considered that the East has to catch up with the West in terms of material achievements (particularly economic performance and military power); on the other hand, it is also contended

that Western modernity has intrinsic contradictions that will eventually lead to self-destruction, of which the only redemption is through the alternative path provided by the East. Such a dichotomous view of modernity has been dominating nationalist discourses in many instances in East Asia. Thus, nationalist projects in East Asia often have a double task: to pursue modernization through state-building, on the one hand, and to "overcome (Western) modernity", on the other. However, due to the legacies of war, which leads to a lack of reflection on state ideology and violence, such nationalist projects often fall into the trap of modernity itself without being able to become the genuine critique of the latter. This paper will use the attempt to "overcome modernity" in wartime Japan and the search for "anti-modern modernity" in contemporary China as two examples to examine such a paradoxical situation. It is concluded that, to better theorize (and critique) modernity, the intertwined relationships between war, state-building, nationalism and global inequality have to be taken into account.

### *Feeling Good about the Iron Rice Bowl: Economic Sectors and Happiness in Post-Reform Urban China*

Situated in China's market transition, this study examines the relationship between economic sectors and individuals' happiness in post-reform urban China. Based on pooled data analysis of restricted urban samples from the China General Social Survey (CGSS) 2003, 2006 and 2008, the subjective premium enjoyed by workers in the state sector is noteworthy: individuals working in the state sector have significantly higher levels of happiness than their counterparts in the private sector, other things being equal. After considering selectivity in mobility into the private sector, differences between those remaining in the state sector and those moving from the state to the private sector are highlighted: those remaining in the state sector are significantly happier than former state sector workers who moved into the private sector, whether the move was voluntary or involuntary. Possible underlying causes of these psychological costs are further explored: Institutional segmentation in the allocation of social welfare benefits rather than psychological factors serves as the primary nexus linking state-to-private mobility and happiness. On the one hand, those who moved voluntarily experienced a trade-off in enjoying higher paid-offs while losing a sense of security. On the other hand, involuntary, downward mobility leaves long-term psychological scars to those who experienced layoff or unemployment after controlling for social welfare benefits. People who experienced sectoral mobility, whether voluntary or involuntary, suffer from loss of the *iron rice bowl*. Results from robustness checks indicate that neither observed nor unobserved confounding factors, if any, would bias our conclusions. This study emphasizes the role of social security as an important dimension in determining individuals' happiness that should be explored in future research.

### *Re-Territorialization and Social Resistance in the Remaking of Dafen Village, Shenzhen, China*

After exhibited in Shanghai EXPO2010, Dafen Oil Painting Village has been advocated as an innovative "best practice" of governing that has transformed urban villages with low-skilled labors and chaotic landscape into a cultural cluster. Many scholars have noted that, in China, couples of famous cultural clusters have emerged and prospered in places with a near vacuum of governance, such as villages or remote suburbs, only to drastically change upon the extension of state governance. Nevertheless, there seems to be a marginalization of scholarly attention to the trade-painting community of Dafen Village, perhaps due to the common critiques on authenticity of trade-painting industry and thus, negligence of everyday life of trade-painting workers and their struggles.

What concerns us is the changing landscape of social relations when a particular area is demarcated as a special cluster subject to the state's regulation in name of objectifying the imagined economy. Instead of debating the nature of trade-painting industry, we argue that the remaking of Dafen Village into a cultural cluster is a project of re-territorialization, driven by the state with a market mindset. The fabrication of the cultural cluster thesis into the settlement of the trade-painting community entitles the state to try new logic and new forms of inclusion and exclusion. More specifically, we are concerned about the differentiated treatment given to different social groups through calculated policies and the corresponding social struggles of various social groups for their rights. Particular attention is given to two major calculated rules: spatial planning for land use regulation and differentiated welfare access rights. Through the study, we attempt to offer a critical yet nuanced perspective toward the heterogeneous society and changeable alignments or blurred boundaries between the state and society in the dialectic process of re-territorialization and counter-territorialization.

### *Gender Differences in Social Quality in Taiwan*

This paper will try to explore the social quality through gender lance. Taiwan is under quick transition in terms of democracy and economic and social progress. However, unstable and anxious social atmosphere tend to occupy the society quite often. This paper is going to see whether there in gender difference in perception of social quality.

The data is derived from 2nd wave SQSQ survey done by National Taiwan University. This questionnaire has been originally designed by the Seoul National University and modified by ACSQ network and Taiwanese SQ team member. Here are about 1200 sample are collected and CATI system has been utilized during data collection. Stratified random sampling has been used for sample representation purpose.

The data will address that here is gender difference in subjective feeling about social inclusion and social empowerment. Women compared their counterpart tend to be more satisfied in those area. More detail will be discussed in this paper.

### *Effects of Social Capital on the Psychosocial Development of Children in Middle Childhood in China*

In this analysis, the effects of social capital (including family, school, peer and community social capital) on the psychosocial development of children from two-parent families in China have been investigated. And five dimensions of psychosocial development are analyzed, including social competence, emotional competence, self-esteem, resilience and pro-social behavior. In total, 140 children studying in grades 4 to 6 from two primary schools in Tianjin have involved. And all of the participants are selected randomly. The outcomes suggest different effects of social capital on the five dimensions of psychosocial development. The interaction effect between family and community social capital significantly affects children's social competence, emotional competence and resilience at the same time. School social capital and peer social capital are interacted, and influence emotional competence. Meanwhile, the interaction effect between school and community social capital has significant effect on resilience. However, except for the direct effect of family social capital on social competence, no other direct significant effects of social capital have been found surprisingly. It is also surprising to find no significant effects of social capital on self-esteem or pro-social behavior, which is conflict with the current literature from Western culture. The outcomes from empirical analysis suggest that, simple social capital can not promote the psychosocial development of children in middle childhood in Chinese context. To strengthen the interaction between family and school, school and community, and family and community, will be very important to improve children's psychosocial development level. Furthermore, more potential predictors are supposed to function to promote self-esteem and pro-social behavior in Chinese context, such as cultural capital.

### *The Guanxi Hierarchy - Family Ties and Finance in China's SMEs*

In his seminal work, From the Soil, Xiao-tong Fei found that solidarity in social ties fades with distance from primary group relations. Thus the power of guanxi (i.e., connections or relationships) would differ according to its source. Most powerful would be guanxi based on kinship, with the power of such connections fading as one moved down the scale from kinship, to regional location, thirdly to school ties, and finally to business ties.

Fei's early work has returned to prominence in analyses of group ties in private enterprise, following market reforms over the past four decades. For instance, Yu-sheng Peng (2004) highlighted the economic benefit of kinship networks in China's rural industrialization programs. He found that kin solidarity played an important role in protecting the property rights of private entrepreneurs. In the absence of credible market institutions or a legal order protecting property rights, kinship ties reduced transaction costs during the early stages of market reform.

Yan-jie Bian (2009) broadened the thesis, arguing that the emergence of private firms can be traced back to guanxi networks. However, He and Jia (2005) discovered a reverse hierarchy in the strength of guanxi ties. They found business-based guanxi gaining prominence more recently in the management and operation of domestic private firms.

I look then to the pattern of guanxi ties, and relevant hierarchy in the strength and significance of such ties among owners of private enterprise. Data were drawn from about a thousand SMEs between October 2008 and March 2009. I found that strong kinship network ties were correlated with positive effects on

the financial support provided for private rural enterprise. At least regards investment, the original hierarchy dominated by kinship-based *guanxi* appears to remain at the center of most enterprise.

*The Influence of Early Trauma on the Quality of Life in Taiwan: The Moderating Impacts of Religiosity?*

A growing body of life course research based on the Western societies has displayed the long-term negative effects of childhood and teenage trauma on life conditions in later life stages and has pointed out that religion plays an essential role in moderating or buffering the critical impact of early trauma. However, whether similar patterns appear in Asian societies remains largely unexamined. It is especially ambiguous whether the effectiveness of religion's coping impacts applies to Asian societies where religious compositions are more diversified with non-Christian religions. As a result, this research regards Taiwan as an ideal setting to elaborate the associations among early trauma, religiosity and two indicators of adulthood life quality: happiness and self-reported health.

With the utilization of the data drawn from two nationwide representative samples: the 2009 Religion Module of the *Taiwan Social Change Survey* (TSCS) and the *Survey of Religious Experience in Taiwan* (REST), three sets of questions are investigated. The first sets of analyses enable this research to ascertain the impacts of diverse dimensions of early trauma on the life quality, including *quantity views* (as indicated by the number of early traumatic events), *category views* (as classified as parental-related, sibling-related, self-related, and economic early trauma), and *juncture views* (as sorted into childhood traumas and teenage traumas). Furthermore, this research discusses whether the Taiwanese with higher level of childhood and teenage traumas tend to display higher level of various types of religiosity during adulthood, including *belonging aspect* (as grouped into no-religion, diffused-religion, and institutional-religion), *belief aspect* (as measured by attitudes toward supreme god and spirituality), and *behaviors aspect* (as determined by public religious attendance, private observance, and religious techniques). Last but not least, this research gauges whether the negative influence of early trauma on adulthood life quality is moderated and buffered by religiosity during adulthood.

*Immigrant Wives As Volunteers in Taiwan: Their Characteristics and Experiences*

The prevalence of transnational marriage can be witnessed in Taiwan in the late twentieth century where Chinese and Southeast Asian women, mainly from Vietnam, dominate numerically. Most of the women got married to Taiwanese men through the operation of profit-pursuing marriage agents. These immigrant wives, contracting "commodified transnational marriage", are labeled in Taiwan as "foreign brides", a derogatory term that implies exclusion and discrimination. It has been recognized that immigrants can improve their economic, social and emotional well-being, civic participation and integration in the host society by undertaking volunteering activities. Nevertheless a variety of factors can prevent them from voluntary work. In other words, it is significant to disclose immigrant wives' experiences of being volunteers in Taiwan. However, the studies to date on the issue of these women have largely concentrated on adaption; little attention is paid to their participation in volunteering. Thus this paper aims to learn about the characteristics and experiences of immigrant wives who participating in volunteering in Taiwan by conducting qualitative research. The major questions raised for this paper are: 1) What are their factors for volunteering? 2) What are reasons keeping them from volunteering? 3) What types of volunteering work do they do and why? 4) What does volunteering work mean for them? The research results can put forward recommendation to policy-makers and mainstream organizations with a hope of promoting volunteering participation of immigrant wives in order to improve their well-being in Taiwan.

*Cooperative Marriage: Queer Politics of Chinese Lalas and Gay Men*

Being a new and under-researched phenomenon since 2005, cooperative marriage attracts attention and generates debate in and out of the mainland Chinese LGBT community. Cooperative marriage is a heterosexual marriage performed and negotiated by two non-heterosexual parties, a *lala* (lesbian, bisexual and transgender woman) and a gay man.

Being a popular coping strategy of *lalas* and gay men in contemporary China, in facing the institution of family, marriage and heteronormativity, cooperative marriage offers great insights into Chinese families, *tongzhi* kinship and alternative forms of intimacy and queer alliances. Filial piety, compulsory heterosexual marriage and potential housing, legal and financial benefits in heterosexual marriages are major momentum for this type of highly ritualized marriage. In cooperative marriage, both parties are fully aware of the obligations and nature of the marriage, however many of them struggle to make a balance between the conjugal family, natal family and their same-sex desire.

Various strategies are developed in finding and sustaining the (superficial) harmony of such families: different family practices, new family arrangement, the performance of masculinity and femininity in their conjugal houses and relevant public spaces. Friendship and even family bonds are thus developed and strengthened, forming new sexual alliances in the society.

Like all heterosexual marriages, cooperative marriage is also a gendered experience; therefore the study is especially interested in *lalas'* experiences and narratives, their definition of love, family and intimacy. This research studies cooperative marriage from multiple aspects of family practices including domestic, consumption, kinship, marriage, emotion and parental practices, in order to understand their lived experiences and how they do gender and families. Feminist, interpretivist qualitative approach is adopted in the research. Semi-structured interviews were conducted and participant observation as well to gain insights of such marriages, 13 *lalas* and 7 gay men were interviewed, as well as activists from the LGBT community.

**WANK, DAVID\*** (Sophia University, [davidwank@yahoo.com](mailto:davidwank@yahoo.com))

*The Embeddedness of Corruption in Contemporary China: The Bo Xilai and Lai Changxing Cases*

Economic corruption cases are a window into networks linking state office holding with wealth accumulation. This paper draws on the concept of embeddedness (Granovetter 1985) to examine two prominent cases in contemporary China. The cases are, I claim, ideal typical of agents and their networks coming opposite social positions. One is "corruption from below". Its agent is an entrepreneur from a humble background, Lai Changxing, who forged networks with hundreds of officials in an immensely profitable smuggling operation that was exposed in Fujian Province in 1999. The other is "corruption from above". Its agent was a high-level official born into the political elite, Bo Xilai, who accumulated great wealth through networks in his social circles that were revealed in 2013. This paper's analysis centers on how the agents select, monitor, and sanction others in their networks. There are two key findings. One is that the networks are organized through third-parties (proxies). The other is that the networks' institutional basis is constituted not only by trust, but also by coercion. The paper's subsequent discussion considers some mirrored differences reflected in the humble and elite positions of the agents, and how their two kinds of networks can interact. In the conclusion, I use the paper's argument to stress the need to develop an economic sociology of corruption.

*Cool Towns for the Elderly - Protecting the Health of Elderly Urban Residents Against Heat Stress*

**Background:** The 2003 heat wave in Europe resulted in 70,000 deaths. Particularly at risk were socially disadvantaged persons over the age of 65 years. The STOPHOT project explores how the elderly Viennese population perceives adjusts their behavior to heat. Of specific interest are the behavior patterns of older persons with lower SES living in socially deprived urban areas.

**Methods:** Using a standardised questionnaire, a telephone survey was conducted in summer 2011. 400 subjects (>65y) living in four different residential area types in Vienna were interviewed. In addition, face-to-face interviews with residents of retirement homes (n=200) and 15 in-depth interviews with stakeholders were carried out.

**Results:** Heat primarily affects the elderly's energy balance. Most frequently mentioned conditions are fatigue (58%) and sleeping problems (48%). Older people adjust their behavior during a heat wave mainly by wearing lighter clothes, increasing liquid intake and staying indoors during daytime. High-risk groups are persons with a lower socio-economic status and activity level as well as poor health condition. This group is also more likely to withdraw from the public for the duration of the hot periods. Those who don't withdraw suffer from fewer heat-induced ailments. Factors that increase the likeliness to stay at home are a disadvantaged neighborhood, dissatisfaction with and lack of neighborhood networks

and age discrimination in the residential area. Whether older socially deprived individuals go out during a heat wave period is not so much a result of available green spaces, but rather of existing socio-spatial conditions.

**Conclusion:** The elderly are particularly vulnerable towards heat stress. With urban populations ageing, and urban temperatures rising, design of urban areas must increasingly consider the interaction of social and climatic factors to increase age-friendliness. Vulnerability towards heat is not natural, but produced by socio-spatial conditions and can be counteracted by community-building initiatives.

**WANKA, ANNA\*** (University of Vienna,  
[anna.wanka@univie.ac.at](mailto:anna.wanka@univie.ac.at))

#### *Older People in Public Space(s) – Engagement or Disengagement?*

**Background:** Public spaces are in transition, and it doesn't head towards age-friendly cities. Instead, spaces are turned into functions of mobility – lacking opportunities for social interactions and integration. This tendency intensifies in times of economic crisis with the withdrawal of public maintenance and the fortification of socio-environmental injustice. Older people are particularly affected as they are highly dependent upon their immediate residential environment for maintaining their quality of life.

**Methods:** The main research question is how older people cope with the deprivation of public places and what role the specific localities play in their strategies. A comparative case study of contrasting residential areas in Vienna, Austria, will be presented. A mixed-methods design combining both quantitative and qualitative methods is deployed.

**Preliminary Results:** The quality of the residential area significantly correlates to older people's outdoor behavior. Factors that reduce the likelihood of spatial engagement are a disadvantaged neighborhood and age discrimination in the residential area. Who owns little resources is even more affected. However, older people also own specific resources that can contribute to the revitalization of public spaces, increasing not only their own quality of life but the quality of city life in general.

**Conclusion:** The intersectionality of old and new dimensions of inequality – like age intersecting with education and gender – poses new challenges for environmental justice discourse. Hence, environmental justice can be discussed under the keywords of age-friendliness. Without counteraction, environmental deprivation and the corresponding withdrawal of older people from public space will increase inequalities in older age – both in regards to health and significance. Who withdraws from public space becomes invisible in society. However, older people are also a highly competent group that is yet hardly targeted by urban revitalization initiatives. Here lies potential for inclusive 'gentrification' of urban areas.

#### *Gender Equality Policy Revisited. the Case of Poland and Norway*

Gender equality is one of the most complex and contested concepts in recent decades in Europe and worldwide which has been developed by academics, practitioners as well as politicians. It is seen as a tool for economic growth and sustainable development. While some European countries have made significant progress as far as the gender equality is concerned, there are still evident examples of inequalities in the economic, social and political sphere. The aim of this presentation is to discuss the possibility to use the new framework of gender equality created by the MAGEEQ project to analyse the equality policy in Poland and Norway. Comparing both models will allow to identify specific social contexts for development of GE policy in Europe and allow to answer the question if it is possible to integrate various approaches and measures to GE policy on the European level. In other words, the policy analysis in both countries will help to suggest the areas of potential improvement for gender equality policy and a new methodological framework for gender equality.

This paper will present the result of research project: Gender equality and quality of life – how gender equality can contribute to development in Europe. A study of Poland and Norway funded by Polish-Norwegian Research Programme.

**WARBURG, MARGIT\*** (University of Copenhagen,  
[warburg@hum.ku.dk](mailto:warburg@hum.ku.dk))

#### *Mission and Management of Meagre Resources in Religious Organisations*

Religious organisations must organise labour and raise money for diverse purposes, such as preparing and holding religious feasts and social events, communicating internally and externally, maintaining property, and in most cases also proselytising. It is resource-demanding, however, to recruit new adherents and subsequently educate and socialise them into the religious and communal life.

Since resources are limited, it is a common dilemma for religious organisations how much of their resources should be allocated for these different purposes. This dilemma can be approached analytically by distinguishing between *Gemeinschaft*-oriented and *Gesellschaft*-oriented activities, drawing upon Ferdinand Tönnies' classical ideal types of social relations. Both kinds of activities are important for achieving a sustainable religious organisation with a potential for long-term growth. The author's studies of the Baha'is and of fund-raising in Danish churches abroad provide empirical material for developing this proposition into a generally applicable model of the internal dynamics of proselytising organisations in terms of *Gemeinschaft* and *Gesellschaft*. It will be argued that *Gemeinschaft* and *Gesellschaft* are complementary to each other and not opposing ideal types of social relations. On the one hand, the organisation must fulfil the members' expectations of *Gemeinschaft* – otherwise, in the long run they will become passive or even resign. On the other hand, the functioning of the organisation must not be jeopardised by neglecting the need for administrative efficiency and proper management of resources, which by definition are *Gesellschaft*-oriented activities. If proselytising is a more permanent activity, it requires formal organisation, rational planning and money to be efficient. When resources are limited, investing in proselytising usually occurs, at least partly, at the expense of activities that strengthen *Gemeinschaft*. Eager proselytising can therefore easily lead to an organisational and human strain which is not sustainable.

**WARD, PETER\*** (University of Texas at Austin,  
[peter.ward@austin.utexas.edu](mailto:peter.ward@austin.utexas.edu))

#### *The Reproduction of Informality Among Low Income Self-Help Settlements in Texas*

Insights from a major cross-national study of low income consolidated irregular settlements in Latin America ([www.lahn.utexas.org](http://www.lahn.utexas.org)) reveals a reversion to informality as previously regularized (legal) property titles become clouded by household and home owner practices. Ongoing research in low income neighborhoods in the USA reveals similar and parallel contemporary processes of informality and reversion to informality. Home building in ex-urban colonias and associated informal subdivisions, as well as home improvement and urban regeneration in inner-city (first suburb) neighborhoods demonstrate informality in a number of dimensions such as: land titling practices, financing mechanisms for home construction and improvement, non-code compliance, lot and dwelling subdivisions and infilling, and inheritance practices – all conceived as highly rational responses to poverty and poor market performance. Data come primarily from Mexican and Mexican American communities in South and Central Texas and draw upon three major datasets compiled by the author. The realms of informality discussed are: forms of land acquisition; types of title and proof of ownership; financing of home building and improvements; compliance with codes; lot subdivision among kin or petty landlord-tenant arrangements; practices of servicing and solid waste disposal; health practices to deal with chronic morbidity and mobility problems and aging; inheritance and disposition of property to heirs.

#### *The Contingent Legitimacy of Professional-Managerial Hybrids: Towards a Relational Sociology of Hybridisation*

Despite increased interest in professional-managerial hybrids, the unit of analysis for most research remains on the hybrids themselves, i.e. practices, interests and identities, or the processes of hybridisation, i.e. moving into the role. There is limited consideration to the experiences or influences of other professional or managerial actors with whom these hybrids must relate and achieve a sense of legitimacy. This highlights a relatively neglected aspect of professional-managerial hybrids and requires a shift in analysis from the hybrid to the wider constellation of relationships and stakeholders. Drawing on theories within relational sociology, especially the work of Bourdieu and Crossley, the paper examines the relational ties of 36 medical-managerial hybrids working in different areas of service organisation, including executive management, clinical leadership and clinical governance. Each of these hybrids exhibits different relational networks and points of 'professional-organisational intersection', which are drawn up, developed or dissolved when taking up and seeking to legitimise their new hybrid roles. It examines the responses of co-workers, from both medical and managerial communities, to these new hybrid roles, where co-workers are often found to question hybrids in terms of their expertise, inter-occupational relations, strategic alignment, and reputation with colleagues. The study shows how hybrid medical-managerial roles are contingent upon the relationships and sanctioning power of both other doctors and managers, and in fulfilling their hybrid roles and this involves drawing upon different forms of social, symbolic, cultural and, increasingly, economic capital. The paper concludes by calling for greater attention to the relational dimensions of professional work in organisational contexts and the relevance of Bourdieusian social theory within the sociology of professions.

**WARR, DEBORAH\*** (University of Melbourne,  
[djwarr@unimelb.edu.au](mailto:djwarr@unimelb.edu.au))

*New Approaches to Sociospatial Network Analysis: Understanding and Responding to Neighbourhood-Level Poverty and Disadvantage*

While socio-economic-spatial divisions within cities and towns have long been evident, in post-Fordist cities they are generally considered to be growing sharper and differentiating at the scale of suburbs and neighbourhoods. This produces effects in which the poor and non-poor increasingly live apart from each other and is referred to as 'socio-spatial polarisation'. These socio-economic-spatial processes have significant implications for the ways in which poverty and socio-economic disadvantage is being reproduced through converging socio-economic and spatialised processes. Drawing on a series of studies conducted in Victoria, Australia, and exploring social network structures and experiences of community in disadvantaged and non-disadvantaged neighbourhoods, this paper explores the implications of converging socio-economic and spatialised processes with particular focus on settings of place-based neighbourhood disadvantage. Issues addressed are: 1) discussion of findings from network analyses that show contrasting patterning of social networks between residents of poor and non-poor neighbourhoods; 2) consideration of the implications of divergent network patterning for experiences and potential of community in place-based settings for poverty reduction strategies. Network analyses use a range of methods to collect network data on residents' networks including contact diaries, CATI surveys and ethnography and, more recently, mobile phone and Global Positioning System [GPS] technology. Evidence from these and other studies suggests that residents of socioeconomically disadvantaged neighbourhoods are likely to have more local networks and fewer extra-local networks, than residents living in other kinds of neighbourhoods. These findings have significant implications for poverty reduction strategies that assume neighbourhood 'community' to be potentially transformative mechanisms for driving socioeconomic change at local levels. Rather, efforts should focus on understanding macro processes that are contributing to socio-spatial disconnections among vulnerable populations and developing poverty alleviation strategies that include efforts to connect residents into extra-local and socioeconomically diverse networks.

*Unpaid Domestic Work and the Economic Crisis: Reinforcing or Diluting Gender Inequalities in Britain?*

The recession of 2008-9 and the prolonged economic downturn have brought to the fore fundamental questions about the ramifications of the crisis for the working lives of diverse social groups. In Britain, a marked absence in the plethora of research projects exploring the work and employment outcomes of the crisis is explicit attention to 'housework'. Whilst campaigning women's organizations have made multiple predictions about the impact of crisis on the gendering of work inside and not just outside the home, there has been little empirical attention paid to domestic work and the crisis. The evidence that does exist is patchy, often anecdotal, and hints at diverse ramifications of the crisis. This is a key gap in our current knowledge. It is significant because domestic work talks powerfully to change, and continuity, in the work roles of women and men. Crises can offer valuable opportunities to re-evaluate, rethink, challenge and change everyday work practices. Attention to domestic work within the home is also pertinent in times of economic crisis because the domestic sphere can carry a very heavy burden, absorbing the fallout of crisis in multiple ways. The domestic sphere might support family members who have lost jobs or are economically insecure, both financially and emotionally. In previous periods of economic crisis in Britain, the hardship caused by economic crisis was not equally distributed by gender within the home. Rather, women bore the heavier burden of increasing domestic and caring work as they sought to support their families in troubled times. The paper draws upon large-scale survey data from contemporary Britain to consider the ramifications of the current economic crisis for gender inequalities in domestic work.

*Promoting Elderly Volunteers and Long-Term Care Policy Reform: Through an International Comparative Analysis Between Nederland and Japan*

The aim of the presentation is to examine how the elderly join volunteers in home and residential care setting.

In Nederland and Japan, expenditure on LTC for the elderly is a matter of immediate concern due to rapid demographic aging. Nederland is the first country which introduced a national health insurance scheme (AWBZ) for covering LTC services from 1968. Japan also implemented public LTC Insurance since 2000. Nowadays, in both countries, LTC policies need serious improvements in order to react increasing expenditure for LTC services and keep quality of these services. The promoting and utilizing elderly volunteers in care setting is focused as one solution of the LTC reforming.

Based on semi-structured interviews to staffs of volunteer organizations, elderly volunteers and public officials in Leiden, Nederland and Yokohama, Japan, I would like to show (1) features of long-term care (LTC) policy reforms on promoting elderly volunteers and (2) elderly volunteers' minds under the reform. Both Leiden and Yokohama adopt new innovative LTC policies to work in closer cooperation with LTC service providers.

What follows are the three observations. Firstly, we show the different goals of utilizing volunteer at a policy level. The goal in Nederland is to supplement and alternate current LTC services. In contrast, Japanese goal is care prevention of volunteers. Therefore, what volunteers do in care setting are totally different between two countries. Secondly, work experiences before retirement have effects on their volunteer experiences, and provide a broad frame of reference for their worlds after retirement. Thirdly, only Japanese volunteers emphasize that volunteering create new social bond in local community. On the other hand, Dutch volunteers tend to think volunteer work is important but personal work, and put little emphasis on pragmatic purposes. The differences is based on the difference of LTC regimes between two countries.

*Entrance Examinations As a Tool for Socialization and System Maintenance: Comparisons Between the United States, Japan, and France*

Examinations have visible and invisible functions in education and society. In particular, entrance examinations for higher education have a great impact on shaping compulsory education, and they reveal the types of abilities and attitudes that each society is attempting to nurture. Moreover, the immutable modes of entrance examinations inevitably reproduce indigenous education, its system, modes of knowledge and pedagogy, although the influence of globalization on education is apparent and educational reforms are continually introduced. Thus, entrance examinations function as a form of system maintenance, even when alien elements are grafted onto education. Since the modes of these examinations are often consistent in both schools and the wider society (e.g., in employment and civil service exams), examinations contribute to the maintenance of much bigger systems, outside schools.

This paper examines the various functions of examinations by comparing three countries, France, the United States, and Japan. Special attention is paid to the socialization patterns in each country. The Japanese National Center Test for University Admissions was modeled after the American SAT (Scholastic Aptitude Test), but what each test examines is quite different in terms of modes of knowledge and students' faculties. Unlike the SAT and the National Center Test, the French Baccalaureat employs essay-type exams. The Baccalaureat is accepted as a rite of passage to becoming "French" through the acquisition of a dialectic for writing and talking that is based on an idea of a shared culture. With this analysis of three types of examinations (contents and systems) and the preparatory education involved, the paper attempts to model different types of socialization and the links between education and society.

*Gender Difference in Network Homophily By Parental Status Among Faculty at a Research Intensive University*

Increasing attention is paid to work-family conflict among faculty fathers. Generally, however, women faculty tend to have a heavier share of family responsibilities and experience greater work-family conflict than men faculty. Previous research suggests that faculty, especially women faculty, are often hesitant to bring up personal life or discuss work-family conflict in the workplace because they are afraid that their colleagues might doubt their commitment to work. The purpose of this study is to better understand the academic work culture by exploring informal (non-work related) social networks of faculty focusing on parental status and gender. Social identity theory predicts that we tend to form homophilous social networks integrating ourselves with those who share status characteristics, such as race, gender, and social class. This is because when we meet someone with the same status characteristic, we expect the person to have similar viewpoints and interests and thus find it easier to talk with them. This study considers parental status as a status characteristic and examines if there is a gender difference in

the tendency to have informal social interactions (e.g., discuss personal matters, share free time) with departmental colleagues who share parental status (parents or non-parents). We use social network data on about 380 faculty within the natural and social sciences at a large research-intensive Midwestern university. For the preliminary analyses, we ran OLS with permutation tests and did not find a significant gender difference in parent homophily, which was measured using the point bi-serial correlation (PBSC). The next step is to run Exponential Random Graph Models (ERGMs) and test the gender difference controlling for dyadic dependence.

### *Why Do Organizations Form Groups?: Complex Structure and Behavior of Japanese Groups from 1977 to 1998*

Although it has been a well-known fact that Japanese business groups have consisted of two types of network, the structural difference between them has not been paid enough attention to by researchers. Applying the techniques of network analysis and regression analysis to data on a total of 2,972 large Japanese firms over a 22-year period, this paper demonstrates the correspondence between network structures and the three different goal-pursuing behaviors of firms.

Corporate Complexes (i.e., the largest six cross-industrial corporate networks with a circle pattern of bilateral equity ties) had a significantly positive effect on member firms' status-oriented behavior as well as on firms' technology-oriented behavior. However, the effect on firms' efficiency-oriented behavior was not confirmed with the same dataset. Meanwhile, Corporate Groups (i.e., the seven corporate networks in the automobile industry with a tree or star pattern of unilateral equity ties) had a positive effect on member firms' economic behavior as well as a negative effect on member firm's technological behavior. In the case of the economic effect, however, only superordinate firms benefited from corporate groups. The effect of corporate groups on member firms' social behavior was not confirmed. The patterns of group structures and member firms' behaviors did not change throughout the observation period despite the fluctuation of the macro economic environment.

From the analyses, these findings suggest that Corporate Complexes were a system of resource-acquiring by means of firms' high social status, while Corporate Groups were a system of making profits to sustain the costly system for superordinate firms. (For subordinate firms, corporate groups were the system for bare survival.) Both structures were thus complementary to each other. Shielding the member firms against environmental fluctuation and technological uncertainty, Japanese business groups, by virtue of their complex structure, simultaneously pursued multiple goals as a united body.

### *Worlds of Nurses in the Care at Home, a Comparison France-Japan*

Most of the Japanese nurses in the care at home in the regions Fukushima and Nagano are married, having children, but they had an interruption in their careers, longer than the French nurses. So we observe it in difference between length of having D.E. (Diploma of State) and experiences as nurse in the care at home. In France, the nurses in the care at home stress the activity and more exactly on their condition of exercise, at the levels of motivation and difficulty, unlike the nurses in hospitals, who like working in team, emphasize the cooperation with other professionals. The French nurses mention practically never the relations with patients' families. So, the professional world of the first ones focuses on the market convention, while that of the second on the industrial agreement. In Japan, the nurses in the care at home, quite as the hospitable, suggest the relations with patients in terms of motivation and difficulty; but the first ones often mention the relations with the family of the patient. The professional world of the nurses in the care at home is characterized by the proximity or domestic convention. However, the nurses in the care at home in Fukushima differ from those in Nagano. The second criticize care managers in the point of view of cooperation. The first ones suffer from the difficult situation after the disasters to improve the quality of life of the patient, but they think of the role of the professional associations in terms of civic convention. This requirement of collective organization comes along with a bigger autonomy and, doubtless, with a grip of more important responsibility. This will have important and positive consequences on the image of the profession.

### *Communicating the Discrepancy: Operational Outcomes of the Activation Policy in the Field of Local Support Activities for Migrant Residents in Germany*

This paper addresses the question of how migrant residents and local welfare organizations experience the recent political changes to the "activation" welfare policy in Germany.

Because of a radical transformation of the political landscape in the last decade in Germany, people with migrant backgrounds are subjected to activation politics in two ways. Since there are twice as many jobless migrants compared to Germans, the migrants are necessarily the addressees in the new job placement measures, which may be well compared to the welfare policies in the United Kingdom. Furthermore, migrants are involved in the activation scheme through the formation of an integration policy in Germany that strongly reflects the concept of activation by requiring total engagement, self-responsibility, and willingness to get involved in the life and norms of the host country.

To assess the practical outcomes of such a political arrangement in the direct surroundings of the involved actors, the author conducted narrative interviews with migrants and local actors who are either in charge of job placement measures in the job centers or are working on educational support programs in elementary schools in migrant-dense city areas in Munich. A wide range of administrative documents were also referred to.

On the basis of these sources, this paper demonstrates the cognitive discrepancies among the actors and discusses that one of the most significant outcomes of these activation measures may be achieved by promoting a reflexive mindset among local institutions and migrant residents. The discussion is concluded by indicating that the operational interest of local welfare organizations is paid increasingly to enhance their communicational sensitivity so that they could deal with the highly complex demands of their individual clients; i.e., the sensitivity that relativizes the predominant distinction between Germans/non-Germans in the traditional welfare community.

### *The Death or the Reinventing of the Social?: A System-Theoretical Contribution to Changing the Semantics of Inclusion and Exclusion in Activation Welfare Strategies*

This paper addresses the question of how the landscape of inclusion and exclusion can be recast in the light of Luhmann's systems theory by referring to narrative interviews with local actors from migrant support organizations.

The ongoing discussions about social inclusion and exclusion, which are mainly conducted in socio-political studies on poverty and inequality, represent a normative understanding of "the social" that is reflected in the notion of solidarity, social policy, and welfare state. On the contrary, Luhmann's systems theory concerns another tradition of "the social" i.e., the tradition of social action, interaction, and communication in a particular way. According to his definition of inclusion/exclusion, neither membership in the legal rights nor a status in the central labor market is crucial; only communicational relevance matters. Taking this definition seriously, even a bankrupt or jobless person is economically "included" insofar as (s)he is communicatively relevant in the economic system, which finally leads us to the conclusion that there is no "social exclusion" in the "social systems."

Applying the systems theoretical understanding of inclusion/exclusion, this paper assesses how the communicational form of migrant support organizations is changing because of a radical shift in the activation policy of the last decade in Germany. The range of political reforms is generally considered a symbolic move to a neo-liberal arrangement of the welfare state, which would be comparable to the diagnosis of "the death of the social" (N. Rose 1996).

This paper presents another scenario by highlighting that operational sensitivity is increasingly enhanced in local welfare organizations; this enhancement is meant to deal with the highly complex demands of individual clients and to ensure their cooperative engagement. Finally, it calls for "reinventing the social" (S. Lessenich 2008), particularly by aiming at a constructive contribution to link the very different assumptions of the social.

### *The Interactional Accomplishment of "Impairment and Disability" in a Sport : From Game Analysis in Wheelchair Basketball Games*

How can the Impairment and Disability be accomplished in the sports games? Answering this question, I apply interaction analysis and game analysis to the Wheelchair Basketball games.

The social model of disability is very important in the way that "disability" is "the Social". But this model is rarely used for the studies of the sports sociology. The social aspect is simply used as a factor to block personal sports participation. However, from a viewpoint of the Ethnomethodology, we can regard the severity of the impairments and the disability as the cooperative accomplishment in / by the interactions of people. The purpose of this study is to illustrate "the sociality of disability" from experiences in the sports practice. In this study, I classify games of wheelchair basketball, the top-level, middle-level, low-level and examined the play in each game.

The game analysis of sports paid attention to the result of a game and illustrated each play related to the result of the game for an index. However, the game analysis does not consider that the performance of the game "achieved" something.

In the wheelchair basketball, it is empirically-known that a competition power of the team is closely concerned with the skill of the low-point player (a player with severe impairments). In the team having high competition power, the implication of a player with severe impairments may be different from a low team. In the logic of the wheelchair basketball rules, "impairments" is indispensable. The game performance shows it. While, "impairments" is experienced as difficulty in the game when the low-point player does not function effectively by the team. The negative side of "impairments" is achievement and maintained as a result of play interactions. "impairments and disability" are accomplished as a play interactions in a game.

##### *Reducing Uncertainty and Improving Recovery through the Provision of Flexible Services*

For many individuals living with mental health and substance abuse problems, it is difficult to obtain the safety and security that are necessary components of recovery. This is because they do not have access to resources such as food, housing, transportation, and employment that are needed to begin the process of stabilizing their lives. When these resources are available, they are often attached to a variety of caveats that make it difficult to exercise personal agency, another important component of recovery. Recognizing this, new approaches to mental and behavioral health care have begun to emphasize the importance of immediate access to resources through the provision of flexible services that give individuals the latitude to establish their own goals and plans for obtaining them. This presentation will focus on this emerging paradigm and the effect it is having within the mental and behavioral health fields. Housing First (HF) and Access to Recovery (ATR) are two services approaches that will be highlighted as examples. HF is an intervention developed in the United States—and spreading internationally—that provides immediate housing with low service demands to chronically homeless individuals with co-occurring mental health and substance use disorders. ATR is a program funded by the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA) that engages individuals with substance use disorders to develop their own recovery goals. ATR also provides individuals with stipends that can be used to access a number of services that are not provided by traditional programs. Discussion of both service approaches will emphasize findings from the author's own research, which demonstrate how these models assist individuals in their recovery processes by reducing uncertainties related to the lack of resources and by increasing personal agency.

##### *Gender, Homelessness and Social Capital: Young Women's Management of Disrupted Housing Transitions*

Mainstream understandings of young people's housing transitions inadequately reflect the diversity of experiences and social processes that shape the course to independent living. By only recognising normative pathways for young people leaving the family home significant experiences are either being misrepresented or lost. In Australia, a largely hidden aspect of youth housing transitions is the presence of homelessness. Many young people in need of accommodation are faced with a difficult housing market where there is a short supply of safe and affordable properties. For young people, to be without a home is not only to be homeless but also to be removed from all the subjective meanings a home carries. In addition, increasingly globalised economies and deindustrialisation have had serious implications for young people's transitions to secure accommodation due to employment insecurity and financial instability. I argue that the complex relationship between disrupted housing transitions and youth homelessness needs to take into account structural factors relating to gender, race/ethnicity, class, location, sexuality and dis/ability. Accordingly, the variety of young people experiencing homelessness in Australia demands new ways of conceptualising

the phenomenon. The application of a gendered lens to homelessness research is one possible way to challenge dominant discourses of youth housing transitions. In this paper I explore young women's experiences of homelessness and the utilisation of intimate relationships as a form of context-specific capital for accessing material support, particularly access to stable accommodation. To this end, I draw on theoretical perspectives of social capital developed by Pierre Bourdieu. These concepts are examined from a feminist standpoint to explain how Bourdieu's work may be appropriated to advance knowledge of how gender impacts on both the management of homelessness as well as transitions to stable accommodation.

**WATT, PAUL\*** (University of London, [p.watt@bbk.ac.uk](mailto:p.watt@bbk.ac.uk))

##### *Housing Market Restructuring and Inequalities in London and the UK*

This paper aims to do two main things. Firstly it provides an overview of UK housing market restructuring which has occurred as a result of longer-term shifts in tenurial patterns, and shorter-term impacts of the 2008 credit crunch aftermath and the Coalition Government's welfare and housing policies. The impact of this restructuring is that the tenure boundary between social and private renting, in terms of rents and security, is becoming increasingly blurred, while homeownership is being transformed via shifts in mortgage finance availability. The result of these trends is the 'end' of both social renting and home ownership as we know it. Secondly, the paper focuses on London and it demonstrates how the national trends are exaggerated in the capital, partly as a result of the central London housing market providing a 'safe haven' in relation to global capital flows, and partly as a consequence of urban regeneration schemes which have had the net effect of reducing the proportion of social housing throughout much of London. The paper uses Census and other data to examine the dramatic rise private renting in London since 2001, a rise which is predicated on the buoyancy of the buy-to-let mortgage markets, foreign capital inflows which generate build-to-let developments, and also the increasing outflows of ex-public housing into the private rental market. The Coalition Government's recent welfare and housing reforms, such as the 'bedroom tax', overlay these longer-term trends. The net result in London is a marked heightening of housing-related inequalities including increased insecurity that parallels and arguably reinforces the labour-market based 'precarious' identified by Guy Standing (2011) and Loic Wacquant (2008).

#### RC43-724.10

**WATT, PAUL\*** (University of London, [p.watt@bbk.ac.uk](mailto:p.watt@bbk.ac.uk))

##### *Public Housing and State-Led Gentrification in London*

This paper sets out a framework for understanding how state-led gentrification has occurred in London with reference to public (council) housing and urban regeneration policies. It argues that council housing played a key role as a 'buffer' against gentrification in London from the 1960s to 1980s, with certain inner London councils such as Camden and Islington, using the municipalisation of private housing as a deliberate policy strategy to counter gentrification. However since the 1980s, this 'buffer' role has been diminished under neoliberalism, firstly by the 1980 Right-to-Buy policy, but more recently by New Labour regeneration policies, notably stock transfers to 'not-for-profit' housing associations, plus the direct sale of estates (or estate land) to the private sector. The paper understands the state-led gentrification of London's council housing via developing the notion of a 'state-induced rent gap', whereby the actual stock has been inadequately maintained while land values have risen. Finally, the paper examines how the diminution of public housing is negatively impacting on London's low-income population and is thereby exacerbating social and spatial inequalities. In doing so, the paper draws upon a range of data sources, including official statistics, but also interviews with young people living in temporary accommodation for whom council housing represents an elusive 'gold standard' of housing that they aspire to, but a standard that is increasingly out of reach.

**WAWRZYNIAK, JOANNA\*** (FSU Jena, [wawrzyniakj@is.uw.edu.pl](mailto:wawrzyniakj@is.uw.edu.pl))

##### *Are There Only Detours and Dead Ends? Durkheimian Routes to the Suburb of Europe*

The paper aims at extrapolating several qualitative hypotheses concerning detours and dead ends in social science from a case study of three generations of Polish scholars influenced by a Durkheimian school in sociology. By this, it attempts to contribute to a larger and seemingly paradoxical question: whether a foreign reception of a school of thought might lead it into a dead end?

In the narrative of history of sociology, the origins of a Durkheimian approach in Poland are associated with Stefan Czarnowski (1879-1937), a student of Henri Hubert and Marcel Mauss, the author of *Le culte des héros* (1919) and the founder of the first chair in sociology in Warsaw in the 1930s. On the basis of the analysis of his unpublished letters to Mauss and Hubert (rediscovered by the author

of the paper), the paper shows the initial organizational and cultural obstacles to the institutionalization of the discipline and to the transnational exchange of ideas. Then, it moves to the case of Czarnowski's student Nina Assorodobraj-Kula (1908- 1999), showing how she combined the Durkheimian thought with Marxism. Although the results of this unusual merge were interesting, the question arises whether they could be considered Durkheimian anymore. Finally, the works of a third generation (represented by Assorodobraj's students) show that what was still left from the Durkheimian core was more and more undermined by a reception of American sociology. Several tentative conclusions are drawn from this overview: 1. Although relatively influential in Poland, the Polish Durkheimians were internationally unknown, which already forms one of the dead ends of the school; 2. The way Durkheimian thought was reinterpreted, provokes the question whether it was still Durkheimian; 3. There has not been a conceptual innovation starting with the third generation. These observations can be extrapolated for the sake of future comparisons.

**WAYACK PAMBÈ, MADELEINE\*** (University of Ouagadougou, [wayack\\_madeleine@yahoo.fr](mailto:wayack_madeleine@yahoo.fr))

### *Interrogating Female Household Headship from Women Heads of Household Perspective: Findings from a Qualitative Study in Ouagadougou*

#### Background and Objective

Despite its extensive use, the notion of female headship is a matter of constant controversial debate among scholars. This study analyzes how women household heads in Ouagadougou perceive themselves, versus the ways in which female household headship is conceptualized by researchers. Studies on female headed households are scarce in Burkina Faso, and it is our expectation that this study will contribute to fill the gap.

#### Methods

Semi-structural in-depth interviews were conducted to explore women's view of and experience on household headship, in relation with domestic power and decision-making. A sample of 20 female household heads was derived from a previous quantitative survey by using a purposive sampling method, in order to have women of different marital status and educational levels. Data were analyzed using a manual grid.

#### Findings

Findings show that all respondents acknowledged themselves as the current head of their respective households, even though all women mentioned the absence of a male partner as the reason why they defined themselves as the 'head'. In terms of authority on family matters, the respondents made no spontaneous association between their being head and having domestic power nor making decisions in the household. It emerges from the responses that for female heads mothers of young children, the consistency of authority on household matters was mediated through women's relationship with in-laws, mostly men. Conclusion

The study reveals that women's experience of household headship differ significantly with the conceptualization of female household headship by researchers, in terms of control over family matters. While the husband/wife transition in the occupancy of household headship seems quite 'natural', the authority tied to this position seems to wane when held by a woman. The study challenges key conceptual understanding of female headship and current debate around the dynamics of domestic power in their household.

## RC20-345.3

**WEAKLIEM, DAVID\*** (University of Connecticut, [weakliem@uconn.edu](mailto:weakliem@uconn.edu))

### *Explaining the Rise in Top Incomes*

Since the 1970s, the concentration of income at the top has grown in most advanced capitalist nations. The standard economic explanation is that the development of information technology has increased the productivity of managers and professionals and reduced the demand for blue-collar and white-collar workers. However, the extent of growth in top incomes varies widely among countries, suggesting that it is necessary to go beyond the common technological factor. This paper suggests three factors that seem to have the potential to explain the national differences. The first is changes in the power of labor and capital. A decline in the strength of labor may have led to a decline in the wages of ordinary workers and an increase in profits and the wages of top management. The second is a combination of deregulation, especially in financial markets, and the degree to which the political system facilitates "rent-seeking." Where the "rent-seeking" is possible, financiers and top managers may have been able to shape the regulations in ways that worked to their advantage. The third is changes in social norms. There has been a good deal of discussion of the influence of social norms on pay, but most of it has focused on lower-level workers. However, it seems possible that the same factors also influence top earnings. On the one hand, a concern for reputation might put some restraint on top earnings. On the other hand, social comparison might lead to a "race" for relative position among

top earners. It is possible that the increase in top earnings reflects the degree to which the forces that produced stability were weakened or disrupted.

The paper will discuss the implications of these three hypotheses and offer a preliminary test using data for OECD nations.

## RC23-414.7

**WEBER, ARND\*** (KIT, [arnd.weber@kit.edu](mailto:arnd.weber@kit.edu))

### *Policy Actions for Securing Computers*

Societies rely on information technology, be it for business operations, private life, or for critical infrastructures. However, IT systems are not reliably protected against attacks on data integrity or confidentiality, as the debates around the Stuxnet worm and the NSA have shown. It is expected that powerful organizations, such as foreign competitors or secret services, will launch significant attacks on businesses or infrastructures in the future.

Industry cannot invest large sums to create highly secure systems, as users who did not yet suffer large damages will not be willing to pay for their development costs. Therefore, only a slow migration takes place towards, e.g., the use of virtualization to isolate sensitive or risky applications. Moreover, the paths to highly secure systems are not clear. One path would be to have careful specification, implementation and evaluation. This path is known to be expensive but would provide a level of protection so far unknown. However, even such implementations might be hacked. Therefore, a path towards provably secure systems might be preferable. Though significant progress has been made, the development of provably secure computing systems faces three challenges: first, a large open source software base needs to be created. Second, matching hardware needs to be designed and ultimately an entire secure system. Third, means need to be explored to make sure that actual implementations match the system design, without insiders planting Trojan horses, and without having any implementation errors.

In either case, a policy push is needed which must take place in at least some economically significant countries. It is needed (1) to make the problems and solutions better known, (2) to explore the costs and benefits of the paths, and (3) to make some path mandatory. The latter could be done in a gradual way, starting with some devices and applications.

### *Lessons Learned about Different Experimented Researcher Positions within Military Organization*

This paper will focus on ethnographic methods used to analyze military organisations and groups and, more precisely about immersion which has been – and still his – a privileged tool use during my research within military universe during the last twenty years.

Four positions will be questioned. A first one, as member of the Army when I was drafted and when I realised my very first research in order to complete my master's degree (study about incorporation and instruction of a draftee). A second one, one year later when I was a researcher completely outside the institution. A third one, as PhD student financially supported by the French MOD but also in a technical way to realise my immersions in the Army, in the Navy, in the Air Force and in The French Gendarmerie. At least, my current position as a researcher and a teacher on secondment from the French University within the French Military Academy of Saint-Cyr where I conducted a research on the socialisation processes of the French Army officers through a class of cadets<sup>1</sup>. Each one of those positions presents its own advantages or disadvantages, inevitably associate to the intelligible dimension of each study produced. The presentation will consequently stick to consider aspects which appear to me as most important: those relating to the posture of the researcher and his statute; those of the delicate question of distance and the differences between the « participating observation » and the « observing participation »; those correlated with the challenge of restitution and the significant stage of the writing with a possible self-censorship; those still of the tricky question of the researcher's identity in a male dominant universe; etc.

### *Elderly Suicide - A Question Of Social Standing?*

The growing social inequality in Germany features a strong spatial component, which is why attention to the concentration of poverty in specific urban areas triggers so much attention, beyond just the social sciences. Subsequent we argue

that the reported suicide statistics in the Berlin Health Report require a closer inspection because the zones used in reporting are not sensitive enough to provide a robust picture of the articulation of social status and suicide. For example, in 2009 the Berlin health report suggested that there was no relationship between elderly suicide (individuals over 60) and social status.

Although Germans have never been healthier, or had such high life expectancy, social inequality continues to rise. While the population as a whole is experiencing this positive social development, it runs counter to the findings that people who are on the periphery, those who are socially and economically disadvantaged, experience less of this good health and extended life. Often these people are clustered together geographically.

The identification of these zones or socially weak areas is based on the research of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They aim to describe and analyse the socio-structural transformation of parts of the city and different districts through a statistical indicator system. Their very precise development index for smaller spatial areas was correlated with the comprehensive coroner data we collected. Then, by ranking the districts with the highest suicide statistics and comparing them to the Berlin health report, we detected a strong correlation between social status and elderly suicide. This suggests that incorporating the legal and medical records from the coroner and altering the definition of a municipal district to capture this fine level of detail establishes a real and concerning trend.

#### *Is Suicide a Question Of Social Standing? Elderly Suicide Rates In Cosmopolitan Berlin*

Although Germans have never been healthier, or had such high life expectancy, social inequality continues to rise. While the population as a whole is experiencing this positive social development, it runs counter to the findings that people who are on the periphery, those who are socially and economically disadvantaged, experience less of this good health. International studies have shown that these people are often clustered together geographically.

We argue that the reported suicide statistics in the Berlin Health Report require a closer inspection because the age groups and zones used in reporting are not sensitive enough to provide a robust picture of the articulation of social status and suicide. For example, in 2009 the Berlin health report suggested that there was no relationship between elderly suicide and social status. We will introduce our comparative study which aims to test whether there is indeed no correlation between elderly suicide and districts when (a.) more comprehensive data from coroner statistics is being deployed and whether there is indeed no correlation between elderly suicide and specific spatial areas when (b.) more comprehensive data from smaller heterogeneous urban zones beneath the district level are being accounted for.

The identification of these zones or socially weak areas is based on the research of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They aim to describe and analyse the socio-structural transformation of parts of the city and different districts through a statistical indicator system. Their very precise development index for smaller spatial areas was correlated with the comprehensive coroner data we collected. We detected a strong correlation between social status and elderly suicide. This suggests that incorporating the legal and medical records from the coroner and altering the definition of a municipal district to capture this fine level of detail establishes a real and concerning trend.

#### *The White Building: Integration or Commodification of East-London Culture?*

A key aim of the London 2012 'Regeneration Games' was the integration of deprived and marginal working-class areas of East London into the global city London. Urban regeneration in Hackney Wick, a neighbourhood directly adjacent to the Olympic Site, embodied this goal of direct intervention into everyday cultures. The neighbourhood was re-defined as a 'cultural quarter' and is now experiencing a culture-led urban regeneration strategy, as a solution for post-industrial decline. Emphasis is on preserving the everyday vernacular culture of the area, once a thriving industrial hub of light industry and warehouses, but now commonly referred to as 'housing the densest concentration of artists in Europe'.

The White Building in Hackney Wick provides a lens through which these tensions can be analysed. It is a valuable case study for scrutinising the complex processes of urban transformation, specifically the relationship between a surge of Olympic-led investment and existing structures, cultures and communities. The White Building - located at the heart of 'local' urban regeneration - once provided

local residents with factory employment, but has recently been renovated and now houses a gallery space, artist studios, micro-brewery and restaurant.

This paper argues that despite planners' attempts to integrate existing local residents (The Bingo Ladies, The Rowing Club, The Trowbridge Estate) into the regeneration plans, the commodification of industrial heritage for the mobile and transient 'creative classes' has served as an instrument to sharpen the neighbourhood's inequalities: polarising those who *can* and *cannot* afford to consume in its space. The paper draws on research conducted in Hackney Wick over the past 3 years. It has a strong empirical grounding, with over 40 interviews with residents, planners, politicians and activists. Additionally, visual methodologies (photographs and mapping), walk-along interviews and oral histories are used to provide rich narrative basis to complement formal planning documents.

#### *A New Global Labour Studies?*

The rapid growth of a new labour studies presents us with a paradox: in a context where the traditional labour movement is in decline, labour studies is thriving. What this new labour studies is identifying are the initiatives, organisational forms and sources of power that are emerging at the periphery of traditional labour. There is a "growing interest in a new political subject of labour... women, immigrants, people of colour, low-paid service workers, precarious workers... Groups that have been historically excluded from the moral and material boundaries of union membership... Rather than traditional scholarship on industrial relations, new labour scholars are exploring transformations occurring at the periphery of mainstream labour movements" (Jennifer Chun, 'The Power of the Powerless', 2012: 40).

