Global education has become a trendy phrase in Japan. A recent international symposium entitled "Primary and Secondary Education in the Global Age," held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of "a global person." For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what Intercultural Education Society in Japan has tried to achieve since it first introduced the word "intercultural" into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term "intercultural." However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society's research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, in spite of the organization's goals, it has failed to scrutinize the idea of "intercultural" in terms related to internal diversity or issues connected to social justice even as Japan has experienced a number of changes related to these in this age of globalization. In this study, I examine and analyze the context above and consider the reasons for the tendency identified in this field of Japanese education.

### *Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique*

This paper will present the preliminary results of a research on the Chilean middle class and its perception of the socioeconomic elite. The global emergence of the middle class (Banerjee & Duflo 2007, Ravallion 2009, Birdsall 2010, Kharas 2011, Franco et al. 2011, Dobbs et al. 2012, Ferreira et al. 2012, López & Ortiz 2012, Oliveira 2012, Chunling 2012) has created a renewed interest towards "new" middle classes in global sociology due to its rapid growth and the socio-political challenges that this poses. How do those who belong to the middle classes in emergent countries feel and think in everyday life about one of the more salient expressions of world inequalities, the socioeconomic elite – i.e. "the 1%"? Does a perception of injustice, discontent or critique emerge towards the elite? How does that happen – or not? Our team conducted a study using an experimental methodology based on games that replicate similar exercises applied by social scientists through studies in different countries: "unknown persons" and "dictator" games. Starting with a middle-class differentiation through occupation and distinguishing by type of territory where they live and work, the simulation was located in three cities of different sizes in Chile. In each city, six simulation games were conducted with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish and give meaning to middle classes, reproducing or challenging inequalities. The paper will contribute on topics that are relevant to stratification in the context of globalization, such as different discourses in middle classes, their feelings, perceptions of justice/injustice, discontent and critique towards the socioeconomic elite.

### *Science and Technology Studies, Africa and the Long Shadow of Unspoken Assumptions*

Science and technology studies have injected new blood into social theory over the past 20 years. Their assumption that the workings of science and technology are a good guide into the constitution of (modern) society has played a central role in sharpening sociological thinking over the notion of modernity and its analytical relevance in research. A paradox underlies the importance of science and technology studies, however. On the one hand, STS seem to refer to a very specific type of society, namely highly technological modern society. This would seem to rule out the possibility that STS might have anything to say about societies which do not fit this description. On the other hand, however, and because STS produces social theory, i.e. a vocabulary designed to make the social world intelligible, it can lay claim to the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a "ceteris paribus" assumption – legal predictability, economic and political stability, etc. – which constrains the translation of concepts into different settings.

### *Is the Concept of Patriarchy Useful to Comparing the Gender Relations through the World?*

Is the concept of patriarchy useful to understanding and comparing the gender relations throughout history and the world? To answer this question affirmatively we must first consider patriarchy not as a system of male domination that imposes itself upon all human societies but instead, by adapting Erving Goffman's concept, as a specific form of "gender arrangement". From this standpoint two things can be shown. First, that gender arrangements such as those that exist within the European Union are not patriarchal arrangements but post-patriarchal: they are the result of the internal contradictions of modern patriarchy, where the transformation of the family and the economy and the aspirations of individualism have dismantled the hierarchies of gender and sexuality in favor of equal rights and the fight against discrimination. However, our approach reveals that the post-patriarchal arrangement also contains contradictions, in particular between the values of equality and the social construction of inequality and between the values of personal uniqueness and social reproduction of cultural differences and gender hierarchies. Secondly, our approach also shows that in most non-Western societies, such gender arrangements are not just traditional patriarchal arrangements, but traditional patriarchal arrangements that have been modernized (by colonial hegemony) and re-modernized (by globalized hybridization). A major conse-

quence is that these hybrid arrangements possess both the contradictions inherent in the modernization of traditional patriarchy and those specific to post-patriarchy. Recasting patriarchy in this way enables one to grasp the logic of action and internal contradictions of each type of arrangement by identifying their singularities without placing them hierarchically on an "axis of progress". Moreover, this analytical move also makes it possible to compare all gender arrangements according to their relationship to the principle of patriarchy.

### *Women Appointments and Political Participation in Brazil*

This work aims to study the change identified in the women's participation in Brazilian politics in what concern the high positions of state bureaucracy. Specifically, it will be emphasize the kind of change's patterns followed in what regards women political appointees by two different governments in Brazil, such as, Fernando Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This study uses the social-democracy theory to analyse the social sphere as main focus of public politics and reforms, as well as to consider it as a movement of women's inclusion in politics and a redefinition of their role. Due to cultural history of women's inferior role in the Brazilian society, the observation of these factors might signify a relatively change in the participation patterns.

### *Longevity, Leisure and Landscape*

This work seeks to develop a critical reflection on leisure from the interaction with natural and cultural landscapes, declared patrimony of humanity, in the city of Rio de Janeiro, in the neighborhood of Copacabana. This site has the second highest concentration of senior citizens of Brazil, being a region, considered by Municipal law "preferred tourist destination of the third age" The theme will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity.

The methodology presents the translation of perception of 60 to 100 years of enduring, residents at the scene, and some social agents the represent government and third sector institutions linked to the work with this audience.

Leisure will be analyzed in its subjective and contemplative dimensions, and in his contributions to resignification of the quality of life of the old guy, and the strengthening of intergenerational relations, solitariness-based and participatory. In this context, the affective relationship will be addressed with the landscape, a place of memory, whose presence preserved is relevant in the biography of who gets old. Thus, these leisure activities, from the aesthetic contemplation, are compatible and suitable for various limitations arising from aging.

### *Gender, Food Security and Climate Change Adaptation in Bangladesh*

This paper examines the links between gender, food security climate change and adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity – may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, river damming and salinity. Smallholder farmers, agricultural labourers and poor women are particularly vulnerable, with ecological changes interacting with other layers of vulnerability, including poverty, gender, political and social discrimination. A range of ideas are present in development and climate change literature, making links between gender and food security, both in terms supply and demand. In particular, women's role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladeshi government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent

strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

**MACPHERSON, ROBERT\*** (University of California Irvine, [rmacpher@uci.edu](mailto:rmacpher@uci.edu))

#### *The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism*

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – if at all. Solving this puzzle requires comparative and historical investigations of the syndicalist unions which are the most long-standing example of a directly democratic mass social movement organization on par with the square occupations. Toward that end, I take a world-historical perspective that allows a comparison of syndicalist attempts at extending democratic rights across two time periods: the early 20<sup>th</sup> century crisis of British hegemony and the syndicalist resurgence in the current crisis of the Eurozone. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crisis-torn states of each period deferred, coopted or adopted the democratization claims of the syndicalists reveals the trajectories of state-movement interaction to be conditioned by processes of global capitalism and the specifics of local structures of dependency and exploitation. Existing social movement theories of democratic movements are shown to be both enriched and reconfigured in light of this long-term perspective. In addition, this study reveals how the movement's rights claims to economic democracy (both inside and outside the workplace) underwent a transition from largely implicit to explicit human rights frames, thus facilitating connection with non-labor democratic movements. Finally, tracing state-movement interaction in unstable economic contexts bears on questions of the meaning and realization of economic rights; the crucial test of such rights claims in periods of crisis becomes the degree to which workers and other stakeholders have democratic input on policy and thus avoid "cost shifting."

### **RC44-727.13**

**MACPHERSON, ROBERT\*** (University of California Irvine, [rmacpher@uci.edu](mailto:rmacpher@uci.edu))

#### *Uneven Development, Austerity and Worker Organization Response in the Eurocrisis*

The response of labor federations and left parties to the Eurozone crisis has provided a stark demonstration of the ways in which these organizations can perform widely divergent functions despite similar institutional forms. Some workers organizations have become willing participants in the imposition of austerity, while others have sought to delay or modify austerity measures via formal political channels. Yet others, most especially the Communist and syndicalist union federations, have identified austerity as an attempt by capital to shift the costs of the crisis onto workers and have refused to acquiesce to labor oppression or control via austerity. Moreover, some organizations have forged links with square occupation movements such as the *indignados* via the use of unorthodox tactics and democratic organizational methods. Traditional social movement analysis might look to the ideological or organizational aspects of the organizations themselves, and the more recent political opportunity structure and political mediation approaches would seek to explain these outcomes by laying out the local state context in which they contend. In reality, neither of these approaches can explain how both labor oppression and mobilization are effected by ostensibly similar worker organizations across the continent. Instead, formal comparative methods such as QCA and ESA can be used within an incorporating comparative method in order to address these outcomes from a world-historical perspective. Only an analysis carried forward on multiple temporal and spatial levels can properly situate the worker organizations of Europe and the crisis itself within the history of the world-economy. The results of long-term processes of capitalist development such as the Eurozone's neomercantilist core-periphery structure and the global financialization of late US hegemony can be related to, and thus become essential to understanding, how worker organizations come to aid or resist capitalist attempts at crisis management.

#### *Completely Included, Partially Included or Partially Excluded in the Labour Market? An Exploratory Schema of Social Vulnerability in Late Careers*

Life course sociology corresponds to an area of study traditionally interested in the analysis of vulnerability during early and middle adulthood careers. Yet, given an increasing attention over the last occupational period in Western countries, the current article aims to analyze the vulnerability confronted in late careers, focusing specifically in Switzerland. To this end, a new exploratory schema of vulnerability based on seminal life course notions and an inclusion/exclusion theory, is proposed for the analysis of late careers. Moreover, another aim corresponds to analyze how different life course determinants – such as life experiences in different domains and positional factors – impact the likelihood of confronting, or not confronting, social vulnerability during this occupational period. Longitudinal data comes from the Survey of Health, Aging and Retirement in Europe (SHARELIFE). Used methods are cluster, optimal matching, and discrete regression models. Results allow concluding first that the proposed conception of vulnerability based on an inclusion/exclusion schema has an acceptable empirical support. Second, that the likelihood of confronting or not social vulnerability during late careers depends mainly on early life experiences in family and occupational domains, as well as the positional status of workers.

#### *The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies*

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, *Legal consciousness of Japanese*, in 1967, theories of legal consciousness and legal culture have been kept among the issues of scholarly controversies in various fields of socio-legal studies. With an eye to the controversies on the globalization and local cultures, theories of legal culture (and legal consciousness of local population) seem to provide suggestive viewpoints for socio-legal studies on globalization and local adaptation.

I would argue that theories of legal consciousness and legal culture serve for studies on globalized law and society in two ways.

First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the legal adaptation to globalization around the Pacific. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions.

Second, they would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories.

I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-legal studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

#### *Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany*

Internationally, health care has seen the advent of (quasi-)market governance in a public service environment and, concomitantly, the rise of organisational policies derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulatory environment featuring free user choice and provider competition. Thus, 'market accountability' becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts related to workforce issues including the roles of doctors, nurses, and further staff seeing the patient. We depart from the assumption that employment norms are shaped at sector level rather than in a single hospital but wonder whether this configuration will persist. Following a brief (statistical) overview of the evolving employment patterns throughout the German hospital sector, we examine the labour-related discourse of two sorts of actors: those of major intermediate regulatory bodies (which are critical players in the German health care system) and those entrusted with leadership functions in the hospital itself. Using material from a three-years research project focusing on sense-making processes at sector and organizational level, we can show not only that there is new discourse related to labour-related issues but also how this discourse is reflected by evolving employment policies. Overall, 'market accountability' puts long-established professional concepts under strain. However, the 'sense-making' is different between

regulators and those who have to implement regulations. This suggests that the rationale of hospital employment is changing bottom-up, often against what regulators conceive as an adequate design for hospital work.

#### *Childcare and Elderly Care in Bologna*

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegated to women capacity to sustain its members. Such model had strong influences on women attitudes: Italy has one of the lowest fertility rates all over Europe and it will be suffering in the next years from an increasingly higher old age dependency ratio, thus worsening the female care overload. Nevertheless, Bologna is a best practice in this worrying scenario. Thanks to a strong social democratic tradition, local welfare system of Bologna has been one of the most attentive to the need of women and it has been the first to introduce childcare services in the '60s, while promoting a wider support for dependency in addition to the national provision. The result is that Bologna has the highest female participation rate to labour market in Italy. However, the financial crisis and the consequent reduction of public funds have put in question the sustainability of Bologna's model in recent years.

In the present paper, we will show results from a series of 8 focus groups involving 34 working women conducted in Bologna during 2013, which have been selected because they have care responsibilities. Stemming from an investigation of both individual and social factors, the analysis will focus on the work-life balance of women, assessing the role of their partners, their family and the local welfare system in it. The comparison between women with childcare duties and women with elderly care will also show how the overload of women in their 50s will be the real challenge for Bologna in the next years, as long as they combine the roles of grandmothers, children of dependent elderly and worker.

[masichiro@aol.com](mailto:masichiro@aol.com))

#### *Possibility of Area Management Organizations for "Bulwark" Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –*

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presentation, a new structure, "Public Development Authority" (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipalities) as special purpose government for promoting specific purpose (such as areal management, or historical and business management of historical market), equipped with business specialist- staffs, and also it is governed by volunteer citizen board members. "Half private, half government" entity is run or governed by citizens.

Some PDAs has been observed to behave as "developer" in the "neo-liberal" urbanization process. But considerable PDAs, for securing neighborhood's core and culture, are trying to build the devices for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown International PDA (inventing "IDEA Space" project for assisting local small businesses, using "visioning" method). These trials are expected to be effective "bulwark"s against diverting impacts of neoliberal developments. This presentation concretely gazes at the PDAs' efforts (and the like's of area management organizations) to keep local core of cultures, local "life economy" with concrete devices from the stand point of citizen eyes and "advocacy". And the conditions for preventing PDA to fall into "developer" are sought.

Just for accessing the present big picture in terms of area management organizations in neo-liberal trends in US, Japan etc, CDCs (Community Development Corporation) in US and "Machizukuri Kaisha", special purpose agency in Japanese PPPs are shortly mentioned as well.

#### *Instrumental Action and Rhetoric: Framing Rational Action on Language Field*

The paper makes a theoretical reconstruction of a model for instrumental action in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bring to the theory of social action some concepts from linguistic field. The first step establishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric

in order to create the persuasive frames of reality and use them for self-persuasion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation: it consists in giving different degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the deliberation as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson's paradox and, in the same way, criticize Jon Elster's paradox of indeterminacy, based on the concept of optimal amount of gathered information. The concepts of rhetoric give to the theory of rational action a key to understand how in empirical situation words, and sometimes just words, are enough to create action.

#### *Social Norms and Policy Influence on Family Formation in Sweden*

This paper seeks to extend existing knowledge about gendered transition to family formation and parenthood by looking at whether and how public policies influence fertility. Our research is part of a larger international project on gender equity and low fertility in postindustrial societies. The theoretical framework is designed to capture the ways in which family- and gender-role norms, institutions, and economic context intertwine with the family formation intentions and behaviors of young adults. We focus on two sets of social norms (family- and gender-role norms) in influencing individuals' intended and achieved fertility. The two sets are viewed as separate constructs, the first dealing with the definition of the "normal" family, and the second dealing with the appropriate roles of men and women in the family and in the public sphere, especially the labor market. Our analytical model seeks to attribute equal explanatory power to men's as well as women's opportunities for engaging in positively viewed activities in the spheres of family and work. In our empirical analyses we rely on a mixed-methods approach. In this paper, we combine a quantitative analysis based on data extracted from the Swedish Young Adult Panel Study on attitudes to work, family and gender roles and their possible impact on family formation (intentions) among Swedish young adults in the first decade of the 21<sup>st</sup> century, with a qualitative analysis of narratives in in-depth interviews (N=80), carried out with women and men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings for the qualitative part indicate that young adults view Swedish family policies as good even when having little first-hand knowledge of them. We discuss similarities and differences across gender and family status, as well as the implications of our findings for research and for policy design.

#### *Development, Modernity and Nanotechnology: The Challenges Of a Time*

This paper aims to raise some thoughts on the present time and the relationship between modernity, environment and development, starting from some questions: If we continue to follow the current economic model, of neverending development and capital expansion, what awaits for us? Is there a future? Will the human species take part in it? How to divert the course of this rudderless ship guided by a commandant called Progress? In search of clues that point to the possible answers, we walk at some tracks left in late 1960s and early 1970s, by Josué de Castro, on the changes that had already been felt in his time and the threat that hovered in the world due to environment imbalances arising from the development model based in the expansionary logic of capital, the rampant belief in science and technology, then to reflect on the reality of our time and the progress and achievements in the field of science and technology, and the challenges we face against the advance of new technologies - and this is the case of nanotechnology. Nanotechnology is a technology that can have and already has numerous applications. It's, in the point of view of the market, a safe investment for the future. In this sense, we must discuss the ethical and legal issues that should regulate the use of nanotechnology. There is no certainty about the possible impacts that the use of nanotechnology may have, regarding the health of people and the environment. This paper is the result of the research "Nanotechnology applied to food and biofuels: recognizing the essential elements for the development of indicators of risk and regulatory frameworks that protect health and the environment" (898/2009), funded by CAPES, a government agency linked to the Brazilian Ministry of Education.

**MAGNO, TÂNIA\*** (Universidade Federal de Sergipe,  
[taniamagno@uol.com.br](mailto:taniamagno@uol.com.br))

*Perspectives On Risk Governance and Regulation Of Nanotechnology Applied To Food and Biofuels*

The "wonders" of nanotechnology are in different sectors of production and commercialization, like food and biofuels, and they have innovative properties.

Considering the absence of regulation, we intend to evaluate the structure of plural forms of nanotechnology risk governance in these two sectors. Law will have to modify and realign its normative forms, expanding to other areas of knowledge, pursuing to develop the management of nanotechnology risks trans-disciplinarily, permeated by the rereading of Natural Law constructed by John Finnis, as an ethical conductor to justify it.

In which measure the organization of legal norms in networks, with formatting dialogues between sources of Law, may be a regulatory alternative to nanotechnology?

It is adopted the theory-dialectical perspective of construction of the legal phenomenon in networks, developed by François Ost and Michel van de Kerchove (*De la pyramide au réseau?* 2000). In the dialectical theory of Law in networks it's proposed the deliberation of structural changes in the legal system that undergo an incomplete paradigm transition, in which the linear verticality of the pyramidal hierarchy of legal system and the regulation by the State tend to make room for a complex network of regulation and governance, that involves a plurality of state and non-state actors.

Law goes through a time of transformation in which the influence of transnational regulation, technical regulation and private self-regulation to replace the state standards are widened, forming a complex network that involves both the traditional mandatory state standards, provided of sanction, and the new manifestations of Law, composed of non-mandatory rules, the *soft law*, disconnected from the legislative process. The state monopoly on the conduct of Law loses space to legal pluralism and to diversity of social actors (companies, institutions of standardization and certification, NGOs) and to the conduction of decision-making processes, with new forms of governance.

**MAGNUSSON, JESPER\*** (Lund University,  
[jesper.magnusson@mah.se](mailto:jesper.magnusson@mah.se))

*"First- and Second-Hand Actants at Van Beuningenplein, Amsterdam – Investigating the Role of Material Agency in the Formation of Human-/Non-Human Collectives"*

The objective of this paper is to develop conceptual tools that can contribute to a relational and non-reductive approach to the analysis and design of public space. A key ambition is to investigate the role of material agency in the formation of collectives and *collective spaces*. In particular, the study focuses on urban artefacts, such as furniture, bollards, fences, walls, platforms etc., as mediators of social exchange and as important actors in the production of collective space.

Public life can be seen as performed by coexisting collectives, or human-/non-human assemblages. Collective space can be regarded as temporal territories, produced by civic or private administration, different tactics, corporeal appropriation and heterogeneous materialities.

The fieldwork entails ethnographic studies of a selection of Amsterdam playgrounds with a specific focus on the van Beuningenplein playground. The van Beuningenplein offers rich settings for human-/non-human interactions, and the role of the playground as a vital neighborhood meeting place makes it particularly interesting as a collective space.

Through a close study of various on-going socio-material interactions and assemblages at the playground, I identify a series of concepts in order to describe how materialities take on different roles in the formation of temporary collectives. *First- and second-hand actants* are concepts enabling an analysis of direct and indirect relations between humans and multiple objects. *First-hand actants* imply personal artefacts (cell-phones, handbags, takeaway food etc.) that are carried around and of which we have direct control. *Second-hand actants* imply impersonal artefacts (benches, bollards, walls etc.), usually are attached to material spaces, and where human interaction sometimes need to be mediated through first-hand actants.

Further examples of concepts explored in this paper are *anchors*, *polyvalent artefacts* and *base camps*. Together these concepts are used to explore the material agencies that are active in the production of collectives and collective spaces.

[margo.mahan@berkeley.edu](mailto:margo.mahan@berkeley.edu))

*Victimized Victimizers? Male Batterers, the "Bitch Tape," and the State That Disciplines Them*

Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative "batterer" credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be "treated" in therapy. Accordingly, non-psychological studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the *sociological* roots of batterer behavior. Drawing from in-depth interviews with 15 male batterers, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculation, and the role they attribute to their female victims. These different meanings are attributable to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

**MAHI, LARA\*** (Université Paris Ouest Nanterre,  
[laramahi75@gmail.com](mailto:laramahi75@gmail.com))

*Sentencing : 'health Determinants' of Criminal Sanction*

Des travaux en *sentencing* ont mis en avant les inégalités face à la sanction pénale. Que l'on soit une femme ou un homme (Mary-Portas, 1996 ; Cardi, 2007), que l'on ait la peau de couleur ou non (Steffensmeier, Ulmer, Kramer, 1998), que l'on ait un travail ou non (Herpin, 1977), ou encore, que l'on ait un nom à consonance étrangère ou non (Jobard, Névanen, 2007), on n'est pas égaux face à la sanction pénale.

En matière de santé, la question de l'impact de l'état de santé somatique des justiciables sur les jugements est systématiquement éludée au profit de travaux sur les déterminants de santé mentale (Thys, Korn, 1992 ; Laberge et al., 1995 ; Cartuyvels et al., 2010). Pourtant, le haut taux de prévalence, dans les prisons françaises, de personnes vivant avec une pathologie lourde (6,2%) par rapport à ceux observés en milieu libre (DREES, 2005) interroge l'existence de formes de sur-pénalisation des malades. Y a-t-il un lien entre l'état de santé des justiciables et la peine à laquelle ils sont condamnés ?

Après avoir observé 412 procès correctionnels au tribunal de grande instance de Paris, nous avons analysé statistiquement les liens entre « état de santé du justiciable » et « condamnation ».

Nos résultats font état d'un contrôle particulièrement coercitif, par l'institution judiciaire, des justiciables malades faisant part d'une absence d'engagement dans un processus de soin. Au cours d'un procès pénal, ces derniers sont sur-condamnés à de la prison ferme et à de plus longues peines.

Au delà de la chaîne pénale, ces résultats nous invitent à repenser la définition que donne Parsons (1951) des rôles du malade et, plus largement, à interroger les formes du contrôle social qui pèse sur les malades.

*The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices*

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under them individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economic initiatives find their dynamics within creativity of action develops by alternative collectives of actors and social entrepreneurial communities. We should better know these collectives in order to differentiate their actors at the same times social activists and entrepreneurs. My second hypothesis concerns acting devices which give its sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in depth as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and constructing devices permit the social fabric of solidarity economic alternatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collectives and their acting and learning devices are developed at the very heart of co working

spaces and other "third places" described by Oldenburg but also through collaborative web sites and their acting platforms.

#### *Urban Waste and Our Day-to-Day Chaos*

There is litter on most streets of the more privileged neighborhoods of the city where there is cleaning services comparable to the first world; in the under privileged neighborhoods, urban sanitation is on par with African or Indian quality levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities with populations of over one million inhabitants. Rio de Janeiro is a city characterized by enormous inequality in income and in geographic distribution of the population, as well as in public services. Erratic urban expansion has made Rio de Janeiro one of the hallmarks of segregation and social degradation, which makes the populace's standard of living a challenge to manage. Due to this inefficiency, most the city's periphery has open sewage that runs in ditches, rivers, the sea and on the streets. The system of rainwater drainage does not undergo periodic maintenance where there is a system at all, causing frequent floods and public damage from heavy summer rains. Litter clogs drainage pipes and exacerbates flooding and the contamination of rivers and the sea. It is still possible to see the accumulation of garbage in outlying areas. In *favelas*, present throughout the entire city, the habitation conditions and urban infrastructure are precarious, and environmental degradation leaps out of control, thereby contaminating the sea and making it impossible to swim and go to the beach in many important parts of the city. Guanabara Bay has been contaminated since the 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of Rio de Janeiro. The research was conducted using quantitative methods, as well as secondary data from official sources.

#### *Migrants Remittances and the Family*

**Abstract:** Contrary to the perception of the relationship between the individual and the family as a structure, this paper offers a conceptualization of this relationship as a process whereby individuals selectively identify with various available forms of family. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants' remitting as a socially motivated economic act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants' relationships to their family in Bangladesh as central to their remitting practices. It recognizes multiple forms of family and community organizations to which the immigrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants' emotional involvement and collective orientation, this study recognizes the mingling of the immigrants' self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants' family by adding a relational approach that identifies fluidity in the individuals' identification to the family through migration and remitting.

#### *Migrants Sending Money and the Family*

**Abstract:** To know why migrants send money to home, this paper introduces a new conceptualization of the relationship between the migrants and their families. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants' remitting as a socially motivated economic act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants' relationships to their family and origin community in Bangladesh as central to their remitting practices. Unlike the NELM approach's assumption of economic rationality, or the cultural approach's emphasis of cultural factors, this paper finds the immigrants' relationships to the remittance-recipients as central in determining their remitting. It recognizes multiple forms of family and community organizations to which the immigrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of

culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants' emotional involvement and collective orientation, this study recognizes the mingling of the immigrants' self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants' family by showing how individuals' identification with the family is a process, which allows the individuals to shift their attachment to particular forms of family in different contexts.

**MAHNE, KATHARINA\*** (German Centre of Gerontology, [katharina.mahne@dza.de](mailto:katharina.mahne@dza.de))

#### *Contemporary Grandparenthood In Germany: A Perspective Of Social Inequality*

The study provides a multifaceted analysis of contemporary grandparenthood in Germany. Building upon ideas rooted in a sociology of the family and in a sociology of ageing, the study aims to demonstrate the usefulness of a perspective of social inequality for the study of the multigenerational family in later life. Social inequality is on the one hand conceptualised in the form of unequal access to the grandparent role (e.g. the transition to grandparenthood). On the other hand, social inequality is conceptualised in the form of unequal outcomes connected to grandparenthood (e.g. levels of subjective well-being).

Based on data from the German Ageing Survey (DEAS) and applying a three-generation perspective, the study demonstrates that access to the grandparent role is in fact unequally distributed: higher educated parents are less likely to experience the transition to grandparenthood and become grandparents later in life than less educated parents. In contrast, the subjective importance of experienced as well as prospective grandparenthood does not vary by levels of education and other indicators of social class. Given the unequal access to the grandparent role, grandparenthood could evolve into a highly valued but unequally distributed social resource for later life. Furthermore, social inequality also exists as a result of grandparenthood: positive and negative outcomes of relationships with grandchildren for grandparental subjective well-being are unequally distributed across educational groups.

Based on these results, it can be concluded that social inequality in relation to grandparenthood exists in two forms: first, access to the generally highly valued social position of grandparent is unequal. And secondly, advantages and disadvantages are unequally connected to the grandparent role. The study shows that the perspective of social inequality is essential for an adequate description and analysis of grandparenthood in social and demographic change.

**MAHON, EVELYN\*** (Trinity College Dublin, [emahon@tcd.ie](mailto:emahon@tcd.ie))

#### *Reconciling Work and Motherhood: Class and Access to Childcare in Dublin*

The 'motherhood penalty' is invoked to explain the lower labour force participation of Irish women. Mothers with low educational levels have even lower participation rates referred to as an 'education penalty'. This paper will explore the way these penalties are socially constructed in an Irish childcare policy context.

Funded by FP7 FLOWS, separate focus groups composed of mothers with third level education and those with second level education were conducted in order to compare their respective orientations to work and their reconciliation strategies. Mothers in both groups articulated a strong intrinsic, social and instrumental orientation to their work and a distinct **worker** identity, separate to motherhood. As working mothers they had all overcome the first penalty.

Mothers with third level education earned incomes that enabled them to commodify childcare for children aged (0-3 ) using private nurseries which facilitated their full-time employment, but at considerable financial cost. But low income earning mothers could not afford the 800- 1,000 euros a month fees. This explains their over lower participation rates.

The exceptional mothers in our focus groups with low educational levels were facilitated by getting a childcare place in a local community crèche with fees of 95 euros a week full time and pro-rata reductions for part time. (Only 30,000 parents nationally have access to these). Mothers without a childcare place (if married) relied on their unemployed partner to provide childcare, or both parents worked part time. Grandparents or siblings also provided care. These constitute a mixture of reconciliation strategies not easily replicated. Childcare policies in a neo-liberal society can considerable reduce equality of access to childcare places and offer an explanation for the education penalty. Overall participation rates are unlikely to rise unless this inequality is addressed.

#### *Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy*

The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1974 in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD's Development Advisory Committee (DAC) supported the promotion of gender equality through its members' aid programs. Although ROWITE was disbanded in 1998, its concerns were, in partly picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

#### *Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes*

Annsophie Mahrs Träff, PhD-candidate  
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden.

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for "physical activity".

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The part of my studies that will be presented have a phenomenographic approach was used to analyze semistructured interviews with elderly people living on residential homes and with staff. This took place in four residential homes in two municipalities in Sweden.

The interviews show that the older people often describes physical activity in one way when asked about what the concept of physical activity means to them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff do describe that physically activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

#### *Global Arenas of Knowledge: Perspectives from the Brazilian Case*

This paper aims to present the major guidelines of the project 'Global Arenas of Knowledge' and its first results. The project involves theoretical work to reformulate the sociology of knowledge in contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery or (in world-system terminology) semi-periphery, but which are not part of the impoverished 'third world', and where knowledge institutions are well established: South Africa, Brasil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographical work, interviews, documentary work and quantitative methods of citation-context analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain. I focus on two specific themes that are more closely related to the proposed session: a) how the dynamics center/periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

**MAICH, KATHERINE\*** (University of California, Berkeley, [kmaich@berkeley.edu](mailto:kmaich@berkeley.edu))

#### *Legislation and Its Discontents: Consequences of the Peruvian Household Workers Law*

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling an incred-

ibly centralized and unregulated flow of labor. Many indigenous internal migrants work as *trabajadoras del hogar* in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms. Colonial relations persist in the apartments and homes across wealthy districts of the capital, yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourist industry, and promoting its global culinary fame.

Peru passed national labor protections for *trabajadoras del hogar* ten years ago, though with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privy to capital's growth and yet [arguably] further marginalized through labor regulation, which grants few benefits, offers no minimum wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

### RC32-554.5

**MAICH, KATHERINE\*** (University of California, Berkeley, [kmaich@berkeley.edu](mailto:kmaich@berkeley.edu))

#### *When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes*

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as *trabajadoras del hogar* in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom. This practice of domestic labor is broadly accepted in Peruvian culture, demonstrating the profoundly deep, entrenched nature of colonial relations within contemporary Limeño society.

I analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for *trabajadoras del hogar* ten years ago, though with negligible improvements in the lives of its household workers as the law offers no minimum wage, few benefits, and lacks real enforcement in practice. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, privy to capital's growth and yet [arguably] further marginalized through labor (mis)regulation as they continue to sweep, iron, cook, and care for the future class of Limeños. My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Limeño homes, with serious consequences for a future, more egalitarian, and 'modern' Peru and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to "protect"? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.

#### *From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?*

##### *From Political Protest to Sectarian Violence: A Sunni-Shiite split in Lebanon?*

The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14<sup>th</sup>, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands went to the streets to either denounce the Syrian regime and accuse it of being behind the assassination, or to flag out their alliance with it and accuse the US and Israel of killing Hariri. In the following research I study how the political protests that followed the assassination of the former Prime Minister Rafic Hariri turned into sectarian violence that has been framed as "Sunnis versus Shiites". More precisely, I look at the shift in the political salience and the re-modelling of political, confessional as well as national identities. I have used official records and newspaper archives in order to compile a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in political, as well as sectarian alliances. A meso-level analysis of coalition formations is carried out using social network research techniques. The empirical results show that the Hariri

assassination was a "political earthquake" that shifted the attention of the Lebanese society from mainly pan-Arab concerns, to internal concerns and anti-Syrian activism. The analysis of our findings suggests that a change in political relations leads to sectarian tension when two main conditions are met: (a) the majority of the sectarian group follows one leader and; (b) when the two opposing communities are equal in size and in power.

### *Australian Carers' Income Support Since 1983 – Changing Frames and Persistent Gender Inequality*

Many Australians provide unpaid, informal care for a relative or friend with a disability, illness or age-related frailty, and women are more likely than men to be the main 'carer' in these circumstances. A dedicated income support payment for some Australian carers has been available since the 1980s. Unlike many other forms of income support, which have been progressively restricted as part of a wide-ranging neoliberal reform process, eligibility for Carer Payment has been extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in which reforms to the social security legislation have been framed. Drawing on Fiona Williams' analysis of the claiming and framing of European care policies (2010), we argue that changes to Australian carers' income support have developed within competing frames of social justice and social investment. The social investment frame, which prioritises paid work over care, has become particularly prominent in recent years. This echoes the increasing concern with paid work participation in other areas of income support, such as unemployment benefits and payments for sole parents. However, the changes to carer policy reflect a unique tension between competing goals of promoting paid work participation for all working-age people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women's ongoing responsibility for the bulk of unpaid caring, and income support policy potentially reinforces this inequality. We argue that these issues must be addressed in future reforms to ensure that the competing pressures on women to care and to engage in paid work do not lead to greater disadvantage for carers and the people for whom they care.

## RC32-553.10

**MAKI, YOKO\*** (Hitotsubashi University, [maki.yoko@nifty.com](mailto:maki.yoko@nifty.com))

### *Middle Class Women's Work and Childcare in Paris*

Today, France draws attention from neighbouring countries because of its high birth rate. French women are also relatively active in their labour work participation. In Paris, the number of women in work is especially high, and the number of nurseries is inadequate. How do women manage to find a place or person to look after their children while they are at work? How are women and class related to the issues of childcare? These are the main interests of this paper. In France, the most widely used form of childcare is the registered childminder, the so-called "Assistants maternels", and not nurseries as in Sweden. The paper will put the emphasis on this French registered childminder system.