In this paper we analyze the content, methodology and authors who contribute to this new global labour studies through an examination of the Global Labour Journal (GLJ). The GLJ was launched in 2010 as a scholarly response to the new forms of labour action, organization and ideas emerging in the age of globalization. It grew out of the activities of the International Sociological Association Research Committee on Labour Movements (RC 44) which has been transformed over the past fifteen years into a truly global forum for the study of labour. Over the past four years the GLJ has begun to record and analyze the forms of action and organization that fall outside the traditional focus of labour studies to include labour linked organisations such as NGOs and community organizations. What emerges from our analysis is the growing focus of submissions on labour in India and China. An emerging theme is the growing informalisation of labour and its implications for traditional trade unionism.

#### *Home Away at Home: Tourism Narratives of the German Village in South Korea*

'Where do you come from?' is a question that haunts tourists. Here, places are conceived as fixed spaces in the same way destinations are considered an end in tourism. In the context of multi-strata mobilities, places are increasingly being reproduced through embodied relationships in a world that is never quite finished. They are performed on unstable stages as they are being reimagined. It becomes apparent then that spaces are emergent and need to be considered alongside the sedimentation of identities.

Places emerge as tourist places when they are appropriated and made part of memories and narratives through the experiences of people engaged in embodied social practices. They are not only packaged for touristic consumption, but are also constantly redefined especially in terms of spatial identities located through everyday tourist practice. This paper focuses on the German Village on the island of Namhae in South Korea, which was built over a decade ago as a tribute to the Korean workers who lived in Germany as *Gastarbeiter*. It explores the question of identities of the 'locals' as portrayed in the film, 'Endstation der Sehnsüchte' by Cho Sunghyung and juxtaposes this alongside the huge influx of 'tourists' indulg-

ing in photographing experience on the film set of Korean TV drama 'Couple or Trouble'.

As the second German Village is now in the process of being built elsewhere in Korea, we need to ask even more so, how the notion of 'place' is reproduced through spatialities in which embodied performances and practices are facilitated within complex infrastructure, networks and mobilities. This paper incorporates reflexive and visual methodology to explore how identities are being configured through local narratives and practice, and questions how we identify the 'tourist' in this era of transformative change as exemplified by the German Village in Korea.

#### *Las Tendencias De Polarización Social En El Conurbano Bonaerense De La República Argentina. Su Impacto En El Trabajo De Los Jóvenes*

En la República Argentina desde fines del siglo XX han surgido nuevas formas de desigualdad social. Una de sus consecuencias es la polarización social y su relación con el trabajo. A pesar de que, en el año 2008, disminuyó la incidencia de trabajadores insertos en empleos precarios o indigentes en un 12,7%, el problema persiste e impacta preocupantemente en el trabajo de los jóvenes.

En este trabajo presentamos un ejemplo paradigmático de la polarización social y su repercusión en el trabajo de la juventud. Del universo de jóvenes hemos seleccionado como objeto de estudio los jóvenes de zonas suburbanas que bordean la ciudad de Buenos Aires. Tomando en cuenta este universo se realizaron encuestas semi-estructuradas sobre una muestra no aleatoria a individuos de entre 18 y 25 años del partido de Pilar y sus zonas aledañas (Campana, Exaltación de la Cruz, Luján, Gral Rodríguez, Moreno, José C. Paz, Malvinas Argentinas y Escobar) y del Partido de Lomas de Zamora (Barrio Santa Marta y El Ceibo). La brecha social que se observa dentro del mismo partido de Pilar se exacerba entre Pilar y las villas de emergencia de Lomas de Zamora. El resultado de las encuestas muestra claramente esta brecha social en el conurbano bonaerense de la República Argentina, así como su impacto en el trabajo de los jóvenes que sigue sin lograr una solución. La juventud desempleada o con empleos precarios continúa sufriendo las consecuencias de las políticas sociales de los años 90.

Frente a este contexto de desigualdades planteamos el debate en torno a la aplicabilidad del desarrollo de las capacidades en el sentido de la política social de Amartya Sen. Brevemente, se trata del desarrollo de las libertades positivas, voluntad política mediante.

#### *The Gao-Ji/Gaau-Gey Discourse in Chinese Youth Culture: Homosexually-Themed Language, Homosociality, and the Transformation of Masculinity*

Literally meaning "to engage in homosexual conducts" and originally from Cantonese *gaau-gey*, *gao-ji* (doing gay stuff) is a derogatory term to refer to homosexual people in mainland China. Thanks to the rapid development of Internet and cyberculture in recent decades, the use the *gao-ji* as well as other derived terms such as *ji-qing* (gay romance) and *ji-you* (gay buddies) have been going mainstream, particularly among Chinese urban youth. Other than referring to homosexual behaviors and relationships, the use of the *gao-ji* discourse becomes increasingly popular to describe the homosocial bonds among heterosexual-identified young men. Focusing on this newly emerging sociolinguistic phenomenon, this research provides an alternative reading of homosexually-themed language that has been traditionally associated with homophobia at both institutional and interpersonal levels. Drawing on findings from mainstream media sources and ethnographic interviews with young people living in Shanghai, combined with a nuanced analysis informed by social constructionist theories on gender/sexuality and other empirical studies done by western counterparts, the paper reveals the construction and transformation of *gao-ji* discourse in today's urban Chinese society. Although acknowledging the decline of homophobia, as shared by other countries, has largely contributed to the rise of *gao-ji* discourses in popular culture, I contextualize my discussion of this sociolinguistic practice in relation to 1) the continuing Chinese tradition of male homosociality; 2) the transformation of Chinese masculinity that gives more credits to intimacy and expressiveness; and 3) the urban youth communities that are stratified along the lines of class, gender, and sexuality in contemporary Chinese society. I conclude my paper by discussing how the *gao-ji* discourse, as one manifestation of queering the mainstream, could affect the public views towards homosexuality as well as its implication to the LGBT politics in mainland China.

#### *Children's Unequal Entitlements to Social Assistance: A Rights-Based View on the National Social Cash Transfer Arrangements Across the Global South*

In most countries of the global South, social cash transfer programmes have spread considerably since the early 2000s. Many of these public social assistance programmes in cash to people considered in need explicitly target children and families, respectively. What can we conclude from this increase of social protection programmes with respect to the children's right to social security? I restrict the investigation to social cash transfers as a test case of social security: In what way are children entitled to a social cash transfer?

Based on a huge and newly constructed database including all social cash transfer programmes throughout the global South (produced by the FLOOR research group, Bielefeld University, Germany; [www.floorgroup.de](http://www.floorgroup.de)), I analyse the institutional design of the programmes from a rights-based perspective. I mainly focus on two questions:

1. What categories of children are targeted and which restrictions are applied to their entitlements?
2. If a particular group of children is entitled to a social cash transfer benefit, to what degree is this entitlement "secure" and reliable?

Whereas the first question sheds light on the aspect under which conditions the children in a country are considered to be (particularly) deserving, the second question refers to the degree of institutionalization of the entitlements in terms of legal foundation, funding etc.

According to preliminary analyses, I find that both regional and global patterns of children's entitlements to social cash transfers exist, expressing different constructions of vulnerability and desert. However, there are huge differences both between countries and within countries. I maintain that the institutionalization of the children's right to social security in form of social cash transfers varies according to the following items: firstly, the child's characteristics such as age, disability, orphanhood, gender, ethnic origin, and secondly, his surroundings, such as the district of residence and the household composition.

#### *Curricular Alienation: Multiculturalism, Tolerance, and Immigrants in Dutch Primary School History Textbooks*

The stories found in a nation's history textbooks are profound statements about the way the nation sees itself. Textbooks that exclude certain groups alienate these children and may lead to disengagement from education and lower levels of educational attainment. The Netherlands is known internationally for its tolerance and multiculturalism, particularly towards immigrants, and sees these elements as critical to their national identity. However, historical and contemporary policies and social attitudes towards immigrants reveals levels of racism not unlike their European peers who, like The Netherlands, have experienced increased immigration and xenophobia in the last decades. In the educational domain, multicultural policies of the 1990s have shifted to those emphasizing assimilation, with immigrants often blamed for low educational attainment. This paper examines how immigrants, multiculturalism, and tolerance are represented in all Dutch primary school history textbooks published since 1980 to identify trends to determine whether or not they reflect larger political discourses and speculate as to the potential effects of these depictions on the children who read them. Preliminary analysis suggests that immigrant groups are depicted as culturally different outsiders from underdeveloped, poor, and violence nations who cause problems for the Dutch society that benevolently allows them entry. Textbooks fail to meaningfully address discrimination in The Netherlands suggesting that immigrants' failure to integrate is due to cultural differences, which likely enhances social alienation among the many immigrant students encountering these texts. Findings are of relevance to multiple nations with large immigrant populations.

**WEINGARTNER, SEBASTIAN\*** (University of Zurich, [weingartner@soziologie.uzh.ch](mailto:weingartner@soziologie.uzh.ch))

#### *The Role of Preferences and Attitudes in Film Consumption*

The sociological analysis of cultural consumption is usually situated in the field of social stratification research, identifying the way how cultural consumption is related to social position and examining the role cultural consumption plays in social boundary formation. Much less attention has been given to the theory of action underlying cultural consumption. Broadly speaking, there are two major perspectives that come into consideration here: The first conceives cultural consumption as the result of a deliberate (rational) decision making process based on the weighing of aesthetic preferences and situational opportunities. In contrast, the second perspective points to the importance of culturally and aesthetically shaped attitudes and dispositions guiding cultural consumption in a rather automatic way, given relevant situational cues. Since either of these perspectives brings about both theoretical and empirical problems, it seems reasonable to conceptualise cultural consumption as a joint process of conscious preference weighing and automatic attitude following. This in turn asks for a "dual-process"-model of action which is assumed here to offer a more accurate picture of the individual foundations of cultural consumption. Drawing on recent survey data from Switzerland (conducted in February 2013), this assumption will be tested in the domain of film consumption. This dataset includes measures of the frequency of attendance to various types of films, and measures of the respondent's preferences for as well as attitudes towards these types of films. This allows for (1) comparisons between the effects of film preferences and film attitudes on film consumption, (2) the identification of the relationship between film preferences and film attitudes, and (3) the examination of the interplay of film preferences and film attitudes in the process of film consumption.

#### *From School to Work and Back – Inequality in Late Postsecondary Education As Part of the School to Work Transition in the US, Germany and Sweden*

Varieties in the school-to-work-transition are often discussed against the background of differences between education systems and labor markets. The focus of most studies is the integration into the labor market. In this paper, I take a different perspective and compare differences between education systems in a. the patterns of school to work transitions with particular focus on non-traditional education and b. the decision to re-enroll into postsecondary education. In order to explain country differences, I refer to the openness and institutional flexibility for non-traditional students of the postsecondary education system.

Non-traditional patterns, such as late re-enrollment after an initial phase of work, vocational training or motherhood differ by country in their relevance for the typical school-to-work transition. In several industrialized countries, in particular children from lower social origins follow these patterns and take "educational detours". As a second step, I pay particular attention to the re-enrollment decision, which is sometimes suggested as an option to ease the transition from school to work. Existing single-country studies raise the question how differences are shaped by institutional settings. Therefore, I compare the US, Germany and Sweden regarding to the role of inequality in non-traditional educational careers for school to work transitions. While Sweden and the US clearly are societies with

broad and open access to the tertiary education, Germany is an ideal of a rigid, inflexible system. Analyses are carried out using longitudinal micro-data data from Germany (German Life History Study), Sweden (Level of Living Survey) and the US (National Longitudinal Study of Youth, 1979). The findings indicate that in the two open and flexible systems social origin effects on the patterns of educational careers are indeed larger than in inflexible systems such as Germany. However, this is more than compensated by their overall smaller educational inequality.

#### RC04-87.2

**WEISS, FELIX\*** (Leibniz Institute for Social Sciences, [felix.weiss@gesis.org](mailto:felix.weiss@gesis.org))

#### *You Snooze, You Lose? Returns to Interrupted and Delayed College Education in the US*

Postsecondary is frequently not acquired straightforward, but through detours and along with initial phases of labor force experience. This circumstance raises the question of the role of timing of higher education for the returns on the labor market. It is further a fortunate situation for separating the role of work experience and education for labor market returns. Since educational detours are more often taken by minorities and young adults from lower social origins, this question also has implications for social inequality in postsecondary education.

The research question is whether delayed entries into and interruptions of educational careers of varying type and duration affect employment outcomes upon labor market entry. The situation of graduates and college-goers never completing is analyzed separately applying propensity score matching. The labor market outcomes studied are whether a job could be found which offers medical insurance, the logarithmized wage and occupational outcomes measured as Hauser and Warrens 1997 version of the Socio Economic Index (SEI). Results show that graduates with a B.A.-degree are not affected by their educational pattern. For incomplete college, the timing matters more. While there are small penalties for interruptions in general, small bonuses can be gained if the time out of the education system was spent with full time work. The dataset analyzed is the US National Longitudinal Study of Youth 79 (NLSY79).

#### *Third Culture Kids and Intergenerational Challenges in Migrant Communities: Korean Christians and Tamil Hindus in Germany*

After several decades of coexistence, the research fields *migration studies* and the *sociology of religion* have built a strong theoretical and empirical exchange. The impetuous was a sociological conceptualization of migration as a decisive factor of religious dynamics in modern societies. This idea, in turn, triggered investigations of religious dynamics *within* migrant communities as they transmit religious knowledge to second generations and their way of adapting religion (*doing religious culture*). We propose, that intergenerational dynamics in migrant religions are reflected in areas of tensions between and among generations.

The paper presents the results of two research projects on intergenerational dynamics in Asian migrant communities in Germany: Korean Christians and Tamil Hindus. The parental generations of both communities were highly engaged with re-establishing a religious life in a foreign land. They created a "home away from home", not least to transmit religious knowledge to their children in an authentic setting, linked to their country of origin. However, the second generation, who will inevitably take over the community, was raised in two cultures. Do these youngsters still relate to their parents' beliefs and practices? Which kind of intergenerational tensions challenge the transmission and reproduction of religious identities and thus institutionalized religion? We will discuss such questions in the paper. Special attention will be given to three areas of tension that affect religious continuities and discontinuities in the Korean and Tamil milieu: (1) religious practices now considered "obsolete," (2) differing ideas of religion and gender and (3) critique of religious organizations.

In accordance with the topic of this panel, the main focus of our comparative analysis between second generation Korean Christians and Tamil Hindus will be drawn to dynamics, which emerge during the *transition to adulthood* phase.

#### RC35-612.1

**WEISZ, EDUARDO\*** (Universidad de Buenos Aires, [eduardoweisz@hotmail.com](mailto:eduardoweisz@hotmail.com))

#### *The Concept of Nation in Max Weber: Back to Gemeinschaft?*

The Concept of Nation in Max Weber: Back to *Gemeinschaft*?

The paper will be centered in Max Weber's concept of Nation and, more specifically, it will try to focus on it through the categories posed by Tönnies and, in his own way, used by Weber: *Gemeinschaft* and *Gesellschaft*. The different uses of these concepts by Weber in both parts of *Wirtschaft und Gesellschaft* have been

sufficiently explained, as well as the turn to *Gemeinschaft* while referring to the relations established in the battlefield, as it is mainly developed in the famous "Zwischenbetrachtung" of his sociology of religion. While in the historical frame of the First World War there are deep coincidences between Weber and Tönnies on the national issues, many differences can be found in the way the latter's referred to the relation of Nation and modern societies in his most famous work of 1887.

Our aim will be to depart from these differences to develop in which senses Weber's much more deeper and longstanding commitment to the German Nation – in comparison with Tönnies – can be read in terms of *Gemeinschaft* (the national *Gemeinschaft* is one of the examples provided by Weber's "Soziologische Grundbegriffe"), as well as to put forward a relationship between his emphasis in the Nation and his desperate intention to sustain a communitarian feeling against the historical-universal tendency – in an ideal-typical sense – towards the bureaucratization of societies.

That will lead us to analyse Weber's use of Tönnies' categories, in order to be able to tackle from this standpoint his political positions in relation with the Nation, which are boldly stated from his early studies on East-Prussia onwards. The tensions between *Gemeinschaft* und *Gesellschaft* will be confronted with this author's perspective on the rationalization process, and his positions on the Nation looked through this prism.

## JS-63.6

**WEISS, ANJA\*** (University of Duisburg-Essen,  
[anja.weiss@uni-due.de](mailto:anja.weiss@uni-due.de))

### *Social Layers in a World of Territorial Containers, Political Closure, and Socially Differentiated Functionings*

The sociology of social stratification is caught in a dead-lock: Data and concepts remain bounded by the nation-state while recent theorizing as well as popular debate focus on the global level.

Based on a theoretical book project, but illustrated by results from two inter- and transnationally comparative research projects on skilled migration, the paper suggests a novel approach to the challenge. Building on individualist traditions with their focus on the resources of persons and households but emphasizing the relational character of capabilities I take a closer look at the social contexts in which resources are put to use. In times of globalization we must assume that persons are placed in more than one social context and we should part with the assumption that the nation state can frame a congruent set of economic, political, cultural and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources.

The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare-states and for the larger part of humankind who is mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

## WG02-903.1

**WEISS, ANJA\*** (University of Duisburg-Essen,  
[anja.weiss@uni-due.de](mailto:anja.weiss@uni-due.de))

### *The Globalization of Professional Knowledge and Practice*

Current debates about migration and high skilled labor markets are characterized by an ambiguity: On the one hand knowledge, especially in the natural and health sciences, appears to be globally versatile. On the other hand, the application of this knowledge in professional practice is inhibited by many factors, including national systems of higher education and licensing as well as migration regulation claiming that the knowledge of migrant professionals may be "different" or less reliable. Put shortly: professional knowledge is viewed as basically globalized while professional practice is not.

In an attempt to overcome prevailing universal/local and theory/practice dichotomies in globalization research the paper suggests a diversity of ways in which professional knowledge and practice can universalize and/or remain bound to specific locations and in which the mobility of people and the spatial extension of bodies of knowledge co-constitute each other.

A review of newer theories in global studies (neo-institutionalism, migratory transnationalism, field theory, cosmopolitanism and social studies of science) firstly shows that their concepts of knowledge diverge: Knowledge is seen as (a) codified and explicit or as (b) comprising tacit and incorporated components. The latter perspective implies that knowledge (c) must be recognized in order to function. Also, knowledge should be able to solve socio-material problems (d) embedded in situations (e). The review secondly identifies a diversity of ways in which knowledge may globalize, namely: the setting and emulation of standards, the migration of professionals, transnational homologies in habitus, the formation of transnational communities, field specific struggle, and the "local universality" (Timmermans/Berg) of solving socio-material problems embedded in specific situations. By reviewing diverse but mutually complimentary theories the paper

expands on Robertson's notion that cultural forms can be part of universalizing and localizing processes simultaneously.

**WELLGRAF, STEFAN\*** (European University Viadrina,  
[stefan.wellgraf@gmx.de](mailto:stefan.wellgraf@gmx.de))

### *Contempt. Dealing with Disrespect and Misrecognition Among Berlin Hauptschüler*

The issue of disrespect and misrecognition will be discussed both on a conceptual and an empirical level and shown to be part of a neoliberal logic.

1) According to Honneth, people experience misrecognition as a deprivation of vital requirements for a positive development of the self. In German, Honneth refers to these deprivations as *Missachtung* (misrecognition), while I prefer the slightly different term *Verachtung*, which better captures the emotional dynamics of this process and also has a more active connotation: in the sense that the students are not only deprived something but that their human dignity is actively harmed. The most appropriate English translation of 'Verachtung' is 'contempt'. The social production of contempt defines forms of exclusion via processes of social ascription in which low socio-economic status is linked with disregard, in turn 'producing' a disrespectful or contemptuous treatment of others.

2) In an ethnographic study of "Hauptschüler" in Berlin, Germany, I have shown that the problem of misrecognition is a pervasive experience among this status group. The main problem for the students proved to be misrecognition on emotional, legal, and social levels – the frequent coupling of social stigmatization with the deprivation of citizenship rights and precarious family situations. In this context, the social practices of "Hauptschüler" can be considered mechanisms of coping with contempt and as struggles for recognition. This can take the form of searching for respect within peer groups based on ideas of mutual support, it can take the form of emotional reactions (shame, anger, envy) and it can take forms of playing with stigmatizations through jokes and irony. What unifies these various reactions is the active approach of dealing with and reacting to the social contempt with which the students are confronted.

**WELLGRAF, STEFAN\*** (European University Viadrina,  
[stefan.wellgraf@gmx.de](mailto:stefan.wellgraf@gmx.de))

### *Disputed Ambivalence. Berlin Hauptschüler As Strangers*

#### **Disputed Ambivalence. Berlin Hauptschüler as Strangers**

The multifaceted problem of the ambivalence of the stranger – how it is produced, how it can be researched and how it is lived – will be the focus of my paper, dealing specifically with "Hauptschüler" (secondary students, often migrants) in Berlin, Germany. These students are faced with a variety of exclusionary mechanisms – besides discrimination on the job-market also media stigmatization and the denial of full citizenship.

I will treat the morally loaded ambivalence of the cultural figure of the "Hauptschüler" from three different perspectives: How are "Hauptschüler" made into strangers? How could one describe the ambivalent positions and positioning of the students? And how do the students themselves deal with their situation? In the first part, based on a media analysis of a public debate about the "Hauptschüler", I will show how structural problems of the school system are construed as problems of ethnicity and religion. In the second part, I will describe the actual intermingling of class, ethnicity and gender in school. In the third part, I will turn the view on the question how the students themselves deal with negative stereotypes and racial or social classifications of being inferior.

The ambivalence of the „Hauptschüler“ as a stranger appears in all three perspectives in a different light: In the media debates ambivalence appears as a problem, in the ethnographic section ambivalences and intersections are treated as a challenge for sociological analysis and in the subversive practices of the students ambivalence is used to resist negative ascriptions and processes of self-victimization. The morally loaded processes of constructing, reproducing and deconstructing ambivalence are thus at the core of understanding the Berlin "Hauptschüler" as a stranger. The task of sociology is to show these processes are functioning and what kind of subjectivities they produce.

### *The Social and Institutional Context of Decision-Making in the Case of Sickness*

Illness has a major influence on people's lives. Studying healthcare-seeking is therefore of vital importance. Patients' decisions about healthcare fundamentally influence the performance of the overall healthcare system in terms of a population's health, the quality of healthcare services, and the level of expenditures. Even though illness behaviour has been an intensively studied research topic over the past five decades, previous work has largely overlooked the embeddedness of these decisions in social and institutional contexts. We will present first insights from a project that aims at theoretically, methodologically, and empirically enhancing previous research. It contributes to the development of an integrative theoretical framework of illness behaviour and provides an important test case for institutional theories and the theory of frame selection.

For analyzing healthcare decision-making a new survey is constructed to collect data on the basis of 2,000 face-to-face interviews in Germany that will provide a unique data source covering the healthcare needs and the way these needs are managed. At the conference, we will provide first results from the survey. We will analyze people's decision making when having a medical condition with a particular emphasis on the interpretation of symptoms and the utilization of healthcare, and generate information about the extent and variety of self-care strategies. Our paper covers how social networks and institutional features of the healthcare system influence the decision making of healthcare seeking.

#### *Capital-Labour Relations in China's Car Industry – What Is “Chinese” about Them?*

Facing shrinking profit margins, and driven by a quest for cost-efficiency and market access, manufacturing enterprises intensified their expansion into the global South since the 1970s. It was especially the automotive industry that was eager to venture into promising markets, first and foremost China. Though global car manufacturers have been present in China since the 1980s, research on their operations is still limited – especially when dealing with sensitive issues such as labour relations and unrest.

The presentation thus sets out to shed light on workers' reactive and pro-active agency in relation to enterprise strategies, trade union culture and developmental policy in a global car manufacturer operating in China. Based on intensive fieldwork in Mexico and China multiple factors determining the specific patterns of workers' agency in China's car industry shall be mapped out and questioned for whether they are rightly attributed to local “Chinese” specificities – or aspects that are better explained by reference to the qualities of the industrial sector and a capitalist global economy, respectively its current stage. On the one hand this will concern the enterprise orchestrating its established strategy with local conditions – of which labour issues are merely one factor amongst others – thus producing boundaries, potentials and vehicles for workers' political-economic agency on the shop floor. On the other, it will focus on workers' subjective concerns, rooting their agency in their more complex social conditions of existence. Relating these findings to a functional examination of certain political and institutional patterns in China, the uniqueness of Chinese capital-labour relations will be raised to question.

#### *Comparison and Topicality of Three Classical European Concepts of Community*

Without any doubt, *community* is one of the most central sociological terms and concepts – particularly in the German/European sociological tradition, where Ferdinand Tönnies might be seen as the forefather of this concept. Taking relevant sociological literature regarding this issue in consideration, one may come to the conclusion that there are two traditional main ideal types of *community*: in one tradition, *community* is theorized as a collective with specific relationships, in the other tradition, *community* is conceptualized as a collective with a shared consciousness of kind, a collective identity (this questions the section of the social reality, which is emphasized). Furthermore, there are two main types of the intended use of the concept: theoretical ideal types on the one hand and terms for the application in empirical social research (this questions the interest, which is tight to the conceptualization of *community*).

Taking these basic categories, three classical concepts of *community* will be analyzed and compared: the ones of Ferdinand Tönnies, Émile Durkheim, and Max Weber. Afterwards the question of the topicality of their concepts of *community* will be dealt with. Especially the possible application of the classical terms of *community* to new forms of communitarianism, presented by the example of so called *brand communities*, will be discussed.

#### *The Discursive Construction of Risk*

In the past few years, an intensified discussion and dispute about the existence and extent of risks of anthropogenic organic micro-pollutants (OMP) and pathogens in drinking and surface water is taking place in public or semi-public discourses. These discourses influence how one perceives possible risks, what risks one states as true or false, and finally how one acts and behaves in everyday life and in times of risk-based uncertainty and crisis.

In this paper, discourses are understood as social practices of producing, reproducing and stabilizing social reality. These practices are usually controversial and conflictive – moreover they are always guided by specific interests. Discourses about the existence and extent of risks of anthropogenic OMP and pathogens in the water occur in and in-between the following main different discourse fields: media, general public (the “normal” consumer of water in everyday life), topic-related sciences (engineering, biology, toxicology, ecology, medicine ...), politics, and water supplier (including their representatives).

This paper aims to analyse, how knowledge about and attitude towards the existence and extent of these risks are being produced in the mentioned discourses above and how these discursively constructed “truths” effect social actors. Especially the role of the media will be emphasised.

An extensive survey was conducted to cover the different discourse fields and to explore how these risks are produced in and in-between these fields, which discourses are most powerful and dominant, and why. Methods of qualitative content analysis are used to extract different lines of arguments, the various levels of the discourses and the diverse discourse positions from the empirical data. Data include in-depth qualitative interviews with “normal” consumers and professionals from science, industry and politics; press articles, TV and radio broadcasts of regional and national media institutions; and published texts and documents from scientific, political, non-profit, charitable, educational, and economical organisations.

#### *The National Society As a World-Societal Model*

The concepts of national ‘societies’ and of a single ‘world society’ are often presented as mutually exclusive alternatives. While sociological theorists take pride in having left national concepts of society behind, the latter still dominate the popular usage of the term. This paper transcends this impasse by taking a sociology-of-knowledge perspective, asking how globalization processes have contributed to the plausibility of these diverging connotations. Informed by world society theories (neoinstitutionalism, systems theory) and recent approaches to ‘banal nationalism’, we (1) analyze the sources of support that the idea of a national society has found on the global level since the mid-to-late 19<sup>th</sup> century. Here, we distinguish two trends: A trend towards the construction of nation-states as endogenously developing units (‘societies’) created by ‘rationalized others’ (John W. Meyer) such as international organizations, social scientists, economists, etc.; a trend towards the integration of national identities in global fields such as economy, mass media, arts, sports or tourism (‘the global banalization of the nation’). Both trends have fuelled the current association of national identities and state borders that is captured in the mainstream understanding of the term society. The second trend, however, also points to (2) the subordination of national identities to global fields, transcending the image of the nation-state as a spatial container of social processes and thus rendering the idea of a single world society more plausible. The analysis suggests that conceptual ambiguities of ‘society’ not only reflect differences between theoretical approaches or between an everyday and a scientific understanding of the term. Rather, these ambiguities indicate the complex interaction and mutual enforcement between two different social processes: global nation-building and the differentiation of global fields. Since the pattern of this interaction can be traced to the mid-to-late 19<sup>th</sup> century, we suggest studying it in a historical-sociological perspective.

#### *Western Tourism and Dialogical Remembering Of The American War In Vietnam*

The history/tourism nexus has typically been theorised in relation to either parochialism or simplification. However, this binary neglects the diversity of tourist forms and the different social actors involved in their production. This paper ex-

amines international tourism at the Cu Chi Tunnels in South Vietnam by focussing on the narration of the war by Vietnamese tour guides and its interpretation by young American, Australian, British and European tourists. While the oversight of tourism in Vietnam by the state sees tourists at Cu Chi presented with some strong anti-American rhetoric, this is offset by a strong dialogical narrative of the war presented by local guides. It is argued that guides are important reputational entrepreneurs who in order to account for post-Fordist tourists privilege the local while also drawing together different national traditions. For Western tourists this typically results in a greater recognition of Vietnamese suffering and a questioning of the anti-authoritarian and post-heroic narratives that have dominated Western projections of the war. However, the dialogical dimensions of the tour and their experience of everyday life in Vietnam also commonly provides tourists with greater agency to mourn the death of Western soldiers. It is argued that through media portrayals and word of mouth such 'dark' tourist experiences have a broader influence in the understanding of history and in shaping debate within the cultural public sphere.

### *Social Networks and Subjective Wellbeing in Australia*

Previous research into social networks and social wellbeing has tended to examine objective aspects of well-being such as employment and socioeconomic attainment, physical security, and political participation. Fewer studies have examined relationships between social networks and subjective well-being, and those that have tended to emphasise limited aspects of social connectedness, such as social support. This paper develops a comprehensive theory of the relationship between social networks and subjective well-being, with the latter concept defined in terms of cognitive (life satisfaction) and affective (happiness) evaluations of one's own life. The theoretical framework defines social networks precisely, specifies different mechanisms for positive and negative network effects and also attempts to account for mechanisms and selection processes whose omission some critics argue undermines much previous social networks research. We examine this theoretical model empirically using data from a new national Australian survey currently being undertaken that is specifically designed to investigate social networks and subjective well-being. In the paper we describe our theoretical framework and the cross-national comparative project we are undertaking on the relationship between social networks and subjective well-being in Australia, China and the United Kingdom. We then present early results from the Australian survey, including measurement models of key scales and constructs, and substantive models examining some of the central relationships posited by the theory.

### *Alternative Lifestyles in Growth-Critical Societies – Conceptual Reflections on Social Movements*

This paper attempts to give some conceptual reflections about the ongoing debate in social philosophy/social theory with regard to the conditions and the possibilities of an embodiment of the good and the right in sociological research. To look more closely and empirically to the outcomes of these debates, the focus lies on the conceptualization of lifestyles which are taken from different social movements/thoughts in Switzerland dealing with questions of (post-) growth (e.g. Décroissance). Concerning these lifestyles for the actors it seems to be not so much whether or not the GDP is growing, but for them it is all about the rejection of growth as the dominant social imaginary (Castoriadis 1990, Latouche 2009) and instead of thinking about the design of alternative lifestyles. Two main themes will be presented:

(1) Social-theoretical focus: From the background of a discourse analytical approach the genealogy of growth will be examined and how this concept is treated in different movements. Besides the study of social and cultural practices, the (value) beliefs are primarily considered from an overall theoretical perspective. One main question is how individuals and communities are capable to make experiences of resonance in times of growth-critical societies.

(2) Empirical focus: Some hints can be given concerning the (sometimes disparate) designs or experimental lifestyles that are compatible with the requirements of a post-growth society. The central intuition here is that a successful life management depends not only on ethical and aesthetic ideas of a singular individual, but includes as well moral and political justice considerations (Sandel 1995, Nussbaum 2010).

### *Higher Response Rates - at What Price? Effects of Different Strategies to Increase Participation By Motivating (Un)Motivated Participants*

Different approaches – e.g. normative explanations, rational choice models or social exchange frameworks – have been used to explain motives on survey participation. This paper deals with one of them, the rational choice theory.

However, both commitment (e.g. triggered by appeals to attend to social norms (Misra et al, 2011)) and consideration of benefit/cost ratio (e.g. positively influenced by incentives) are regarded as decisive for survey participation – at least for the initial items. These strategies may result in higher response rates but also in satisficing ("Instead of generating the most accurate answer, respondents settle for merely satisfactory ones" (Krosnick, 1999)). Consequently, the longer a survey takes to finish "No-Opinion-Responses" (ibid) but also "Non-Responses" are expected to be more likely and both may affect data quality.

The central issue of this paper is to examine the effect of different motivating strategies on refusals to answer. For this reason experimental arrangements were included in a survey dealing with student participation at university. The survey population was randomly divided into several groups. The information provided to each group differed concerning the presence and combination of the following "triggers":

- i) the possibility to make profits (incentives),
- ii) appeals to social conscience (commitment) and
- iii) information on duration and progress (related to effort/burden).

Additionally the answer categories of several questions varied with regard to including a "No-Opinion-Option" to control for satisficing. Finally, pros and cons of the presented "manipulations" in order to gain higher response rates will be discussed.

### *"I Haven't Got a Clue!?" Do Clueless Respondents Affect Data Quality through Response Behaviour?*

Several papers are dealing with the effect of different numbers of response categories (e.g. Preston & Colman: 2000; Lai et al: 2010). However, irrespective

of the number of categories it can be assumed that respondents are facing difficulties in answering questions if they do not already have an opinion for the topic. If a "don't-know-option" is offered the participant might tend to choose it even if it were possible for him or her to form an opinion. This is "*making survey researchers reluctant to offer this option unless absolutely necessary*" (DeRouvray & Couper: 2002).

However, if the "DK-option" is missing, respondents may skip the question and increase items missing. Offering a middle category in rating scales may even enlarge biases if perceived as "neither-nor-option". In this connection personal characteristics and the type of question (e.g. opinion, attitude or behaviour) are expected to influence corresponding ad hoc decisions.

According to these considerations, the paper

- i) focuses on the effect of different numbers of categories in combination with "don't-know-options" on missing values,
- ii) takes several question types into account and
- iii) considers effects of personal characteristics on scale quality.

The results are based on methodical experiments included in three online surveys in Austria and Germany.

**WHITE, THERESA\*** (California State University, Northridge, [theresa.white@csun.edu](mailto:theresa.white@csun.edu))

#### *The Racial Divide? African American College Students: Mitigating Digital Visual Culture*

The most important development in terms of Internet users between 2000 and 2005 was the radical increase in the number of women, ethnic and racial minorities online. In the early years of the Internet's massification, cyberculture scholars discussed online with only marginal references to online media produced by African Americans, Asians and Latinos, instead focusing on representations of racial and ethnic minorities produced for consumption by white users and audiences (Nakamura, 2002).

Notably, social media, such as Facebook and Twitter, are platforms of web and mobile-based technology that enable consumers to turn communication into interactive conversation, much of which is widely consumed by college students today. Demographic studies on Internet use emphasize African American's position as consumers. But surveys of access, race and the "digital divide" that fail to measure digital production in favor of measuring access or consumption, cannot tell the whole story. This suggests that minorities are more or less successful consumers of a commodity, rather than producers or active audiences. But how might African American college students use the Internet and mobile technology as sites of resistance?

This study will visually document the level of internet/social media usage, the propensity and style of Internet user-created content, as well as its effect on cultural and social capital for African American college students. The project will gather visual data (videotaped interviews, focus groups and cyberspace photo mapping) on students who are engaging in content creation (e.g., developing Web sites, posting music, images and videos, managing and contributing to Listserves, or adding content to other textual sites). The study will demonstrate how these students are not only active consumers of the Internet, but also Internet content producers and creators.

#### *Australian Fathers' Use of Leave for Parenting: Changing Patterns and Policy Implications*

In the absence of policy measures widely-recognized as conducive to fathers' parental leave-taking, such as well-remunerated and non-transferable leave arrangements, a relatively low proportion of Australian fathers (around 30%) use paid paternity or parental leave, although around half take some paid annual leave in association with the birth of a child. These figures suggest persistent barriers

to more gender egalitarian divisions of parenting and raise questions over the pace of change in Australia. Using survey and interview data collected over the past three years we examine fathers' leave usage in detail, analyzing the factors that influence leave uptake and duration and seeking evidence of changes in patterns of use. Change might be expected in part as a reflection of evolving expectations and behaviors associated with increases in the labour force engagement of mothers and/or as a result of a greater awareness and legitimacy of parental leave stimulated by recent policy initiatives. Our surveys suggest a complex picture in which the overall duration of leave taken by fathers increased somewhat in recent years, although the duration of leave specifically designated as 'paid paternity leave' decreased. We test these results for consistency when controlling for sample differences. The data also illustrate different patterns of leave usage among fathers, with a significant group taking leave for parenting purposes after their child was six months old. We use interview data with mothers and fathers to probe further into influences on fathers' use of leave arrangements around the birth of a child. Overall our analysis provides an assessment of changing patterns of leave usage by Australian fathers over a period of policy innovation, as well as a more nuanced picture of fathers' leave usage to inform future policy development in the interests of more gender egalitarian family outcomes.

#### *Parenthood and Career Mobility: Implications of Transitions to Part-Time Work Among Australian Mothers*

One of the main strategies adopted by Australian mothers to minimise work-life interference is to work part-time hours. The prevalence of this working pattern in Australia underlines contradictions between gender equality and care and raises questions about the contrasting possibilities for career retention and advancement associated with the transition to part-time work, particularly in the context of austerity pressures. In this study we examine the employment patterns of Australian mothers and assess the career implications of transitions made on return to work. Our analysis draws on data from the first two waves of a longitudinal survey of Australian mothers who had given birth to a child in 2010 (Wave 1, n=4,201; Wave 2, n=3,487).

As a basis for our analysis we map employment trajectories among these women, illustrating the prevalence of transitions from full-time to part-time work: 77% of those who had returned to work in Wave 2 of the survey were working part-time, and among those who had been working full-time prior to the birth of their child, 75% returned part-time. We use multivariate models to examine the impact of these and other transitions on indicators of career mobility, utilising changes in hourly earnings and occupational mobility as objective measures and responses to a question on perceptions of career prospects as a subjective measure.

Our analysis identifies some risks associated with the transition to part-time: for example, around 40% of mothers making this transition perceived that their career opportunities had declined compared with only around 20% of those who maintained their pre-birth working-time status. Our models explore the complex relationships between these and other potential influences on career mobility, including the type and duration of parental leave taken. The analysis establishes a baseline from which longer-term effects may be examined and the contradictions of the Australian context explored.

**WHITTAKER, ANDREA\*** (Monash University, [andrea.whittaker@monash.edu](mailto:andrea.whittaker@monash.edu))

#### *From intimate industry to rotten trade: reproductive travel in Southeast Asia*

Intimate processes of conception and reproduction have become increasingly global in expectation and practice. They have become the focus for a new form of global commercialized reproductive trade, often termed 'reproductive tourism' whereby people travel to seek reproductive health services in other countries. This can involve the movement of patients, but also of service providers, ova donors and surrogates, as well as ova or embryos across the region. In this paper I concentrate upon the intimate industry of cross border IVF involving the movement and in some cases trafficking of women for reproductive services. The social and medical realities in many parts of the region compromise attempts at 'regulation' of the trade. Examples of the internet advertising for Thai surrogates and testimonials of commissioning parents illustrate the ways in which Thai surrogates are marketed and constructed as willing and available to service the needs of foreigners. Implicit presumptions of race privilege are woven through exchanges between *farang* and Thai often glossed within the discourse of 'Asian service values'. In parallel to the legal circulation of these bodily commodities has arisen an unregulated market, a 'rotten trade', in which 'bioavailable' women and their body parts are trafficked to feed the demand for their reproductive capacities.

*Income and Wealth Inequality during the Life Course. - a Study Based on Sibling Correlations*

How should intergenerational inequality be explained? A common idea is that parents transfer resources to their children and that parental investments influence their children's attainments. Most studies have emphasized the effects of parental investments in education. It is easier for parents to directly influence their children's attainment of education than their success in the labor market. Therefore early parental investments are considered to have the largest impact on their children's life chances. This is not the case for wealth transference between generations. Wealth may be easily transferred during the whole life course, and in many cases transferred quite late in life.

In this paper, we measure intergenerational inequality through the life course using sibling correlations. A sibling correlation provides an omnibus measure of family background and neighborhood influences, a measure that includes both observable and unobservable characteristics. There are no prior studies to our knowledge that assess life course changes in sibling correlations using wealth as measurement.

Following recent theoretical developments, we explore the consequences of different parental investment strategies. Put simply, one strategy is that parents make equal investments in their children, something that leads to the expectation that sibling correlations in wealth should decrease over the life course. If, however, the parents seek to compensate for initial differences in talents and attainments among siblings, by transferring most to the least successful sibling, we expect an opposite trend. We discuss how these patterns may be influenced by children's labor market success and savings, and by variations in parental strategies in different socioeconomic layers.

We use register data from Norway for brothers and sisters born 1955-1960, tracked annually 1993-2010. Our measures include earnings and capital income, as well as two measures of wealth (net and gross wealth). We also take into account sibling differences in education.

*Changing Patterns of Immigration, Social Identity and Social Cohesion: Investigating the 'Diversity Decline' Thesis in Two Cities*

Increasing immigration poses a serious challenge for many countries. Empirical studies from around the world indicate that immigration and increasing diversity lead to decreases in social cohesion and increases in social withdrawal, particularly in disadvantaged areas. Less understood, however, are the mechanisms that explain these relationships. We contend that these associations are at least in part due to two key factors: how residents' perceive the neighborhood composition and how these perceptions influence residents' own social identity. Further we suggest that that these relationships will differ in cities with different immigration histories. In this paper we integrate census data and the Australian Community Capacity Study survey data from approximately 10,000 residents living across 298 neighborhoods in Melbourne and Brisbane, Australia. Using a multiple indicators multiple causes model, we first consider the cues that lead individuals to distort the presence of non-whites in neighborhoods. Here we focus on recent immigration increases, ancestry, language and religion as important cues of difference. We then employ multi-level models to test if these distortions influence residents' superordinate or subordinate identities. Finally, we consider the independent effects of these distortions and social identity orientations on residents' reports of social cohesion and interactions with fellow neighbors.

*Awakening Activist Sensibilities in the Hills: Across Age and Gender*

Children and young people's civic engagement has occupied the attention of researchers and policy makers globally during recent decades, but there is a growing acknowledgement that young people's political engagement can only be understood in the context of wider social cultures and practices. This paper explores the social dynamics of civic engagement, in the context of one community's democratic practices and targeted activism, involving the 'nannas' as central players as well as mothers, children and young people.

In the Dandenong Mountains near Melbourne, Australia, a small community has taken up a prolonged battle with a multi-national fast food giant. The battle

is a symbolic one as much as it is about a capital and a building site. The picket line, the on-line world, the legal system and mass media are the different fronts of the battle, providing multiple sites for experiences of political engagement, confronting ideas about political issues, power inequalities, social justice and the role of the state.

In facing an unequal world, one of the challenges for global sociology is about creating the conditions where the systemic drivers of injustice can be recognised. Analysing material from the campaign's social media pages, this paper identifies critical moments where activist sensibilities are awakened and identified, within, despite and across generations. It shows how the progression through fear and anger, humour and hope can be heightened when elements of difference in power, class, gender and generation are named and mobilised as resources.

*Voluntary Association Involvement Among First- and Second-Generation Immigrants in the Netherlands: Addressing the Role of Different Layers of Social Context*

Voluntary association involvement is both a cause and consequence of immigrants' integration into their host societies. Yet, while previous work has demonstrated that immigrants generally lag behind in civic participation as compared with natives, the causes of these differentials and especially any differentials between immigrants of different ethnic origins and migration generations remain far from fully understood. This study analyses immigrants' selection into voluntary associations, both as members and volunteers, in order to examine the scope for voluntary association involvement to fulfil its alleged role as vehicle for social integration.

Recognizing the importance of social networks for explaining civic behaviour, I pay particular attention to the influence of various layers of social context. More specifically, I look at the impact of personal networks (the characteristics of parents, partners and friends), local living environments (the affluence and ethnic diversity of neighbourhoods and municipalities), and the ethnic composition of voluntary associations. Finally, I contrast the observed associational involvement patterns for different immigrant groups with their engagement in informal volunteering.

My analysis employs data from The Netherlands Life Course Study (NELLS). The first wave of this panel study was carried out in 2008-2010 and the second one in 2013. Its oversampling of respondents from Turkish and Moroccan descent helps to overcome the statistical power problems that usually haunt research on ethnic minorities. Moreover, its panel design allows me to shine a light on immigrants' involvement trajectories over time.

Exploratory analyses of the NELLS yield intriguing results. Most notably, I find that, given all immigrants being less likely to volunteer than Dutch natives, second-generation Moroccans are in fact catching up as compared with their first-generation counterparts, whilst Turkish immigrants exhibit the exact opposite pattern (controlling for amongst others educational attainment and religiosity). This puzzling finding invites the question of what is behind these differentials.

*Intra-European Labor Mobility from Post-Socialist Countries: The Example of Hungarians, Slovaks and Czechs in Austria*

This paper deals with job-search strategies and related labor market outcomes of cross-border commuters residing in the regions of the Czech Republic, Slovakia and Hungary bordering on Austria. This European core region has a long history of cross-border mobility and social exchange, from Habsburg Monarchy to post-war period and after 1989. Several years after the fall of the Iron Curtain a process of European re-integration began which led to the accession of post-socialist countries into the EU. However, substantial social inequalities between Central European countries still exist in terms of wages and unemployment. Cross-border mobility on an emerging transnational labor market therefore can be seen as an "individual response" to massive transformations in this region.

So far the given circumstances for participants in this transnational labor market have not been investigated in depth. Our paper aims to close the research gap by pursuing the following research questions: What job search methods do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)? Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a longitudinal survey on employment careers of cross-border commuters conduct-

ed in 2012 (N=2,550). Our results show that human and social capital resources serve as key factors for job finding strategies and successful labor market integration. There are also substantial gender differences and differences related to previous occupational status and migration experience within the group under study. Overall, our results reflect cross-border commuting as a renewed form of social practice in this European core region, which may reduce structural inequalities between Central European countries in the mid-run.

### *The Limits Of Multiculturalism*

1. Multiculturalism and transnationalism are concepts that belong to the present historical era. They have been produced in western countries, and are used often, with a deep unconscious ethnocentrism. Aren't they part of the intellectual hegemony of the west, and in the same time, maybe, of its decline?

2. There is in some parts of the world at least a feeling that multiculturalism, if not a failure, is at least in a difficult situation, and there are important criticisms of the idea of transnationalism

3. The political concrete limits of multiculturalism are connected with the rising importance of globalization, including transnational phenomena. But globalization does not necessarily mean the decline or the crisis of the Nation and/or the State, which is the natural framework for multiculturalist policies and institutions. And the limits of transnationalism are given by States that still control borders, deliver passports, authorisations for transit, visas, etc. If societies are not entering in an era where multiculturalism and transnationalism are stronger and stronger, how will they deal with cultural differences, on the one hand, and with identities and practises that are not limited to one national state?

### *From Web Surveys to Online, Multi-Device Surveys*

Unintended mobile survey completion rates have risen largely in the past couple of years, with around 7% of the online respondents attempting to access surveys using tablets and 2% using smartphones (LISS panel, June 2013). While these rates are expected to continue to grow, the question arises whether one can speak of traditional web panels as we know them anymore. Especially the tablet user group has become too large to ignore anymore.

While regular web surveys can be accessed via mobile browsers, this can be burdensome if the layout has not been adapted. To avoid coverage, nonresponse and measurement error, new strategies are needed for offering web surveys which can be properly accessed by the most common online devices.

We present the strategy for the Dutch LISS panel to develop from a web panel towards providing true, multi-platform compatibility to the different online respondent groups. We start with presenting the latest rates of unintended mobile response in online panels and provide a profile of the mobile respondent. We discuss the advantages and disadvantages of different multi-platform approaches and report the latest experimental findings from the field.

### *Visual Narrative and the Internet: Ethical Approaches to Engaging Australian Aboriginal Participants on Their Experiences of Ageing*

**Aims:** The wider accessibility of video equipment and the internet provides new possibilities for involving culturally diverse participants in research. We explore the benefits and challenges of using visual methods to engage remote-dwelling Aboriginal elders about their experiences of ageing in Australia.

**Methods:** We interviewed 50 people from throughout Australia, including three Aboriginal elders living on a remote island in the Northern Territory, using DIPEX methods (Alexander & Zeibland, 2006). This involved narrative interviews recorded in a documentary style format on film, thematic analysis, and findings presented via video clips on the [www.healthtalkonlineaustralia.org](http://www.healthtalkonlineaustralia.org) website. This was the first DIPEX project to include the experiences of Australia's first people in their own language.

**Findings:** Using these methods had benefits for individuals, communities, and the research project. On an individual level participants' personal stories were

documented, leaving a record for future generations. They could express their personal agendas and have their voices heard via a public internet platform. Video narratives recorded in the Indigenous language provided an ethnographic record in a rapidly changing culture, thus benefitting the community by making the narratives more widely accessible to other speakers of the language. These methods benefitted the research project as they provided more information about participants and their environment. Visual narratives are also a powerful educational tool for healthcare providers and students. Challenges of this approach included additional equipment and technical expertise; gaining community permission; interviewing and translating across languages; and negotiating cultural processes around the use of images after a participant dies. These were mitigated by working closely with Aboriginal researchers from the beginning, and building additional time and funding into the project budget.

Implications: Video and the internet are more engaging for a lay audience than academic writing and provide a more reciprocal way of involving traditionally marginalised people in qualitative research.

### *Which Form of Organizational Governance Supports Freedom of Teaching and Increases Their Perception of Relevance? Empirical Evidence from Two Types of Higher Education Institutions*

New Public Management caused an 'economic turn' in universities to managerial governance. The leadership literature distinguishes two modes of governance, which can also be applied to the governance of universities: transactional and transformational modes of governance. Transactional governance encompasses all forms of managerial governance, which includes selective incentives and monitoring capacity. The theoretical underpinning of this mode can be found in Principal-Agent Theory which is the theoretical underpinning of New Public Management. Whereas transformational governance covers, on the one hand, the means of restructuring the roles of principals and agents or the interaction situation in the organization, on the other hand, it also addresses all the means of restructuring the relationship between perceived environment and motivation, as can be seen in Self-Determination Theory. Other elements of transformational governance are social norms such as those that inform the quality of research or approaches to teaching. As such, the main research question is: What has more impact on professors' perceptions of the significance attributed to academic teaching in Germany – transactional or transformational governance? Two hypotheses for transactional and two hypotheses for transformational governance are developed. The research question is answered with the help of two quantitative surveys, one conducted in 2009 with a sample of 1,119 German research university professors and another conducted in 2011 with a sample of 942 German professors from universities of applied sciences. The main findings are that transactional governance has no impact on the perception of the significance attributed to academic teaching whereas transformational governance has ample influence. Under the bottom line, economic instruments could produce not intended effects but without an increase of the perceived relevance of teaching.

### *A Longitudinal Examination of the Intersections of Ethnicity and Sex and Their Influence on Perceived Racism Among Newcomer Youth in Canada*

Perceptions of racism and discrimination are powerful forces influencing social cohesion of members of any society. Real or not, those holding a perception that they are victimized by discrimination feel marginalized and ostracized socially and may experience instrumental forms of discrimination in various aspects of their careers, access to education and health care and others. The consequences of the belief that racism affects life chances mean that many people are unable to achieve their potential in employment, school, and health. This has a significant impact on their feeling of belonging. This paper uses data from a longitudinal national study of newcomer youth in Canada to examine the extent and factors influencing perceptions of discrimination. We follow nearly 4200 11 to 17 year old newcomer youth over 8 years on a variety of different topics. The data analysis technique involves a multivariate analysis of the changes in perceptions of discrimination and the factors involved in perceived discrimination and changes in this perception over the eight year study period. The main control variables are sex and place of birth. Findings indicate that female newcomer youth are significantly more likely to feel marginalized than their male counterparts regardless of their place of birth. Other factors influencing perceived discrimination include entry class, parents' income, degree of match between parents' pre-arrival education and post-arrival employment. These findings have significant influence over the sense of belonging in Canadian society among immigrant and refugee born youth and are interpreted through a lens of intersectional and identity theories. The presentation concludes with a discussion of policy and practical implications.

*Economic Democracy in South Africa: Women at the Grassroots*

In this paper we explore the ways in which women are creating spaces for economic and political participation in South Africa. The post-apartheid South African Constitution has been hailed as one of the most progressive constitutions in the world with its entrenchment of socio-economic rights and recognition of equality along various cleavages such as gender, race, and sexual orientation. There are myriad policies and legislation entrenching women's rights. Despite the conducive policy environment, the state has not created spaces for women's participation at local levels. Nevertheless, women are creating their own spaces of political and economic participation, linking up with the state when and where it is possible, and forging ahead when it is not possible to link with the state. In this paper, we look at a township north of Johannesburg and a rural area in the Eastern Cape to see the ways in which are creating and engaging economic production within their communities. Are these simply survivalist strategies or do they represent an emergent alternative that is rooted in economic equality and social justice? Are they practicing economic democracy? What role has the state played in this process?

*Practicing Women's Agency: Women's Participation in Local Spaces in South Africa and Kerala*

In this paper we look at the conditions for and effects of increased participation of women in political spaces in Kerala, India and South Africa. In both places, women enjoy supportive policy environments, yet patriarchal gender norms continue to limit women's agency. Drawing on interviews of two communities in Kerala and two communities in South Africa, we show that despite the conducive policy context, women face various challenges in practicing their agency and citizenship.

Based on empirical research in four localities inhabited by economically and politically marginal populations (a Johannesburg township and rural Eastern Cape in South Africa and a Trivandrum slum and a fishing village in Kerala), we show that women's participation is influenced by electoral dynamics and party politics; the relations and networks that women are part of both collectively and individually; the intersectionality of gender with other social structures based on caste, class, and race; and relations in the wider political economy including changing market relations as a consequence of globalisation. Kerala (as well as India at large) has targeted women directly in policies aimed at increasing the participation of women in public, economic and political life, through electoral quotas in local governments, the establishment of Self-Help Groups for poor women, and the involvement of these groups directly in local planning processes. While South Africa has one of the most progressive constitutions for gender equality, it has not established such "invited" spaces for women's political participation at the local level, directly targeting poor women. In South Africa, we find quite a few very interesting "invented" spaces of women's political participation, from the bottom-up, through cooperatives, various forms of voluntary work, and political engagement. The comparison of the opportunity structures and political agency of women in these two different contexts therefore allows for interesting theoretical reflections.

[RGW511@york.ac.uk](mailto:RGW511@york.ac.uk))

*Cords of Collaboration: Exploring Political, Clinical, Private, and Third-Sector Interests within the Emerging British Umbilical Cord Stem Cell Bioeconomy*

The paper illustrates how attempts are being made to redress ethnicity-based social inequities in health through collaborative governance of umbilical cord stem cell banking. This technology has enjoyed a growth in popularity among clinicians delivering treatment to cancer patients, partly because it is believed that ethnic minorities are more likely to find a tissue match in umbilical cord stem cell biobanks than in extant bone marrow registries (Anthony Nolan Trust 2013). In

response, clinical experts, third-sector charities and policy makers have sought to develop an infrastructure to increase the public collection of immunologically diverse umbilical cord stem cells (Brown et al 2011).

As such, we are witnessing the novel intersection of clinicians, charitable bodies, patient advocacy organisations and private enterprise. These stakeholders come together in parliamentary meetings to discuss barriers to development, produce policy documentation (APPSCT 2012, UKSCSF 2010) and foster further dialogue.

As has been noted by Emerson et al (2012), such a model of collaborative governance can facilitate discussion between parties seemingly separated by impermeable boundaries of profession and politics. This paper explores the means through which expertise and interest are brought together toward opening policy discussion to a wider field of stakeholders. In this way, it is a case study of an emerging collaborative governance model that hopes to add to this burgeoning area of theoretical development.

The presented data, including interviews with stakeholders and observation of parliamentary meetings, also investigates the manner through which a recognised ethnicity-based health inequity can be strategically deployed for specifically professional, political or civic interests; that is, how socially charged notions of race and ethnicity can be mobilised toward potentially beneficent ends (St Louis 2010; Benjamin 2013). Finally, the paper also brings into relief the tenuous position of the "expert" within a widening forum of stakeholders.

*Rescaled Citizenships and Vernacular Cosmopolitanism in Sydney, Australia*

In the Australian context, notions of cosmopolitanism have had less airtime than the nationally sponsored program of multiculturalism. Cosmopolitanism has emerged in academic theories of living together with difference, as well as in the realm of urban governance, where it is strategically employed as a place marketing technique, for example, in marketing Sydney as a multi-ethnic, globally competitive city. Academic theories of vernacular cosmopolitanism have been used to analyse forms of quotidian engagement across ethnic difference in Australian society, and are usually synonymous with notions of 'everyday multiculturalism' (Velayutham and Wise, 2009). However, these theories have been less explicit about how such everyday, intercultural exchange might be part of a rescaling of belonging for migrant residents, and how this might impact on the nation-state (Kay, 2000). In this regard, I suggest drawing on notions of urban citizenship (Holston and Appadurai, 1996) as a form of post-national or sub-national belonging to scale up the potential implicit in quotidian modes of cosmopolitanism. Urban citizenship – as a set of substantive rights relating to inhabitation in the city – enables a more explicit framework for thinking about how everyday practices of urban dwelling might complicate the dominant scaling of belonging at the level of the nation-state. The paper draws on qualitative research in two multi-ethnic neighbourhoods in Sydney, Australia to explore localized belonging amongst migrant communities and emergent forms of urban citizenship that destabilize dominant narratives of national belonging. The paper argues that urban citizenship as a form of post-nationalism can complement and augment the potency of everyday cosmopolitanism – which is easily appropriated by the state and commercial interests. Also, arguments about emergent urban citizenship should draw on ethnographic understanding of ordinary cosmopolitanism to better understand the multiple ways migrants negotiate identity and socio-spatial belonging in urban settings.

*Cosmopolitan Spaces in Non-Cosmopolitan Places*

Encounters are an important part of the texture and form of social life, in a global world where opportunities for people to foster positive cosmopolitan outcomes are increasingly visible and accessible. The concept of cosmopolitan encounters offers a grounded way to understand the everyday dimensions of cosmopolitanism through considering certain practices and performances that people draw upon to negotiate situations of diversity. Questions of the spatiality, configurations and locations of where encounters take place, in both likely and unlikely places, are also central to understanding how cosmopolitanism may emerge and flourish, or falter, fade and fail. But while places can serve as a vector of cosmopolitan possibility, the distinction between 'place' and 'space' is also important.

Drawing on empirical, qualitative research as part of a three-year project into cosmopolitan encounters, our paper argues that both cosmopolitan and 'unlikely', non-cosmopolitan places can be the sites of emergent cosmopolitan spaces. Our research sites include urban, regional and rural locations across Australia. Across these sites, our research employs observation and interviews with a broad range

of Australians to shed light on various 'spaces' of cosmopolitanism that provide the opportunity for cosmopolitan encounters.

Rather than revealing a linear pathway to a final, utopian cosmopolitan destination, we highlight various gradations of opportunities enabled by certain spaces, and in a range of places, that may or may not nurture the seeds of cosmopolitan to their full potential or permanency. We conclude with recommendations for deeper understandings of the relationality between space, place and performance into what constitutes cosmopolitan encounters. We then propose particular research strategies for uncovering cosmopolitan encounters, and highlight unlikely contexts worthy of investigation in future research.

#### *Fitness As Leisure - Exploring Physical Activity through Consumption and Lifestyle*

Drawing on the discussion on the commercialization of the fitness culture, this study examines fitness as a leisure activity. Fitness is prominent both in media and consumer culture, and it plays an important role in individuals' everyday life as everyone is surrounded by the social world of the fitness culture, its meanings and signals. Fitness activities are practiced in numerous ways and due to various reasons. Also the fundamental aims of the activities have changed; they have become commodities of the leisure industry.

The core of leisure is in the production of value, and it can thus be associated either with freedom from work and responsibility, or as freedom for self-production. Fitness is understood in relation to both health and appearance, which have become central not only to the social order, but also to individuals' occupational success and social status. Fitness has both instrumental and non-instrumental value, but the rationale for fitness is still instrumental; fitness is seen as an investment in the body's physical capital.

This study takes a quantitative approach to examining how consumption and lifestyle are related to the motives for physical activity. The data is derived from The National Student Health Survey (n=4403) conducted in Finland in 2012. The results revealed three consumption styles/lifestyles: hedonistic, healthy and sustainable. Moreover, four main motives for physical activity were found: sociability, health, target-orientation and appearance, which all correlate with the appreciation of well-being emphasizing different aspects. Hedonistic lifestyle correlated with all fitness motives, the strongest relation being with the motive of appearance. Also healthy lifestyle was related to all fitness motives, emphasizing the motives of sociability and health the most. Sustainable lifestyle, on the contrary, had no correlation with any other fitness motive than health, even having a slightly negative correlation with the motive of appearance.

#### *Glorious Mission: Social Media, Video Games, and Propaganda*

Governments and social movements have long used information technology to promote their causes. In the past books, songs, radio, and television where used to persuade people that political and social actions where necessary. With the growth of information and communication technologies there are now new media that can be used for propaganda and persuasion. Technology such as Twitter, Facebook, and Video Games have emerged in the past decade as growing forces in protest movements and government propaganda.

This paper will discuss how new technologies have been used for purposes of propaganda around a number of political issues in Asia. Analysis is based on content review of Twitter archives, online newspapers, blogs, and Video Games associated with political issues in East Asia. The issues to be addressed will include territorial disputes such as the Dokdo/Takeshima islands, North and South Korea, and Chinese internet censorship. Results suggest that governments in East Asia have been quick to recognize the propaganda power of new media and have quickly organized to provide a government perspective on ongoing disputes. Protest movements may have had an initial advantage in recognizing the power of new technologies and new media, but government quickly responded to remove or reduce the political advantage they had. Even though new information technologies have become common the issues of public discourse and propaganda remain fundamentally the same. Propaganda through Twitter and Video Games has the same motivation as in the past, but presented using current and emerging technology.

#### *Does Newsworthiness Influence Construction of Food Risk? Views of Media Actors*

In modern society, many risks are invisible and are brought to the attention of the public through the mass media. This is particularly relevant for food, where the widening gap between producers and consumers in the developed world has increased the need for consumer trust. Therefore the media play a crucial role in how risk is constructed and presented to the public. It is pertinent to gain an understanding of the construction of food risk as this is likely to influence consumer trust in food. This paper presents empirical data from research investigating how the media construct food risk and ultimately affect consumer trust across three countries: Australia, the United Kingdom (UK) and New Zealand (NZ). Interviews were undertaken with media actors from each country including 20 from Australia, 10 from the UK and three from NZ. First, our findings identify that newsworthiness is important when constructing a story about food risk. This followed a hierarchy, with risks affecting children and babies perceived as the most newsworthy. Second, risk reporting follows a cycle with precedence given to the dissemination of *any* information about the risk, regardless of the severity of the risk to public health and safety. This is followed by tempering of the risk, coverage of new angles to keep the story going and seeking to uncover the 'truth' such as the source of contamination that led to the food incident. Third, working conditions of media actors, including limited time, limited space and short deadlines were found to diminish the ability to report a balanced story, hence adding to newsworthiness and augmenting construction of risk. Our findings indicate that the construction of food risk by the media is influenced by newsworthiness and this is likely to impact the ways in which consumers regard the food risk presented.

#### *Managing Risk in a Complex Food System: The Importance of Inter-Personal, Professional and Organisational Trust*

A challenge of managing food safety risk is the multi-sectoral nature of the complex system set out to do so, with responsibilities lying with expert actors from both food industry and food regulation. Amidst this complexity, a unified message must be conveyed to consumers so that food risks are managed. This paper presents research conducted to navigate this complex system. We investigated the role of expert actors from the food regulatory and food industry settings in developing/ breaking/ repairing/ maintaining trust with consumers about food. Qualitative interviews were undertaken in Australia (n=30), the United Kingdom (n=15) and New Zealand (n=5). Respondents identified that risk management, including increased consumer trust, could only be established if trust existed within and across the expert actors. As such, the nature of the trust between actors became central to the research. Inter-personal, professional and organisational trust between these actors was observed. Interpersonal trust and relationships were developed between actors through transparency, good communication and regular phone and face to face informal meetings. Organisational trust was built and maintained through documents such as memorandums of understanding and regular, formal meetings. Professional trust was particularly apparent between actors within the regulatory and industry systems who both had responsibilities for managing food risk. Some actors indicated that they did not understand the perspective of the other system, because of the different processes and systems in which they worked. Despite this, each system had a common goal (to avoid foodborne illness). When this common goal was recognised by industry and regulatory actors, stronger trust was formed which enabled a unified message to be communicated to consumers. Therefore one way to manage the complexity of the food regulatory system, and ultimately better manage food risks, is to develop inter-personal, professional and organisational trust between expert actors in the food system.

*A Walk through Memory: Urban Interventions and the Sensual Battle Against Oblivion*

In the years following the Latin American military dictatorships of the 1970s and 80s, historians and activists noticed a disappearance of documentary evidence that paralleled the disappearances of human beings. Decades of activism by the Mothers and Grandmothers of the Plaza de Mayo, human rights groups, and political administrations that value human rights, has fueled an archive of memory; an ongoing city-wide network of projects and museums dedicated to remembering the Dirty War years throughout Buenos Aires.

This paper explores the roles of mural art and street flagstones in the production and reception of two post-conflict memory projects in Buenos Aires. The *Olimpo* museum (a former clandestine torture facility) and the *Barrios x Memoria y Justicia* collective flagstones project (traversing upper and lower-class neighborhoods, to form a city-wide visual map of disappearance) both represent attempts to inscribe memory onto public spaces.

The *Olimpo* project began in 1995 in the City Council of Buenos Aires. The building housed the automobile registration office of the Federal Police before being converted into a torture facility. Many Argentines wanted the facility razed to the ground once democracy returned. The museum owes its existence to an ongoing local community struggle to manifest the identities and experiences of individuals made abject and invisible by the military dictatorship. The Flagstones project, created by the *Barrios x Memoria y Justicia* collective began as an ongoing endeavor to replace parts of sidewalks with small, colorful plaques, in front of places where victims of state terrorism were born, lived or were kidnapped.

We consider two-decades of historical data reflecting the struggles to establish memory projects that bring into conflict state authorities, human rights organizations, neighborhood groups and university students. These concrete visual reminders of state-sponsored violence are both memorials and fuel for the battle against forgetting and/or rewriting history.

*The Origin of the World: Analysis, Representation and Performance*

This paper focuses on an artistic experiment or performance, 'The Origin of the World', in which over a two year period, 50 male artists were provided with charcoal, paper and instructions quickly to draw a vagina (only) with no human or other model. 20 of the drawings were later re-presented in a video in which the drawings slowly morph together and apart consecutively to music. Later, the drawings and video were exhibited in a university space. This paper explores this process and these data from a methodological perspective, discussing their potential as both representation and performance. First, the drawings were analysed interpretatively in relation to Lacanian psychoanalytic theory and feminist critiques of the same. This analysis highlighted the notable lack of consensus in the shapes produced, the extent to which the artists stuck to or deviated from the instructions given, and the clues they provided as to the artists' responses to the exercise (anxiety? disgust? humour?). This work raised further questions as to the nature of the data analysed and the potential contribution to such analysis of interviews exploring the artists' perspectives on the exercise, its distance from their habitual artistic practice and perhaps their own gender/ sexual identities. However these data are also performative (Law 2009) in that they enact multiplicities, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertain and less defined. Further the video itself constitutes an interpretation and interrogation of the drawings, as well as an aesthetic argument as to their significance, one in which conventional, commercial representations of female bodies become strange. The later presentation of the artefacts produced (drawings, video) in a university exhibition produced a further space in which to open dialogue, debate and alternative understandings.

*Trends in Wealth Inequality*

Nico Wilterdink: Trends in Wealth Inequality

This paper will present new estimates of inequality in household wealth in the Netherlands 1993-2011. Changes in this recent period will be connected with long-term trends in Dutch wealth inequality (from around 1900), which will be compared to trends in other Western countries. Preliminary findings are: there has been an overall tendency of partial collectivization (a shift from personal to collective wealth) and diminishing wealth inequality in the Netherlands and other

Western countries during the greater part of the twentieth century, followed by a tendency of decollectivization and growing inequality since the 1980s. The latter trend will be explained by connecting it with processes of deindustrialization, globalization and politico-institutional change. The paper will give special attention to recent changes under the impact of the financial crisis, and discuss the question to what extent national government policy can be used to modify wealth inequality.

*Legal Costs Insurance (LCI) – an Attempt at Comparative Analysis*

Legal aid systems are best conceptualised as complex entities, comprising different institutional and non-institutional mechanisms enabling the individual to obtain legal advice. In this perspective, commercial, public-subsidized, pro bono or prepaid legal services are all one method of providing access to legal advice, just capitalising on different resources. The same can be said about private/informal mechanisms of dispute resolution, self-help, and unbundled legal services. Yet another widely-recognized mechanism for providing legal aid is legal costs insurance (LCI). Despite relative prevalence of this channel of access to legal advice in some countries (such as Germany, Netherlands or Austria), legal aid literature (with some notable exceptions) does not devote much attention to LCI. In particular, it by and large neglects the interactions between the LCI as a channel of access to legal aid and other types of provisioning such services. Not much is also known about the institutional and cultural conditions of establishment of LCI systems.

The paper aims to contribute to filling this gap. It undertakes an attempt to answer the question of the factors driving emergence, prevalence and stability of legal costs insurance and the interaction it enters with other channels of provisioning of legal aid. To this end, the paper does two things. First, it analyses the hitherto literature in the search for theoretical explanations of said phenomena. Second, it juxtaposes theoretical explanations with the outcomes of a comparative study of LCI in Europe, utilising existing data on LCI, legal systems, disputing behaviour as well as values and culture.

*Why Do Procedures Have Unexpected Outcomes?*

According to a famous statement by Adam Przeworski, the difference between democracy and dictatorship lies in the fact that in a democracy the content of a political decision cannot be known in advance: democracy, not dictatorship, institutionalizes uncertainty. Sociology has largely ignored the institutionalized uncertainty thesis that follows from this observation. In particular, one has to be careful not to confuse Przeworski's argument with that of Robert Merton, which has animated the sociological discussion about unintended consequences for decades. Merton argued, famously, that important factors exist, which may keep the outcomes of action from the sight of the acting party, yet he perceived unintended consequences of action as largely undesirable and non-institutional.

This paper attempts to contribute to both the discussion of Mertonian unintended consequences and to the developing of a legal sociology of institutionalised uncertainty, à la Przeworski. It aims to do this by translating the intuitions of both authors into the language of Niklas Luhmann's systems theory. The particular field under investigation is akin to what Przeworski found remarkable: procedures and their outcomes. Yet, against Przeworski's theses and some theories of procedural law and democracy, it is argued that procedures are not necessarily outcome-neutral and that they do contribute to certain outcomes of political and legal processes. Against Merton's observations, but in accord with these of Przeworski, it is demonstrated that macrosociological and indeed deeply institutionalised factors exist, which contribute to the production of unintended consequences of individual actions. Finally, against theories of procedural justice in sociology and psychology of law, it is argued that procedures do not provide individuals with a sense of ontological security, but to the contrary, are but one form of "institutionalized uncertainty"

The paper has been published in Mica, Peisert, Winczorek (eds), *Sociology and the Unintended*. Robert Merton Revisited, Peter Lang 2012.

**WINTER, BRONWYN\*** (The University of Sydney,

[bronwyn.winter@sydney.edu.au](mailto:bronwyn.winter@sydney.edu.au))

*(In)Visible and (im)Mobile : Lesbians, Exile and Global LGBT and Womens' Rights Movements*

In a world that is supposedly more and more mobile and in which globalised LGBT rights claims are now firmly on the UN and many national agendas, lesbians often remain, paradoxically, invisibilised and immobilised—but to varying degrees. This paper will consider this paradox with reference to the issue of political asylum.

On one hand, social movements campaigning nationally, transnationally and internationally for both women's and LGBT human rights have facilitated access to asylum, mostly in Western countries, for lesbians from the many countries where homosexuality remains illegal (76 countries), or where the state fails to protect homosexuals from abuse, despite decriminalisation (another 60-70 countries). The European Union, for example, now explicitly includes references to the specificities of LGBT experience and needs in its new standardised asylum procedure.

On the other hand, continued cultural taboos and in some cases political backlash have, in many countries, maintained or even exacerbated the isolation of lesbians, depriving them of easy access to global LGBT rights networks (including the very important online networks that have proliferated over the last decade, but which frequently continue to privilege gay men). Moreover, the significantly lower levels of financial and cultural autonomy for women in many countries have meant that access to escape routes is much more limited than for men—a problem that lesbians share with heterosexual women but can be even worse in their case. Yet, access of lesbians to asylum presents as one of the world's most urgent human rights issues, as almost without exception, lesbians seeking asylum have suffered multiple forms of physical and psychological torture.

The paper will discuss the above issues with reference to the importance of transnational social movement activism and support that specifically addresses the situation of lesbians, as well as to case studies from France in particular.

*"My Boss Is like Family" – a Singaporean Case Study of Race Relations at Work -- CANCELLED*

A growing literature on race relations foregrounds cultural 'contact' in developing stronger intercultural understanding and forms of community that bridge difference (cf Amin 2002). Yet little of this literature takes the actual site and social field of 'contact' as important in mediating difference. The workplace is a special kind of micro-public, where the rules and codes of contemporary working cultures interplay with collegial and hierarchical relationships, which in turn mediate inter-ethnic relationships. In addition media cultures and wider national structures and discourses on diversity resonate through situated encounters difference.

This paper focuses on a case study of low and 'middling' workers in a multinational firm based in Singapore. The case study is drawn from a larger comparative study of inter-ethnic relations in workplaces in Singapore and Sydney. Drawing on the work of Lamont & Aksartova (2002) and others, the paper explores the discourses, scripts, rituals and practices (Noble 2009) workers engage to create or overcome boundaries of difference.

Employees in the case study multinational framed experiences of belonging and collegiality in familial terms, drawing on ideas of reciprocity, care, friendship and intimacy to describe positive feelings towards co-workers of same and different backgrounds. Race and cultural difference was described by most as having little salience in everyday working life. Yet we argue that the quality of collegial intercultural relations at work does not necessarily translate into shifts in racialised hierarchies nor views about cultural and racial 'Others' more generally. Indeed, the use of ideas of family and informal modes of recognition and care actually reinforces and legitimised certain forms of vulnerability and discrimination. This is so especially in a context like Singapore which is a highly racialised society with a variegated system of temporary work visas where opportunities, rights, and conditions differentially distributed according to national origin and race.

[per.wisselgren@soc.umu.se](mailto:per.wisselgren@soc.umu.se))

*Alva Myrdal, Unesco, and Cold War International Social Science, 1951-1955*

The paper is concerned with the international organizing of the social sciences during the early Cold War era. Empirically it is focused on UNESCO's Social Science Department (SSD) during Alva Myrdal's directorship, 1951-1955. The SSD was set up in 1946, as part of the wide family of intergovernmental organisations that emerged with the United Nations in the aftermath of the Second World War. When Alva Myrdal (1901-1986) became the Director of SSD, it has been suggested that she "set the department on its feet". But what difference did she actually make? What ideas, visions and hopes did Myrdal have regarding the SSD? How did she try to realise them? Which projects did she initiate during her time as director? Which issues lay closest to her heart? What did she oppose? How did she view her own role as Director of the SSD? With which people and organisations did she collaborate? By employing a STS-perspective and analyzing the everyday practices at the SSD during these five years, the paper intends to discuss the above mentioned questions in relation to the contemporary geopolitical setting.

*Beyond Generic Urban Theory? Grand Narratives, Assemblages, and Urban Critique*

In the late 1970s, in his well-known proclamation, Lyotard announced the end of grand narratives. Nonetheless, thirty years later, urban studies research remains strongly structured by a selection of generic storylines. Developed in specific – mostly Anglo-Saxon – settings, these narratives are used to interpret and critique urban developments in cities around the world. This paper questions the implicit relationship between the narratives of urban theory and urban realities. It argues that storylines can play an important role as 'sensitising devices', but that they should be critically confronted in urban research. The paper underlines this argument with an analysis of the relevance of two grand narratives in two Asian cities: the 'end of public space' in Mumbai, and 'splintering urbanism' in Bangkok. The analysis shows that both storylines are relevant, but in ways other than the theory suggests. A direct translation of theory to specific urban settings will therefore lead to mistaken interpretations and inadequate critique. Unfortunately, urban studies research rarely incorporates such a critical confrontation of urban theory. From this observation, the paper draws conclusions on the practice of urban research, the value of urban theory, and the possibility of urban critique.

**WITTROCK, CHRISTIAN\*** (Aarhus University, [chr@wittrock.dk](mailto:chr@wittrock.dk))

*A Typology and Analysis of "World-Changing Management Concepts": Beliefs, Unanticipated Consequences and Anomie*

I develop criteria for and analyze consequences of what I call "world-changing management concepts" (WCMC), drawing on Lean, TQM, BPR, JIT and coaching. To qualify as a WCMC, the authors claim that the concept: 1) yields specific, predictable results if implemented correctly; 2) enables fundamental, groundbreaking changes leading to a superior competitive advantage for the organization, regardless of the context; 3) is a more humane form of management practice, making previous approaches obsolete, and 4) will change the world for the better. I.e. they are presented as grand theories. However, the knowledge content in these concepts is based on studies of distinct or disparate cases, industries, or cultures (e.g. the Automobile Industry in Japan), or they are based on ideas from other fields of practice (e.g. sports).

I draw on translation models (by Lillrank (1995) and Røvik (2007)) to show how treating management concepts as theories of the middle range, rather than grand theories (like WCMC's), is likely to greatly enhance the local translation of management concepts and reduce unanticipated consequences. I further show how the claims of WCMC's logically require changes to basic underlying assumptions in the organizational culture (Schein 2010). Such requirements create a situation where the culture is at odds with what employees are asked to do, potentially creating anomie (Merton 1968), and in a further sense creating a double bind for employees (Bateson et al 1956).

Although theoretical in scope, the presentation builds on ethnography from management consultancy.

*Lean between Practices and Ideology: the diffusion of a "World Changing Management Concept"*

In my international review of quantitative studies of lean diffusion, surveys indicate recurrent problems with the implementation of lean: managers report that a "lean culture" is difficult to attain. Furthermore, positive outcomes are scientifically unsubstantiated (Freytag & Arlbjørn 2011). Lean is an example of what I call a "World-Changing Management Concept," characterized by holding ideological ambitions to create a better world, while claiming that practices work regardless of context. I use the seminal texts of Womack et al (2007 [1990]) and Womack & Jones (2003 [1996]) to show how lean is in part a theoretical construct, inspired by "Japanese management", but ideologically aimed at creating a sustainable management practice in a globalized economy.

I draw attention to the distinction between the adoption of a management idea as a practice and as an ideology (Guillén 1994). I then use Guillén's neo-institution-

al framework to show how lean draws heavily on practices and ideologies that do have a long standing in Japanese history, including ideologies of co-prosperity (Goto-Jones 2005). I show how institutional factors in the organization adopting lean will be decisive for whether lean will come across as Taylorism in disguise or something closer to the original ideological intentions. In keeping with my arguments, recent research on work environment issues in lean projects gives a mixed picture of consequences for employees (Edwards et al (eds.) 2010).

#### *Information Et Participation Politiques En Ligne: Inégalités Ou Fracture ?*

Dans les recherches interrogeant les rapports entre politique et numérique, l'une des thèses les plus discutées porte sur l'existence d'une "fracture civique" entre citoyens, engendrée par la difficulté croissante à trouver et organiser l'information pertinente, dans un contexte de profusion, de flux informationnels démultipliés par les réseaux numériques. Autrement dit, les individus qui seraient déjà motivés et intéressés par les questions politiques bénéficieraient pleinement du web comme ressource d'information, mais ceux qui seraient peu motivés n'en tireraient pas réellement profit, ce gain informationnel serait donc marginal. Cette fracture civique reposerait sur l'inégale répartition des compétences d'individus disposant de manière variable de capitaux culturels et cognitifs. A cette fracture, viennent s'ajouter d'autres thèses sur la contribution des médias, de masse et numérique, à soutenir voire à accroître l'apathie civique. En effet, la multiplication d'offres thématiques numériques ou câblées et la personnalisation des contenus permettraient aux individus qui préfèrent le divertissement de profiter d'opportunités encore plus nombreuses de ne pas être exposés à l'actualité politique. Les technologies de l'information et de la communication apparaissent dès lors comme les auxiliaires du désengagement civique d'individus auxquels ferait de plus en plus défaut un niveau même basique de connaissances politiques. Le caractère alarmiste de cette proposition a été récemment contrebalancé par plusieurs récents travaux qui incitent notamment à appréhender de manière modulaire l'intensité des effets de l'information en ligne sur les internautes certes en fonction de déterminants classiques (âge, sexe) mais aussi de leurs préférences à l'égard de certains types de dispositifs numériques. Nous proposons de discuter ces différentes thèses à partir de données recueillies par questionnaire durant les trois semaines qui suivirent en France l'élection présidentielle de 2012, auprès de 827 internautes français ayant utilisé Internet à des fins électorales (recherche d'information ou prise de parole en ligne) pendant la campagne.

#### *Assessing Nonresponse Bias with Microdata from Official Statistics – the European Case*

"Data without Boundaries" – a project funded under the 7th European Framework Programme – aims at improving access to microdata from official statistics in Europe. This overarching goal is reached through several tasks, among them: compiling information on available data and access conditions, proposals for harmonized accreditation access conditions, building a remote access network and offering web-based, structured and searchable codebooks for Eurostat data. Among the data sources that Eurostat produces and disseminates and that "Data without Boundaries" is creating a service for is the European Union Labour Force Survey, the largest household survey of the continent. EU-LFS is a continuous household survey currently carried out in 33 countries. In many of these countries EU-LFS is mandatory leading to very high response rates. Because of its size and the high quality of its sampling this survey is often used as benchmark to measure nonresponse bias in social surveys.

After introducing "Data without Boundaries" the presentation will demonstrate how EU-LFS can be exploited to assess nonresponse bias in surveys conducted in Europe. The empirical analysis focusses on the European Social Survey, the European Values Study and the European part of the International Social Survey Programme. Nonresponse bias will be assessed relative to the variables sex, age, education, employment status, household size and where available region or size of place.

The analysis demonstrates how not only those directly interested in micro data from official statistics but also survey researches benefit from the efforts of "Data without Boundaries" and the improved access to Eurostat's data.

#### *Problems of Survey Measures of Social Networks*

Since Fischers (1982) and Burts (1984) seminal contributions to collecting egocentric network data in social surveys the method has been employed in numerous studies and can be regarded as standard in this field. Recently this approach has been severely criticized. Several authors have pointed out that the standard approach to measuring egocentric network data suffers from strong interviewer effects which may lead to misleading conclusions (Paik/Sanchagrin 2013; Brüderl et al. 2013).

The presentation will discuss the methodological problems with the standard approach to collecting egocentric network data. Several adjustments to the standard approach will be discussed and alternative methods to capture aspects of "social capital" will be presented. The presentation ends with a plea to use a combination of several independent measures of social embeddedness thereby overcoming the shortcomings of each of the single measures.

#### *Democracy and Autonomy: The Contradictions of Global Social Movement Networks*

Scholars of emergent global social movements and other transnational activist and new media networks have hailed the coming of horizontal, flat, democratic networks tied to new communication technologies. The shared claim is that these networked organizational forms, and accompanying cultural practices, are creating a new more egalitarian social world. At the foundation of this argument is the unexamined embrace of the twin concepts of local autonomy and participatory democracy. However, within transnational networks these dual aspects of the cyber age, democracy and localism, are often in tension with one another.

In this paper, I use the indymedia movement as an exemplar of a transnational media network where the dynamics of global democracy and local autonomy come into tension, offering a more nuanced look at the intersection of the global and the local in global networked social movements. Founded during the WTO protests in 1999, indymedia is a globe-spanning media network, with over 200 active nodes on six continents, where news and journalism is produced in multiple formats in over 30 languages. In specific, in this chapter I look at the decision of the global indymedia network to reject a large grant from the Ford Foundation because of Ford's history in the Argentine dirty wars. The heated episode almost forced the young dynamic network to shut its doors, and brings to the fore the complex tensions of local autonomy and global sovereignty, highlighting the conservative and oft-times reactive nature of transnational communication networks. Moreover, this episode and indymedia in general, brings to light the inability of decentralized networks to build proactive power, highlighting the disorganizing and at times debilitating organizational logic of contemporary social movements.

#### *K. D. Har : A Public Sociologist in (Post)Colonial Korea*

K.D. Har (1897-1951) is one of the first pioneers of Korean sociology, and may be the very first Korean public sociologist. He was the student of Richard Cabot and James Ford at Harvard, and his book <Social Laws: A Study of the Validity of Sociological Generalizations> was published by the University of North Carolina Press in 1930. In his book, he argued that sociology is not science like natural sciences, but we should see it more as "social arts." Sociologists can not separate ourselves from the society, but only parts of the society that we are studying. In this sense, he argues for the need to engage in the public action to reform the society.

However, his hope to become a public sociologist in Korea was not possible due to the Japanese Colonial rule and the authoritarian post-colonial South Korean government. Japanese colonial government regarded sociology as a disci-

pline to teach the ideas of communism and social action, thus banned teaching sociology at universities in Korea. K. D. Har was not able to teach sociology, and eventually kicked out from the university. After liberation from Japan, he pursued the career in journalism, but his newspaper was not allowed to publish due to its critical report on post-Colonial South Korean government. Using K.D. Har as a case study, this paper discusses the potentials and limits of public sociology in (post) colonial context, and explores the challenges of global sociology in (post) colonial context.

#### *Passing and Crossing: A Study of Transgender Embodiment in Hong Kong*

Issues of transgender and transsexuality provide a new impetus and a practical need to problematize assumptions about bodies and identities and to rethink the categories of women and men. While transgender studies have exposed the artificiality and mutability of sex/gender/sexuality categories, a tension exists between the transgender/transsexual discourses which are oriented toward a search for a gendered home and the queer emphasis on creating trouble for the gender order through non-normative, unintelligible embodiments. This paper seeks to address the debates through an examination of the embodied practices of passing and crossing in the transgender community in Hong Kong.

For many gays and lesbians, passing or acting straight is a strategy for coping with stigmatization in a hetero-normative society. For many transgender people, passing, that is, to blend into society both socially and visually in accordance with their preferred gender, is a goal rather than a means. They want the society to see them in their desired gender. The emphasis on passing is reinforced by the 'Real Life Test', which requires trans to dress and live in their gender identity successfully for a period of time in order to be eligible for hormonal treatment or surgery.

Questions will be raised as to whether a hierarchy based on the ability to pass has been created in Hong Kong's transgender community; to what extent the practices of passing entail compliance with dominant standards of dress and behavior which are grounded in the class privilege and compulsory heterosexuality. Similarly, questions will also be raised with regard to incoherent embodiment. Who can afford incoherent or unintelligible embodiment? Whose incoherence is strategic, and whose incoherence is necessary or unlivable? This paper argues for the importance to subvert dominant codes, yet without losing sight of the materiality, complexity and ambiguity of the lived experiences of transgender people.

#### *Biographical Experience, Desires, and Interests: A Case Study of Individual Hong Kong Fans of Japanese Boy Love Comics*

This paper is an ethnographic attempt to understand the relationship between individual Hong Kong fans of Japanese Boy Love (BL) comics and the general image of male characters in BL through the fans' derivative creation of BL. The key concept here is the desire. We show that while Hong Kong fans of Japanese BL comics share a collective meaning of the general image of male characters in BL comics, each of them tends to maintain a unique interest in it. We further argue that the unique interest in the general image of male characters in BL comics is closely related to the biographical experience of each individual Hong Kong fan. The biographical experience itself is a product of many social factors, among which family is the most important one. Following Sangren (2000), we argue that in order to understand how biographical experience shapes unique interest of each individual fan, we should understand how family as a social institution underlies the desire of individual fans toward BL comics in general and the general image of male character in BL comics in particular. The desires instituted by family in turn will be shown to motivate the unique behavior of individual fans toward BL comics. Through this ethnographic attempt, we shall try to transcend the classic dichotomy of individual and society, sociology and psychology, and culture and personality lingering in social sciences in general and sociology in particular.

#### *A Spectral Existence: Living in a Chinese Ghost City*

With more than half of the Chinese population now urbanized and 75% expected to be in the next two decades, the proliferation of new, 'instant' cities in China can be understood as the efforts of the Chinese government to house and provide employment for the fast expanding urban population, inducing them into 'modern' forms of production and consumption, thus fueling the wheels of global capital and China's own rapid ascendance as an economic power house. How-

ever, of late, an emerging phenomenon that arises from this ceaseless urbanization is the sprouting of ghost cities and towns across the country. These are defined as cities and towns which lie largely under-populated and under-utilized, and where housing projects serve mostly as vehicles of real estate speculation rather than domestic accommodation. Ordos City (or Kangbashi) in Inner Mongolia is one such product of Chinese hyper-urbanization gone wrong. Contrary to the local government's ambitions to build a global, modernized city in the midst of the desert, residents in this new city are living in the mirage of a future which is promised but has yet to arrive. With the collapse of the local coal industry and China's own impending economic slowdown, this future of Ordos's metamorphosis into a global city looks even more bleak. Discussing the ethnographic data collected from my fieldwork in Ordos City, I will attempt to show how residents manage this dissonance between the promised and the realities of life in a ghost city through their production and consumption activities—informal or otherwise; also revealing the embedded inequalities of class, gender and urban/rural status which have been simultaneously overcome or exacerbated in this rapid process of urbanization.

#### *From 'Reds' to Riches: Contemporary Changes of Educational Assortative Mating in China from 1949 to 2000*

Ever since the Chinese Communist Party took full control of the country in 1949, massive institutional transformations shattered and reshuffled traditional norms and structures, including individuals' mate selection by depreciating the value of education, valorizing the importance of political loyalty ("red"), and thereby reducing the extent of educational homogamy and overall association. Between 1949 and 1979, political capital and class origins are paramount in determining individual's position in the society. However, with the advent of economic and market reforms since the late 1970s, the tide has changed again. Under the new environment, de-collectivization, industrialization, and the rise of market economy all point to the rise of human capital and economic success as major determinants of one's socioeconomic position.

Through the use of 1982, 1990, and 2000 China Population Census and 2005 Chinese mini-census, our results indicate that (1) massive political upheavals between 1950s and 1970s generally decrease the strength of educational association ( $\phi$ ) and increase the propensity of hypogamy; (2) the downward trend was abruptly halted since market reform and the strength of association has reversed its direction to sharply rising trend instead; and (3) assortative mating patterns in rural and urban areas are distinctively different from each other.

To further investigate whether sent-down experiences may have differential impacts on mate selection, additional analyses based on the 1995 and 2002 Chinese Household Income Project are included. Indeed, we find that the impact of sent-down experiences varies by gender, educational levels, and couples' joint experiences.

**WONG, RAYMOND SIN-KOWK\*** (Hong Kong University, [sorwong@ust.hk](mailto:sorwong@ust.hk))

#### *Gender-Oriented Statistical Discrimination Theory: Empirical Evidence from the Hong Kong Labor Market*

This paper proposes a simple search model to shed light on the role of aggregate fertility as a form of statistical discrimination against young working women in the labor market. Our proposed theory assumes that workers generate identical production value that does not differ by gender. When matched with a firm, the worker and the firm bargain over the wage rates. Since pregnant female workers receive wages during maternity leave and generate no production value, a matched pair with a female worker may generate lower expected profit to the firm. Rent-sharing ensures a male worker to be paid more than a female worker even with the absence of overt discrimination, thus resulting in statistical discrimination against female workers. Using the 5% random subsamples of census and by-census data in Hong Kong in 1996, 2001, and 2006, the study provides unequivocal evidence that age-specific fertility rates exert negative impact on female wages, after controlling for other observable characteristics. More importantly, the negative effects of fertility on women's earnings are notably greater in female dominated occupations whereas similarly situated men are unaffected. Since fertility rates tend to be increasing with age during the early stage of women's work career, our theory partially explains why the gender gap tends to rise with age. One important implication from our model is that employers would similarly expect lesbian workers to have lower fertility than their heterosexual counterparts and thereby resolves the puzzle of the existence of the lesbian earnings premium found in the economic literature.

*Can the Industrial Relations in Japan be Reconstructed in the Long-Term Perspective?*

More than ten years have already passed since it was first proposed that Japan's corporate management and labor relations should be reformed to keep pace with globalization. After the financial crisis of 1997, especially, corporate governance changed, and management began to shift emphasis to short term rather than long term profits and shareholders' rather than employees' concerns. In addition to the general reduction in labor costs, replacement of regular employees with non-permanent employees rapidly proceeded. The wage system became more performance-based as well in accordance with emerging HR policies that sought the immediate competence of employees. However, some scholars argue that, in the long term, such changes in business strategy and HR policy have negatively affected Japanese industries' productivity and quality. Moreover, Japan's industrial relations have been affected as well. Labor unions have failed to cope with problems such as wage reductions, growing numbers of non-regular workers, and the decrease of collective bargaining power. These problems exist against a backdrop of increasing wealth disparity. This paper aims to elucidate the possibility whether the Japan's industrial relations could be reconstructed or not in the long-term perspective, focusing on the mechanisms by which globalization and changes in corporate governance are influencing industrial relations at the micro level.

*Welfare Support Attitudes in Korea, Taiwan, Germany, and Italy: Focusing on the Influence of Institutional and Political Factors*

Previous studies have shown that welfare attitudes are determined by various demographic, economic, and social factors in Western countries. Class is found to be one of the most influential factors in explaining individual welfare attitudes in Western countries. On the contrary, no clear factors have been found to be significant in differentiating individual welfare attitudes in Asian countries, particularly in South Korea so far. To understand welfare attitudes in comparative perspective, we will analyze the <Life and Society> survey data collected from Korea, Taiwan, Germany, and Italy in 2012. Two Asian countries are small emerging welfare states, whereas Germany and Italy are already mature welfare states. However, these countries have some commonalities in that their welfare systems were constructed by the principle of Bismarckian insurance system. It would be very interesting to check changes in welfare attitudes in Western countries, finding out differences and commonalities between Western mature welfare states and Asian emerging welfare states.

The first purpose of this article is to explore whether there are different social cleavages in welfare attitudes in Western and Asian countries. The second purpose is the main part of this study. The study focuses on the issue addressed by institutionalists in the analysis of welfare attitudes. That is the importance of institutional and political factors. We expand the concept of 'political trust' to measure an evaluation of the 'political world'. We argue that institutional and political factors that measure individual evaluations of the political system are important in explaining welfare attitudes such as individual support for welfare states. At the same time, we will show that there are variations among four countries, and particularly differences between Western and Asian countries in the direction and significance of institutional and political factors.

*'Presentism' and Youth Research: Methodological and Historical Oversights*

A key incentive for why many youth researchers undertake research is the hope we can 'make a difference' for the young people. No more so than in community participatory research when we are invited to participate in 'transformative' change for marginalised young people in particular. However, while we know that social change takes time, we are constrained in such research by timeframes imposed by neoliberal institutes that compel quick research turn-arounds and rapid outputs. Moreover, such constraints also encourage a very 'presentist' view of the young people at the focus of our research, thus overlooking historical legacies, continuities and discontinuities that are embedded in communities and how these shape their social worlds. In this paper I examine a participatory community youth research project that 'failed', forcing me to confront my own presentist and

short-sited views, as well as those imbued in methodological choices. Drawing on Hannah Arendt (1986), I re-examine the 'web of relations' (p. 150) which these narratives of 'failure' are situated in, thus highlighting the complex and intertwined historical and contemporary factors at play when we conduct research. The paper critiques 'presentist' tendencies in youth research and raises questions about collective ethical responsibilities toward sustainable actions of change through youth research.

*Precarious Labour In The UK: The Impact Of Neoliberalism and The Possibilities For Resistance and Organisation*

This paper seeks to examine resistance to precarious employment in the UK. It has been the focus of recent debate in the UK, both in academia and in the labour movement. In academia there have been debates between Guy Standing (2011) and Kevin Doogan (2009) amongst others about the extent and implications of precarious employment. The use of statistical evidence is a particular point of contention; ranging from some arguments relying on very little of it to others claiming it negates the concept. However statistics alone provide only a partial picture, as the category of precarious employment is heterogeneous: it is not simply about being on a specific kind of temporary contract. The experience of precarity is an important component of work today, and an understanding that draws on Bourdieu's (1998) notion of 'précarité' as a 'mode of domination' is useful for developing this further. The paper will attempt to historicise precarity in the UK as part of capital's response to the crisis of the 1970s and the rise of Neoliberalism. These processes were enforced with a series of defeats for the trade union movement, which have left low levels of membership concentrated mainly in the public sector and large sections of the private sector without traditional forms of working class organisation. There has been resistance to precarious employment. The examples of university teaching staff, call centre workers, and the campaigns against zero-hour contracts will be examined to understand how new forms of struggle can lay the basis for the renewal of workers' organisation. The paper will argue how the historical examples of new unionisation in the 1880s and 1930s can inform contemporary debates on overcoming precarity.

*Towards a Method For Activist-Scholar Research Collaborations: Taking Inspiration From The Tradition Of The Workers' Inquiry*

This paper will argue for a method for collaborative research projects involving academics and workers that takes inspiration from the tradition of workers' inquiries. It draws on my own experience of conducting an inquiry in a UK call centre. In Marx's (1938: p379) attempt at an inquiry he stated that workers 'alone can describe with full knowledge the misfortunes from which they suffer,' and crucially that 'only they, and not saviors sent by Providence, can energetically apply the healing remedies for the social ills to which they are prey.' The innovations of the Johnson-Forest Tendency in the USA, in examples like *The American Worker*, highlight how collaborations between workers and intellectuals can be used to develop an understanding of society. The Italian *Operaismo* in the 1960s developed the methodological component of inquiries as a form of 'co-research.' The aim was to simultaneously develop a form of knowledge production and new organisations. The debates in their journals discussed the difficulties in this approach, seeking to move from inquiries 'from above' to those that involved workers self-organisation – an inquiry 'from below.' Romano Alquati argued that in many ways this was not new: 'political militants have always done *conricerca* [co-research]. We would go in front of the factory and speak with workers: there cannot be organization otherwise' (quoted in Roggero, 2010: p3). This paper will argue that inspiration can be taken from previous attempts to develop workers' inquiries. They represent particular moments when academics sought to engage with the changing conditions in the world alongside groups of workers. Although the location of the factory gates has changed in many ways, the current context of austerity necessitates the engagement of researchers with workers' struggle, both inside of universities and in different workplaces in society.

FURLONG, ANDY (University of Glasgow)

*The Rise Of The Precarious Class? Conceptualising Inequality Among Young People In The Context Of Labour-Market Change*

Casual, insecure and variable patterns of work are rising across the developed world, particularly for young people. Academics and policy makers have

used a range of terms to capture the 'grey zone' that falls between worklessness on the one hand, and relatively secure full-time employment on the other. This 'grey zone' varies significantly in size across first world countries and is likely to expand under the current turbulent economic conditions. Although sociologists have both introduced and critiqued various terms used to represent insecure and fragmented work forms, there have been few attempts at a theoretically driven conceptualisation that ties the new conditions to broader processes of change in advanced capitalist societies and links structural change to new forms of consciousness. While the idea of a framing the experiences of fragmented and casualised work in the new economy as a new class, for example the precariat, has some attraction, there are also difficulties with the conceptualisation. One of the core problems relate to the fact that not all young people who are structurally located in the precariat by virtue of their employment in casual or insecure forms of employment represent a disadvantaged or marginalised group. For some the experience of precarious employment is alleviated by access to other resources, such as family support, and they escape some or all of these precarious work conditions as they get older. Drawing on evidence from a number of countries, and primary data from an ongoing mixed-methods study of youth in Australia, in this paper we describe some of the ways in which changes in the labour market are affecting young people, consider the adequacy of representations of precarious and fragmented positions as the basis of a new 'class' and propose an alternative way of conceptualising 'individualised' structured inequalities in the new economy.

#### *Balanced Advice? Appointments to Advisory Boards and Gender Quota's in the European Union*

Advisory councils and boards play an important role in countries with corporatistic decision-making practices. Appointments to these boards are often controlled by political actors but regulated in a bureaucratic framework. Feminist movements identified these decision-making bodies as both crucial gatekeepers and easily malleable venues for a quick fix of gender balance. Given that many of the bodies are appointed by the state, boards and public committees seemed to offer the opportunity to quickly change the gender balance in decision-making, even as electoral sectors were changing slowly. Countries such as Belgium and Norway adapted legal gender composition rules for appointed bodies by 2005. Later quota's in electoral politics became more widespread. Today many European countries have also started proceedings to implement gender quota's in advisory bodies and corporate business boards with state participation. To what extent has the increasing integration of Europe led to adaption of gender regulations of appointed boards in EU member states? How does this interact with political appointment processes? What are the results and how does the bureaucratic capacity of the state interact with implementation of gender-balance rules? This paper will report on comparative data and measures in the 27 European Union countries. Who has adopted quota for these bodies, and what are the arguments? How do gender equality considerations relate to debates about depoliticization of appointments? Further the paper will review available results on the composition of boards with a view to identifying potential pitfalls for adaption in other political and cultural contexts.

#### *Between Ambition and Reality: The Role of Gender Representation Rules in European Scientific Advisory Councils*

Research Councils are crucial gatekeepers to academic power. Substantial research indicates that gender skewed scientific advisory and review boards play a role in the underrepresentation of women receiving scientific grants. Since the mid-nineties many European scientific advisory bodies have adapted guidelines about the gender composition of their panels, either compelled by national legislation and European directives or voluntarily. European Union scientific review boards are supposed to be composed at the 40%/60% level, for example. However the adaption of guidelines and the implementation and monitoring of guidelines are not always linked. Quota's generate controversy, even among female scholars. Further, the re-alignment of the European Research Area may mean that ambitions of representation become lost thanks to neo-liberal arguments about an undefined and ambiguous concept of 'excellence.' This paper documents the present state of affairs in terms of regulation, the resistance to quota regulations and the extent to which there is compliance with regulations in the composition of panels and management. The implications for research councils and gender equity in decision-making will be discussed. Contextual and structural factors of legislation, leadership, peer pressure, Europeanization, monitoring and bureaucratic capacity are identified as contributing to differing outcomes. Concretely, the paper treats the major European players in transnational funding

and management: European Science Foundation, the nascent Science Europe, the European Research Council and the Commission of the European Union.

#### *Rematerialising the Commodity in Social Theory: Performativity, Iconicity and Object Transitioning*

The frontiers of social theory and cultural inquiry have been advanced by the affordances of object-oriented analyses and, more critically, a material ontology. Objects, things and materials are the stuff of new ecologies of meaning and practice, whereby social structures, global networks, cultural ideals, social values and human bodies have been shown to be materially fashioned and constituted. Studies of object ecologies, material culture and things have challenged how we think about the nature of mundane experiences, modes of social communication and performance, and networks of social affiliation. In all of these fields, the material basis of social life has been uncovered and emphasised. As it has matured, material analysis has tended to bifurcate into interpretivist and materialist approaches, leaving approaches to materiality at something of a crossroads. On the one hand, strongly materialist approaches tend to fetishise material dimensions and relational, systemic patterns of exchange, while interpretivist approaches focus on patterns of signification and meaning. Using the central sociological category of the commodity, this paper explores opportunities for integrating these approaches with special focus on the relatively new cultural sociological resources of performance theory and theories of iconicity.

**WORTH, OWEN\*** (University of Limerick, [owen.worth@ul.ie](mailto:owen.worth@ul.ie))

#### *Neoliberalism on the Defensive: Austerity As a New Form of Common-Sense*

Since the global financial crisis, the extensivity of resistance to global forms of neoliberalism has been marked, with economists being at the forefront in demonstrating how austerity is unsustainable as a means of production. Both radicals and Keynesian economists, alongside a wide variety of political and social movements, which were already prevalence during the preceding decades since the end of the cold war became more prominent in their attacks and criticisms of neoliberalism. These have included social movements such as the Occupy campaign, regional political movements such as those in Latin America, reactionary nationalist groups and religious-based organisations, which have all been explicit in their attacks on the hegemony of neoliberalism.

In response, the notion of austerity has flourished as a concept in order to keep such criticisms at bay. This paper will argue that the notion of austerity has developed into a defensive ideology, geared around the rejection of comprehensive alternatives to the crisis. Instead, it is geared upon the idea of presenting austerity as a compulsory painful measure, required in order to re-stimulate growth and confidence in the economy. It will also suggest that this narrative has been strengthened by the failure of its criticisms to adequately construct a viable hegemonic alternative that might replace the status-quo. As a result, austerity has assumed a character that can be understood as a form of 'common-sense' in the wider Gramscian tradition. It serves as providing a set of norms and conditions which are understood as being both 'natural' and 'universal' in many ways. This paper will conclude that it is through this articulation of common-sense that neoliberalism has (as least to date) managed to survive and to go on the defensive. Such a position that was not seen possible merely five years ago.

#### *Gender Equality in Progressive Muslim Movements: Social Implications in the United States*

The varied forms of progressive Islam all endeavor to realise social justice and equality through a critical engagement with Islamic sources and an inquiry into prevalent contemporary Islamic practices. An important feature of most progressive Islamic movements in North America is the focus on social equality and ultimately on gender parity. This paper seeks to investigate the ways in which social justice is achieved and enacted in target progressive Muslim communities and organisations. Subsequently the possibility of the instigation of social processes for ensuring human rights stemming from progressive ideologies will be examined. The research will be focused on two organisations: *Muslims for Progressive Values* and the *New York Community of Progressives*. Fieldwork will be carried out through online focus groups, observation and in-depth interviews in the United States. It is the intention of this research to investigate the role of gender issues in progressive Muslim movements and within other alternative Islamic practices/communities. The findings from this study will be used to evaluate the broader

concerns of social justice, human rights and pluralism in these two progressive Muslim movements.

#### *Neoliberal metropolitanism and the remaking of welfare systems: The rise of professional projects in the government of the biopolitics of the metropolis*

European research on the linkages between professionalization and political systems has focused either on the role of the state in professional projects or, more recently, on the relevance of transnational developments for a globalisation of professions. This paper extends the analysis of political systems to a new scale, that of the metropolis, identifying the recent discourse of metropolises as 'landscapes of power' in global economy as a meta-level turn to 'neoliberal metropolitanism' in public policy. The paper further argues that the new discourse has helped to constitute metropolises also as important landscapes for professional projects.

The analysis examines urban planning focusing on the Greater Helsinki region as 'a world-class centre for business and innovation', focusing on the professional projects that rise in the intersection of government and scientific expertise. I employ Patrick Carroll's ideas about how the role of scientific expertise for 'material design' as conducted by political systems. Carroll highlights how the key boundary objects of land, people and built environment are transformed into 'techno-territoriality', 'bio-population', and 'infrastructural jurisdiction'. Employing Carroll's framework to my analysis of role of expertise for the biopolitics of the metropolis, I argue that expert professionals are key agents of this transformation work, forging expert knowledge into institutional practice.

The findings show that like the old liberal state that gave rise to new sciences such as public health the market-conscious metropolis also supports expert projects anchored in the public sector. The reported analysis of policy documents finds four expert professional projects: innovation policy and innovation professionals; new public management and efficiency professionals; transnational human resource management and recruitment professionals; and integration policy and diversity management professionals.

### PRES-3.1

**WRIGHT, ERIK OLIN\*** (University of Wisconsin, [wright@ssc.wisc.edu](mailto:wright@ssc.wisc.edu))

#### *A Sociology of Real Utopias*

On Marx's tomb in Highgate cemetery is one of his most quoted passages: "Philosophers have only interpreted the world in various ways; the point is to change it." Usually this is taken as a call to action. But it is also a call to produce a certain kind of knowledge, knowledge that is relevant to the task of social transformation. Such knowledge needs to grapple with four broad problems: specifying the values that drive our search for a better world; developing a rigorous diagnosis and critique of existing social structures and institutions in terms of those values; elaborating models of emancipatory alternatives that better realize those values; and understanding the conditions and strategies for transformations that move us towards those alternatives. Sociology, in its various critical traditions, has focused mainly on the second of these – the diagnosis and critique of the way existing social processes generate harms in the world. It is now especially imperative that we engage the rest of this agenda. The idea of "real utopias" is one way of doing this. It is a way of connecting ideas about emancipatory destinations beyond the existing world to practical transformations that prefigure such alternatives. The "utopia" in real utopia insists on developing visions of alternatives that embody our deepest aspirations for a world in which all people have access to the conditions to live flourishing lives; the "real" in real utopia means taking very seriously the problem of the viability of institutions that could effectively move us in the direction of that world.