According to a French national report on childcare, in 2011, 37 % of children under three whose parents worked full time were left with registered childminders who were approved by the local authorities and received children mainly in their own homes. 18% of children had places in nurseries, and 4 % were left with unregistered childminders, usually professional nannies who worked in the children's homes.

The French "Assistant maternel" system was passed into legislation in 1977 to clarify the undeclared work, and progressed during the 1990s to increase jobs in the domestic sphere. Local authorities conduct home inspections, and 120 hours of professional training is required for approval. The state takes charge of the social security cost of childminders.

Now in Paris, many childminders are immigrant women and they help middle class French women to work outside the home and to get higher wages than the childminders do. Mothers are generally satisfied with this system because of the flexibility of working time, which means the longer and less well paid work of immigrant women supports the work and families of French middle class women.

**MAKINO, TOMOKAZU\*** (Japan Society Promotion of Science, [makinotomo815@gmail.com](mailto:makinotomo815@gmail.com))

### *The Transformation Of Self-Consciousness In Japanese Youth: From 1992 To 2012*

Japan's economy entered a long period of stagnation, known as the 'Lost Two Decade,' after reaching its peak in the late 1980s and early 1990s. In this period, many politicians, business person, and intellectuals criticized Japanese youth: tending to lose their temper with the darkness of mind, chasing their unplanned dream without regular jobs, and not leaving their nests. Critics also told fragile about the self-consciousness of Japanese youth. But we can get another figure of Japanese youth from the outcome of the research of Japan Youth Study Group, conducted in 1992, 2002, and 2012. For instance, most Japanese youth love themselves, and feel senses of themselves. They are anything but fragile. By the way, one of the merit of comparison of three or more time point is that we can distinguish between temporary trend and long-term trend. For example, the ratio of respondents of feeling sense of oneself has declined by degrees from 1992 to 2012. The ratio of keeping one's individuality in any situation has declined too. And the ratio of changing oneself depending on the situation, and engaging in superficiality has increased from 2002 to 2012. These means long-term trend of diversification of the self. On the other hand, the ratio of loving oneself had increased from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What causes for these? We can consider two matters. First, the cultural-social change underpinning long-term trend, for instance, the diffusion of mobile media and social network service accelerating the diversification of the self. Also, we need consider what happened in 2002 (about temporary trend). We try to explain the structure of self-affirmation by comparing the determinant and related item of self-affirmation on each year. Finally, we discuss the effect of intertemporal research on public opinion in Japan.

### *A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the "Water War" in Bolivia-*

Why does the water resource problem in Bolivia remain despite the victory of "Water War"?

"Water War" in 2000 was an anti-privatization movement towards the public water service and it changed the water law and forced a private company to withdraw.

The goal of the social activists who had played a main role in "Water War" was to improve water resource accessibility. However, the success of "Water War" did not solve the water resource problem in Bolivia. Does it mean that the other issue was needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the water situation not mentioned. In order to investigate a 'real' driving factor that had caused the problem, analysis of the Water War should be revisited from different angle. A water shortage is classified into two factors: "Real scarcity" and "Manufactured scarcity" (Mehta 2003). While real scarcity refers to a shortage of volumetric quantities, incurred mainly from population growth, industrialization and an ecological system, manufactured scarcity is constructed by powerful actors such as politicians, bureaucrats and irrigation farmers to gain profit at the exclusive possession of water resource.

I assume that the goal emphasized in "Water War" was directed towards manufactured scarcity, it prevented its focus from real scarcity, which is also pivotal in order to solve the water resource problem. This study uses the original data of fieldwork and local newspapers from three times of fieldwork by the author. I will use discourse analyses to expose the process of why social activists chose to focus on "Manufactured scarcity" in order to gain the civilian support. I present the importance of recognizing the each characteristic of water scarcity to improve the water resource problem. This research intends to provide a new framework for equitable water distribution.

### *Pathways Of Aging: Old Women's Gendered Narratives and Cultural-Historical Locations*

#### **Pathways of Aging: Old Women's gendered narratives and cultural-historical location**

Social gerontology has moved away from a focus on old age *per se* to the recognition of old age as part of the life-course, and more importantly, as the result of a lifetime's experiences. In this paper I explore the themes that old Mexican women themselves identified as important in shaping their pathways towards old age. I do so by employing a thematic-narrative analysis of multiple in-depth interviews with 32 women aged 60 to 89.

Throughout their life-course the women's personal biographies, their current social, cultural and economic locations have been informed by a range of structural factors, institutions and personal attitudes, choices and opportunities. My intention is to stress the importance of structural and personal mechanisms that underpin the socio-cultural construction of aging and old age; the relation between the objective reality and subjective experiences of aging. By making refer-

ences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story.

There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters. The women's -formal and informal- participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

#### *The Complex Adaptive Systems Approach. a Sociocybernetic Reading*

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal claim, its mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Sociocybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that system and complexity are primarily attributes of an observer, an operation of "punctuation" in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an "invented reality" (von Foerster) and the system that simulates the real system would be doubly so.

CAS epistemic limits become more evident in its sociological models called "Artificial Societies". The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, "self-referential" (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

#### *Not No Place: Fragments of Johannesburg*

*Not No Place* is a collage of visual and written fragments on Johannesburg- historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of *U-topia*). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. *Not No Place* presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothee Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg, *Not no Place: Johannesburg: Fragments of Spaces and Times*. This intriguing and beautiful book is by no means an official biography of the city - it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors' personal narratives and ruminations on topics; the subheading *Fragments of Spaces and Times* captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

#### *Mattering Difference Cervical Cancer, HPV Vaccines and Global Health*

Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the "developed" world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the "developing" world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of "anticipated" cure.

#### *The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia*

Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even "normal". The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military's involvement in disaster management.

*Transnationalization of Labor Mobility Development Trends and Selected Challenges of Its Regulation*

Ever since the early development of the industrial mode of production paid employment has been strongly structured by regional or at least national mobility structures until the end of the 20th Century. Ways to the workplace were primarily daily oscillations; spatially varying work assignments concentrated on relatively small groups of experts and construction workers.

With the internationalization of value chains, migration and organizations, this picture changed dramatically. Labor mobility becomes transnational for a constantly growing share of the working population. This concerns inner-European labor migration as a crisis-induced labor migration, as well as contract and subcontract work, but also the growing cross-border mobility within profit and non-profit organizations as well as the increase of locally recruited employees who have the nationality of the "parent organization". In our contribution, after conducting an empirical assessment of selected types of new transnational labor mobility, the related challenges of regulating their labor, employment and participation conditions will be discussed. Along with secondary data this paper refers back to the results of a project funded by the German Research foundation (DFG) on cross-border personnel mobility in organizations

*Generational Shifts in Subcultural Participation: The Transformation of Symbols, Practices and Performances in Visual Kei*

Leisure based youth subcultures are often depicted and best remembered in the common imagination as the material manifestations that they occupy at the height of their popularity. The styles, behaviors and shared practices of these subcultures are often thought to reflect how participants feel, what they value and the lifestyles they desire. Oftentimes dismissed as mere 'fashion fads' or instances of deviance, subcultural participation is characterized and reduced to a passing period of youth to be outgrown or resolved as one moves into adulthood.

Visual Kei refers to both an aesthetic movement in Japanese rock music as well as the subculture surrounding the consumption, production and practices of its performers and fans. This paper critiques such notions of subculture as tied to a temporal period of youth by examining the generational shifts and continuous participation that extends well into adulthood from within an established leisure based subculture such as Visual Kei, which is now in its third generation of practice and (re-)production.

To this end, this paper will compare the difference between each generation of the subculture by focusing on subcultural symbols and how the meaning attached to these symbols (in the form of dress, discourse and performance) transforms over time. It is suggested that these symbols form both the basis of a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively, allowing for the continuation of the subculture, albeit not without contestation as the emotive value attached to such symbols varies across the generations. The article concludes that potent symbols that continue to resonate with the values and orientations of people over time say much about people's feelings regarding larger, hegemonic socio-cultural norms as they do about individual values.

*Youth and Social Movements In Japan Characteristics Of The Rebellious Youth and Its Mobilization In Japan*

Though not as spectacular or massive as in other countries, recent mobilization of the youth in Japan is however a major phenomenon that triggers the attention of the media and the general public. Especially, the mobilization of young non-regular workers since 2000 had a major role in strengthening the national anti-poverty movement. It supported, for instance, the reform of the assistance income law and the reform of the temporary workers law.

However this contribution has been scarcely analyzed or has been simply bypassed by some researchers. As a matter of fact, we still know very little about the social mobilization of the Japanese youth.

By analyzing results of our research focusing on members of the « Union of the Youth of Tokyo », a leading organization of the anti-poverty network, I would like to present new findings concerning two dimensions of this mobilization:

- 1) What are the characteristics of the young people who mobilize (in terms of age, gender, income and socioprofessional class)
- 2) What are the characteristics of their mobilization (primo-mobilization or not; short term or long term mobilization).

Our findings are based on quantitative and qualitative data: the archive of the SU (630 entries) and in-death, longitudinal interviews of 50 members that started in 2008, during and after their mobilization in the « Union of the Youth ».

*Uneven Development and Social Equity in American Shrinking Cities: Can the Growing Social and Economic Gap be Narrowed?*

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. While there has long been some degree of internal variation within United States shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for redistributional strategies in an environment of severe resource and policy constraints, and the extent to which that in turn dictates rethinking governance roles and responsibilities in shrinking cities.

*Resilient Or Vulnerable? Analyzing Disaster-Triggered Migration Process Of A Tropical Cyclone Prone Coastal Community*

The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration-decision by the disaster victims is not really instant – it is a long-term consequence of societal mechanisms that is determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities – as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and finally, result to a migration-decision of the cyclone victims? Results are derived from a field survey with 1555 respondents. The survey was conducted during 2009 and 2010 in 48 southwest coastal villages; those were severely affected by cyclone Aila. Applying principle component analysis (PCA) in SPSS, a social vulnerability index (SVI) is constructed and then the respondents are classified according to their socio-demographic characteristics. Findings show that socio-politically vulnerable population is proportionately more displaced than the socio-politically resilient population. Thus, it increases the social instability through increasing the dependency of powerless on the powerful classes in the society.

*Contested Proprietary Technology: In Search Of a Non-Proprietary Technology In Agriculture In India*

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented though have contributed to improvement in agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development, exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problems, raising questions of equity, sustainability, justice – distributive as well as cognitive. Further, productivity based on green revolution strategy has

reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflicting interests about ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

#### *Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan*

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The "Telling the Stories of Disasters Study Juku," visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

#### *A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring*

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization

approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the "field" of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

#### *The Making Of "Homo Financius": The Emergence Of The Financial Literacy Field In Israel*

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered as necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable "homo financius". In the last years, the constitutive traits of homo financius are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy in Israel, analyzing the modes of action of the array of actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

#### *Social Housing in Sustainable City*

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the participation of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the researchs on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program's goal was to serve 364,000 homes, but reached in fact 46 000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregularity, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is on the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

*From Chernobyl to Fukushima: Socio-Ecological Analysis. Russian Outlook*

The authors aimed to analyse the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey present the definite level of socio-ecological tension in the region of explosion even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conceptualization of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by:

- establishment of united federal unified information system on nature use and environment protection;
- introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
- provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
- organization and implementation of the environmental education of population.

*New Ethics of Russian Ecologists: Myth or Reality?*

New professional ethics is becoming important in the conditions of unequal societies, especially during the socio-ecological crisis. The present study is examined the phenomenon of ethics and morality of ecologists - quite new social-professional group in contemporary Russia and other Post-Soviet countries which are societies of anomaly. The ecological ethics and morality are latent and only a part of bigger system of values. It can be seen as a historical phenomenon which evolves and exists as a number of developing and interchanging moral systems.

While economics sounds during the globalization process, the ecological morality often keeps silent. Modern ecological ethics and morality are degraded, mostly its regulating influence is evident in emergency situations only. Furthermore, the prominent social orders and levels (including social-professional group of ecologists) have their own specific "ecological moralities".

The findings of the expert survey present the social attitudes and system of values of these professionals and the views of the lay public about their social role. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. The competency of ecologists is higher comparing with others professional groups of this field, they have a sufficient influence to other professionals. The main social features of the group are: adequate axiological and emotional relation to society and nature, the availability of specific knowledge, capacities to creative action and thinking, which help them to analyze the real socio-ecological problems and to make the balanced optimal decisions in the sphere of nature protection. The institutionalization of the ecologists is influenced by its special characteristics: the special role of ecological ethics in activity of the professional and the importance of professional activity in conditions of local ecological crisis which leads to development of professional self-identity and appearing of professional pathos.

*Strategies for Change: Immigrant Women Confronting Dekilling and De-Professionalization*

This paper is based on empirical data from a research study<sup>[1]</sup> on the experience of highly educated Chinese and Indian immigrant women who were professionals in their home country. In particular, this paper aims to discover how the women utilize their agencies to mobilize a myriad local and transnational strate-

gies to confront and change their situations in the context of neoliberal restructuring and the concomitant deskilling and de-professionalization of immigrant women in the new country.

The study found that despite their education, immigrant women professionals are routinely being deskilled, and are channeled into precarious positions which are low paid, part-time, flexible, with no security nor benefits. In order to survive in a racialized and gendered globalized labour market, some women lowered their employment expectations, and took on menial, precarious employment in the new country in order to gain "Canadian experience" and to make ends meet. Others tried to improve their situation through formal retraining processes by returning to college/university so as to gain formal Canadian education, knowledge and skill. Our research also found that the immigrant women were actively participating in transnational practices. For examples, some immigrant women who were unable to juggle their paid work and looking after young children, sent their children back to their home country to be cared for by extended family members so they could focus on their job search or engage in paid employment to make ends meet.

[1] The data for this paper is derived from the project "Transnational Migration Trajectories of Immigrant Women Professionals in Canada: Strategies of Work and Family" (2009-14), supported by SSHRC through a research grant to Guida Man (PI), Tania Das Gupta (CI), Kiran Mirchandani (CI), and Roxana Ng (CI).

**MANALO, MELANE\*** (Independent Researcher, [melanemano@gmail.com](mailto:melanemano@gmail.com))

*Education-Inequality Trap: State Contributions to the Vicious Cycle*

The education-inequality connection is not only apparent but very strong in the Philippines where discussions of inequality, usually in household incomes, almost always never fail to mention the role education plays in maintaining the wide gap among Filipinos. Conversely, this gap accounts for most of the inequalities in education. If the potential of education to increase incomes and allow access to higher-earning sectors of the economy is limited by one's social standing, the marginalized will remain marginalized, while the dominant and rich fortify their position. Thus, inequalities and education—access to it and its outcomes—form a trap that leads to the reproduction of initial inequalities.

Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities.

In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state's role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths through which the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of "education for all." Viewing high inequality negatively as it not only impedes growth but also restricts people's exercise of their freedoms, the paper also attempts to partake in the discourse of inequality/ies and its relation to development.

*Paradigms Of The Social: Current Vis á Vis An Alternative*

The idea of the "social" is the foundational paradigm of sociology, one which has been stated, understood and restated several times through its story. In the realm of Sociocybernetics Niklas Luhmann's social systems theory defines them as based on communication, with society being the most encompassing form. To this author human beings don't and can't communicate, only communication can do so, this means that society has to be described on the basis of events. Social systems are autopoietic because they produce their own components and their growth can be explained on terms with second order cybernetics; unlike living systems, which are closed, social systems are cognitively open and operationally closed.

This posthuman theory of social systems has been widely discussed and some of its criticisms are that it ignores the law of requisite variety (as it only understands the reduction of complexity), empirical evidence that social systems are indeed open, and the fact that it does not comprehend human behavior in micro scale.

The purpose of my participation is to expound the merits of Luhmann's theory, to criticize it and to propose a new approach to social systems.

As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonomical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems, which are self-observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

#### *Labor Risk Typologies and Life Course in Latin America*

Global labor markets and the internationalization of economies have changed the kind and nature of social risks. Life subject to comprehensive job security systems is questioned in different societies. In this context, the paper considers contradictory hypotheses on occupational life course related with work uncertainties:

- Standardization process: progressive concentration of biographical transitions on specific ages related with tripartition of work careers: education- work- retirement.
- Individualization of occupational life course: pluralization and de-standardization of individual labor trajectories.

The main of the paper is to analyze the links between job uncertainty and life course in Argentina and Mexico, in three cohorts. The aim is to develop an empirical approach to life course perspective linking it with a sequential analysis to:

- Model individual trajectories of occupational status related with job uncertainties (identifying different typologies of risks).
- Assess the social conditioning of these trajectories, namely the influence of socio economic status, educational level, family structure and birth cohort.

Optimal Matching Analysis is applied to model time-related processes in order to identify labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to existing theoretical models rather than defining them a priori on theoretical grounds. Data come from the Retrospective Survey of Labor Insecurity 2011.

The results of the analysis suggest:

- The tripartition model exists but it is gendered and different for each cohort.
- There is no unique model to link individualization of occupational life course and risks typologies. Rather, this link is dependent on: 1. Family and occupational constraints; 2. Social resources and; 3. Institutional performances in each country.
- These results indicate new kinds of social inequalities, by means of widespread labor uncertainty and individualization of work trajectories, that implies new challenges for how we do research in the fields of social risks.

#### *Youth Labor Trajectories and Social Changes: Transitions and Occupational Mobility in Three Generations of Mexican Workers*

The aim of this paper is to analyze, from a life course perspective, changes in certain transitions related to occupational mobility during labor trajectories of young men and women of three generations, in Mexico.

Data come from EDER 2012, a national longitudinal survey.

The analysis is based on the study of:

1. The first entry to the labor market and the number and duration of occupational transitions between 20 and 30 years old.
2. Mobility tables at the same ages between five specific occupational transitions:
  - a. Between "formal" and "informal" jobs.
  - b. Between salaried and non-salaried position at work.
  - c. Between manual and non-manual occupations.
  - d. Between full time and part time jobs.
  - e. Between jobs in industrial and service sector.
3. Discrete time regression models associated with these same transitions.

Through the analysis of mobility tables for each of these transitions and the study of the weights associated to their constraints, the objective is to test a hypothesis of social change related with the precariousness, outsourcing and de-salarization processes of work force at early ages in this country, coupled with increased "heterogeneous" labor trajectories in younger cohorts (where the "determinants" factors are more diffuse).

Under this hypothesis, we admit that the processes of globalization and internationalization of the economy enable greater heterogeneity in certain occupational transitions and an increase in the diversity of youth work trajectories.

#### *Role Of ICT In Mitigating Social Problems*

In India children from poor families get enrolled in free government primary schools. However, due to poor quality of schooling majority of them drop out without completing primary education. To address this problem the present research explores the use of ICT to provide web based quality teaching by developing and also customising already available teaching materials in the internet. The project also aims at identifying potential teachers from among the aged who otherwise suffer from loneliness as their grown up children are either pre-occupied with their work or live away from their parents in their place of work in other city. Elderly people those who are willing to take part in the proposed web based teaching are provided training in web based teaching with the help of materials developed for the same. Along with providing a low cost solution for improving school quality and checking drop out, this would also improve the quality of living condition of the aged by helping them to overcome the problem of loneliness and spending meaningful time by teaching disadvantaged children, without moving out of their homes. Through this initiation of using ICT to the elderly people, we also aim at enabling them to make use of ICT to meet their some other needs (by using email, Skype, net based purchasing and availing of other needed services).

We have made trials in web based teaching making it very interactive, in a tribal boarding school for girls, with very positive results which is discussed in the paper. After few more trail runs we will arrange for regular supplementary teaching to deficient schools to improve the teaching quality and assess the learning outcomes and aim at replicating this model for wide impact.

**MANDEL, HADAS\*** (Tel-Aviv University, [hadasm@post.tau.ac.il](mailto:hadasm@post.tau.ac.il))

#### *Rethinking the Paradox of Welfare States and Gender Inequality*

Although most comparative studies of welfare-states and gender inequality highlight the favorable effects of work-family policies on women, a growing number of studies, including my own, provide evidence of the unanticipated, and negative, consequences of work-family policies. The conclusion from these findings is that state interventions to reconcile paid with unpaid work, which are considered "mother-friendly," have, paradoxically, negative consequences for the labor market attainments of working women.

In this work, my aim is to locate these findings within a wider context – not to challenge the findings themselves, but to question the conclusions that arise from them. My arguments are twofold: First, I argue that the impact of work-family policies is conditioned by class. The negative implications of family-policies for women's labor market attainments, found in previous studies, are, in fact, a consequence of their impact on highly skilled and highly educated women. Among lower-skilled women, these effects not only diminish, but also reverse. Second, I argue that when the focus is shifted from a single aspect of gender inequality to multiple aspects that are analyzed simultaneously, the implications of work-family policies for gender inequality no longer appear paradoxical, for it becomes possible to see the inherent tradeoffs between the different aspects.

These arguments are examined using a wide range of country-level indicators, aggregated from the ISSP data, of 14 welfare states. The indicators encompass most aspects of women's economic activities that have been investigated in comparative research. The indicators are divided into two groups: one that is relevant to advantaged women (e.g., women's representation in managerial positions), and the other to disadvantaged women (e.g., poverty rates). The relationship between welfare-state policies and each group of indicators will be examined and discussed in light of the tradeoff between participation and occupational attainments, and the class divisions among women.

**MANDELERT, DIANA\*** (Universidade Católica de Petrópolis, Education Faculty, Brazil, [dmandelert@gmail.com](mailto:dmandelert@gmail.com))

#### *Teachers Council in a Top Rated School*

This research is aimed to understand the judgments made about students during the teachers council in a top rated private school in Rio de Janeiro, Brazil. In our country, below average grade students are always evaluated by Teachers Councils before the end of each term. These collective assessment meetings are exceptionally adequate places to perceive, through the agents' speeches, how the school classification system is produced and reproduced. That's where we can observe the structure of hierarchies of proprieties to reproduce and, therefore,

the "choices" made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as been originated outside of the school. Students' personal dramas influence grades, their families are also subject to judgment. Teachers' work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition's considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

#### *The Price Of Successful Secession: The State, Its Separatist Challenger and Organized Crime In Serbia and Georgia, 1989-2012*

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia from 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfulness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo's greater success in nearing sovereignty compared to South Ossetia's more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

#### *Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire*

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain "with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation" (Adam 2009) the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mishe 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls "capacity to aspire" that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex field in which the capacity to aspire emerges as stretched out between the forms of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the cultures of the future inhabiting the public domain (as produced by technologies, media, institutions). Strongly connected with the concepts of reflexivity and creativity the "capacity to aspire" has to be seen mainly as the ability to project present opportunities using socially relevant narratives. These ideas are explored through the analysis of ca. 200 essays on the future, written by young boys and girls of age 17-18.

#### *Social Justice and Energy Consumption: The Problem of Fuel Poverty*

The social discourse on sustainable development not only focuses questions of intergenerational and global justice, but also increasingly questions of social ecological inequalities in industrialized countries (keyword: environmental jus-

tice). Within this framework, a society's consumption of resources is associated with inequalities. When it comes to climate change, the focus is on questions of responsibilities and persons concerned, inevitably bringing up the issue of social inequalities and thus a central field of sociology. Likewise, when management tools towards sustainability are discussed, social inequalities are addressed (e.g. in connection with environmental taxes). However, social science-oriented environmental and sustainability research on consumption of resources and social inequalities is still at its beginning regarding both, theoretical conceptualisation and empirical research.

In the proposed presentation, one dimension of this topic will be stressed, namely the relationship between energy consumption and social inequality in general and the issue of fuel poverty in particular. Insights will be given into an Austrian fuel poverty project (funded by the Austrian Climate and Energy Fund, 2012-2014) which has the aims of implementing tailor-made measures of energy efficiency against fuel poverty in 400 fuel poor households in Austria and of elaborating a national program against fuel poverty. Three different projects (two of them on a local and one on a nationwide basis) covering fuel poor households from urban as well as rural regions serve as examples of implementation. The programmes and measures are evaluated regarding their effectiveness and their improvement of advice services. Benefits (e.g. mitigation of burdens related to fuel poverty, reduction of CO<sub>2</sub>-emissions) and costs calculated. First empirical results of the evaluation will be presented at the conference and discussed in the light of social-ecological inequalities.

#### *The Rites of Institution As an Instrument of Public Policy. the Example of French Municipal Rituals*

This contribution addresses the issue of the performance of contemporary French municipal rites of institution.

I will start from the findings of my doctoral research in political science which is related to municipal rites of institution in France. A rite of institution (Bourdieu 1982) is a symbolic event marking someone's transition from one status to another. In my research, I identify four ideal types of municipal rites of institution: kinship rites, like civil weddings and Mother's Day; citizenship rites, which include naturalization ceremonies, coming of age ceremonies, conscription rituals; honor rites providing municipal or national medals; and work rites, which encompass welcome receptions and retirement ceremonies.

Through my communication, I will show the importance of these rituals in public action. First, I will demonstrate that these rites can be considered instruments of public policy (Lascombes and Le Galès 2004). Here, I will focus especially on two examples: naturalization ceremonies and Mother's Day. Since their invention, both rituals have been the instruments of migration policy and family policy, which aim to make virtuous citizens and mothers from foreigners and women. In both cases, the rites of institution have been considered the most convenient policy instruments to let foreigners and women see themselves as virtuous citizens and mothers, and therefore, behave as such.

Nevertheless, how does it occur? To answer that question, I will focus on the performative dimension of these rites of institution, that is, on how status and social roles are assigned to participants in these rituals. Drawing evidence from ethnographic observations and from interviews that I conducted, I will study the sequencing of these rituals and the verbal and non-verbal performative practices that happen during these rituals, as well as the representations of the participants related to them. Thus, I will consider what social conditions allow for effective performance.

#### *Reflections on a Rural Community Traversed By the Process of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)*

This paper aims to present preliminary results of a PhD research that focuses on the dynamics of social relations of rural population living in a sustainable development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area, activities related to local and regional tourism have been developed and since 2009, it features a resort – an uprooted space geared towards international luxury tourism. In this context, specific elements of the globalization process are involved, such as financial (global and regional), touristic and political interests. The Tupé Reserve appears as an arena of interaction among several actors, being a basis for manifestations of a production process of consumer demands and new lifestyles in which imageries, values and worldviews are shared. Thus, the social relations there are no longer constrained by the local context of interaction, as various forces (local, national and global) are at stake. These, far from being seen as opposites, are seized as part of a dialectical process, instances of socialization of a particular culture. In short, we propose a paper that discusses the effects and constraints of the transformations and conflicts in the relations between global

social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

##### *Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network*

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having "good standing" with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors' local network, and (b) loses the second positional element of Coleman's theory. We rely on the latest advances in network methodology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman's theory.

##### *Negotiated Neoliberalism?: The Labor Struggles and the Latin American State. Evidence from the Peruvian Mining Industry (1993-2013)*

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements felt dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—; it is the second world producer of copper and gold; and multinational corporations control 85% of the country's mineral resources.

In this context, mineworkers have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital—particularly within specific workplaces—, but have overlooked the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state's interventions in the mining industry's collective bargaining processes between 1993 and 2012, as well as qualitative evidence of two in-deep case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the "neoliberal state" and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers' organizations; and discuss its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

##### *Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry*

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—in contrast with the political transformations of other Latin American countries—; mining is the most important economic activity; and more than 70% of this industry's workforce is subcontracted. As in other societies, this labor

market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted mineworkers organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry's importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between workers' mobilizations and labor law's trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers' mobilizations produced divergent outcomes. In Chile, subcontracted workers created their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers' struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers' organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry— and more inclusive in Chile.

**MANNING, NICK\*** (University of Nottingham, [nick.manning@nottingham.ac.uk](mailto:nick.manning@nottingham.ac.uk))

##### *DSM V, a Sociological View*

What does sociology have to say about the DSM? Sociology as a discipline has two approaches to analysing a classification system such as the DSM. Looked at as an object of sociological study, questions and observations are about the way in which this is connected to general patterns of social structure and social action. For example, how do the organisations function that produce and use the DSM? what are their sources of income and power? how do they change? and how does the DSM function in relation to them? A second sociological approach is to accept the general priorities of a field which is committed to some particular outcome and to try to bring sociological knowledge to bear on its problems. From this point of view, sociology could be used to try to help or improve the process of producing a classification system such as the DSM. Sociological analysis of how the DSM is produced, the way it functions in research and clinical practice and its relation to the nature of knowledge and medical care could all have been incorporated into the way in which the DSM is developed. To my knowledge, this has not happened, and I shall argue that this has resulted in the very substantial failure of the DSM to work. In this paper, I will analyse the nature of the DSM as a classification system and its performance. Secondly I will examine the way in which the DSM became rapidly and widely accepted. Thirdly I will advance some general explanations of the way DSM has been produced and the functions it performs.

**MANOHAR, NAMITA\*** (City University of New York, [NManohar@brooklyn.cuny.edu](mailto:NManohar@brooklyn.cuny.edu))

##### *Highly-Skilled Immigrant Women's Labor Market Access: A Comparison of Indians in the United States and North Africans in France*

Using the concept of cumulative dis/advantage, this paper examines how early dis/advantage in immigration generates barriers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia.

It finds that despite their more advantageous position upon immigration – student migrants, single women, and French-styled North African educational qualifications – North African women experience barriers in accessing skilled work – difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore strategize by working in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women's immigration is marked by early disadvantages – their legal status as "dependent" wives, the non-transfer of Indian credentials and responsibility for care work – that contribute to their de-skilling. In response, they strategize through the pathway of gradual ascent – moving from low-wage to high-wage work; (re)education and direct entry; and skilled entrepreneurial work to successfully access highly-skilled work.

Four mechanisms explain these divergent outcomes – education-work experience nexus, interactive effects of local labor markets and immigration policy, social capital in classed social networks, and racialization. For Tamil women, the cumulative effects of these converts their early disadvantages to "contingent advantage" resulting in them becoming highly-paid professionals in America. For North African women, these contribute to the erosion of their early advantages leading to their "categorical disadvantage" – long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the

downward mobility associated with skilled immigrant women is not universal, as is often theorized, but relational across national contexts such that some groups are more successful than others in accessing skilled work.

[vmansour@masonlive.gmu.edu](mailto:vmansour@masonlive.gmu.edu))

#### *Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt*

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in comparing and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of Ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimizing the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in the case of Iran, the state is characterized by coordination and diffusion of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak's National Democratic Party (NDP) of Egypt was more closely characterized by Patrimonial bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infatih and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

#### *Patterns of ICTs Using and Information Flow: A Study of Rural India*

**Patterns of ICTs Using and Information Flow: A Study of Rural India**  
**Manushi and Prakash Chandra Dilare, PhD Scholars, Center for the Study of Social Systems, School of Social Sciences, Jawahar Lal Nehru University, New Delhi, India**

##### ABSTRACT

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the gnawing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain unreachable by the benefits ICTs are supposed to offer. The vision of a so-called "information society for all" as stated in both developed and developing countries' ICT policy documents today does not apparently include "all" (Chiumbi 2008).

This paper presents the patterns of people's ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exists in the country and now with the emergent of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

#### *Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities*

Currently more than 2.5 million Americans living on the South and North American continents are *Nikkei* or descendants of Japanese migrants. The history of their forefathers' emigration has attracted considerable scholarly attention. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of "return migration" and the "returnees' remigration" on the diaspora in Latin America. To what degree have ideas of ethnic or political loyalty, of national and cultural identity been shifting one way or the other due to the increased proximity to their ancestors' place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the *Nikkei* in Latin America? The *Nikkei* experience of living abroad bears the potential for rethinking the meaning of diaspora. As the *Nikkeis'* return home migration, to the land of their ancestors, has not fulfilled the postulated 'negation of a diaspora' (Clifford 1994), it has squared the sensation of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the *Nikkei* are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

#### *Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn's Park Slope*

The transformation of New York City into a global corporate city and the consequent deleterious effects on small firms and on dwindling employment opportunities for blue-collar workers began to create housing opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn's Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist – and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and 'moral pluralism' to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class' desire for diversity and difference (Lees et al, 2008) as well as the influences of housing-abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

#### *Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn*

Streets do possess attitude. What usually community preservationists define as 'spirit' or the 'soul of place', here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable - and urban lifestyles (Jacobs 1989, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of 'coolness' - showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

Using the concept of 'cool' as a framework - understanding it as a cultural category in its own right (Pountain and Robins 2000) - this work explores the way gentrification interconnects with the development of an individual habitus as a

spatial manifestation in which the street coolness is crucial to the construction of stylish individual personae.

This exploratory paper describes the relationship between aesthetics, symbolic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed as sites of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York's wealthy and educated people. As I have observed, their street practices sometimes overlapped with working class people and (super)gentrifiers and sometimes do not. However, with hip bars and cafés, used-books stores, yoga studios, and renovated townhouses, they are 'no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class' (Osman 2011:8).

Drawing on several years of field research (2007-2013), empirical quantitative and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

### *South Africa within Brics: Emerging Society and Sociological Discourse*

The formation of the **BRICS contingent** opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant influence on regional and global affairs.

In 2010, **South Africa** was the last country joined the BRICS and currently holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa's strategic position in Africa, facets of the **social structure** as well as **critical processes** act as key drivers for social change in the country as well as parts of Africa, and simultaneously, provide the platform for rigorous sociological discourse.

Consequently, this paper aims to - in terms of **social structure** - critically analyse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues, for example good governance, democracy and social services, developmental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/Aids, etc.), as well as other issues related to sustainability will be touched on. Intertwined with the above-mentioned, the normative component of culture, namely values, norms and sanctions will also be part of the picture.

Closely linked to social structure, the following **critical processes** will in an integrative way be put under the magnifying lens, against the BRICS background: ideological reconciliation, nation-building, economic transition, nationalisation, migration, globalisation and post-globalisation.

In the final instance, the paper will sought to - from the South African perspective - analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

### *Can the Racialised Other 'Belong'? Rethinking Race, Racism and Belonging in Australia - Perceptions of Skilled Black African Migrants*

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of 'belonging' within the Australian context. Specifically, the paper explores how participants' constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant's experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination. Drawing on data from a qualitative study on identity and belonging among skilled 'black' African migrants, we argue in this paper that experiences of racism and racial discrimination entwined with ascriptions of 'otherness' evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants' perceptions of belonging as exposing an/other 'paradox of skilled migration': where feelings of being 'needed' ('invited' into Australia to fulfil an identified 'need' in the labour market) co-exist with experiences of discrimination to construct an 'other' who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of 'home', they also expose the power relations, contestations and complexities

inherent in the notion of 'belonging' particularly when one has to contend with racism and racial discrimination persistently and consistently.