#### *Digital Contention: Anonymous and the Freedom of Information Movement*

The main task of this paper is to analyze the online collective known as "Anonymous" as a case study using the theoretical framework of traditional social movement studies. I outline this framework in the literature review section of this paper as nine distinct characteristics, each pertaining to a different aspect of social movement research. My purpose in doing so is to argue that Anonymous is part of a larger, loosely-connected new social movement, which I call the Freedom of Information Movement, as well as to show how its unique characteristics which have developed out of new digital technologies are making it necessary for sociologists to update and expand upon our existing theories and concepts of so-

cial movements. Some of this work has already begun. There have been several, though not many, studies of cyber-activism, hacktivism, digital repertoires of contention, cyber diffusion, online activist networks, and decentralized organizational forms of online movements. Through a combination of historical and qualitative content analyses of news articles, websites, operational fliers, and other written materials associated with Anonymous, I am attempting to build upon and expand this new and growing paradigm concerning online social movements and digital forms of contention.

#### *Child Abuse and Public Inquiries: Historicizing the Imperative for Openness and Disclosure*

By the late twentieth century, an imperative for openness and transparency – what might fruitfully be called a 'culture of disclosure' – was increasingly evident across all spheres of social, political and personal life in the West. While this can be identified in disparate domains, it has been particularly striking in relation to discourses of child abuse. This paper explores the imperative for openness and disclosure about the abuse and neglect of children against the backdrop of emergent constructions of childhood vulnerability since the 1970s. It takes as its focal point a key instantiation of societal openness over the last several decades: public inquiries into childhood maltreatment. While official inquiries have a number of functions, a key purpose is acknowledged as 'learning lessons' from the past in order to prevent future recurrence. Given it is now widely accepted that people who have suffered abuse and neglect as children often face lifelong challenges, including poverty, social isolation and poor mental health, there is a strong warrant for investigations that throw light on cases of past abuse. This paper first considers the rise of public inquiries in a number of countries, including the United Kingdom, Ireland and Australia, as exemplars of increasing societal concern about childhood vulnerability and abuse. Second, it examines inquiries against the backdrop of emerging theories of human development and psychological research that re-shaped how childhood experience, and the effects of ill-treatment, came to be understood. Finally, it explores the public pedagogical function of inquiries, and makes a case for the use of official inquiries in understanding broader processes of social change; in this case, changing concepts of childhood vulnerability and the emergence of social and educational policies aimed at safeguarding children and promoting their wellbeing.

**WRIGHT, KATIE\*** (The University of Melbourne, [kwright@unimelb.edu.au](mailto:kwright@unimelb.edu.au))

#### *The Role of Official Inquiries in Understanding and Preventing Childhood Maltreatment*

The 1970s saw both the emergence of child abuse as a recognised social problem and the rise of public inquiries to investigate issues of major social concern, including childhood maltreatment, in a number of Western countries. In the United Kingdom there have been more than 80 inquiries into various aspects of childhood abuse and neglect over the last four decades. In Ireland, 14 reports published since the 1990s have examined abuse in schools and institutions. Similarly, in Australia, growing concern about the welfare of children in out-of-home care has prompted a number of official investigations, the most recent being the current Royal Commission into Institutional Responses to Child Sexual Abuse. It is one of the largest public inquiries in Australia's history and like the Irish Ryan Commission before it, is likely to be one of the most significant inquiries into historical instances of child abuse internationally. Through examination of a number of prominent inquiries, this paper first explores the role of official inquiries in social and educational policy reform, and in shaping public understandings of the problem of child abuse more broadly. It then considers the cathartic function of inquiries for victims and for societies more broadly, through exploration of the notion that inquiries reflect an open and transparent society in which 'the voices of the powerless are heard' and the powerful are held accountable. Finally, the paper analyses the fraught social justice issues at play in the investigation of past instances of abuse, and the promise of social and institutional change aimed at better protecting young people today.

### *Choreographing Risk: Multiple Sociotechnical Networks of Multiple Pregnancy*

This paper creates the concept of "choreographing risk" to explore the socio-technical networks of multiple pregnancy, mostly caused by assisted reproductive technology. I argue that during the processes of assisted conception and multiple pregnancy, heterogeneous elements of technical, legal, financial, emotional, political and gender, are coordinated around risk. Data includes in-depth interviews of women and medical professionals, and archival data. I find that in the stage of getting pregnant with assisted reproductive technology, doctors tend to use multiple embryo transfer and ovarian stimulation medication to increase the pregnancy rate. Both doctors and women perceive failure of conception as the major risk, and tend to disregard the risk of multiple pregnancy. In the case of multifetal conception, fetal reduction becomes a technical model to reduce the risk of multiple pregnancy. However, some women and doctors refuse this technique for reasons other than health risk; network of fetal reduction often collapses. High prevalence of multiple pregnancy in Taiwan exists. Pregnant women of twins and triples take embodied responsibility to avoid risk of premature birth, including diverse bodily work, and negotiation between productive and reproductive labor. This paper shows that as women vis-à-vis medical professionals become more and more the central choreographer in the multiple networks of multiple pregnancy. For policy implication, I suggest adjusting assisted conception methods, such as reducing the number of multiple embryo transfer during in-vitro fertilization, to relieve women from the hard labor of multiple risk choreography.

### *How Scenes Drive Housing Prices in Beijing*

Wu (2011) proves that Scenes heavily influence the urban residential choices in China. In that paper, an analytical framework is constructed to study 375 counties of 35 large cities in China. The objective of this paper is to improve on the previous analytical framework and delve into an examination of neighborhood level housing markets. Specifically, we focus on the city of Beijing in this paper and collect a dataset which includes three-year housing prices data and 85 types of amenities from 220 neighborhood areas in Beijing. In addition, we develop a novel technique to overcome the drawbacks of the original theory in spatial evaluations due to strong spatial autocorrelations among housing prices. We also employ geographically weighted regression and Kriging mapping to support our analyses. Our conclusions are the following: (1) the distribution of local culture and amenities is polarized in Beijing; (2) housing prices in Beijing are significantly influenced by neighborhood level culture and amenities; (3) the distribution of housing prices in Beijing has the shape of a comet, corresponding to the distribution of local culture and amenities, and with tails spreading towards the northwest.

### *The Research of Cost Performance of Urban Housing in China: Base on the Theory of Scenes*

In the last decade, the rising real estate price in Mainland China has become a worldwide issue. All walks of life paid close attention to the urbanization process stood by flourishing Real Estate Market in China. Moreover, some scholars have more emphasis on crisis and bubble hidden by the fast-rising real estate price. Researches and analysis on commercial housing vacancy ratio, relationship with housing price land value and Housing Price-to-Income Ratio have occupied the mainstream. These researches either stressed the influence on housing price by the cost of residential land from the perspective of supply or underlined the mismatch of housing price and per capita income from the perspective of demand. However this paper argues that whether there exist bubbles in commodity residential market is a dynamic equilibrium process, it is difficult to judge only by one-side factors. Hence according the Theory of Equilibrium Price posed by New Classical Economics, this paper re-examine the residential market bubble issue in China from a totally new perspective- cost performance of commodity housing based on Principle of Supply-demand equilibrium. Using ideological system of the latest achievements of Scenes Theory from Chicago School, this paper selected Panel data from 2001 to 2012 in 147 main cities in china, built urban residential Scenario index to measure cost performance of commodity housing in different regions in China and empirically proved the rationality and validity of the index. Finally this paper points out that urban cost performance of commodity housing ruled low in general, Second-tier cities had a low commodity residential market bubble level rather than first- and third-tier cities had a high level and offers targeted policy recommendations for macro-control of real estate market of the government of China.

### *Micro and Macro Conditions for Happiness in Urban China*

Despite the large literature on happiness research, sociological studies on the social determinants of happiness in China remain rare. This study examines not only micro conditions for happiness but also the potential interplay of micro and macro conditions in urban China. Specifically, we focus on some wide-studied and much overlooked micro conditions, socioeconomic achievements (what you get) and non-cognitive skills (who you are), respectively. However, the happiness effects of micro conditions may well differ across macro contexts. We thus investigate how the happiness effects socioeconomic achievements and non-cognitive skills depend on the level of economic development in urban China.

Our data are drawn from the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey. Socioeconomic achievements refer to years of education and annual total income. Non-cognitive skills refer to conscientiousness, operationalized by indicators of consistency, dependability, and deferral of gratification in performing the student role. Macro condition refers to urban areas in the most developed provinces versus less developed provinces, as indicated by provincial-level GDP per capita. We obtain three main findings: (1) Both adolescent conscientiousness and personal income, but not education, enhance personal happiness. (2) The happiness effects of education and income are highly contingent on the level of development, with education having a positive effect in less developed areas but a negative effect in more developed areas. (3) The happiness benefit of conscientiousness is robust across urban areas of high and low economic development. The evidence thus suggests that the micro conditions for happiness do depend on certain macro conditions in China. There is a penalty on happiness for high achievers of education and income in the most developed urban areas, but the happiness effect of adolescent conscientiousness is uniform across development contexts.

### *Personality Traits, Socioeconomic Inequality and Subjective Well-Being in Urban China*

This paper brings together two literatures: a large literature of health inequality that has long documented the robust health benefits of socioeconomic status (SES) and a new human capital theory that emphasizes the health benefits of certain personality traits. We examine the potential dynamics between psychological functioning (personality traits and competitive pressure) and socioeconomic inequality in the context of subjective well-being (SWB). Specifically, (1) does adolescent conscientiousness (one of the "Big Five" personality traits) affect socioeconomic status (measured by education and income) in the transitional economy of

urban China? (2) Does adolescent conscientiousness also modify (interact with) the SWB effect of SES? (3) Are the SWB effects of conscientiousness and SES contingent on the degree socioeconomic competition of an urban area?

Drawing on the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey, we measure SWB with multiple indicators of positive and negative affect and conscientiousness with consistency, dependability, and deferral of gratification in performing the student role. We obtain three main findings: (1) Adolescent conscientiousness enhances education and income. (2) There is no interaction between adolescent conscientiousness and SES in predicting SWB. Each has independent effect on SWB. (3) However, psychological functioning and structural inequality interplay in a more complex way. We use level of economic development as an indicator of the degree of socioeconomic competition. While the SWB benefit of conscientiousness on SWB is robust across urban areas of high and low economic development, the SWB effects of education and income are highly contingent on the level of development. The evidence suggests that there is a penalty on SWB for high achievers of education and income in the most developed urban areas. Thus psychological functioning does not only affect socioeconomic achievement, it also critically determines the SWB benefits of socioeconomic achievement.

#### *Perceptions on Hurricane Information and Protective Action Decisions*

Tropical storms and hurricanes have caused extensive casualties and damage in past decades. Population and economic growth in the vulnerable coastal areas have made hurricanes a serious problem and created the potential for a catastrophic loss of life. The existing research literature lacks a sufficient scientific understanding dynamic protective action decision making during events in which additional information becomes available over time. Emergency managers and residents in the risk areas are most likely to make decisions on their protective actions based on National Hurricane Center's hurricane forecast advisories. This study uses the *DynaSearch* program to conduct a computer-based experiment that the understanding of hurricane strike probabilities and their choices of protective action recommendations during four different hurricane scenarios by having students playing the roles of county emergency managers. This study simulates the approach of a hurricane by providing experiment participants a sequence of hurricane forecast advisories and examining their threat perceptions and implement protective actions over time. The results show that (1) people's hurricane strike probability judgments and protective action recommendations escalated as hurricanes approached to their counties; (2) people realized that hurricane could make turns and might not always follow the forecast track; (3) risk assessment variables are correlated with people's disaster responses; (4) hurricane experience has a significant effect on protective action recommendations; (5) participants failed to evacuate appropriate risk areas in timely manner; and (6) participants had difficulty interpreting strike probabilities. The results suggest that participants were able to utilize the available hurricane information to make reasonable judgments about each city's relative strike probability. However, their failure to take appropriate actions suggests a need for more comprehensive training on what actions to take in response to the hurricane information displays.

#### *Claiming a Sub-Urban Citizenship: Migrants, Parenting and Reunited Households in Margins of Beijing, China*

This paper explores the new realities and challenges facing skilled self-employed migrants who have worked in Beijing for almost two decades and who tend to settle in the far-off, intersecting area between the rural and urban spaces of the city (*chengxiang jiahequ*). Based on extensive field research and in-depth interviews with some of these veteran migrants, this paper asks these questions: how do veteran migrants define their living space and resist structural discrimination? The research shows that veteran migrants are able to unite with their left-behind children and wives in the outlying area of the city, where cheap accommodation, public education and an informal economy are available. Examining the ways these migrants speak about parenting strategies, reuniting households and take advantage of various resources and opportunities in the intersecting area, this paper argues that they make claims on what I call a "sub-urban citizenship." The paper joins a broader discussion on citizenship mutation in the global era and argues that the concept of sub-urban citizenship allows one to understand the nuanced and everyday strategies peasant migrants actively assert to enfranchise themselves.

#### *Left-behind and/or Migrant Statuses, Social Capital, and the Mental Health of Children in Rural China*

Children migrating to the urban cities with their parents and children left behind in the rural counties by their migrant parents are two vulnerable populations accompanying the rural-urban migration in mainland China. Some of these children even have dual experiences of being migrant and left-behind at various occasions due to their parents' return migration as a consequence of the economic downturn or other family decisions. Despite a growing body of literature on the mental health of either migrant children or left-behind children, no previous study had ever tried to distinguish the various experiences of being migrant or left-behind, or both, that might contribute to children's well-being. This study was aimed to investigate how the left-behind experiences of children living in the rural context of China influenced their mental health status, with their potential migration experiences being taken into account. Moreover, it investigated how the effects of left-behind experiences on mental health might be mediated by the stock of social capital in their family and neighborhood.

Data of this study came from a questionnaire survey with 701 children ages 11-18 living in the rural counties of Guizhou province, China. The structural equation modeling results suggested that, compared to those rural children who lived with both parents and never had any experience of being migrant or left-behind, children who were currently left-behind and had some previous experience of being a migrant appeared to exhibit higher levels of depression. Children who used to be left-behind but lived with both parents at the time of study tended to experience less depressive symptoms, demonstrated both as the direct effect of their unique left-behind experiences and through the mediating effect of social capital in the family. Implications of these research findings were further discussed.

#### *Ethnic Autonomous Policy and Ethnic Inequality in China: An Evaluation*

China's 55 ethnic minorities constitute about 9 percent of the national population, and most are concentrated in remote areas and disadvantaged in social and economic development compared to the Han majority. To promote ethnic inequality, Chinese government has instituted the ethnic autonomous jurisdictions at different levels: 5 autonomous regions, 30 autonomous prefectures and 120 autonomous counties/banners, covering 71 percent of ethnic minorities and 64 percent of the territory as of 2005. This paper aims to employ China's census (from 1982 to 2010) and the mini-census data in 2005 to evaluate the effectiveness of such a policy on ethnic disparities in educational, occupational attainment and income. Specifically, we will employ the causal inference methods to investigate the experience of ethnic minority (relative to Han) living under their own autonomous jurisdiction and their counterparts otherwise. The findings will have important implications for China's policy towards ethnic minorities.

#### *Trends in Intergenerational Social Mobility in China*

This paper studies the intergenerational social mobility pattern in the People's Republic of China over half six decades, based on an analysis of 5 cohorts (born between 1932 and 1988) from a series of national representative surveys conducted in 1996, 2005, 2006, 2008, 2010, 2012, respectively. In the context of rapid economic industrialization since 1949, the absolute mobility rates in China increased over time, but the level is much lower than other countries. The relative mobility patterns were largely stable for both men and women except for the youngest cohort. Education played an important role in intergenerational social reproduction: the effect of origin on educational attainment does not change over time, and but the effect of education on destination does. The household registration (*hukou*) system that the Chinese government installed in to curb the rural-urban migration in the course of socialist industrialization created a unique pattern of social mobility in China that deviates from core models of social mobility found in other countries. The market reform has altered the pattern of social mobility: the effect of origin on education increased and the market-oriented reform seems to enhance the inter-generational transmission.

#### *Between the Individualism and the Collectivism: Dilemma in the Socialization of Today's Chinese Adolescents*

About one hundred years ago, William Bagley put forward several controversial issues on different trends of education concepts. One of them concerns the debate between two opposite values in pedagogy: the individualism and the collectivism. If these two values represent and distinguish two different notions in diverse civilizations, especially during this transitional stage and the context of globalization, today's Chinese youths are the first generation whom simultaneously contact with various cultures from the Western world and from their own tradition, thus directly confronting this dilemma during their socialization.

On one hand, Chinese social convention attaches importance to the strategies needed in maintaining a collective life, in which individuals should adhere to Doctrine of the Mean in hopes of becoming invisible within the community; On the other hand, the competition advocated by market economy require individuals to show their uniqueness in order to stand out above others. Moreover, the Confucian family tradition is used to emphasize that an individual submits to the collective interests but disavows his or her public responsibilities. However, civil society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today's Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships? How do they consider their civic responsibilities and their social connections? Which values represent, for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by quantitative and qualitative analyses, the inclination and the hesitation of this young generation facing the obligation of the familial collectivist tradition with that of the impacts of the individualist civic innovation.

#### *Re-Thinking Political Trust in China*

Political trust matters as it reflects a regime's perceived legitimacy. Cross-national survey research shows that political trust in China is very high. This is puzzling because China is not only governed by an authoritarian regime but it also has serious corruption and large wealth inequality. The high trust exhibited within the Chinese context is therefore questionable.

In this study, we argue that there are at least four key points that need to be considered when using survey data to examine political trust in China. First, the Chinese notion of "Xinren" commonly used in surveys such as the World Values might be different from western concept of "trust". Second, questions about political values are sensitive, especially in China, and therefore the distrust in interviewers and political fear may lead Chinese citizens to overstate their trust in the authoritarian government. Third, the political system and culture of imperial China could still have an impact on those Chinese respondents who hold traditional values. Fourth, the collectivist nature of Chinese cultures and the cultural tradition of being modest may encourage Chinese people to hide their political values.

Using the Chinese General Social Survey (2005 & 2006), in this study we explore how traditional cultures and interview contexts impact the expression of trust among the Chinese. We distinguish between trusting attitudes and trusting behaviors. We use alternatives to the stand question asking directly how much confidence people have in government, as the measure of political trust. We conclude that trust in government is much lower in China than is suggested by research based on the World Values and other well-known surveys.

#### *Food Security Part II. Politics of Food Security in Asia Pacific: Neoliberal Reforms, Contamination, and Social Movements*

Food Sovereignty Movements under Neoliberal and Frontier Capitalisms in Thailand and the Mekong

The concept of "food security" has been enshrined in official ASEAN including Thailand's government documents. It is argued that there are increasing evidence of rural and some urban-based social movements related to food could be more readily conceptualized under the food sovereignty concept. Situated in the tropics, Thailand like other Mekong and ASEAN countries are rich in agrobiodiversity. Modern agriculture, diverse cash crops have been promoted as sources of foreign currency for the country, with much less recognized negative impacts. These farming systems necessitate the use of agro-chemicals and monocropping practices resulted in the loss of agrobiodiversity. More recently, expanding industrialized agricultural and animal husbandry practices have been promoted responding to market demands of globalizing trade. In these contexts, food sovereignty movements have been observed, from ethnic tribal highland rice farming, new organic and sustainable agriculture including traditional mixed ones, peasant-to-peasant seeds sharing, struggle to defend local-

ly produced food, be it marine and coasts against mega-energy, deep sea gas/oil drilling and industrial projects of either national or multinational enterprises. Despite somewhat shared concerns for food security, improving livelihoods livelihoods and sustainable agriculture between the farmers, the state and civil society groups, tensions are evident in power imbalances embedded in these, and and contradictions in the policy spheres.

This paper aims at substantiating the transformative potentials and significance of these movements in transcending the present productivist and growth-centric discourse.

#### *The Persistence of Gender Inequalities in Australia Workplaces: An Analysis of Two Generations*

Drawing on the two-decade Life Patterns longitudinal study that follows the lives of two generations of Australians (popularly known as Gen X and Gen Y), through their transitions from education into the workforce, this paper investigates the factors contributing to gender equality in workforce participation and in the labour market. Focusing on female participants in the Life Patterns study, we draw on qualitative and quantitative data to examine the micro and macro explanations that underpin this phenomenon. Firstly, we briefly analyse the impact of social and cultural values in the development of egalitarian approaches to the field of education that have contributed to the expansion of the participation of women in tertiary education and, subsequently, the workplace. Secondly, we focus on neoliberal sensibilities and values underpinned by the concept of choice to understand the egalitarian values that exist alongside persisting gender inequality. Finally, we argue that while institutional arrangements are needed to address persistent inequalities around women's roles and participation at work, there is also a need to scrutinise social and cultural beliefs about work and gender to achieve greater equality.

#### *Discrimination Facing Immigrant Job Applicants in Poland - Results of a Field Experiment*

In the 'global race for talent,' many factors can affect the attractiveness of a particular country for migrants, including the likelihood of securing employment commensurate with their qualifications. Empirical data, however, show that immigrant status and/or ethnicity act as stratifying mechanisms, and can contribute to inequality in the chances of migrants' securing adequate employment versus those of native workers. Whether this inequality is affected by factors related to the labor supply side (e.g., differences in skills) or by the labor demand side (e.g., discrimination by employers) often remains unclear. It is also an open question whether migrant status plays a similar role in homogenous nations where there are no established foreign-born ethnic or immigrant groups as it does in nations with a long history of immigration. In order to investigate whether and to what extent there is an 'immigrant and ethnic hiring penalty' in the primary labor market of one of these 'new immigration' countries -- Poland -- we conducted a natural experiment. Ostensibly on behalf of potential employees, we sent over 3,500 applications in response to job advertisements. The candidates were equivalent in their human capital, but differed in their ethnic and national backgrounds. The results show a statistically significant net discrimination against immigrants. However, contrary to our predictions, discrimination against 'white immigrants' is stronger than that against 'ethnic immigrants'. We also observed different levels of discrimination against immigrant men and women, depending on the type of the job and size of the company. Specifically, there is greater discrimination against immigrant females applying for typical female-type jobs, whereas the likelihood of discrimination is higher among immigrant males applying to large companies. We discuss possible explanations of the observed effects, with particular focus on predictions from economic theories of statistical discrimination and from the status characteristics theory of double standards.

### *Multilingual Education of European Union – Backstage of Ideology*

The image of state education, together with visions of its main functions, priorities and expected results are constantly being reshaped under the impact of various social, economic, political and cultural changes. Being a powerful tool of influence, education is often becoming the battlefield of different interests, the most powerful of which have their reflection in educational policies and practice. This paper concentrates on the case of Poland, which faced several important transformational processes during last decade, among most important of which is joining the European Union (2004). What impact on educational system and its actors did it have? This paper investigates how EU's directives and recommendations influenced Polish educational system, using the example of foreign language proficiency. In 1995 the European Commission published a White Paper on Education and Training, which states that each citizen of European Union must speak at least two foreign languages, which would enable mobility and competitiveness on the labor market. This is the starting point of the analysis of the paper, which will present the insight to EU recommendations concerning foreign languages and relate this data with the actual educational reforms in Poland in 2004-2013. Further on, the paper will concentrate on the analysis of the foreign language skills characteristics of Polish citizens in 2013, using the data gathered in Polish Panel Survey POLPAN and European Survey on Language Competences (2011). Interpreting the results, the paper confronts the dominating idea that Poland should 'catch up' in learning foreign languages (Poland National Summary ESLC, 2011) and opens the questions of whether foreign language proficiency is an unavoidable condition of modern world and to which extend the multilingual pressure creates the new marginalization, unequal relationships and uneven chances.

### *Contested Controll: Irregular Transit Migrants in Europe*

This presentation is about young migrants' journeys with low chances of receiving asylum or any other type of residence in Europe. These migrants exhibit a highly complex migration pattern. First, these migrants are frequently in durable "transit" across Europe, moving back and forth between different states. Second, transit migrants must exhibit a high degree of flexibility, as they have to respond to suddenly changing conditions, such as work opportunities, rejection of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty and psychological distress. The experience of these young adults shows a deep ambivalence between a sense of autonomy, on the one hand, and of profound hope- and powerlessness, on the other. This presentation explores the "fragmented journeys" of these migrants, by way of a multi-sited ethnographic approach and biographical interviews. It focuses on the lived experiences and the strategies of irregular migrants to find a way to reside in Europe in the context of an increasingly restrictive migration management.

### *Is Another Economy Possible? the Prospects of Social Entrepreneurship from the Business Viewpoint*

The dynamics of the economy goes through three strands: the State, the market and civil society. The State, in principle, is characterized by the logic of intervention, by the regulation and entrepreneurship; the market prefers the competitive logic; and the third sector step by associative pathways. Currently, the economy of many countries goes through times of turbulence. The State no longer meets the diverse needs of its population; private companies are increasingly profitability. Social "companies", in principle, have many weaknesses in their management and, in this regard, we realize that there is a disruption of economic and social order in society, like: increasing poverty, violence, environmental degradation and so on. We need an alternative to the productive process. In this way, the social entrepreneurship enables new forms of economic activity management with a logic contrary to market economies. In this paper, we describe an entity of third sector with the solidarity economy approach, through social entrepreneurship postulates. Our research is descriptive, qualitative, being a case study on a social entity. We use observation and documentary work for data collection and the analysis of the content reflected the catalogued information. The results suggest that there is a new economic order and that other alternatives practices of economic production are viable. Cooperating companies can be managed by the competitive logic, but with emphasis on the collective human needs. The entities have vision of solidarity and aim financial and social profit as well. The local market is valued and the cooperative process is visible. On the other hand, is not easy to maintain an organization of this type in the market, with associative goals. Predatory and unfair competition of traditional companies undermines the survival of social entities. Finally, the success achieved by the Organization studied shows that another economic production is possible.

### *Worker Agency In Chinese Internet Companies*

This paper examines the role that workers in Chinese internet companies play in relation to potential transformation of both online and offline China, by examining how workers in the organisations negotiate the gaze of the allegedly authoritarian state, and how they use the internet to create meaningful, expressive and resistant spaces. This paper outlines the complicated context of Chinese internet industries, in which Chinese state plays a significant role, and the difficulties that workers in internet companies face in their efforts to create alternative online spaces. The paper then discusses the various ways in which workers mobilise their agency, such as acts of negotiation and resistance, in order to respond to interference from the state. This paper also discusses how workers' acts of negotiation and resistance in workplace, the internet companies in this research, contribute to creating a new online space which gives voice to diverse classes in contemporary Chinese society.

On the one hand, this paper contributes a valuable perspective to explore the shaping of the new and socio-cultural space of online China, by suggesting a focus on workers in internet companies. On the other hand, this paper also contributes to debates about workplace agency. I argue that the tradition of understanding worker agency as workplace resistance is limited. As an alternative, some forms of worker agency can be characterised as negotiation, which might open up possibilities for online China in different ways. Meanwhile, I also argue that the tradition of understanding worker agency in the context of workplace is limited; rather, it is necessary to discuss such worker agency in the socio-cultural context, such as the resistant space of offline China.

### *Who Becomes Registered Urban Resident during China's Massive Urbanization: Assessing the Roles of Human, Political and Social Capital*

#### Background

Over the last half-century, registered urban residents persistently occupy an advantageous position over rural residents or rural-urban migrants in obtaining good jobs, health care, housing and even education for their children. Therefore, transforming one's household registration (*hukou*) status from rural to urban is a very effective path to upward social mobility. Prior research shows that education, Party membership and military service are the three most significant predictors of *hukou* conversion. However, the finding does not have the necessary data to address the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in *hukou* conversion.

#### Question

We re-examine the roles of three types of predictors in *hukou* conversion: human, political and social capital.

#### Data and Analysis

We draw on the 2008 Chinese General Social Survey that provides crucial timing data for life events, including the timing of *hukou* conversion for both the respondents and their spouses, first marriage and joining in the Communist Party.

#### Empirical Findings

(1) Education is a far more powerful credential than expected, facilitating the use of not only educational channels, but also a wide range of state sponsored conversion channels, such as military, employment in state sector or cadre; (2) when reverse causation is thoroughly eliminated, we show that Party membership actually impedes, not facilitates, *hukou* conversion, and thus wholly contrary to the view of the prevailing literature. By controlling for the impact of unobserved heterogeneity, the results suggest that securing Party membership in one's home town appears to undermine the incentive for mobility to urban areas by enhancing the chance of one's local success; (3) marrying an urban husband is rural women's social capital for *hukou* conversion, almost completely offsetting the human capital advantages of rural men, resulting in no overall gender difference in becoming registered urban residents.

### *Income Inequality in Today's China: How High and Why so High?*

In this paper, we first document a rapid increase in income inequality in China's recent past, capitalizing on newly available survey data collected by several Chinese university survey organizations. By now, China's income inequality not only greatly surpasses that of the US but also ranks among the highest in the world, especially in comparison to countries with comparable or higher standards of living. We argue that China's current high income inequality is mainly driven by structural factors that have been sustained by Chinese political system, the main structural determinants being the rural-urban divide and the regional variation in economic well-being. Analyzing 2005 and 2010 comparable survey data in China and US, we examine these structural determinants that may help explain China's high income inequality. Our results show that for both periods, once we factor in China's large structural inequality due to the rural-urban divide and the regional variation in economic wellbeing, China's remaining inequality closely resembles that of the U.S.

**XING, GE\*** (Fudan University, [geleoxing@gmail.com](mailto:geleoxing@gmail.com))

### *A Differentiated Community: Chinese Journalists and Their Interest-Driven Professionalism*

Professionalism of journalism has been debated in China in the past decade, partly because of the commercialization of the mass media and emerging elite media. It still remains a question whether there is a journalistic professionalism in China, or whether such professionalism is a fragmentary one instead of a coherent one. However, it is clear that traditional mouthpiece role of Chinese mass media has no longer been able to offer enough explanation to portray the current change in such a profession.

This paper focuses on one special phenomenon in Chinese journalistic activity usually named "red-envelop journalism" or paid journalism. Journalists routinely accept money and other gifts from news source including government officials, industries and even foreign companies, which in western journalism is viewed as bribe. However, in Chinese social context, it should be considered more complicated rather than merely a violation of professionalism.

In this paper the transition of function and structure of paid journalism from the mouthpiece era to the current party-market corporatism situation is historically reviewed and analyzed. Then by participatory observation and interview, it is concluded that professionalism is interpreted mainly according to differentiated interests such as fame, market and political capital within journalist community and by other participants in the institution. It is also noted that journalists use interpretative discourse to explain and defend such interest-driven professionalism. Consequently these developments may have profound implications for the transition of Chinese media from a lapdog perspective to a guard dog perspective, while the traditionally defined perspective of professionalism as a watch dog is dismissed.

### *Legacies of the Sichuan Earthquake: Disasters As Past and Present Political Events*

This paper examines legacies of the 2008 Sichuan earthquake in China in politics of subsequent disasters, particularly Yushu and Ya'an earthquakes. The legacies were manifested in three political realms: state leaders' compassionate performance, the state's cooperation with the civil society, and mourning rituals for disaster victims. While the Sichuan earthquake provided a cognitive template for people to interpret subsequent disasters as well as a political action patterns for political actors to follow, its legacies' features and effectiveness varied across events and realms. First, while leaders' compassionate performance in subsequent disasters resembled Premier Wen Jiabao's in Sichuan, it was much less effective. Second, the state's cooperation with the civil society organizations was politically selective and biased. Third, the mourning ritual for disaster victims was institutionalized but deprived of its substantive meaning, and the spontaneous mourning for student victims of the collapsed schools was suppressed. This paper explains the variations by examining both situational and structural dimensions of state-society relations. I argue that structural tensions between the state's moral legitimation and its other political interests as well as contextual factors alter the shaping power of the Sichuan earthquake's legacies. More broadly, I propose a state-society relations perspective to theorize political legacy.

Hermeneutics and Cultural Sociology: A Discussion between Alexander's "Strong Program" and the "Cultural self-awareness" of Chinese Sociology  
Bing Xu, Shanghai University, China

Jeffery Alexander's concept of cultural sociology is closely related to hermeneutics, and hermeneutics has been built continuously as well as cultural sociology. He and Philip Smith's "strong program" takes Dilthey's hermeneutics as its philosophical resource and late Durkheim as its classic sociological resource (Alexander and Smith, 2003). What is the relationship between the two resources? My viewpoint is that both of them are inspired by Wilhelm von Humboldt's metaphor of "the web of language" in German Romantic Philosophy, which plants the seed of modern hermeneutics (cf. Taylor, 1985: 231). "The web of language" is expanded from text-like actions by Dilthey, and from text-like action to social structure by Durkheim. Durkheim articulates his approach to reach beneath the symbol to grasp the social reality around 1920, which has hermeneutical implications (cf. Durkheim, 1995: 2). This approach has been transformed into structuralism in the French tradition in early 20 century, and has been extended by Alexander between French structuralism and American pragmatics as "cultural pragmatics" in the turn of 21 century.

Chinese sociologist Xiaotong Fei (2003) argues that hermeneutics is a powerful approach for the "cultural self-awareness" of Chinese sociology, because the profound thoughts on mind in Neo-Confucianism of Song and Ming Dynasties has hermeneutical implications. I would argue that hermeneutics can be developed in this exploration, and in return, the exploration can be pushed forward by the expanded hermeneutics. The hermeneutics in this context is different from that of Alexander but can be inspired by the latter.

**RC28-492.2****XU, DUODUO\*** (Hong Kong University, [dxu@ust.hk](mailto:dxu@ust.hk))*Aspirations, Motivations and Immigrant Children's Unexpected Success in Education*

Evidences have shown that despite their undesirable family background, immigrant children are doing unexpectedly well in education when compared to their native counterparts. Previous studies have failed to prove that strong motivation towards better life and high aspiration for upward mobility may contribute to their academic success. To fill this gap, I use Hong Kong PISA data to identify four types of incentives that theoretically would cause immigrants' outstanding performance, and use mediation analysis to measure how much of the effect of immigrant status on academic achievement is mediated through these factors. The results confirm that aspirations and motivations do mediate a part of the immigrant effect on mathematics achievement, and educational aspiration seems to be the relatively more important one. For immigrant students from families with low socioeconomic status, although their academic advantage is especially large, but that does not mean they have stronger motivations and higher aspirations.

**JS-83.3****XU, PENG\*** (Wuhan University, [xupeng1986@whu.edu.cn](mailto:xupeng1986@whu.edu.cn))*Factors Associated with Subjective Well-Being in Chinese Elderly People*

This paper used the data from China General Social Survey to examine factors related to Subjective Well-Being (SWB) in Chinese elderly people. I constructed a conceptual model adapted from Anderson's health behavioral model and probed the associations between SWB and predisposing, enabling, need and health behavior factors. I discovered that higher SWB is more likely to be found in elderly people who have spouses accompanied, maintain good quality of relationship with family relatives and friends, have stronger need for recreational activities, have better health status, exercise more, perceive an increase in their current socio-economic status compared to previous situation, and remain optimistic about their future socio-economic status. Results also suggested that enabling factors (socio-economic status and quality of social connections) can impose more influence on elderly people's SWB. Thus, policies that maintain or boost the perception of upward socio-economic mobility and that enhance harmony between older people and their relatives and friends should be given special consideration in future.

This paper is devoted to the analysis of the Russian Media during the "Snow Revolution": the period of a political crisis in Russia between December 2011 and March 2012. The falsification during the parliamentary elections caused numerous demonstrations and street actions, which continued till the presidential elections.

The social networks played undoubtedly important role at that time: as a source of information, as a mean of mobilization and as an environment for the discussion and reflection. As a consequence, several recent studies of the "Snow Revolution" have been focused on social networks, such as Twitter or Facebook.

Unlike these previous studies, this paper is focused on more traditional sources, such as newspapers, information agencies and news feeds on the Web. We address two interrelated research questions: first, how the socio-political crisis affects the content and language of the Media, and, second, to what extent their view of the events represents the public opinion.

To answer these questions we use various types of evidence. First, we collect large corpus (52 millions tokens) of Russian news, published both during the "Snow Revolution" and before this period; we automatically extract the statistically significant keywords that characterize the investigated period. Second, we conduct the experiment among 104 informants who were asked to recall words and phrases that they associate with the "Snow Revolution".

We compare the results of these experiments and discover the correspondence between the news and the survey responses; this demonstrates that the traditional news still have an impact in mind-shaping of certain strata of people. We compare our results with the dictionary of neologisms collected by FaceBook users and post-edited by professional linguists, and come to an idea that a self-reflection of the social networks users not necessary represents the real processes in language and society.

**JS-93.2****YALCIN-RIOLLET, MELIKE\*** (Centre Maurice Halbwachs (CNRS-EHESS-ENS), [yalcinmelike@gmail.com](mailto:yalcinmelike@gmail.com))**GARABUAU-MOUSSAOUI, ISABELLE** (EDF)*An Emerging Energy-Focused Community in France: A Local and Social Innovation*

Can we talk about "ommunities" in the field of energy in France? Local and citizen-led initiatives relating to energy are developing strongly in Anglo-Saxon countries and a growing body of research is examining the innovative potential of these grassroots initiatives, known as "community energy". In France, similar initiatives – albeit with certain specificities – only began to emerge recently (in parallel of and related to the Degrowth Movement and the Transition Towns), and so far, very few studies have dealt with them. The purpose of this communication is therefore to propose an exploratory and in-depth analysis of one advanced French case, that of Le Mené, a pioneer in local energy autonomy. We examine the conditions under which the initiative emerged, and the processes through which a grassroots innovation is formed and developed. In studying this case (interviews with key actors and inhabitants, analysis of documents), comparing it with other sources of data (interviews with experts, comparative observation of other on-going initiatives) and taking stock of various social sciences studies, we show that a social innovation was produced in Le Mené through the hybridisation of actors, sociotechniques and discourses. This local initiative was innovative not only in terms of the scope of the implemented equipments, but also in terms of the social organisation behind the development of the projects and the capacity to use energy production as a social resource. Finally, the case study highlights the emergence of a new form of collective action and reflects on its possible diffusion in France.

## *Why so Weak? : The Social Conditions of Labor Insurgency in Malaysia*

Many Asian countries have experienced rapid industrialization and developed manufacturing for the past several decades. Given that manufacturing was traditionally one of bases of labor activism in many countries, the growth of manufacturing can activate the labor movement. In fact, as a result, some newly industrialized countries including South Korea and China have also experienced labor upsurge in a large scale. However, in Malaysia, which has also been remarkably industrialized since the 1970s, there does not necessarily exist a strong labor movement. This paper seeks to explore the reason why the labor movement in Malaysia is so weak even though manufacturing has clustered. Firstly, the brief history of Malaysian labor movement is reviewed and the labor movement in Malaysia used to be very active in the past. Secondly, taking into account various social factors such as class relations, organizations, institutions, networks, and the state, the cause of the weak labor movement in Malaysia is clarified. Thirdly, examining the recent process of the enactment of minimum wage law in Malaysia, this paper clarifies that the labor movement did not necessarily affect the enforcement of minimum wage law but the government primarily took the initiative to decide its enactment. Lastly, this paper tries to examine the possibilities to support the labor movement through various measures for resource mobilization, and to analyze how the recent deterioration of economic inequality can affect workers and their movement in order to define the social conditions of labor insurgency in Malaysia.

### *Japanese Challenges Towards the Sustainable Society -- the Recovering Process from the Earthquake and Tsunami, and Establishing New Industrial Relations --*

After the serious earthquakes and tsunami in 2011, Japanese society, mostly in Tohoku area, had been damaged horribly and the accidents of Fukushima nuclear power plant are still on-going. Japanese central government had established "Reconstruction Agency (<http://www.reconstruction.go.jp/english/>)" for reacting to them. The task is "leading and managing the reconstruction process", and the role is "to accelerate structural reconstruction and revitalization in the affected areas, by supporting implementation of government policies and managing coordination of reconstruction strategy and initiatives between various branches of government at a national level and with local municipalities". However, the reconstruction process is not sufficient for the local communities.

Following this situation, at a municipality and a community level, we could consider two distinctive changes as hints for new Japanese working features. This presentation tries to examine whether these changes will shed their skin and become new industrial relations or conditions.

The first case would be an excellent collaboration between fishermen and NPOs in Iwate prefecture. Traditionally, the cleavage between fishermen and leisure divers was deep, because of their miscommunication. Currently, a NPO is proposing a cooperation aiming at recovering the sea both for fishery and diving. Through the collaborative works, fishermen have gradually presented their positive attitudes to divers and both of them have been able to understand each philosophy of work.

The second case would be a citizens' participation toward local administrations. For the aim at reconstructing a community, most of all municipalities are requesting citizens' participation to set their future plan. In this case, the working style of municipality's staff had changed to deliberative and negotiating process. Under this pressure, the staffs of municipality office have been forced to think how they can work with citizens and how they can realize the policies through deliberations.

### *An Attempt to Analyze the Narrative World of the Life-Stories of Doctors and Patients Involved in the HIV Tainted Blood Product Incident in Japan*

An attempt to analyze the narrative world of the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan.

We had conducted the research projects started in 2001 ended 2010, which aimed at collecting and analyzing the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan. This endeavor culminated in the final reports consisting of 3 volumes which amount to 1358 pages. Against the simplified bipolar model of the perpetrator and the victim of this incident, we found more complicated and individualized world of life-stories which would reflect the differences of social and historical context where each interviewee was situated at that time. First, the doctors had been thrown into the uncertainty and

indecisiveness toward the then unknown disease of HIV infection, which would result in refraining from taking a clear-cut attitude concerning the use of non-heated concentrated blood product. For most doctors, the change from cryoprecipitate to concentrated product meant undoubtedly a quantum progress of medical care treatment for hemophiliacs; to return to the old method of treatment looked retrogression and might run the risk of engendering the lives of hemophiliacs by the higher rate of intracranial bleeding.

Second, the older generation of hemophilia in Japan unanimously experienced the unbearable painfulness of bleeding and was told by parents that they would die young. For them, the anti-hemophilia factor concentrate was regarded as the miracle medicine to ease the pain and to endow a long life. However, facing up the occurrence of HIV infection, they felt being kept separated from every trustworthy information sources. Although, the frank communication between doctors and patients should be acutely demanded at the time of confusion and uncertainty, we found little evidence of any interchange between them.

### *The "Vocabulary of Motives" of Worker's Suicide in Japan*

Recently, Worker's Suicide has emerged as a serious social problem in Japan. According to the governmental statistics, the number of application for insurance and the total amount of payout about "karo-jisatsu" in the worker's compensation insurance system in Japan have gone up significantly last ten years. The purpose of this presentation is to examine how worker's suicide is understood among Japanese people now through the interview researches with bereaved families.

Japanese government reported the number of the people who committed suicide per year in Japan has been more than 30,000 from 1998 to 2011. This presentation especially focuses on worker's suicide, what is called "karo-jisatsu" in Japan. Karo-jisatsu is a Japanese word that means working person kills him/herself after too much working or moral harassment in workplace. This word has been popular in our country since 1990's, while "karo-shi" which means death from overwork has been known since 1970's. Some lawyers and doctors who are engaged in labor problem or industrial hygiene have claimed that too much working and stress make worker exhausted, so he/she injures his/her mental health, in the worst case he/she kills him/herself. That is called "karo-jisatsu".

But I point out there is a logical leap between overworking and committing suicide. I clarify how they have been connected in the discourse of "karo-jisatsu" by reconsidering of "medicalization" (Conrad & Schneider, 1981) of suicide. My empirical analysis shows that suicide is regarded as one of the symptom of depression today, while "harakiri", "seppuku" and "kamikaze" have been traditionally regarded as heroic suicide in Japan. Medical terms constitute a major "vocabulary of motives" (Gerth & Mills, 1953) of worker's suicide. So when bereaved families decide on the significance of their member's suicide, they tend to use these types of vocabularies.

### *Decomposition of Inequality By an Extension of the DiNardo-Fortin-Lemieux Method: An Application to an Analysis of Gender Inequality in the Proportion of Managers in Japan*

As a method for analyzing how inequality in one dimension is explained by inequalities in other dimensions, this paper introduces a method for the decomposition of a group difference in the outcome into several components, explained by differences in the covariate values among groups and a component unexplained by them. The method is an extension of the decomposition method introduced by DiNardo, Fortin and Lemieux (DFL) based on propensity-score weighting. An application of this method focuses on the amount by which gender inequality in the proportion of managers is explained by sex differences in human-capital variables. The regression-based Blinder-Oaxaca (BO) method cannot be employed for a decomposition of the difference in proportion because the linear probability model cannot be specified as a regression model. Unlike the BO method, the DFL method can be applied to decompose a difference in proportion, but the latter does not permit a simple further decomposition of the explained component into elements explained by each covariate. The method introduced in this paper enables alternative sequential decompositions to assess the contribution of each variable to the explained component.

Suppose we denote by C, birth cohorts, by E, the educational attainment, and by D, the employment duration, and the causal order,  $C \rightarrow E \rightarrow D$ . The decomposition of gender inequality in the proportion of managers by the forward order of equating the conditional distributions of C, E, and D between sexes leads to a sequential application of the DFL method and identifies the effects of C, E, and D including each variable's indirect effects through causally posterior variables. The decomposition by the backward order of D, E, and C to assess the unique contribution of each covariate's effect on gender inequality requires an extension of the DFL method, however. This paper demonstrates the usefulness of this extension.

*The Determinants of Gender Inequality in the Proportion of Managers in Japan*

This paper analyzes linked data of employer and employee surveys from the International Comparative Surveys on Work-Life Balance conducted by the Research Institute of Economy, Trade, and Industry to find the determinants of gender inequality in the proportion of managers among white-collar workers in Japan. The high job quit rate among women is a common reason given in employer surveys conducted by the Ministry of Health, Labor and Welfare for "having few or no female managers." This cannot be the true cause underlying gender disparity. The proportion of managers among female college graduates is far below that among male high school graduates even when the female employees have worked the same number of years as the male employees at their current companies. The fundamental problem is the institutionalized managerial practices of Japanese firms through which sex is given greater weight than educational attainment in evaluation for managerial potential.

Using the decomposition method of DiNardo, Fortin and Lemieux, this article shows that the difference in human capital between men and women only explains 21% of the gender disparity in the proportion of managers. It also shows that in order to become a manager, long hours of work are required even more for women than for men and that the proportion of managers increases for men and decreases for women depending on the age of their last child in a way suggestive of the reinforcement of traditional gender roles by employers. The analysis also shows that firms with 1000 or more regular employees and firms with centers dedicated to the promotion of work-life balance have smaller gender inequality, and that gender inequality in those firms decreases more rapidly than other firms as the quit rate of female employees decreases. Policy measures to eliminate gender inequality in attaining managerial positions are also discussed.

*The Impact of the East Japan Great Earthquake on Community in a Small Village*

This article explores the impact of the East Japan Great Earthquake on the sociocultural aspects of community based on 40 in-depth life history interviews and a survey administered to more than 1200 villagers in a small seaside village. Noda village, which is located in northern Japan and has a population of 4500, is characterized by close interpersonal ties, a traditional patriarchal system, and an ethic of mutual aid. During times of economic prosperity, many male villagers moved to the Tokyo metropolitan area to work as carpenters due to the lack of jobs in the village. When a 37-m-high tsunami hit this village, 37 people were killed and almost 30% of the houses were damaged. The tsunami caused not only material damage and life-threatening situations, but also changed the sociocultural character of the community. For instance, people were initially reluctant to accept support from outsiders, such as volunteers, and talking about the tsunami experience has become almost taboo among villagers. We explore the processes by which sociocultural changes occurred and discuss the goals of post-earthquake community reconstruction in the context of data from small village.

*Lay Responses to Radiation Contamination of Food*

The possibility of radioactive contamination of food presents a threat not only to health but to autonomy. Radioactive contaminants cannot be seen, smelled or tasted, and the extent of any possible danger is not easy for the lay public to assess. Consumers are thus forced to depend on external sources of knowledge, such as government oversight and advice from experts. In the aftermath of the Fukushima disaster of 3/11, the Japanese public has experienced an increasing diminishment of trust in the government's ability to ensure the safety of the food supply. Consumers are not convinced that "the experts" (e.g., government officials) are providing sufficient information to enable them to avoid the threat. Beck (1986) suggests that in such a situation, individuals are forced to find "individualistic approaches" to the systemic contradictions, such as making their own private decisions about which foods to buy and dealing with any health issues as their own problem. However, there are indications that new social coalitions are emerging in Japan, motivated by shared fear of a common danger and/or by shared bonds of sympathy and empathy. This paper is going to argue that these phenomena – in which individuals seek and create "societal approaches" to deal with the contradictions created by the emergence of this new set of risks and the

perceived failure of experts to fulfill their roles and ensure safety – is an indication that experiences that concern safety or risks at the local level can motivate a response that is much more social and less individualistic than the theoretical formulation would predict. The data used come from a series of focus group discussions; separate groups were created by gender, by households with and without children, by educational background and by type of work.

*Effects of the Natural Disaster Recovery Process on Multicultural Community Development*

This presentation discusses the impact of natural disasters on foreign nationals in Japan and the process of recovery that they undergo. The data were collected through interviews. The Great Hanshin-Awaji earthquake of 1995 had a major impact on both newcomers as well as early immigrants in our society. Most of the affected people were family units who shared the same heritage, and aids were accordingly designed to support these families. In the area affected by the Great East Japan Earthquake, foreign brides of Asian origin in Japanese families posed a major problem. Although they belonged to a different culture, they expected to be treated like their Japanese counterparts as they believed they played an important role in passing down traditional Japanese family culture just as a Japanese family member would. However, circumstances have changed their lives after the disaster; they have started using their mother tongue, and find many ways of giving expression to their culture. The experience of the disaster and the recovery process has created a bond among these foreign brides – many of them have taken vocational training, enrolled in Japanese language programs, specialized as caregivers, and some of them have been employed as professionals in various organizations. Such empowerment programs have enhanced their self-esteem, which has changed their family lives and the local community. Participating in various social activities is crucial to being equal members in a society.

*International Comparison of Protest Norms Between Japan, South Korea and Germany*

In recent years, many protests draw many people's attention all over the world. However, protests in Japan are not yet as active as in other countries. Why don't Japanese people participate in protest? They have complaints about society and politics, and they also have opportunities to participate. In the previous survey in Japan, we found people who shy away from politics consider that social movements are arbitrary claims which bring about disruption in social order, although majority of people consider that social movements are legitimate political rights. In addition, the fear of social order disruption has a bad influence on permission to participate in protests.

Based on these findings, the important factors that affect Japanese non-participation are norms to participate in protests. Although people think a protest is legitimate, they also think a disruptive activity should not be done. Then, protest participation is affected by which norms people consider important.

However, are these arguments applicable to other countries? Do people in other countries have similar views toward social movement? Therefore, in this study, we try to grasp the norms to participate in protest by the international comparison survey: Japan, South Korea, and Germany.

Using this survey data, we examine similarities and dissimilarities of protest norms between three countries. Furthermore, we explore questions as follows. First, what factors affect such norm emergencies in each country?: political regime, civil society structure, political culture, and so on. Second, do protest norms effect on real protest participations?

It is indicated that these countries have different characteristics about civil society: active advocacy in South Korea and calm advocacy in Japan. By comparing these two countries, we can expect to grasp norm emergencies clearly. Furthermore, we can grasp a feature of the Asian protest norms by comparing norms in these Asian countries to norms in Germany.

*Impact of Social Change and Restructuring of Urban Underclass Areas on Homeless People: The Case of Yokohama, Japan*

This study aims to explain the impact of social change and restructuring of urban underclass areas on homeless people by examining a case in Yokohama, Japan.

The labor demand for day-laborers decreased since the early 1990s. As a result, the number of homeless in major Japanese cities increased. After the establishment of a new law to help homeless people become financially independent in 2002, many people who were homeless or considered unable to work because of age or disability received welfare and took up residence in urban underclass areas.

Kotobuki, Yokohama's urban underclass area, currently houses the highest rate of welfare recipients—approximately 80%—of underclass areas in Japan. The number of welfare recipients in the area has especially increased this decade. As a result, the area has become the center of the socially vulnerable.

In light of this social change, the local government, the social welfare council, and nursing care business offices developed a community welfare system in 2011. This system mostly focuses on officially recognized residents, not on those who are homeless. In 2006, Yokohama City reduced its special temporary welfare support for homeless people, and then cut it entirely in 2012. This caused greater difficulties for the homeless in the neighborhood, creating a highly concentrated district of welfare recipients.

So far, urban underclass areas are important for the homeless with regard to providing access to social resources—for example through forging relations with supportive groups and getting free meals. As urban underclass areas have gradually changed into places of concentrated welfare recipients, those who do not receive welfare support and are homeless now face even greater pressure.

#### *A Half-Open Door to Africa: Chinese and Japanese Migrants in the Twentieth Century South Africa*

Over recent years, amid the increased presence of China and residents of Chinese descent in African countries, growing attention has been paid to experiences of Asians migrants in interdisciplinary fields of studies in South Africa. What has been revealed by exploring their histories is that, despite their small numbers, the existence of Chinese and Japanese migrants had a considerable impact on 'white' South African racial policies. By focusing on those who migrated from East Asia at the beginning of the twentieth century, this paper seeks to examine how they confronted the technologies of exclusion that South Africa introduced in order to maintain the colour bar of the country. While several countries and colonies had restricted Asian migration associated with the 'Yellow Peril' panic and a threat to the 'white' labour at that time, the British government imported Chinese labourers just after the Second South African War to compensate for the absence of labour in gold mines. Lake and Reynolds (2008) emphasizes that introduction of the Chinese strengthened 'white' labour unions and encouraged legislations which restricted skilled work to white men. As for the Japanese, they were listed as prohibited migrants under the 1913 Immigrant Regulation Act, and were later removed from the list because the Union government needed to allow Japanese business persons into the country in order to expand the wool exportation. This can be considered as a precedent for the 'eminent visitors' status under apartheid, or the privileged status granted to non-white inhabitants staying in the country for business or diplomatic purposes. The paper aims to contribute to wider discussions on South Africa's history of immigration policies, some of which have not been adequately address due to Atlantic-centrism of academic research.

#### *Child of the Other: Wartime Sexual Violence and the Japanese Repatriation Support Policies after the Second World War*

In the end of and just after the Second World War, mass rape by Soviet troops against Japanese women took place in Manchuria and Korean Peninsula. Many pregnancies and venereal disease were uncovered upon arrival of groups of repatriates to Japan, and hundreds of abortions were carried out inside or near the harbors between 1946 and 1947 as part of an official support. Parliamentary papers and related documents indicate that identification of unborn babies to Russian perpetrators encouraged the Japanese medical doctors and relief workers to implement the abortion. Illustrating the experiences of Japanese women in the post-war period, this paper aims to examine how the 'child of the Other' or children born / unborn as a result of wartime sexual violence have been excluded from their peers, community, and the states. Previous studies on children born from wartime sexual violence have revealed that they frequently suffer discrimination from mother's communities. One of the examples of this is that they are often attributed pejorative names. Regarding the case of rape committed by German soldiers against French women during the First World War, the children were called 'child of the barbarian'. In other conflicts such as East Timor, the children born to Timorese women were called 'children of the enemy', in Rwanda, 'children of bad memories' (Seto 2013). Close observation of the case studies above and the case of Japanese victims indi-

cates that the children are unwelcomed due to identification not with their mothers but with their 'enemy' fathers. This paper suggests that investigation on children should be addressed from feminist and humanitarian perspectives as well.

#### *Displacement and Politics of "Transitory Space" for Resilience: A Case of the Great East Japan Earthquake*

Forced displacement induced by disaster makes various types of "transitory spaces" in the process of reconstruction. The aim of this presentation is to discuss about functions and politics of "transitory spaces" for disaster assistance in the age of population-shrinking/aging society based on a case study of the Great East Japan Earthquake and Tsunami in Iwate Sanriku coast. The first point is to rethink about "temporary housing" system established in the 20<sup>th</sup> century. In the history of disaster in Japan conventional relief act defines "sufferers" by the standard whether they lost their own "houses" or not. As a result after the dissolution of emergent shelters public assistance tended to be concentrated on temporary housings made by the municipal government. But in the case of the Great East Japan Earthquake and Tsunami this system did not adequately function because in the age of population-shrinking/aging society when power of kinship and community itself more and more decreases having "house" do not necessarily mean that residents do not have "social vulnerability". Inequality of assistance among sufferers in temporary housings and in their own houses became serious problem in the 2011 Japan disaster. To cope with such situation new types of social spaces emerged to mobilize multi-scaled resources and to make flexible and continual assessment on condition of sufferers according to the case. This is the second point. This presentation will focus on a temporary "base point" of assistance which was constructed by individual affiliate labor union in Tono area, one of the inland cities in Iwate prefecture. On the background of urban precarity and decline of provincial city this "base point" emerged as a nodal space for re-organizing collective infrastructure of life. Considering such politics of "transitory spaces" will offer a valuable hint to invent future system of social resilience.

#### *Party Membership during Partisan Dealignment and Realignment Phases in Post-War Japan*

This paper investigates whether an abrupt and drastic realignment trend (i.e. a revitalisation of political support) in Japan since 2000 has changed patterns of political membership, even though Japan had a quite similar political dealignment pattern (i.e. a constant and substantial increase of independent electorates) to advanced industrial democracies in the West until 2000.

Political scientists have pointed out that party membership has constantly declined in contemporary Western democracies. This substantial downward trend has been caused by the widespread political detachment from conventional party politics throughout the post-war period. In Japan, scholars have rarely examined the association between dealignment and political membership, although a long-term dealignment trend throughout the 1960s to the 1990s was observed by newspaper opinion polls and social survey datasets. Furthermore, using the Japanese General Social Surveys (JGSS), this paper clarified that the dealignment trend inverted into realignment since 2000.

The data analyses using Japanese data in the World Values Survey indicated that party membership witnessed an increase of inactive members from 1981 to 1995 and the percentage of these had remained through 1995 to 2005, while the ratio of active members remained stable from 1981 to 2005. In addition, logistic regression models suggested that political interest was a significant predictor throughout 1981 to 2005, however, its explanatory power had been weakening through the periods. Even though Japan entered into a realignment phase since 2000, the growth of partisanship has not led to an increase of party membership.

Japan has a great theoretical potential for contributing both the Western and Asian political membership studies. This is because it has not only a Confucian-style political culture, which is based on strong social ties in a local community, but also political norms highly valued in advanced industrial democracies, such as citizenship, independent individuals, and basic human rights.

### **Medicalizing the Male Obesity through Metabolic Syndrome – Some Social Aspects of the Japanese National Chronic Disease Prevention Program**

The Japanese mandatory National Chronic Disease Prevention Program started in 2008. Although some experts in public health and medicine have questioned the efficacy and feasibility of the program, it cannot be denied that it spread the term "metabolic syndrome" among the public and contributed much to the medicalization of obesity in Japan.

We interviewed scientists, experts, doctors and public health nurses about the intention of the program and the difficulties in its implementation. Currently we found the following points. 1) In spite of the fact that the program designates the whole population aged 40 to 74 as its target, the real target of the program is middle-aged men, especially working for small companies or self-employed. In that sense the medicalization of obesity is gender-biased. 2) The program used the newly developed diagnostic concept, "metabolic syndrome," as its key concept to prevent cardiovascular diseases and type 2 diabetes. The concept played the central role in medicalizing obesity in Japan, where men's obesity has always been the focus of health professionals. 3) The program faced with serious difficulties and resistance in its implementation. Some of the difficulties are viewed as originating from the masculine understandings of one's health and its care. 4) There is also a marked contrast in the understanding of the program between public health nurses and general practitioners. Whether the reason for this lies in the professional interests of the two or in the gender biased concept of health for the two is not yet clear.

We like to place all of these issues in the context of medicalization of men's health in the post-industrial society where several traditional masculinity-related behaviors are viewed as problems and medicalized.

### ***The Uneven Structure of Home Care Service Provision Between for-Profit and Non-Profit Organizations in a Quasi-Market System***

The Japanese Long Term Care Insurance (LTCI) was implemented in 2000, aiming the promotion of user's choice and the competition among different kinds of providers (i.e. such as for-profit, non-profit). It was expected that a quasi-market system would facilitate the effective competition among providers and improve the quality of care, though the price of each service was regulated as "legal price" by the government. However, it is not clear that such competitions can be realized, because different providers have different motivations in providing care services. Especially, non-profit organizations (NPOs) have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Thus, this study investigates the structure and mechanism of segregation of providers, focusing on care workers' motivations in NPOs based on the analysis of the data from 12 in-depth interviews with care workers and a questionnaire survey of 34 NPOs

The findings are as follows: First, among the services of the LTCI, NPOs tend to undertake lower-priced domestic work, while for-profit providers take higher-priced physical care. NPOs cover the deficit in domestic work in spite of large costs. Second, NPOs provide the older people with additional services in order to meet their needs outside of the LTCI rubric, even though the income from the additional services is smaller than the services under the LTCI. Third, the altruistic motivation makes NPOs' workers content with long working hours of additional services.

NPOs have tendency to deliver their services in spite of small profit, as long as users need them. This allows for-profit providers to choose the services with larger profit, that is, cream-skimming. The different motivations of providers create the uneven and uncompetitive structure of the elderly care system in Japan.

### ***Cross- National Survey on Well-Being and Social Relations***

Well-being is an important issue in recent social survey research and many surveys focus on subjective well-being, happiness, and quality of life with some measures or scales on certain items in questionnaires. The measurement, however, is not free from differences on gender, culture, and other social conditions. As for social values and general response tendencies to questionnaire surveys, we have repeatedly reported regional variations in our longitudinal and cross-national surveys over half a century by the Institute of Statistical Mathematics (Yoshino, Nikaido & Fujita, 2009) (<http://www.ism.ac.jp/~yoshino/index.htm> and [http://www.ism.ac.jp/ism\\_info/j/kokuminsei.html](http://www.ism.ac.jp/ism_info/j/kokuminsei.html)), under the paradigm of Cultural Link-

age Analysis (Yoshino & Hayashi, 2002) and Cultural Manifold Analysis (Yoshino, Nikaido, Fujita, 2009).

The present study examined the relationships between well-being and social factors using our cross-national surveys, "a study of statistical science on health and culture: cross-cultural study on dynamics of social disparity and life", carried out during 2002-2010 in four western countries (USA, Germany, France, UK) and three East Asia countries/ region (Japan, South Korea, Taiwan). The survey was carried out on the target population of adult residents in each country/ region, with the sample size of some 1000. Random Digit Dialing (RDD) telephone survey using CATI system was conducted in the four western countries and Japan whereas a face-to-face interviewing was conducted in the South Korea and Taiwan. By multivariate analyses, we show how social and cultural factors are related with several indices on well-being as well as the similarity and dissimilarity of these Western and East Asian countries. We discuss the characteristics and limitations by considering methodological issues.

### ***3.11 Crisis and Okinawa's Demilitarization Movements***

Okinawa has a long history of resistance against the U.S. imperialism and Japan's power over its islands and have been engaging in various forms of resistance to protect their ancestral lands, dignity and human rights. This paper looks at the demilitarization movements in Okinawa, and examines what kind of impact Japan's post 3.11 crisis have brought to the movements and how Okinawans have responded to it. One of the common frameworks used to describe a connection between Okinawa and 3.11 survivors is that they both are "sacrificed" for the larger "national agenda." Some of the anti-nuclear protestors and Japanese settlers in Okinawa suggest that it is a coalition opportunity between people of Okinawa and the survivors. However, some Okinawan activists criticize such framework because it overlooks complicated power struggles between Okinawa and the national government. Another common misconception is that Okinawa is a safer place to be. Various types of Japanese organizations have planned getaway programs for the survivors of 3.11 in Okinawa. Okinawa is marketed to be a "safer place" since it is the farthest location from the "affected region" in Japan. These programs upset some activists for its false and disrespectful claims. Due to the largely concentrated and long lasting U.S. military presence, Okinawa's land and water has been contaminated by many toxic chemicals such as PCB, dioxin, depleted uranium and so on that the military had stored. Lastly, some of the post 3.11 Japanese settlers in Okinawa declare themselves "refugees" and participate in the demilitarization activism threaten the ownership of the movement and attempt to shift the focus of the movement to fulfill their agenda.

### ***Social Perceptions and Environmental Communication on the 'Benefits' and 'Risks' of Tidal Flat Restorations***

This paper looks at how the 'risks' and 'benefits' of tidal flat restoration projects are communicated, perceived and negotiated by different stakeholders in case studies from Japan, the UK, Netherlands and Malaysia.

Various tidal flat restoration projects have been conducted in Japan and elsewhere in recent years in an attempt to revitalise fish stocks or preparing sea level rise. Coastal wetland restoration projects, such as coastal realignments or re-flooding farmland, still represent a new concept. Due to the need for long-term social support and investment in such schemes, it will become increasingly important to take into account the various perceptions that exist in the community from now on. Yet, at the moment it is often not clear 1) what kinds of environmental information on wetland restorations are produced and communicated by project contractors and other stakeholders in the community; 2) in what way various stakeholders perceive the 'benefits' and 'risks' of their local restoration projects; 3) what the commonalities and differences among these discourses are, within and across different case studies, and 4) how the findings could make a contribution to future decision making and support for coastal wetland restorations in Japan and beyond.

This paper explores the above four points to examine the improvement conditions of participatory sustainability initiatives. This paper is based on data collected during a three-year government-funded research project (2011-2013) from stakeholder interviews and through document analysis of the environmental information provided to citizens and decision makers via various media.

*Double Responsibilities of Care: Emerging New Social Risks of Women Providing Both Elderly Care and Childcare in Japan*

This paper is based on a both international and comparative research project exploring how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relationships in East Asia. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their frail elderly relatives and young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions as facing with acute demographic and social changes. Through the comparative analysis of data from questionnaire surveys and semi-structured interviews, this paper investigate the new structure of social risk involved in the double responsibilities of care, work and generational relations with a specific focus on Japan. We will discuss both theoretical and practical implications of our research on double responsibilities of care, to wider social theory, care policy and practice.

*Double Responsibilities of Care in East Asia*

The aim of this paper is to explore how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relationships in selected East Asian societies - Hong Kong, Korea, Japan and Taiwan -. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their frail elderly relatives as well as young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions. More over double responsibility of care may possibly be more prevalent in East Asia than other European counterparts as facing with acute demographic changes and different family values embedded in the societies. Through the comparative analysis of data generated from mixed research methods in each society, this paper will investigate how these sandwich generations experience a double responsibility of care, by analysing resources available to them from local policy configurations and from their personal and kin networks. The research will highlight increasing new risks emerging in East Asian societies in relation to women's citizenship, care, work and generational relations.

**RC25-450.5****YAMASHITA, RIKI\*** (Graduate School of Humanities and Sociology, the University of Tokyo, [rikayam111@gmail.com](mailto:rikayam111@gmail.com))*Performing Cool Japan and Uncool Hybridity: Analysing 'luugo' (Lou Language)*

'Metrolingualism' refers to young people's use of new hybrid language or foreign languages/dialects, in popular culture or everyday interactions (Otsuji and Pennycook 2010). They are creative moves which challenge and loosen cultural, historical, and political boundaries, in-sync with the late-modern and globalised social reality that we apparently live in today.

As of Japan, Maher (2005) provocatively stated: 'Cultural essentialism and ethnic orthodoxy are out. In Japan, metroethnicity is in. Cool rules'. True, young people in Japan today are far more 'open' towards foreign cultures and languages: dimsum and Thai curry follow for dinner, followed by drinks at a British pub with the NBA games on TV screen. But are they really feeling ever so border-free in terms of language? And do many discursively engage in such border-loosening behaviours? If not, why not?

Luugo ('Lou language') is a performative and comic idiolect of a TV personality, Lou Oshiba. Luugo is a deliberate mixture of English words into Japanese phonology and syntax. In his communication styles and stunts, he also reenacts the stereotypical culture shock between 'Western' and traditional Japanese non-verbal communication styles.

Using discourse analysis, I discuss how the intricate mixing of the two linguistic/cultural codes is interpreted as uncool, illegitimate, unprofessional, undesirable, idiosyncratic, foolish, and fantastic, rather than cool, creative, liberating, desirable, ubiquitous, skillful, and down-to-earth.

Despite the popularity of such cunning comedy, the boundaries between languages and ethnicity do not look as if they are loosening and liberating. Rather, the comic act securely positioned the hybridity in the marginal discursive space. In turn, even the seemingly liberal, multi-layered and sometimes fun nature of hybridity is supporting the hegemony and the distinction between the socioeconomically powerful and the rest.

**RC06-124.1****YAMATO, REIKO\*** (Faculty of Sociology, Kansai University, [ryamato@kansai-u.ac.jp](mailto:ryamato@kansai-u.ac.jp))*Changing Determinants of Women's Continuous Employment at the Time of Family Formation: A Comparison Between Japan and Taiwan*

[Background] Women's work-family experience differs across countries. This study analyzes how different employment systems (including firms' employment customs and public policies) lead to different work-family experiences for Japanese and Taiwanese women. The post-war employment system in Japan segregates workers according to gender and marital status assuming that women quit employment at marriage, and this system is more prevalent in large-scale firms and for clerical workers. Under this system, women employed in large firms or clerical occupations are more likely than others to retire at the time of marriage or childbirth in Japan. In Taiwan, the segregation is more on the basis of human capital than on gender and marital status, and therefore women with lower human capital are more likely than others to retire at marriage or childbirth. Since the 1990s, however, with intensifying global economic competitions and low birth rates in a backdrop, Japanese employment system has qualitatively changed: non-standard employment has expanded while measures for balancing work and family for standard employees have developed. Taiwanese system may be intensified under economic competitions but not qualitatively transformed. [Research question] This study analyzes how employment systems since the 1990s affect the work-family experience for Japanese and Taiwanese women. [Results] Analysis of data obtained from the 2005 Social Stratification and Mobility Survey reveals that the determinants of women's continuous employment have changed in Japan: women in standard employment are more likely than those in non-standard employment to continue employment at marriage or childbirth while firm sizes and occupations no longer have large effects. In contrast in Taiwan, the situation that women with higher human capital are more likely to continue employment has not changed in this period. [Conclusions] Employment systems differ and historically change among East Asian societies, which produce different work-family experiences for women. Policy implications will be discussed.

**RC11-207.11****YAMATO, REIKO\*** (Faculty of Sociology, Kansai University, [ryamato@kansai-u.ac.jp](mailto:ryamato@kansai-u.ac.jp))*Gender Difference in Older Parents' Coresidence with Their Adult Children: A Comparison Between Japan and Taiwan*

[Background] In East Asian societies, being influenced by Confucian values, the intergenerational coresidence (i.e. older parents live with, are provided, and cared for by their adult children) has been thought to be desirable. Recently, however, the coresidence rates are decreasing even in East Asia. Moreover, there are differences in the manners of the coresidence between societies there. The coresidence rates are relatively low in Japan but high in Taiwan. Gender distributions of living arrangements also differ between the two societies: older mothers are more likely than older fathers to live alone in Japan while there is no large gender difference in Taiwan. [Research question] Analyzing the process and determinants of intergenerational coresidence, this study explores why mothers are more likely than fathers to live alone in Japan and why there is no such difference in Taiwan. [Results] Analysis of Japanese and Taiwanese data obtained from the 2006 East Asian Social Survey reveals that in Japan, the "reunion" coresidence (the coresidence after a parent become widowed) prevails, and the determinants of coresidence differ between widowed mothers and widowed fathers: the factors that promote widowed fathers' coresidence with their children do not necessarily promote the widowed mother's coresidence with their children. In contrast in Taiwan, "life-time" coresidence (the continuous coresidence before and after a child's marriage) prevails, and there is no difference in the likelihood of coresidence between widowed fathers and mothers. [Conclusions] First, with different public pension availability in the backdrop, older parents' independent living is more expected in Japan than in Taiwan. Second, in Japan with different gender expectations (men as the care-receiver, women as the care-giver) in the backdrop, independent living is more expected for widowed mothers than for widowed fathers. Implications of older mothers' risk in the availability of family care will be discussed. (296 words)

### Japanese Jewelry Market

Though Jewelry market size in Japan in 1991 was three trillion yen (around thirty billion USD at current rate), its size is less than one trillion yen (around less than ten billion USD at current rate) in 2013. Jewelry market size in Japan grew up with bubble economy in Japan. After collapse of bubble economy in 1991, the market size continues to shrink up to the present date. Japan had not had western style of Jewelry market because Japanese wore "kimono" and western style of jewelry does not fit with kimono, Japanese does not wear western style of jewelry. After restoration of Imperial power in 1868, western style of clothes was getting popular in Japan and western style of jewelries started to be manufactured and sold in Japan. Along with western style of clothes population, western style of jewelry market continued growth. It means western style of jewelry market in Japan has only one hundred and fifty years' history. In addition to that, generally the value of jewelry is difficult to judge for consumers. This is true not only for Japanese but also western people. In the process of new market of western style of jewelry growing, I will investigate how the knowledge of western style of jewelry was implemented and diffused or Not implemented and diffused to Japanese. I also will analyze how western style of jewelry market was formed in Japan during these one hundred and several decades and how the relationship among seller, purchaser and institution was transformed and affected each other from view of institution of jewelry and its contribution. As researches on jewelry from sociology points of view is very rare in Japan, I would like to make contribution by stating historical background of Japanese jewelry market and relationship of players and institutions.

### *Reconstructing Biopower: From an Analysis of Television Programs about Conducting Surrogacy*

How does performance affect the human body in terms of biopower? This research analyzes a process where discourse about reproductive technology leads to its implementation to change actual bodies. From an examination of television programs in Japan, I show how culture impacts the materialistic sphere, which is mediated by performance regarding "America," an icon of modernization for the Japanese.

The Japanese national public broad casting organization, NHK (Nippon Hoso Kyokai), has aired programs about reproductive technology since the emergence of In Vitro Fertilization. At the beginning, it portrayed the technology as a realization of scientific progressivism, but regarded the ethical aspects as unrealistic. In the discourse, the image of Europe was that of an agent of intelligence; on the other hand, the image of the U.S. is that of savageness.

However, after a Japanese celebrity couple conducted surrogacy in the U.S., "America" became a normative model for the Japanese; there was a contrast between the undeveloped Japanese and the developed American in terms of modernization. The television programs implied surrogacy stands for emancipation from the traditional Japanese convention to oppress women to construct a modern family. Moreover, they constructed a solemn image of the children taken from the U.S. by utilizing imaginary which evolves memories of the imperial coronations.

These images raised a positive public opinion toward surrogacy; which led the government to rush to legalize it. However, after foreign mass media revealed that a Japanese male had conducted surrogacy in India with a purchased egg (known as Manji's case), NHK stopped discussing surrogacy and the Japanese government postponed the legalization of surrogacy. The Manji's case showed the Japanese had already gone beyond the savage and modernized "America." Therefore the Japanese lost their frame of reference.

The above examination indicates the decision to apply reproductive technology depends on culture.

### *Cultural Consumption, Class Mismatch, and Gender As a Determinant Factor*

Studies of cultural consumption have a distinctive academic tradition after Bourdieu's book "Distinction" (1984) where each class has their own cultural tastes and high class people are considered as high culture, giving them the authority of class domination. A major question currently subject to debate is whether we can identify these hierarchy matches between class and culture. This paper examines this question, collecting and analyzing the results of cross-national empirical research. Research has shown there is considerable evidence contradicting the results of Bourdieu, even in France where Bourdieu conducted his own research (Lamont, 1992). This may be due to the fact that existing class-based approaches put too much emphasis on the class, rather than focusing on diverse social groups and the meaning behind a person's preferences for certain culture.

As an alternative to the existing class approach, the approach based on gender will be presented with data from Survey on cultural Enjoyment 2010 data, South Korea as well as other empirical research results conducted in many countries such as France, West Germany, the United States, and the other developed countries. These empirical findings suggest that women consume more cultural activities than men, even after controlling traditionally important variables, for example, class and education. In addition, women have a tendency to prefer high culture, even women with low education or class background, implying the distinctive meaning of women favoring high culture compared to men. A discussion of several reasons for these results will be followed focusing on the particular meaning to women's identity and status. We will conclude with the suggestions for future research to address more issues related to the interactions between social factors such as race, gender, and class, along with analyzing the latent meaning of preferring certain culture for each social group.

### *The Metaphor of 'home/Family' in Introduction of the Nordic Model in Taiwan*

Welfare studies find specific characteristics in East Asian countries, such as development of welfare system is considered as introduced from top and the focus of the family in East Asian societies is linked with Confucianism. Different from former studies, this paper focuses on the reform of child care policies in Taiwan, which was initiated by women's organizations and several feminist scholars. Moreover, feminist discourses in introducing the Nordic model in Taiwan highlight the family, which is not as conservative as it was considered in 'Confucian Welfare States'.

Departure from feminist welfare studies, this paper aims to examine the active role women play in transformation of social welfare policies. The research methods consist of discourse analysis of welfare studies on Nordic model in Taiwan and interviews from key figures in child care policies reform.

I find feminist discourse stresses on de-familialization while using the metaphor of home/family that regards the state as 'the People's Home' and the local community as 'the big communal family'. I will argue that Confucianism can be strategically used by state feminists who employ a legitimated cultural tradition in order to make the 'importation/emulation of the Nordic model in an East Asian country possible. Secondly, I will examine how such a discourse highlighting the provision of child care by a strong collaboration between civil society and the state in a social context with high commodification of child care in Taiwan. This will make the triangle model of 'state-market-civil society' complicated and help us to rethink the relation between civil society/family and the state. I will relate my analysis to former debates on Confucianism in welfare studies specifically and discussions of civil society and family in social theories generally.

### *A Study on Female Industrial Structure and Gender Segregation of China*

**[ABSTRACT]** In the first decade of the 21<sup>st</sup> century, China achieved stable and rapid economic development, and made new progress in industrial restructuring; the modern service industry and emerging strategic industries have provided more employment opportunities for laborers including women. To analyze the female industrial structure and gender segregation in industrial structure, data retrieved from the Third Wave Survey on The Social Status of Women in China in 2010. It was found that if viewed from the perspective of gender structures in different industries, females are mostly concentrated in sectors with lower levels

of income and social security, where gender segregation and gender parity coexist. Compared with 10 years ago, the proportion of employed women in farming, forestry, animal husbandry, fishery and water conservation shows a substantial decline, while the increased ratio in wholesales and retail, and in public administration and social organizations are the two highest. The proportion of women in industries with higher degrees of monopoly is low, and the declining tendency reflects the intensified gender discrimination and gender differentiation in monopoly industries; the proportion of females in the modern service industry as well as the degree of gender parity in the industry have been increasing, making it possible for more and more women to obtain higher incomes.

### *From Green Energy Governance to Green Economy: A Case Study of a County in Southern Taiwan, 2009-2013*

After a lot of negotiations, conducted by Ping-Tung Government in Southern Taiwan, among solar PV companies, Tai-power Company, Central Government and local farmers, 25MW solar farms were installed on the damaged lands of orchards and fish farms in Lin-Bian and Jia-Dong, two towns in central Ping-Tung, in which the government carried on post-disaster reconstruction in the wake of Typhoon Morakot on 8<sup>th</sup> August 2009. Meanwhile, under these highly ground-mounted solar panels, there were organic vegetable farming and ecological fish farming set up. Inspired by the example of agricultural/solar farms in Lin-Bian and Jia-Dong, companies of various green energies came to Ping-Tung in search of different socio-technical experiments.

Since April 2013, a hydrogen fuel cell company has allied itself with local B&Bs, gas stations and convenience stores, offering 80 hydrogen-powered scooters to promote a "low-carbon tour." Now, this company is preparing to get fuel cell scooters into mass production. Meanwhile, small-scale wind turbines are planned to be installed in central Ping-Tung, together with the existent solar farms and hydrogen fuel cell systems, to conduct a 'smart grid' experiment, which has been listed in the 'Smarter Cities Challenge, 2013' by IBM Company. Also, in northern Ping-Tung, there is another 'smart grid' plan to connect solar farms, wind farms, bio-gas powers from pig farms, and micro hydropower systems.

The author of this paper has investigated and analyzed the performance of green energy in Ping-Tung by means of participative-observations and in-depth interviews. More specifically, adopting the concepts of green energy governance, social innovation, green economy and STS, this paper describes and explains the socio-technical mechanisms and meanings of green energy in Ping-Tung, with a focus on a variety of human and non-human actors such as the green-energy team in Ping-Tung Government, green-energy companies, local entrepreneurs, NGOs, and local communities.

### *Gambling Behavior As a Masculinity and Violence Using Japanese General Social Survey 2000 and 2001*

As gambling population is expanding, many studies have started to clarify the relationship between gambling behavior and masculinity. It is claimed that gambling behavior is closely related to violence, since gambling is thought to be a type of masculine behavior. However, few empirical studies have examined the relationships among gambling behavior, masculine attitudes and violence. In Japan, gambling industry such as casino is now planned to introduce by government. People might be anxious about the possibility of increasing violent incidents. Examining whether gambling causes violence through masculine orientation is a very important research topic. The JGSS-2000/2001 integrated data are very suitable for us to explore such a research question, since the data include the following variables:

Firstly, gender, age, marital status, occupation and educational background are used as demographical variables. Secondly, a degree of reaction (5points-scale) to physical punishment by parent and teachers is used as a variable for masculinity. This variable particularly explains that as part of masculine culture, physical punishment influences children and students to gamble away and justifies their misdeeds. Lastly a series of frequencies (4points-scale) on different gambles (pachinko, horse-racing, lottery, soccer-toto, numbers or mini-lotto) are chosen as variables to the quantitative analysis.

Consequently, this empirical analysis could examine whether the relationship between frequency of gambling and masculine behavior as a form of force exist or not. If not, Japanese gambling would not generate friction in Japanese social life.

### *The Origins Of Conservative Democracy In South Korea: Nation-Building, Democratic Transition, and Middle-Class Politics*

After more than twenty years since the democratic transition in 1987, South Korea witnessed an ironic political scene, in which a daughter of the former dictator Park Chung Hee, Park Geun Hye, was elected as the new president in the winter of 2012. This paper argues that the middle class largely shaped the post-democratization trajectory in Korea by resisting any significant social reforms and preventing furthering social equality and redistribution. While the middle class is believed to be a strong supporter of representative/electoral democracy to have led a democratic transition in Korea, the middle class has also been the one that resisted significant socioeconomic reforms implemented by the center-left governments including the Kim Dae Jung and Roh Mu Hyun administrations. This paper examines the origin of conservative democracy in Korea in which the middle class played a key role as a status-quo political actor. To do so, this paper traces the historical process of nation-building and economic development, through which the middle class was emerged by the support of the authoritarian state and became an exclusionary social group that advanced its own class interest against the less privileged. In addition, the current geopolitical situations that have confronted with North Korea for more than half a century also contribute to preventing any left-leaning policies from taking place and in turn to strengthening right-wing power. By looking at political dynamics of historical context, class alliances, and political discourse, this paper will broaden the understanding of the relationship between the middle class and democracy in transitional periods.

### *Contradiction Between Leisure Pursuits and Structures of Inequality*

Applying the method of stratification research could be a more rational way of looking at matters, especially inspecting Leisure Pursuits from the perspective of structures of inequality. Leisure is not a simple individual behavior, and cannot be independent from social environment and the influence of time. Leisure pursuits is neither a matter in view of pure spiritual level nor a question of pure economics, but a resort of spirit and physical of human being which has close relationship with social political and economic structures.

Essentially, structures of inequality or limited resources decide the inequality of leisure consumption. The contradiction between leisure pursuits and structures of inequality is an objective existence. Idealists intend to stress the universality of leisure pursuits or the individual right of leisure, criticize and neglect the positive impacting of the existing of structures of inequality on leisure pursuits. However, the existing of the inequality of leisure consumption is not only facilitating the reasonable distribution and portfolios of resources to a large extent but also playing an important role in maintaining structures of inequality as well as the vigorous vitality of the social organism actually.

It will be beneficial for us, if we treat positively the contradiction between leisure pursuit and structure of inequality, to treat the matter of leisure consumption correctly and help us deal with many confusion and difficulties in real life, particularly those related to a series of questions of imbalances, such as the imbalances between leisure and individual rights, leisure and social economics, leisure and wealth distribution as well as leisure and spiritual resort etc.

### *Athletic Sport or Health Promotion: Development Dilemma Confronted in Globalization of Chinese Traditional Martial Arts*

This study is to clarify the relationship between the two different purposes of Chinese Traditional Martial Arts as a sport: athletic sport and health promotion, and propose the author's own view on the development direction of Chinese Traditional Martial Arts in the context of sport globalization.

This paper reviewed 75 related published articles and academic papers and summarized the views. The author held ten semi-conducted interviews with Chinese Traditional Martial Arts coaches, scholars, students and other Chinese Traditional Martial Arts enthusiasts.

Some hold that in the process of globalization we should focus on training elite players and develop athletic sport system for traditional martial arts, which will help traditional martial arts widely recognized by western cultures. This kind of thoughts results in a reality that Chinese Traditional Martial Arts practitioners prefers to practice athletic Martial Arts. In university, Chinese Traditional Martial Arts Majors choose to practice athletic Martial Arts and attend contest of all kinds,

because this is the only way they can get authorized eligibility as first or second class national sportsmanship.

Others argue that since its functions of attacking and defending have been in degradation as modern weapons developed, Chinese traditional martial arts still can attract many people of different countries, ages, and backgrounds, not because of its athletic features, but because it contribute immensely to one's physical fitness and self-moral-cultivation, and the cultivation of both physical and moral health is the power source of its sustainable development in the context of sport globalization.

The author think that as to the development of Chinese traditional martial arts, a regular authorized eligibility certification system as the athletic sport has will standardize its technical requirements, and the focus on the physical and moral health promotion will keep its diversified national features in its globalization in the world.

#### *Asian Migration to the United States and within Asia in Comparative Perspective*

More than one million Asians had migrated to America before 1965. Since 1965, Asia has been a major source of migration to the USA and more than 10 million Asians have arrived on U.S. soil. Most recently, Asia has surpassed Latin America as the largest source of immigration to the USA. Up to the mid-19<sup>th</sup> century, Asians mainly migrated to other Asian countries, and in contemporary time Asians have continued to migrate within Asian countries. What are the trends in Asian migration to the USA and within Asia? How do sending countries of Asian migration to the USA and within Asia resemble and differ? Do the same or different types of Asians migrate to the USA and within Asia? What are the similarities and differences in causes of migration to the USA and within Asia? Are there similarities and differences in Asian immigrant transnationalism between the USA and Asian countries? How are Asian migrants to the USA and within Asia similar and different in patterns of adaptation to host societies? How do the impacts on host societies of Asian migration to the USA and in Asia resemble and differ? What is likely to happen to Asian migration to the USA and within Asia in the near future? Using a variety of data from the USA and international organizations and focusing on the post-1965 period, this paper seeks to answer these questions through comparison and to address the implications of the findings.

#### *Mechanisms of Trust Formation Under Different Conditions of Political Identity*

Individual political behavior is a manifestation of social behavior, and individual voting behavior indicated his/her political choices and political identity. After democratization in Taiwan, presidential elections show bipartisan polarization and reinforce general distrust of social phenomena. Therefore, this study intends to explore how people format their trust behavior when they interact with others of the same or different political identity groups. In stage 1, the computer randomly assigns trustors and trustees and does not show political identity of 2012 presidential candidates (Ma Ying-jeou and Tsai Ing-wen). In stage 2, the computer displays political identity logo by random arrangement. In stage 3, the subjects can choose their preferred objects of the same or different political identity logo by themselves. There are three mechanisms of trust behavior formation under different identity condition. (1) Win-win mechanism: Win-win strategy is that both trustor and trustee attempts to maximize their providence and return through exchanging with the targets of the same or different political identity groups from the beginning round. (2) Identity mechanism: Under the condition of political identity choice by subjects, identity effect becomes strongly significant at the beginning of the first round on the third stage of the experiment, especially for that of Ma-Ma group. (3) mutuality mechanism: Mutuality effect is very significant in all three stages of trust experiment, especially in the second and third rounds of each stage. When people exchange with the same political identity groups, it will produce the phenomenon of polarization. When the trustee return high proportion profits to the trustor in the first round, the trustor will feedback more in the second round. However, if the trustee return low proportion profits to the trustor, the trustor will feedback less and less, even lower than exchanging with different political identity groups.

#### *Saemaul Undong and Beyond: Upgrading the Opportunities and Capabilities of Women in 1970s' South Korea and Kenya Today*

Capabilities and empowerment are no longer new concepts: they are well understood and widely seen as necessities for individual as well as community development. Practices in today's developing world, however, are not always successful. Nor have the successful practices of the past been much elaborated so as to provide practical lessons for today. This study attempts to fill this gap with the case of *Saemaul Undong*, a New Village Movement in South Korea in the 1970s, in combination with discussions of its applicability to Kenya, one of today's developing countries.

*Saemaul Undong* has recently become an inspiring development model for many developing countries. It is known for its strong and committed leadership both at central and local levels, as well as the high rate of local participation. The rise of women as equally capable agents of change as men has been noted as one of its distinctive features. Indeed, *Saemaul Undong* is understood as a remarkable turning point for women in rural areas, which made them visible and active in formal activities beyond their own family and household. This newly explored social force is known to have effectively served rural and national development during the high growth periods of Korea.

The objectives and the structure of this paper are as follows. First, it explains the mechanism and processes of *Saemaul Undong*, which made women's involvement, or empowerment, possible within a society that had a strong Confucian character at that time. Second, it elaborates the strengths and weaknesses of the Movement in terms of women's capabilities and empowerment. Finally, the paper discusses the applicability of the findings to today's developing world. Our selected case country is Kenya, but discussing the applicability of the case is expected to provide practical lessons the developing world in general.

**YANICKI, SARAH\*** (University of Canterbury,  
[missyanicki@yahoo.ca](mailto:missyanicki@yahoo.ca))

#### *A Tale of Two Suburbs: Earthquake Recovery and Civil Society in Christchurch, New Zealand*

This study followed two similarly affected, but socio-economically disparate suburbs as residents recovered from the devastating 6.3 magnitude earthquake that struck Christchurch, New Zealand, on February 22, 2011. More specifically, it focuses on the role of local churches, community-based organisations (CBOs) and non-governmental organizations (NGOs), here referred to broadly as *civil society*, in meeting the immediate needs of local residents and assisting with the longer-term recovery of each neighbourhood. Analysis of sixteen qualitative interviews with residents as well as key informants from local civil society in each suburb found that despite considerable socioeconomic differences, civil society in both suburbs has been vital in addressing the needs of locals in the short and long term following the earthquake. Institutions were able to utilise local knowledge of residents and damage in the area to a) provide a swifter local response than government or civil defence and then help direct the relief these agencies provided locally; b) set up central points for distribution of supplies and information where locals would naturally gather; c) take action on what were perceived to be unmet needs; and d) act as a way of bridging locals to a variety of valuable resources. However, the findings also support literature which indicates that other factors are also important in understanding neighbourhood recovery and the role of civil society, including: local leadership, a shared, place-based identity, the type and form of civil society, social capital, and neighbourhood- and household-level indicators of relative vulnerability and inequality. The intertwining of these various factors has influenced how these neighbourhoods have coped with and taken steps in recovering from this disaster. It is suggested that a model that takes a multi-factoral approach in understanding community vulnerability and capacity within the Christchurch context be designed to more effectively explore further research in this area.

#### *Culture As "Agon": Agonological Features of Weberian Sociology*

Culture as *Agon*: Agonological Features of Weberian Sociology

Max Weber treated the Greek concept of "*agon*" with great interest, in the final parts of his treatise of the "City". However, if we focus on his interest on "*agones*" in general, the social fields of competition and social selection, we should rather say that this interest can be considered as his premier Leitmotiv, which permeates his comparative study of cultures.

This paper explores the advantages and the limits of this methodology on the cultural comparison of *agones* (that will be coined "agonology"). Starting from Weber's concrete historical depiction of Asian competitions (especially, in his "Hinduism and Buddhism"), this paper moves in to the theoretical concerns. It argues that, it is much fruitful to point out the agonological features of Weberian methodology than just to stick the clichés such as "cultural determinism", "idealism", "methodological individualism", or "conflict theory". Finally, briefly contrasting this Weberian agonological features with modern sociological theories of competition, such as Bourdieu's theory of symbolic violence, etc., we will like to outline the future possibilities of this comparative agonological perspective.

*International Political Support For Endangered Languages (The Uralic Languages of Russia as an example)*

**International political support for endangered languages (the Uralic languages of Russia as an example)[1]**

According to the UNESCO Atlas of the World's Languages in danger there are 131 such languages in Russia: 20 vulnerable ones, 49 definitely endangered, 29 severely endangered, 22 critically endangered and 15 extinct languages. Uralic languages are among them. Along with traditional measures the World Congress of Finno-Ugrian peoples (the institutional form of the Finno-Ugrian language community) are forms to attract attention to the situation of these languages

The beginnings of construction of the Finno-Ugrian community were laid in the eighteenth century by Henrik Gabriel Porthan, professor of rhetoric who popularized the idea of Finno-Ugrian brotherhood in Finland and urged Finnish scholars to investigate the kindred Finno-Ugrian languages. Spheres of cooperation expanded in the 19th century. This trend culminated in the Finno-Ugrian cultural congresses organized by Finnish, Estonian, and Hungarian scholars, teachers, and students. The first was held in Helsinki in 1921.

The ideas of rebuilding began in the early 1990s. The Finno-Ugrian world was conceived as a broad cultural identity based on linguistic affinity, and attempt to integrate various Finno-Ugrian peoples in the social and cultural integrity. In 1992 the first World Congress of Finno-Ugrian Peoples was held in Syktyvkar where it was tasked to "achieve the status of non-governmental organization United Nations", further in 1996 (Budapest), in 2000 (Helsinki), in 2004 (Tallinn) in 2008 (Khanty-Mansiysk) and in 2012 (Siofok).

Over the past two decades, World Congresses did not grow into a non-governmental organization or analogue of the International Organization of la Francophonie. However, they have become forums where the problem of endangered languages is actualized. World Congresses are the guidelines for the implementation of language policies at the regional level.

*Social Justice, a Key Concept in the Social Movements of the Last Hundred Years in Iran*

Social Justice is a very important and widely used concept in the political and social history of many nations. As well as many countries, it has had a significant role at least in mobilizing people for social movements and in protesting against the existing political system in Iran.

In analyzing the causes of many social and political processes and also the Constitutional and Islamic Revolutions in Iran, the realization of social justice is cited as one of the major and prominent indicators. It can be found in different kinds of resources and documents such as poems, speeches, political debates, rhetoric of social groups and so forth. Therefore a form of emphasis on the concept of social justice has existed in every single social movement in Iran based on its special arrangements and aspects which were shaped socially and politically.

This study aims to narrate the history of social justice in the social movements of the last hundred years in Iran to provide a better understanding of it during this very important period of time and to theorize this concept and its changes over this timeframe.

By making use of documentary method and interviewing some sociologists and social activists, a classification of usages of this concept and their differences, in the history of social movements in Iran, is presented.

*Modern State of a Home Education in Russia*

Over the last 20 years, an education system in Russia has undergone significant changes. The changes led to the organization of new forms of training, for example, a home education, which at the same time has its own long enough history in Russian traditions.

Home education takes on special significance in a modern life, giving new opportunities of training and reflecting challenges in both Russian educational system and the society in whole.

For example such as:

- *Dissatisfaction with*: a quality of education at different levels; an established system of relations inside of pre- and comprehensive institutions;
- Difficulty with realization of constitutional right of choice of training form, because of imperfection of legislative base;
- Challenges of combination of family culture and religious principles with those of formal education and so on.

However, for all obvious advantages, a home education is not means of solving all the problems as gives rise to new questions. In Russia these are: efficacy and completeness of children and adolescents (who received a family education) socialization and adaptation in adulthood; compliance of the level of education of upperclassmen, graduated home education, to the requirements of the state educational standard; the lack of the system of diagnostic, methodical and consulting help assistance.

They begin to raise like questions at the legislative level today. Since September 1, 2013, a new Federal law «On education» entered into force, where they pay more attention to this form of training. Legislators reflected growing tendency to an increase in the number of families, who resort to the help of this form of education.

Under the circumstances the development of a home education in Russia and an increase in the number of families, practiced this method, become not only a private affair but also a social phenomenon, needed social analyze and comprehension.

#### *Recreational Hunting in Africa: "Meat" or "Poison" for Local Community*

Recreational hunting is one of the oldest known tourism activities using wild-life. Leader-Williams (2009) defined recreational hunting as the hunting where the hunter or hunters pursue their quarry for recreation or pleasure. Same as in colonial period, hunters, mainly from Europe and U.S.A., range over hill and dale in developing country to obtain trophy of big game and their pleasure.

Some researchers have suggested that controlled recreational hunting can benefit the development of local communities, thereby promoting the protection of wildlife resources as well as both ecological and economic sustainability. However, important debates remain regarding the social impacts of conservation and tourism on local communities.

This presentation aimed to introduce a social impact of recreational hunting on local community in Cameroon. Approximately two years of fieldwork, mainly based on interviews and observations, showed that recreational hunting in North Province, Cameroon generated tax revenues of approximately 0.9 million US dollars in 2009/2010, that is, 200 times as large as than safari in National parks did in the same year. A part of economical benefits shared with local communities as profit sharing and employment opportunities. However, the local inhabitants were affected by regulations of their rights to use natural resources. Moreover, some villages experienced forced migration because of the beginning of hunting tourism in this area.

Recreational hunting brings to local community not only positive impacts such as profit sharing and employment opportunity, but also negative one as control of the livelihoods of local people and forced migration. Even if recreational hunting can play an important role in community conservation and wildlife conservation with its great economic benefit, the independence of local people and their connection with wildlife should be considered to re-conceptualize "Sustainability".

#### *Ethnic Food As Tourism Resources*

This paper aims to examine ethnic food as one of the tourism resources, based on field research conducted in ethnic town in Yokohama city. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multiethnic. Since 1990s the ward office and travel companies have introduced this town as a multicultural site for development of the region and shopping streets. Because of the scarce touristic place, they promoted ethnic restaurants where before only migrants used. Nowadays, some tourists visit this town and enjoy having Okinawa Soba (noodle of Okinawa), churrasco (Brazilian BBQ) in ethnic restaurants. During an urban ethnic festival here, ethnic food booths attract visitors. Tourists talk about their experiences of cuisines and put photos of food in blogs and Facebook rather than towns scenery.

However, most tourists' experiences are superficial. Although ethnic restaurants' chefs change flavor to suit Japanese tourists' taste, most of tourists think their ethnic food authentic. Guidebooks and festivals become tools which merely consume migrants' food as a touristic appeal. In the restaurants, the collective ethnic fantasy presented stereotypic ethnic foods to dramatize the myth of ethnic solidarity. The festival is a way to embed various ethnic groups as a group of "foreigners" who offers novelty items for Japanese.

Taking a tour through these sensuous landscapes, this paper charts an exploratory excursion through arguments that address 'authenticity', touristic reinvention, and cross-cultural encounters through food within the 'mixed' spaces and contradictory imperatives of postcolonial cities.

#### *Ethnic Food Business As Cultural Practice*

This paper aims to examine migrants' ethnic identity and cultural practices, based on field research conducted in an ethnic town. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work

in industrial complex of coastal areas. Such immigrants have made this area multiethnic. I conducted participant observations to some ethnic groups (Okinawa Association, Brazilian NPO etc.). Also I conducted in-depth interviews with some families who have multiethnic backgrounds and experiences in order to understand their identities and their changes in the migration process. Based upon these field work data, this paper considers the social value of migrants from the methodological individualism.

In particular, this paper focuses in entrepreneurs of ethnic food business. For example, ethnic restaurant owners in this area are second generation migrant. They think their business not merely as a job but also as a cultural practice for keeping their ethnic culture. However, some ethnic owners have conflict because they must change flavor to suit Japanese guests' taste although most of guests think their ethnic food authentic. Besides some first generation do not admit their work as a cultural practice. Multi ethnic condition makes the situation even more complicated.

Taking a tour through these multiethnic migrants and their business, this paper charts an exploratory excursion through arguments that address 'ethnicity', identity, 'memory', 'authenticity', 'Invention of tradition' and cross-cultural encounters within the 'mixed' spaces and contradictory imperatives of postcolonial migrant in Japan urban area.

#### *An Analysis of Recent Internationalization of Education in Japan: A Case Study of Nepalese Students*

In this paper, we discuss the experiences of Japanese language school students from Nepal, as a case study, to understand the emerging new trends and issues surrounding the internationalization of education system in Japan. In 2008, the Japanese government proposed the goal to recruit 300,000 international students by 2020. Due to the effort of the Japanese government and school systems, the number of international students has been increasing; however, the patterns of international students have been changing simultaneously. For example, Chinese and Korean students, who used to be the most popular group of international students, are now less likely to choose Japan as their destination country to pursue their education. Instead, the number of students from Nepal, Vietnam and Myanmar has been increasing in the last five years.

To explain the new trends, we discuss the push-pull factors for the changes. Also, the international students need to acquire Japanese language skills to be enrolled in the Japanese university system, the Japanese language school often serves as the first school for many international students. For this reason, we focus the role of Japanese language schools to discuss students' perspectives on life in Japan. Based on the case study of Nepalese students, we found that the most of them are "self-funding" students. Although they hope to pursue higher education and better career prospects, providing financial support to their families in Nepal has become the top priority. Nepalese students have to work double or even triple jobs to manage the heavy debt from study abroad, high living cost in Japan and support families in Nepal; consequently, many students face challenges to pursue their dreams. In addition, some of them expressed cultural differences and isolation from the society. Based on the analysis, we propose social implications of the emerging trend of international students.

#### *A Systemic Approach to the Construction of Urban Places*

This paper reports on research undergone across three markets in the centre of London, England. The research adopts an ethnographic approach that focuses on the ongoing process construction. By using in-depth/iterative interviews the work highlights both the changing narrative that people constructs 'in the moment' while also highlighting the role of researcher in place construction. This projects works on the premise that it is beneficial to understand places as complicated adaptive systems that are constituted by an array of heterogeneous parts. Places have physical locations and material forms but they are also in part, made up of the very people who experience the place. Understanding such complexity leads the researcher to focus on the 'how' of place, rather than the 'what', 'where', or 'who'. Rather than attempting to understand place as unique, stable, concepts, this work builds on systems-theoretical approaches towards an understanding of places that facilitates both change and permanency so important to architecture and community building theories.

##### *Study Choice, Gender and Ethnicity*

This study aims to explore ethnic differences in gender specific study choice patterns. The central research question is: to what extent do ethnic minorities present different gender-specific choice patterns in mathematics, science and technology (MST) and what are the reasons for such differences?

The study is based on the premise that pupils with non-western ethnic backgrounds differ in their evaluation of MST-studies from pupils with native ethnic backgrounds as a result of the difference in cultural values. To explore this premise, we first examined the effects of gender, ethnicity and grade averages on school profile choices of 265 pupils in higher secondary education in two schools in the Netherlands. This was followed by semi-structured interviews with 45 individual pupils about their choices.

In our sample 59% of male and 42% of female pupils have chosen a MST-profile, of which 39% of both male and female pupils have chosen this profile in combination with a Health-profile. Moreover, the combined grade average for mathematics, physics and chemistry is shown to have the strongest effect on a positive choice for a MST-profile. Gender also has a significant effect, even after controlling for the combined grade average. Ethnicity however does not.

The interviews reveal that female pupils who choose a MST-profile often did so because of interest in a health related career. The high share of pupils and in particular female pupils with a MST-profile is partially also explained by the wish to keep options open for future educational choices since a MST-profile grants access to almost all fields of study in tertiary higher education. Ethnic background, despite not being significant, is thought to serve as a proxy for social class since pupils with non-western backgrounds have smaller social networks than pupils with native backgrounds through which they can acquire information about choices.

##### *Class Differences in Women's Work-Care Reconciliation in Contemporary Leeds*

This paper focuses on women's working lives in Leeds, England, where some of the UK's most affluent and most deprived localities are found. The authors compare the work-care reconciliation practices and attitudes of lower and higher educated women, and consider how differences and similarities in these are shaped by local welfare state arrangements and conditions in the local labour market.

The analysis, conducted within the EU-funded FLOWS project, is based on data from a survey of local women and focus group interviews with women who combine paid work with raising young children or looking after old, disabled or sick family members.

While working-class women in the UK have 'always worked', the second part of the 20<sup>th</sup> century brought middle-class women's mass entry into the labour force. In some other countries, this process was actively encouraged by state provision of publicly funded care services and other policies to support women's attachment to the labour force while raising young children and/or looking after older family members. In the UK's liberal welfare state, childcare and caring for older, sick or disabled adults have primarily been conceptualised as individual/familial responsibilities and care services are currently provided primarily by market actors, rather than directly by the state. The authors explore the relative importance of the national/local state, cultural preferences and market conditions on women's working lives, and consider how these shape social inequalities between women in different socio-economic circumstances.

##### *Gender Disparities in How Older Workers Reconcile Work and Care in England*

Carers in England and across the UK have been a focus of policy debate on work and care for several decades. In the 2000s, modest new employment rights (including the right to request flexibility at work) were introduced to support them reconcile work and care, and municipalities received new funding from central government to help develop local services to address carers' needs. In national population censuses in 2001 and 2011, the Office for National Statistics collected data about caring responsibilities and these permit examination of the relation-

ship between the (unpaid) care individuals give to their older, sick or disabled family members, friends or neighbours and paid work, age, gender and health. Based on analysis of these data, and supported by insights from two surveys of carers (the 2009/10 Survey of Carers in Households and the Carers, Employment and Services survey undertaken in 2006-7 at the University of Leeds), this contribution examines data on the intensity of caring responsibilities (using hours of weekly care provided as a measure of intensity) and participation in the labour market for men and women aged 45-64. The paper highlights gender differences in patterns of care and paid work, with a particular focus on the extent to which men and women in this age group appear to use part-time work and early retirement as ways of combining work and caring responsibilities. In interpreting these data, the authors also draw on qualitative and policy evaluation studies undertaken by the CIRCLE research group at the University of Leeds. These provide insights into older workers' motivations, preferences and behaviour in relation to work and care, and indicate the complex cultural, moral and institutional contexts which shape patterns of caregiving in later life.

##### *Forming Counter-Hegemonic Identity through Narration: Personal Stories, Historical Narrative, and the Transformation of National Identity in Taiwan*

Over the past four decades, Taiwan has undergone a dramatic political transition from authoritarian rule to democracy. Accompanying this transition is a major change of the sense of national identification when hegemonic Chinese nationalism has increasingly given way to local Taiwanese consciousness. A series of survey data show that the percentage of people who identify themselves as being Taiwanese has risen from 17% in 1992 to 57.5% in 2013, while the percentage of people who identify themselves as being Chinese drops from 25.5% to 3.6% in this period. Yet few researches have been made on how common people formed a counter-hegemonic national identity on the personal level during the period. To investigate this transformative dynamics, we draw on the theoretical perspective of "narrative identity" to analyze a large number of "letters to the editor" describing personal experiences of identity transformation which were published in two major Taiwanese newspapers during the period from 1994 to 2004, when the change accelerated sharply. We find that a special historical narrative which consisted of a distinctive historical outlook and story line and displayed unique values and emotions served as a common framework of reference for those who began to discredit Chinese nationalism to reassess their individual life history and make sense of their connections with the destiny of Taiwan. It was critical to the formation of the counter-hegemonic Taiwanese identity. We argue that counter-hegemonic identity is typically effectively created and sustained when an elite-derived historical narrative had popular resonance in the sense that it demonstrates a remarkable ability to explain the marginalized and suppressed life experience of ordinary people. Our analysis also shows that the act of narration or story-telling is a key mechanism through which linking individual to society, the present to the past, the micro to the macro, and agency to structure.

##### *Indigenous Mobility: Experiences and Narratives of Mobility and Immobility of Yami Indigenous Youth on Lanyu (Orchid Island), Taiwan*

Travel, mobility and diaspora are facts of contemporary societies across the globe and their implications are profoundly important. This paper attempts to articulate the significant connections between travel, mobility and diaspora in Taiwanese indigenous Yami society. It argues that the Yami youth from Orchid Island cross the strait to urban Taiwan for diverse reasons relating to both mobile physical bodies and emotional displacement. The paper offers a range of mobility narratives as reflective accounts cultural diasporic encounters toward a deeper understanding of travel and mobilities in contemporary indigenous society. Engaging with multi-sited fieldwork between Taiwan and Orchid Island, with in-depth interviews with Yami youth, this paper explores the complexities of the forced 'migration' phenomena of indigenous young people and their experiences and narratives of travel and mobility. It addresses issues that arise when they are 'on the move' and feel a loss due to their emotional attachment to a place whether interpreted as home or homeland. Focusing on aspects of everyday life, this study illustrates the tensions and dynamics of travel, mobility and diaspora. It aims to open a dialogue among tourism studies, indigenous studies and mobility studies in which issues of diaspora and people being 'on the move' are investigated.

*Initiatives Collectives De Création D'activités, Circuits Courts De Production Et Citoyenneté Au Travail Au Brésil*

L'économie solidaire au Brésil regroupe des travailleurs (informels, chômeurs, pauvres des périphéries urbaines, travailleurs ruraux) ainsi que des organismes communautaires, des mouvements de foi et des syndicats de la CUT (la *Centrale unique des travailleurs*, principale confédération syndicale au Brésil). Elle a impulsé des formes de développement local reposant sur la notion de circuits courts de production et de souveraineté alimentaire. Ces formes prennent appui sur l'organisation en coopératives autogérées d'agriculteurs familiaux et sur la mobilisation des Communautés traditionnelles (*Quilombas*, etc.) qui réinvestissent leur savoir faire en matière d'exploitation écologique des ressources naturelles. Elles associent les *Catadores*, personnes qui ramassent et trient les matériaux recyclables. L'économie solidaire consiste aussi dans des « chaînes de valeur » qui regroupent, par exemple, des coopératives assurant la production du coton écologique jusqu'à la fabrication des vêtements, et leur commercialisation selon une politique de prix accessibles aux familles à faible revenus.