### *Social Innovation in the Housing Policy in Spain*

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to analyze the impact of social movements on innovation based on scientifically validated successful actions, in public housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and social movements have contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

### *Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation*

Greece has turned in recent years into an immigration region. While immigration started in the early 1980s, it was only in the early 1990s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the immigration process in Greece is the large proportion of women who migrate alone in search of employment.

With regard to the integration problem of migrant women many studies indicate that issues related to citizenship are crucial. In particular the exclusion of women from social goods and welfare national system and the non-active participation in social and political life in the countries of residence are of paramount importance. Thus, access to welfare goods is associated with citizenship, while social security and health system use are key indicators used internationally to measure the degree of social integration of transnational migrants. At the same time, active political participation highlights the level of their integration.

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic women migrants who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010.

This paper refers to some issues related to the integration of women migrants in our country based on the results of the above survey. More concretely we will analyze the access of migrant women to social - welfare services, investigating issues related to social security coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.

### *Les Limites De L'individualisation De L'engagement Dans Les Syndicats « Minoritaires » Le Cas Des Ouvrier-e-s Brésilien-e-s Dans Le Japon Des Années 2000*

La communication vise à montrer les limites de l'individualisation de l'engagement syndical, en examinant le cas des ouvrier-e-s brésilien-e-s du secteur industriel dans le Japon des années 2000.

Depuis la fin des années 1980, les syndicats dits « minoritaires » (Jobin, 2006) ont émergé dans le contexte japonais où les syndicats d'entreprise sont dominants et recrutent parmi les employé-e-s « régulier-e-s » (Kawanishi, Mouer, 2005). L'accroissement des emplois atypiques au cours des années 1990 a ce-

pendant affecté une part plus grande de la population active qui échappe à ces syndicats « traditionnels ».

Les travailleur-e-s migrant-e-s sont recruté-e-s sur un « marché du travail secondaire » (Higuchi, Naoto) en expansion et il-le-s constituent une des fractions de cette population active précaire. La grande majorité des migrant-e-s brésiliens accède à des emplois d'ouvrier-e spécialisé-e du secteur manufacturier par le biais de ce marché (Kôseirôdôshô, 2009). Leur emploi est fortement corrélé avec des contrats temporaires délivrés par des agences de placement (*empreiteiras*) et l'occupation de postes de travail à la chaîne physiques et pénibles (Ôkubo, 2005).

Trois sites de syndicats minoritaires investis par les travailleur-e-s migrant-e-s entre 2000 et 2010 ont été explorés par le biais de l'observation ethnographique et de récits de vie. La syndicalisation individuelle des Brésiliens prend de l'ampleur dans la deuxième moitié de la décennie. Elle s'accompagne de l'augmentation des recours en justice (Rôdô shinpan seido, 2011).

Ce mode d'affiliation inspiré de nouveaux modèles d'organisation (Bérout, 2009) a certes permis d'ouvrir l'espace syndical nippon à des populations marginalisées sur le marché du travail (Urano, Stewart, 2007). Elle a cependant contribué à reproduire les rapports de domination sexués et racialisés de l'organisation du travail industriel dans l'organisation des syndicats minoritaires.

### *Is There a Unified Recipe to Predict Civic Engagement? Comparisons of 47 European Countries*

This presentation is focused on comparative framework of civic engagement in contemporary Europe. The database of the European Values Study (2008) is used as a main set of information, though some indexes (e.g. World Bank's, Freedom House' indicators) are used as a supplementary source. The scope of the research takes into account 47 countries. Civic engagement is conceptualized in three aspects: cognition-status-action as possessing the knowledge, skills, and values needed to enhance the community and their expression through attitudes and behaviour (Ehrlich, Doolittle, Faul). It is seen as the indicator of civil society and democracy formation (Mill, Coleman, Tocqueville) and, at the same time, as one of the elements of social capital (in both bridging and bonding meanings). Attention is paid to the differences of 1) content and actors of civic engagement in Europe and 2) factors that shape civic engagement in its two parts, namely Post-Socialist and developed Europe. In such a way, the main idea of the paper is to clarify whether in the latter prevail contextual, external factors, while individual factors of civic engagement dominate in the former. Thus, the levels of analysis include both individual and country, main methods are correlational and regression analysis. The research is implemented individually under the guidance of Laboratory for Comparative Social Research in the National Research University "Higher School of Economics", Russia.

### *Hasidic Pilgrimage As a Cultural Performance: Challenges and Opportunities*

This presentation deals with the research of Hasidic pilgrimage in nowadays Ukraine on the examples of two settlements, Uman and Medzhybizh. The research is aimed to shed light upon the Hasidic pilgrimage through the lens of cultural sociology and the theory of "cultural performance" elaborated by Jeffrey Alexander as the most suitable theoretical and methodological tools in the analysis of this issue. Despite long standing historical prerequisites, Hasidic pilgrimage is still a new issue in Post-Soviet Ukraine which has become a special "core" in the world context. The understanding of performativity in the issue helps unveil its stable and emerging elements, as well as show the most problematic areas and possible consequences. It is shown that the Hasidic pilgrimage in Ukraine does possess all characteristic features of different elements of a successful cultural performance: collective representations (as well as background symbols and scripts), actors, means of symbolic production, mise-en-scene, power and audiences. Research methods (which included visual observation, media documents analysis and interviewing) help outline and analyze typical resources, lines of communication and possible conflict areas both in time (2009-2012) and space (two mentioned settlements) perspectives. The author pays attention that the Hasidic pilgrimage is far from becoming an established phenomenon with defined areas of sacred and profane in the contemporary Ukrainian society, though it is constantly bringing new challenges and opportunities.

**MARCUELLO-SERVOS, CHAIME\*** (Universidad de Zaragoza, [chaime@unizar.es](mailto:chaime@unizar.es))

### *Openness, Transparency and Traceability of Public Policies*

The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more "the condition of being transparent". It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is creating the global ICTs system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors involved in the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a "policies processing software" for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a "barcode" to reveal who proposed an action and how it was designed, implemented and evaluated.

**MARE, ROBERT\*** (University of California, Los Angeles, [mare@ucla.edu](mailto:mare@ucla.edu))

### *Multigenerational, Demographic, and Spatial Aspects of Stratification and Mobility*

#### **Multigenerational, Demographic, and Spatial Aspects of Stratification and Mobility**

This paper reviews three closely related developments in research on social stratification and mobility: (1) studies of a broader range of kin connections in the reproduction of inequality than just parent-child connections, including the effects of grandparents and other more remote kin on the achievements of individuals in a given generation; (2) studies of the interdependence of social mobility processes with the creation and dissolution of families and other social groups that are related to stratification; and (3) studies of the interdependence of socioeconomic and geographic mobility. The review will touch upon conceptual, empirical, and methodological issues involved with the study of multigenerational effects; the interdependence of stratification and demographic processes (including two-sex marriage markets, assortative mating, fertility, and mortality); and how geographic and spatial mobility contribute to socioeconomic and other forms of spatial segregation. The paper will use empirical examples from the author's own research on China, Sweden, and the United States, as well as related work by other researchers.

## RC04-94.9

**MAREKOVIC, ANNA-MARIA\*** (Linnaeus University, [anna-maria.marekovic@lnu.se](mailto:anna-maria.marekovic@lnu.se))

### *Against All Odds – First Generation Immigrants in Upper Secondary Education*

The paper focuses on first generation immigrants who arrive to Sweden in the later school years. This group of students is at a major disadvantage compared to native students as well as to second generation immigrants and even to first generation immigrants who arrive before school entry. Statistics imply that a low number of "late arrived students" enter upper secondary education, and of those who do the drop-out rate is high. The educational gap between young students in Sweden is thus increasing, creating larger social inequalities between natives and foreign-born residents. In this study, however, I am interested in those examples that are exceptions to the rule – first generation immigrant students who against all odds make it to the college preparatory track. The object of the paper is to investigate aspects that contribute to school achievement and success for this group of students.

An initial survey study in Malmö, Sweden's third largest city, showed that a majority of late arrived students had entered the same upper secondary school. The additional material consists of interviews with school personnel as well as interviews with ten students at this school who arrived to Sweden between the ages 13-16 years old. The student group is heterogeneous, different nationalities, different reasons for immigrating to Sweden and different family contexts. The material reveals that in order to get a better understanding of the aspects contributing to school achievement, school culture as well as the individual migratory experiences and social capital need to be considered, and in particular how they interlink. The paper also discusses the obstacles met by the students, especially concerning language acquisition, and the strategies involved in overcoming them.

*The Image of the City Between the Local and the Global*

Within the global competition among cities for recognition the 'image' plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing is today highly professionalized, and operates with standardised practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the 'self-representation' of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local 'urban imagery' (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers and journalists have been interviewed. Thereby an insider's perspective of how city marketing operates in daily business and a critical, independent opinion about the 'outcomes' of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are discussed in the local media. Lastly, the picture analysis displays what and how local peculiarities are condensed to a coherent image and what stays unaccounted.

Cities around the world try to attract almost the same audience. Within their image production they carefully observe other cities, which are perceived as role models and competitors. This paper presents a comparative in-depth analysis of the image production of Glasgow and Frankfurt, and shows how globally communicated 'self-representations' refer to the 'cumulative texture' (Suttles 1984) of the local urban culture.

**MARIANO, DANICAR\*** (National University of Singapore,  
[danicar.mariano@gmail.com](mailto:danicar.mariano@gmail.com))

*The restrictive Assisted Reproductive Technology (ART) laws and 'moral safety valves' in Singapore and their role in creating Singaporean reproductive tourists or exiles*

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee's (BAC) strict regulations on ARTs – one of the most stringent in Asia. Formed as Singapore's counterpart to the UK's Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as "race or traits shopping" through selection of egg and sperm donors. It also denies fertility treatment access to certain people, gays and lesbians, women over 40-45, singles, and women who cannot gestate. The BAC's ban on payments reveal a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting "weaker classes" and "not importing Singapore's fertility issues to other nations."

As a result of the BAC's ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Internet is enabling many to circumvent these 'moral safety valves' that the BAC had set in place—leading to the creation of grey markets. Singapore doctors and hospitals are lobbying to the government to revise some of the stricter regulations or else "lose out" to neighbouring India, Thailand, and Philippines who are establishing their niche and reputation as fertility tourism destinations. Their lower cost, exotic appeal, and most importantly, loose regulations and "bioavailable" citizens are their major selling point and competitive advantage. Since many technologies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

FONJONG, LOTSMART (University of Buea)

*Rethinking Environmental Movements In Developing Nations: The Case Of Cameroon*

Conventional wisdom holds that citizens of developing nations rarely participate in movements similar to the "mainstream" environmental movements of the developed world. Instead, like dispossessed groups in developed countries, their mobilization generally takes the form of locally based, confrontational responses to direct threats to their livelihoods and health. A large literature examines such movements, but it generally ignores developing nations where such mobilization is infrequent. This paper examines the case of Cameroon, where mobilization of

large numbers of citizens for confrontation with government or business interests over environmental issues has been limited and infrequent. Our data come from an extensive literature search and interviews with 52 NGO leaders from five of Cameroon's ten regions. We conclude that the relative absence of large scale, clear, and immediate threats to the livelihoods or health of large numbers of citizens, in combination with a resilient, quasi-authoritarian government characterized by patronage, divide and conquer strategies, and mild repression, have mitigated against such movements. Cameroon does, however, possess scores of NGOs and citizens' groups that address environmental problems through lobbying, public education, and concrete projects to protect the environment. Although they lack a mass support base, they do enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important questions about how environmental movements are to be defined, which we explore in the conclusion.

[mmarkin@hse.ru](mailto:mmarkin@hse.ru))

*The Problem of Opportunism in the Changing Conditions (A Case of the Relationships between Retailers and Suppliers in Contemporary Russia)*

The rules of market exchange do not only distribute the value added [Gereffi, 1994] but also reduce uncertainty and control opportunism in business partners relationships [Kelly, 1991]. In Russia in the 2000s retailer-supplier contracts included different requirements such as pricing and bonus requirements of retailers, unpaid services and penalties to retailers, compensation for retailers' services. Those requirements made the behaviour of business partners predictable. But in 2009 the trade law was passed and the most of the requirements must be excluded from the retailer-supplier contracts. Nevertheless, the business partners still have to reduce uncertainty and to control opportunism in their relationships even in the new conditions. The objective of this research is to analyze how retailers and suppliers altered their rules of exchange after the political intervention. The empirical data are two quantitative surveys that were carried out in 2007 and 2010. About 500 managers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen. The half of them are retailers and the others are suppliers. The findings demonstrate that after the enactment of the trade law the most of unallowed requirements were excluded from the retailer-supplier contracts but they are still used as separate contracts. This practice gives the business partners an opportunity to make each other's behaviour predictable in the new conditions. Retailers and suppliers also continue to discuss the content of the political intervention and the consequences of its application.

**MARKLUND, CARL\*** (Södertörn University,  
[carl.marklund@sh.se](mailto:carl.marklund@sh.se))

*Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison*

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of "the political", limiting the exercise of public power in general and planning in particular.

Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based in scientific evidence, and to generate tangible results in a logic of input and output legitimacy (Scharpf 1999). Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunsson (2002) – can be analyzed by confronting Karl Popper's concept of "open society" with Gunnar Myrdal's notion of "constructive social engineering" and Karl Polanyi's concept of "double movement", as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-

tween neoliberalism, progressivism, and traditionalist backlash but also provide some instructive contrast.

### *Shaping the Things to Come: Concepts of Planning and European Modernity*

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaks of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme "technocratic" interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright "neutral" response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diverse theorization of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis.

Yet, it is a key concept whose conceptual history is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on "critical planning studies".

### *Foundational Political Myths in Divided Societies: The Case of Montenegro*

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogenous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial politicological investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explains their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of 'competitive foundational mythology' and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

### *Post-Nationalism in Practice: European Citizens' Initiative*

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU's civil society movements. In this context, the notion of "constitutional patriotism" is analyzed due to its centrality in the cosmopolitanism/post-nationalism debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European

belonging. The paper concludes with an examination of the European Citizens' Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

### *When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies*

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incommensurable) value systems (Boltanski and Thevenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservators to adopt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the 'meaning' of objects and cultural heritage sites when planning interventions. They study records of the creator's intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work's origins and of subsequent transformations seeking insights about ways to preserve the integrity of the work that respect its symbolic and cultural significance. These efforts by art conservators to draw on sociological insights provide a compelling example of the relevance and uses of sociological research in contemporary art worlds, however they also raise questions about decision-making, in particular how to use social scientific theory as an affordance for practical action.

### *Environmental Trust: A Cross-National Study*

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to the expression of environmental views remains underspecified. This research examines environmental trust using the International Social Survey Program Environment data from 2000 to advance the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regions regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

### *Pathways to Environmental Activism Across Time and Place*

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory, a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make environmental contributions is investigated in detail given previous research. Results demonstrate support for the model across the countries individually, as resources, awareness of consequences, and attitudes combined affect environmental activism. Moreover, mediating tests were conducted that demonstrate a prominent yet not exclusive role of willingness to contribute in promoting activism across nations, uncovering relations that are masked in previous cross-national research. Results reveal that the model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.

*Families' Control and Youth Sexuality As Meaningful to Young Peoples' Transitions into Adulthood*

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered as floating, diverse, complex, nonlinear and reversible. However some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. Although the family context tends to be recognized as important to young's people trajectories, sexuality is often forgotten or, even, considered as insignificant to their transition into adulthood. Thus, sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children's play. Based on 60 in-depth interviews conducted in Central Portugal, with 60 white young adults, aged between 18 and 29 years old, I intend to look for possible articulations between family control over young people's leisure times, sociability and sexuality, young people's representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people's trajectories into adulthood. Instead aspects related with family control, sexuality and gender can have implications on the ways (some) young people go from young to adults, especially in what concerns educational paths, leaving home, conjugality and parenthood. This happens especially in two main ways. First, the maintenance of some control concerning young women's leisure time, sociability and sexuality can be associated with a smaller period of sexual experimentation for these young women and with some of them leaving home, entering into conjugality and/or parenthood earlier than the others. Second, the problem of "coming out" and/or assuming a non-heterosexual identity can be related with the need to lie, being (or being afraid of being) kicked out from home, the search for autonomy and the difficulty of becoming a parent.

*"Is Heterosexuality That Bad? Questioning Some Presuppositions and Asking for a Sociological Analyses of Sexuality"*

"Is heterosexuality all negative? Why is heterosexuality so dangerous or bad? Are heterosexual women all submissive, victims and passive subjects? Should people be ashamed of being heterosexual? These are some of the questions that come through my mind as I was working on my PhD dissertation and attending conferences about sexuality. Giving credit and importance to the work of feminist, as pioneers in the analyses of gender relations and sexuality, as authors that called attention for problems related with power in gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, I still felt that something was missing in those discourses. Notwithstanding, simultaneously I was reading the work of some social scientist that problematized "my concerns". I felt more reassured. I have to say then that this presentation is also personal. But from a personal unease I wanted to insist on the sociological problematization of sexuality and gender, following the analytical tools given by authors like Gagnon and Simon, Weeks, Thorne, Connell, Richardson, Jackson or Bozon, as well as some other sociological authors like Archer, Mouzelis or Lahire, and using a critical realism perspective. The idea here is not to deny all the problems with living in a hetero-normative world, dominated by ideals of masculine supremacy, but to ask for a sociological approach into gender and sexuality, where categories, identities, norms and values are not taken for granted, but subjected to scrutiny, taking into consideration the multileveled and interconnected social world where they are constructed and enacted, and where individuals should be thought of as social positioned, action as conditioned and categories critically analysed as relational and contextualized.

*Returnees, Knowledge Spillovers and The Family's Role In International Migration - The Case Of Brazilian Families Returned From Paraguay*

The complexity of family arrangements that constitute the return migration of Brazilians from Paraguay can be identified as an important element in maintaining the circularity between the two countries and the consolidation of transnational space brasiguau. The return plays an important role in migrants' direction and in the daily interpersonal relationships between migrants and non-migrants, either in Brazil or Paraguay, forming a web of friendship and solidarity that sus-

tain this intense cross-border transit of people, goods and information. Thus, in order to understand the phenomenon of migration as a social product, not only as a result of individual decisions and / or economic and political constraints, it is necessary to consider the key role played by social networks, mostly those related to families and households in the entire process. This paper describes the changes in volume and composition of family arrangements of Brazilian returnees from Paraguay in the five-year periods 1986/1991, 1995/2000 and 2005/2010 and raise some points for reflection and discussion on the participation of transnational families in the migration process and circularity of these migrants. Information from the Brazilian Demographic Censuses of 1991, 2000 and 2010 will be used to do so, and to estimate the direct and indirect effects of international migration return to that country.

**H1:** It is expected that in the period 2005/2010, there is greater diversification of family participation in the migration projected for Brazil, both of returnees, as well as international immigrants from Paraguay.

**H2:** Although a structural pattern persists, given the nature of family ties, we expect a change in the roles of families in the return to Brazil and in the entry of foreigners from Paraguay, given changes in economic and political contexts of the two countries.

*Social and Solidarity Economy As a Real Utopian Design: A Comparative Perspective*

Social and solidarity economy (SSE) presents a collective project for another way of organizing the production and the society, in which the economy is subordinated to its social function. Thus, the paper discusses SSE as a real utopian proposal (Wright 2010): its institutional design is desirable in terms of egalitarian emancipatory ideals, such as privileging the collective ownership and control of economic resources and integrating solidarity in the core of economic activities as a means to achieve common goals; it constitutes a viable, and to some extent achievable, alternative to capitalist arrangements, since it has been partially implemented and is active on the political agenda worldwide; it contributes to a pathway of social empowerment, as it involves collective actors taking control of the economy over the capital or the state. However, SSE is also a complex field pervaded by tensions and conflicts. If, on the one hand, it embodies a normative vision for overcoming the hegemony of the dominant system, on the other, some experiences have become complementary or even functional to the capitalist world. The paper results from ongoing PhD research and its purpose is to critically examine SSE, in light of an empirical comparative analysis based on one case from the North (Portugal) and one case from the South (Brazil).

*Out of Time: Uchronian and Dyschronian Devices in Social Theory*

Social Theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, uchronias (the realm of the nowhere in time) never seemed to enjoy the same and widespread attention as their spatial imaginary counterparts. In this paper, based on the contributions of Tarde and Renouvier, I'll try to signal that Sociological Theory has much to gain by paying a closer look to uchronian thought. First of all, uchronian thought paves the way to a better understanding of causality mechanisms at the macrosociological level, separating the essential traits from the ancillary elements. Secondly, the use of uchronias is particularly helpful in comparative historical analysis, introducing conditional reasoning and "as if" instruments of analysis, offering a clear cut division between universal rules and contextually valid models. Thirdly, analysis of uchronian literature and fictional arrangements modeled by imaginary times (such as SF movies and TV shows) is an important device to assess how societies evaluate current dangers and future risks. Building up dyschronian times (like the ones imagined by Tarde) reflects the way groups and individuals, criticize existing modernities, hierarchize the current social problems and think about their possible effects. Fourthly, uchronia asserts the levels of temporal continuity and discontinuity that characterize specific societies, making perceptible the creation of foes, imaginary foundations, communitarian links, and invented traditions. Finally, uchronian thought offers insights on the ways we predict, memorize, accelerate and decelerate time and how we sew the threads that link past, present and future in intelligible ways.

### *Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust*

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological response or emotional expression, theorizing disgust became an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating interdiction, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of revulsion. Terror and horror movies, tend to epitomize both dimensions of disgust by focusing their attention either on the mutilated, raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hubris of the brilliant but mad scientist that aspires to play a demiurgic role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronenberg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as a suppressor of the traditional boundaries of the artificial-natural divide or the human-animal partition. Cronenberg's filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or sexploitation.

#### *Researching Young People and Sensitive Information*

This paper analyse an ethical dilemma experienced during fieldwork in a youth centre in Portugal. It argues that the revelation of particular kinds of information by some participants within qualitative research can present particular challenges, which in some cases could cause harm to participants or researchers. Consent and confidentiality are key principles of ethical research. Researchers tend to formulate studies to ensure that informed consent is obtained and confidentiality is protected. Less attention has been paid to the impact that ethical decisions and research processes can have on people's lives, or the ways in which participant disclosure can impact upon researchers. Attention will be paid to what should we do with particularly sensitive information given by participants.

Drawing upon an ethnographic research project undertaken in a context of social and material deprivation this paper attempts to explore a particular issue concerning 'uncomfortable' information disclosed during fieldwork. I was confronted by the information that a 16 year old girl, Diana, was working illegally and being exploited in a textile factory. To report this situation to the authorities was ethically in juxtaposition with confidentiality, which is related to data and information and with respect of personal privacy. Above all, emerged conflicting positions associated with the values and different types of *good*, which means that we are dealing with what is referred to as a 'grey matter' (Kennedy 2005). This does not mean that ethical decisions are taken based only on researcher's own criteria. Some regulation is important and suitable, however, certain complex situations are impossible to anticipate by regulatory regimes.

#### *An Integrative Model for Analyzing Strategic Corporate Social Responsibility in Portugal*

Capital increasingly takes the integration of corporate social responsibility (CSR) into account in the development of business strategy. Nowhere has this been more the case than in the European Union, where commissions on CSR have reported and made policy recommendations to the European Parliament.

Different firms adopt different CSR perspectives, from denial of any interest to commitment to a long-term CSR strategy for sustainability. The paper identifies levels of corporate commitment that we place on a continuum of what we call CSR maturity. Previous studies have neglected the relationship between different business strategies and the firm's degree of CSR maturity. The research considers the variables underlying commitment to strategic CSR by looking at major com-

panies listed on the Portuguese stock exchange. We are interested in how these companies formulate, implement, and align CSR with business strategy.

After a critical literature review of strategic CSR, we present a matrix and analysis grid that distinguishes different types of strategic CSR orientation, and assesses their degree of maturity. The paper includes the findings of a pilot case study that we will apply to our ongoing research.

The proposed model identifies six types of strategic CSR by looking at patterns in the company-environment relationship. This matrix serves as a diagnostic and improvement tool for the company to take advantage of CSR as a strategic force that can simultaneously create competitive advantage and social value.

The paper advances understanding of strategic CSR and proposes a model to evaluate the maturity of a firm's integration of CSR into its business strategy. The research holds special interest at a time when Portuguese capital seeks to balance shareholder pressure to find new markets and sources of profit with strategic decisions on whether to pursue CSR as a viable path to profitability and long-term sustainability.

#### *Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations*

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature's patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns.

The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

This paper was presented as a SEAD white paper, and supported by the National Science Foundation under Grant No.1142510.

#### *Social Origins and the Access to Public Higher Education in Brazil*

According to the well know MMI hypothesis (Raftery and Hout, 1993; Shavit and Blossfeld, 1993), the class inequality on the distribution of educational opportunities tend to decline only when attendance rates reaches saturation at given educational levels for the upper classes. Lucas (2001) challenged this view introducing the EMI theory which proposes that, even when saturation is achieved for a given educational level, inequalities tend to persist in a qualitative sense, with kids from privileged socio-economic background having more chances of going to the better schools or universities. This means that IEO had to be analyzed not only in reference to attendance to a certain educational level, but also in reference to which segment (or track) in the educational system the individual accesses.

This proposal aims at analyzing the association between social origins and educational destinations through the selection process of a prestige public higher education institution in Brazil. Drawing on the notion of tracking, we want to

evaluate (a) given the high competitiveness of the selection process, how is the association between social origins and chances of obtaining a place at this elite institution; and (b) if this association varies depending on which undergraduate course option the student applied for. Research has already shown how students from private schools have more chances of progression in all educational levels (Ribeiro, 2011; Montalvão, 2011) in the country, but the IEO between different tracks in public higher educational institutions in Brazil has never been analyzed before. Also this proposal relies on the use of data collected in the moment that the application is made, and it contains information on the entire universe of candidates on the selection process of this specific institution, which is another contribution to the empirical literature on the theme in Brazil, based mainly on cross-sectional household surveys.

#### *Examining the Long-Term Effects Familias: Preparando La Nueva Generación, a Culturally-Specific Mexican American Parenting Intervention*

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called *Familias: Preparando la Nueva Generación (FPNG)*, designed to increase the effects of *keepin'it REAL (kiR)*, an efficacious school-based drug abuse prevention intervention targeting middle school students. Randomized at the school-level, parents and youth in nine schools were assigned into one of three conditions: (1) control condition, (2) youth-only condition -receiving only *kiR*, and (3) parent + youth condition, -receiving *FPNG* and *kiR*. Youth and parents completed a wave 1 pre-test prior to implementation, a wave 2 short-term post-test after the last lesson, and a wave 3 long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in *FPNG* were examined. Findings indicate that participation in *FPNG* and *kiR* had a significant direct effect in lowering adolescents' amount of substance use for alcohol and cigarettes at wave 3 in comparison receiving only *kiR*. These effects, however, were completely mediated by anti-substance use norms – youth whose parent also received *FPNG* had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecocultural Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthening the efficacy of youth-only classroom based intervention. Because *FPNG* was designed with Latino parents and for Latino parents, *FPNG* is emerging as a curriculum that can positively impact familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

#### *Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin It REAL in Guadalajara, Mexico*

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, *keepin'it REAL (Mantente REAL)*, a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementation, a short-term post-test after the last lesson, and a long-term post-test 12 months later. Substance use measures were 30-day amount and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS regression models predicted short-term outcomes, while growth curve models with missing data imputation examined program effects on trajectories of substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes for youth participating in *keepin'it REAL* compared to youth in the control group. Growth curve models indicated that over time the effects of *keepin'it REAL* are gendered. Females in the treatment group drank alcohol significantly less frequently over time. Males in the treatment group, however, showed a relative reduction over time in the amount of marijuana used. This pilot study provides support for the global applicability of efficacious substance use prevention programs originally developed in one country, but also the importance of assessing for cultural fit and adapting the programs to achieve maximum efficacy. The results indicate that *keepin'it REAL* can be an effective tool in teaching drug resistance strategies and reducing substance use and dependency among adolescents in a major urban area in Mexico.

#### *From the Family to the Market – the Complexity of the Care Finance*

From the family to the market – the complexity of the care finance  
The problem of payment for the care delivered to old or/and disabled persons, because of its complexity, is rather difficult and not very popular. Simultaneously, it creates the significant element of the state's social policy, sometimes being shaped in the previous political regime and strongly connected with the constitutional guarantee of the special rights given to the dependent persons.

Dependency, despite the development of anti-discrimination legislation and the public perception of disabled, is still one of the main factors of poverty, the stigma and exclusion. Moreover, it affects not only directly a dependent person, but indirectly this persons friends and family, who (in many countries) are legally expected to deliver the care and become fully dependent on the system of public care services. Along the change of economic regime, we can observe the strengthen of the care recognized as a commodity. This care, no matter the source of finance (public or private) has to be bought on the market.

This paper presents the initial effects of the research grant focused on the theoretical model of financing the care delivered to dependent persons, especially in the situation of social structures evolution and resources limitation. This project finalizes the few-year studies on the original theory of the costs of disability, which systematize the expenses on disability policy and called for transparency and concentration.

The elaboration will focus on the financial situation of caregivers in different social systems. It will compare legal solutions across selected counties, the impact of the financial advantages and disadvantages for the family of dependent person, connections between public and private sources dedicated for care delivery. The discussion over types and forms of care will be tested introducing financial aspects as one of the recommendations.

**MARSTON, GREG\*** (QUT, [greg.marston@qut.edu.au](mailto:greg.marston@qut.edu.au))

#### *Rethinking the Marketisation of Australia's Employment Services*

In Australia the dominant construction of citizen obligation for the unemployed has legitimated a host of policies and practices, including 'strong paternalism', punitive financial sanctions and tightly scripted employment pathways that allow little room for the exercise of autonomy. Moreover, the Australian Government has devolved responsibility for the exercise of rights and obligations to a 'quasi-market' network of private and non-profit organisations in the form of Job Services Australia. The institutional design of unemployment policy combined with the privatisation of employment services has created a number of unintended consequences over nearly two decades of reform. The 'helping relationship' has been commodified, front-line staff discretion has been reduced and the employment outcomes for the long-term unemployed have seen little improvement. Incremental reform by successive Australian governments has done little to address the power imbalance and unintended consequences associated with disciplinary poverty governance. This paper seeks to examine how these processes and outcomes might be transformed so that employment assistance can become a key plank of a more just and respectful society. To this end, the paper will employ a historical and comparative analysis to problematize governance of the unemployed in Australia, reviewing recent evidence. I will argue that a new system does not have to abandon cross-sector governance. Non-profits can play an enabling role in the field of employment, but they must be freed from compliance burdens and strong paternalism that has subverted their capacity for public accountability, social advocacy and a mutually beneficial alignment of employer and worker needs.

#### *NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?*

Global social governance is increasingly characterized by complex and fragmented institutional arrangements. In this paper, we study the role of NGOs in these governance arrangements. In particular, we are interested in the question whether NGOs have the potential to be drivers of policy synergy or policy conflict. We understand policy synergy as a situation in which the interaction of different actors and their policies leads to more favorable outcomes than would have been achieved independently. Policy conflict describes then a situation in which the interaction of different policies results in more negative outcomes than if these

would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

#### *Ethics As a Professional Responsibility From a Higher Education Perspective*

Se presentan reflexiones provenientes de dos investigaciones doctorales en responsabilidad social universitaria. Por una parte el desarrollado en la Universidad de Valladolid en el cual se indaga sobre la percepción de la sociedad (stakeholders) acerca de lo que esperan de la Universidad. El segundo estudio desarrollado en universidades de 4 países iberoamericanos (Colombia, España, Perú y Chile) realizó una evaluación del aporte de la educación universitaria a la formación de una ciudadanía responsable. El estudio mostró datos que cuestionan el fomento de unos valores prosociales desde que accede a la academia el estudiante hasta que finaliza su grado.

Es de interés para esta ponencia el resaltar la necesidad de confluir en la denominada responsabilidad social de las universidades, aspectos que conllevan a la relación de diálogo con el entorno, y promueve en su mismo seno para ser una institución agente de cambio social en conducir a profesionales con sentido ético de responsabilidad y una ser instituciones que promueven un desarrollo socio-económico sostenible y que favorecen la progresiva disminución de las desigualdades no tan solo a nivel global si no también en su entorno cercano.

Junto a la presentación de reflexiones sobre los estudios doctorales, se señalarán algunas de las directrices internacionales emitidas por organismos como la UNESCO o la OECD en base a las cuales se señala el necesario rol de que la educación superior se alinee con los objetivos del milenio, y capacite en competencias no solamente técnicas sino de carácter transversal y valores solidarios. Considera la perspectiva del presente trabajo la necesidad de progresar en modelos de evaluación de responsabilidad social a nivel interno y externo como medida que garantice a la sociedad que se da una transparencia en la misión y visión de las universidades, y su práctica hacia la sociedad y en su malla curricular.

#### *Managing Organisational Religious Diversity in Finland*

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state's involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularisation. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not replace historical church-state relations, but it works alongside it. The paper argues that in order to analyse how states' aim to regulate and manage contemporary religious diversity, we should look at how the historical church-state relations function together with new forms of governance networks.

#### *Impacts of the Financial Crisis on Family Trajectories: The Case of Living Together Apart Couples*

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.).

The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these "living together apart" situations in USA and France with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children's sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

#### *L'appropriation Des Réseaux Sociaux : Des inégalités Sociales Et Culturelles ?*

Dans le cadre de la thématique « Technologies de communication et inégalités », nous proposons d'analyser les inégalités sociales et culturelles révélées dans l'appropriation des réseaux sociaux par les usagers.

Pour repérer certaines de ces inégalités, un focus est réalisé sur quelques situations extrêmes de violence et domination sociale dans l'élaboration du processus interactif de construction de l'identité numérique sur Facebook et Spotted/Facebook. Grâce à l'analyse de profils, commentaires et tags, diverses formes de stigmatisation sociale, injure et diffamation (espace à la fois privé/public) sont classifiées, et interrogées comme autant de traces/marques faisant irruption dans ce processus de construction identitaire.