Ces initiatives collectives montrent que la redistribution de richesses s'opère en amont même de leur production, dans les choix de filière d'activité en relation avec les communautés locales. Ces initiatives donnent aussi un contenu concret à ce que peut être la citoyenneté au travail, qui consiste à remettre en cause les divisions traditionnelles entre concepteur et exécutant / intellectuel et manuel, et aussi entre travail marchand et travail de reproduction sociale. Ces réalisations questionnent enfin les notions de démocratie et de représentation collective. L'étude de cas menée au Brésil auprès de syndicats et du Forum brésilien de l'économie solidaire indique que les initiatives se constituent comme des modèles alternatifs quand elles font appel à des formes participatives et délibératives de démocratie et non au processus habituel d'agrégation des intérêts par des syndicats, qui ont tendance à reproduire les pratiques dominantes.

## JS-66.4

**YEROCHEWSKI, CAROLE\*** (Université de Montréal, CRIMT, GIREPS, [carolejerochewski@msn.com](mailto:carolejerochewski@msn.com))

*Reproduction Ou Transformation Des Organisations Du Travail Dans Les Coopératives De L'Économie Solidaire Au Brésil*

Cette communication propose un éclairage sur la façon dont des syndicats de la CUT (Centrale unique des travailleurs, principale confédération syndicale au Brésil) sont amenés à prendre en compte le rapport au travail des personnes considérées peu qualifiées, en s'appuyant sur l'observation des pratiques sociales et des identités collectives dans le mouvement de l'économie solidaire au Brésil. Celui-ci rassemble des coopératives et associations de production d'horizons divers (anciennes entreprises industrielles récupérées par les travailleurs, création d'activités de faible valeur ajoutée en couture, alimentation, collecte et tri des matériaux recyclables..., coopératives d'agriculteurs familiaux), qui ont en commun d'être autogérées. Cependant, les pratiques d'autogestion diffèrent, notamment sous l'angle de l'organisation du travail, qui peut reproduire ou au contraire remettre en cause les divisions hiérarchisées du travail entre qualifiés et non qualifiés et entre sexe.

Si des syndicats peuvent appuyer des pratiques transformatrices de rapports sociaux au travail, ils n'en sont pas le plus souvent à l'initiative. Ils justifient plutôt de perpétuer les divisions hiérarchisées du travail au nom de la compétitivité des coopératives et de l'amélioration des conditions d'emploi et de salaire, maintenant les personnes peu qualifiées dans un rapport instrumental et hétéronome au travail.

L'étude de cas indique par ailleurs que les femmes tiennent, collectivement, un rôle de premier plan dans la subversion des rapports traditionnels au travail et dans la ré-articulation des identités au travail et hors travail. En prenant appui sur les notions d'identité collective de Melucci et de transaction identitaire de Dubar, l'étude permet d'explorer comment s'effectue cette ré-articulation et pourquoi elle est porteuse de pratiques autogestionnaires réelles et non pas seulement formelles (au sens où l'autogestion se réduit à la tenue d'assemblées générales). Ces résultats participent des questionnements sur la notion de travail.

CHEUNG, ADAM KA-LOK (National University of Singapore)

*Temporal, Spatial Distribution and Determinants of One-Person Households in China*

Nearly 60 million people live alone in China now. As one of the fastest growing living arrangements in China, representing 14.0% of all Chinese family households in 2011, little is known about who they are, where they are, and what drove this

increase. We take a historical look at the temporal and spatial distribution trends of the one-person household based on 1982, 1990 and 2005 individual-level Census and 1% Population Sample Survey data. In this study, we estimate a series of prefecture-level fixed effect regressions with data from 1982, 1990 and 2005 to examine the temporal-spatial trend of the changing prevalence of one-person households. We also conduct multi-level analysis with 2005 data to examine what contextual and individual characteristics contribute to an individual's propensity to live alone.

Results show that socioeconomic development and internal migration are crucial factors for the increasing prevalence of one-person households in prefecture-level. There is an increasing spatial heterogeneity in that these households cluster in economically developed areas. Although widowed individuals remain a substantial proportion of those living alone in China, we observe a sizeable increase in the prevalence of married individual who live alone. The multilevel models with the 2005 data decompose the effects of socioeconomic development and internal migration into individual-level and contextual-level. Both out- and in-migration have significantly shaped the regional variation of living alone at both individual and contextual levels. However, the effects of socioeconomic development are positive at individual-level but negative at contextual-level suggesting that higher socioeconomic development may have led to higher living cost in these areas that may cast a negative effect on the propensity of living alone. In China, different age groups of those who live alone are motivated by different socioeconomic and cultural circumstances quite different from the cultural individualism emphasized in recent literature on Western societies.

*Belief in God, Religion and Secularism: Self-Identifications of Jewish-Muslim Mixed-Married Couples in Contemporary Turkey*

This study destabilizes the dichotomous approach in secularization theories and in intermarriage literature, which views contemporary identities either as secular or religious, through the analysis of Jewish-Muslim mixed-married couples' perceptions of their religious backgrounds in the officially secular state of Turkey. In-depth interviews with Jewish-Muslim mixed-married couples show that these individuals distinguish between "religion" as externally defined religious rules and "faith" as an unmediated relationship between God and the individual to explain their connection to their religious backgrounds and to identify themselves as secular. Thereby, they establish a hybrid position which conceptualize as "faithful secularity" that incorporates both belief in God and secularity within the Turkish context. Unlike Jewish partners, Muslim partners have difficulty perceiving their religious background as one that goes beyond the religious identity; therefore, the distinction between religion and faith becomes particularly helpful for mixed-married Muslims to situate themselves with respect to their Muslim background. The concurrently secular and faithful identities of these Jewish-Muslim mixed-married couples break the artificial dichotomy between secularity and religiosity and pave the way for a new theory of secularization.

*Academics Producing Knowledge for the World Bank*

The trend of neoliberalization that is experienced in all spheres of life also has its impact on the academia in the forms of managerialization and entrepreneurialization of universities, increasing workloads, increasing pressures on academics to generate funds, transformation of knowledge into a product that can be exchanged in the market, alienation of academic researchers from the knowledge they are producing, and an increasing degree of specialization and division of academic research labor in the developed and developing countries alike. Especially for the second group of countries, international organizations like the World Bank indeed have a major role in the development and spread of neoliberalization in academia. Limited resources for research lead the academics to look for external funding opportunities and international organizations like the World Bank emerge as important suppliers of funds for doing research in these circumstances. Doing research and producing knowledge for the World Bank create certain outcomes both in the short and long terms for these researchers themselves and also for academia in general. This paper demonstrates how the academics' experience of producing knowledge for the World Bank fosters the neoliberalization of the university in Turkey. Depending on interviews with academics, the paper looks at the impacts of doing research for the World Bank. It concludes that although these academics are forced to act as entrepreneurial subjects, they haven't necessarily internalized this neoliberal mentality.

### *Struggling to Climb the Organizational Ladder in Turkey*

Depending on twenty in-depth interviews with men and women who graduated from top universities of Turkey and who have been working in corporate jobs for more than ten years, this paper reflects on the impact of gender on prestigious white-collar jobs. It aims to answer the questions of to what extent gender has an influence on the experiences of a white-collar employee, what it means to be a white-collar employee for a woman, and what kind of factors prevent women from rising up in the corporate hierarchy. It points out that males talk about issues related to gender only when they are directly asked to respond on the impact of gender on work experience, whereas gender has a central role throughout the accounts of females, especially if they are married and have children. For married women with kids, it is not possible to talk about their jobs without talking about how they manage their domestic responsibilities. The paper demonstrates that organizational cultures that emphasize staying at the workplace for extended hours make it very hard for women with kids to climb the organizational ladder, as child care is still primarily considered as women's responsibility. Women who have struggled to reach senior management positions give up, as they get exhausted because of the double shift of paid work and child care. Although these women have above average family incomes and can afford to hire domestic help, because of the traditional ideology that emphasizes the crucial role of mothers for socialization of kids, they give up their careers and shift to jobs that have regular work hours but no future prospects. Educated in the same way with their male colleagues to be successful and to have achievements, these women end up being unsatisfied with not only their jobs but also their lives.

### *The Business of Housing God: A Case of Singapore Megachurches*

Religion and business are often seen as inhabiting separate social spheres but in this paper I explore how they are combined and reconciled in the activities of megachurches. Through two case studies of Singapore's largest megachurches, I examine how they combine religion and business, focusing on how these churches strategically co-opt the discourse and techniques of marketing managerialism to manage growth and multiply financial rewards through church building projects. This explicit engagement in business practices not only raise the question of profits in 'non-profit' organisations but importantly, foreground the reconciliation of religion and business practices in the same discursive space. I demonstrate this reconciliation through the churches' built environment-building projects which exemplify the dedifferentiation of space that characterises not only the religious, investment and consumption practices of these megachurches, but also of the language and practice of business. This not only extends understanding of neo-liberal effects, but demonstrates the form and dynamics of marketing managerialism in a specific 'non-business' context. In doing so, they reflect the values of economic neo-liberalism which has been a driving force in global economies such as Singapore. Therefore this research is interested in questioning how neo-liberalism privileges business and the market to become the prime factor in shaping religious practices in contemporary churches such as the megachurch in the 'intelligent island' state of Singapore. Singapore is "famous for being run like a giant corporation"<sup>[1]</sup> and is an affluent country characterised as "neoliberal-developmental"<sup>[2]</sup>. This is reflected in the religious organisations operating within it, especially megachurches that have pressing space issues in containing its burgeoning congregation in a highly urbanised and compact city.

### *Urban Transformation in a Transitional Economy: Is "Gentrification" an Analytically Useful Concept for Vietnam?*

Despite the rapid transformation in the urban landscape of Vietnam, a simple and uncritical application of the "gentrification" concept out of the specific spatial and temporal context of the country is problematic. Not only does the phenomena progress in a highly compressed temporal scale compared to similar processes in cities in the "global north", it is also embedded within a paradigmatic shift of the entire socio-economic system. This paper attempts to explore the process of urban redevelopment in Vietnam and to critically examine whether this concept, with its origin from the "global north", is capable of offering a conceptually robust lens through which the phenomena can be consistently analysed. This paper attempts to contribute to such discussion and explore the process of urban redevelopment in Vietnam and offer a critical examination on the applicability of the concept in cities of the global south, particularly within the context of a city in a transitional economy. To enhance coherence of the empirical data being compared, the city of Hanoi is used as the case study city. As the capital and a "political" city of Vietnam, Hanoi is undoubtedly commendable to the typical socio-political forces that are at work in the country. With case examples of redevelopment projects in Hanoi against the context of the specificity of the socio-economic and political transformation of the country, this paper will offer a conceptually robust lens through which the phenomena of gentrification can be critically analysed in the specific context of Vietnam.

### *Civil Society Organizations and Cultural Repertoires of Evaluation in the Media Debate on Climate Change: Comparing France and the United States*

National political cultures have an effect on how global political problems are constructed in media debates in different countries. Our starting point is that the repertoires of moral evaluation used to justify arguments related to the problem of climate change are likely to vary between countries, and that these differences may, in turn, affect policy responses. Civil society organizations, we argue, have a particularly important role in bringing moral evaluations into the debate. In this paper, we compare the argumentation of civil society organizations and their allies and opponents in coverage of UN climate change conferences in Le Monde and the New York Times between 1997 and 2011. We find that arguments are more often justified by appealing to civic values like equality, democracy and sound legal regulation in France, while monetary value plays a more important role as a justification for climate policy arguments in the United States. These differences are not due to differences in the selection of sources by journalists, but seem to reflect deep-seated cultural differences. In France, even business organizations often resort to the civic mode of argumentation while in the US, civil society organizations often justify their arguments in economic terms. Over time, we see convergence in both countries towards arguments based on the idea of ecological modernization: economic growth, technological progress and ecological values are increasingly seen as supporting each other. Radical ecologist and radical pro-market arguments are both becoming more marginalized.

### *Crowding in: Why and How Indian Civil Society Organizations Began Mobilizing on Climate Change*

In this paper, we argue that a process of crowding in of civil society organizations (CSOs) into the field of climate change advocacy has occurred in India since around 2007. Both the number and the diversity of CSOs involved in this field of advocacy has greatly increased. Drawing on the Dynamics of Contention approach, We identify five mechanisms that explain why and how this process has unfolded: (1) The expansion of discursive opportunities in the global public sphere, (2) the event effect of Copenhagen COP 15 in 2009, (3) the network effects of expanding global civil society networks of climate change advocacy and the resulting flows of discourses and funding, (4) adoption and innovation of new action repertoires, and (5) the global political pressure effect leading to development of national climate policies and corresponding opportunities for CSOs to influence their formulation and implementation.

**YLONEN, MARJA\*** (University of Jyväskylä,  
[marja.k.ylonen@jyu.fi](mailto:marja.k.ylonen@jyu.fi))

*Nuclear Energy and Safety: International and National Isomorphic Pressures*

Nuclear safety has often been an accident driven topic as the Three Mile Island, Chernobyl and Fukushima disasters show. In addition to accidents, severe economic and environmental challenges related to the construction of new nuclear power units and management of ageing plants and new technology, not to mention decommissioning of existing older units keep nuclear energy and safety among the relevant topics. Furthermore, the recent upgrading of safety requirements at the national and international level and harmonization attempts of nuclear safety regulation by the Western European Nuclear Regulators' Association, raise questions about the cultural features of nuclear safety regulation.

The aim of the paper is to explore how nuclear safety (that is an important component of human and environmental health) has been dealt with in the international and national level in Finland and the UK after Fukushima and what kinds of factors constrain learning. The data consists of the International Atomic Energy Agency's Safety Standards, Western European Nuclear Regulators' Association's reports and the OECD Nuclear Energy Agency's reports, the national final reports of the Stress tests of Finland and the UK, national nuclear energy act and safety guides. The method of analysis is content analysis.

The conceptual frame draws on the isomorphic pressures, which refer to the phenomenon by which organisations become structurally or strategically homogeneous. Isomorphic pressures, stemming from national institutional patterns or professionalisation of certain sector may play a role in the nuclear sector, since they affect the what, how and who of safety-related action. Isomorphism is important to the extent that it may strengthen and spread effective understandings of, and approaches to, safety, but it may also engender inability to detect specific needs and requirements or it may lead to contrasting understandings and approaches among bodies involved in nuclear safety that are exposed to different isomorphic pressures.

**YLÄ-ANTTILA, TUUKKA\*** (University of Helsinki,  
[tuukka.yla-anttila@helsinki.fi](mailto:tuukka.yla-anttila@helsinki.fi))

*Populism As Politics of Personal Experience: The Case of Suviivirsi*

In this paper, I will present one possible sociological interpretation of conservative populism, recently of rising popularity all over Europe. I will base my analysis on Laurent Thévenot's sociology of engagements and use texts from candidates of the conservative populist Finns party in the 2011 Finnish parliamentary elections as empirical examples. In the texts, the candidates appeal to the shared national experience of singing a traditional Christian spring hymn, *Suviivirsi*, as schoolchildren. I will argue that populism can be interpreted as *an attempt to expand the gamut of acceptable political claims to include claims based on personal experiences*, where the physical and emotional proximity to significant persons and objects is of crucial importance.

This is in contrast to a typical requirement in mainstream politics: to distance one's self from one's demands. It is customary to present political claims as based on universally accepted and abstractly communicated principles of justice such as democracy, the market mechanism or technical efficiency, instead of mere personal preference. The populist mode of argumentation is in stark contrast particularly to typical Finnish expectations of politics, focused on efficiency.

To make this argument, I need to present four elements: first, Boltanski & Thévenot's theory of public justification; second, a brief overview of Finnish political practices; third, Thévenot's sociology of engagements; and fourth, the case of *Suviivirsi* and the populist and non-populist practices in which it is used in nationalist political argumentation. I conclude with a discussion of the implications of this interpretation, pointing out that nationalist politics made with reference to personal affinities can be even more exclusionary than ones based on public justifications. On the other hand, however, an acceptance of personal affinities into politics is also a possibility for political movements of other types, not just reactionary conservative nationalism.

[khl@sam.sdu.dk](mailto:khl@sam.sdu.dk))

*Youth, Political Socialisation and Everyday Life*

This paper aims to explore the social processes that shape political socialisation of European youth. The theoretical point of departure is the literature of political socialization that sees family and close friends as principal actors in young people's political socialization process (e.g. Hyman 1959, Jennings et al. 2009). A key question is to what extent parents pass on political values and habits to their

offspring, and how upcoming generations differ politically from their predecessors. However, there seems to be a lack of knowledge concerning social dynamics and interaction in the everyday experience of young people's political life. Especially, whether the development of modern family patterns and increased gender equality might change the classic roles of the parents in the political socialization process.

While we recognize the importance of parental socialisation, we challenge the typical assumption of a "one-directional" intergenerational transmission of political values from parent to child. Therefore, we believe it is essential to scrutinize how young people engage in daily conversations and discussions about politics and society, because young people who engage in political discussions with family and friends tend to be more engaged in political participation than other youth, such as voting at elections, petitions and participation in demonstrations (Gundelach and Levinsen 2011).

Besides outlining relative contributions by different agents of political socialisation, we aim to explore the contexts of political socialisation by asking how political issues are raised and what kind of political issues are discussed? Thereby, it is possible to make a coherent analysis at different levels, which both maps the networks of political socialisation and explores how young people gain and develop information and knowledge.

Methodologically, the paper adopts a mixed methods research model. The paper triangulates survey data (n=936) and in-depth interviews (n=60) of young Danes. Data has been gathered for the MYPLACE project.

*How Social Class and Education Affect Youth Transition in Japan? : Youth Cohort Study of Japan*

The purpose of this report is to clarify how social class and education influence youth transition in Japan from Youth Cohort Study of Japan (YCSJ). In the late 90's, the life course after secondary school graduation have significantly changed. The close connection between upper secondary schools and employers to smoothly transit the graduates into work in Japan had been once highly praised, but the system became less functional due to several factors (Mary C.Brinton, 2011, *Lost in Transition*). Many young people cannot get permanent and secure jobs, so some of them become 'Freeters' who only get temporal and insecure jobs to make a living. Many empirical studies have taken place to find who are the most disadvantaged among Japanese youth, trying to find what causes the dysfunctional transition between school and labor market in the 2000's. However, most of these studies focused on the youth transition during only a certain period of time, and they are not sufficient to clarify the complexity of youth transition. YCSJ has conducted a panel survey of a group of youth for five years from their age of 20, so that YCSJ is able to capture the dynamic young people's transition in consideration of various factors. Above all, we aim at unraveling how youth transition differentiated with social class and educational opportunities.

*A New Attempt At Organizing Irregular Workers In Korea :Examining The Activities Of The Korean Women's Trade Union*

It is difficult to organize irregular workers, especially female irregular workers in Korea, as many of them are employed by small enterprises, change their jobs frequently and enter and leave the labor market according to economic fluctuations. Therefore the Korean Women's Trade Union (KWTU) has tried to build a new model of a trade union and a new idea of a labor movement which are different from the enterprise unions for male regular workers in order to organize female irregular workers who have been entirely excluded from the protection of labor laws, the welfare system and the trade union. While the enterprise unions have concentrated on protecting employment and improving working conditions of the union members at each workplace, the KWTU has been an independent women's trade union which any working woman can join by herself without distinction of industry, occupation or region, or whether she is unemployed or not beyond the enterprise, and performed various activities. In this presentation, we consider the activities of the KWTU as well as its implications.

### *The Rise of 'Reflexive University Governance' in the Risk Societies: Japan, the United Kingdom and the United States*

Socio-economic upheavals after the Lehman Shock, and in European countries, the introduction of austerity measures have financially overshadowed the university sectors cross-nationally. The purpose of the paper is to identify how uncertainty and insecurity in the post-2008 period have re-shaped university governance relating to risk management. The study examines university governance at the system and institutional levels in Japan, the United Kingdom and the United States.

The paper is both theoretical and empirical driven. The study takes the theoretical approach by utilising two conceptions of 'peer reflexivity' and 'risk' in the context of university governance. The former refers to the 'cycle of peer feedback, self-monitoring, self-analysis and action. Higher education institutions are treated as 'learning organizations' (Clark 1998; Dill 1999). The latter explores Beck's (1992) and Giddens' (1990, 1999) risk society. The study then proposes, a new concept, 'peer reflexive governance', which is compared with Foucault's neo-liberal 'governmentality' (1988, 1991) to capture the characteristics of 'peer reflexive governance'.

Regarding empirical analysis, the study takes documentation for data collection in order to identify the extent to which the institutions in three country settings are autonomous (not in direct state control modes), making the peer reflexive mechanisms feasible. The collected document includes acts, government White Papers, circulars and other official documents.

The paper argues that 'peer reflexive governance' has become significant in the insecure and uncertain environment in the post-credit crunch period because the universities have become increasingly more self-aware, reflective, and reflexive than ever before. The universities have strengthened their self-monitoring mechanisms in order to respond to uncertainty and risks, shaping them into learning organizations. The practices of 'peer reflexive governance', however, differ between Japan, the United Kingdom and the United States.

The study is significant because few literatures so far connect the conception of 'risks' to university governance.

#### *Policing For Prevention Of Juvenile Delinquency In Japan*

I will analyze the development of policing for prevention of juvenile delinquency after the World War II. Immediately after the war the Japanese police system was democratized. However, the police did not have resources enough to carry out the activities for prevention of juvenile delinquency. With the recovery of economic conditions the police established the system to prevent juvenile delinquency. Since then the police have carried out the net-widening of their activities for the prevention of juvenile delinquency. I will explain how the net-widening has been carried out.

Survey of Standardization in Tsuruoka, Japan□F

Comparison of results from four surveys conducted at 20-year intervals

YONEDA Masato, MIZUNO Yoshimichi, MAEDA Tadahiko, ABE Takahito.

The present study briefly reports the result of "Survey of Standardization in Tsuruoka" (hereafter abbreviated as SST). SST is a cooperative research project between National Institute for Japanese Language and Linguistics and the Institute of Statistical Mathematics since 1950, when the first survey was administered in central area of Tsuruoka, a local city in Tohoku district, Japan. Since then the project has been repeated at about twenty-year intervals (we administered the

fourth survey in the fall of 2011). This project aims at describing the process of language standardization in Tsuruoka in both societal and individual levels.

SST is a combination of Area survey and Panel survey. In the Area survey, informants were sample randomly drawn in each survey occasion from the residential register of the target area. The aim of the Area survey is to capture the standardization process in societal level. In the Panel survey, respondents of the first, second and third Area surveys were followed up in the subsequent occasions and asked to answer to the same items. The aim of the panel survey is to investigate the typology of life-span linguistic change in individual level.

The sample size for the Area survey in fourth SST was 700 and number of respondents was 466 (response rate 66%). Panel survey in the fourth SST consists of three groups, four-time repeaters from the first survey, three-time repeaters from the second survey, and the two-time repeaters from the third survey. The total of the eligible sample for three groups was 437 and the number of respondents was 333 (response rate 76%).

In the presentation, we will report on selected results of the fourth survey on several items.

#### *Japanese Language Education for Japan-Philippines Economic Partnership Agreement*

This paper asks how Japanese language education for Filipino nurse candidates under JPEPA can be located in the Philippine socio-cultural settings, in order to provide academic grounding toward more meaningful policy making for both governments.

Foreign nurses' entry to Japan presents a unique pattern of migration from the point of view of language learning. It pertains to adults who learn a foreign language from the beginning, yet are required to reach a high level of proficiency. Historically speaking, adult migrants often meant either unskilled workers who are not required high level of language skills; or skilled workers who already know the language of the host country. In any cases, the movement often took place from a former colony to a former sovereignty. As for Japan and the Philippines, although Japan occupied the Philippines for a few years during World War II, linguistically speaking, there is little colonial legacy among the young generation of Filipinos today. Also, due to the eligibility constraints, it is unlikely possible to find an EPA candidate who has received higher education in Japan.

The paper illustrates the socio-cultural situation in language practice in the Philippines at large and points to the both governments' weakness in systematic understanding and addressing it — a) multi-lingual-ness with ambivalent relation with English as both colonial and global language; b) prominence of orality over literacy; c) weaker establishment of Japanese language education than other Southeast Asian countries in quantity and quality; and d) class issue in gaps in motivation and needs of Japanese language learning.

#### *University Governance and the Academic Profession in "Rising" East Asia*

The role of universities is increasing with the rapid growth of the knowledge economy across the world. At the same time, universities are also being called upon to change their governance and management structures in order to transform themselves into the core sector of the globally competitive knowledge industry. Salmi (2008) suggests that "world-class" universities and higher education systems require favorable governance with autonomy and academic freedom. Terms such as "entrepreneurial universities" (Clark, 1998) and "academic capitalism" (Slaughter and Leslie, 1999), however, imply that traditional "collegium" governance is at risk. Most East Asian higher education systems have been established and developed through strong intervention by national governments, and, therefore, granting of academic freedom and autonomy has been relatively slow and recent. Namely, the top universities in these "Post-Confucian States" (Marginson, 2011) are now achieving "world-class" status without experiencing the strong "collegium" governance pattern of the past. Japan could be an exception, having developed strong academic freedom and autonomy led by the faculties since World War II. However, now, top Japanese universities are faced with stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and around the world. By utilizing data from the Academic Profession in Asia (APA) survey among selected Asian countries in various development contexts gathered by Arimoto et. al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium culture? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?

*What Leads to High Participation in Tertiary Education?*

The relationship between demographic change and investment in education is one of the topics that has attracted considerable attention from both policy-makers and experts. Extended education increases the social and private costs of raising children, and has been considered a major factor in the decline of birth rates. At the same time, the growing knowledge society requires a high level of participation in higher and post-secondary education. Individuals tend to utilize advanced educational qualifications for migration to world cities and knowledge clusters, but also simply for securing stable jobs in their hometowns. The relationship between the growing patterns of tertiary education enrollment and demographic trends, however, is not that simple. There are varieties of approaches for achieving high levels of participation in tertiary education in different countries and economies; in cost sharing between the public and private sectors, in the distribution of resources within tertiary education systems and institutions, and in regulatory frameworks for sustaining and enhancing academic excellence and a minimum quality of education and training. In this study, the authors examine patterns of achieving high levels of participation in tertiary education, focusing especially on their relationship with demographic changes. Then, the authors identify the characteristics of these patterns in Japan and other East Asian countries where the higher education systems are financially highly privatized, but under the strong guidance of national governments. Lastly, the authors conduct a detailed case study on the reality of the high-participation tertiary education system in Japan as a country facing a very serious aging problem, and outline the implications for international discussion.

*Food Sovereignty and the Politics of Food Insecurity in South Korea*

**Food Sovereignty and the Politics of Food Insecurity in South Korea**

As South Korea has become one of the fastest industrialized countries in the world, it has also been one which experienced a dramatic decline in agriculture. Between 1970 and 2011, the share of agriculture in GDP dropped sharply from 25.4% to 2.3%. The collapse of agriculture has been accelerated by the global agri-food system and the government's neo-liberal agricultural policies. As a result,

food insecurity is one of the most important social issues in South Korea, today. Food insecurity can be understood not only as low grain self-sufficiency, 22.6% in South Korea; but also, as food safety problems. The Korean government, however, has prioritized overseas land exploitation and has recently strengthened neo-liberal agricultural reforms such as the FTA. Under these circumstances, the food sovereignty movement, which was originally advocated by La Via Campesina, has been discussed among the South Korean civic and peasant movement sectors. In order to establish food sovereignty, the peasant movement sector is urging the South Korean government to secure stable production, while the civic movement is advocating a rights to food project. Considering the fact that consistent food insecurity has threatened not just the farmers' livelihoods, but the consumers' dining tables, the concept and practical application of food sovereignty may bring many groups together. Building a consensus between civic groups and farmers' movements seems to be more feasible in Korea, under these conditions. The aim of this paper is to analyze the various actors, and their dynamic interactions involved in food sovereignty, in South Korea. We investigate the mechanism of the politics of food insecurity and food sovereignty by examining two major cases in South Korea involving the full-tariff on rice, and the import ban on fisheries products from Japan, due to radioactive contamination.

*Examining Factors Contributing Spontaneous Volunteerism in a Disaster Situation: The Case of the 2009 Red River Flood*

Spontaneous volunteers play a significant role in times of disaster. Before governmental and organized voluntary disaster agencies arrive in sufficient strength, civilian volunteers often spontaneously mobilize to protect their lives and belongings in the early period of disaster. This study uniquely examines the characteristics of spontaneous volunteers at three different levels of flood stage risk during Fargo, North Dakota's response to the 2009 Red River flood threat. The Red River crested at a record level on March 28, 2009. More than 20,000 civilian volunteers spontaneously mobilized and gave of their time to respond to the threat of Red River flooding. Unaffiliated volunteers signed-up at coordination sites throughout the city and filled more than 3 million sandbags and piled these sandbags along the riverfront. Sign-up data from 11,553 volunteers were geocoded to connect volunteers to the local area's 96 census block groups. Data on these census block groups were then compiled from the American Community Survey (ACS) 5 year data (2006-2010). Factors in terms of socio-economic and geographical characteristics of spontaneous volunteers are examined before, during, and after the flood stage at the 2009 Red River Flood. Findings show that education, race, age, occupation, and geographic factors are significantly associated with volunteerism along with different levels of risk in the case of the 2009 Red River Flood.

KIM, HEE-SANG (Korea University)

*Brain Circulation and Transnational Identity of Asian Students Studying in Asian Countries*

This paper is based on an empirical comparative analysis of study-broad students from Korea, China and Japan. By focusing on the phenomenon of 'regionalization of higher education,' the study compares international students' mobility within Asia, construction and transferability of human resources, and formation of transnational identity. The study specifically focuses on Korean, Japanese, and Chinese students studying in institutions of higher education in Korea, Japan and China.

This study is based on a survey study among Asian students studying abroad in South Korea, Japan and China. The survey was conducted in Korea from October 2012 to December 2013 among 405 students; in Japan from October 2012 to February 2013 among 319 students; and in China from December 2012 to April 2012 among 312 students.

The most significant research findings are as follows. With regard to students' career plans, the three groups of international students showed high rates of those who plan to return home five years after studying abroad at around 40-50% and a relatively high rate of those who plan to migrate to a third country at around 20%.

Regarding the transferability of education, all three groups indicated high assessments of transferability. The data shows that all three groups believe that their education from home country is transferable in the host country and that their education through studying abroad is recognized in their home and a third country. While experiences of studying abroad positively increased awareness for regional community and transnationalism, it did not meaningfully affect the students' national awareness. Such result illustrates that national identity remains central to Asian international students. This result is interpreted as stemming from the continuation of close connections between the individual and the nation

state as Northeast Asia experiences a conservative shift and territorial and historical disputes are reignited.

### *The New ICTs and Gender Inequality in Korea*

This presentation aims to explore the implications for gender inequality of the increased access to and usage of mobile ICTs, based on the data collected in Korea. Korea used to be no exception to the conventional digital divide in which women, compared to men, are disadvantaged in the use of ICTs. In recent years, however, there has been a remarkable increase in Korean women's access to internet and, specifically, mobile internet technology. Women have surpassed men in the number and proportion of 'smart' mobile phone users. Among young generations, in particular, girls, compared to boys, tend to have access to the mobile phone earlier and use it more frequently and longer in duration of time. In 2011, Korean children are reported to own their first mobile phone at the average age of 10.4 years (fifth grade at elementary school), and 80% of the third graders at elementary school owned it.

What would be consequences in terms of gender inequality of this earlier and increased exposure to mobile internet technology represented by the 'smart' phone? On the one hand, the user friendliness of the new technology has the potential of narrowing or eliminating the gender gap in its professional and financially lucrative utilization, and its mobility in time and space potentially brings the liberating effect for women both in employment and domestic labor. On the other hand, however, there are concerns that the easy availability and access to the mobile technology would lead to continued gender inequality, in which women remained mere consumers, and increased vulnerability to the new problems brought by the new technology, such as digital/mobile addiction. This presentation investigates the consequences of the new ICTs in gender inequality and their implications to cope with the gender inequality at present and in the future.

### *Cultivating Ethnic Solidarity in the Transnational Enclave: Co-Ethnic Relations Between South Korean "Newcomers" and Korean-Japanese/ Korean-Chinese "Oldcomers" in the Korean Enclaves in Osaka and Beijing*

Recently, scholars have noted that migrants exhibit distinct patterns of adaptation characterized by frequent movement to their countries of origin. This influx of transnational migration has in turn, altered the structure of historically established minority communities. My research investigates how changes in the ethnic community brought on by transnational migration have shaped the ways ethnic minorities construct notions of ethnic identity, using ethnographic, interview and survey data conducted in the Korean enclaves in Beijing and Osaka.

The Korean enclaves in Beijing and Osaka are characterized by two distinct waves of Korean migrants: recent South Korean transnational migrants, and third- and fourth-generation Korean Japanese/Korean Chinese minorities. As a result of the growing number of South Korean newcomers since the 1990s, the Koreatowns in Beijing and Osaka today have become increasingly connected—both on the institutional and grassroots level—to the homeland. But rather than strengthen sentiments of ethnic identity, increasing contact to South Korea has led to the growth of formidable barriers in constructing a collective ethnic consciousness within the Korean community. Damaged co-ethnic relations between the two waves of Korean migrants have significantly hindered their ability to mobilize the rich transnational resources in the enclave for upward mobility. This paper brings to light the structural barriers Korean migrants encounter in cultivating ethnic solidarity in the transnational enclave. In doing so, I offer suggestions for social welfare policies that may aid transnational migrants in more effectively cooperating together to mobilize the resources of the enclave to better their life chances.

### *Effects of Child Involvement in Housework on Future Gender Role Expectations*

Housework allocation has been studied extensively, particularly in its relation to women's employment. Despite the richness and abundance of literature on this subject, most research has focused on housework allocation between cou-

ples, and children's participation in housework has been understudied. These few studies, however, indicate that children participate in household tasks to varying degrees. The present study utilizes writing assignments submitted by approximately 120 undergraduate students enrolled in family sociology courses at a Midwestern U.S. university, and qualitatively analyzes patterns of housework participation in students' families of origin, with special emphasis on the meanings of terms used to describe this participation. Preliminary data analysis shows that most college students expect to marry, and for both spouses to earn an income, even when students grew up in households with stay-at-home mothers. While this implies more gender-neutral expectations in provision tasks irrespective of childhood experiences, expectations regarding domestic tasks varied more, and childhood experiences appear to have important impacts on perceptions and expectations with regard to housework. Students who "helped" their employed mothers with the second shift were more likely to perceive indoor housework as primarily wives' work, and to expect husbands and/or children in their future households to be "helpers." Other students stated that all family members "contributed" to domestic tasks in their childhood households. These students tended to view housework as the responsibility of the entire family, and to hold less gendered expectations. The types of housework done by children were often gendered (e.g., sons doing yard work and daughters helping with cooking), and this also shaped students' perceptions and expectations. By analyzing childhood experiences, this study aims to fill a hole in the literature, shedding light on how parents include their children in negotiating housework allocation, and how childhood experiences shape gender role perceptions and future expectations.

### *Lessons Learned from Great East Japan Earthquake - Birth Outcomes in the Catastrophe of Highly Aged Country*

The Great East Japan Earthquake and Tsunami occurred in 2011/3/11 and this disaster revealed health care issues that Japan already had. One is the lack of attention for maternal health care in the highly aged society and the other is decreasing OB/GYN providers in the Tohoku area. It was hard to see pregnant people and babies in the highly aged country like Japan, however, there were a few expecting mothers left in the cold, hungry and anxious shelter with another people. They were not prioritized as a vulnerable population. Continuing research of 11 hospitals and 37 clinics in one prefecture in the devastated area showed that most of pregnant mothers stayed more than 3 evacuation shelters to find a safer place to live and half of the pregnant patients could not find a way to go out from the Tsunami area to have birth. With more than 200 patients who could succeed to transport to another prefecture, their average delivery time (weeks of gestation), weight of baby, preterm birth rate, low birth weight rate, amount of blood loss and another birth outcomes of this catastrophic area tells us the importance of the pre-hospital OB/GYN care team in disaster response and safety confirmation system for mothers and babies. We should strengthen the perinatal care in highly aged society where mothers are "minority". There is a generation inequality in health care of highly aging society like Japan - perinatal health care is less concern than elder care. 10 obstetricians set up a project specialized for pre- and postnatal care, and carried out medical activities in these disaster-stricken areas by taking care of pregnant and postpartum patients from April 1st until September 3rd, 2011. With dispatched specialist after natural disaster and built the visiting system and correct birth outcomes and neonatal health outcomes.

### *Who Takes Part in Anti-Nuclear Actions? a Case Study of the Organizations of Evacuated People from Fukushima Plant Area and Their Attitudes Concerning Nuclear Energy*

It is often assumed that the people of Fukushima, especially those who lived near the nuclear plants, are increasingly aware of the impracticality of Japan's nuclear energy policy as they have been replaced from the 20km or larger evacuation zones.

In this paper, the author asks whether the assumption is valid in any case, and if it isn't, what are the reasons for the cases that goes against the assumptions. The author will examine some of the responses of the recently formed organizations based on the areas bordering the Fukushima prefecture and other prefectures in the more distance.

First it is shown that, as long as each organization represents the people who lived in the same municipality before the devastating event of March 2011, the extremes of both now passionate "anti-" or "pro-" opinions concerning the nuclear energy policy have been embraced by some of these organizations.

Second, it is demonstrated why these people have taken either "pro-" or "anti-" stances in the process of the disaster followed by the nuclear accident, and the author points out that these attitudes are affected not only by their experiences

after the beginning of the disaster, but also by their life-styles before the disaster and their memories of these life-styles.

Third, the question of whether these organizations have simply endorsed or excluded some of these "anti-" attitudes or the "pro-" attitudes is discussed; rather, here we see the unexpected effect of the "anti-nuclear" discourse on the formation of these very people's doubts about the discourse; but even this adverse effect has not resulted in showing anti- "anti-nuclear" discourse.

Hence scholars may expect that time would ease the unfortunate misunderstanding about the anti-nuclear opinions; however, this could take a generation, which may be too long a time for some witnesses.

#### *Aging Problems in Suburban Neighborhoods: A Case of Hiroshima Region*

The Japanese suburban neighborhoods that were developed in the 1960s to 1970s are standing at a crossroads; one path leads to sustainable communities to which young people move, while the other leads to "ghost towns" in which both young generations move out when they grew up and old people leave their houses because of residing in a nursing home. Regarding the demographic characteristics and housing conditions of Japanese suburbs, a large number of housing estates are at risk of heading towards the second road. Aging and the increase in vacant houses is one of the most serious and urgent topics to be surveyed by scholars in a variety of academic backgrounds. This paper examines (1) aging problems in Japanese suburban neighborhoods with GIS methods, and (2) relationship between aging and increasing vacant houses in Hiroshima region; and (3) finally, we discuss generative process of vacant houses in local cities.

#### *Women's Hair Loss from the Perspectives of Body and Gender*

This research aims to pursue the social cognition on women's hair loss (women's baldness) due to alopecia, and to clarify the structure of oppression on which they were placed from the perspectives of body and gender. Through this study, I want to point out that women's hair loss should be argued as a sociological object than just a medical disease.

Until recently, hair loss was mainly identified as alopecia in a medical or psychological research. By the previous studies, mental difficulties of women with alopecia are clarified[Eckert 1976, Van der Donc et al. 1994], and the usefulness of wearing wigs as the ways of coping is shown [Nakajima, Nakayama:2002]. However, in these researches, it isn't clarified about the problem experience after wearing wigs.

So, this research uses Goffman's passing theory [Goffman: 1968] and analyzes the narration of 14 bald women with alopecia areata who wear wigs.

This study draws the following discussions. Firstly, the point of view of the concerned individual, wearing a wig is itself a disability for bald woman and it's based on the cultural norm which considers hair as the symbol of femininity. Secondly, one reason behind the production of the disability as being the existence of "close others" (family), who force or encourage the individual concerned to wear wigs. As the encouragement by society and the intimate sphere to wear the disability fits with the gendered body's accepted norm, it is one reason why the individual continues to wear the wig.

In conclusion, women's hair loss is seen both as a physical abnormality (dis-ease) and as a deviation from the gendered body's norm, and that these two consequences place the issue in a structure of double oppression.

#### *Organic Farming, Consumers and "Teikei" in Japan: Focusing on the Influence By the Nuclear Plant Accident*

The nuclear power plant explosion in March, 2011 caused severe damage to the people in Fukushima and surrounding areas. Present paper examines its influence on organic farming, focusing on the behavior of consumers - general consumers and teikei (direct co-partnership between farmers and consumers) consumers.

After the accident, farmers were restricted to sell contaminated products, and even if not contaminated, the fear restrained consumers from purchase. The heavier organic customers one is, the more sensitive was her/his reaction to products from affected area, and the economic damage of organic farmers was severe. It was ironical that the food industry and local people supported affected farmers at the critical stage.

Consumers and farmers of teikei groups held study meetings jointly to understand the situation, and such meetings were opened to general consumers, too. Among un-affected consumer groups, the number of members increased, which shows the reliability of Teikei was reevaluated.

Many consumer groups did some kinds of special supports, but continuing the relationship was also the support. Consumers went to farmers' fields to help farm work, and one group sued nearby nuclear plant to stop the operation. Feelings of mutual help and solidarity encourage the affected farmers, and also give deep learning to consumers.

Teikei is shrinking in Japan while "Community Supported Agriculture" is growing worldwide. Conventionally, teikei relied on voluntary work of women (especially for consumer side). Such style become difficult to maintain, and Teikei is now shifting to individual based one using parcel delivery service. Serious divergence between farmers (rural) and consumers (urban) in the consuming society is the cause and the result of the accident. Social consensus and broad struggle to get out of such divergence, learning from the experiences of teikei, need to be sought seriously and not to reopen the nuclear plant.

[yoshino@ism.ac.jp](mailto:yoshino@ism.ac.jp))

#### *Cultural Manifold Analysis (CULMAN) for Cross-National Comparative Survey*

The objective of this presentation is to show our paradigm called Cultural Manifold Analysis (CULMAN) for the comparability of cross-national surveys. This paradigm has been developed in the longitudinal and cross-national surveys on national character by the Institute of Statistical Mathematics (ISM) over the past six decades since 1953. First, I summarize our paradigm of cross-national and longitudinal surveys. Second, I summarize some Japanese social values and, among others, aspects of people's sense of interpersonal trust shown in our longitudinal survey of Japanese national character. (See [http://www.ism.ac.jp/ism\\_info\\_e/kokuminsei\\_e.html](http://www.ism.ac.jp/ism_info_e/kokuminsei_e.html))

Thirdly, I present cross-national comparisons of interpersonal and institutional trust as well as some basic social values based on our past surveys, including the Seven Country Survey (surveys of seven-countries (Japan, USA and five European countries)), the East Asia Values Survey (EAVS) (2002-2005), the Pacific-Rim Values Survey (PRVS) (2004-2008) and the Asia-Pacific Values Survey (APVS) (2010-2014). (See [http://www.jsps.go.jp/j-grantsinaid/12\\_kiban/ichiran\\_22/e-data/e33\\_yoshino.pdf](http://www.jsps.go.jp/j-grantsinaid/12_kiban/ichiran_22/e-data/e33_yoshino.pdf)) The results show that East Asian countries have already departed from traditional Confucianism and that people share more common social values beyond the distinction of East and West. Fourthly, I present an overview of data on Japanese immigrants in Brazil, Hawaii and the U.S. West Coast in order to study the interaction between the environment and ethnicity. Finally, some comments are provided for our future research.

#### *The Representation of Wedding News in Taiwan: Critical Thinking about Romantic Love, Capitalist Ideology and Gender Politics*

This research explores the representation of weddings news in mass media in Taiwan. Focusing on the gender/sexual politics, the researcher examines how wedding events are reported on mass media. In terms of textual analysis, the researcher discusses the gap between the wedding news representation and the

social reality. Additionally, the implied ideology is examined. Hopefully, the result could be transformed into teaching materials for the graduate course of sociology of gender.

Wedding as an event affects and is affected by a combination of external and internal constraints and expectations. In modern Taiwanese society, weddings are big money, and most people want to get in on the act. Thus it may be said that wedding consumption is related to emotion as well as interpersonal relations. The researcher is interested with how wedding is reported on mass media and how these representations will affect people's cognition and attitude.

Heterosexual relations and gender stereotype roles in the wedding events have been depicted in certain ways. These images also convey illusion of romantic love ideology. Popular culture plays a key role in naturalizing the capitalist as well as the gendered pattern. The present research attempts to analyze the wedding news to explore the implied gender ideology.

We are living in an age often portrayed as being dominated by consumer capitalism and the products of capitalist popular culture. It is important to acknowledge the influence of the mass media in shaping people's identities and daily lives. Combining gender analysis with sociological inquiry, the researcher believes that the study on the representation of wedding news could provide some insights for the teaching practice of critical media literacy, gender equity education and relationship education in universities.

**YOUKHANA, EVA\*** (University of Bonn, [eva.youkhana@uni-bonn.de](mailto:eva.youkhana@uni-bonn.de))

### *The Power of Religious Objects in Transnational Migration*

Since the economic crisis in Spain hit most migrant households as the most vulnerable, religious institutions such as the Catholic Church, are becoming increasingly important. Their houses act as reference points by which the faith community is kept together. Tangible assistance is offered and transnational communication structures and family bonds are sustained. Being assisted by local Saints, the Catholic Church serves as a place of remembrance to produce and reproduce senses of belongings that date back to the early colonial era. Social relations of migrants are manifested in a space which symbolizes the power and glory of the former Colonial regime.

Giving the example of the congregation of San Lorenzo in an immigration neighborhood in Madrid, it is shown, which role and agency religious artifacts play in re-producing collective identities and allocating social and financial resources. By focusing on the object itself (not necessarily its symbolic representation) the functions and cultural meanings of the figure in different historic contexts become apparent. The religious staging around the object of the Saint show spatially and chronologically comprehensive chains of interaction which reflect deep seated power relations between the immigrant and the host communities.

### *Economic Crisis: Toward the Erosion or Stability in Individual Welfare State Preferences?*

Understanding voter preferences for the welfare state and how they are formed has become an important basis for making claims about either the erosion or continued stability of the welfare state.

In the past decade evidence has mounted to point towards a relationship between individual measures of economic hardship/risk and support for the welfare state. However, most of the research has been constrained to limited time-series data that evaluates this relationship under relatively stable business cycles which seldom affects individuals belonging to more secure economic groups (high skill, high income). In light of the increasing global economic instability that places these individuals at greater risk, it becomes important to determine if they will respond differently and change the direction of aggregate support for the welfare state.

This paper will examine in detail how different class groups respond to increasing risk, in particular more economically secure groups, and identify if recent findings of increased aggregate support as well as class convergence in Sweden hold or if they resemble a recent study that demonstrated a decline in welfare state support in the United States following the 2008 economic crisis.

The leverage of this study is based on the use of (1) exogenous properties of the 2008 economic crisis, (2) a Swedish survey that reflects respondents' welfare state preferences and socio-economic attributes that spans seven consecutive years sampling approximately 3000 respondents per round, and (3) a design which employs a difference-in-differences method to compare individuals across municipalities. Municipalities are sorted according to those that experienced an immediate substantive spike in unemployment and those that experienced little change, which resembles a treatment and control group respectively. This design reduces endogeneity to make stronger claims for causality, improves estimation of increased economic risk on more economically secure groups, and consequently overall changes in public preferences.

### *Racemaking in New Orleans: Racial Boundary Construction and the Prospects for Social Change*

This paper explores how an ideologically diverse group of affluent, white American college students respond to and process evidence of white racism and racial and class inequality in their immediate environment. It is based on an ethnographic study of Tulane University students living in post-Katrina New Orleans. Although participants' responses to racial and class inequality within and without New Orleans suggest their racial attitudes and ideologies are anything but uniform, Tulane students remain largely uninvolved in combating these inequities. Drawing on anthropological and sociological theories of racialization, we suggest that students' socio-political inactivity is linked to their continuous construction and reinforcement of racial boundaries between themselves and local African American residents of New Orleans. Importantly, although there are some differences in how boundaries are constructed by participants who subscribe to different racial ideologies (e.g. color-blind racism, racial progressivism), we find the outcome to largely be the same. White Tulane students distance themselves socially from African Americans in the city, reinforcing social boundaries while deterring student desire to combat structural inequalities. The findings offer valuable insight into racial boundary making processes and the socio-political implications of such boundary construction in the United States.

### *Communal Entrepreneurship in Shanghai Commercial Streets: The Cases of Tianzifang and Minxinglu*

This paper presents the cases of *Tianzifang* and *Minxinglu* commercial streets. In both sites, commercial development implicates two broader social processes - the global rise of gentrified neighborhoods, and rapid urban sprawl sustained by new town construction and old district revitalization. In this paper, we discuss one central motivation behind the commercial boom, communal entrepreneurship (CE hereafter), which is reflective of a historically rooted spirit of street commerce in Shanghai. Our discussion of CE is anchored in two key concepts, *Jugaifei* and immigrant entrepreneurialism.

The first key concept is *Jugaifei*, which underlies the emergence of both cases. The local government tacitly consented to and provided support for community shops, whose legal status was murky as owners used residential space for commercial purposes (known as *Jugaifei* in Chinese) without explicit approval from authorities. Despite the illegality of shops and the inaction of state authorities, this peculiarly anarchist arrangement nonetheless facilitated the commercial success of local streets. Such practices of *Jugaifei* also received popular support, thanks to the increasing availability of consumable goods.

Our second key concept is immigrant entrepreneurialism, which can also be found in both cases. In the case of global gentrification, as represented by *Tianzifang*, transnational migrants with solid knowledge of global art and business development were instrumental in the development of a creative industry. In the case of urban sprawl, as represented by *Minxinglu*, internal Chinese migrants from rural regions operated businesses to meet the daily needs of local residents. While the former type of commercial streets is tailored to middle-class consumption, the latter satisfies the otherwise unmet needs for consumable goods in the neighborhood.

We conclude with a discussion of CE, which is the core spirit of commercial streets in Shanghai; it enabled the intersection of residents, community, and entrepreneurs, leading to the communalization of street commerce.

### *Weibo and Inequality in Disaster Coverage*

The disasters today have the characters of uncertainty and inequality. This article focuses on the two big earthquakes happened in the last five years in Sichuan province, China. It explores the way to reduce the inequality in disaster coverage by researching the changes of the form of news report.

In the disaster coverage, especially in the early stage, the traditional media tends to draw close attentions on basic information in key areas, ignoring the remote areas inevitably. The new media, especially SNS, with its group advantage, becomes another important force in the disaster news report. In Sichuan Lushan earthquake in May, 2013, the traditional media started to use its weibo account which formed a new mode of news report. This is different with their works in the Wenchuan earthquake five years ago. By interviewing 15 journalists who partic-

ipated in reporting the Wenchuan and Lushan earthquake, this article finds out the discrepancy in using the traditional media and new media. It also elaborates that a new form of inequality emerged due to the digital divide, while weibo is eliminating traditional inequality.

(Weibo is a SNS like Twitter)

#### *Is Religion an Alternative Source of Help for Immigrants to Maintain Their Mental Well-Being?*

A number of studies have shown that religious participation is positively related to immigrants' mental well-being in the West, thus making religious venues "places of refuge" for immigrants and religion their "balm for the soul." A study in Canada in 2007 found that immigrant status is associated with lower rates of use of mental health services, which is likely caused by cultural and linguistic barriers to care. In this paper, I attempt to find if religion is an alternative source of help for immigrants when they suffer from psychological distress and whether religious participation is associated with lower rates of use of mental health facilities among immigrants. The goal of my research is to help policy makers better understand how immigrants adapt in their host countries when facing barriers to access to certain important resources, in this case, culturally and linguistically appropriate mental health services.

I will conduct my analysis within the Canadian context, where there is universal health insurance. My analysis will be based on data provided by the Canadian Community Health Survey: Mental Health and Well-being. The variable mental well-being is defined by the "psychological well-being manifestation scale" in the survey. Consisting of 25 questions ranging from "self-confidence" to "pace of living" on five scales, these measurements are combined into one continuous variable. Religious participation can be defined by the two questions on how religious respondents feel about themselves, and their frequency of attending religious activities. The survey also contains a section on health care utilization, thus making it possible for me to analyze the relationship between religious participation and the use of mental health services.

**YU, YAN\*** (Grand Valley State University, [yuy@gvsu.edu](mailto:yuy@gvsu.edu))

#### *Declining Marriage Rates Under Globalization: Homogeneity Or Heterogeneity?*

Around the world, marriage is undergoing massive changes. The United States has called on "saving marriage" (Popenoe, 1993; Furstenberg, 2005), the Middle East is experiencing a marriage crisis (Rashad, Osman, and Roudi-Fahimi, 2005), Latin America is seeing the rising substitution of cohabitation and single motherhood in place of marriage (Esteve, Garcia-Roman, and Lesthaeghe, 2012), and China is seeing more "sheng nu" meaning "leftover women", a group of single women with high education and high income. A series of questions arise from these changing trends of marriage: Does globalization affect marriage the same way in the developing countries as it does in the developed countries? What causes declining marriage rates under globalization? Do these changing trends mean marriage as an institution is weakening or even disappearing? What does a marriage mean in different regions under globalization? Previous research focuses on either the declining marriage rates in the developed countries (Cherlin, 2004 and 2013; Trost, 2010) or the "flight from marriage" in the developing countries (Jones, 2005). What is missing in the current literature is a comparative perspective on this phenomenon, which can help us better understand marriage as an institution characterized by a heterogeneity (its complexities) not a homogeneity (an individually driven phenomenon). This paper explores the declining marriage trends occurring in different regions (i.e. the United States, Latin America, the Middle East, and the Southeast Asia), compare and contrast their similarities and differences, and analyze their implications for the significance of marriage as an institution. I argue that delayed marriages and declining marriage rates in the developing countries do not indicate marriage as a traditional institution is eroding, replaced by other modern alternative living arrangements. Instead, marriage is still viewed as a significant institution and its traditional characteristics are reinforced by family and economic contexts under globalization.

#### *Effects of Social Capital on the Developmental Outcomes of College Adolescents: Evidence from Shanghai, China*

It has been suggested that individuals are faced with more transitions and life-decisions in adolescence and young adulthood than at any other stage of life. Overseas studies have also suggested that during these time periods social ties might change. However, domestic research has spared disparate efforts in the investigation into college students' psychosocial development undergirded by

the deficit-based model. Drawing upon a sample of 1153 university students in Shanghai, China, this study investigated how family social capital, friendship qualities, associational social capital, linking social capital, and adolescents' agentic personality influenced multiple developmental outcomes of college students in mainland China. The results of a structural equation modeling analysis provided a good fit for the sample as a whole. The overall findings support the hypothesis that higher levels of agentic personality were associated with better developmental outcomes of college students, including higher levels of resilience, self-efficacy, and self-esteem. Agentic personality also mediated the effects of family social capital, friendship qualities, associational social capital, and linking social capital on developmental outcomes.