En quoi l'ordre de l'interaction (Goffman) est-il opérant et reproductible dans la négociation de cette mise en scène de soi en ligne ? Comment articuler le concept de face avec cette représentation de soi socio-techniquement contrainte ? Le profil de ces usagers en termes de capital social et culturel – ses déficits ? – en ferait-il les nouvelles victimes sacrifiées dans l'affirmation du lien social ? La complémentarité online/face-à-face est importante. Ré-explore le concept d'empathie (avec son corollaire, le partage des émotions et affects), interroger l'éthique du visage (Levinas) et son devoir de responsabilité permettent de comprendre l'évolution de ces interactions à distance. Et si les TIC participent de la montée de l'urgence généralisée (Jauréguiberry, Aubert), nous montrerons combien l'injonction (la fatigue ?) à participer à ce flux informationnel génère diverses formes d'instabilité dans le travail sans cesse renouvelé de cette construction identitaire.

Exploitant l'hypothèse selon laquelle la colère est plus influente pour s'exprimer sur Facebook que la joie ou la tristesse, nous avons ouvert un blog pour recueillir des témoignages d'usagers victimes ou témoins. Ces données empiriques sont complétées par des entretiens semi-directifs (n= 20) et des focus group.

#### *God Is Argentinean, and Also the Pope!" Catholicism, Popular Religion and the National Imagination*

The arrival of Jorge Bergoglio to the Holy See has introduced a number of changes in the relations between the Catholic Church and the State in Argentina. While traditionally, these relations have been characterized by the preferential status of Catholicism as quasi-official religion and its active presence in the government's decisions, in the last decade it was noticeable a succession of conflicts between the Church and State. However, few days after the coronation of Pope Francisco, government discourse changed radically, emphasizing the importance of having "a Argentinean Pope." The media and various forms of popular expression (graffiti, jokes, cartoons, montages on Facebook, etc.) express how unprecedented and unexpected this situation was, from a key that combines various representations of national culture.

In this new picture, the traditional and conservative homology between Argentina national identity and Catholicism, acquires new features, especially at the level of popular religion.

In this work, I will observe a specific matrix that allows to relate to the sacred and the idea of nation: soccer. Soccer appears as one of the matrixes that model the relationships with the sacred: not as metalanguage, nor as religious meta-

phor, but anchored in the specific experiences and particular semantics and their influence on the imagination of the nation and of religion. Soccer, as a matrix, helps us to problematize hegemonic definitions of religion and national identity.

#### *Black Ethnicity and Rethinking Assimilation Theories: A Multilevel Analysis of Housing Values Among and Between Whites and Native- and Foreign-Born Blacks in the U.S*

Black-white residential segregation is still a reality in America. Research shows black homeowners are more segregated from white homeowners than black renters are from white renters. The findings have been interpreted to mean blacks do not benefit as much from home ownership because home ownership does not lead to greater access to white space. Implicit in this interpretation is the mistaken belief blacks ultimately desire residency in white neighborhoods and home ownership in said neighborhoods is evidence of the completion of the assimilation process. Focusing almost exclusively on home ownership as an indicator of assimilation is inadequate. To accurately understand whether blacks are assimilating, housing values must be analyzed. If blacks are assimilating the gap between them and the dominant racial group should decrease over time. Using census-based data for the past few decades, the present study examines the following research questions: 1. Are there racial disparities in housing values for blacks and whites and how have they changed over time? 2. Are the racial disparities larger or smaller between whites and foreign-born blacks or between whites and native-born blacks? 3. What social and demographic variables account for the variations in housing values by race and by ethnicity? 4. What are the theoretical and methodological implications of the study findings?

#### *Gender Inequalities in Health and Socioeconomic Status: Analysis through Healthy Expectancies in the Basque Country (Spain)*

In the Basque Country, like in most societies, women survive longer than men but are less healthy. However, several authors have criticized this fact as being too simplistic and not taking into account that men and women are heterogeneous groups. It is necessary that the study of gender inequalities in health consider other variables such as educational level, social class or age that can explain this gender gap.

The aim of the present paper is to examine gender inequalities in health and their change in the Basque Country considering two variables of socioeconomic status, and healthy expectancy as the main result variable, which integrates health and mortality. This measure also allows separating life expectancy into years of life in good and poor health. Educational level and a deprivation index of the residence area were used as socioeconomic status variables. The last one summarizes four characteristics of census tracks (unemployment, manual and eventual workers, insufficient education overall and in young people). Health expectancy by sex and each of the socioeconomic status for different ages was calculated in two periods (1996-2001 and 2001-2006).

Women lived more years than men at all ages, periods and social groups, but the gender gap varied by age and social position. Thus, differences between men and women in life expectancy were greater as the level of education decreased or increased the deprivation index. The difference in the number of years between men and women was lower when considering only the years in good health, so that women lived more years in poor health. The gap between men and women decreased in the second period comparing to the first.

A comprehensive vision which integrates gender and socioeconomic inequalities is necessary to adequately understand the health differences between men and women.

#### *Gender, Ageing and Everyday Life: Visually Representing the Body*

As people grow older, daily norms and practices can be disrupted, the taken for granted nature of embodiment challenged, and people may increasingly be required to make sense of bodily changes in order to maintain and/or re-negotiate their identities. Drawing on the findings from an empirical study *Photographing*

*Everyday Life: Ageing, Lived Experiences, Time and Space* funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the 'everyday' appearance and body practices that participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential disruptions, bodily betrayals, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual. We argue that these visual representations, and participant narratives discussing their daily practices, indicate that the body is a process of 'becoming', a continual bodily 'project' (Gill et al., 2005), which is both socially and physically constructed through the practices participants engage in to maintain, discipline, and work on and with their bodies. The paper overall highlights participants' negotiations of, and sometimes resistance to, dominant ideas and discourses surrounding gender, ageing and the body.

#### *Cultural Representations of Widowhood: Social Media and the Declaration of a Status*

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life courses. Cultural gerontology promotes further enquiry outside mainstream sources of scholarly knowledge in the social sciences, to reveal an even more complex and varied picture. Theatre and film have emerged in some cultural contexts as powerful tools to inform and emancipate widowed women from degrading widowhood rituals and norms. In addition, the rise of social media, with blogs, websites and interactive messaging, has transformed public representations of widowhood. While older women in particular have traditionally had access to a reference groups of widowed age peers, the defining quality of those interactions is different from the new world of social media. As with structured 'widow support groups' in the past, interaction begins amongst strangers, brought together in structured situations through the widowhood status they have in common. Through social media, contact begins more anonymously (visiting websites, reading blogs) or highly publicly (creating a website, authoring a blog, filming an online video) and then may lead to interactions and connections beyond one's local community – through 'widow conferences' and meetings, with some becoming sustained interactions. In historical context, one thus sees, over the period of about 75 years, cultural shifts from the public 'wearing' of one's widowhood ('widow's weeds' and other aspects of dress and appearance) – that ended by the 1930s; to the subsequent 'invisibility' and denying of widowhood and bereavement for some decades; to use of social media as a declaration or even reifying of widowhood, especially amongst younger women, those for whom widowhood is off-time, or for those experiencing dis-enfranchised grief.

#### *Indigenous Female Farmworkers in Northern Mexico: Workers' Rights Violation Under the Veil of Better Jobs*

In Mexico the implementation of macroeconomic policies has resulted in the indigenous population experiencing great disadvantage, being deprived of benefits and subject to profound inequalities. Despite the fact that in the northern Mexican states living conditions are generally better than in the rest of the country, development is unequal and inequitable. This situation particularly impacts the female indigenous population that works in the agricultural fields in northern Mexico, as reflected in their low educational levels, unemployment or unstable employment, inadequate housing, poor nutrition, lack of social support and great poverty.

This paper discusses the point of view of female indigenous farmworkers in terms of social inequalities and their effect on living conditions. It is based on research conducted over three years in an agricultural valley of the state of Baja California, regarding working conditions, workers' rights and the health of indig-

enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpensive work force, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working and salary opportunities. The socioeconomic vulnerability in which this population is found is reflected in job insecurity and the inability to defend themselves against the state.

#### *The Precarization of Women's Living Conditions in Spain (1995-2010): The Impact of the Crisis and Beyond*

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women's situations in a time of crisis, we need a longitudinal analysis that show us the weakness of women positions and the precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women's living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complex and research around that hypothesis. In a first moment, we will analyse women as a precarious group as a whole by using other recent researches done in Spain around mainly the work and labor conditions of women (Borderías, Carrasco y Torns, 2011; Torns, 2012) and the exploitation of statistical data, but we will try to look into differences among women depending on other social positions (employment, maternity, age, origin...). It is an attempt to show empirically the feminist theoretical proposals around the diversity of women by examining which variables explain more about those differences among women. In a second moment, we will centre our attention on the socio-economical dimension of precarity (employment, income and education levels) to analyse the paradoxes of a high level of precariousness among women in spite of the increase of women acceding the work place. This paradox certifies that the incorporation of women to the work place is always done in conditions of precarization of jobs (temporality, partial jobs...); and that this process might not be separated from an analysis of major changes in the work place (politics of flexibility) that also affects those who were until now considered as "stables"

#### *Protest Cycles and Squatting Practices: Socio-Spatial Structures or Activist Agency?*

There are several public myths about squatting houses and social centres. One consists in ignoring the long lasting history of squatting practices and movements over the decades. A second one considers squatting as a simply legal issue which should be either persecuted either legalised. Finally there is a general image that depicts squatters as the unique agents, authors and responsables of the squatting movements. This paper aims at providing empirical evidence against those three myths. First, I recall on a complete data base of all the squatted social centres publicly visible in the city of Madrid since the decade of 1970. Urban location, duration of the squats and types of ownership of the buildings, shed light over the patterns and socio-spatial conditions. Second, mass media coverage before and after the recent wave of squatting in Madrid (connected to the M15 movement), serve to identify new and external conditions. Additional documents and interviews help to understand the deep political tradition and the experiences that created a favourable scene for squatting. Usually hidden legal tactics and the predominant kind of interaction between squatters and local authorities also shaped the explanatory context of the evolution of the movement. There is a more general consensus about the role of the housing shortage and urban speculation in the legitimation and motivation of squatting, so I won't develop it here. Instead, I will emphasise the theoretical framework about socio-spatial structures of opportunity and protest cycles as the best way to overcome the shortcomings of the abovementioned myths and also to provide comprehensive explanations of this and similar urban movements. Finally, the overlaps and distinctions of this approach in relation to previous theoretical references (Castells' *The City and the Grassroots* and different authors about *The Right to the City*) will be discussed.

#### *Contemporary Japanese Migration Process in Spain: Cultural Boundaries and Social Networks*

The relationship between flow and fixity in globalization literature, leads to questions about how a sense of belonging is achieved, especially when given concepts such as home, family and nation are becoming detached from physical boundaries. In adding to the literature on migration and belonging, this project focuses on how Japanese immigrants in Spain build new social networks and questions how this process changes the way they relate to Japan and their Japanese identities.

In the history of Japanese migration belonging and identity have been managed in different ways. From the *businessman* migration system (1970s and 1980s) to the *voluntary migrants* (1990s, nowadays), migration reasons, interests and lifestyles have changed a lot. However, voluntary migrants are underrepresented in the literature on Japanese migration, and as they do not have the same institutional support structures as the businessman group, it is important to understand the methods through which they create a sense of belonging.

This project employed a grounded theory approach and collected data through semi-structured, in-depth interviews with 44 Japanese living in Spain. The preliminary outcome suggests that Japanese who have created solid support networks with predominantly non-Japanese clusters have a firmer grasp of their Japanese identity. Conversely, immigrants with few Japanese links are more willing to identify their home in the host society. As a result, a Spanish-Japanese identity based on the reminiscence of Japanese traditions and the willingness to become part of the host society is rising.

By focusing on the experiences of Japanese immigrants within the host community the research results provide insights into the construction and consolidation of social networks and how they contribute to a new sense of Japanese identity. Understanding this process and the relevance of identity within the Japanese community can help prevent inter-group and social conflicts as well as promote a multicultural society.

#### *From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province*

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. Social network play an important role in both the decision to emigrate and the choice of location. Related to migrants and its social net, very little is known about patterns of integration and community participation in rural and low population density contexts in Spain.

This communication explores these issues and is based on a study, in the province of Teruel (Spain), using a sample of 324 Latin American migrants over the age of 18, selected by sex and place of residence. A standardised test – the Musitu

and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAS analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language etc., the peer group, the family and the neighbourhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous population and the immigrants. Prejudices and stereotypes are easily developed in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

[maria.martinezi@urv.cat](mailto:maria.martinezi@urv.cat))

#### *Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)*

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the late 1980's, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrated men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that son's and brother's migration along with other structural changes on sending societies has broken down the traditional system of protection based on son's inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improved their situation, without establishing direct causality relations as women's paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men's migration to USA and finally *usos y costumbres* (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

#### *On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in PEPfar*

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver's metaphor on communication as exchange of information and develops Buber's and Peters' ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness and communication is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theodicy is not the end of the ethical because the ethical is a space of profound intimacy, beyond preachment. Extreme cases of annihilation of otherness can't be described as rational in some cases and not others, and have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patriarchal order, implantations, involvement of the ego, dehumanization, isolation of larger contexts, traumatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention/topic shift, emotions such as feelings of awe, and art. Case analyses of negotiation and decision-making in PEPfar are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and

psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

#### *Science without Borders: An Academic Mobility Program from the Brazilian Government*

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a post-graduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the *Science Without Borders Program* with the goal of sending 100,000 undergraduates, graduate and science/technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales who want to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented looks to analyze the results of the program as well as the possible difficulties it faces in achieving its goals.

#### *Collective Rights to Life and New Social Justice: Lessons from Latin America*

For a long time, the basic legitimization of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is generating some reactions that question the general rights of privatization. Additionally, they suggest a new social justice hierarchy that underline the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia's, are interesting ones to reflect about this change of development paradigms.

#### *Intellectuals and Development: Reflection from Diverse Latin America Statements*

**Intellectuals and development: reflection from diverse Latin America statements**

**Paulo Henrique Martins**

**Summary:** In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of diverse national statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic deterioration was not only an economic problem but a political issue. Thus, it is impossible to generalize this understanding of development to other continents but it is very important to try to compare some different processes. The second point is that the idea of development in the region is linked to the idea of power system, because what is developed is not the country but the power. Then, in this sense, it is possible to define some different development patterns in Latin America that reflect some possibilities of alliances between social and political forces that contribute to organize national power systems in the last decades. To demonstrate our papers we will try to show the differences and similarities between Brazilian and Bolivian cases. It is important to show the relationship and

differences between economic and political spheres and about global and local views, from different contexts.

### *Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren*

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional help. Their financial aid at critical junctures is not uncommon. In the absence of or inability of parents, the adult grandchildren generally provide care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interview method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandparents than with maternal grandparents. Likewise grandfathers have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

### *Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city*

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolical and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of privateness/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of "feeling at home".

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies practices regulation - are crucial elements affecting sociability (neighbours relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promoting interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork: a building hosting only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social "superdiversity". The ultimate aim of the paper is to show how "hard" elements (material and socio-economic conditions) are more relevant than "soft" elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

### *Pakistani Immigrants in Central Brianza's Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District*

The paper focuses on Pakistani immigrants' social emplacement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The diffused territorial model of immigrant incorporation in Italy – with a significant pres-

ence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogenous area in terms of immigrant composition, economic structure, political and cultural tradition. International migration has become relevant here since the early '90s: in Desio, migratory flows from Pakistan have become more and more significant, producing one of the higher concentration of Pakistani citizens in Italy. Immigrants found employment as both unskilled and specialized workers in the small, medium size factories which stretch all over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistani Punjab. The paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place through ethnic and non-ethnic forms of incorporation shaped by regulatory practices of local administrations and non-state actors, like associations and NGOs of a catholic background. The data collected (through ethnographic fieldwork and qualitative interviews with immigrants and privileged observers) show the ambivalence of such forms of incorporation, in which different features of the immigrant population – such as status and socio-economic gaps, habits, cultural traditions and migratory paths – together with the local government practices and discourse, coalesce in defining different trajectories of immigrants' emplacement in the local society as well as transnational social spaces and urban fields.

### *Mobile Precarious Workers? the Case of Post-2008 Latin American Onward Migration from Spain to the UK*

Contemporary studies on intra-EU (European Union) migration have paid insufficient attention to forms of secondary mobilities, either in the case of mobile European citizens or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from Spain to the UK post-2008. Existing studies have found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and 25 semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants' hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European citizenship, settlement in the UK becomes fraught with initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants' socially disadvantaged position as precarious workers in the UK.

### *"El e-Government Como Recurso Para La Construcción y Consolidación De Liderazgos Presidenciales. Perspectivas Actuales y Tendencias Futuras En América Latina"*

La problemática de los liderazgos presidenciales (LP) constituye un eje de estudio relevante para la Sociología y la Ciencia Política, situación reflejada en la abundante producción bibliográfica existente. Empero, la relación entre construcción de LP y E-Government (EG) ha sido trabajada en forma insuficiente, advirtiéndose un vacío académico en el análisis del impacto de la tecnología sobre los sistemas políticos en general y la construcción de liderazgos en particular. Las actuales perspectivas académicas sobre liderazgo se han focalizado en el abordaje de la disponibilidad de recursos de poder (institucionales, sociales, financieros, de estrategia política y apoyo ciudadano) que un presidente posee o es capaz de generar, pero no han aportado categorías analíticas innovadoras que aborden el impacto del EG en la construcción, consolidación y debilitamiento de sus LP.

Esta investigación apunta a corroborar que el EG supone no solamente un cambio de paradigma en la teoría existente sobre liderazgo, sino también el surgimiento de un nuevo recurso de poder (RP) al que apelan los presidentes latinoamericanos con el propósito de obtener legitimidad en sus iniciativas políticas. En esa dirección, el EG deviene un mecanismo que supone toda una renovación de los canales de comunicación política, permitiendo a los Jefes de Estado el acceso

rápido y directo a franjas masivas del electorado, el fortalecimiento de su relación con la ciudadanía y la posibilidad de disponer de cuantiosa información para la formulación de las políticas públicas.

En definitiva, el EG constituye un RP que contribuye a generar cambios en la modalidad de ejercer el poder político, deviniendo un instrumento clave en el incremento/deterioro de la capacidad político-institucional de un líder presidencial y dando origen a un nuevo escenario de comunicación, acción y movilización política, en el que cobran entidad los LP y los regímenes democráticos de América Latina.

#### *Paying Bonuses for Safety: Pitfalls and Proposals*

Recent events including the Global Financial Crisis and the BP Texas City refinery disaster have triggered a renewed interest in the use and impact of financial incentive structures. Analyses of the BP Texas City refinery disaster have highlighted that incentive structures for senior executives worked against process safety. Equally, the Global Financial Crisis was found to be precipitated by people whose behaviour was a direct consequence of their financial incentive regime.

Financial incentives have long been used to influence professional values and practices, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasised a breadth of human motivation beyond self-interest.

This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations are seeking to manage complex technologies safely. We examine the extent to which people respond to financial incentives in this environment, the potential for perverse consequences, and approaches that most appropriately focus attention on major hazard risk. This analysis is based on qualitative interviews and document analysis on the incentive schemes in oil, gas, chemical, and mining companies.

We argue that despite discomfort with the concept that safety decisions might be influenced by money, financial incentives do influence priorities and behaviours. We conclude that financial incentives matter in corporate environments because they do not rely for their effect on economic self-interest alone. Instead they tap a number of human motives, among them the need for approval, the need to belong and the need to be recognised as making a valuable contribution.

**DORN, A. WALTER** (Canadian Forces College)

#### *Cultural Imperatives: Peacebuilding in Afghanistan through Local Culture and Customs*

As the 2014 deadline for withdrawal of coalition forces approaches, Afghanistan's fate remains uncertain. Officials have long concluded that the war in Afghanistan could only be won through a negotiated settlement and not militarily. After years of shunning negotiations, in 2011 coalition forces pursued talks with the Taliban, however these ambitious plans have now been deemed as being too unrealistic to achieve by 2014. To promote reconciliation and unity the socio-cultural factors that enable communication among conflicting parties is important. Communication is also a decisive factor in social integration as well as the strengthening of social solidarity in society. In the case of Afghans, communication in conflict resolution is central to the concept of *jirga* and is deeply embedded in Afghan history, practice and people. *Jirga* refers to the gathering of people for the purpose of consultation. Its integration into national politics is a reflection of its prevalence and success as a mechanism of conflict resolution among most Afghan ethnic/tribal groups; "it has national currency." Although the Karzai administration made use of this "national currency" in 2002, the *Emergency Loya Jirga*, it is evident that it failed in its attempts at national reconciliation due to a multitude of factors. This paper will investigate those factors while examining peacemaking/peacebuilding initiatives in Afghanistan, through the use of Afghan indigenism and methods of local dispute-resolution for reconciliatory purposes. While there is a continuing need for *jirga* in resolving local, tribal and national conflict, the socio-cultural significance and political potential of *jirga* is ignored as it has only minimally been adapted to the current efforts in Afghanistan. This paper will investigate the feasibility of a national *jirga* process and how it can be more inclusive and widely used, representing both men and women, initially from a grass-roots level and ultimately to a national level.

#### *Risk Management: The Effects of Militarization and Surveillance within the Canadian Context*

Since the inception of the 'war on terror', Canada has been among the group of Western democratic countries that have extensively depended on militarization and subsequently relied more heavily on surveillance technologies to monitor its citizens in the name of security. It can be contended that the purpose of surveillance technologies and the militarization of Canadian society post-9/11, is a precursor to greater government control; constructing ideal citizens that are 'governable' and can benefit the government by giving up certain freedoms, supporting government initiatives aimed ostensibly at securing citizen safety. This logic fits in nicely with narratives that argue there is no end to the 'war on terror' and therefore countries like Canada will continue indefinitely to militarize and rely on surveillance technologies. This proposed paper will examine sociologically the relationships between on the one hand, popular discourses and practices of militarization, and on the other, the adoption of surveillance systems whose software and hardware have become routine aspects of negotiating everyday life for all citizens. While government uses such risk management knowledge to seek security, social and other inequalities tend to be reproduced. This paper will investigate the effects of Canadian political discourses surrounding militarization as the site for government control on the construction of Canadian identity. Using critical discourse analysis (CDA) which specifically emphasizes a sociological (rather than economic) framework, the rise in militarization, its links with surveillance, and its effects on the reconstruction of Canadian identity will be investigated.

#### *Governance of Pension Funds Investment Decisions Between Financial and Social Returns*

Funded mode of pension financing has been a common ingredient of pension reform agenda in the context of international efforts to cope with demographic and economic challenges that pension systems face. However, a central concern involves the consideration of additional risks in funding and how these are addressed in order to maintain core pension system objectives, like adequacy, security and intergenerational equity. Governance, including regulation of investment decisions around pension resources is a crucial variable to these concerns, given that related decisions carry risks and implications for pension system objectives. Despite an increasing interest in the governance shaping pension funds decisions, evaluations of the latter are overwhelmingly driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. The paper argues that research on pension fund governance is either driven by economic rationalities, or focused upon insulated aspects of governance or regulation or the role of actors involved into decision-making. Within the latter, I aim to adopt a holistic approach in order to deconstruct the way in which actors interpret regulations and proceed to pension funds investment decisions, along with their implications for pension systems objectives.

#### *Beyond the Official Version? Israeli Teachers' Perspectives on Citizenship Education*

In societies under protracted conflicts the challenge of teaching about citizenship is inevitably overshadowed by the conflict itself. Stemming from a larger research project, aiming at understanding the dilemmas and challenges of citizenship education at all levels of the Israeli educational system, and across its various branches (general, religious and Arab), this paper is set to examine how teachers circumvent these difficulties and confront the challenge of teaching about citizenship in a society where citizenship is stratified and divided. More particularly, we offer a thematic analysis of in-depth interviews with teachers, from which we learn on the ways teachers, while not avoiding the concept of citizenship altogether, employ more multi-dimensional (educational) acts towards citizenship giving it different meanings and shaping it in various ways as either 'localized' or 'integrative' conceptions (or in between). This, we propose, allows the teachers

to deal with the challenges of teaching about citizenship, yet without directly confronting the system that requires from them to teach only the official version of citizenship. We specifically explore, based on the teachers' own perception, what practices are used in delivering their own conceptions of "citizenships", and how they confront the explicit and implicit supervision of the Ministry of Education.

**MAST, JASON\*** (University of Warwick, [j.l.mast@warwick.ac.uk](mailto:j.l.mast@warwick.ac.uk))

#### *The Ick Factor: The Resignification of the Grasshopper*

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlins's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahlins (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlins was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into objects connoting nourishment, pleasure, even succulence. An insect on an American dinner plate, except in rare and select places, represents "matter out of place" and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming "the ick factor – the eyes, the wings, the legs... people won't accept it beyond novelty," one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into "mini-live-stocks," ones that are interpreted as not merely edible but as desirable.

#### *Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia's Civil War*

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from a theory-driven empirical analysis of two communities that, in the midst of Colombia's civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups' violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies, they differ in the form this strategy took: while the PCSJA unilaterally declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to chose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. The study draws on both quantitative and qualitative data. A dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops, inform the analysis of both the emergence of noncooperation and its variation. These findings are the basis of a larger research project that aims to theorize the emergence and sustenance of community-based forms on non-cooperation in irregular civil war as grassroots efforts to build and sustain peace in the middle of war.

### TG04-943.3

**MASULLO, JUAN\*** (European University Institute, [juan.masullo@eui.eu](mailto:juan.masullo@eui.eu))

#### *Coping with Risk and Uncertainty in Civil War. Community-Based Noncooperation Strategies in Colombia's Civil War*

Although commonly portrayed as either mere victims or resources to be plundered, civilians in warzones face a wide number of possible responses to armed groups' demands and war strategies. Studies dealing with the micro-dynamics of civil war have informed us extensively on some of these responses,

such as displacement, obedience and active collaboration. However, other responses such as resistance and defiance have attracted scant scholarly attention. Despite of the high risks involved and the high levels of uncertainty outcomes are subject to, unarmed civilians have chosen to defy armed groups through different strategies of noncooperation. This paper presents findings from a theory-driven empirical analysis of two communities that, in the midst of Colombia's civil war, chose noncooperation as a strategy to seek protection from armed groups' violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). The aim is to explain what drove these communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (trans)formation, anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. A unique dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops with members of both communities, inform the analysis of the emergence of non-cooperation in warzones.

#### *Japan's New and Old Concept of Ethnic Policy with a Comparison to a Multicultural Policy*

Globalization has changed Japan's population composition significantly by the 1990s as a result of the arrival of a relatively large number of foreign workers for the manufacturing industry. This prompted the development of the concept of "Co-Living among Many Cultures" to facilitate the settlement of new foreign residents who have come mainly from South America and China. Many of the residents have taken up permanent residence or citizenship, instead of remaining as foreign residents on temporary visas. Japan's large and long settled Korean community who have been treated unjustly in the past are reacting cautiously to the new concept of "Co-Living Among Many Cultures".

A new issue affecting the experience of Japan's growing Chinese population is the rise of China-Japan tensions which also poses a challenge to the new co-living policy. A major aspect of the troubled relation is the emergence of transnational political action, including the Beijing Olympic torch relay incidents. Such incidents, as widely reported in the Japanese media, have triggered concerns among Japanese in general who treasure "Wa", or harmony and peace, a traditional Japanese value and practice.

In this presentation, I would like to point out what the Japanese new concept "Co-Living Many Cultures", the traditional philosophy "Wa" and the Australian "Multicultural Policy" concept have the common idea despite significant differences in demographics and ethnic relation policies in the in two countries.

**MATEVSKI, ZORAN\*** (Ss. Cyril and Methodius University, [matev@mt.net.mk](mailto:matev@mt.net.mk))

MATEVSKA, DUSKA (Ss. Cyril and Methodius University in Skopje, R. Macedonia)

#### *Building the National Identity through the Religious Identity in R. Macedonia*

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: "love all other nations as you love your own". We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives of one nation follow one faith (almost with no exception each ethnic Macedonian is Orthodox, such as every ethnic Albanian is member of Islam). But, there are a few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are ethnic Macedonians who are Muslims. Typical examples for this are Torbeshi who are ethnic Macedonians who follow the Islam religion. But most of them on the last census declared themselves as ethnic Albanians, even though they don't know the Albanian language. This proves the fact that the religious identity is a key factor in forming an ethnic identity. The appearance of such strong ethnic emotions can be expressed only if the religious feelings are weakened. That is what's happening in the Macedonian state, despite the influence of its basic religious institutions (Macedonian Orthodox Church). The Orthodox Church has the main role in preserving the national identity of the Macedonian people in their entire history. It kept and secured the Macedonian identity in the most difficult moments. It seems that in 1991 it was forgotten and suddenly everybody in R. Macedonia was proud of being a subject of the Macedonian ethnic community. In that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.

*Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead*

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Sustainable development aims at environmental protection, social well-being and economic development. Over the years, corporate houses have realized that it is in the interest of business to operate within a healthy environment and economy and that sustainable development must be incorporated into the vision, mission and policies of business. This paper highlights the initiatives taken by leading corporate houses for sustainable development. These corporate include Apple, Cipla, McDonald, Philips, HUL, Reliance, Tata Group, Panasonic, ICICI Foundation and Bajaj Group. The study reveals that environmental excellence has become a part of corporate strategic thinking. However, in spite of all the initiatives with respect to sustainable development, the picture is dismal and shocking, not only in India, but world over. The three goals of sustainable remain unachieved to a significant extent. It is reported that 40% deaths globally can be attributed to air, water and soil pollution. 925 million people are under nourished. 30 trillion kg carbon dioxide- equivalent greenhouses gases is released into the atmosphere. Further, rural-urban inequality is increasing while 15% of the world's population goes to bed hungry. The author suggests the need for adopting a holistic approach towards sustainable development and the relevance of Mahatma Gandhi's Universal Trusteeship concept. The culture and mission of the business enterprise must be aligned together. A sense of mission and social goal for the organization needs to be developed. The paper suggests a model which takes into account the economic, technological, social, environmental, value-based society, learning and adaptability aspects of sustainable development which rests on the belief that sustainable development is a pervasive philosophy to which every participant in the global economy (industry, community, government, NGO's etc.) must subscribe.

*Structural Social Support: Insights from Sociograms of Aging Individuals*

The objective of the present study was to understand the structural social support and social network of the aging persons using sociograms. The study was based on a sample of 139 Indian respondents which were identified using snowball sampling technique and following clear inclusive and exclusive criteria of selection. The sample was classified on the basis of working status (pre-retired, retired and post retired) and gender. Respondents completed the short form of Social Support Questionnaire (Sarason et al 1987). The items assessing the number of people were considered for exploring structural social support. The sociograms were analyzed (one sided social dependence arising from the respondents towards others) on the basis of number of persons in social network, frequency of dependence and nature of dependence.

The number of persons remains similar across working groups and gender however the nature of dependence changes dramatically. It is revealed that social network of the pre-retired group is predominantly family centered where spouse is perceived as most important support system followed by children, friends, relatives and siblings. For the retired persons, spouse support is critically important. Contrarily, the post retired depend more on themselves under different situations which require support from others. The importance of supportive neighbors and same sex friendships increase significantly for post retired males whereas family (children, grandchildren and relatives) remains the pivotal support system for the post retired women. Changes in the nature of structural social networks with respect to dependence on others, gender diversity in support networks, frequency of seeking help, availability of support, intergenerational support and emergence of personally satisfying leisure activities emerge as a result of aging process and remain different for both men and women across time.

[shraddha\\_mathur19@yahoo.co.in](mailto:shraddha_mathur19@yahoo.co.in))

*Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights*

**Subjective Assessment of Happiness and Dimensions of Social Support: Empirical Insights**

Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons and functional: level of satisfaction) of ageing respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City, (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Subjective Happiness Scale (Lyubomirsky & Lepper, 1999) and short form of Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness ( $r = .291, p < 0.05$ ) for ageing males whereas functional social support is positively and significantly related with subjective happiness ( $r = .427, p < 0.01$ ) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with only functional social support ( $r = .516, p < 0.01$ ) for retired persons. However subjective happiness is unrelated with both the dimensions of social support in case of pre-retired and post retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

*The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas*

In this paper we investigate how Brazilian women's participation in transnational feminist networks and the UN Conferences on Women and Brazil's ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: third wave of the 1980's and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women's movements. The third wave of the Brazilian feminist and women's movements encompasses the civic participation of Brazilian women in the transition from a military dictatorship to a democratic regime as well as participation in the transnational women's movement and Brazil's ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive managerial organs for such policies at the national (the national Special Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism – currently reflected in the intersectionality of gender, race, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalizing the local and localizing the global should be at the center of both feminist activism and scholarship.

*Informal Support Networks and Female Career Continuity*

Female Japanese workers who have chosen to play multiple roles, such as those of wife, mother, and paid professional, often experience difficulty in career continuity. Some research and theory suggest that public policies that promote gender equality, childcare, and nursing leaves have positive effects on the career continuity of working women. Nevertheless, the impact of informal support has not been empirically evaluated.

In this exploratory study, I focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personal or gender issues in 22 Japanese companies or associations. My major findings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering

emotional support in times of trouble, and providing role models for working women.

Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

#### *Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?*

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by "their own choice". Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

#### *The Issues Related to Care-Giving Conducted By Male in Japan*

The issues related to care-giving conducted by male.

-Through the example of a husband and the son caregiver participating in the self-help group-

MATSUI□ Yuka

Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three people of the family caregiver is a male.

Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience.

As a result, I understood that a male caretaker faced various problems.

Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem.

So they had a risk of the abuse for the family.

And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.

#### *Career Plan and Gender Norms Among High School Girls in Tokyo*

In sharp contrast to many North American and European countries, the M-shaped pattern of labor force participation rate of Japanese married women has been so far persisting to a substantial extent. Due to the decrease in productive age population and reluctance to opening the labor market for immigrants, Japanese policy makers regard married women with a young child as one of its remaining human resources to be tapped, and propose some policy options which give an incentive to join a paid work by reducing their burdens of unpaid early child care. On the other hand, Hakim (1992) suggests that the girls' anticipation of their own future career (career plan) affects their labor market participation in middle-ages. According to her inference, career plan at the time of early adolescence among girls has an influence on the decision-making about their labor force participation of decades later and therefore gender division of labor as well.

The present research aims to explore what kind of factors relates to the attitude to their career plan among female high school students. In particular, our attention lies in its relationship with gender role norms. The research conducted a self-administered survey to second year students (at the age of 15 or 16) who attended ten public high schools in Tokyo and analyzed the data consisting of female respondents with multinomial and nested binomial model. The results are basically supportive of Hakim's "graceful slaves vs self-made women" hypothesis. In addition, although the constraint to our data collection makes it less assertive, the job status of respondent's mother affects daughter's career plans.

#### *Heritage Language Maintenance in Old and New Japanese Communities in Mexico*

This paper reports the first sociolinguistic investigation of heritage language maintenance in two distinct types of Japanese migrant communities in Mexico City (old pre-war labour migrants and new recent self-movers). We investigate which social factors most strongly contribute to the preservation of Japanese oral language ability in these two communities among social variables, namely age, generation, sex, identity, education, mass media, language importance, language used at home and work and contact with community members in Mexico as well as relatives and friends in their homeland, Japan.

The results confirm the significant effects of languages used in the home and educational domains upon the maintenance of the heritage language in both old and new migrant communities, while highlighting the community-specific effects of both age and languages used in the workplace among the old community and those of contact with the homeland in the case of the newcomer community. We argue that these differences indicate that in the older community, where a strong solidarity network has been developed but where contact with the homeland has been mostly lost, the use of Japanese in the workplace is most likely to help pre-war migrants maintain it, whilst in the more recent newcomer community with more loose-knit Japanese networks within Mexico, frequent interaction with relatives and friends in Japan serves to strongly support the retention of high language ability.

This paper concludes that heritage language use in both home and school is indeed the fundamental determiner of migrant heritage language survival, whilst different factors, such as the use of the heritage language in the workplace and contact with the homeland, may aid its preservation depending upon the recency of the community's arrival as well as the strength of the community's network.

#### *Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance*

This paper attempts to elucidate the hidden social mechanisms of "structural disasters" involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework

of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of SPEEDI (The System for Prediction of Environment Emergency Dose Information), of the organizational structure of the Governmental Examination Committee on the Fukushima accident, and of the siting of facilities for the disposal of HLW (high-level radioactive waste). Firstly, the social mechanism by which "institutionalized forbearance" to secrecy causes serious damage to third parties without breaking laws or moral ethics is revealed. Secondly, the paper illustrates the way in which the organizational structure made up of both investigators and stakeholders tends to carry over structurally originated problems and reproduce them. Thirdly, the paper highlights the possibility that social decision-making, with a very long time horizon and high degree of uncertainty, can bring about infinite responsibility, and eventually lead to collective irresponsibility.

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex-ante expertise rather than ex-post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situation of the Science Council of Japan, a policy proposal to redesign institutional structures after "structural disasters" will be made.

#### *The Past of Others: Korean Memorials in a New York Suburb*

Since the first decade of the twenty-first century, memorials to an aspect of the Korean past, that of the "comfort" women, forced into sexual slavery by the Japanese Imperial Army during the 1939-45 war, have been founded in the U.S. by members of the Korean diaspora. The issue of "ianfu" (Jap. "comfort women") remains contested political and moral terrain between the two countries. The fundamental narrative--war-time victimization of women and the aim of concretizing their memory, coupled with Japan's official reluctance to acknowledge the role of colonial aggressor--has produced tension between the Korean and Japanese communities in the U.S. At the local level, such monuments have encountered resistance from native-born residents on the basis of lack of pertinence of memories of incidents in East Asia to the American land. The Korean American initiative towards inscription of a passage from their national history into the American context may be considered symptomatic of wider cognitive and social shifts in immigrant adaptation. Memorial-building is a political act par excellence. The present paper analyzes recent polemic and resolutions regarding the erection of a memorial in a particular metropolitan suburban community in the New York area. The location has been the subject of rapid immigration from Korea since the 1990s, with Koreans now constituting some forty percent of the local population. Despite the presence of local opposition, activists' demands for the right to found a memorial to the memory of comfort women have been upheld by the municipal government. The case touches on many of the intricate relationships contingent on contemporary immigrant integration. Boundary drawing, the changing significances attached to race and ethnicity, and an increasing sense of entitlement in being both "ethnic" and "American" have been integral to this contest and negotiation regarding collective memory.

#### *A Cross-National Comparative Study of Trust in Nonprofit Organizations*

The emergence of nonprofit sector has been shown in many countries since 1990s (Salamon & Anheier, 1994). In addition, trust and nonprofit organizations can be considered basic elements of the so-called social capital which Putnam (1993) discussed. So, examining the cross-national comparison of trust in nonprofit organizations is significant in the present social situation. Nonprofit organization, however, is ambiguous and diverse. Its concept cannot only include volunteer organizations but also trade unions and religious organizations. And its definition is never common in all countries. Thus this study aims to examine not only the simple comparison but also the measurability and comparability of that.

This presentation mainly uses the results of some questions concerning "trust in nonprofit organizations" in the Asia-Pacific Values Survey (APVS, 2010-ongoing) and Public Opinion Survey on Political Participation and Social Contribution (Civil Society Survey, CSS, 2007-2009). The former survey was conducted in Japan and USA in 2010, and China in 2011, and the latter in Japan, USA, and South Korea. This study focuses on the rate of the item nonresponses, "Don't Know," the degrees of trust in their organizations, and correlation structures of them. For the analysis of the correlation structure, multivariate analysis was used.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn't find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, it found a kind of gap in pattern structure of trust between religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

#### *Postrevolutionist Islam or Traumatic Resecularization? What Does Historicizing the Religio-Political Unity Offer in the Post-Khomeini Iranian Context?*

The postrevolutionary Iranian "Islamic revivalists" (who now call themselves "principlists") still evoke an early twentieth-century event that—in their collective reconstruction of the past—crucially grafted politics onto religion. A foreign-backed military coup d'état elevated an anti-Islamic modernizer to the position of power, enabling him to tragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. "Our religion is the essence of our politics, and our politics is the essence of our religion," a saying attributed to "Martyr" Seyyed Hasan Modarres (d. 1937), the prominent Shi'i *mujtahid* and long-term political opponent of Reza Khan, thus serves as the emotional and (formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded postrevolutionary reformists (known in Iran as "religious intellectuals") who dare to suggest separation, in one way or another, of religion from politics run the risk of being labeled as "secularists." It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly *Mehrnameh* and a June 2013 principlist political documentary featuring them adopted as their title "We are not secular," a quote from prominent reformist-intellectual Saeed Hajjarian.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?

#### *Use of Paradata in Non-Response Bias Adjustment: Application of Sequential Propensity Weighting on Dutch Reluctant Respondent Sample in the European Social Survey*

This paper explores the use of European Social Survey (ESS) Round 5 paradata Z-variables (eg. type of dwelling and neighborhood characteristics, and characteristics of contact procedure variables) to adjust survey estimates for non-response. By taking reluctant respondents - as opposed to cooperative respondents, as proxies for all types of non-respondents - this paper obtains calibrated propensity weights in sequential steps. Two types of propensity scores (i.e. focus is on 'contactability' and 'survey cooperation') are obtained through logistic regression models and multiplied with each other in order to obtain nonresponse weights for reluctant respondents based on sub-group stratification methods. ESS Round 5 Dutch sample is used as a case study because of high number of reluctant respondents sample (N=460). This paper illustrates sequential steps to transform reluctant respondents sample that are representative of all types of non-respondents through sequential propensity weights. The effectiveness of propensity weights are studied through level of standardized bias, level of correlations between Z-R and Z-Y variables as well as effects of multiple regression models on attitudinal variables tested between unweighted and weighted samples. These evaluative items are also compared with the effects of post-stratification weights based on key socio-demographic variables (eg. age, gender, region). The paper addresses implications of data quality in paradata, fieldwork design on refusal conversion activities and use of reluctant respondent sample for non-response adjustments in cross-national research.

*Deciding 'Quality' Surrounding Umbilical Cord Blood Treatments in Japan and the UK*

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown *et al.*, 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient, and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they 'know' what constitutes a 'quality' cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish 'clinical expertise' around cord blood treatments would impact upon perceptions of 'quality' cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived 'transplant quality' of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed 'best practice tariff' to reimburse hospitals for securing 'high quality collections'.

Emerging findings from a three year project, funded by the Great Britain Sasakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive 'quality' in cord blood in a global context, and what factors influence their perceptions, will be presented.

**MATSUSHITA, NAMIKO\*** (Hitotsubashi University,  
[namiko.matsushita@gmail.com](mailto:namiko.matsushita@gmail.com))

*Collapse Of Vacant Japanese Accepting Migrant Care Workers Policy*

Why has most Japanese migration policies ended in failure? Since 1990 the Japanese government have argued that we will positively accept highly skilled workers for competing economic globalization. By 2006, the Japanese government had concluded EPA agreements with the Philippines, Indonesia and the other East Asian countries. The Japanese care industry strongly disagreed with this agreement but the Japanese government still asked for the abolishment of a tariff in exchange for accepting care workers. Though the Japanese care industry is suffering from a serious labor shortage, Japan has designed an absolute strict institution with high entry barriers for foreign care workers.

At the beginning of this program, hundreds of candidates came to Japan and trained for the National Nursing Examination which is the same for a Japanese examinee. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this exam from 254 candidates. In addition to this low pass rate, nurse candidates can take this exam three times in three years and care workers have only one chance in the fourth year. Obviously candidates who can't pass the exam must return to their country. How can they keep their motivation?

Five years have passed since this program started, the number of candidates is declining each year. The most significant problem with this program is foreign care workers were unwanted by the Japanese care industry. Japan takes no account of their former job careers, even if they have a nurse license in their home country. These skills and experience are just a prerequisite for being a candidate.

Even though Japan has the most aging population coupled with lowest birth rate in the world, Japanese government are still lacking a long wide vision in regard to migration policy.

**MATSUTANI, MINORI\*** (Kyoto University,  
[minori.matsutani@gmail.com](mailto:minori.matsutani@gmail.com))

*Beyond the Skill Migration: Middle Class North-South Mobility in Asia*

Favell's famous work, *Eurostars and Eurocities* (2008) arouse wide academic interest in mobilities in EU. Under the popularization of international migration, migrants' social background and migration flows from/in North has been diverse. As Scott (2006) claimed, it has "become a 'normal' middle-class activity rather than something exclusively confined to an economic elite." However, these works are limited on the research area. This paper tries to theorize the middle class North-

South mobility in Asia, based on empirical work among young Japanese migrant workers in Asian cities, including Shanghai, Hong Kong and Singapore.

In decades, the destinations of Japanese migrants have been gradually shifting from Western countries to Asian countries. This occurs in the economic transition or power-shift between Japan and other Asian countries. Young generation increasingly prefer economic opportunities in Asian global cities. They are not typical expatriates transferred from headquarters, nor project-based temporary professionals, but contract-based and locally hired workers moving individually. This represents a new trend of migration, which has emerged in the last decade.

I explain how its migration system has formed in Hong Kong and transplanted to other areas and discuss the characteristics of the migrants. The phenomenon formed a market-based migration system arranged by staffing agencies. Now Japanese companies abroad have two types of Japanese workers; expatriates sent by the same company and locally hired contract workers positioned under them. Young contract workers' career plans are often inconsistent with the actual achievements, since they are excluded from the companies' promotion system. Consequently, many of them use their working experience and social networks acquired while abroad and find another career track with entrepreneurship. This shows a pattern that is distinct from career-based skill migration. Through these discussions, I propose a different perspective on the middle class migration in Asian context.

[minori.matsutani@gmail.com](mailto:minori.matsutani@gmail.com))

*Identification for Career: Contemporary Young Japanese Diaspora in Asia*

Most literature on contemporary Japanese diaspora has been focused on male expatriates and their families following the offshore transfer of Japanese companies. Under the popularization of international migration, however, the flow, period or style of migration and the social background of migrants are getting increasingly diverse. This paper focuses on a new type of young Japanese migrant workers in Shanghai, Hong Kong and Singapore.

They move individually and are locally hired, usually through staffing agencies. In most cases, they find positions under expatriates in Japanese companies abroad, which leads them to be marginalized in Japanese communities. They speak local language and work with local people under the management of expatriates. Therefore their identification becomes more complicated when compared with expatriates, who are strongly embedded in Japanese companies and communities. In addition, their identification influences and is influenced by their choice of staying/moving/circulation. They are contract-based workers and can easily change their jobs and working/living place. It means their mobility is connected with their career planning. Considering these situations, they are drawn to 3 directions: localized, globalized and national under their working conditions and future plans. Localized and globalized identities are necessary for daily working and career building in abroad. Japaneseness has to be preserved for re-entering Japan labor market after return as well as for business communication with Japanese companies abroad. These identities coexist, conflict or are combined in each context.

What forms their diasporic identity, how does it change, and how do they try to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora's identification.

**MATSUURA, YUSUKE\*** (Kumamoto university,  
[matsuura@kumamoto-u.ac.jp](mailto:matsuura@kumamoto-u.ac.jp))

*Industrial Heritage and Memory : A Case Of Miike Coal Mine*

In recent decades a new gaze has appeared upon architectural remains of modern industry. This gaze makes it possible to turn these remains into cultural heritage, or more precisely, industrial heritage. Architectures such as factory, dockyard and coal mine pit which used to be symbols of modernity has turned, after changes of economic structure, into symbols of degeneration of local towns which had depended on these industries. Industrial heritagization is a way of revitalization favored by these towns.

Through the process of heritagization, the past of modern industry is reconstructed from the point of view of new perspective. Reconstructed industrial heritage assume public memory of the place. On the other hand, these remains used to be the places not only of labor, but also of conflicts and tragic accidents whose painful memories last long upon local people such as ex-workers and their families. It happens that local people have their own view about the past of the place of their labor different from the gaze of industrial heritage.

In this presentation I will discuss this cultural gap between industrial heritage and lived memory. How are modern industries' remains heritagized through reconstruction of the past? How local people remember the past of their labor, especially tragic moments? How the perception of the present heritagization is different as a function of the past experiences? I will address these questions

through considering a case of Miike coal mine, which exists in Kyushu, western Japan.

[smatsuzawa@wooster.edu](mailto:smatsuzawa@wooster.edu))

### *A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China*

This paper examines the Yunnan Great River Project (YGRP) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China's fragmented bureaucracy. Despite TNC's race to save one of the World's ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key local stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC's rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation methods.

Thirdly, TNC's inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its "Growth Machine" (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC's wish to emphasize community participation.

### *Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet*

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday use of new media technologies. In large and rapidly increasing numbers, everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleeting and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online information by new media organisations in control of social media services lead to greater agenda setting by the individual users of news, or does it reinforce established news media organisations as the primary or authoritative sources of news? And how may the various affordances of differing and fragmented web and mobile apps impact the discourses of everyday users?

This paper aims to explore such questions through initial findings from research using qualitative observations of online social media discussions on austerity, economic crisis, and financial news, in combination with interviews of participants who regularly engage with such information through social media sites and mobile internet devices. The paper aims to explore how current and recently popularised trends in the use of new media technologies may be affording or constraining behaviours and habits of everyday users when engaging with online news and information on issues that impact social inequalities like austerity and economic crisis.

### *Knowledge in the Wild - from Mad Cows to Alzheimer's: How Knowledge Mobilization Works*

This paper presents analysis of interview data from a study of 'knowledge mobilization' as a social process. In doing so it contrasts concepts of 'knowledge transfer' with those of 'knowledge mobilization' which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease, Alzheimer's Disease, ALS, Parkinson's Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.

### *Academic Writing As a Contesting Territory for Women*

In this paper I present a discussion on the forces that come to play when talking about the production of knowledge in universities understood as international identities, particularly through the act of writing. I use women's interviews to explore on the meanings of academic writing today. These interviews have been conducted to female professors from different disciplines in the Social Sciences and Humanities in one university in Chile. My argument is that contemporary ways to reason universities as corporate institutions have important effects on the configuration of knowledge, subjectivities, and their relations. Discourses of internationalization of higher education that use institutional arrangements to promote specific practices to name themselves as successfully international, such as, international networks and circuits to publish academic work, designing and implementation of international collaborative research, high level indexed publications, etc., produce the idea that all these are the "natural" institutional outcomes and aspirations for professors. These institutional practices create the conditions for a new institutional developmentalism (Sidhu, 2007) where the re-configuration of international practices has taken the status of managerial tools. Institutional cultures produced through these discourses have privileged the constitution of a disembodied academic subjectivity that requires subjects to narrate themselves with no reference to gendered, racialized, nationalized, and sexualized intensities. I explore on how this dis/embodiment is narrated and problematized by women through their acts of academic writing, particularly in disciplines related to Humanities and Social Sciences.

### *L'accès Au Logement Des Jeunes Français : Pour Quelle Indépendance ?*

Les jeunes français doivent faire face à des difficultés d'intégration de plus en plus aiguës dans tous les domaines de la vie sociale : accès au travail, dans des conditions stables et en rapport avec leur niveau de qualification, accès au logement, accès aux droits sociaux, etc. Ces difficultés en font la population la plus en butte à la vulnérabilité sociale et à la précarité.

De ce fait, les enjeux qui pèsent sur les politiques publiques de jeunesse apparaissent importants : les nécessités sont grandes de voir se développer des actions publiques permettant de sécuriser les parcours, de garantir un égal traitement des différentes générations, notamment en termes de protection sociale.

Pourtant, le paysage des politiques publiques françaises laisse plutôt apparaître des actions éparpillées, relevant de tous les niveaux de décision, comportant peu de réflexions sur les façons de dégrader des valeurs, des objectifs communs, des modes d'accompagnement en convergence.

Dans ce contexte, notre communication s'attachera à analyser l'accès des jeunes au logement indépendant. Nous partirons d'une première approche objective présentant les manières actuelles des jeunes de s'installer dans un logement. Le coût financier apparaît comme un obstacle sérieux à cette prise d'indépendance. L'aide économique de tiers comme la famille et/ou des acteurs publics est souvent requise ; ce qui n'est pas sans créer de profondes inégalités sociales.

Cette première approche objective sera complétée par une entrée compréhensive qui abordera les liens subjectifs que les jeunes entretiennent avec le logement. Les jeunes apparaissent ancrés en différents endroits : le logement indépendant ; lieu d'apprentissage de l'autonomie ; la maison familiale : vécue comme un lieu d'ancrage. La construction des espaces d'autonomie ne signifie pas absence de liens. L'analyse de la fonction de ces liens permet de questionner la notion d'indépendance et de dépendance juvénile, autrement que sous un angle économique.

*The PhD Degree and Weber's Concepts of Rationality*

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD?

Using Weber's concepts of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, alignment of research topics with institutional research priorities and a tightening of candidature time limits), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

*Digital Technologies and Work-Family Boundaries: A Posthumanist, Performative Approach to Family Research*

Our paper draws on a research project funded by the UK's Engineering and Physical Sciences Research Council that explores how boundaries are being made between work and family in everyday practices, and how technologies are implicated in constituting these boundaries.

Our paper will discuss the theoretical and methodological framework that we have developed to study work/family/technology figurations in the home, and that allows us to treat and study social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: feminist science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this approach.

Our empirical study uses sensory, visual and participatory ethnographic methods (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013). Our overall approach is to invite family members to take part in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in 'A day in the life of ...' our participants. The study involves in-depth work with 5 households in North-East Scotland, with at least one child under the age of 18.

*Technology and the (re)Making of Work and Family: Towards a Performative Approach to Visual Practices*

Our paper draws on a project funded by UK's Engineering and Physical Sciences Research Council that explores technology use in work and family practices in the home. Our study seeks to address a number of theoretical, methodological and substantive aims:

1. To develop a conceptual framework for studying work/family/technology practices and boundaries in the home, drawing on material-semiotic, posthumanist, and performative approaches (Barad 2007; Haraway 1997; Law 2004; Suchman 2007)

2. To explore how work/family/technology are figured – made and re-made – through everyday social and technological practices (where social and technological are not treated as separate);
3. To develop and test a portfolio of methods, drawing on visual, sensory, mobile and participatory ethnographic approaches (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013; Watts and Urry 2008). An important element of this process is to explore the performativity of these methods, that is, how they are constitutive of particular stories, or versions of reality (Law 2004, 2009; Law and Urry 2004).

Families (with at least one child under the age of 18) are invited to take part in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in 'A day in the life of ...' our participants.

Our paper will address emerging questions and challenges including: Whether and how visual methods can help us grasp sociomaterial practices; how we can analyse visual materials from a performative perspective; how we can use visual methods in participatory, collaborative and cooperative ways with our families.

*ICT and Local Development in Globalization***Abstract**

In modern times, development is more or less interconnected with globalization. On the other hand, globalization processes are more or less interconnected with the use of ICT. The use of ICT is defined as the access in modern communicative systems, and as a result marks the "presence" or the "absence" of a specific area in the world map, and consequently the ability of this area to attract investments in multiple fields of entrepreneurship.

But what is globalization in analytical terms? Is it a system consisted of state entities which maintain their authority in the regulation of their internal affairs, or it is a system which functions autonomously, transcending states? This paper examines the possible answers to this crucial question up to a final conclusion. Further on, it depicts statistical data from all over the world, in an attempt to document the interconnection of the presence of ICT services in a certain area with the economic growth and the development of this specific area. Finally, it examines the problem of "exclusion" of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

[cmay@gwdg.de](mailto:cmay@gwdg.de))

*Social Science Knowledge and Welfare Expertise – a Closely Intertwined Development*

The development of the social sciences in the 19<sup>th</sup> and 20<sup>th</sup> century has produced knowledge about societies that informed other areas of society and politics. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of this knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900. In this paper, I will analyze a twofold translation of knowledge: The first is how academic social science knowledge diffuses into politics: I will examine how the idea that society was a structured entity, that was put forward by early sociologists such as the Historical School of Economics in Germany, informed social policy experts. Social science knowledge contributed to the insight that the Social Question was induced by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens between countries: Social policies that had proved useful could be translated to other countries, but the standing of the newly developing social sciences within these countries had a strong influence on how successful these translations were.

I will illustrate my theoretical considerations with examples about how different welfare knowledge propositions influenced the early set-up of state-administered social policies in Germany, Great Britain and the Netherlands (ca. 1870-1920). Thus I choose to compare two pioneers of public social policies and one "welfare laggard". I will analyse historical sources in order to analyse how text-based academic knowledge can be translated into policy expertise both within and between countries.

**MAY, CHRISTINA\*** (Georg-August-Universitaet Goettingen, [cmay@gwdg.de](mailto:cmay@gwdg.de))

*The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)*

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerably threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was "Social Hygiene", as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or "Volkskörper". Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hinted at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated. Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied considerably and was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

**MAYA-AMBA, CARLOS\*** (Universidad de Guadalajara, Mexico, [carlosmayaambia@hotmail.com](mailto:carlosmayaambia@hotmail.com))

*Japan and Mexico As Global Players in the Horticultural World Market*

**Abstract:** Horticultural trade reflects the major features of current globalization. The first one is the multi polarization of the economic world, whereas especially three great centers are dominating, namely: the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the most relevant part of international agricultural trade flows. In this context both Mexico and Japan are playing an important role, Mexico as major exporter of fresh products and Japan as main buyer of these items. Mexico is located in the sphere of influence of the USA and Japan is the axis of the East Asian economic bloc. Mexican exports are depending strongly on the USA market and Japan's demand of food must be satisfied mostly by imports, particularly from USA and China. At the same time, Mexican fresh vegetables are losing competitiveness in their principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. All these facts make clear both countries necessitate to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangos, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

*Social Systems Form Simulation to Observation*

The cognition-computing short circuit is still affecting both neuroscience and computer science today. Social systems theories, on the one hand, and agent-based simulations on the other have once more pinpointed the traditional sociological dualism between macro-and micro-sociology. However, the advent of 'Big Data' has paved the way to new techniques of investigation based on the study of new types of data, such as conversations taking place on popular web sites like Twitter and Facebook, traces left by our mobile devices or data generated by wearable sensors. Thanks to these techniques, we can go beyond simulation and observe the operation within the social "black box" in the same way that neuronal functional magnetic resonance imaging (fMRI) does as regards to the brain. This paper discusses the potential as well as the limitations of these new methods of

sociological investigation and their spillover effects on the theoretical development of the discipline.

*Career Advancement for Women in the UK Military- Opportunities, Risks and Responses to Gain Acceptance*

The number of females holding senior posts in the United Kingdom's military is around 1% compared to an average of around 30% in the rest of government. This paper reports on a study which sought to examine why the rate was so low using an entrepreneurial lens. As there is a paucity of research on female entrepreneurship in the public sectors and none in the UK military, this study helps to provide some fresh insights into an issue which to date appears to have been intractable.

Using entrepreneurial literature, a model was developed to research the potential barriers faced by female officers in the UK military when seeking promotion to the most senior ranks. The model was designed to examine the relationships between institutional and individual determinants in relation to promotional outcomes. These determinants included structure and agency, social capital, homophily, support and how women deploy a series of other strategies to accommodate institutional and network orientated logics and norms to gain promotion acceptability.

Semi-structured interviews were used to gather data from 48 female officers and a sample of 5 male officers over a four month period in 2013. Candidates were drawn from a stratified sample at the senior ranks. The overall research paradigm was critical realist. All interviews were recorded and transcribed and then analysed using Miles and Huberman qualitative methodology for coding and analysis of data.

The findings from these interviews demonstrated that the interplay between structure and agency played a major role in determining promotion. Factors such as emotional support, conflict resolution, reputation and legitimacy also determined the contextual social capital perceived to be necessary for promotion by deeply embedded bespoke male networks.

The originality of this research is in the use of an entrepreneurial framework to examine promotion within a government agency.

*Heritage, Culture and Politics of Tourism Along the New Silk Road*

After twenty years of the UNWTO's Silk Road programme, there seems to be a new impetus to revive and re-envision the project to bring the heritage and cultural attractions along this ancient set of trading routes to a new prominence. A recent conference in Dunhuang in August 2013, the addition of a 30<sup>th</sup> nation into the Silk Road project, together with an action plan for the future that will build a sustainable and competitive tourism product suggests a fresh impetus and a desire for collaboration and tourism development. But to what extent does the Silk Road project offer real potential for sustainable tourism development? And what lies behind the rhetoric of the Silk Road Action plan? This paper seeks to address the politics and discourses of international collaborative tourism marketing projects with a focus on the Silk Road initiative. Whilst the aims of the project are laudable, the paper seeks to understand the power dynamics at play between these nations and the role of the UNWTO. The countries along the Silk Routes that have signed up to the project include some of the most politically unstable in recent history and the paper hopes to shed some light on the tensions between an ideal of peace and intercultural understanding through tourism development and a political, economic and social reality. The papers approaches the issues through the adoption of discursive analytical perspectives on texts: policies and plans, strategies and media items.

*Who Negotiates The Relationship Between Leisure and Quality Of Life?*

Increasing user's quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user's quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship between leisure and quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user's outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative

style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual's quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

#### *Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South*

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are "implemented" locally. I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshall Ganz calls "strategic capacity." This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa; legal changes in India; socio-cultural transformations within the union in Brazil. The point is to re-direct our attention to the local arena of transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal global process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

WARD, KEVIN (University of Manchester)

#### *Policies Travel Uneasily: The Comparative, Relational and Translative Work Of Making Urban Policy In A Global Context*

This paper intervenes in a conversation between two emerging literatures in urban studies: that which questions the generalizability of urban theory and methods developed in, and with reference to, a small number of Global North cities and the literature on 'urban policy mobilities' that conceptualizes the circulation of 'best practice' policy models. Both literatures focus on forms of theory-development, associated method-making, and questions of comparison, learning, mobility, translation, and travel. The former seeks to push academic urban studies to more fully account for the provincial (mostly Global North) character of its concepts and methods, while the latter seeks to shed light on how policy communities and institutions are involved in similar intellectual work as they also develop generalizations, concepts, and methods to understand, govern, and manage cities. A key problematic in both urban theory-building and in urban policy mobilization is the historical-geographical specificities of supposedly universal, or transferable, theories and models. Discussion therefore revolves around whether the experience of a few cities should form the basis for theorizing the entire urban system or how 'successful' policy models that are developed in certain places become defined as universally-applicable. This paper is based on ongoing research into the political, intellectual, and practical work policy actors (e.g., consultants, politicians, city government staff, and activists) perform in order to identify, compare, and translate, best practice policy models and then implement them in specific, differentiated locations. The paper will discuss examples of policy-mobilizing work that span global North-South divides and the concepts and methods that are inherent to them. By outlining the uneasy travels of these policies, the paper will reflect back on the similarly uneasy travels of concepts in academic urban studies and how the decentring of the global North in policy circulations might shed light on similar attempts in academia.

#### *Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency*

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFIA), within which tasks and skills could be appropriately described. This 'one page framework' stimulated Japanese administrators to sponsor an IT framework for Japan, the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations and policy implementation in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources does not mean that 'learning from abroad' cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

#### *Addressing Diversity Trends in Rural America*

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in racial and ethnic diversity found in small and rural America is expected in our future growth.. This demographic change is highlighted by rural farming communities that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed "decline in community." This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory predicts that access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant social networks for inclusion of newcomers and long-timers in order to take advantage of their strengths. The heterogeneity of the networks increases the probability of diffusion of the innovation or new ideas.

### *Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club*

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller's patter, square dance encodes an idealized version of heteronormative, "old time" gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bolo ties for the men; full, flouncy skirts and puff-sleeved blouses for the women. In the present day, these "invented traditions" coexist amidst a range of self-presentational options, as well as frequent urgings from within the square dance community to "update the image" of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors' club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as infirm and unlovely.

### *Duel of the Dualisms: Production and Reproduction Reconfiguring*

The processes and mechanisms by which inequalities are produced and reproduced globally are serpentine and rapidly changing. The standard historical narrative that economic life left the household, leaving nurturance behind in a separate sphere of family, has moved to another stage. Thought to be separate spheres of work and family, of paid and unpaid work, a significant blurring is occurring. Work is more often unpaid. Nurturance is more often paid. Economic inequalities leak into and out of care inequalities. Relying on two of the author's current research programs, on care migration and on life course effects of the Great Recession of 2008+, the duel and dance of the dualisms of production and reproduction in comparative contexts are explored.

### *Global Ageing in Precarious Times*

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public spheres – all contour ageing as a macro, meso and micro process. As the *coup d'état* in slow motion, as population ageing has been termed, sweeps across all regions of the world, although in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and counterintuitively the greater availability of potential paid caregivers. In this proposed talk, McDaniel will draw on her extensive research on the policy implication of global ageing, on her comparative research on life course ageing in various countries in times of economic challenge, and her current research on transnational ageing and care supply/demand.

### *Green Consumption, Equity and Climate Change*

The purpose of this paper is to explore how the mechanisms of the risk society and reflexive modernity (Beck et al. 1994) produce inequality in respect to green consumption. The research was implemented by an empirical approach. The research data was collected by interviewing people on how they make energy decisions when buying electricity, their relationships with nature, and what they see as being important in life overall. Interviews were completed in four cities in Finland: Vaasa, Espoo, Imatra and Joensuu. The people interviewed ranged from the laymen to the executive, i.e. different social classes. During the research it is becoming clearer that the characteristics of the risk society and reflexive modernity and equity seem to be significant when solving issues of the risk society and climate change.

It seems that the ownership or the lack thereof of cultural, educational and financial capital makes a difference – people made their energy purchase decisions based on what had value to them which was influenced by their cultural, educational and financial background. The abstract and insecure nature of the risk society and reflexive modernity makes it difficult for people to be green consumers because of the lack of stability that seems to be a requirement for green consumption. Individuals will not act on altruistic motives without personal stability in life which would seem to lead to the possibility and understanding to take part in green consumerism. Cultural and educational capital makes it easier to grasp abstract issues like climate change or act on altruistic motives. It seems that green consumption can be increased by equal opportunities in employment, education and equality in income division.

### *Excavating Risk Dialectics: On the Multivalent Dimensions of Disaster Prevention*

An extensive research literature now examines both the prevalence and causality of disasters within complex socio-technical systems (Vaughan, 1996; Snook, 2000; Hopkins, 2010; Hayes, 2012). These studies evince that disasters are as much an outcome of social relations as they are a result of technical failings. With this framework in mind, we explore empirically alternate definitions of risk amongst a range of stakeholders with primary and secondary responsibilities for ensuring the security – and integrity – of natural gas supply in Australia. This involves tracing how risk perceptions are contingent on social positioning in politico-industrial 'fields of practice' and differ markedly according to factors like identity, expertise, resource capital and organisational role. We focus attention initially on how pipeline design engineers perceive risk vis-à-vis industry concerns that revolve principally around asset protection, public safety, legal obligation, insurance burden and reputational management. We then critically compare this risk burden with a variant borne by a different set of actors, those whose mundane activities pose a constant threat to gas pipeline stability. Although the actual harms that 'excavation workers' confront – i.e. operators of excavating equipment who might be either utility company and local council contractors or landowners – are similar to those visualized by pipeline maintainers (loss of life, loss of supply, loss of contract, loss of material resources) the former group bear a differing set of values, interests and ambitions in terms of how they formulate risk imaginaries. Moreover, they face divergent external pressures and accommodate contrasting internal desires, a situation shedding light on the pluralised, but socially conditional, nature of risk perception and the multivalent elements influencing disaster prevention procedures. In particular, the paper reveals risk perceptions to be dialectical in essence: orientated to a similar conception of envisaged harm but shaped by discrete contexts and circumstances.

### *Punishing Coaching: Japanese Educational Sports Clubs and the Normalisation of Coach Violence*

At the beginning of 2013 two independent cases made the headlines of Japanese newspapers. The first case involved the suicide of a high school student that was allegedly triggered after he received several beatings from his basketball coach for failing to perform well enough. The second case involved fifteen female judoka, including competitors in the London Olympics, who filed a letter with the

Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (*tai batsu*) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which students' normalized acts of violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a uniquely Japanese form of identity. The complex relationship between sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

##### *'If It Weren't for Rugby I'd be in Prison Now': Pacific Islanders, Rugby and the Production of (un)Natural Spaces*

Drawing on research conducted with Pacific Island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of Pacific Island identity and the demonstration of successful integration into 21<sup>st</sup> Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders' enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such sports, instead positing them as exemplars of individualism and self-governance.

[k.mcdonald@mdx.ac.uk](mailto:k.mcdonald@mdx.ac.uk))

##### *Agency and the Vulnerable Body*

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodied experience of strangeness and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective identity give way to a ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

##### *From Indymedia to Anonymous: Agency, Public Spheres and Internet Action*

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can 'reverse engineer' freedom. More nuanced forms of this technological optimism are evident in many sociological studies of internet activism, with themes of horizontality, networks and openness widely repeated – themes central to many of the analyses of Indymedia, in particular by 'scholar activists'. What is striking in the period since is the decline of this kind of action, and the emergence of a quite different form of action evident in networks such as Anonymous. These are grounded in hacker worlds, shaped by a culture of the ephemeral, the hidden and the revealed, with an ethic of *lulz*, the mask and the trickster. This action takes completely different forms from the 'open deliberation' attributed to internet ac-

tivism such as Indymedia. This paper explores the emergence of Anonymous from its origins in a manga site and its initial campaign against Scientology, and considers to what extent this form of action, and the types of public spheres it creates, may extend beyond Internet cultures to point to wider transformations in public spheres and agency.