The study advances the theory of social capital by incorporating its various dimensions into one conceptual framework, thus unraveling the mechanism of how family social capital, friendship qualities, associational social capital, and linking social capital influence the college students. It also advances the theory by testing it in a non-western socio-cultural context, thus potentially fortifying its universal applicability. Moreover, it is desirable that more programs for enhancement of agency building could be devised to foster emerging adults' agentic personality. Family education, positive peers groups, associational participation, and linking mentoring are also anticipated to promote their optimal development.

DAIMON, SHIN'YA (Kansai University)

#### *A Sociological Analysis of Linking Renewable Energy with Rural Regeneration*

A feed in tariff system that was introduced after Fukushima nuclear accident has let people think that there are big business chances in the renewable energy's market. Then, a lot of companies have tried to join to the market as electricity generator. In this presentation, we will examine the way of linking this market waking up with regenerations of rural economy from sociological perspectives.

Because electricity generators need to sizable land for a facility, they install it in rural area. Rural areas where suffer from economic recession welcome it. However, if installers are only big companies whose main offices are in big cities such as Tokyo, economic benefits for rural areas will be limited.

The scheme of our research group aims to link installs of renewable energy facility with spontaneous developments of rural areas. Based on this scheme, our group has researched and supported several projects that people living in rural area install renewable energy facilities.

In the research, we have found that small entrepreneurs encounter a lot of barriers to install renewable facilities. Typical one is the negative attitude of local banks to financing them.

Financing local companies by local banks is essential to the vitalization of regional economy. For promoting this finance, an analysis from sociological concepts such as social network is useful.

To date, with overcoming barriers, lots of projects are ongoing by local people in Fukushima and other parts in Japan. For example, in Minami-Soma where is partially polluted by radioactive substances, farmers have installed PV panels on their farmlands. This project is called the 'solar-sharing' and will bring profits to farmers. In this case, a social network has played an important role.

We will take some projects by local people and show the way in which people overcome financial and other barriers.

**YUASA, YOICHI\*** (Kanto-Gakuin University, [yuasa@kanto-gakuin.ac.jp](mailto:yuasa@kanto-gakuin.ac.jp))

#### *Disregards to Principles on the Distribution of Risk and Bads*

Geological disposal is the primary option for most countries where have high-level radioactive waste. All countries except for Finland, however, have not found any sites for geological disposal facilities due to objections from the population. Japanese government is facing same problem. We must dispose nuclear wastes regardless of continuation/stop of nuclear electricity. How can or should we tackle this problem?

The essential sociological perspective is the distribution of risk/bads. This perspective was suggested by Ulrich Beck in his *Risk Society* (1986). He has insisted that the concept of class is not effective for understanding the logic of this distribution anymore. To his argument, lots of works have asked whether it is true or not. The logic of the distribution of risk/bads has been a focus of sociological studies.

In this presentation, we will show two disregarded principles on the distribution of high-level radioactive waste. These principles are deduced from an analysis of conflicts on general wastes in Japan. Based on these principles, we will analyze a site finding scheme and its result of geological disposal facilities in Japan.

Japanese government is looking for communities where spontaneously accept the facility now. For getting a spontaneous candidacy, the government established a governmental body called NUMO (Nuclear Waste Management Organization of

Japan) in 2000 and has offered lots of benefits such as subsidies, tax revenues and job creation. Local communities and councils could get those benefits if they accept a facility. However, no principles mentioned above are found in this scheme.

To date, no local community or council has officially put up for it. This result shows that the scheme of Japan has an important fault that is caused by a disregard to the principles. We will elucidate how these two principles function in the process of the distribution of risk/bads.

HAYAMI, NANAKO (Kobe University)

##### *Japanese Wave of Sub Cultures*

The aim of the paper is to use methodological viewpoint of the visual turn of sociology to understand the field of Japanese Animation and Manga and the phase of their 'globality.' The data that will be dealt with is the one from the extended survey research on Manga and Anime conducted by Association of Japan Sub-Culture Studies at Kobe University (headed by the author).

Comparing the research results that have already been conducted by European Manga Network in European countries a few years ago and that of conducted by the Association of Japan Sub-Culture Studies in Asian countries in the last year, paper will describe a view as to the similarities and differences in the process and phase of 'accepting' (and rejecting) Manga and Anime as cultural production in those areas.

Empirical researches from which the data of the paper generated, have been conducted in the areas such as in Hangzhou (HANGZHOU) in China, Hong Kong, Taipei and the survey research has been done using questionnaires as well as interviews with the participants / fans in the events of Manga / Anime festival in those cities / areas.

Observing those processes of acceptance/ rejections, and the ways of penetrating into people's daily life paper suggests the transformed nature of our contemporary way of life in terms of the visual and the social are constructed simultaneously in localized 'cosmopolitan' consciousness from below.

##### *Same Blood or Cultural Other?: The Paradoxical Racialisation of Korean Chinese Migrants amid South Korea's Multicultural Turn*

This paper addresses the fusion, rupture and transformations in the notions of race, nation, and culture by attending to the contradictory but reciprocal relationship between racial nationalism and the 'cultural' deployment of multicultural rhetorics. Focusing on the South Korean context, the contemporary racialisation of *Chosŏnjok* (Korean Chinese) migrants in tandem with the rise of the autochthonous far-right is examined as an illuminating case study. South Korea, a country that considered itself to be racially homogeneous, has begun to experience the influx of labour and marriage migrants from less developed countries since the 1990s. More than half of these migrants come from China and among them, the majority is Korean Chinese who have been rhetorically constructed as part of the Korean nation by the state and the *Chosŏnjok* rights movement, under the rubric of the *tongp'o* (blood kinship of overseas Koreans) discourse. Yet *Chosŏnjok* migrants are created as a distinctive group both discursively and legally (through a discriminative immigration system) and concurrently situated somewhere in between autochthonous Koreans and *racially non-Korean others*. Against this background, anti-*Chosŏnjok* sentiment has become prevalent as autochthonous far-right movements and media have increasingly criminalised and racialised the *Chosŏnjok* as a *cultural Other* whose potential damage must be controlled by stricter state regulation and, if possible, through complete assimilation. Ironically, the language of cultural difference and incompatibility employed to otherise the *Chosŏnjok* derives from the very cultural rhetoric of multiculturalism, only proving its limitations in contesting the racialised exclusion of this group. Combining discourse analytic and in-depth interviewing techniques, this paper investigates intersecting racial, cultural, ideological and economic rationales that aim at including the *Chosŏnjok* and how the boundary of nation is debated and redrawn amid South Korea's multicultural turn.

##### *How Do Students View Their Mentor-Student Relationship?: A Cross-Case Analysis of Narratives of Academic Harassment in Japanese Graduate Education*

This paper examines academic harassment of graduate students in Japan by their mentors. By cross-case analysis of student narratives, this paper examines how students view their relationships with their mentors.

In Japan, a variety of non-sexual types of harassment distinct to high-

er education, collectively known as academic harassment, has recently begun to attract public attention as a social problem. Academic harassment includes acts such as constant criticism, neglect, and distorted authorship credit in joint publications. Many universities now publicize measures against this type of harassment, and several quantitative surveys have shown that serious psychological damage is a possible result of such harassment. However, such surveys have focused on the ultimate outcome of the harassment; few sociological analyses have explored the actual process of harassment.

This paper describes how students view this process and the variety of problems they experience in mentor-student relationships recognized to involve harassment. Interview data was obtained from 17 graduate students and young researchers collected between 2009 and 2012, and this paper focuses on the narratives of six key informants from different disciplines. First, the interactive construction approach was applied to interpret narratives to reconstruct life stories and the cross-case analysis of these life stories was then conducted.

The results revealed three commonalities in students' experiences of the relationship, regardless of their gender, academic discipline, and type of harassment experienced: 1) non-sexual, yet uncomfortable, closeness or distance with their mentor; 2) recognizing exploitation in the relationship; and 3) viewing their mentor as lacking integrity as a researcher, not as an educator. By elaborating on the interplay among these points, this paper describes the issue of academic harassment as relational, not as the specific attack behaviors described in previous works.

#### RC44-740.6

**YUN, AELIM\*** (Korea National Open University, [aelimyun@hotmail.com](mailto:aelimyun@hotmail.com))

##### *Reversing a Cost-and-Risks Transfer Chain for Workers' Rights*

In many countries the basis of labour law protections is an employment relationship that has been identified as a 'subordinate' relation to a single employer in individual corporations. However, the emerging pattern of precarious work is often done in relation to multiple 'users' beyond corporate boundaries. Among triangular employment relationship or dependent self-employment, for example, different type of dependence – frequently referred to 'economic dependence' or 'quasi subordination' – is more dominant.

In case that labour law protections have been extended to those precarious workers, the grounds and the effectiveness of labour protections are still questioned. On one hand, the degree of similarity to employment relationship is not the right grounds for labour protections, as capital seeks to evade that type of relation. Therefore, the strategy for adjusting criteria of employment relationship (i.e. The ILO Employment Relationship Recommendation) is not enough. On the other hand, the need of social protections for precarious workers cannot fully explain why capital should take the burden of labour protections.

This paper explores an alternative basis and method of employment standards enforcement with cases of construction and personal care service industry in Korea. In both cases, trade unions have developed new strategy for organizing precarious workers and for closing the enforcement gap since 2000s. In particular, unions have focused on the liability of 'user-enterprises' in industries where other precarious work than employment relationship becomes the norm.

Furthermore, this paper analyzes the nature of dependence of precarious work and suggests that it can be understood as 'externalized dependence' which comes from the cost-and-risks transfer from capital to labour and society. In conclusion, this paper shows reversing the cost-and-risks transfer chain is the better approach for expanding labour protections for all kinds of workers regardless of contract types.

**YUSUF, FARHAT\*** (The University of Sydney, [farhat.yusuf@gmail.com](mailto:farhat.yusuf@gmail.com))

##### *Prevalence of Abortion in South Australia, 1970-2009*

The main objective of this paper is to review the first 40 years' experience of legalised abortion in South Australia and its demographic implications.

Data sources included the official abortion statistics and demographic data from the Australian Bureau of Statistics. Standard demographic and statistical techniques of analysis were used.

After an initial rise during the 1970s, abortion rates remained fairly constant for the next decade but have increased since 1990. The Pregnancy Advisory Centre was opened in 1992, to reduce waiting times and to cater for late abortions. Consequently this has resulted in an increase in abortions earlier in pregnancy and also an increase in late abortions. With the adoption of vacuum aspiration techniques and improved services, abortion is now a day only procedure, performed by specially trained GP (general practitioner) doctors. Morbidity and mortality have been greatly reduced. Concurrent sterilisation has also declined. The increase in abortion has affected all age groups, but particularly women under 30, consistent with the national trend towards the postponement of births. After an initial rapid decline, the total pregnancy rate has risen slightly since 1990, reflecting changes in patterns of contraceptive use. However, this is not reflected in an increase in the total confinement rate. Overall, contraception has had a greater

effect than abortion in reducing births in South Australia. The abortion rate is still lower than in the rest of Australia as calculated from Medicare data, even though this is an underestimate because it includes only fee-paying patients. There remains a need for continuing emphasis on better contraceptive use, including better emergency contraception.

An international comparison of the recent abortions data for South Australia, UK and USA revealed that the prevalence of abortion in South Australia was marginally lower than that in the UK and USA.

#### *The Chechen and Japanese Values in a Globalization Context: The Comparative Analysis*

In the modern world the globalization process strengthens an interference of cultures and values, actualizes contradictions of secular and religious, traditions and the modernity, requirement of defining a vector of a society development.

**Object of research** - the Chechen and Japanese values in conditions of globalization.

**Methods:** cultural and action approaches, methods of the sociological, comparative analysis.

**Results.** In Caucasus, as well as in Asia, Japan in the hierarchy of values the key place take the values of family, collectivism, respect for seniors, mutual aid, solidarity, group unity. The Chechen values, despite religious and language distinctions in Caucasus, are considered as a part or a segment of the Caucasian and Russian values. During the post conflict period in the Chechen Republic, as well as during the post-war time in Japan, high interest to social and cultural values and norms is observed, responsibility for preservation and revival of traditions and customs is shown. In the Chechen and Japanese society there is a similarity and distinction in the ratio of collectivism and individualism, display of paternalism, reflections on globalization calls. Transformative changes in Russia cause social activity, among young and persons of middle age enterprise, initiative, requirement for a competition is more often observed. The Internet, mobile communication, other information means make changes to functioning of traditional norms. In this context interesting is the aspiration in Japan to adapt traditions for new conditions.

**Conclusion.** Caucasus is on crossing of the European and Asian cultures. Japanese social practice of combination of traditions and the modernity serves as a model for others in carrying out transformations in social and cultural spheres of life. However in each region and country it is necessary to develop a strategy of modernization taking into account social and cultural specificity.

#### *Work Values in a Modern Linguistic Space*

In the modern world, in the conditions of globalization many languages and cultures undergo changes. Social factors make the mediated impact on languages that is shown in contexts of their use, new word meanings.

**The purpose** of our research is the study of work values in the English, German, Russian and Chechen idioms taking into account social and language contexts, the language situation in the Chechen republic.

**Methods.** The comparative, semantic, corpus, sociolinguistic analysis of idioms, poll of the Chechen language speakers is carried out.

**Results.** In the basis of work values there are the material values focused on income, profit; spiritual and psychological values - self-realization in work, pleasure from work, understanding and feeling of the meaning of life, spiritual growth through work, creativity, social and career values - education, status in society. In an internal form of idioms the cultural values describing work traditions, customs, and the historical events forming work cultures of different countries were also reflected. So, in the English and German languages the value of official regulated work was accentuated, in German the value of an official duty was also specified. In the Russian contexts very similar social experience is fixed. According to the poll of Chechen language speakers at the present stage important are the values of income and success that can be connected with a post-war situation of revival, construction of work culture. In the frame of a language situation in Chechnya the idioms with the opaque internal form which fixed the facts and subjects of culture not taking place in the modern reality are less familiar and seldom used.

**Conclusion.** Thus, the study of contexts is necessary for revealing the influence of social factors on idioms and evaluation of the language situation in society.

#### *Intersectionality, Inequality and Bordering Processes*

Traditional sociological stratification theories privileged class and equated societal boundaries with national boundaries. The challenge for contemporary Sociology is to establish a theoretical framework which would go beyond the limitations of the traditional paradigm. Such a framework would recognize specific spatial and temporal as well as other situated locations of social actors and will incorporate their structural as well as epistemological effects, but would not be contained by them.

In order to do so, the paper presents an intersectionality stratification theoretical framework in which the different axes of social power, including gender, race/ethnicity, stage in the life cycle, sexuality, ability etc, are being considered when discussing systems of inequality. At the same time this theoretical framework also recognizes that in the contemporary world state boundaries often do not overlap national boundaries and neither of them necessarily overlap societal and market boundaries. At the same time, such a framework would also recognize that any simplistic notion of boundariless global society can be just as misleading.

The paper, therefore, focuses on constructions and processes of bordering as often borders and borderzones separate as well as combine social systems of inequality and provide exclusionary as well as permeable boundaries of political projects of belonging. Their constructions, which are often shifting and contested, affect and are affected by structures/processes of unequal social, economic, cultural and symbolic relations of power and thus can provide an important site to examine the framework presented in the paper.

#### *Narratives of Women Against Fundamentalism Activists - Some Methodological and Political Ponderings*

Narratives of Women Against Fundamentalism activists - some methodological and political ponderings This presentation is based on the autobiographical narratives of women members of Women Against Fundamentalism (WAF) which were recorded by me and then transformed into autobiographical chapters in an edited volume on WAF (2014, Lawrence and Wishart). It explores some of the methodological and political issues which are involved in making decisions how to process and present political narratives of close political and personal colleagues. It also explores in what ways women who were born in different geographical, national, religious, class, ethnic and racial locations construct the narratives of their life story into becoming political activists who share with the others feminist anti racist anti fundamentalist political views and activism and especially what kinds of incidents are seen as the transformative life events by these women to lead them into WAF kind of politics.

*Khutsong: An Empirical Example of the Complex Relationship  
 Between Concepts like Risk, Inequality, Exclusion and Inclusion*

This paper reports on research conducted in the Khutsong municipality, North-West Province, South Africa. In 2004 a presidential project was announced to re-settle the Khutsong township because it was built on a dolomite hazardous area that causes sinkholes. For this purpose the biggest town redevelopment programme in South Africa was undertaken. As the project now unfolds it is clear that different processes are running concurrently. The town planners professionally assessed the risk problem and provided a grand solution. For this they obtained political buy-in from national government. The local politicians on the other hand are careful to be involved in the demolition of the old houses or shacks of people moving to the new houses. They tend to protect their power bases. The people on the other hand are well informed about the hazards of dolomite but blame the municipality for allowing water seepages to occur in the water supply and sewerage systems. They use the new housing scheme to lessen household density with only a part of the family moving to the new houses and the rest remaining in the original house or shack. Or they use the original house or shack as a source of income by renting it. Poor households use this risk scenario as a tool to enhance their disadvantageous position by profiting with regard to housing. Richer households resist resettlement because the government is not in a position to replace their houses and businesses. In fact the businessmen use this to expand their businesses. This paper demonstrates that this municipality presents a salient example of professional risk management clashing with political instincts and how inequality, exclusion and inclusion become complex concepts in such a scenario due to the skills people have to exploit such major projects.

**ZABIROVA, AIGUL\*** (Eurasian national University,  
[zabirova2002@mail.ru](mailto:zabirova2002@mail.ru))

*Astana As a Postcolonial Narrative*

In my paper I'll aim to show the possibility of postcolonial ideas in exploring of emerging new Kazakh capital and evaluate how this new Kazakh elite project was succeeded? 15 years ago the capital of Kazakhstan had moved from the Soviet Alma-Ata to unrenowned, provincial small town Akmola.

At the very beginning of independence the new national Kazakh state should handle with some issues. The most important issue was question of nation building and stabilization of the national state. For stabilizing and strengthening the new national state the new capital was required which would become the strongest object of identity with new national state. Ethnic composition, ethno demographic disproportion in distribution of population was one of the strongest challenges for new Kazakh state. Therefore new nation state faced with question: how to balance the national state without violent exile of Russian-speaking population? How to bring here Kazakhs? How to stimulate southern Kazakhs to move, to migrate to very Russian and Russian-speaking North? It is important to remember that historically population's density in Kazakh Steppe always was low.

Secondly new Kazakh state needed for the new centers of modernization; here it is important to notice that new Kazakh state chose strategy typical for the post-colonial state. I mean the enclave type of modernization, strategy of creation of new enclave of Kazakhstan on the North in addition to already existing enclave on the South created by Empire. Here I argue that soviet Almaty was not Kazakh city, during Soviet time Kazakhs never defined Almaty as a cradle of the Kazakh nation.

Finally it seems to be obvious that modernization was understood by Kazakh elite as urban modernization in parallel with kazakhization of North and then the whole society.

*El Concepto De Individualización En La Sociología Clásica y Contemporánea y Su Aplicabilidad En México*

**El concepto de individualización en la sociología clásica y contemporánea y su aplicación en la sociedad mexicana..**

Por Gina Zabludovsky Kuper

[ginaza@unam.mx](mailto:ginaza@unam.mx):

tweeter:@ginazabludovsky

La ponencia vincula el desarrollo de la individualización con el proceso histórico de diferenciación social que caracteriza a la modernidad y que se expresa en un conjunto de creencias, prácticas y normas sociales que han sido propias de las so-

ciedades industrializadas. Este punto de partida, eminentemente sociológico, se distingue de las polémicas de corte político que contraponen al individuo con la sociedad o el Estado, y de los debates teórico-epistemológicos que privilegian ya sea al individuo o la estructura social como método de aproximarse a la realidad social-

Desde esta perspectiva el término "individualismo" responde a los procesos que se manifiestan de forma más evidente a partir del S XIX. En la cultura democrática moderna, el concepto adquiriría un peso decisivo con Alexis de Tocqueville, quien lo introduce en el tratamiento de la esfera pública y logra diferenciar entre el mero egoísmo y el individualismo de corte democrático.

A partir de estos antecedentes, la ponencia explica los fundamentos de esta terminología en la obra de sociólogos clásicos y contemporáneos como Émile Durkheim, George Simmel, Norbert Elias, Zygmunt Bauman, Ulrich Beck, Gilles Lipovetsky y Robert Wuthnow. En los últimos apartados, se muestra los vínculos que esta temática puede tener con el pensamiento de algunos autores mexicanos como Samuel Ramos y Octavio Paz, y su aplicabilidad para analizar algunas conductas y actitudes del México contemporáneo.

A lo largo del trabajo, se destacará la importancia que tiene la precisión conceptual para lograr la claridad necesaria en la producción y comunicación académica en la sociología.

*La Presencia De Las Mujeres En El Trabajo y Los Cargos De Dirección En México*

Las mujeres en cargos de dirección del sector privado en México.

Gina Zabludovsky Kuper

La ponencia mostrará cómo, a pesar del drástico aumento de la participación de las mujeres en el ámbito laboral y en las universidades, su presencia en los cargos de dirección y de liderazgo en las compañías privadas es todavía muy escasa y varía de acuerdo a una diversidad de circunstancias y como son el tamaño, giro de la compañía, procedencia del capital, existencia de políticas de diversidad, y otras características del ámbito laboral.

Las fuentes de la investigación la constituyen los trabajos académicos sobre la temática, la interpretación de los datos estadísticos del país, la cuantificación y generación de la propia información a partir de los distintos directorios empresariales, el trabajo de campo realizado con base en entrevistas con los directores(as) de recursos humanos y las mujeres ejecutivas de varias corporaciones. Con base a estos datos, el trabajo adoptará una estrategia comparativa que permita analizar la situación en México con las tendencias de otros países tanto en América Latina como en el resto del mundo.

Los puntos a tratar, son los siguientes:

- 1) La presencia de las mujeres en la fuerza de trabajo, en los cargos de liderazgo y en la educación superior. Persistencia del "techo de cristal" segregación horizontal y vertical en los oficios y carreras en las organizaciones
- 2) Los efectos sobre las oportunidades que tienen las mujeres de las políticas de flexibilidad, diversidad y de apoyo a la conciliación familia trabajo. Diferencias entre las empresas de capital extranjero y las nacionales.
- 3) Características familiares y diferencias generacionales de las mujeres directivas.
- 4) Feminización y masculinización de las ocupaciones.
- 5) Diferentes trayectorias laborales.
- 6) Principales retos y obstáculos de las mujeres en cargos gerenciales y ejecutivos.
- 7) ¿Hacia dónde vamos? Proyección hacia el futuro.

*Renegotiating Communal Identity in a Globalized World: The Case of Greek "Communal Associations"*

As a follow-up research on "communal associations" in Greece, this case study of 16 internal immigrants' hometown associations from the island of Lefkas, aims to examine their struggle to survive the intergenerational gap amidst the present conditions at the turn of the millennium. Established primarily during the post-war period in the country's urban centers, thousands of "communal associations", acting as "mediating structures", undertook initiatives for the implementation of public projects in the villages; played an active role in maintaining "local cultures"; and reinforced collective identity and belonging to an "imagined community" away from home. Although their noble mission was initially very successful, during the last two decades these associations were confronted with a number of problems, the most important being the declining membership and participation of the second and third generation. This paper intends to understand the recent organizational challenges and institutionalization dilemmas, which impede their operation and threaten their continuity, in the light of three major changes that impact communal life: (a) The dissolvent extreme individualization with multiple identity trajectories that characterize postmodern societies; (b) the eroded sense of "topo-logical" conception and "self-placement" due to globalization and (c) the

weakening of communal cohesion due to the recent economic crisis. In addressing these problems, Lefkadian "communal associations" employ different strategies to overcome their current predicament and counterbalance the "homogenizing" effects of globalization: Some, stressing the eternal qualities of traditional values, try to perform an almost religious "anabaptism" to old and unaffected identities through the ritualistic re-enactment of village customs and practices that promote group spirit. While others, introducing a "glocal" approach, adopt novel means and try to institutionalize new communal practices in order to appeal to youth. Thus, seeking to (re)establish communal bonds through "invented traditions", they renegotiate local identity and culture.

#### *Private Provision, Public Care? Community Based Postnatal Care in Neoliberal Times*

As with many other high-income welfare states, maternity care in Australia is available through a system of universal health coverage available to all citizens. However, Australia is distinctive in its parallel private health insurance sector which operates alongside and in competition with the public sector. The private health insurance sector has been heavily subsidised through a range of government policies, many of which have been criticised as costly and inequitable insofar as they favour the most affluent segments of the Australian population and those in metropolitan regions. In addition, concerns about the impact of this stratified system of care on maternal outcomes have been increasing. For example, women birthing in the private sector are at substantially higher risk of instrumental delivery, caesarean birth, induction of labour, episiotomy and epidural analgesia; their stay in hospital following birth is, on average, twice as long as women birthing in public facilities (*Australian Institute for Health and Welfare, 2011*). What do these differences mean for how women experience post-birth care following discharge from hospital? In this paper, we report on analyses from two Queensland studies of women's experiences of care in the community following childbirth, with a particular focus on the impact of public and private care provision. We report findings from a Queensland survey of new mothers ( $N = 6,433$ ) in terms of their experiences of care in the community, and their confidence and satisfaction with their health care. In addition, we report the findings of qualitative interviews with 70 new mothers and 49 health care professionals providing post-birth care in public and private health care sectors in Queensland. Together, these analyses demonstrate inequities in health care provision resulting from the current stratification between public and private systems of maternity care.

[dz251@cam.ac.uk](mailto:dz251@cam.ac.uk))

#### *Tempelhof: A Battle for the Green Heart of Berlin*

Tempelhof Airport, an iconic building with rich history in the middle of Berlin, was closed for traffic in 2008 and the airfield turned into a huge park, much loved by inhabitants from the adjacent neighbourhoods as well as by Berliners from further afield. However, after the Berlin Senat, as a governing body of the metropolis, announced its much-trumpeted "Masterplan" to re-develop the airfield, a wave of activism emerged. What was in stake was not only a loss of a unique place of biodiversity, positively mitigating the urban climate, but also an irreversible transformation of a site with special atmosphere: green lungs of Berlin and one of the largest open green spaces within an urban landscape in the whole of Europe. Moreover, Tempelhof is a witness of 20th century history: Nazism, Berlin Airlift, Cold War and the 1989 *Wende*.

Therefore, various kinds of creative activism appeared in order to save the park, consisting mostly of engaged volunteers and enthusiasts, yet of different educational and income backgrounds and age: from garden colony (established in the 1920s), fighting against the loss of social learning to public initiatives campaigning against gentrification and rocketing rents. Thus, it is obvious that the perception of "urban renaissance" is dissimilar amongst different strata of society: it is not only the conflict of the power elites and citizens, but also of people who believe they belong to Tempelhof (and keep its memory) vs. those who do not.

This paper looks at how the topics of urban renaissance and public initiatives are related to themes of memory and collective place-making activities (developed by Karen Till) and how their momentum reflects on Pierre Nora's concept of *lieux de mémoire*. What is the role of collective cultural and social memory in public engagement? What could be learnt from the case of Tempelhof?

#### *Kozminski University Index of Balanced Economic and Social Development ("IBESD") for Poland*

The paper presents a new Index of Balanced Economic and Social Development ("IBESD"), designed to evaluate Polish economy and society, with an emphasis on human conditions. "IBESD" is constructed in "beyond GDP" paradigm, on widely accepted assumption that traditional measures, such as GDP, are insufficient to evaluate socio-economic development. "IBESD" covers four domains: internal (national) economic, external (international) economic, internal ("micro" or subjective) social, and external ("macro" or objective) social. Each of them is measured as an aggregation of several simple indicators. All four medium level indexes of four domains show almost parallel changes, so they can be aggregated into a general "IBESD" index. All of them, "IBESD" included, describe very well changes in Polish economy and society during 2000-2011. Their trends may be explained by general knowledge of economic cycles in Poland and they are surprisingly highly correlated with the ultimate measure of human conditions, operationalized as an aggregation of psychological well-being (state of mind and emotions) and suicide indicators. Economic and social components of "IBESD" show the same pattern of changes, with a slight delay and greater amplitude of social changes. That indicates "leading" role of economic aspects in relation to social ones and great sensitivity of social indicators to economic ones. As far as social aspects are concerned, the trend of subjective evaluations of current conditions repeats, with small delay, the "leading" trend of expectations for future social conditions. This delay does not appear, however, during the present economic crisis, when predictions and evaluations similarly react to dramatized economic news. "IBESD" was designed in a theoretical context of balanced development. Its application confirms the theory that rapid development is associated with diminishing balance between its different domains.

#### *Discourse on Youth' Sexual and Reproductive Health-Stigmatized in Lahore Pakistan*

##### **INTRODUCTION:**

Pakistan is facing various challenges to deal with issue of youth' Sexual and Reproductive Health (SRH). Although youth represent large number of population, yet are deprived to seek proper education and treatment to cope with their SRH' needs.

Subject of human sexuality is associated with strong ideology, moral views and traditions. Being Muslim country where, to discuss the topic of SRH is a societal taboo, less research is done. Moreover, poor infrastructure coupled with non-cooperative behaviour of family/community and healthcare providers discourage youth' practices to access particular services. **Thus need for this study has arisen to understand youth development, enabling to provide appropriate information about sexuality and reproductive health to youth of Pakistan.**

##### **METHODS/APPROACH:**

Research on "Assessment of awareness of youth living in Lahore regarding Reproductive health" was conducted in 2009, funded by Small Scale Research Grant under Bill and Melinda Gates Foundation at John Hopkins University and organized by Population Council. Potential participants for study were youth (males and female of 15-24 years), parents, teachers, representatives of youth organizations, service-providers and Govt. officials/policy-makers. Qualitative research technique was adopted through 40 In-depth interviews and 12 Focus-Group Discussions alongwith combining two techniques (Dynamic Contextual-Analysis and Formative-Research).

##### **RESULTS:**

Research provided a deep insight into lives and thinking of youth. Results show that youth are quite aware about subject although there are still some concerns about access and understanding of correct/authentic knowledge. It highlighted gaps in access to information from reliable sources and non-cooperative behaviour of family and community.

##### **CONCLUSION:**

Research concluded that there is major difference of perceptions and awareness-level amongst females and males. Lack of reliable knowledge about sexuality/reproduction, unpreparedness for physical/emotional changes, over-exposure of information via internet, scarcity of youth-based interventions and ambiguity of key-stakeholders' roles are major constraints.

#### *HIV/AIDS Prevention Among Female Sex Workers, Lahore, Pakistan*

**Background:** Although commercial sex is illegal in Pakistan, yet the number of FSWs<sup>[1]</sup> is increasing. Pakistan is almost in the grip of an Asian epidemic, where HIV/AIDS is spreading like a silent killer. One of its main reasons is the high rate of transmission among sex workers and their clients, due to lack of awareness, limited access to healthcare and preventing services, socio-cultural barriers and taboos.

**Description:** FSW Service delivery project to respond spread of HIV/AIDS was launched in collaboration with Punjab AIDS Control Program and Contech International in Lahore during 2012-13. Comprehensive package of HIV services and provision of sex-workers supportive environment were the key project interventions. DISH<sup>[2]</sup> Centers (including FSWs friendly-DICs<sup>[3]</sup>) established in high concentration areas of FSWs, focusing their typology including home, street, koti-khana and hotel-based FSWs. Extensive trainings were imparted to peer educators and counselors followed by refresher and close monitoring. Vulnerable community network (VCN) was formulated by bring together more than 100 volunteer peer-educators. Innovative strategies including provision of Primary Health Care (PHC), STIs management, Inter-Personal Counseling sessions with 9,500 FSWs and Behavior Change Communication (BCC) interventions was applied for awareness and promotion of safe-sex practices. Moreover, law enforcement agencies, local GPs/CBOs, sex-workers network operators were also sensitized to create enabling environment.

**Challenges:** Major challenges e.g. community and service-providers stigma regarding sex-workers, substantial use and limited access to healthcare services, availability of prevention commodities, HIV-testing, illegality of sex-workers and non-cooperative attitude of law agencies were addressed.

**Conclusion:** A mix of multiple interventions involving key stakeholders be beneficial to bring change in knowledge and behavior of community and vulnerable populations. Offering both outreach and drop-in services proved the best way of involving sex-workers and the services would be more effective with this coordinated approach.

#### *Dual Job Market for Universities' Graduates – Comparing Educational Paths and Careers of Science and Humanities Graduates*

During last twenty years huge expansion of tertiary education could be observed in Poland. Number of students has risen from less than half a million in the begging of the nineties to almost two millions in recent years (GUS, 2011). For most of the time in this period the number of students of humanities, especially social sciences, was rising at fastest pace. At the same time a shortage of technically skilled employees has occurred in the Polish economy. This led to number of policies aimed at increasing popularity of technical and scientific studies among secondary schools graduates and reversal of the aforementioned trend (MNIŚW, 2013). These changes have yet to satisfy the demand for skilled labour force.

We will present results of multiple research projects conducted for the last five years among students and graduates of University of Warsaw – the biggest university in Poland. We combine results of statistical analyses of surveys and administrative registers with results of qualitative research (Jasinski et al., 2012). One of main conclusions is that there is a dual labour market for university graduates: one for highly demanded graduates of sciences and the other for the graduates of humanities. Representatives of these two clusters prove to have different approach towards their studies and tend to develop different strategies for entering the labour market: students of sciences concentrate on gaining knowledge and specific skills, whereas humanists tend to seek job experience during their studies to enhance their employability in the future. Careers possibilities of these groups differ substantially. Graduates of sciences seem to be more successful on the labour market.

**ZAKHAROV, NIKOLAY\*** (Södertörn University, [nikolay.zakharov@sh.se](mailto:nikolay.zakharov@sh.se))

#### *Racialization of Labour Migrants in Russia - Taking Social Movements into Consideration*

The anti-immigration movement is one of the most important actors in the Russian social movement network. The goal of this paper is to isolate the key elements of the movement's frame, the ways in which it is applied in building

the discourse around "illegal immigration". It is shown that the social movement against immigration may be treated both as epiphenomena accompanying global processes of racialization but also as the producer and transformer of societal patterns, discourses and political constellations which has its own morphogenetic, structure-transforming potential. By revealing the relatively autonomous character of many of the key themes of racial discourse in Russia, I argue that although the processes of forming class, nations and ethnicity are intimately intertwined with the biologization of cultural differences, the latter cannot simply be reduced to the former. Racial discourse concerning labor migrants in Russia has been shaped by economic relations and the realization of a nationhood project. Construction of the "migration issue" as a social problem in Russia is in many ways embedded in the tensions obtaining between the demands of the state for social cohesion and the demands of enterprises for socially disunited labor. My study has demonstrated that the operation of these factors results in the racializing of visually recognizable groups of labor migrants, the social relations in which they are involved, and, more recently, the category of "migrant" itself. Since groups and individuals develop strategies for negotiating their place in the racial order, they are also involved in the process of negotiating access to material and discursive resources. We thus need to identify and examine trends in the shifting logic underlying the construction of the racial other through the migration regime and also take a closer look at individual and group responses and negotiations in respect to this process.

#### *The Politicized Schooling: Institutionalizing Educational Decentralization in Indonesia's New Democracy*

The paper discusses the effect of new democratic environment on the implementation of a globalizing policy of educational decentralization in Indonesian municipalities. It identifies the new policy has created a new organizational arena in which different governance arrangements arise beyond the policy's original will.

The Indonesian education decentralization policy was enacted in the early 2000s following one of the world's most radical political decentralization projects. The central Education Ministry has transferred most of its authorities to municipal administrations whose leadership is established through a democratic election. This new policy also offers greater school autonomy as well as invites wider civil society participation. While much research on education policy heavily emphasizes the role of formal institutions, this paper highlights the involvement of non-formal sectors that nonetheless play more dominant function. Analyses are done through developing two neo-institutionalist's concepts: "organizational field" and "governance and exchange relations."

Using the former, this paper proposes that the new democratic field has left the reformed education system trapped in a democratic network of constraints, involving numerous organized interests like political parties, teacher unions, education corporates, and rent seeking entrepreneurs. New alliances between autonomous schools and private suppliers do enable schools to attain their immediate outputs. However, school principals cannot simply enjoy such autonomy for they have to maintain a patron-client relationship with the municipal officers who appoint them.

Furthermore, employing the latter concept, the researcher goes beyond the boundaries between institutional and technical environments in analyzing the effect of those organizational relations. Such relations do to some extent reflect the technical aspect of mandated civil society participation and help educational organizations avoid a loosely coupled management. As they become routine, however, new institutionalized practices are established. And as a result, the effort for their fulfillments tends to overlook the substantive changes originally intended from the policy.

#### *Addressing Social Justice Issues Around the Economic Crisis in Spain*

Against the backdrop of a deep economic and financial crisis worldwide, welfare regimes in countries of the European Union are undergoing drastic changes driven by austerity policies. In the case of Spain, such changes affect an already weak welfare state and the large support networks woven around the family. Extreme unemployment rates, weaker job security conditions or rising poverty rates coexist with recent, dramatic changes in values around the family, gender roles or individuals' rights.

Given its length, it is feasible to expect that the crises may be influencing changes in the country's demographic dynamics and its value system. This presentation will touch upon three aspects. Firstly, a question on whether the crisis is affecting births. Recent research in other countries suggests a reversal in the traditional pattern of childless in women: now less educated women are more likely to stay

childfree/childless than the more educated (studies on men and childlessness keep being less abundant, though). Moreover, research findings from European countries suggest low fertility may be correlated to unemployment risk and job insecurity. How are births being affected in Spain? Secondly, an inquiry on how older never-married women and men, regardless of their sexual behaviour or identity, are facing difficulties due to the crisis. Within a familial welfare regime, never-married older individuals (and some childfree ones) build support networks in a slightly different fashion than do parents/married older adults. Such networks tend to be more diverse, but also more vulnerable to health/dependency negative events. Thirdly, a question on whether salient social justice issues are being dealt with or not when looking at the two previous points: is becoming a parent a choice increasingly being reserved for the more educated and privileged individuals? Are childfree/childless and never-married individuals suffering cumulative inequalities just for the still prevailing stigma of such conditions?

*Childfree/Childless Individuals, Population Ageing and Sexual Identities*

In many societies, either as a single person or as a couple, individuals who choose not to have children are increasing in number and as a share of the population. Also, many individuals and couples do not have children not because it is their choice, but because of other social and individual factors. Both situations confront normative sexualities, and question the normative links between sexuality and reproduction. In parallel, a large group of individuals have been denied social (and thus legal) recognition concerning the access to parenthood; therefore, a great part of these individuals have remained childless/childfree, whether voluntarily or not. This is the case, for instance, of many lesbian, gay, bisexual, transgender, intersexual or queer (LGBTIQ) individuals aged 60 and older, or even younger. Both LGBTIQ parents and non-parents confront and question, too, normative sexualities and the links with normative reproduction.

How are these social processes affecting demographic changes, such as population ageing? Have they been affecting such changes? Does the study of childless/childfree individuals in their fifties and sixties shed some light on how to address the challenges facing societies in the future decades, when family structures will have changed so much and childlessness will become more visible? Will the increasing choice of a childless/childfree life blur the boundaries between certain features of the so called sexual identities? Can there be an identity based on childless/childfree choices? Will this affect sociological research perspectives on demographic changes? Is this relevant for policies addressing population ageing?

This papers analyses waves 1, 2 and 3 from the Survey of Health, Ageing and Retirement in Europe (SHARE). It compares parents and childless/childfree individuals in terms of health, social expectations, and other variables. The paper analyses, too, results from 10 in-depth interviews with LGB individuals aged 50 and older, most of them non-parents.

**ZAMORA VARGAS, DANIEL\*** (Free University of Brussels, [daniel.zamora.vargas@ulb.ac.be](mailto:daniel.zamora.vargas@ulb.ac.be))

*When Exclusion Replaces Exploitation: Structural Unemployment and the Retreat of Class Politics*

The rise of mass unemployment in Europe in the late 70s and early 80s changed the conditions of the political struggle and debate in the west industrialized societies, producing a strong economic and political inequality within the working class. While the conflict between capital and labour had structured the analysis of the post-War years (with strong unions and labour parties), the 70s and 80s witnessed a shift of attention to the unemployment crisis and in particular its unequal effects (as evidenced by the centrality of debates around exclusion, urban marginality, and unorganized struggles). This simultaneously political, sociological, semantic and ideological turn is deeply rooted in the changes that have taken place within the salariat over the last forty years. The increase in unemployment, which is itself increasingly concentrated on parts of the population (both socially and geographically) resulting in the emergence of a vast stratum of (what Marx called) "surplus population", is a key elements in understanding this evolution. This evolution also created the conditions of possibility for both the conservative political strategies aimed at limiting access to the Welfare State as well as the declined centrality of "the working class question" among authors and critics on the new left like André Gorz or Herbert Marcuse. In this new ideological framework, the "exploited" is defined by its exclusion and its increasingly precarious relationship to work. Making use of new statistical data on unemployment in Europe, our paper will explore how the political struggle and debate was progressively framed around the question of the "excluded" and the underclass in a way that

made less relevant the question of exploitation and changed the political agenda. This evolution is of fundamental importance – theoretically and practically – for the advancement of critical theory and for understanding inequality under neo-liberalism.

*Sociological Dilema of Iranian Sociology: Critic of Critics*

**Abstract:** The purpose of this paper is to study the situation of sociology in Iran focusing especially on examining the lack of sociological theorizing. For thirty years the development of positivism and experimentalism has dominated, emphasizing quantitative methodology. The impact of this is that theorizing about Iranian society has been forgotten. To understand the reason for this we have performed a meta-analysis of discourses of social actors in social sciences. Findings indicate that this can be explained by social choices and not social chances, individualism, or a lack of cooperation or creativity. Findings also suggest that what is important is the manner in which they spoke, perhaps even more than what they actually said.

*The Early Employment Inequalities of Disabled Postsecondary Graduates in Canada*

Disabled youth have become an increasingly important at risk group for educators and policymakers in Canada. Youth with disabilities are more likely to drop out of high school and are significantly less likely to pursue higher education. Yet, many universities are now reporting that nearly 10 percent of their graduating students self-identify as having a disability, and educational achievement-based programs designed to accommodate students' needs are growing across campuses. While accessibility within postsecondary education may be improving, existing studies suggest that youth with disabilities still face inaccessible workplaces and hiring discrimination. In fact, perceptions of disability by employers and colleagues have been shown to have stronger effects on workforce outcomes than lack of accommodations in the workplace. Drawing on Statistics Canada's 2005 National Graduates Survey, we explore three major research questions. First, despite increased access to disabled youth at the postsecondary level, how do disabled individuals with postsecondary credentials fair in the labour market relative to their non-disabled counterparts? Second, what types of credentials appear to moderate the effects of disability on workforce outcomes? That is, how do the transition outcomes of disadvantaged groups compare across fields, faculties, and types of programs? Do these relationships vary across levels of education (college, trades, undergraduate degrees, graduate degrees)? Finally, do disabled graduates experience similar inequalities across economic and non-economic transition outcomes (earnings, education-job match, job satisfaction, employment, full-time employment)?

*The Communist Legacy As a Self-Transforming Social and Semiotic Structure*

This paper will focus on the problem of the contested meanings of the legacy of communism in Central and Eastern Europe and the relationship between moral and political assessment of the communist past and the modes of its interpretation in academic debates. Post-communist societies are commonly perceived in terms of the legacy of the communist period, which is seen as a crucial factor defining both their general path of development and shaping their internal social hierarchies. At the same time, elements of the communist legacy are imbued with strong moral and emotional judgments. In the majority of cases, this legacy's connotation is clearly negative and is used to color most of the past and current outcomes of the socio-economic development in countries of the region. Moreover, contemporary social actors, for a variety of reasons, are often viewed as being

tainted by the communist legacy: as products of the communist institutions and path-dependent effects. Analogically, diverse discourses that may be perceived as harmful are seen as direct outcomes and/or new forms of communist "new-speak". This highly moral and political nature of the communist legacy, which is an important component of the reservoir of moral metaphors of public discourses in the countries of the region, makes debates on the nature and scope of the "real" or structural impacts of the communist past extremely difficult. The paper will demonstrate how constantly re-negotiated meanings of communism, and the boundary between "negative" and "positive" (if any) aspects of the communist legacy, impact the way in which the role of the past is interpreted in academic debates. Examples will be taken from discussions of regional inequalities and from sources that examine the roots of economic and social backwardness of Poland and other countries in the region.

#### *Gender's Crooked Path: Feminism Confronts Russian Patriarchy*

This contribution discusses the uneasy development of gender studies in Russia as one example of public sociology, on the basis mainly of our own experience in the Gender Studies Program at the European University in St. Petersburg. It observes how the political and academic context of the 1990s created opportunities for academic innovations that ideologically challenged Soviet patriarchy and invoked gendered criticisms of post-Soviet changes. I discuss the effects of the rapid but partial institutionalization of gender studies in the Russian academic context and how gender became the umbrella term for both feminist and anti-feminist standpoints. Since international support for the gender studies diminished in the 2000s, the fashion and economic benefit of doing gender studies has declined, with only a small group of researchers maintaining their commitment to the feminist approach to gender. I focus on the politicization of gender in the last decade of Putin's Russia and the role of feminist researchers in the analysis of the new conservatism, expressed in gender ideology. The problems of combining public expertise and academic work in the particular realm of gender politics are examined.

#### *Gender Socialization Of Children Through Toys: Between Stereotypes From a Globalized Market In Expansion and Daily Interactions With Family and Peers*

The globalization and expansion of toy market in the 1980s and 1990s caused development of gender stereotypes. In order to be exported to many countries and to address to children increasingly prescribing purchases within the family, the commercial communication of toys' manufacturers and distributors is indeed highly segmented and leads to the hegemony of explicitly gendered categories "boys toys" and "girls toys". This categorization, both written (name of sections, sales pitches) and iconic (colors, photographs of children), is normative because it shows to children the "gender" of objects, activities and values depicted (like household toys that are in sections and departments called "girls" in catalogs and stores). The toy's industry and trade appear more and more as an instance of children's gender socialization, teaching them since their earliest childhood to distinguish masculinity and femininity. But children do not learn passively these gender categories: this initiation comes through interactions with other children (peer group, siblings) and adults (especially parents) that may strengthen as well as challenge stereotypes. In particular, families with a strong cultural capital used to develop strategies to thwart stereotypes and open their children's field of possibilities. From an investigation which combines interviews with children, parents and sales teams, international catalogs' sales pitches (with lexicometry for the French ones) and participant observation in a toy store as a salesperson, we will analyze two successive phenomena. On the one hand, I will clear up the process by which the globalization of toy market and the development of marketing led to the circulation of gender stereotypes in the late twentieth century. On the other hand, I will show that interactions between children and with adults produce contrasting effects depending on families' possession of cultural capital, because standardization of commercial communication does not result in a uniform reception of gender stereotypes.

#### *Apport De La Socio-Analyse À L'étude Du Processus De Construction Identitaire*

L'objectif de ma communication consiste à explorer le lien entre l'expérience de l'immigration et la construction de l'identité ethnique, à partir d'un cas concret (une famille d'origine nigérienne émigrée/immigrée au Canada). Les théories de l'ethnicité, qui ont connu un boom depuis les années 1970, ont certes rompu avec l'essentialisme des premières approches, mais perpétuent souvent (à leur insu) une approche substantialiste des identités ethniques (Brubaker, 2000; Jenkins, 2010). On reconnaît volontiers ces dernières comme étant mouvantes et dynamiques, mais on s'attarde très rarement sur leurs incohérences, leurs ruptures, leurs contradictions (Bajoit, 2009; Collovald, 2007). Par ailleurs, l'ethnicité (comme l'immigration) a souvent été traitée sous l'angle soit de l'intégration (le fameux concept du vivre-ensemble), soit du déracinement (crise d'identité), soit encore du rapport intergénérationnel (crispation ou dissolution de l'ethnicité; ethnicité symbolique). La socioanalyse (Sayad, 1991; Bajoit, 2009), en remettant l'individu au centre de la recherche et en privilégiant la méthode de la biographie reconstituée, permet de concevoir l'identité ethnique (loin des discours dichotomiques) dans ses contradictions les plus profondes, ses ambivalences, ses évolutions (au cours d'une vie), ses mécanismes de dissimulation, etc.

Pour ce faire, il faut nécessairement saisir l'expérience de l'immigration dans toute sa complexité; autrement dit, dans les rapports qu'elle implique avec le pays d'origine : souvenirs, fantasmes, nostalgie, désillusion (du retour); avec la famille élargie : entre culpabilité et sentiment de devoir s'acquitter d'une dette; avec la société d'accueil : promesses (réelles ou déçues) d'une nouvelle vie ou de nouvelles possibilités, discriminations ('raciales', sociales, économiques, etc.), sentiment de déclassement, etc. Il s'agira donc d'étudier le processus plutôt que le résultat de ce processus (comme disait Brubaker (2002), l'identification, plutôt que l'identité, permet d'éviter le piège du substantialisme et de penser l'ethnicité en termes dynamiques, relationnels et processuels.)

#### *Successful Aging: Cross-National Analysis of Subjective Well-Being in the Late Life Period*

This paper aims to identify and analyze the life course and contextual factors that influence the level of subjective well-being (SWB) of 60+ aged people. Our research is based on the results of 5-th waves of World Value Survey. We have investigated the level of SWB of older people on individual and country level. The results of research demonstrate that the strongest predictors of SWB in late life period are satisfaction of financial state, health state and sense of control, i.e. belief of individuals that they control their live, control what happens to them. Besides, the important factors of SWB of older people is an ability of older people to establish and maintain friendly relations with other people (members of family, friends and etc), i.e. to invest their own resources to positive emotions and important relationships for themselves. Older people from ex-communist countries have the lowest level of SWB. Older people from English-speaking countries such as USA, Canada, New Zealand and United Kingdom have, by contrast, the highest level of SWB. These results allow suggesting that the degree of modernization influences the level of SWB very strongly. For older people the country in which they live, the level of democracy, GDP per capita, freedom and tolerance are very important. In contemporary society late life period is a time for self-realization, new activities, new leisure and new emotions. If society understands the needs of older people and provides the opportunities for their realization, society can overcome the challenges caused by population aging. Only in this case we can say about such a conception as 'successful aging'.

#### *The Schooling Of Emotion and Memory: Analyzing The Emotional Styles Of A Teacher's Pedagogical Practices*

In this paper, we explore the intersection between emotions and memories using data from a case study of a teacher's pedagogical practices in a conflict-troubled society. The aims of this study are: to examine the construction of emotional style(s) in a teacher's pedagogical and interactional practices whilst teaching the memories of ethnic conflict and war; and, to investigate whether these emotional styles enable or discourage certain representations of the past in the classroom. In general, the study shows that individual emotional experiences are connected with larger historical, political and social structures, which, in turn, supply the meaning and motivation by which the particular emotional styles are enacted in the classroom. The implications of this study are discussed.

*The Reverse Panopticon Metaphor: The Autocratic State's Fear of Being Recorded*

In the aftermath of the catastrophic earthquake that occurred in the Chinese province of Sichuan in 2008, the artist and activist Ai Weiwei launched an independent 'citizen investigation' movement that challenged the government's failure to gather accurate data on the number of deaths, especially the deaths of school-children who had fallen victim to shoddy school building construction. Through a case study of this movement and its suppression by the Chinese State, this paper aims to analyze how new media facilitate the power dynamics between the autocratic state and social movement actors.

To analyze this campaign, the paper uses David Whiteman's 'coalition model', developed to evaluate the impact documentary film affect social movement actors, and redefines this model. First, activist documentary film that is disseminated via the internet and makes use of the internet at various stages of the creative process does not merely influence the dominant public sphere, but, rather, it creates new public spheres, including a local 'grievance community', as well as an activist community. It creates new internet spaces to discuss issues addressed by the documentary. Second, the documentary film production and distribution become key processes of movement mobilization in this context. Third, various state agencies' responses to social movement actors illustrate a pattern of the autocratic state's fear of being recorded. The prison Panopticon metaphor is therefore reversed in the process: the governor who is monitoring all members of the autocratic society, becomes the subject of all-pervasive observation by its prisoners in the new public spaces created by new media technologies.

This study signifies discursive social movements in the digital century in a party-state with multiple strict controls and heavy censorship on expression and association.

*Asian Values Revisited after 20 Years: Value Shift in China, Japan, South Korea, and Taiwan*

1 Introduction

This paper focuses on the value shift occurring in four East Asian societies resulting from socioeconomic modernization and political democratization. Proposed in the first half of the 1990s, the notion of "Asian values" describes the socio-cultural characteristics of East Asia (i.e., conformity, hierarchy, harmony, and the priority of collective interests). In reexamining Asian values in China, Japan, South Korea, and Taiwan against the background of overwhelming social transformation in this region, this paper addresses two issues: (1) the differences of Asian values in the public and private spheres in four East Asian societies and (2) whether citizens in these four societies detach from the Asian traditional culture and thus Asian values.

2 Methods

The theoretical discussion includes an examination of the empirical evidence provided by the Asian Barometer Survey. Three waves of surveys administered over the past 10 years in four East Asian societies have offered an abundance of information to test the value shift in this region.

3 Results

Revisiting Asian values 20 years after its initial proposal has revealed two major findings. First, no remarkable gap exists between the Chinese and other East Asian societies' citizens in terms of Asian values in the private sphere. Second, although citizens in Japan, South Korea, and Taiwan have abandoned authoritarian political values, this value shift has not been observed in China.

4 Conclusion

The value shift is more significant in the public/political sector in East Asia. Even though Asian values in the private sphere are popular in all four East Asian societies, modernization and political democratization have facilitated declining Asian values in the public sphere in Japan, South Korea, and Taiwan. Not only do the Chinese cherish traditional family and social values, as do the citizens in other East Asian societies, but they also uphold authoritarian political values.

*An Evaluation of Poverty Prevalence in China: New Evidence from Four Recent Surveys*

Knowledge of actual poverty prevalence is important for any society concerned with improving public welfare and reducing poverty. In this paper, we calculate

and compare the poverty incidence rate in China using four nationally representative surveys: the China Family Panel Studies (CFPS) of 2010, the Chinese General Social Survey (CGSS) of 2010, the Chinese Household Finance Survey (CHFS) of 2011, and the Chinese Household Income Project (CHIP) of 2007. Using both international and official domestic poverty standards, we show that poverty prevalence at the national, rural, and urban levels based on CFPS, CGSS, and CHFS are much higher than the official estimation and those based on CHIP. The study highlights the importance of using independent datasets to validate official statistics of public and policy concern in contemporary China.