[ruth.mcdonald@wbs.ac.uk](mailto:ruth.mcdonald@wbs.ac.uk))

##### *Organising Celebrity – Social Mobility and Symbolic Violence In England's Green and Pleasant Land*

According to Cohen (2013), celebrity represents the most distilled form of social mobility. The paper draws on 60 interviews with celebrities from different sectors (entertainment, medicine and business) in which they talk about their life, work and musical tastes. It identifies differences between these sectors in terms of the logic of celebrity and this is reflected in differences in accounts between these different sectors. For example the way in which doctors are constituted as self-sacrificing, collegiate and 'noble' is in contrast to the portrayal of individualistic heroic endeavours of celebrity entrepreneurs that justify accumulation of wealth and sidestep questions of exploitation. The constitution of celebrity doctors avoids engagement with thorny issues such as high rates of marital breakdown and drug and alcohol abuse amongst medical professionals, as well as medical errors and financial motivation. In contrast to the white, middle class nature of elite doctors, business and entertainment professionals are drawn from a more diverse range of backgrounds. With regard to the latter, celebrity accounts of mental illness have been viewed as reducing stigma and to be welcomed. However, the constitution of such celebrities is a world away from the lived experiences of ordinary citizens grappling with mental illness. Despite the differences between the different celebrity sectors, there is a common thread insofar as celebrity is implicated in providing reassurance and hope in relation to the existing order and especially the distribution of power and resources in society. In contrast to Cohen, this paper drawing on Bourdieu's Distinction and Giddens' writings on 'distanced instances' suggests that far from reflecting social mobility, the organization of celebrity contributes to the maintenance and reproduction of societal inequalities on a grand scale.

##### *Charisma and Subcultural Bureaucracy: Challenging Weber's Ideal Typical Distinction*

What role does charismatic authority play in the inculcation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and incubating transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence.

My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enables them to attract high quality personnel even in the context of human capital scarcity. Such charismatic leaders strategically offer subordinates "high profile" work that connects them to "big men" who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos, attracting high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber's ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

**MCDONNELL, TERENCE\*** (University of Notre Dame,  
[terence.e.mcdonnell@nd.edu](mailto:terence.e.mcdonnell@nd.edu))

##### *Cultural Entropy*

This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency toward disorder, cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is *inevitable*. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-person interactions because objects can't engage in "impression management." As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resonant meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of AIDS campaigns (McDonnell 2010) by broadening the set of material mechanisms that encourage entropy beyond discordant settings, displacement and decay to practices of translation and juxtaposition. Ultimately this work contributes to the growing field of materiality by specifying how material qualities of objects have independent effects, beyond falling back on the symbol-driven work of material culture studies.

**MCFALL, ELIZABETH\*** (Open University, [liz.mcfall@open.ac.uk](mailto:liz.mcfall@open.ac.uk))

#### *Charisma on the Doorstep: The Role of Agents in the Industrial Assurance and Home Credit Markets*

In Weber's typology, charismatic authority is distinguished from bureaucratic and traditional forms of authority because it derives from the exceptional, extraordinary qualities an individual personality is thought to possess. Being ideal types in opposition, charisma may seem to have nothing to do with bureaucracy but, ideal type generalisation does not exclude the blurring of elements in practice. As the twentieth century progressed the proliferation of organizational forms encouraged deviation with eg large bureaucratic organisations incorporating charismatic forms of leadership in adapted forms. These developments haven't made bureaucratic organisations more like pure charismatic organisations, but the idea of charisma offers a way of explaining certain things that happen within bureaucratic organisations yet appear to have little to do with rationality or order.

This paper explores the ways charisma was bureaucratically organised within doorstep finance companies. One of the acknowledged goals of marketing is to 'qualify' products, that is, to equip them with qualities calculated to intensify consumer longings. For doorstep finance companies, agents offered the first available means of endowing products with more than their face value. Agents began as a distribution device but the peculiar affordances of an orchestrated personal selling force meant they soon exceeded this role. Through agents, insurance and home credit companies acquired an operative, adaptive 'grooviness' by virtue of the channel they established between company and customers. In both sectors, the first role of the agent was payment collection but as important was the exchange of information since information was the key to product persistency. The challenge was that agents' capacity to get and transmit useful information was closely related to their personal qualities, their personal charisma.

**MCGARRY, AIDAN\*** (University of Brighton, [a.mcgarry@brighton.ac.uk](mailto:a.mcgarry@brighton.ac.uk))

#### *Territoriality and Roma Nationalism in Europe*

The Roma community is one of the most marginalized and persecuted minority groups in Europe. Facing hostile policies at home, the rise of right-wing populism, and widespread negative ascription of their collective group identity, Roma elite have attempted to circumvent national political structures in order to address the socio-economic situation of Roma in Europe, by mobilizing transnationally. The key tenet of Roma activism in the transnational political context is that Roma are 'a nation without a territory'. The articulation of Roma nationalism is not built on a shared ethnic identity, a common language or religion, or a territorial claim which makes fostering solidarity and raising consciousness all the more difficult. Based on these assumptions, this paper explores how Roma nationalism develops our understanding of territoriality (i.e. the use of territory by a state for social, economic and political ends) as Roma are not anchored to a particular territory within a state and are geographically dispersed across Europe. Roma nationalism signifies an attempt to make new types of spaces that cut across traditional interstate borders and has created the belief that Roma are a true European minority. However, Roma nationalism is exclusively a transnational enterprise promoted by ethnic entrepreneurs and lacks legitimacy as well as resources, in terms of local

actors and networks, which support the construction of Roma as a European minority. As Roma become figuratively and symbolically removed from the local and national socio-political space they reside in it leads to claims by the majority that Roma do not belong or do not 'fit' in the dominant nation, be that Italy, France, Hungary or Czech Republic. This in turn could lead to further marginalization and persecution.

**MCGOVERN, PAULINE\*** (University of Manchester, [pauline.mcGovern@manchester.ac.uk](mailto:pauline.mcGovern@manchester.ac.uk))

#### *An Unequal World: Class, Leisure and Health Outcomes in Older People*

In this presentation, we look beyond the direct physical and social effects of leisure activities on health and wellbeing. Instead, we explore the effect of leisure on the health of older people within the context of social class and structural inequalities.

Occupational class, as a proxy for social class, may be less theoretically robust in defining stratification and life chances once people retire. In Bourdieusian terms, it is reasonable to suppose that the secondary properties (lifestyle) linked to occupational class may be more important in determining the life chances of people post-retirement, than the specific occupational capitals that marked their social position during working life. In retirement, people may maintain their former lifestyles (tastes and leisure activities) but may also develop new activities that are linked to their material circumstances, social connections and skills. In this way, the leisure activities of older people may be central to their 'space of possibilities' for a happy and healthy retirement.

This presentation outlines the results from a longitudinal path analysis of the relationships between social class, wealth, leisure activities and health status, conceptualised within a Bourdieusian framework. This study used panel data from the *English Longitudinal Study of Ageing* (2002-2010) with variables lagged at different time points to maintain temporal/causal order. The findings show that the main effect of occupational class on health for these older respondents was indirect, via economic assets, cultural and social activities and perceived social status.

In terms of the role of leisure in promoting healthy ageing, the strongest effect from cultural and social activities was via perceived social status. It seems that activities such as museum-going and attending the theatre may make older people feel better about themselves and, as a result, be good for their health.

#### *Fighting Complacency and Retrogression: Reawakening Gender Equity Activism In New Zealand*

**Fighting complacency and retrogression: reawakening gender equality activism.**

New Zealand enjoys an impressive reputation for gender equality. It was the first self-governing nation to grant women's suffrage in 1893 and scores highly in international indexes such as the World Economic Forum's Global Gender Gap at sixth out of 135 countries. In recent political history women held the top four constitutional positions: Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman (2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and litigate on human rights for women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the State party accountable for the implementation of women's human rights and their retrogression. The paper explores and analyses the re-awakening of women's civil society activism around social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand's seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to equal pay and assesses the State party's response to concluding observations and recommendations. It also reflects on the patterns of response of women's groups moving from complacency through frustration to mobilisation legally, politically and at the community level.

The paper explores the re-awakening of women's activism around social and economic rights in a nation with a strong self-regard for its international reputation in progressing gender equality. The paper uses data collected from New Zealand's seven periodic reports to the Committee on the Elimination of Discrimination Against Women and the Committee's concluding observations and responses to successive governments in relation to Article 11, relating to equal pay and pay equity. It analyses the ebbs and flows of political will and explores the patterns of complacency, frustration and now mobilisation by women's civil society groups who are pressing the case for women's human rights.

RC10-196.1

**MCINTYRE, JANET\*** (Flinders University,  
[janet.mcintyre@flinders.edu.au](mailto:janet.mcintyre@flinders.edu.au))

### *The Challenges For Social and Environmental Justice Posed By The Global Panopticon, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World*

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an 'existential risk' to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transdisciplinary and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next.

The paper makes a plea for a different form of governance that weighs up the social, economic and environmental indicators of wellbeing, in order to enable equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

The starting point is to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

- i) Control over the use of force;
- ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not undermined.
- iii) Strengthening self-determination of people based on participatory democracy and the 'absence of domination' over others
- iv) Monitoring based on democracy and governance;
- v) Participatory management of the global commons as the fabric of life.

Currently the role of the state in Western democracies acts as protector of residual welfare rights in terms of the social contract applied to citizens within the boundaries of a state or federation. Those outside these constructed containers do not receive protection in states that are becoming increasingly like fortresses.

### *When 'the Other' Poses the Questions: Turning the Tables to Produce Data on German National Belonging*

After a change was made in Germany's census categories in the year 2005, who is called 'German' came to circumscribe a much narrower group than German citizens. Germany's population was divided into 'Germans' and 'persons with a migration background'. The latter category captures, in one basket, some German citizens—born and bred in Germany—along with immigrants newly arrived to the country. What makes one German? How does one come to belong to the national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality 'out there', independent of the

shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher's person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? I — a dark-skinned, native English-speaker living in Germany — interviewed Germans (German citizens) in a mid-sized city in Germany to explore study participants' understandings of what makes one German. Rather than hinder access or curtail discussion, I found that my status as outsider spurred vigorous discussions on the notion of Germanness. My 'otherness' seemed not to have hampered free expression but, rather, may have even opened the door for persons who felt themselves marginalized to voice their views. In this paper, I look critically at the process and reflect on the peculiarities of the data produced through the interviews.

### *Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment*

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport reinforces shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann 2008), it is unclear whether such benefits extend beyond the college years to influence young Americans' career trajectories or subsequent attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models reveal that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants' greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood. At the household level, female sport participants, but not males, report larger incomes than their peers. While male sport participants report the highest individual earnings, female participants report the highest annual household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.

### *Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom*

The United Kingdom has seen dramatic changes in the nature of work and family and related normative gender divisions of labour over the past forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities; fathers are more involved in childcare; and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality between households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national birth cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course work-family typologies. Evidence of increasing individualisation across cohorts and the potential emergence of 'new' typologies is investigated, as are early life predictors of work-family patterns. Finally, the study investigates relationships between work-family typologies and objective markers of health risk in the two

older cohorts. One of the objective health markers considered in this study inflammation, a significant predictor of chronic diseases such as coronary heart disease and type II diabetes. Early results suggest that gender differences in employment histories remain fairly entrenched across cohorts, and that educational attainment has a stronger relationship with inflammation in mid-life than the subsequent life course work and family trajectories it sets people on.

**MCNAMARA, DENNIS\*** (Georgetown University, [mcnamard@georgetown.edu](mailto:mcnamard@georgetown.edu))

#### *Asian Developmental States: Innovation, Industry, and Investment in China and Japan*

This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson's seminal study of Japan as a "plan-rational" polity initially challenged the neo-liberal assumptions of development in the West. State intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia's newly industrializing countries (NICs), leading to a mid-range theory of state/market ties termed the "developmental state."

China followed a far different trajectory, but again with a prominent state role. I look here to the current status of the developmental state in China and Japan, to assess continuities in Asian Capitalism. I focus the study to state coordination in national innovation systems, where both nations have excelled. Innovation offers perhaps the best indicator of future competition between capitalisms of the East and West.

The paper opens with plan and profile in national innovation systems (NIS) with attention to higher value-added exports. I then look to the role of major firms in both nations since enterprise plays the major role in R&D. In the third section of the paper, I turn to global ties with a contrast of foreign investment in the two nations, and the role of foreign firms in innovation systems.

The review of industrial policy evident in NIS efforts suggests three major differences in the state role. As might be expected, China's party/state plays a far more directive role than that of the Japanese state. Secondly, the Chinese party/state continues to evolve, with curious discrepancies between central and regional governments. We find more continuity in central government policy in Japan, though with greater regional participation. Thirdly, inward FDI plays a major role in China's NIS, in contrast to Japan where outward FDI links them to innovation network in the U.S. and Europe.

#### *Visceral Militarism: Embodiment, Intensity and Experience*

This paper provides a critical reconstruction of the notion of militarism that is particularly attentive to how militarism is specifically embodied in specific corporeal dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond a cognitivist understanding of militarism in terms of an explicit system of militaristic attitudes, values and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory practices through which war-preparedness and military valorization is felt to be normal and desirable, through which militarism becomes assumed, and unexamined, as an 'abstract social norm [that] may inhere within the deepest fibres of our bodily being' (Shilling 2007: 13).

Drawing upon empirical analyses of contemporary phenomena ranging from the growth of 'British Military Fitness' as a popular leisure pursuit in the UK, the technologies of affective captivation of immersive military video-gaming, and the intimacies and intensities of helmetcam footage recorded by soldiers in the ongoing conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrill and bodily transformation increasingly articulate with wider military imperatives and corporeal practices to produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialized flows of affective experience associated with contemporary transformations in warfighting.

#### *The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP*

As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world's "one percent." This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the *nouveau riche* convert their economic capital into symbolic and social capital. Central to such conversions are gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club organizers and guests, I document how gift giving is a central condition of conspicuous consumption among nightclub patrons, who distinguish amongst themselves through the display of beautiful women and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatches. I develop the concept of *girl capital* to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize *girl capital* through the circulation of gifts, perks, favors and intimacies to establish reciprocity; thus, free goods sustain relationships between paid brokers (men) and unpaid women, thus masking the labor behind conspicuous leisure and framing economic relationships as friendships. Additionally, women are themselves circulated as gifts among men, largely through their symbolic presence on display. Thus this article documents two levels through which gifting practices sustain structural gender inequalities and uphold a traffic in women system: gifts to recruit women and women as gifts. This article also demonstrates how gifting practices are fundamental to stratification among elites. Lastly, this article genders elite space by revealing the logics of gendered worth within a contemporary high-society arena, one which recognizes and rewards economic capital for men but bodily capital for women.

#### *The Effects Of Divorce On Children From Life-Course and Family Systems Perspectives: Example Of Denizli In Turkey*

Divorce has negative socio-economic and interpersonal consequences on adults/children consist of behavioral and emotional problems. They are more likely to divorce, more likely to marry at young ages, to report problems, perceived instability, conflict, lack of trust in their marriages. Many two-parent families don't offer a happy environment for children. Parental divorce may disrupt the life course, with lifelong consequences for children well-being: lowered socio-economic status and problems in interpersonal relationships. Compared with individuals who grew up with both parents, children of divorce have lower levels of education, occupational status, and income, higher levels of economic hardships more often marry young, divorce and remarry several times, find themselves in unhappy relationships, and mistrust people in general. However they do not have lower levels of social support in their life. These relations may vary according to age, minority status, sex, parental education, parental death and socio-economic status.

In our research, we indicate the effects of divorce on adults/children who live in Denizli. The sample was randomly selected from living with divorced parents in Denizli. The effects of divorce are determined according to the adult's age, gender, parental conflict, post-divorce family stability, parent-child relationships, education, socio-economic status. These variables are significant to understand the effects of divorce on children. We examine the association between child depression and childhood parental divorce using a representative sample of 354 in Denizli (177 male and 177 female). Firstly, in our research, methodological issues are addressed in this context. Secondly, the findings are discussed within a theoretical framework using family systems concepts and life-course theory's arguments. Results strongly support the our research hypothesis. Cultural differences and implications of the study are also discussed. Our research is supported by TUBITAK (The Scientific and Technological Research Council of Turkey). We thank to TUBITAK for supporting to our research project.

#### *Indigenous Religion, the State and Civil Society in Bukidnon, Philippines*

The paper describes the religion of an indigenous case community in Bukidnon, Philippines from participant observation, interviews, focused group discussions and content analysis of documents from government and civil society organizations and other secondary materials. It analyzes the diversifying role of indigenous religion in the public sphere amidst social change in the uplands with the entrance of migrants, logging companies, the state and civil society organizations. The paper also intends to shed light on how indigenous religion contributes to communal adaptation and sustainable development as well as efforts to protect ancestral domain in the face of increasing commercialization of the economy, as well as political and environmental conflict. The increasing visibility of religion and the strategies of religious leaders to position themselves in the changing context has implications as well for the relations between religion and the state and

civil society. Theoretical perspectives examining the role of religion in the public sphere as well as political ecology will be utilized as frameworks for analysis.

##### *Poverty and Unequal Development in Central America*

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it excels Costa Rica, which some have considered the Switzerland of America, for having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent's poorest nations.

This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

##### *Social Investment at Sub-National Level in Mexico: The Role of Actors and Institutions*

Sub-national governments have been largely considered to be better equipped to respond to local preferences and needs more effectively than central governments. While this capacity has been mainly associated with the role of sub-national governments in delivering social services, their role in as social policy innovators has been scarcely studied, especially in the Latin America context. Nonetheless, as the case of Mexico shows, in the context of increasing political and financial decentralization, sub-national governments have been more active in implementing their own social policy initiatives. This paper explores the most important factors that may explain the increasing activism of sub-national governments in the social policy realm, measured by the size and type of social investment, apart from their spending in health and education services. To do so, we produce a qualitative comparative analysis that comprises three different states in Mexico; state-level is the second-tier of local government in the Mexican union. This comparative analysis looks at the relationship between social policy and different political and institutional variables, including the actual capacity of the government to get financial resources, as well as the type of actors in charge of social policy in each state.

##### *Globalization and Human Rights*

The concern for the human rights becomes popular particularly in the twentieth century, though it had its roots in different forms since time immemorial. The horrors of the Second World War led to the birth and recognition of the modern human rights. The global framework of human rights was laid down by the United Nations General Assembly on December 10<sup>th</sup>, 1948.

The idea that the protection of human rights knows no international boundaries has gradually captured the imagination of mankind. After the Vienna Declaration (1993), there seems to be a global consensus on the fact that all the Human rights are universal, inseparable, interdependent and interrelated.

The respect for Human rights is enormously essential for achieving the global priorities of peace, development and democracy. Today, the concept of human rights has assumed universal proportion, accepted virtually by all states and societies regardless of historical, cultural, ideological, economic, or other differences. Almost all the countries of the world have clear provisions about the human rights in their respective constitution.

Human rights are rights which the individual has, or should have, in his society. Though the International Human rights imply rights for the individual against society, but they are not seen as opposed to the interests of society.

Despite human rights becoming the subject of concern to the legal fraternity, The Asians countries criticize the western concept of human rights is that there are no universal human rights as there is no single human nature, and thus no universal moral law to which appeals across cultures can be made.

##### *Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)*

##### **Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)**

###### **Abstract**

**Dr Alok Kumar Meena**

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and tradition.

The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy.

Group- oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc.

Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi; playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere.

Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and life style of tribals.

**Keywords:** leisure and lifestyle, Chaupal, Traditional games, family-oriented activities.

*The Impact of Social Structures on Adolescents' Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran*

**Aims:** This study investigates the social underlying factors which impact on substance abuse in Iran's society.

**Method:** In a comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals' behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents' deviant behaviors. The paper is drawn up on theories' Durkheim, Giddens, Putnam and also the evidence related to the situations of social anomie and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors' behavioural habits and skills in society.

**Findings:** The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of up rootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates an ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so complicated realities of social life.

**Conclusion:** Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

*Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany*

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition of the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid ("smart grid") has started. In this smart grid private households should play a role as adaptive consumers who shift their electricity consumption according to the electricity production (from periods with low production to periods with high production) and who save a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members everyday routines? To what extent are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

**MEISSNER, MIRIAM\*** (University of Amsterdam,  
[m.m.meissner@uva.nl](mailto:m.m.meissner@uva.nl))

*Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives*

A major challenge of narratively portraying the 2008 financial crisis consists in representing debt and the multiple ways in which debt – as the underlying

asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only alludes to the inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquestioned.

My objects of analysis range from filmic and documentary crisis portrayals such as *Inside Job* (2010, Charles Ferguson), *Wall Street: Money Never Sleeps* (2010, Oliver Stone) and *Margin Call* (2011, J.C. Chandor) to fictional and non-fictional crisis literature such as *A Week in December* (2009, Sebastian Faulks) and *The Big Short* (2010, Michael Lewis).

This paper forms part of a research project that applies anthropological and socio-semiotic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.

*Dans Un Contexte De Crise économique : Tensions Sur L'emploi Et Sur Le Marché Immobilier. Quelles Conséquences Spatiales ?*

Dans le cadre de la recherche ANR Transénergie, six sociologues ont entrepris deux enquêtes par entretiens semi-directifs dans les métropoles françaises de Lille et Lyon sur la *classe populaire salariée stable* (Bihl, Pfefferkorn, 2004) potentiellement affectée par les évolutions économiques des marchés de l'emploi et de l'immobilier.

La première enquête (40 entretiens) s'intéresse aux candidats à l'**accession à la propriété**. La seconde (30 entretiens) s'intéresse aux salariés **travaillant dans des zones d'activités** périphériques.

Notre contribution traite des conséquences spatiales de tensions combinées sur les marchés de l'emploi et immobilier et s'articule autour de quatre parties:

– En situation de crise économique, l'attitude la plus répandue est de s'agripper à l'emploi. Au nom de cette sécurité professionnelle, des projets familiaux sont au mieux différés sinon abandonnés, y compris des divorces. Traiter des conséquences spatiales des évolutions récentes des marchés passe d'abord par en considérer les conséquences en terme d'**immobilités**.

– Les marges de manœuvre que contrôlent les salarié-es sont différentes selon qu'ils rapprochent l'emploi ou se rapprochent de l'emploi. Si la proximité domicile-travail détermine largement le choix résidentiel, elle n'est plus garantie. **D'écidence, la proximité domicile-travail devient privilège.**

– Les difficultés que rencontrent certains ménages en période de crise pour accéder à la propriété ou à la location (dépôt de garantie) étant donné l'instabilité de leurs emplois, rendent plus complexe l'**ajustement des localisations**. L'instabilité professionnelle ou les fréquentes délocalisations d'entreprises aboutissent à ce sentiment que, du point de vue des navettes domicile-travail, tous les lieux se valent.

– Si la ville n'est pas *cohérente* (Korsu alii 2012) cela ne tient-il pas d'abord à sa **forme urbaine** ? Dans une ville multipolaire comme Lille si la possibilité de trouver un logement à distance raisonnable de l'emploi paraît satisfaisante, dans une métropole unipolaire comme Lyon, les difficultés à trouver une localisation satisfaisante sont plus grandes.

### *Aspects of Measuring National Identity: Insights from Online-Probing*

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation.

Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project "Optimizing Probing Procedures for Cross-National Web Surveys" already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondent from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term "social security system" and is this comparable to the definition given by German respondents? How comparable are the understandings of "fair and equal treatment" across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

### *Ways to Uncover Cognitive Processes: A Comparison of Cognitive Interviewing and Online-Probing*

Cognitive processes shape the way respondents answer survey questions: how they understand a question, retrieve the relevant information, form a judgment and how they communicate it. At the different steps of this process respondents can encounter problems.

Cognitive interviewing is a technique which aims to uncover the cognitive processes of respondents when answering a question and to detect problematic items in this regard.

In the last years the number of international survey programs increased. Cognitive interviewing is a valuable tool to reveal differences in the item interpretation across countries. The application of cognitive interviewing in cross-national surveys has so far been restricted, due to, e.g. restricted availability of cognitive interviewers across countries (Miller et al. 2011).

One additional inexpensive solution is online-probing which implements probing techniques from cognitive interviewing within online surveys. Although online-probing has been developed only recently, both techniques, traditional cognitive interviewing and online probing, have been applied successfully and could shed light on comparability issues of items in cross-national research.

However, there is still a remaining research gap. So far, both techniques have not been compared. Within the project "Optimizing Probing Procedures for Cross-National Web Surveys" data has been collected which enables such a comparison. The presentation will shed light on the differences and similarities between cognitive interviewing and online-probing. In particular, it will show what type of cognitive problems the different techniques are able to detect and in which context which of the two techniques proves itself more useful to improve items for future use.

### *Trust and Social Classes in Russia and Nordic Countries*

Trust and Social Classes in Russia and Nordic Countries

Sociological studies have shown that economic and social inequalities are increasing everywhere. Studies have also shown that there is a strong connection between generalized trust and equality (Wilkinson&Pickett 2010). Comparative evidence indicate that strong social institutions prevent free riding and other similar problems. The Nordic countries are in many respect good examples of generalized trust, well functioning social institutions and equality. On the other Russia is an example of low trust, weak institutions and inequalities. However there are clear differences between different social actors both in the Nordic countries and in Russia. In the paper we ask what is the role of social class in this respect? what kind of differences there are between social classes and trust? Can we find one Nordic model, or are there different models? What are the main differences between Russia and the Nordic countries? Our paper is based on 2010 European Social Survey data.

### *Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?*

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a "new internationalism" as opposed to an "old" labor internationalism. The new internationalism is meant to be anchored in a break both with the issues (thematic approach to social movements) and with the means (the use of social networks) due to the "old" internationalism. In Brazil, there is a widespread belief among unionists that the constitution of trade union networks based on multinationals can function as counterweight to the advancement of neoliberal globalization. The supporters of that view bear that such initiatives could eventually update the notion of international solidarity, which is part of the labor movement historical heritage. The global union networks of multinationals are nowadays relatively well organized in some branches (chemical, metalworkers), though many accuse them of encouraging an enterprise microcorporatism at the expense of any collective wider interest. Additionally, the labor law reform initiated by the State promotes wage flexibility and encourages subcontracting. The picture is one where "internal" front points to a worsening in both employment conditions and use of labor force, while the "external" front is open to experiences of deliberative participation within corporations. The paper aims to explore this apparent paradox. Evidence brought are: the quantitative dimension of the union networks, their distribution across economic sectors, their guidelines and prospects, all captured throughout available secondary data, as well as interviews with managers and workers. The deepest reach of the union networks is intended to be sociologically measured in a scenario of restructuring, privatization and attacks on social rights. Thus, the paper seeks to raise the point that, in fact, the gap between the "old" and "new" labor internationalism unveils an underlying material and symbolic cleavage which opposes an "old" to a "new" working class.

### *Festivals and Living History. Tourism in the Age of Edutainment*

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy – local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the "seriality" of the festivals devoted to local authenticity or the new culture of slowness, as well as the inability to properly manage edutainment, are stifling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.

## Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, of the societies most influenced by the Western consumption patterns.

This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, "liquid" and post-modern orientation could be overcome by a return of "solid" and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

### Educación Inconsistente;ejercicio Profesional Desigual

#### Educación inconsistente, ejercicio profesional desigual.

José César Mendoza-Cornejo<sup>1</sup>

[1] Profesor investigador. CUCBA-UdeG. México

Email: [cesarm@cucba.udg.mx](mailto:cesarm@cucba.udg.mx)

En la historia del hombre sedentario, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta "diferencia".

Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del iletrado etc. términos que provocan divergencia y estancamiento.

Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humanista, con ideas que converjan en la solidaridad y por consiguiente, hacia una visión de interés colectivo.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud antepone el beneficio individual sobre el colectivo, circunscribiendo los principios que pudiesen haberse recibido en el seno familiar o en las instituciones escolares.

Con el objetivo de evaluar el comportamiento -simulación- de productores y profesionistas se efectuó una encuesta en localidades del Estado de Jalisco.

#### Resultados

El INEGI 2010 concuerda con la indagación, el esfuerzo por hacer más es poco, desatendiendo a quien radica lejos de los centros, simulación que provoca desigualdad separándolos del resto y de las oportunidades, generando abandono, emigrando en busca de anhelos donde su personalidad es menguada por lo distante de sus familias y costumbres.

#### Conclusiones

La universidad y su comunidad deben ser ambiciosos y asumir un objetivo humanista y reorientar programas escolares y acciones como el Servicio Social.

### Cross-Border or out-of-country Voters? Citizenship and Elections Across the Frontier Between Brazil and Paraguay

Brazilians living in Paraguay are the largest immigrant group in that country and the second Brazilian population living abroad. Although Brazilian nationals are allowed to vote from abroad in homeland elections, those residents in Paraguay prefer not to be registered as out-of-country voters in favour to cross the frontier into Brazil to go to the polls on elections days. Furthermore, the Paraguayan residents in Brazil cross the frontier into Paraguay to cast their ballots in Paraguayan elections. In the frontier region, the cross-border ties have a far-reaching impact on the political life among emigrants and their descendants, and it takes a leading role in the construction of a citizenship which merges the local, the emigrant and the extraterritorial dimensions. The paper discusses how the electoral processes blur social categories such as resident and expatriate, analyses the cross-border political ties and the political participation of Brazilian and Paraguayan emigrants in local and national elections of both countries, and then examines the implications of the cross-border and the out-of-country voting in the construction of an extraterritorial citizenship in Brazil and Paraguay.

### The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals' cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for sociology. It consists of a quantitative analysis of open-ended responses to Ralph Turner's True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe's student body is more culturally diverse than it was at the time Turner did his study. Around 25% are overseas-born students, most of them coming from Eastern societies backgrounds. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Inglehart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/Western societies divide in relation to experiences of authenticity. Turner found no relationship between respondents' cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

### Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: *Drifters* (1929) from John Grierson and *Misère au Borinage* (1933) from Joris Ivens. The first one shows the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second one shows the very arid and difficult life of the Belgian miners of Borinage, focusing in their hard conditions of work that has led to a major strike in 1933, after the worldwide crisis of 1929 in the USA.

Drifters show a very interesting process of overcoming the old artisanal fishing work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam in an harmonic process but questioning the "natural" approach of a film like *Nanook of the North*. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage shows that against the power of capitalism, that in the process of reproduction of capital also reproduces the miners in the worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if *Drifters* is remarkable as the first documental film in history to put the working class in the central place as a film subject, *Borinage* is the first one to show the working class in the process to become an historical subject to change the world, like fiction has already made in Eisenstein's *Potenkim* (1925).

JS-50.3

**MENEZES, PAULO\*** (University of São Paulo, [paulomen@usp.br](mailto:paulomen@usp.br))

### Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documental cinema, where the confusion and the merge between the reality of

images and the exterior "reality" that the camera faces are more fragrant and undeniable, based on the theoretical assumptions made by Foucault in *What is an author?* and by Pierre Sorlin in *Sociologie du Cinéma*.

It discusses the documental cinema by analyzing their relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality they allude. This analysis criticizes the positivist foundations that organizes the documental films and the positivist watch that audience gives to them, fundamental for the misperception of a film as the "real" itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images suggest. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

Finally, I interpret the film *Les Maîtres Fous*, by Jean Rouch, as a Discourse and not as a film of his Director. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the "other" (a ritual) and not a discourse that alludes something else (the French colonial heritage).

##### *Authorship and Curatorship: The Active Face of the World Music's Passive Work*

This is a research about Putumayo, a NY based label of World Music collections. On its own words, the label's work consists in organizing collection that gather music from "exotic places where the music originated" so the rest of the world could know about that culture "as it is". But what we observed in the research activity is that the curatorship work of the label brings a strong authorship signature: the label isn't only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorship gestures are also active and interested acts of authorship: world cultures are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in this *between poles*, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to show how this exercise of coming out of itself searching the other, when based in its own believes, it's always a jump into itself. We want to discuss these issues inside the modernity debate, showing how the problem of "other voices" is a central analytical topic.

**MENJÍVAR, CECILIA\*** (Arizona State University,  
[menjivar@asu.edu](mailto:menjivar@asu.edu))

##### *Title of Paper: Multisided Violence and the State in the Lives of Guatemalan and Salvadoran Women*

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of *feminicides* (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such crimes. Both countries have recently created governmental offices and enacted a battery of laws to combat these crimes and both countries have ratified the 1994 Convention of Belém do Pará, Brazil, yet, levels of crimes against women have continued undiminished. Impunity is rampant and only a small fraction of these crimes are ever prosecuted and an even smaller share result in convictions. And while a UN 2012 report places El Salvador's feminicide rate as the worst in the world, this country also has enacted a total ban on abortions, under any circumstances, even when the mother's life is in danger. Based on years of fieldwork in Guatemala and observations from El Salvador, I argue that these various forms of violence in the lives of women are deeply connected and have roots in *multisided violence* composed of structural, symbolic, political and everyday forms of violence. I move away from explanations that focus on individual acts of aggression against women (which for the countries I examine are often are couched in machismo) to focus on extrapersonal structures that create conditions that permit such acts. The persistence of multisided violence may not cause the horrific crimes of feminicide to occur but, I reason, the intertwined nature of these various forms of violence paves the way for these more visible forms of violence to take place and also sustains conditions of impunity on the part of the governments.

##### *An Operational Framework for Addressing Socio-Political Environment of Disaster Risk Reduction-Oriented Spatial Planning*

Spatial planning plays a significant role in disaster risk reduction (DRR); UN Habitat has proposed methods and implementation strategies of spatial planning at local level in this context (UN Habitat 2011). However, DRR has only partially taken this into account in the development and the implementation of numerous spatial plans. Local level socio-political environment (SPE) plays a significant role in effective and functional spatial planning. Lack of good governance, incompetence of political institutions and corruption hinder the policy planning and implementation procedure, mostly in developing countries. This paper addresses particularly the need for a comprehensive understanding of the local socio-political conditions in context of DRR that hinder the planning process and implementation, using the developing countries examples: Mongla Port City in Bangladesh and Medellín in Colombia. Both of them are subject to natural risk – storm surges in Mongla and flash flooding in Medellín. The obvious differences between them (cultural environment, social structure, level of economic development, intensity of the natural hazards, city size etc.) are considered to define the SPE which may be common to different areas in the developing world. Our findings show that in the studied regions, spatial planning is not given enough importance in local level DRR planning. Its implementation is difficult because of lack of coordination and conflicting interests between different stakeholders and also external influence from development partners. The methodology applied in this paper to address the socio-political dimensions of planning procedure is applicable to other similar contexts and that will contribute to global DRR.

[natalja.menold@gesis.org](mailto:natalja.menold@gesis.org))

##### *Effects of Rating Scale Polarity on Attitude Measurements with Latent Variables*

Beside the item content, rating scales represent a central data base for survey measures. Attitudes are often measured by a certain number of items thought to present a latent concept. This paper focuses on the polarity of rating scales and its impact on the attitude measurements with latent variables. With respect to scale polarity, bipolar and unipolar rating scales are distinguished. Bipolar scales reflect two opposing alternatives (e.g. agree-disagree) with a conceptual zero as midpoint (neither/nor). Unipolar scales (e.g. level of importance; do not agree –agree) reflect varying levels of the same dimension with the middle category presenting the conceptual dimension's midpoint (e.g. moderately). In surveys so called "mixed" rating scales are often used, as for instance a unipolar rating scale with a midpoint that reflects a conceptual zero point.

The present study addresses the question how attitude measures with latent variables are affected by unipolar, bipolar and mixed rating scales. A 2x2 randomized experimental design was implemented varying polarity (unipolar vs. bipolar) and middle category (matching vs. non-matching to scale polarity). Different attitude constructs were measured using these rating scales. The effect of rating scale formats on item loadings, error terms and dimensionality of items were assessed using Confirmatory Factor Analyses (CFAs). The effects were also modeled and tested with help of structural equation modeling (SEM) taking response sets and certain personal characteristics into account. The participants were 522 members of GESIS online access panel representing a probability sample of German residents. The results show an effect of experimental manipulation on item loadings and error term variances. The effect of experimental manipulation on attitude measurements was mediated by response sets. The results are discussed in terms of their applicability for surveyors and researchers.

##### *Problems of Recognition Extremist Information on the Internet*

In recent years, there is an increase of extremist activities in different countries in the world. Terrorist organizations skillfully recruited new supporters. Internet is one way of attracting people to the organization of extremist activities. Information placed on websites explicitly or implicitly leads to actions aimed at destabilizing the political situation in the country and poses a threat to the health and life of many people. Internet users are not always able to clearly define which kind of information they receive from different sites is really extremist information.

In 2013, we conducted the research in a large industrial center of Yekaterinburg (Russia). The method of research is case-study. The aims are to examine

the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups.

The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people, who suggests ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believes that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believes that extremist information means call for terrorist acts. In this case, 17 % of school students and college students mention the difficulties in discerning which information is really extremist. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

### Local Development Agencies

#### LOCAL DEVELOPMENT AGENCIES

In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility.

The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and POs (producers' organizations) that live in areas classified as critical, such as native zones in the rural milieu, which are marginalized and made up of settlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint.

The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development.

This model involved a cut in the budget for social policy and a reformulation of the objectives and scope thereof. From the mid-90's to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystallizes on how the State has to face the problem of poverty. That is, it aims to let society know how much it costs to support the poor. Through the Programs designed to alleviate poverty, the Mexican government assumes that the poor are ready and able to overcome the generational poverty status. However, the government is only investing in improving the labor force.

### Magic in Social and Natural Worlds: Planting New and More Colorful Technologies in South Africa

Scientific knowledge and technological artifacts travel with experts from centers of knowledge production to the places where they are translated, over an un-even global terrain and amidst a social history of technological failures and coercive public policies. While global in their extent and consequences, however, techno-scientific facts are *emplaced* and co-constructed within specific socio-logical circumstances and cultural conditions. As a consequence, accounting for a techno-scientific practice can only be made with regard to processes of local social and institutional transformation. Within a context of risk and uncertainty about water resources – real or perceived – South Africans are faced with a variety of technological options that will affect the nature of these arrangements. Focusing on a 'disaster mitigation' approach in a United Nations World Heritage Site in South Africa, I have positioned myself at the access points at which 'experts' and 'lay people' meet to discuss the "green economy". Considering the various ways in which a "green technology" is conceptualized, I probe at the concept of 'trust' and how it mediates societies relationship with science and technology. In the process I ask: What makes an expert an expert? What empirical factors make-up and account for 'conceptual innovation'? When does an object become a technology? When does it become a problem? And might the object of that problem offer any analytical and methodological tools that are interdisciplinary and area specific?

### Indigenous Pathways in Social Research: Addressing Inequities Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is that indigenous people from many different countries have successfully negotiated the Northern educational system without losing their indigenous cultural heritage. The indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways into social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research, exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation will be Research and Indigenous Knowledge Systems by Motheo Koitsiwe, a member of the Bathako tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a research from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation will be "Coloniality of Knowledge and Indigenous Researchers and Epistemic Violence, by Cesar Cisneros from Mexico; the historical consequence of the global dynamics of capitalism is discussed in relation to a knowledge divide that is associated with epistemic violence. Donna Mertens, a transformative researcher from the United States, will provide the final commentary in a presentation titled: Indigenous Researchers and Social Transformation.

**MERVIO, MIKA\*** (Kibi International University, [mm@tintti.net](mailto:mm@tintti.net))

### Japanese Artistic Traditions: Mimesis, Politeia and Re-Interpretation

My paper analyses the representation and perfecting of reality (*mimesis*) by visual arts in Japan and how the different traditions of art have been connected to changes in Japanese society and culture. The Japanese state was slow to realize how important visual arts for Japanese the Japanese society and culture and that visual arts have a huge influence home and abroad. The idea of state being responsible for promoting the cultured life of people or the idea of cultural rights of people are rather foreign to Japanese society. However, the whole idea of 'being Japanese' is very much a cultural reconstruction and the Japanese state has been actively engaged in shaping that reconstruction together with other pillars of establishment in Japan, such as the educational and economic institutions.

The invention of tradition does not mean that they are all false or invented from a scratch. The refined tastes of upper classes served as a basis for artistic traditions that are officially associated with the essence of Japanese art and culture. The modern Japanese state presented the Japanese cultural traditions as a proof of Japanese cultural superiority and, therefore, there has all along been a tendency also to protect the "Japanese" cultural traditions. For instance, *nihonga* was seen by the early modern policy makers as more Japanese than *yōga*, regardless of the theme of painting and without much of critical discussion whether *nihonga* really is that uniquely Japanese. After all, both Japanese *nihonga* and *yōga* are deeply influenced by former foreign and Japanese art and by each other. My paper reinterprets the tradition(s) of Japanese visual arts and places it in its social and political context, as well as develops theoretical tools that would better suit analysing Japanese artistic traditions.

## TG04-947.6

**MERVIO, MIKA\*** (Kibi International University, [mm@tintti.net](mailto:mm@tintti.net))

### Japanese Risk Society: The Changing Policies and the Role of Families

While the Japanese state has used its power and financial resources without hesitation in some fields such as public construction it has conserved resources by making people face many social risks, such as most family-related risks and unemployment, the best way that they can. If people fall ill or face other individual problems Japanese society often has surprisingly little room for such values as social solidarity and compassion. On the other hand, there have been social practices that have served to soften the image of Japanese working life practices, such as the strong emphasis on lifelong employment and relatively small wage differences among employees, especially among the elite salarymen (*sarariman*).

The characteristics of the Japanese model of risk society are that the weak political leadership muddles along with the rest of the societies with globalisation and most sectors of the society need to adjust to the changed realities the best way they can. On the one hand Japanese society has its cultural values emphasising the merits of social harmony and virtues of intersubjective practices. However, conflicts have always existed openly or been managed under the facade of

harmony and the new era of even weaker national governance, accelerated by the process of decentralisation (*chihô bunken*) and deepening fiscal crisis (making politicians powerless and leaving people on their own) have imposed individualisation on Japanese people from above. This individualisation has already encompassed every corner of Japanese society and the impact has been drastic for families. While the Abe administration has shown determination to address foreign, defence and economic & trade policies, the issues of social policy have clearly not been given priority and have been left to traditional institutions, especially to families.

#### *Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality*

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not as institutionalized as the transition from school to work for example. However, the complexities and reversibility of housing transitions, as well their ties to other youth-related transitions and social inequalities, become forcefully 'visible' when the homelessness of young people is taken into account. Within social welfare systems, special housing related aid for this age group is rare, and usually given in extreme situations when housing has already become problematic. This support is also often connected to other requirements, such as involvement in employment, training or education.

In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labour market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of "youth transition regimes" (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

#### *Hooliganism and the Dark Side of Football Events*

Sport events in general and football matches in particular are often clouded by acts of violence. Hooliganism is a problem that is widely feared and thus is communicated throughout the media weeks or months before the actual event. Descriptions of raging masses, flying stones, lighted flares and wounded innocent victims dominate the coverage. At the same time the term "hooliganism" has very little analytical power, as it is used for all kinds of violent acts that occur during football matches including right-wing extremism. The underlying purpose when speaking of "hooliganism" is to make sense of seemingly "senseless" violence, to produce a surplus of order over disorder. From the hooligan's own perspective the violence is by no means "senseless" but is restrained by a diffuse moral code. These rules are similar to former ritualized – and thus "fair" – duels, in which the combatants could achieve or restore their honor. In this paper we want to address the phenomenon of "hooliganism" from a cultural sociological point of view. We contrast the "public" perspective and the media imagery of violent acts of hooliganism with the self-concept of the subculture in question. This comparison shows that hooliganism is a deeply ambivalent phenomenon. It is both playful and serious, sport and "war". Hooligans are peaceful and "invisible" in everyday life, while they are violence-prone as long as the "moral holiday" (Randall Collins) lasts. We argue that this in-betweenness makes hooliganism so hard to grasp by science, politics and the media.

#### *Transformations Of Cultural Identity: Japanese Mothers Raising Intercultural Families In Australia*

##### Abstract:

Stuart Hall argues that identity is not about 'who we are' or 'where we come from', but about 'becoming' something. This paper explores Japanese women's

changing cultural identity by focussing on those who have chosen to leave their homeland and settled in Australia to raise a family. Selected from a larger study of mixed marriage, this paper focuses on three case studies of Japanese women who settled in Western Australia with their European migrant husbands and raised children in the third culture are the focus of this paper. It examines how these women adjusted their cultural values in relation to their husband's culture and the new host culture, how they raised their children in a foreign land with a foreign husband, and the manner in which they retained elements of their Japanese identity, re-creating themselves through different stages in life. While their experiences demonstrate challenges, not least of which are alienation, 'culture shock', and racism, they also offer evidence of resilience and creativity in the negotiation of cultural adaptation. This paper demonstrates the complexity of the transformation of cultural identity, which is intertwined with the multicultural home environment, isolation from familiar cultures of origin, gender roles within the family, and the historical and political background of the society in which these women live.

#### *Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities*

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency's "Whole Community Approach" for disaster resiliency, in which four of the six resiliency themes focus on social capital. Organizational social capital benefits the individual organizations and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental organizations (Provan et al. 2005). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kapucu 2006; Kapucu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations use of networks for disaster situations (Boerfel, Lai, and Chewning 2010). In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed between 2012 and 2013 and include two communities that had recent disasters and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organizations, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportunities for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience. My results address how the "Whole Community" is practiced as well as contribute to organizational theory about social capital's effect on organizational and community outcomes.

[mmeyer@arch.tamu.edu](mailto:mmeyer@arch.tamu.edu))

#### *The Family Burden of Disaster Assistance*

One commonly proposed, but under-theorized, component of community disaster resilience is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individual members and the entire network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families' resilience. I apply a common social network measure—the name generator—to measure the availability and source of disaster-specific resources in individuals' social networks. This network-based approach to disaster social capital shows the importance of family to disaster assistance. Individuals turn to family first for all types of assistance, and almost exclusively for financial assistance. This reliance on family results in extreme racial homophily of disaster social capital networks. Further, older family members are more often indicated as sources of financial assistance, which results in further pressure on their often limited resources. Finally, low-income and high-income respondents have similar disaster assistance networks, but high-income respondents will only use family for nonfinancial assistance and

use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other "get by" during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogenous.

#### *Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism*

The concept of "fields" has a lively history. Starting as one of the crucial concepts in Bourdieu's theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Fligstein/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of practice (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of western modernity (Luckmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jepperson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

#### *Modern Times: How Organizational Time Structures Influence Society*

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as *organization society*, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timetables, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as *Procrustean bed* regarding societal macro-logics. In the same way in which Procrustes "adjusts" people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science.

Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (temporal) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical surveys which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.

#### *Understanding Long-Term Risk Behavior: The Importance of Full Picture*

On the example of a qualitative study of long-term injection drug users (IDUs) who remained HIV and Hepatitis C free despite long history of risk behavior (drug injecting) we argue that analysis of non-risk related aspects of the lives of the risk-takers is very important for understanding their risk-taking behavior and its outcomes. To understand safety—in this case not getting infected—we need to understand more than situations and behaviors that put people at risk. Epidemiologic theory that focuses on recent injection practices as infection risks cannot help much in explaining how these users "stayed safe" in the long run. In addition, by focusing all attention on drug users' risk behavior, it distracts researchers' attention from other important areas of drug users' lives that are not in themselves risks but *may be extremely important in having consequences* on various risks people who use drugs face. In short, we need to go beyond epidemiological risk theory to understand risk behavior in the long run. As we shall show, non-drug related practices contribute to peoples' fates as drug users. More specifically, we intend to show how adjustment of person to drug use, successful mutual integration of drug user's role with other types of roles are pivotal in defining his life chances, including chances to get infected by blood borne infections. Based on life history interviews with 35 long-term IDUs in New York City, we argue that analysis of their biographies as complex, continuous, and integral life-trajectories is indispensable for comprehending their activities, including drug using and risk taking behaviors. Successfully combining drug using and non-drug using roles and drawing on work-related, social, and institutional resources, our double-negative informants underwent both periods of stability and turmoil without getting infected.

#### *The Dilemma of Feminist 'double Activism' and the Pressure of Separatism*

Feminism shares boundaries with other political movements, often acting in synergy with many of them. The term "double activism," coined by Italian feminists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist collectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conflicting loyalties in the 60s and 70s by feminists advocating a complete separation of their movement. Double activists who lived that experience, were criticized for not devoting their energies entirely to women and feminism; for not thinking and acting freely outside frames of reference controlled by masculine thought. The pressure felt was described as schizophrenia resulting from being engaged in two opposite worlds and not feeling whole in neither of them. This presentation is based on a comparative research between two types of feminisms which have never been compared before: Québécois (Canada) and Italian feminisms during the 60s and 70s. The paper intends to go beyond the Italian case dominated by the traditional and the New Left and beyond the 60s and 70s period by showing that double activism was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed synergy found between feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists; the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of feminism while seeking to bring feminist principles and feminist struggles within leftist groups.

**MICHEL, PATRICK\*** (École Hautes Études Sciences Sociales,  
[patrick.michel@ens.fr](mailto:patrick.michel@ens.fr))

#### *Elements of a Socio-History of the Relation Between Nation and Religion – the Case of Catholicism*

The nation has been, simultaneously, a privileged tool of modernisation (that is of disenchantment) and of the political, and also a potential tool of perpetuation of a new type of enchantment (which is a privileged space for the refusal of modernity). Indeed, should the nation become an object of sacralisation, it is ancient politics, funded on transcendence, that is then maintained.

One of the main actors involved in this perpetuation of enchantment has been the process of forced homogenisation aiming at producing 'sameness' in a fictional way. If the nation was calling for a progress of differentiation, it was only

imposed in the 19<sup>th</sup> and 20<sup>th</sup> centuries while (re)producing indifference, and re-sulting in violence.

Today, the reality of pluralism makes this fiction of 'sameness' globally incredible. Should a space which can bring back the current evolutions carried by the acceleration of globalisation exist, the best option would be the one that carries the resistance against this process. In a situation that is characterised by the disqualification of the absolute and the passage of 'sameness' to plurality, there should be no surprise to the fact that we are witnessing some actions towards the reaffirmation of the absolute and of 'sameness'.

To explore this problematic, this paper will draw on the paradoxical relations (and the successive reorganisation of these relations) maintained by the catholic church towards the nation. In an orientation to follow the sign of the times (if not to transform it, at least to inhabit it), religion and the nation are both categories which share with intimacy the avatars of legitimacy, that is the rebuilding (and the partial over imposing) of complex dispositions to organise the religious. What is at play around religion and the nation can only make sense when dealing with the contemporary redeployment of these devices.

[miquelimichetti@yahoo.com.br](mailto:miquelimichetti@yahoo.com.br))

##### *The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism*

Culture plays a central role in the "flexible accumulation", but does so as a "resource", as a way of generating economic value. It is in this context that arise notions bringing together seemingly antithetical terms, as "economy of culture" and "creative economy". The study aims to show that in this new "capitalism of spirit", the world of culture seems to incorporate both *practices* and *discourses* from the new corporate world, which in its turn seems to feed on the cultural sphere. In this increasingly intricate intertwining between economy and culture, it seems to be an isomorphism between the practices of companies of the flexible capitalism and certain agencies of culture. Under the rhetoric of "organizational innovation", these agencies replicate business models such as the networking, horizontal, anti-hierarchical organization, based on crowdsourcing and / or crowdfunding, etc. In these new models of "cultural business", content producers find themselves in precarious conditions. Under the promise of eventually monetize their creative capital, they experience temporary and outsourced contracts. As Max Weber teaches us, each form of capitalism needs a corresponding "spirit", so that will also be a discourse isomorphism between the world of flexible economy and the sphere of culture. The discourses about the non-separation between professional and personal life, between work and leisure that flexible capitalism took from counterculture is easily extended to current artistic and cultural activities because such ideas refer to the historical separation between art and work that founded the very category of "artist". Through the analysis of similar practices and discourses into the corporate world and in the cultural sphere, the study will show how the precariousness has been rhetorically transformed into flexibility and freedom and how, even under the rhetoric of alternativeness, culture in the flexible economy has contributed to the reproduction of an unequal world.

##### *Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries*

1. Income and wealth inequalities have represented a central issue of social policy analysis in the past. Nowadays the nature of inequalities and types of inequalities are changing. The paper aims at analysing the inequalities in subjective well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the paper: Does the welfare state reduce inequalities in people's overall subjective well-being? Does the welfare state reduce inequalities in people's satisfaction in various domains of life such as health or work-life balance?
2. The goal of the paper is to measure and compare, across European countries, inequalities in overall and domain subjective well-being (SWB) based on subjective indicators of well-being. Doing so allows for the evaluation of economic, social and demographic changes in societies and to provide information on well-being of different groups in the European societies. So the first question asked is of diagnostic nature: what are the inequalities of well-being of parents and non-parents among European countries? Are there cross-national differences in the level of inequalities in subjective well-being of people belonging to the vulnerable groups due to specific life course stages (parenthood, marital status)?
3. The paper considers the broadly defined cross national, comparative analysis of contemporary family policy as well as gender regimes. The paper will assess if the cross-national differences in the level of inequalities in sub-

jective well-being of parents and non-parents can be related to the welfare state regimes or to specific policies.

##### *The Effects of School Racial and SES Composition on K-12 Reading and Language Arts Outcomes: A Metaregression Analysis*

Structural vulnerability theory proposes that educational outcomes emerge as organizational features of schools interact with students' individual characteristics. The organizational feature of interest in this paper is school racial, ethnic, and social class (SES) composition. This paper asks the following question: "Does school racial and SES composition affect individuals' K-12 reading and language arts achievement?" To answer it, the authors conduct a metaregression of the US social science literature published in the last 20 years on the relationship between reading and language arts outcomes and the racial, ethnic, and SES composition of the K-12 schools students attend. The authors employ a two-level hierarchical linear model (HLM) to synthesize approximately 75 primary studies with 200 regression effects. The tentative answer to this research question is a qualified yes; students attending schools with concentrations of disadvantaged racial minority and/or poor peers achieve less academic progress than their otherwise comparable counterparts in more racially integrated or low poverty schools. Preliminary results indicate that attending a racially isolated disadvantaged minority school has a statistically significant negative effect on reading and language arts achievement. This relationship is moderated by the size of the sample in the primary study and by the way the independent variable (school racial/ethnic composition) was operationalized. Effects vary for different racial and ethnic minority groups and the effects are stronger in secondary compared to elementary grades. The emergence and widening of the race gaps as students move through the grades suggest that the association of racial and social class isolation with reading and language arts performance compounds over time, illustrating how school composition effects reflect the dynamics of structural vulnerability theory.

##### *The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies*

Schools play a crucial role in preparing children for their adult responsibilities as workers, parents, friends, neighbors, and citizens. Increasingly, in the US and other multiethnic democratic nations this responsibility is complicated by the growing demographic diversity among students, a diversity fueled by international migration. The central argument of this paper is that integrated schooling is a necessary, albeit insufficient, condition for developing the social cohesion that just, multiethnic democratic societies require to flourish. Using the United States as a strategic case study, the paper synthesizes the US educational, social, and behavioral science literatures on the effects of school and classroom racial, ethnic, and social class composition on short- and long-term academic and nonacademic outcomes across the life course, with special attention paid to immigrant youth. The preponderance of the extant US literature on the topic links integrated schooling to improved academic and non-academic outcomes, and suggests integrated schooling is also a necessary, though, insufficient enabling condition for fostering civic engagement in multiethnic democratic societies. Ironically, despite this growing corpus of evidence, US schools are resegregating by race, ethnicity, and/or social class. To be sure, because of international and internal migration trends, the nature of US school segregation has changed so that today it is much more ethnically complex than the Black-White or Brown-White binaries of the past. Nonetheless, studies indicate that today, as in the past, schools with concentrations of poor disadvantaged minority students generally fail to educate their students. The paper discusses the implications of its findings for 21st century education in the US and other multiethnic democratic societies (especially OECD nations) facing the opportunities and challenges that demographic diversity and international migration pose for delivering educational excellence and equity to all students.

##### *Property, Patrimony and Territory: Autochthony and the Politics of Immigrant Place-Making in Peri-Urban Kisumu, Kenya*

The rapid urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and autochthonous framings to unravel the socio-spatial transformations underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations in Kisian are characterized by uneasy co-existence, featuring class divide and social cleavages. The host community views the 'immigrant invasion' as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarity of livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embedded in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

**MIDHEME, EMMANUEL\*** (University of Leuven,  
[emmanuel.midheme@asro.kuleuven.be](mailto:emmanuel.midheme@asro.kuleuven.be))

*The Mismatch Between Planning Practice and 'Actually Existing Urbanisms': Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya*

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and the more recent proliferation of globalization and neoliberal development policies. In Kisumu, the increased presence of street traders in urban public spaces has however fomented a 'clash of cultures'. On the one hand are private property interests (of capitalist investors) and the planners' modernist vision of an orderly city, while on the other hand are urban residents seeking alternative livelihood opportunities in the wake of diminishing formal jobs. The aim of this paper is to unravel the conflicts that arise out of these two contradictory worldviews on the use of urban public space. Using in-depth interviews, focus group discussions, mapping and ethnographic fieldwork, the paper interrogates a range of planning responses that have been used by municipal authorities to regulate and contain the phenomenon of street trade in Kisumu over the past few decades. By extension, the paper situates the politics and spatial practices that have since been devised by street traders to fight back state repression and marginalization and to stake out traders' claims to urban public spaces. The central argument in the paper is that while street trade and other forms of informal space production and use constitute the predominant mode of urbanism in contemporary Kisumu, official planning practice is still steeped in prescriptive ethos aimed at producing the 'modern' city. There is thus a mismatch between official planning policy and the practical realities of what Shatkin calls 'actually existing urbanisms'. The paper contributes to current debates on inequality, informality, urban citizenship and the challenges of governance, particularly as they relate to contemporary planning practice and scholarship on rapidly urbanizing cities of the global South.

[harald.mieg@hu-berlin.de](mailto:harald.mieg@hu-berlin.de))

*Weber's Ethic of Responsibility As a Framework for Professional Ethics*

Max Weber coined the term *ethic of responsibility* in his lecture on *Politics as a Vocation* in 1919. The ethic of responsibility demands to take account of both the means and consequences of one's actions. Weber contrasts the ethic of responsibility with an ethic of "good attitude": "there is an abyssal contrast between conduct that follows the maxim of an ethic of ultimate ends—that is, in religious terms, 'The Christian does rightly and leaves the results with the Lord'—and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one's action." My paper discusses how Weber's ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise...). I will explicate how an ethic of responsibility "takes account of precisely the average deficiencies of people" and can therefore be

linked to empirical social psychology. Redefining Weber's ethic of responsibility as professional ethics clarifies some open conceptual issues both in Weber's approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

*Public Participation and Deliberation about Nuclear Energy Policy: A Case Study of "National Debate" after Fukushima Accident*

This paper explores the possibility of public participation in decision-making on nuclear energy policy through a case study of "National Debate" on energy choices after the Fukushima accident in Japan. Japan has been pressed to fundamentally reform its national energy policy in order to break away from the excessive dependence on nuclear energy. In the summer of 2012, the DJP (the Democratic Party of Japan) coalition government at that time presented a set of national energy policy options, which ranged from the complete phase-out of nuclear power to partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DJP government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the process and result. As the result of the deliberative poll, approximately half of the participants supported the complete phase-out of nuclear energy, and it was reflected on the government policy decision to some extent. Some of the major findings from the participant observation of the deliberative poll are as follows: first, the public participation and deliberation substantially impacted on the policy formulation, producing a complementary effect to a wide range of direct actions such as demonstration and public comments. Second, the deliberative poll provided ordinary citizens with opportunities to question the existing authority of experts and make informed judgments about national energy policy. Third, however, the result of the deliberative poll was abandoned once the conservative coalition took power at the end of the year, and there still remain many challenges

about connections between public deliberative/participatory exercises and decision-making in energy policy.

#### *Family and Non-Family Support during the Transition to Parenthood*

Although today parenting is largely a choice, having children causes stress. Parents, especially of young children, are tired, sleep deprived, and stressed (Even-son and Simon, 2005, Umberson et al., 2010). They experience financial strain (Stanca, 2012) and time pressure. Childcare, an activity slightly more enjoyable than housework (Kahneman et al., 2004) is in conflict with parents' leisure, freedom, work demands, and romantic relationships (Angeles, 2010, Lyubomirsky and Boehm, 2010, Nomaguchi and Milkie, 2003, Twenge et al., 2003).

Previous studies show that families and other networks provide extensive help to parents of young children (mainly by providing childcare and housework, advice and information, as well as material support, see: Bengtson, 2001, Chan and Ermisch, 2011, Coall and Hertwig, 2010, Hank and Buber, 2009). However, longitudinal analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviates the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers' well-being.

We use the Swiss Household Panel to observe a sufficient number of transitions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for section effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2) models.

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

#### *The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes*

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being premium of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000, Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from theWorld Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Multilevel regression allows me to distinguish between the cross-country differences and the withincountry differences across time.

Results show that the life satisfaction gap between the married and the never-married decreased over time at a rate that could close the well-being gap between the married and the never married in about 25 years. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

#### *Women and Men As Providers of Informal Social Assistance: The Case of Lithuania*

Viewed from configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond its boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample - 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project „Trajectories of family models and social networks: intergenerational dimension“, financed by the European Social Fund (ESF).

#### *Changing The Subject: Occupy Wall Street's Achievements and Prospects In Comparative Perspective*

Occupy Wall Street burst onto the scene in New York City in September 2011. It was partly inspired by social movements in the Middle East and Southern Europe, and soon after its critique of inequality gained traction with the slogan "We Are The 99%," it helped to stimulate many similar occupations worldwide. In the aftermath of the eviction of the New York City protestors from Zuccotti Park and the similar evictions around the country, the U.S. Occupy Wall Street movement has dissipated. But similar movements have continued to spring up around the globe, and the social processes that led to the emergence of Occupy in the U.S. remain in place.

This paper explores the sociological roots of the New York Occupy movement, with particular attention to the changing U.S. labor market. Drawing on the results of a representative survey we conducted of New York City Occupy Wall Street participants in a May 2012 protest march, we analyze the movement's characteristics and discuss its achievements. In addition, we consider various comparisons and contrasts between the New York Occupy movement and other such movements before and since, and on that basis speculate about the prospects for the future of such movements in the USA and elsewhere.

#### *Social Conditions of Happiness. the Case of Mexico*

Social conditions of happiness. The case of Mexico

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the conscious of freedom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the medium level, it will explore two dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic

and political). At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

#### *Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research*

**Context:** Recurring problems with patient safety have led to growing interest in helping hospitals' governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

**Methods:** This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic and comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

**Findings:** Recent empirical studies linking board composition and processes with patient outcomes find clear differences between high- and low- performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

**Conclusions:** Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

#### *Dark Shades of travel: Death Tourism with its Legal and Social Implications*

The growing interest of dark tourism, namely death tourism, where the confrontation with grief and mortality is met with the expressed purpose of orchestrating travel that culminates in assistance to end one's life is becoming more a central focus on the debates in the right to life arguments. This paper describes the emerging phenomenon of death tourism, to present briefly the social and legal aspects of assisted suicide in conjunction within the tourism industry. By employing a variety of primary and secondary resources, from death tourism industry documents, legal statutes, and news reports, this study explores the propositions of this article. Whereas much of the contemporary research in dark tourism focuses on sights, experiences, and actual memorialization, death tourism tends to comprise a holistic view of the emerging phenomenon by viewing supply and demand management (and promotion), political interpretation and control. The final component of the paper views societal interpretations of death tourism and its potential for market expansion. There have been several social movements and legislative attempts to curtail the spread of assisted suicide and death tourism; however, the demand for the services has grown to the point where jurisdictions are considering measures to allow this practice. Such an expansion of legalized assisted suicide will allow those seeking the right to die more options for a death within a diversified tourism industry and how the trend of death tourism is potentially spreading to other countries beyond Europe.

#### *Researching Virtual Realities – Methodological and Conceptual Issues*

The first decades of the century have seen profound transformations of societies through digital media. One effect of these new means of contact is that virtual identity does not necessarily correspond to corporeal identity and can be-

come divorced from it or deliberately masked. An extreme manifestation is the creation of 'virtual worlds' populated by 'avatars', alternate online identities. For many, the opportunity to take on an alternate identity in a 'virtual world' is its primary attraction. Biological constraints, from being plain or unattractive through being too old or the wrong gender to having a physical handicap, can be transcended. Arguably, moral constraints need not apply either. While not 'real' in the physical sense, virtual worlds can be very real in their effects and are independently evolving societies. They have economies that interact with economies in the 'real world' and it is possible to make a living or become rich in the real world through your activities in a virtual world. Even in their present, rudimentary form, some persons prefer their virtual identities and lives to those in their 'first lives'. Driven by strong economic and technological imperatives, human/computer interfaces and virtual realities will become radically more immersive in the near future. It is not hyperbole to speculate that this could have profound effects for what it means to be human and social in the 21<sup>st</sup> century. This paper will explore some of the myriad issues – ethical, methodological and practical – that arise from conducting research, particularly biographical research, in virtual worlds.

#### *Using Biographical and Family History Methods in Sub-Saharan Africa: Inheritance in Kenya*

Inheritance systems and practices in sub-Saharan Africa play a key role in people's ability to exit poverty, or, conversely, plunging them further into it. As land is the major asset in low-income developing countries, how property is passed on and divided between future generations is a significant factor. This paper looks at inheritance through the lens of biographical interviews with several generations of Kenyan families, seeking to explain that the *how* and *why* of poverty needs to be understood in the wider family context. It analyses fortunes and misfortunes of families over a given time period in the context of property ownership rights. It also looks at the impact of education and the inheritance of cultural capital. When both fertility and survival are high, traditional patterns of land inheritance can lead to the progressive sub-division of land with long-term adverse implications for sustainability. While inheritance in Kenya is male-dominated, the paper nonetheless examines the position of women in the chain as vectors of male property rights. The application of male-oriented customary law where inheritance is concerned, rather than the use of statutory legislation, was found to be the reality for the overwhelming majority of the participants in the study. The practical implications of this for safeguarding the property rights of women and their children is discussed.

#### *Mō Tātou: Doing It for Ourselves. Developing Indigenous Māori and Pacific Marine Scientists in Aotearoa / New Zealand through Tino Rangatiratanga (Self-Determination)*

Persistent ethnic disparities in tertiary success have been experienced by indigenous and minority students globally, especially in the sciences, and more so at postgraduate level. Nevertheless, Te Rōpū Āwhina (Āwhina), a programme based on the Māori (indigenous people of Aotearoa / New Zealand) concept of whānau (extended family) at Victoria University of Wellington (VUW), has substantially increased the number of Māori and Pacific undergraduates and postgraduate students in the science, engineering, architecture and design disciplines. The kaupapa (goal) of Āwhina is to produce Māori and Pacific scientists who contribute to Māori and Pacific community development and leadership. An important Āwhina initiative, the Āwhina VUCEL Incubator (AVI), is based at VUW's Coastal Ecology Laboratory (VUCEL). The kaupapa of the AVI is to develop outstanding Māori and Pacific marine scientists capable of advancing scientific understanding and, critically, contributing to leadership and development in their communities in meaningful and significant ways. Māori and Pacific marine science capability is built through direct involvement in research that benefits those communities. Key aspects of our work and kaupapa are exemplified by two recent activities discussed in the presentation: (1) The Āwhina Summer Cybrospace event where

years 12 and 13 rangatahi (youth) from Ngāti Kahungunu and other iwi (tribes) and Āwhina local community clusters participated in hands-on activities including marine laboratory and field-based activities, and (2) a project developed by Ngāti Kahungunu Iwi Incorporated (NKII: the tribal entity for Ngāti Kahungunu) in partnership with the AVI, to increase Māori capability around marine resource management and provide pathways into marine science for Ngāti Kahungunu rangatahi. We describe the partnership approach taken to develop the project with NKII, evaluation of the Summer Cybrospace event, and research being undertaken to demonstrate that Āwhina and the AVI are having a positive influence on Māori and Pacific success in science-related disciplines.

### *New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia*

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday child care has increased very little. Despite fathers' general lack of 'hands on' parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation 'shared parental responsibility', which has been widely interpreted by lawyers and parents as a basis for equal ('50-50') shared custody of children. However, a 2009-11 qualitative study, entailing three, in-depth interviews found that gender inequity in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included 'lone' fathers and mothers – 'primary time' parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally.