*What Preconditions Industry-Level Collective Bargaining in China?*

As indicated in a fair amount of existing literature, China has been seeing a tendency of fast growing collective bargaining in general and industry or regional level bargaining in particular. Significant cases have constituted a fact of the centralization of the bargaining structure in China as opposed to the established knowledge that collective bargaining in China is largely institutionalized at the firm level. The centralization is not only news in China's industrial relations studies, but also somewhat counter-intuitive in the context of the worldwide decentralization of collective bargaining structure since the late 1980s and early 1990s.

This counter-intuition has raised the question of what has led to China's centralization of collective bargaining, or more generally, what factors precondition relatively centralized bargaining (e.g. industry-level bargaining). No systematic study has provided a theoretical framework that helps us perceive this issue.

This study tracks multiple industry-level bargaining cases in a same city in China. It examines varieties of institutionalization processes of industry-level bargaining, as well as distinct roles of relevant players—unions, workers, employers' associations, individual employers, and government officials.

The industry-level bargaining scenario it has revealed in this city, being admittedly somewhat regionally characterized, illustrates the power dynamics that relevant players interact with each other in the sphere of collective bargaining in China (political/institutional factors). It also shows that economic/industrial factors matter—different industries have had very different institutionalization processes of the bargaining.

*Tourism As Ritual: A Space-Time Model*

Tourism is considered as secular ritual and important topic of the anthropological study due to its symbolizing of individual life, and its indicating of the sacred-profane shift of away-home and at-home status. Based on the spatial study of tourism system and the temporal analysis of tourism ritual, the paper tries to develop a space-time model of tourism, and finds that tourism is the complex of space and time and secular ritual in modern society, and the space-time presentation of rites of passage in modern mobile world. For tourism, spatial movement is more distinctive than time elapsing, therefore, space is primary while time is secondary; the spatial characteristics of tourism is far beyond the micro-spatial territory of non-religion rites of passage, thus tourism can be the complement rites of passage in a world on the move.

*Getting Access to Justice from Bottom up? Social Capital and Resolution of Civil Conflicts in Rural China*

Civil disputes in rural China have long been considered as a threat to social stability and order. Previous studies focus on the formal institutions, especially the state power beyond the village in resolving civil disputes, relatively ignoring the natural informal institutions within the villages. This research, therefore, will try to explore

the possibilities of resolving civil disputes from bottom up. Using a national survey dataset (CGSS2005) from China's 410 villages, this study aims to exam the impact of social capital on rural residents' preference and actual choice of resolution in virtual and actual civil disputes, respectively. The social capital in the village refers to the features of social organization, such as trust, norms and networks that can improve the efficiency of society by facilitating the coordinations. The author argues that increase in social capital can significantly increase the probability of mediation. First, the abundant associations provide more platform and agency for the residents to resolve their civil disputes. Second, the networks on the community level could give rural residents more choices when they face disputes. Considering the high cost of administrative and legal ways of resolution, the macro networks are cheaper and more available for ordinary villagers. Third, the social trust increases the interaction and dependence with each other so that villagers may be more willing to resolve their disputes by resorting to the informal parts. This research is of great importance for discovering the informal institutions indisputable resolution and provides insightful evidence for rethinking the state-society relationship in authoritarian China.

**ZHANG, JUNDAN (JASMINE)\*** (University of Otago, [jasmine.zhang@otago.ac.nz](mailto:jasmine.zhang@otago.ac.nz))

#### *"No Gods, No Shangri-La": Rethinking Tourism In An Environmental Discourse*

Currently, environmentalism and the conservation movement still largely are situated within a positivist epistemological paradigm that is built on a tradition of Western scientific knowledge production. Consequently, the value of the current concepts of 'the green economy' and 'sustainable development' often are not challenged from non-Western political and ethical perspectives. Drawn from a study in a remote Tibetan village called Nizu, in Shangri-la County of northwest Yunnan province, China, I pose the question: "what role does tourism play in the formulating and distributing of power and reshaping knowledge in terms of how humans relate to 'nature'?" From a political ecology perspective, I will identify an environmental discourse within which tourism is embedded. By describing how tourism acts as a medium for mediating the material needs and cosmological beliefs in the village, I will challenge the idea that tourism is an imported product with the power to bring people and their living environment to modernity, in a more "ecological" way than would otherwise be the case. I argue that the descriptors "premodern", "modern" and "postmodern" are performed by the villagers in one way or another, through tourism. Such performances can be contextualized in the environmental discourse that constantly is shaping and reshaping ecological knowledge that has been taken for granted. Finally, I suggest we look further into the subjectivities that determine such performances of tourism, and the power relations involved, to better understand the complex and fluid nature of concepts such as "nature", "culture" and "tourism" in this setting.

#### *Tourism, Politics and Beliefs in Nizu Village in Shangri-La, Southwest China*

While most of the literature in tourism studies focuses on the problems relating to tourism development at World Heritage Sites, little attention is paid to places that somehow failed to be included in the list of World Heritage Sites. This paper will talk about tourism, politics and beliefs in a Tibetan village called Nizu, with a reputation as the 'backyard of Shangri-La' in relation to the famous tourism destination Shangri-La County, Southwest China. Geographically located within the Three Parallel Rivers Region, which is a natural World Heritage Site, the 2003 application of Nizu village to be included in the Three Parallel Rivers WHS failed due to the governmental plan for a copper mine north of the village. Pudacuo National Park's establishment in 2007 brought hope to the villagers of Nizu for promising to develop the village and region around its ecotourism products. Such hope hasn't realized. Currently, the village attracts approximately 1500 visitors each year. One significant issue in the village, brought about by the 'underdeveloped tourism dream', is the diversity of ideas held about environment/nature. Traditionally, the villagers believed in the ancient Bon Religion, a belief that treats mountains and rivers as gods and then bonds people's everyday life to these gods. In such a belief, the tangible (mountains and rivers) and the intangible (spirits and gods) are intertwined and inseparable. With the existing ambivalent attitudes to developing (eco)tourism in the village, various ideas of dealing natural resources become tangled with other socio-political issues among villagers. By contextualizing and theorizing from a political ecology perspective, I question what role does the notion of world heritage site play in a complicated situation such as in Nizu village? Also, I ask how far can the idea of 'protecting heritage' progress without close scrutiny on the power issues involving the different players?

**ZHANG, LU\*** (Temple University, [lu.zhang1@temple.edu](mailto:lu.zhang1@temple.edu))

#### *Labour Dispatch, the State, and Contested Labour Regulation in Post-Socialist China*

The aim of this paper is twofold. First, it problematizes the common assumption of the core/periphery labour markets dualism as a "natural" economic trend or fact, inquiring into the processes through which this boundary is itself defined and contested. Second, it seeks to examine the enduring (albeit evolving) impact of revolutionary and socialist legacies (notably, the populist mass line) on the subsequent labour politics in post-socialist China. Through an in-depth study of the rise of labour dispatch (temporary agency work) and the contested legislative process associated with it, this paper argues that the simultaneous dynamic of flexibilization and dualization of labour markets in post-socialist China has been the result of active state policies and regulations to strike a balance that draw boundaries among its working population. On one hand the market-oriented labour reform has significantly increased labour market flexibility and led to widespread job insecurity. On the other hand, there has been a persistent but evolving dualist employment structure sponsored by the state that constantly creates boundaries and inequalities among workers. The Labour Contract Law, for instance, promises more job security and protection for workers with regular labour contract to shore up the state's legitimacy, while excluding agency workers to the law in response to popular discontent channeled by the official trade union, suggests that the Chinese labour politics is not a "settled" fact. The Communist Party's continuing public adherence to its populist mass line while persisting in the one-party authoritarian rule, has recurrently incited contestation, negotiation, and boundary-drawing by the party-state and its agencies, employers, and different groups of workers. Continual struggles for inclusion by the excluded workers, I content, have periodically propelled the party-state to redraw boundaries and expand labour rights to some of the formerly excluded.

#### *Collective Journalism Is in Formation? Common Net-Users Challenging Professional Journalism Online and Offline*

With the development of social ICT (Information and Communication Technologies), the media landscape has achieved dramatically transformation. Utilizing the social ICT, common people obtain the new tool and the public space for self-expression, discussion and opinion exchange, thus exerting a practice of journalism. There are several success sites/examples of participatory journalism or citizen journalism, such as Ohmynews, Nowpublic, thus ordinary people become 'citizen journalists'.

In China, the mass media is still strictly controlled by the state. Since the 1990's, accepting the influence from the market economy, the mass media has changed its image from the government's organ to a kind of enterprise, but it remains far from the perfect platform for people to participate in civil society. Compared to the mass media, the Internet is less controlled by the state and it is technologically impossible for the government to control online content as thoroughly as traditional mass media.

In recent years, some social affairs (such as 'South China Tiger' and 'Black Brickfield Scandal') had become nation-wide known public events, were the result of Internet users. During this process, the concept of 'citizen journalist' has also been introduced to China. There are no successful citizen news websites as Ohmynews in China, common users and several famous individual figures are utilizing websites, blogs, BBS forums to collect information and exchange opinions.

Through an interview with the 'first citizen journalist' in China, ZHOU Shuguang, whose online and offline identity, and performance and expertise as a journalist will be clarified in this paper. Additionally, journalism conducted by the plentiful and nameless ordinary people will be academically defined as 'collective journalism'. Amateur journalists' personal identity and behavior online and offline, and the similarity and difference between collective journalism and citizen journalism will also be examined through some case studies in China.

#### *Development and Evolution of China's Urbanization: A Case Study of Mei County in Guanzhong Area of Chinese Inland*

In the context of Chinese history, the concept of "city" in ancient society appears quite early and county as one of the municipality settings almost has a history of thousands of years which carries different but important political, military and economical functions, and etc. Hence, the concept and its contents of "city", and the urban-rural relations, etc. need to be historically reviewed and discussed, so as to better understanding the diachronic development and evolution of China's urbanization procedure and its distinguishing characteristics, which will

further help to think more clearly about the possible path of urbanization and guide more effectively the practice and exploration. This paper takes Mei county-a county located in the core zone of Zhou-Qin culture, which is of thousands years of history-as research object, by historically presenting its development to observe the developing stages, distinguishing characteristics and historical evolution of China's urbanization.

#### *A Study on the Method of Public Participation Based on Discourse-Power Model Among Different Stakeholders: A Case for Avoiding NIMBY Risks of Waste Transfer Stations in Nanjing, China*

Promoting sustainable development of the world is a common of different country. Because of sustainable development and public participation are inextricably linked, to promote sustainable development, it should to enhance the public participation.

The "NIMBY" phenomenon which means that not in my back yard is an increasing prominent urban problem in China to threat sustainable development. NIMBY risks are the kinds of negative external effects of urban facilities. However, in China, with its rapid urbanisation rate, city services still need to be optimised, and many public facilities must be established. Thus, the remission of avoiding NIMBY risks is an important action which can help to improve social equality and justice. NIMBY conflicts are a type of social conflicts among different stakeholders including governments, experts, planners, developers, media, residents from different locations, etc. To solve it, we need to coordinate the interests among different stakeholders to achieve a win-win situation.

This study constructs a method of public participation based on discourse-power model among different stakeholders for avoiding NIMBY risks and also the related approaches to realize them in Nanjing. Firstly, it classifies the different interests groups basing on the spatial zoning of different negative impact areas and the services area of waste transfer stations by using GIS-based spatial quantitative analysis approach. Secondly, it introduces the concept of discourse power, establishes a discourse-power model based on different interests groups, and analyses the game relationship among them. Thirdly, it builds a mechanism of distribution and implementation of discourse power, to clarify different discourse power among different stakeholders. This study attempts to improve an ordered public participation on avoiding NIMBY risks to guarantee a scientific, participatory, and operational urban governance.

#### *Data Envelopment Analysis on Assessing the Efficiency of Japanese Film Release Market from 1955 to 2011*

The film industry, as one crucial component of the leisure and entertainment industry, has received much attention in decades due to its great contribution to the economy and culture. Undoubtedly, with the presence of a big domestic market and excellent works, the Japanese film industry is playing a crucial role both to Japan and the world.

This study examines economic performance of Japanese film release market quantitatively from the perspective of input-output by applying the method of DEA based on the data from 1955 to 2011, and tries to interpret the change in light of historical development. The results demonstrate a wide range of efficiency among the individual units, and suggest a new perspective to recognize the performance of Japanese film industry for years.

Specifically, the models adopted in this study are Charnes, Cooper, and Rhodes model (CCR, 1978) and Banker, Charnes, and Cooper model (BCC, 1984), which are frequently used models of DEA. Technical efficiency (CCR efficiency) measures a DMU's ability to convert inputs to outputs given the size of the DMU. On the other hand, by decomposition of CCR efficiency scores, BCC scores (Pure Technology Efficiency) and Scale Efficiency (SE) is calculated to examine whether the scale of the industry has any impact on its efficiency. The input includes number of screens, number of Japanese films released, number of imported films released, and average admission fee. On the other hand, the number of admission and box office receipts is output. The results also present the change of inefficiency slacks on basis of input-oriented model, which suggests the potential improvement room for input. Based on the above calculation, possible reasons for the changes of efficiencies and also some managerial implications and helpful insights are provided to competitors, investors and researchers.

#### *Social Integration of New-Generation Migrants in Urban China: A Case Study of Suzhou*

Associated with the rapid urbanisation, there is a gigantic issue of social change in China. Part of that change is caused by the millions of rural-urban migrants. As a consequence, their integration into China's urban society has drawn extensive attention in recent years. There are, however, a growing number of new-generation migrants whose prospects of integration cannot be simply gleaned from the experience of their predecessors, the old-generation migrants. Based on the concept of lifeworld (Habermas), the character of the new generation migrants are investigated from the perspective of their social interactions at the neighbourhood level. The study uses qualitative and quantitative data derived from a survey of a large resettlement neighbourhood (new 'urban village') in Suzhou. In the survey, we examine the socio-spatial sphere of migrants' social interaction and the role of the receiving neighbourhood in facilitating such interaction.

Our sample shows that migrants are the overwhelming majority in neighbourhood. The findings show that new-generation migrants are more willing and have more potential to integrate into the urban society and become permanent urban citizens. Although new-generation migrants have weak neighbourly interactions, they have relatively high attachment and sense of belonging of the neighbourhood. The findings also shows the quality of public open space is important for a more flourishing neighbourhood life which could support better social integration of migrants.

**ZHANG, YI\*** (Chinese Academy of Social Sciences, [zhangyi@cass.org.cn](mailto:zhangyi@cass.org.cn))

#### *China's Aging Population and Challenges It Is Facing*

According to Chinese population projections, the paper analyzes future aging process of different historical periods. Findings indicate that unless the family planning policy reforms in future decades, the bottom of population pyramid will shrink dramatically, and growing life expectancy will progressively expand its top. By the year 2050, the aging population over 65 will account for 25% of the society. Considering the reduction of children population, the population in the labor force between 15-64 years old will also decrease.

This population transition will bring some very serious problems in the near future: Firstly, China will face the shortage of labor force if automatic standards of production process can't be improved, especially in the low-end industries. It means migrant workers' income will keep increasing and the labor cost in the production process will be getting higher. It will produce some negative effect on China's international competitiveness.

Whereas aging process will accelerate, the adult population will save money for their future aging, restricting the consumption rate. It will affect the domestic spending policy. On the one hand, the decreasing of children population will lower family's expenditure rate, on the other hand, the lower level social security will prevent the people in the labor force from contributing more to savings in their productive years.

With the population transition and the changing Chinese family structure, the aging people will face the shortage of social support network, especially due to lack of family members' support. The linkage between mother' and children's family will weaken because of population migration. Thus Chinese aging population will have to depend on their spouses for their care. If they lose their spouse, the aging people will have to be sent to beadhouse to be cared for. But up to now, China has not prepared enough beadhouses for their aging population.

#### *Formalize the Informal? the "Pacification" of Favelas in Rio De Janeiro*

What is the boundary between formalization and informalization? Why does the state attempt to formalize the informal space and how does it do so? Will the effort of formalization produce new forms of social, spatial, and political order amid the expansion of informality in the Global South? This paper tackles these issues by examining the current effort of favela "pacification" in Rio de Janeiro. As one of the most visible manifestations of urban informality, favelas of Rio de Janeiro have gone through several regulatory and upgrading programs but none have succeeded. Starting in late 2008, Rio de Janeiro's State Government has been placing a special police unit called Pacifying Police Unit (Unidades de Polícia Pacificadora, UPP) inside some favelas and providing public services to the residents in order to regain control over territories long lost to drug traffic and reintegrate the economically challenged communities into society. As of September 2013, thirty-three favelas were "pacified" in Rio. Despite the official discourse of crime control and public goods provision, the "pacification" program is highly controversial. Based on fieldwork and archival research, this paper investigates the main characteristics and consequences of the "pacification" program. It shows that the purpose and approach of the formalization effort is largely shaped by the state's agenda of global image building. As the city of Rio will host two major sporting events -- the FIFA 2014 World Cup and the 2016 Olympic Games, an event-led planning and governing ethos is at work that caters the global audience whereas marginalizes the local demands, thereby is hard to have an impact which is both substantive in scale and lasting in impact. By neglecting the interest of local communities and denying the channels of public participation, the effort of formalization is symbolic and paradoxically creates new space for informality.

*Where the Other Half Lives: Low-Income Housing Provision in France, China, and Brazil*

As the urban income structure has become increasingly bifurcated with the rise of service economy, there is an increased demand for low-income housing in cities. How to meet the demand by the large population working at the lower tiers of the urban economy is a critical policy issue facing cities of both the developed and the developing countries. Failing to address this issue will not only hinder the long-term economic development but also undermine the political and social stability of cities. This paper tackles the issue of urban inequality by comparing the practices and consequences of low-income housing provision in France, China, and Brazil. Whereas France launched the low-income housing construction through a system called HLM (Habitation à Loyer Modéré, French for "housing at moderated rents") in the 1950s, similar practice is at the early stage and lacks systematic operation in China and Brazil. In China, many low-income housing projects have produced a concentration of poverty where residents suffer from a long commute to work and the lack of public facilities. In Brazil, a growing number of social movements have intensified their claim to create alternatives for the inclusion of low-income housing in the city centers, some of them employing more drastic actions such as the squatting of empty buildings. The cross-national comparison reveals the intricate relations between the state, market, and civil society organizations in low-income housing provision. It shows that a state with internal structural coherence and institutionalized connections with private and civic actors is critical for the successful provision of low-income housing. Besides the method of financing, the design of the projects including the locations and densities of the low-income housing is important in shaping the economic and social wellbeing of the local communities and the entire cities.

*Demokratia in Everyday Lifeworld*

In this article, the author argues that there is a tendency to realize a high degree of demokratia in Western everyday lifeworld. Depending on one year ethnographic fieldwork in a Dutch village, the author uses the method of autoethnography in order to provide a frame to observe the tendency. The article is divided into three parts. In the first part, the author explains that Everyday lifeworld is the horizon of social life, in which human being as ordinary practitioner lives its own meaningful life and realizes its own desires, wishes and hopes with emotions. The author identifies three principles, equality, togetherness and openness, as the principles of "Demokratia". In the second part, the observing frame of the phenomena theorized as demokratia in everyday lifeworld will be provided. The frame includes the gestures in daily interaction, the dialogue in daily lifeworld, and the form of collective action in daily lifeworld. In the last part, the author argues that the nature of "Demokratia in everyday lifeworld" is the habitus of practical reason. Playing together could be the possibility of "Demokratia in everyday lifeworld" in the future. To disclose the ruling relationship in everyday lifeworld should be one of the main sociological issues.

*Awards and Conservation of Intangible Heritage*

In 1804, Napoléon Bonaparte rewarded for the French "Honneur et Patrie", which became the first modern awards institution affirming nations as the unit of selection and pride. Then such awards systems spread throughout the modernizing world and fostered the formation of world's fairs, such as modern Olympics and UNESCO, which almost accepts all countries as its membership.

Specific to the awards systems of intangible heritage which promoted by UNESCO, on the one hand, it reaches the same action-oriented and strengthens people's consensus to protect ICH, but on the other hand, for different countries and areas to implement the same awards way, could it really accomplish the protection aim? It is noteworthy that each country and area form the culture logic and mode in their own history river, when the local culture rule meets the global culture awards, actually it's difficult to reach the expected aim. Today UNESCO carries out a series of awards ways all of the world, including "Masterpiece", "Nominations", "Medals", "Living National Treasures" and "Heritage Funds", in fact, when China operated these awards ways specifically, which led to the "culture crash" will usually make the counter result that awards really wants.

As the Guizhou Miao ethnic group's Yalu King Epic for an example, The paper will research the culture awards in the conservation of intangible heritage, emphasize the importance of the local culture logic and rule in intangible heritage awards, make sure the awards could really protect the intangible heritage.

[galina-zhigunova@yandex.ru](mailto:galina-zhigunova@yandex.ru))

*Resource Capabilities of Children with Disabilities*

The younger generation is an important resource of society. However, children with disabilities require significantly more material, physical and emotional inputs in the process of socialization in comparison with healthy peers in order to later become full-fledged subjects of social reproduction. Children with disabilities are clearly losing their peers, having a low level of health, education, opportunities for self-realization, traditionally seen as individuals with low human potential. As a result, young people with disabilities remain largely unclaimed in society and they cannot fully realize themselves and as a whole bring benefit to society.

In 2011 and 2013 years the author conducted a sociological study among children with disabilities in the aged from 12 to 18 years to identify the resource potential of the juvenile disabled. The respondents were interviewed through a formal interview. So, the juvenile disabled consider themselves talented people who realize their abilities in various social practices. Most of the studied types of students are active members of the society who have the relevant social norm of knowledge, skills, aspirations and values.

Thus, in this connection, we note that the younger generation with disabilities can be considered the perspective intellectual, economic, social, political and cultural reserve of society and investing in them is the most important task of the state, influencing national security.

XU, YING (The Chinese University of Hong Kong)

*Going Beyond Passion and Dedication: The Struggle Towards Professionalization Among Grassroots Philanthropic Organizations in China*

Grassroots philanthropic organizations (GPOs) have emerged in China in large numbers. Previous studies tend to focus on these organizations' interaction with the government, particularly their experience with the unfriendly NGO regulation system in China, while leaving their daily operation, and their process of development out of the discussion. The current study looked at GPOs in China at a particularly important stage of their development: when they face increasing internal and external challenges and could no longer remain informal. Through studying southern China GPOs involved in rural education promotion (n=44), we show that rather than the unfriendly registration system harming the development of GPOs, organizations have been enjoying their informal way of operation, including lack of legal identity. They focus on their relationship with the rural students, the cohesion within the organization, and the feeling of being able to help. They often have little desire to register or formalize until various internal and external changes, such as the growth of members and the expansion of programs, challenge the sustainability of the organization. At this point, GPOs do not naturally formalize. They first try all they can to maintain their usual way of operation, until the idea of professionalization is introduced to them by outsiders. Such a foreign idea may cause much confusion among the members, resulting in disagreements about

the organization's future. Under different situations, GPOs will choose different paths. Some will professionalize, and become paid staff NGOs; some will remain informal and wait for better opportunities; some will take a clear stand to resist future attempts of formalization; and some will dissolve or break into different organizations. Government policy only starts to influence GPOs once they decide to seek registration.

### *The Rise of Income Inequality in Urban China, 1996-2010: Increasing Returns to Education, State Sector Shrinkage, and Composition Effects*

Income inequality in urban China has experienced a rapid growth over the past two decades. To account for the rise in income inequality, previous studies have provided three major explanations: widening regional gaps, increasing returns to education, and growing residual inequality. Since the mid-1990s, however, the composition of the urban labor force has been considerably reshaped by three large-scale structural changes: (1) the expansion of higher education, (2) the shrinkage of state sector employment, and (3) a surge in rural-to-urban migration. In this article, I discuss how the recent rise of income inequality can be driven by these institutional and demographic shifts. Based on data from two nationally representative surveys, I use variance function regressions to decompose the growth in income inequality from 1996 to 2010 into four components: changes in between-group income gaps, changes in within-group income variation, and two types of composition effects (*distribution effect* and *transfer effect*). The decomposition results indicate that changes in between-group income gaps explain around 40% of the rise in inequality, while more than half of the total growth can be attributed to composition effects. Using counterfactual analysis, I find that changes in between-group income gaps are almost entirely driven by increases in returns to education, while composition effects stem chiefly from changes in human capital distribution and the shrinkage of state sector employment.

**ZHOU, YANG\*** (Social Work Department, [yzhoucuhk@gmail.com](mailto:yzhoucuhk@gmail.com))

### *Participation and Cooperation: An Approach to Productive Aging for Institutional Care Service in F Resident*

Institutional care service is an important part of the elderly welfare system aiming at improving the quality of life of the elderly. In the resource-input type of the welfare service, care-givers tend to treat the older people as vulnerable groups and to ignore their abilities and value. Based on the materials obtained from the observations and interviews in F Social Welfare Institution, the "functioning" of the elderly is described to reflect their identity pursuit of self-integrity, namely the elderly's agency, constituting the impetus of their involvement in institutional service. In the service field, care-givers and care-receivers, as the actors in contact, gather to build the "life world" during care service with the subjective recognition and interaction practice, which becomes the foundation of the Participation and Cooperation between the aged and the organizational workers. Accordingly by way of self-care and participating in service the elderly construct the Participation and Cooperation in Context with the care-givers together, which contributes to both the old persons themselves and the resident, and to reaching the elderly's "productivity" ultimately. Then the elder's participation and their cooperation with care-givers are meant to be an approach to Productive Aging in Institutional Care service.

### *How Home Ownership Becomes a Measurement of Inequalities: Analysis of Home Ownership of the Young Generation*

Since the beginning of the 21<sup>st</sup> century in contemporary China, house prices have been increasing rapidly especially in metropolitan cities like Beijing and Shanghai. The problems of 'unaffordable houses' are most significant among people who need to buy their first houses in this period, i.e. the young generation born in the late 1970s and post-1980s. This paper aims to examine how home ownership influences life and work chances in contemporary China. It uses data from both national surveys and survey of the university graduates. The empirical analysis will start with home ownership rate with regard to type of employer, age, household registration and residential areas, which this paper argues to be four most important factors for the segregations in home ownership. The core analysis focuses on the young generation, concerning their differences in expenditure (leisure, holiday and education), car ownership, savings, subjective feelings as well as marriage and work by owning a home or not and living in a metropolitan city or not. The main arguments are people without home ownership are in a relatively

disadvantageous position in life quality and even the marriage and labor market, so in the metropolitan cities in China, home ownership has become an important index of socio-economic status or to measure social inequalities.

### *Contesting Imaginaries: New Urban Spaces of Xi'an*

The development of heritage tourism in historical cities of China is regarded as a vital ingredient of urban regeneration by state and local governments. In Xi'an, the imperial capital of thirteen dynasties of Chinese history, the construction of a modern landscape catapulted the city from an isolated entity to the globalized world system. Guided by a fifty-year governmental city plan, the densely populated inner city of Xi'an is currently being transformed into a functioning replica of the Tang-era Imperial City to reconstruct the glorious past of Chinese civilization. Guided by the project plan, a large number of buildings of Xi'an were demolished and local residents were relocated to other districts of the city. Meanwhile, historic monuments were transformed to cultural theme parks. Antique markets and high-end residential houses were built to attract middle-class immigrants from other cities of China.

This study will examine the multiplicity of imaginaries that are produced and negotiated by actors involved in urbanization, and the way these imaginaries shape new urban spaces of Xi'an. I will analyze the role of the main actors in this dynamic process: how the municipal government implements urban regeneration policies with their own entrepreneurial agendas; how real estate investors, empowered by local administrations, utilize cultural resources and real estate property for commercialization and consumption; how immigrants inhabit newly created urban spaces to search for leisure lifestyles and cosmopolitan identities; and how the traditional residents negotiate, resist and manifest their identity through daily practices. The complex associations of these actors co-construct new urban spaces through contestation and meaning-making.

Moving beyond the macro-perspectives of political economy and economic geography, the research will engage with Xi'an as an important ground for testing urban transition of social and spatial landscape, and examining social inequality in the rapid development of modern China.

### *How the Internet Is Transforming Health Experiences: Reflections from a Decade of Qualitative Research on Experiences of Cancer, Chronic Illness, Infertility and Bereavement*

This study explores how people talk about the internet and how attitudes and cautions about different types of websites have changed over the last decade, drawing on comparative qualitative analysis of narrative interview studies, conducted during the years 2002-2012.

In the early 2000s patients' narratives suggested that only particularly engaged, expert and activated patients sought health information online. By 2010 the web had become an almost unremarked, routine part of people's experience (eg 'of course we all looked it up straight away'). The internet has transformed how people make sense of and respond to symptoms, decide whether to consult, make treatment choices, cope with their illness and connect to others.

Increasingly doctors are aware of this and recommend useful sites to their patients yet, even in 2012, respondents express reluctance to talk to their doctors about what they find online, fearing that such revelations might damage the relationship. GPs have reported feeling threatened (having a 'heartbeat moment') when faced with a patient who uses the internet.

People want more than information online, they also want to find reflections, insights and practical advice from other patients. UK doctors may want more evidence about the health effects of using the internet but patients and the public are routinely online, even if they do not mention it in the consultation. In this paper we consider why it is not yet routine to discuss websites in primary care consultations and the consequences for inequalities in health.

**ZIELINSKI, ALEKSNDER\*** (UPD Waldau, [milosz13@gmx.ch](mailto:milosz13@gmx.ch))

### *Drawing a Picture of the Changing Global Elite after World War II*

One of the primary methods of analysing elite cohesion is the analysis of corporate networks, focusing on interlocking directorates. However, there are some network qualities, especially the intersection between economy and politics, which cannot be adequately analysed in this way. I propose that in order to do this it is necessary to take into account informal organisations, like the Bilderberg Group, in which influential people from both fields interact with each other.

Using previously unresearched archive material, which provides a list of all participants of Bilderberg meetings in the years 1954-1958, I draw the social network

of what can be labelled the „conservative“ block of the Western elite. „Conservative“ means that its primary interest is the conservation of the status quo: the rule of a small elite through a democratic capitalist system. Attempting to achieve this goal in a dynamic environment with major challenges (the spreading of the communist ideology, the breaking up of the colonial system etc.), it needs to adapt innovative methods, like the creation of supranational institutions.

In the descriptive part I focus on nationality, age, gender and occupation of the participants. In the second, analytic part, I present the connections between different sectors of the industry as well as positions of political power that the participants held. In a further step I attempt to describe the shift in this network between the 1950s and today. The official lists of current participants of the Bilderberg meetings allow researchers to draw an adequate picture of this network in its current form. From previous research on the topic of the change in the elite it can be expected that the major changes have occurred regarding the dominant industries, while little changes are to be expected regarding the nationality, the gender and the age of the participants.

#### *Between Voicelessness and Empowerment – a Biographical Approach to Life Stories of Complex Traumatized Mothers*

Regarding currency and scope of sexualised violence against children my research takes a look at the long-term consequences for victim-survivors of these human rights abuses. With this perspective the social positioning of highly mentally burdened survivors comes into consideration. This paper is based on a biographical-sociological approach of the life stories of women, who are all patients of a traumatized psychiatric hospital and who were abused in their childhood. I would like to contribute first empirical results of my PhD project. Due to the fact that all the women I interviewed have children my results point to the major difficulties of being diagnosed, treated and seeing oneself as mentally ill and at the same time being a mother who is not supposed to be mentally tainted in any way. In my presentation I would like to illustrate that there is a strong self devaluation regarding the women's motherhood that leads to a form of voicelessness of the interviewees towards actors, e.g. in medicine or social work. Based on further empirical results I will also take a closer look at ways of empowerment due to trauma-specific approaches the women have appropriated to themselves. I would like to discuss on the one hand to what extent a trauma-specific approach might overcome women's voicelessness concerning issues of motherhood and on the other hand to what extent these women are somehow limited to pathologising labels of mental illness that detach their present mental symptoms from their biographical background.

#### *Yokohama, 1860-1923: Confinement and Clashes, Exchange and Hybridization*

Yokohama, meaning "broad beach", was Japan's biggest free trade port opened in 1859, under so-called "unequal treaties" with Western powers. It became Japan's most important venue of economic exchange with the world, technological and cultural imports, hybridization and innovation - such as Japan's first railway link to Tokyo, first daily newspaper, first brewery, first gas-powered street lamps and first waterfront urban park. Yokohama provided space for international communities - American, European as well as Filipino, Korean and Chinese. The paper analyses some of the processes - confinement and clashes, exchange and hybridization - that ultimately led to the "rise of Asia" out of (semi-)colonial dependency.

#### *Reducing or Re-Producing Inequalities? Grand Narrative of Diversity and Its Influence on the Minority Learner*

European societies increasingly implement diversity education as part of a civic education curriculum in order to provide young people with competences in dealing with different forms of diversity. The presentation analyzes policies and praxis approaches pertaining to education for diversity at both the supranational level of European Union and Council of Europe as well as at the level of member states (Germany, Estonia, Russia, and Sweden). The presentation shows that in Europe school education for diversity simultaneously pursues two separate goals: while generating a grand narrative of celebrating European diversity those same materials and policies stipulate that issues of inequality are to be dealt with separately.

Based on the conceptualization of diversity with reference to heterogeneities and inequalities, the presentation shows how inequalities tend to be covered over in positively connoted conceptions of diversity. Comparing educational pol-

icies, school curricula, and teaching materials, the presentation reveals the ways in which diversity and inequalities are decoupled in curriculum and educational practice, and poses following questions: What happens if diversity is only treated as a matter of celebration? Turning to the minority learners, experiencing exclusion, the presentation demonstrates, how diversity celebration narrative disempowers the minority learners, contributes to more uncertainty, social closure and (self-)exclusion of those learners, who do not find themselves within *diversity celebration*.

#### *Capabilities, Critique and Sociology*

This paper discusses the implications of the double dimension of capability, a normative and descriptive concept, for sociology and its relationship to critique. Using a capability approach means endorsing a critical stance. But the resulting critical standpoint is as much a matter of concept, as of theoretical and methodological implementation. Therefore different ways of bringing together capabilities, critique and social sciences are at hand.

The conceptualization of capabilities along freedom and power of achievement offers a common normative background. Beyond equal distribution of resources, it makes out of equal freedom to choose and achieve, i.e. to convert resources into valuable realizations, a yardstick for assessing social inequalities.

Once settled this common background, conversion factors bring into play the second dimension of capabilities, namely the descriptive one, which is diversely taken up. Economists have worked a lot on measures and descriptions of capabilities. Sociologists should contribute to this debate with their own means. The paper argues that the sociological design of inquiry may offer an as important source for critical social sciences. Along the lines opened by J. Dewey's logic of inquiry, it shows how the capability concept may fuel a *critical pragmatism* based on the confrontation of different levels of analysis: institutional semantics (the public policy level), which designs how things should be, its implementation (organizational level) and the outcomes it actually produces in people's lives (the biographical level).

Finally, the paper gives an insight into the analytical and critical perspectives opened up by a capability approach focusing on the interactions between institutions, organizations, and individuals on issues such as freedom, responsibility, empowerment and employability, core-concepts in the reforms of European Welfare-states.

#### *Comparative Analysis of Changing Family Formation – Different Life Course Regimes and Developmental Paths Identified in European Countries*

The paper contributes to the comparative analysis of life course dynamics and cohort changes in Europe. Varying forms of data collection and preparation often hinder quantitative comparative analyses; therefore, international survey programs like the Generations and Gender Survey (GGS) have been initiated. I added data from the National Educational Panel Survey (NEPS, research methodology very similar) for West Germany to compare developmental paths with regards to family related life courses between four European countries (Germany (NEPS), Italy, France and Norway (GGS)). I use sequence analysis to examine life course patterns of nearly 40,000 respondents and identify life course regimes and changes between them. The empirical patterns are finally related to classifications of countries and developmental paths as provided by concepts of welfare regimes (e.g. Esping-Andersen).

Findings show, that Northern and Western European countries follow a similar sequence of regimes, starting from a traditional life course regime, marked by a simultaneous start of cohabitation and marriage and subsequent fertility among the majority of respondents. Afterwards, they pass through a 'semi-traditional' regime with unmarried cohabitation preceding traditional family formation. Finally, they reach a 'post-modern' life course regime, in which life courses with first birth(s) to unmarried, cohabiting couples are more frequent than other life courses. The process of change is completed in Norway and France, while in West Germany the transformation from the second to the third regime is retarded. Italy follows a different developmental path: The change towards a 'semi-traditional' regime is much slower and the regime is characterized by a postponement of the traditional process of family formation.

Overall, the concept of family related life course regimes is helpful to understand, compare and classify life course dynamics. The sequence of the regimes can be interpreted as developmental paths; developments are not determined, differing speeds and changes in directions are possible.

*The Aesthetics of Banality*

Be it Breton's fascination for an adorned wooden spoon or Valéry's ambiguous affections towards an indefinite fragment of a sea shell and not to mention the rapturing experience of cracking the crust of Crème Brûlée described by the movie character Amélie Poulain, all these seemingly ordinary objects are said to be surrounded by a sacred aura offering the possibility to sense the (assumed actual) mysterious depth hidden behind the surface of banality. Whilst the avantgards at the beginning of the 20<sup>th</sup> century conjured the magic of the overlooked in terms of a countercultural model, we are positing that the epiphany of the unimposing has to be regarded as a prevalent model of popular culture symbolizing a nostalgic search for the utmost real.

According to sociological approaches referring to material culture and with respect to coeval cultural theorists we will first reconstruct the emergence and the changing cultural valuation of the discourse about the cultural significance of the insignificant, claiming that the contemporary search for the meaningfulness of banal artifacts serves as a prime example for the reenchanting conquest of the quotidian. In particular the new aesthetics continuously stress the fact that the aesthetics of the marginal are laying at the core of the *condition postmoderne*: on the one side with regard to the construction of the banal as a category of sensuality and on the other side with respect to diverse strategies of aestheticism creating the auratic effects of trivial things. Hereon we will secondly shed light on the consequences of this discourse on the study of material culture suggesting that we won't be able to expose the cultural significance of mundane objects properly, if we don't account for the factor that these "actual signifiatory structures" are themselves part of a prevalent model of the aesthetics of banality.

*Multi-Level Governance in the Adaptation to Climate Change in Australia - the Latrobe Valley*

The planning and political negotiation processes of sustainable energy production in Australia are contradictory processes. A number of different players from Commonwealth, State Government and regional level got involved to transform the Latrobe Valley region that has the dirtiest coal fired power stations in Australia.

We examined the interwoven processes of strategic planning and governance, the set-up of the Latrobe Valley Transition Committee and the development of a Roadmap to transform the region as well as the funding of concrete projects to provide new jobs within the region. What has been seen by many as a smooth and successful process came to a halt when the political conditions changed.

At the same time it became clear that allegedly smooth process had some weaknesses. Since the process had been driven by funding promises of Commonwealth and State Government the region did not develop an independent vision of the transformation of the region. With the loss of funding it became obvious that there is a need to develop such a vision to further drive the process. However, good networks have been developed that might be strong enough to push forward where major funding resources are no longer available.

This paper will discuss the conditions of climate change adaptation and the advantages and challenges multi-level governance structures provide for regional planning and governance.

*A Multiple Imputation Approach To Address The Problem Of Nonignorable Nonresponse and Misreporting Patterns In Income Data*

When people are asked to report their monthly income they are likely to refuse to answer. If they answer, they tend to round their income to the nearest fifty, hundred or thousand, or they even completely misreport the value of income. It is well known that the propensity to misreport or to refuse to answer income questions depends on individual characteristics. For example, people with migration background are normally more likely to refuse to answer. Thus, commonly income data collected by personal interviews show nonignorable nonresponse and abnormal concentrations of reported values at certain "heaping points". Using such data to compute, e.g., distribution characteristics like sample quantiles or proportions usually causes severe bias. In order to allow to adequately modeling such kind of incomplete and heaped data, we introduce a general method that allows addressing both, the issue of incomplete data and the problem of round-

ing. To impute missing values, we suggest using the proven method of multiple imputation by chained equations. The method requires determining a univariate imputation model for each variable with missing values. We suggest specifying the imputation model for the income variable such that it describes the true distribution of the income variable simultaneously with the heaping pattern present in a data set. Monte Carlo simulations are used to validate the novel approach. To illustrate the capacity of the approach we conduct a case study using income data from the adult cohort of the German National Educational Panel Study.

*Relationships Between Gender Role Attitudes, Role Division, and Perception of Equity Among Heterosexual, Gay and Lesbian Couples in Israel***Abstract**

The purpose of the present study was to investigate the relationships between gender role attitudes, household tasks, and the perception of equity among heterosexual, gay and lesbian couples. One hundred and twenty-four participants (54 heterosexuals, 30 gay men and 40 lesbians) were tested. It was found that same-sex couples had more liberal attitudes toward gender roles than did heterosexual couples. In addition, significant differences were found between the spouses in their responses regarding role division in housekeeping in each group. The responses of heterosexual spouses correlate more closely with each other regarding the role of each of the spouses than was the case for same-sex couples. However, the role division among lesbian couples was more egalitarian than that of heterosexual couples. In addition, heterosexual women consider their married life less equitable than heterosexual men do. Similarly, one of the gay spouses considers the relationship less equitable than the other spouse does. The results are discussed in terms of their relevance to theories of social perception and cultural backgrounds.

*Varieties of Policy Design in Swiss Family Policy Adaptation to New Social Demands: Bounded Possibilities of Childcare Services for Social- and Gender Equality*

This paper deals with the question of who ends up with what in the process of welfare state adaptation to new social demands in post-industrial societies. To answer this question a new typology of childcare policies on the basis of the social outcomes of those policies in terms of redistribution and gender equality will be developed. The implications of childcare policies on these two dimensions of inequality are of particular interest, given that the international literature agrees since a long time that we need a new typology that helps to understand the trade-offs between distributive and socio-cultural goals. Empirically, I focus on the specific design of childcare policies that are institutionalised in ten Swiss municipalities since the 1990s. To this end, I first classify the different policy designs of childcare policies according to their degree of professionalization and the use of childcare services by parents. Second, I develop a new typology of childcare policies that allows to illustrate the potential implications of the design of such policies on gender equality and social redistribution. Whereas some municipalities have institutionalised public support for childcare services with low quality standards, which are provided by daily mothers, others have implemented highly professionalized crèches with rigorous quality standards. However, these offers are used differently by parents from different income classes. Whereas the low quality childcare services are used more frequently by parents from low income classes, the more professionalized offers are used more frequently by parents with middle and high income. This segregation in the use of services is notable, not only with regard to the criteria of social redistribution: It is even more striking in regard to the scientific social investment discourse, where it is stated that the reduction of poverty should be obtained by public investment in human capital, beginning with pre-school children.

*Predicted and Observed Child Health Indicators in Haiti: Exploring the Impact of the 2010 Earthquake at National and Regional Levels*

The 2010 Haitian earthquake caused catastrophic damage within the impact zone and had a profound effect on social, economic and political conditions within Haiti since the disaster. Regional variations in the severity of disaster impact

and the social and economic consequences have been encountered. The 2010 Haitian earthquake occurred within a country with a history of poor child health indicators and outcomes. The indicators include child nutritional status, immunization status, and diarrheal disease treatment. Despite the low performance on many child health indicators, data from Demographic and Health Surveys (DHS) have shown national-level improvements in key child health indicators in the three surveys conducted prior to the earthquake. These improvements continued in the 2012 DHS despite the 2010 earthquake and cholera outbreak. The purpose of this study is to determine national and regional differences in child health indicators in Haiti and to examine the influence of the disaster on predicted child health indicators. Simple extrapolation method was employed to calculate the estimates. The results show a difference between expected and observed values, with observed values indicating poor health outcomes for children compared what was predicted based on the previous three time points. Further, regional variations were apparent and linked to proximity to the earthquake impact zone and family composition. The results provide evidence of the effects of the disaster on child health in Haiti.

*Is Georg Lukacs' Critique Of Neo-Kantianism Justified?*

A recurrent theme in the work of Georg Lukacs is a critique of the prevailing currents of sociological theory and method of his time. For Lukacs, Marxism provided a theory of society that surpassed social theory modeled on the neo-Kantian distinction between facts and value. Several scholars have argued that Lukacs' commitment to Marxism blinded him to the contributions made by other social scientific approaches. In effect, Lukacs is charged with dismissing all other social scientific approaches on the basis of his alleged dogmatic Marxism. Moreover, Lukacs is accused of identifying any non-Marxian approach to social science as reactionary. This paper revisits Lukacs' critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs' critique has been misinterpreted and warrants renewed consideration. Reexamining Lukacs' critique of neo-Kantianism reopens debates over claims that Lukacs' notion that prevailing currents of social theory overlook the problems of alienation and reification.

**ZUCKER, GREGORY\*** (The Graduate Center, CUNY, [gzucker@gc.cuny.edu](mailto:gzucker@gc.cuny.edu))

*Reification and Racism*

Both historians of social theory and practicing social theorists have drawn attention to the prevalence of racist thinking in nineteenth and early twentieth century social theory. They have been increasingly aware of the ways such thought remains embedded in social theory's early historical development and questioned the extent to which the vestiges of such thought still informs contemporary social theory. This paper examines an overlooked chapter in the critique of racist social theory. In particular, it focuses on the seldom-studied work of Georg Lukacs, *The Destruction of Reason*. In that work, Lukacs develops a critique of racist thought in social Darwinian social theory. This paper argues that the critique Lukacs develops can contribute to the examination of racism in social theory. Further, it argues that Lukacs' critique should be reconnected to the concept of reification, which Lukacs developed earlier in his career. This allows intellectuals to interpret the experience of racial prejudice under capitalism as a form of reification. In this respect, this paper attempts to move toward developing a social theory that can employ the concept of reification in the understanding of racism.

*In and Beyond the Visual Gaze of the Tourists: Humanizing Antarctic Wilderness*

The objective of this study was to unwrap the Antarctic tourism imaginary and go beyond the oral-visual narratives of tourists in order to understand which other senses and how are activated when touring in Antarctica. What is the grand master plot at the core of the Antarctic tourism imaginary? To summarize, most of the visualization of Antarctica and Antarctic experience rotates around the theme of "humanized nature": the penguins are seen as human-like creatures, the icebergs are spoken about as the perfect examples of abstract art and whalebones are static reminders of once prolific whale-hunting industry. Antarctica is the only land that has no myths of origin but compensates this with the heroic stories of its first explorers. In contrast to the "gaze" centered approach to tourism, Antarctic tourism presents an example of multisensuous, non-ocularcentric geography. Deepest affectual encounters of tourists come from engaging various senses: interviewees talked about the powerful sounds of calving glaciers and meditating

brash ice, the awful smells of penguin and seal colonies, the caresses of Antarctic wind, of refreshing Polar plunge and thick morning mist, which concealed the land and upon seeing which people would start to cry.

**ZUEV, DENNIS\*** (Independent Scholar, [tungus66@gmail.com](mailto:tungus66@gmail.com))

*Self-Transformation Of Russian Youth Through Work and Travel Program In The USA*

In this study I wish to examine the mechanisms of personal transformation among Russian youth through the contact with America as an imaginary and real-life entity in the course of the program "Work and Travel". I delineate several families of transformation: relational transformations, physical transfiguration and attitudinal transformations. I argue that the transformations that occur with individuals during the contact with another culture or as a consequence of the trip are part of the (de)civilizing process of the individual. One of the practical questions behind the study is whether after being a guest in the other culture young people become positive towards others being guests in their home culture.

Some of the effects of the trip have civilizing effect in the sense that they touch the structures of habitus and modes of knowledge. Through lived-in experience young people transit to the stage or reevaluation of their distance with parents and intimate partners. One of the important configurational changes is the reevaluation of the relationship with parents who initially serve the primary instance in regulating the trip (through financial and emotional support).

The physical changes in perception of one's body and emotional management are reflected with ambiguous reaction: the body reaction to the contact with the fast-food culture resulting in weight gain increases refutation of American civilization, however the behavioural patterns of everyday communication can be adopted and attempted to be transplanted in home culture. One of the leading emotional changes concern the feeling of embarrassment for the behavior practiced or observed before the trip and after the trip: accepting money from parents became embarrassing for some respondents and seeing people behaving rude towards them was also considered embarrassing.

**ZUKIN, SHARON\*** (Brooklyn College, [zukin@brooklyn.cuny.edu](mailto:zukin@brooklyn.cuny.edu))

*Globalizing the Local: Restaurants, Racial Identity, Gentrification, and Immigration*

The globalization of cuisines takes place in sites ranging from the family dinner table to fast food franchises, with the integration of new products, new production techniques, and new taste criteria into traditional formulas. Located between the private, domestic space of the family and the public, mass-market space of McDonalds, neighborhood restaurants and modest takeout food shops provide a middle ground of individual action and collective provisioning where globalization reshapes local identities. Much of the globalization is carried out by demographic changes, with the entry of immigrant and "creative" entrepreneurs who both replace old restaurant owners but open new kinds of restaurants and food stores. But globalization is also encouraged by the entry of menus that define traditional cuisines in new ways, repositioning them, on the one hand, in a new global culinary order and, on the other hand, in changing local markets. Recent changes in restaurants in a majority-black neighborhood of Brooklyn, New York, suggest that the global migrations of cuisines help to create more complex social, racial, and local identities.

**ZULUETA, JOHANNA\*** (Soka University, [zulueta@soka.ac.jp](mailto:zulueta@soka.ac.jp))

*Memory, Nostalgia and the Creation of "Home": An Okinawan Woman's Journey*

This study looks at how elderly Okinawan women return migrants created and re-created perceptions of "home" upon their return to Okinawa through the life story of an Okinawan woman presently living in Naha, Okinawa. Married to Filipino base workers during the American Occupation of Okinawa, these so-called "war brides" spent a considerable number of years in their husbands' country, assimilating into Filipino culture as well as negotiating their identities as Okinawan women amid wartime sentiments against the Japanese in post-war Philippines. In recent years, many of these women have been returning to Okinawa, creating a significant community – albeit small in number – of Okinawan women return migrants.

For this paper, I seek to explore how migration, memory, and nostalgia came to define these women's identities as return migrants in an Okinawa that saw the ravages of war (i.e. the Battle of Okinawa) and continues to negotiate its place vis-à-vis the Japanese mainland (i.e. the current base-related issues) by focusing primarily on one woman's life history. Along with this interview that was carried out in October 2012 (as well as subsequent conversations with her), data culled from fieldwork, interviews with other Okinawan returnees, and interviews with family members of these women are to be utilized as well. The migration of Oki-

nawan women to the Philippines during the immediate post-war years is a lesser known phenomenon in contrast to the migration of "war brides" to the United States. While similarities present themselves in these two migration streams, circumstances widely differ, and thus it is hoped that this research would be a contribution to existing on Okinawan women's international marriages and overseas migration during the post-war years.

#### *Okinawan and Beyond: Okinawan Women and The Re/Creation Of Diasporic Identities*

Studies on Okinawan women migrating to the Philippines during the postwar years are scant and not accorded much attention by scholars looking at Japanese/Okinawan migration. Furthermore, the role of women in the maintenance and re/creation of diasporic identities have been significantly overlooked. These Okinawan women married Filipino men who worked on U.S. bases in Okinawa during the early years of the Occupation Period (1945-1972). Many of these women went with their husbands to the Philippines and settled there, raising families and living new lives. Upon migration, many of these women consciously assimilated into Philippine society. Despite this, they still acknowledge their Okinawan selves by passing on aspects of Okinawan culture to their offspring, creating in the process, a diasporic Okinawan identity that contains both Philippine and Okinawan characteristics.

I argue that these migrant women are active agents in the transmission of Okinawan culture, at the same time promoting the culture of their husbands and their adopted land, thus creating a distinct "Philippine Uchinanchu" identity. This particular identity is continuously being maintained and re/created not only within familial and contiguous boundaries, but also across space and time, through various activities these women engage in. I also argue that these women engage in this process of re/creating as they fashion out their sense of a "home" away from home. The creation and re/creation of an Okinawan diasporic identity also relates to a re-definition of Japanese identity, which tends to conflate nationality, ethnicity, and race, and continues to leave Okinawans in an ambivalent position vis-à-vis a Japanese identity.

This study analyzes data gathered from interviews with these women, as well as from participation in meetings/gatherings of the Philippine-Okinawan Society in Manila. Interview data from their children are also pertinent sources of information about their mothers and thus will be utilized in the analyses.

#### *Anti Doping Code and Controls: Social Sorting For Fair Play?*

Viewing doping controls in the lights of social sorting, puts a new perspective on the subject. Besides touching on issues such as data protection, citizens rights of informational self-determination, privacy and the right to be let alone, those controls foster forms of social sorting, albeit ones that claims to sort out particular

subjects in the name of fairness. As much as doping practices are a problem to a culture of fairness and good sportsmanship, so are the controls.

From existing research, it is apparent that the athletes' perspective is missing in the discussion. The athletes are the object of the public debate, rather than the subject. Athletes that are convicted (or even only suspected) of doping practices are blamed and condemned - often by the same people that were generating the pressure under which the decision to take illegal performance enhancing substances was made. Doping and its controls therefore operate in a twofold field of social sorting: one that sorts out the guilty - and one that sorts out the losers, which may turn to illegal measures to improve their situation.

From interviews with athletes, officials and doping controllers on doping control practices, I will highlight what forms of social sorting are generated through doping controls, how they are perceived and what discourses are being formed.

I want to draw the attention to other issues within the debate on doping, such as have not received wide attention and are not likely to, as athletes more and more are put under a general suspicion within the system that is generating a massive pressure and puts athletes at risk. Social sorting is by no means an intended consequence, but a „collateral" effect that does play a major role on how these controls are perceived and hence legitimised.

#### *Italian Young People and the Choice of Emigration: Economic Crisis' Weird Effects*

In Italy, as well as in other European countries, the economic crisis and the austerity policies have exacerbated the structural national problems, worsening the already difficult situations of the whole population and, in particular, of the youngest generations. In a country where the unemployment rate touches the 35% among the 18-24yo young people and where the demographic, socio-economic and political disparities between young and adult generations lead to a worrying decrease of the social visibility of the first ones, emigration become again an option for many Italian young people. Although still quantitatively limited, it's emerging among them a new migration trend which involve extra-European countries such as Australia, where the emigration phenomenon acquires new peculiar characteristics in terms of adaptation plans and future projects. The proposed contribute aims at exploring the new features of the old phenomenon of young people emigrations through the analysis of 25 in-depth interviews - collected between January and June 2013 in Sydney and Melbourne - to a group of Italian young people aged between 18 and 26yo, emigrated in Australia in the last two years. Trying to situate the emigration project within the framework of the interviewees' transition to adulthood, the analysis will focus on the reasons pushing them to emigrate, on their adaptation strategies and on their future plans. The first results highlight the weight of personal, familiar and socio-demographic characteristics on the choice and especially on the results of immigration, which does not mitigate the starting social inequalities: within the transitions to adulthood, emigration becomes an opportunity of realisation for the strongest and a 'trap' for the weakest. Finally, as immigration has a mirror effect on the society, the interviewees' stories stress the difficulties of a country that seems no more able to invest on its present and future.