The socio-political policy underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in 'doing family'. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own 'rights' while mothers shoulder a disproportionate burden of everyday 'responsibility' for children (even in 'equal shared care' situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within 'intact' families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

### *Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011*

The series of disasters following the 2011 Tohoku earthquake severely affected Japan's ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo's recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourses in international tourism promotion amongst these organizations. The appeal to support both Japan's and the disaster-region's recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

### *Contemporary Greek Myths: Visual Resources for Self-Transformation*

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed aural and visual methods (photo elicitation around spaces and objects; drawings of actual and ideal 'homes'; recordings of sounds including music tracks then discussed in two interviews). The data produced suggested the great importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their use by participants point to a complex interweaving of absences and presences cross-cutting the private and public spheres, (and often reflected and reproduced by academic disciplines). In spite of living in a somewhat 'confessional' culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people's family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/'troubled' families in stigmatising public, political discourses that divert attention from the structural inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

### *'Taking Photos? I Don't Do That Anymore': Critiquing the Photo-Diary As Method in Ageing Research*

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to 'an explosion of participatory media projects' (Luttrell and Chalfen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age [www.liveablelives.org.uk](http://www.liveablelives.org.uk). The research, funded by the Joseph Rowntree Foundation, adapted Bartlett and Milne's diary making method (Bartlett 2011). Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), aural (sound diaries) or textual (written or txt). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diary making method and an exploration of its limitations.

**MILSTEIN, DENISE\*** (Columbia University, [denicham@gmail.com](mailto:denicham@gmail.com))

### *Authoritarianism and Paths of Resistance in Latin America*

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-

tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged reactions to authoritarianism built on social movement participation and ideological commitment to produce music that could be used as a tool for sustaining anti-authoritarian identities and supporting mobilization. Countercultural reactions attacked authoritarianism from a different angle, challenging established national identities, incorporating foreign musics and thereby also threatening the cultural status quo. The bifurcation of political and cultural responses to authoritarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing the polarization of politically engaged and countercultural artists. In other environments, the two paths converged as artists collaborated to combine political and cultural responses to repression. These dynamics in turn shaped the cultural and political environment of resistance to authoritarianism, just as much as social movements and, sometimes, in the absence of openly manifest social movements. Building on this comparison, the author draws broader conclusions on the long-term impact of resistant art on the cultural, political and social landscape in which it develops.

#### *From the Inner Workings of Innovation to Historical Accounts of Artistic Development*

What mechanisms drive innovation in art? How does exploring this question incite broader understandings of the history of artistic movements? This paper examines innovation in Brazilian artistic movements over the 20<sup>th</sup> century. A look at the local, regional and international dynamics that impacted these movements reveals repeating mechanisms that both facilitate and limit innovation. The study of Brazilian artists and movements reveals processes relevant to the broader, historical development of artistic movements in Latin America. Methodologically, the focus on innovation in art worlds requires constant shifting among analytical levels in order to grasp transnational influences, the interactions of global and local actors, and the dynamic of change and transformation in art worlds. Adding a relational focus to this multi-level approach helps to unveil the channels whereby artists and their movements develop. The study describes three stages in the evolution of art movements in Brazil over the 20<sup>th</sup> century. First, a concern with authenticity that led to explorations of "native" Brazilian cultural heritage; second, a fragmented notion of national culture that built on mid-century populism; and third, the critical and grounded incorporation of diverse cultural elements within an international and, in some cases, global cultural sphere. The identification of mechanisms that repeat over time with each step in the development of an artistic trajectory is a tool that may be applied beyond this case. These mechanisms shed light on widely recognized phenomena such as revivalism, nationalism, counterculture and political engagement in art. The paper demonstrates, both empirically and analytically, how it is possible through the study of innovation, to build a broader narrative of the struggles through which artists and their audiences build identities within national contexts.

#### *The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective*

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverishing neighborhoods. The author argues that the uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These

private market actors often pursue investment and rental strategies that are contrariwise to the municipal development/ demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

These private market actors often pursue investment and rental strategies that are contrariwise to the municipal development/ demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

#### *Model Minority and Discrimination: Case of the Second Generation of Cambodians Refugees in France*

It is said that immigrants and foreigners in France posed a problem of socio-political order in the middle of 1970s. While the Maghrebians immigrants have undergone the experience of discrimination and exclusion in French society, South-East Asian refugee were considered to be a 'non provocative' or 'silent' group in the integration process at the local resettlement and benefitted from a warm welcome (Gilles 2000; Simon-Barouh 2003). They have a conscience to take advantage of their positive image based on ethnic category. It is suggested that for French people, receiving Southeast Asian refugees provides an opportunity to justify their virtue as non-racist citizens (Roquejoffre 2009:118). With this good reputation, they became a 'model minority' in France. As Asians have a fairly positive image compared to other immigrants, it is difficult to say that there is a feeling of hostility and racism against them (Gayral-Taming 2000). However, the idea that Asians can be accepted because they are silent while other ethnic groups without such a personality could be rejected is itself a radicalized stereotype. In the context of French society, the positioning of Southeast Asian refugees as 'exceptional' resulted from colonial history and the politics of compassion. But this exceptionality risks generating racialised practices. Regarding Second generation, their educational success in science and their typical choice for the sector of the communication industry has been noticed (Le Huu 1996; Meslin 2006; Masse 1996). Are they really success in their schooling and professional career? It is doubtful if they

really benefit from their positive image in their living experience. By examining educational and occupational attainments of the second generation of Cambodians refugees in France, I will show aspects of discrimination encountered by them as a model minority. I use interviews collected from my field research conducted between 2010 and 2011 for this analysis.

### *How Is Multiculturalism Americanized and Japanized?*

The idea of "multiculturalism" has spread globally and impacted on the ways of being "nation-state" since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the "weak" states in the strength of multiculturalism policies, modified it to a vision of "multicultural coexistence (*tabunka kyosei*)" for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Related to the legacies, national discourses redefine the relationship between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the nation. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how multiculturalism has or has not become a part of the national image. The USA's liberal modifications help to implant a multicultural ethic on its national image while Japan's transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

### *Nationalism, Exclusivism, and Purism: An Analytical Description of National Identity in Mongolia*

In recent years, Mongolia has witnessed the rise of ultra-nationalists and even neo-Nazis. Their campaigns pillory foreigners, especially Chinese and Koreans, as threats to the "purity" of the nation, and are often accompanied by vandalism and violence. Their target is not only limited to foreign people and enterprises but also to their fellow citizens. Reports state that women accused of fraternizing with foreigners, as well as sexual minorities, are typical examples of domestic scapegoats and objects of violence.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, descriptions of the public opinion in Mongolia are conflicting. Some argue that nationalism and prejudice against foreigners is common in the country, and that exclusivists are gaining popularity, against the backdrop of public fear that Mongolia, the country with so small population, might be easily swallowed up by the massive influx of foreign people, investments, culture, and others. Meanwhile, others explain that these ultra-nationalist groups do not represent the majority of Mongolian people, and that their activities are still in the margins. Which is closer to reality? Resolving the contradiction and portraying an accurate picture of public opinion will help in forecasting the future of nationalism and exclusivism in the country.

This paper presents a study of issues on the national identity of ordinary Mongolians, such as exclusivism, national pride, and aspiration of "national purity." Using data from cross-national public opinion surveys, the study examines Mongolian attitudes toward those issues, by comparing Mongolia with Asian societies and post-socialist ones. This study also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national identity.

### *A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries*

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world economy. One of the more relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division

of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, México.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies require large investments to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?

### *Youth and Public Space in Hanoi, Vietnam*

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increasingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space, but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city's largest public spaces, which are mostly fenced off and for which an entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fees or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new urban culture in the squares of Hanoi, manifested in skating, biking, rollerblading and street dancing.

Based on the results of 40 interviews with youth held on two squares in Hanoi – one located in the inner city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professional and institutional planners, this paper provides an understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

[alexomir@gmail.com](mailto:alexomir@gmail.com))

### *Routines, Rhythms and the Mobilisation of Musical Practices*

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relationships. The specific case of *son jarocho* is addressed to explore and discuss this notion. *Son jarocho* is a musical practice originated in southeast Mexico and is believed to be product of the encounter of African, Nahua and Spanish-Andalus traditions. It is nowadays reproduced, appropriated and recreated in various locations of Mexico and the United States, partly due to the migratory flows between these two countries. Practitioners have used *son jarocho* to elaborate discourses of authenticity and preservation of a regional musical heritage; however, it is currently also sustained, informed and reshaped by transnational linkages. I suggest that *son jarocho* is no longer confined to a bounded and coherent community or ethnic group (namely Mexicans, *Jarochos*, Mexican-Americans or Chicanos), but constitutes a complex form of socially established activity in which repertoires of bodily gestures, rhythms and routines are reproduced, re-appropriated and recreated across transnational social fields.

*Inequality in Students' Citizenship Participation Across Countries*

Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Scholzman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/strengthen the impact of the social background on student's citizenship participation, guided by the following questions: To what extent students' participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students' background and participation? The central hypothesis in this study is that country contextual economic indicators as well as democratic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students' and school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide.

The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main object of study is citizen participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation refers to activities that involve interaction with the local communities, civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

 TEJERINA, BENJAMÍN (Universidad del País Vasco)

*Exploring a Model of Inter-Disciplinarity Based on Collective Action Theories*

The objective is to develop a theoretical model to analyse and facilitate trans-disciplinary dialog and collaboration between art, science, engineering and humanities (SEAD). The model is inspired in key concepts taken from sociological Theories of Collective Action, which usually are applied to analyse different kinds of collective actions. We propose that these theories can be pertinent to understand the interaction between the main dimensions, agents, resources, contexts and strategies of trans-disciplinary action.

The hypothesis is that interdisciplinary action can be considered as a form of collective action according to the following definition: Collective action is "the result of a social action (or collective challenge) carried out by the set of formal and informal interactions established between (1) a plurality of individuals, collectives and organized groups and (2) other social and political actors with which they come into conflict. This conflict is triggered by the appropriation (of), participation (in), and transformation of relations of power to achieve social goals, and above all, through the mobilization of certain sectors of society" (Tejerina, 2010).

When collective action forms groups it is crucial to understand how these collective entities are shaped by means of discussions, negotiation and re-negotiation processes and not take their existence for granted. There is a need to develop a typology of different kinds of interdisciplinary collaboration in which the elements that structure it are reflected. This paper will focus on the key elements to construct a theoretical model for interdisciplinary action and intend to contribute to improve the vision on how interdisciplinary actions change knowledge production and how the aims, motivations, and interactions around interdisciplinary problems synchronize and find resonance (or not) in an environment of limited resources and changing opportunities in which there are collaborators and opponents that need to dialog. Supported by the National Science Foundation under Grant No. 1142510.

*Methodological K/Notes: Designing Research on the Enforcement of Labour Standards*

This paper traces methodological considerations in designing a research project which aimed to challenge the enforcement of labour standards in Ontario, Canada. It documents the discussions of a multi-disciplinary team, situated in both universities and community settings, which met over a three year period to develop the project design. Discussion of methodological possibilities often began with "nots"; that is, consensus on methodological approaches the team collectively rejected. Out of these discussions emerged suggestions and approaches through which we navigated dilemmas in research design. Three such "knots" are presented in this paper, specifically: [i] epistemological tensions around mixed methods and the politics of mixing, [ii] the attempt to capture the relationships between policies and their practice/enactment, as well as research and its impact [iii] the need to develop interviews which both establish respondents as knowers, and simultaneously focus on that which is unsaid/normalized in life history accounts.

*New Gendered Practices in Auxiliary Services in India's High Tech Firms*

Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who "service" India's high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low wages, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

**MISAWA, JIMPEI\*** (Rikkyo University, [misawa@rikkyo.ac.jp](mailto:misawa@rikkyo.ac.jp))

#### *Rethinking Pharmaceuticalisation from the View of Japanese Context*

Medicalisation is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as 'the process by which social, behavioural or bodily conditions are treated or deemed to be in need of treatment, with medical drugs by doctors or patients' (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousands hits for "pharmaceuticalisation" in Google, and only seven for the topic of "pharmaceuticalisation" in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Though discussion of the concept is increasingly developing in the Western society, the discussion in Japan is still scarce. Therefore, in this report, by considering the reason for lack of the discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is greater for Japanese people. That is, generalising pharmaceuticalisation without the point of social system would be hard. However, given that a lot of Japanese people use dietary supplements, pharmaceuticalisation might be affect individual healthicisation. Therefore, by using pharmaceuticalisation that is associated with individual healthicisation and social system, it might be available to analyse social phenomena of pharmaceuticals better.

#### *Reclaiming the Skin: The Tattooing and Piercing YOUTH Revolution and the Body-Skin-Mind Problem*

All modern countries have recently experienced a "tattoo Renaissance." This has become an essential part of what is here termed *a movement for self-rights*, the main driving force of which have been adolescents and young adults. Although tattooing and piercing, even in their more extreme forms, are generally no longer regarded as signs of social deviance, they are still viewed as "self-sabotage" since they not only pose a threat to physical and mental health, but also matter in recruitment for a range of jobs, especially those involving a business brand.

This paper examines the relationships between self, social roles, tattoos as self-brands, and business brands. Only after attention became directed to the employment problems that people with extensive and visible body modifications sometimes encounter did it become obvious that an individual's skin is a contested territory that is as much a part of an individual's body as it is a part of the role, over which the employer rules. Tattooing as a social phenomenon is thus an appropriate object for the study of the *individual-society* controversy, where the battle for the primary self, which is as much individual as it is social, becomes a form of rebellion in the name of self-rights and the reclaiming of the skin. The revolutions of previous centuries may have liberated the body, and even the mind, but they never included the skin.

Studying tattooing as a new social phenomenon, coupled with new developments in psychoanalysis (Anzieu), may radically advance the theory of self. The

body-mind problem remains a philosophical problem because philosophy has not thematized the third party in the relationship, which both divides and unites them – the skin. The body-skin-mind problem thus provides a new starting point and philosophical platform for socio-psychological discussions of self.

#### *Institutionalizing Community Participation and Sustainable Irrigation Management: A Case Study from India*

Community participation has become a key method in contemporary development projects. Most of the projects have given emphasis on community participation. Learning through experiences for proper operation and maintenance of irrigation systems and supply of irrigation water in adequate quantity according to a farmer's need on time in a predictable, reliable and equitable manner, decentralised governance of irrigation infrastructure have recently been emphasised as an essential precondition. Centre as well as some States in India has adopted various Acts to encourage farmers' participation in irrigation management. Using anthropological techniques, the present paper attempts to see the villagers' participation in traditional system of irrigation management among the tribal communities in kalahandi district of Western Orissa. It also critically examines the intervention of new institutions in irrigation management and their impact on age-old traditional system of community management.

It is observed in our study that the collective action or community participation was quite prevalent in the traditional system of irrigation management of tribal communities. The local knowledge, community cohesion, social capitals, traditional practices, values and beliefs were playing the most important roles in the traditional system of management. The government sponsored Water Users' Association, which is not devised based on the local culture and needs of the local tribal communities, is not able to evoke their participation in the Water Users' Association. The culture of ignorance, drinking alcohol, feeling marginal, poverty, illiteracy, the improper co-ordination between irrigation officials and beneficiaries, Physical structure of canals, dominance of head reach, higher caste large farmers have influenced the participation of marginal farmers. Moreover, some of the factors like social norms define domestic works and childcare as women's work and social perceptions discount women's abilities and opinions restricts women's participation in WUAs.

**MISHRA, SHASHI\*** (Ramniranjan Jhunjunwala College, [avms@godrej.com](mailto:avms@godrej.com))

#### *Gender Inequality and Education for Women*

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society's women have lower status, no access to education, less food and no health care but work longer hours, have lowered incomes and little or no access to ownerships of property. Normally in developing countries, the proportion of women literates is less than that of literate men.

Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors' where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for fulltime or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. This heavy workload leads to high rate of absenteeism and drop-out of women from literacy activities. Cultural patterns or customs also force negative attitude to daughters' education. For parents, investing in girls' education is perceived as a waste of time and money, as after marriage she will be leaving her parents and live with her husband and in-laws. Further women in general are paid less in labour market.

Present study will explore the dropout's girls from schools and how it affects their future life and in turn loss to nation.

**MISHRA, SHASHI\*** (Ramniranjan Jhunjunwala College, [avms@godrej.com](mailto:avms@godrej.com))

#### *Healthy Ageing, Happiness, Quality of Life for Rural Marginalized People and E-Health*

"Health for all" is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

#### *San Francisco and The New Economy Of Desire*

Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/sex partners. Despite the apparent universality of technology it is intrinsically connected to the cultural reality in which it is created. Because of the concentration of tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrification and the use of mobile digital media. Its local life also allows a clearer comprehension of the rising of a new economy of desire marked by phenomena like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrification, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile devices like smartphones and tablets in search of love and/or sexual partners. One of the main arguments is that this new economy of desire has also created a new sexual ethic and is changing moral patterns about monogamy and partnership. Research Sponsor: FAPESP (The State of São Paulo Research Foundation)

#### *From Agitation to Political Autonomy: Interlinks in Three Movements in a Northern Province of India*

This paper attempts explore the impending continuities in people's mobilization by identifying the inter-linkages in three contemporary movements in a northern province (Uttara-khand) of India. In an empirical study of the three movements; the movement against felling trees (chipko i.e. hugging trees), the movement against alcoholism (Sharab-bandhi), and the movement for a separate hill state, it has been found that these movements are entwined in terms of issues, leadership, organizations and ideologies. The present paper highlights the role of the middle class in contributing to evolve and articulate the issue/demand of the protection of a customary right of the local populace into a demand of political autonomy and the right to self-development of a regional community. Secondly, the paper focuses on pathways of the growth of specialized organizations from a spontaneous rise of a people's groupings. Thirdly, the paper explains the nature and role of leadership and intelligentsia in creating and articulating symbols, discourse and narratives of a distinct identity. Furthermore, it also pinpoints the role of middle class youth in dissemination of partial and total ideologies and debates which engender the conditions of mass awakening and thereby broadening the public sphere and rousing people to provide a critique and organize unrelenting struggles. The assiduous mass mobilizations by way of intensifying issues/demands, strengthening organized efforts and upgrading ideological inputs has produced conditions for civil society to collectively engage against state and eventually increasing people's space i.e. moving a step forward in democratization.

#### *The New-Petty-Embourgeoisment of Professionals in the Age of Globalization*

Ever expanding global corporate capitalism has all-encompassing influences; professions also fall within its explanandum domain. Professions once considered liberal and noble are being transformed into intellectual workers of the corporate sector of all kinds of societies. Professional expertise and intellectual capacities are being utilized for commerce and maximization of profit rather than in the interest of the client and the public. This applies to scientists, doctors and lawyers who carry out the function of corporate capital on the one hand and perform the task of labour by producing the surplus. The growth of the knowledge economy world over has created vast opportunities for this kind and concomitant growth of the new middle class consisting professionals. A study of Indian professionals, working in various kinds of corporate sectors operating in different countries, suggests that they are undergoing the process of new-petty-embourgeoisment. The autonomy of the new middle class is grounded in the specialized professional knowledge; however, they work like intellectual white-collars and able to exercise lesser degree of professional independence. Furthermore, the ascendancy of new technology in all spheres of work organization has brought about a change in formal organizational relations which leads to work autonomy a class character of the new middle class, but at the same time it leads to 'deskilling'. It has been found that more homogenous life chances and life style are on rise among the professional middle class at the global level. It can be argued that they are moving from the old petty bourgeois nature and location to the new petty bourgeois class location as also subjective identity.

#### *Reconsideration of Isigami Research By Aruga Kizaemon: Based on the Tutiya Takao's Field Notes*

We aim to reexamine both the distinguished monograph "*The large family system and the Nago (serf) system at Isigami hamlet, Ninohe county, Nanbu district*" written by ARUGA Kizaemon in 1939, who is one of the founder of Japanese rural sociology, and some field notes and documents by TUTIYA Takao, who is a professor of economic history and participated in this research as a coworker but withdrew from it in midstream.

In this monograph, the serf system which was present at Isigami was investigated and analyzed in detail. From this monograph, ARUGA was going to form the "*Douzoku*(cognate groups) theory", which is the base structure of Japanese society.

However, when we read this monograph, we feel Aruga did not pay enough attention to the lacquer ware which a head family of Isigami produced in those days. It is thought that the production using forestry materials such as the lacquer ware or the charcoal was important for the cash income, because in this area the scale of rice fields was not so large. However, ARUGA does not describe the concrete situation of the lacquer ware production. How was the family system related to the lacquer ware production system?

On examining this question, we discovered some field notes and documents of Isigami research by TUTIYA. In this report, we try to consider the following points in reference to these notebooks and other documents. 1) Why did TUTIYA abandon a joint investigation? What was the critical issue for him? 2) In this critical issue, what position does the data of the lacquer ware business occupy? 3) Can we see something new when compared to the monograph by ARUGA?

Through these questions, we try to relativize the *Douzoku* theory and to examine the dispute over the Japanese capitalism.

#### *Net-Base Theory of Social Capital*

The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theories (theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social

structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the 'net-base.' Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and group participation in ordinal individual-base survey. Thus, net-base theory makes it possible to locate 'social capital' in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Völker (2004).

### *The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary*

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals' influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through which society is provided with ideas of ordering its political world, with definitions of selfhood and otherness and visions of the past and the future. The paper's theoretically informed empirical exploration of the intellectuals' prime function, that is, the elaboration of these symbolic configurations, focuses on the fate of East European intellectuals who assumed the role of the creators of the post-communist state. These dissidents-turned-politicians did best when, instead of trying to prove that they could 'live in truth', approached politics without any illusion. Yet their most effective performance in politics was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counter-parts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectual's role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underlying structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

## RC20-356.1

**MISZTAL, BARBARA\*** (University of Leicester, [bm50@le.ac.uk](mailto:bm50@le.ac.uk))

### *Trust and Modes of Cooperation*

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today's society increasingly depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today's society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices and increase of the demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on the both formal regulations and informal means, such as trust, to secure conditions for socially beneficial exchange. In order to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy and agency and in which there are neither winners nor losers, we need to search for ways of tuning the formal and informal means supporting social exchange.

### *Qualitative Analysis for Sociological Study of Various Conditions of Happiness*

What I would like to emphasize in this presentation is that now we need to try an analysis of contents (not contents analysis) based on qualitative data for the sociological study of "happiness." To say it objectively, we need to examine the methods and effects of detective analysis of research data from interviews or open questionnaires.

In this presentation, I will show the result of my examination. The examination had me analyze open questionnaires treating them as short interviews, made on Mexican university students, who as we all know tend to answer "very happy." As a result, three clusters were found, according to the regions, with different "conditions for happiness." Feature keywords for happiness are: In the Capital, "above a certain economical level, nation and politics, charity-like service," in Chiapas, the most southern border state, "economic problems, close people, religious consciousness," in Puebla, a city in-between those, "autonomy or self-sufficiency, 'around me' or 'social' situations." Naturally, many points are shared as well.

Almost all the data used by social scientists for analysis about happiness always implicate measurement and scaling problems. We cannot completely solve those problems but can moderate their problem levels by changing the analysis levels from whole happiness to happiness within each cluster.

This result shows two additional points, valuable to the future of sociology. One is the utility of detective analysis and research with a weaker hypothesis; different from the way with a strong hypothesis to prove, test and certify. Another is that open questionnaire, a system we cannot say we have utilized enough, can be an important source of quantitative data. With quantitative data like this, we can effectively classify and objectively treat the elements of "happiness." Sociology has the method to do it and it must be an advantage to the other disciplines studying "happiness."

### *A Framework for the Sociology of Future: Logistics Curve and the Axial Ages*

Until the later decades of the 20th century, almost "self-evident" image of the history was that of the ever-accelerating progress. That image of history had the objective basis; statistics of the energy consumption, etc. However, it is also evident that this kind of ever-accelerating growth cannot be maintained forever. Biologists know well of the S-shaped "logistics curve" of every species, with the 3 stages; I. of slow foreflow, II. of rapid or explosive propagation and III. of the stable equilibrium with the environment. Our species in a finite environment on the planet cannot be free from this curve. Statistics of the increase rate of world population shows the sharp watershed around the year of 1970, turning point from acceleration to deceleration. We are already passing the historical point of junction from the stage II to III. Macroscopic meaning of the world system crisis in 2008 can be understood as the first crush of the infinite globalized-informatized system with the finity of the reality. "Globe" is a paradoxical geometry; infinite and finite. Radical meaning of the "globalization" lies in this paradox. Karl Jaspers talks of the "Axial Age" --simultaneous emergence of major world religions and philosophy: Old basis of Christianity, Buddhism, Confucianism, and Greek philosophers. Sociological background of the "Axial Age" can be understood as the ensemble of the interrelated factors: 1) Emergence of the monetary systems; 2) rise of the cities and liberation from the communities; 3) crisis of lives thrown into the infinity of the world. Monetary system, urbanization, and the infinity of the life world are the very essences of modernity. For that reason, the Axial Age has been the basis of life and world until the final phase of modernity. Modernity can be seen as the stage II. Axial Age was the critical point from I to II.

### *Observing Fukushima: A Case Study of Japanese Nuclear Policy through Luhmann's Social Systems Theory*

Since the Fukushima Daiichi nuclear disaster three years ago there has been much debate regarding Japan's nuclear policy. These debates usually focus solely on the technological, economic or strategic issues at hand, or on the dwindling public support for a nuclear Japan. Whilst all of these arguments have their own strengths, they discuss specific points regarding nuclear policy with little regard to the wider picture. They all also describe what the political system should do to resolve the issues they raise rather than considering how the political system rationalises nuclear policy and the associated risks. By utilising Luhmann's Social Systems Theory, this paper proposes to frame the different views on the nuclear

issue as a problem of observation by different observers within a functionally differentiated society. The paper shall discuss the technological, economic and public opinion issues surrounding Japanese nuclear power, demonstrate how these are first-order observations of different observing social systems, and how Japan's political system acts as a second-order observer of these observations. By understanding politics as the social system which acts to manage system expectation by introducing binding resolutions upon society (and thus deals in risky decision-making), the limits of Japanese political action when faced with technological risks on one hand and the desire to maintain Japan's economic and strategic position on the other will be illustrated. This paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

#### *The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston*

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have less of an influence on the use of alcohol and tobacco than peers, the quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

#### *Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People's Perception in the Perspective of Community Policing*

Apposite police-community relationship in India is still in a nascent stage owing to the assorted attribute of the Indian society. Caste, communal and religious discords act as a barrier in developing a widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people's perception of police-community relations in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives of the capital cities of north east India have been successful in bridging the gap between the police and the public. The north east of India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has suffered discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community development programmes of which community policing is surely a must. In this regard, the findings of the present study can contribute in analysing the nature of police-public relations and the impediments to stronger police-community interactions in the north east of India.

#### *I Was Not Really Imagining Myself in Terms of Becoming a Big Scholar or Academic...' Academic Mothers: Power and Powerlessness in Academia and in Homes*

Power and powerlessness are two poles of the continuum of life that Academic mothers inhabit by virtue of simply playing these roles in convergence with each other.

Their's is a double edged problem. Traditionally women are denied the thinking and reflecting acumen and are seen as substandard contributors to the academic discourse. Interestingly, mothering is defined in many cultures as a full time responsibility and one that is the most treasured attribute of women. One the one hand, thinking and emotionality are seen as opposed traits that logically imply academic mothers to be lacking in the basic requisite of mothering, on the other, women's intuitive emotionality is seen as coming in the way of a scientific approach required of women as Academics.

This study seeks to understand women's experiences, positive and negative in terms of transgressing these straight jacketed boundaries and combining the

role of mothers and academics in India, Brazil and South Africa and seeks to explore how strong traditions of family values in these cultures influence and impact women in the Academia. Some of the questions it seeks to address are as follows:

In what ways do women live these roles which are very demanding and challenging, also satisfying and fulfilling? What are women's obstacles, what are their strengths? How do academic mothers do a different kind of academics, maybe or a different kind of mothering, so as to satisfy their aspirations from these two roles, two lives? What are their tensions, how do they resolve them, what kind of adaptations do women make? What kind of a philosophy on life and work do they evolve from living these different responsibilities simultaneously? The paper is based on in depth qualitative data that is deeply reflexive and drawn from 15 women Academicians in India.

#### *Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo*

In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that harmful doings by the learning-disabled and autistics are connected with what was done by others, including the attendants themselves. Thereupon, they attempt to unravel an unexpected harmful doing in terms of the relationship of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.

#### *Social Investment Strategy in Japan: A Failed Attempt?*

A rapidly aging society with low birth rates, an increasing public distrust to the sustainability of the social security system, a high level of child poverty, and a high rate of suicide among the youth all suggest that Japan should embrace social investment strategy. A large gain in social benefits seems possible with the rethinking of an inter-generational redistribution. Yet, social investment strategy has been weak both in discourse and in practice. Although the Democratic Party of Japan (DPJ) government (2009-2012) pursued some policy innovation in the area of childcare and youth programs under the slogan of "children first," a paradigm shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited in Japan despite the fact that its social and economic conditions should provide a fertile soil for such a strategy. We shall explore the political conditions which prevent the full-fledged development of the ideas and practices of social investment strategy. In so doing, we show how the dominant force of neoliberalism constitutes a stumbling bloc in policy innovation.

This paper will cover major policy changes in the realms of childcare policy (cash allowance and daycare), youth programs for job training and job seeking, and "career education" from the 2000s to the present day. Its main focus will be on the rightward shift of partisan dynamics, legacy of statism, and the persistence of traditional gender roles.

**MIURA, NAKO\*** (Kanagawa Institute of Technology, [miura@gen.kanagawa-it.ac.jp](mailto:miura@gen.kanagawa-it.ac.jp))

#### *Social and Intellectual Antinomies of Information Technology*

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into two conflicting poles. There are some antinomies of various dimensions in today's highly informative society.

At a socio-economic dimension, Big Data (and data-mining technology) is expected to rediscover the information marketplace as a rich untouched field, and that it will produce industrial reorganization and activation, just like fossil fuel (and mining technology) accelerated the Industrial Revolution in the 20th century.

On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing.

At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to help explain people's decision making and mechanism of action selection, and help predict people's behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people's free will and humanness, and may seriously change the relation between an individual and society.

These social and intellectual antinomies are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today's antinomies of information technology could be considered by using Bourdieu's sociological methods of overcoming dualism.

### *The Effects of Child Birth on Marital Satisfaction in Contemporary Japan*

Marital satisfaction has been studied in family sociology all over the world. In Japan, many empirical findings regarding the determinants of marital satisfaction have also been accumulated. However, most prior researches in Japan have limitation of data quality because they use cross-sectional datasets or panel datasets without male respondents. Especially, reconsidering the relationship between child birth and marital satisfaction by longitudinal analysis would be important for Japan in an era of low birthrates and high rate of unmarried people.

We examine how child birth, years from marriage, amount of time of conversation with spouse, occupational career, and socio economic status affect the levels of marital satisfaction among Japanese female and male respondents. Our focus points are whether or not the finding that first child birth just has an impact on marital satisfaction could be reproduced, and the interaction between gender and child birth effect could be shown.

Datasets from the National Family Research of Japan, 2008-2012 Panel Study (NFRJ-08Panel) are used. Fixed effects regression models are applied to analyze that panel datasets.

Our analytical results show that the expected relationship between child birth and marital satisfaction. As the same with findings by prior research, first child birth has negative effect on marital satisfaction while second or later child birth do not necessary affect. Then, we can observe the significant interaction effects between gender and first child birth on marital satisfaction. Male respondents are more likely to decline their marital satisfaction by first child birth rather than female respondents.

These findings indicate the necessity of detailed research on the changing of life, behavior and attitude by first child birth among Japanese men. We discuss the implication of gender difference in the fluctuation process of marital satisfaction.

[hgwdp816@yahoo.co.jp](mailto:hgwdp816@yahoo.co.jp))

### *The Formation Process of the "National Orthodoxy" Regime in Contemporary Russia*

Through dramatic domestic and foreign changes over the Soviet Union's extinction, Russia has historically reappeared on the world's stage. Although contemporary Russia does not have a firm unification principle, a "National Orthodoxy" regime is being formed. The "National Orthodoxy" corresponds to "the state religion" as the core element of national unification. Separate from "the private Orthodoxy" as a live faith, "the public Orthodoxy" emerged as a principle to unify the people. "The National Orthodoxy" regime is the national ideology that the Russian Orthodox Church should unify with the people of Russia and is a political religious system where national unification is realized by the ideology. Under this regime, the value of the Orthodoxy applies to all the people of Russia. The Russian Orthodox Church promotes a harmonious agreement between the Russian state and society.

The Russian Orthodox Church has been revived in contemporary Russia. While the movement from the bottom known as the private side mixes with the policy from the top known as the government side, "the National Orthodoxy" regime formation process in Russia is promoted. In addition, it is observed that the "centralization of the Orthodoxy" assumes that the Orthodoxy is a unification principle. And at the same time, the "marginalization of the non-Orthodoxy" suppresses and removes religion except the Orthodoxy. In this country, dual structure exists separately while the various schools of religion in the private sphere overlap with "the National Orthodoxy" in the public sphere. The contemporary Russian national identity may say to be reconstructed, with the principle of unification known as the "the National Orthodoxy" regime at its core.

### *Doing Occidentalism through Mangesque Convergence*

This paper addresses contemporary Japan-Italy relations in the field of popular cultures as shaped by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the 'West' as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (K.M. Heller 2007). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationalism, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientaling imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the Italian record of being the country with the highest number of anime series broadcast on television outside Japan (M. Pellitteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be examined through a theoretical perspective inspired by *relational, intersectional and positional* sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the *mangesque* (J. Berndt 2012) and a media theory of *convergence culture* (H. Jenkins 2006).

### *Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance*

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that the Takarazuka performance—especially with regard to the male-role players—reveals new possibilities for challenging traditional gender roles.

My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka's performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender perspective because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and offstage. Even on women-only stages, there is an unequal construction of gender.

I will also discuss the audience's approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the underpinnings of Japanese society's gender consciousness.

### *Musicology in Post-War Japan: German Influence and Social Context*

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan.

This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan.

Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J.S.

Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicologists was Carl Dahlhaus. His book *The Idea of Absolute Music* was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, we have to understand Dahlhaus's social and ideological background in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the 'great German music' from the country's guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

#### *New Urban Childhoods? Globalisation, Socialisation and Urban Informality on Children in Ghana*

Globalisation has fuelled rapid and unprecedented levels of urban expansion the consequences of which for children's socialisation have been profound. 'Urbanisation without industrialisation' is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the 'engines of growth and structural transformation' (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear both cause and symptom of lasting economic and social crises. It is argued here that one aspect of this may be productively explored through the notion of 'urban informal childhood'. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. To do so it considers the experience of structural adjustment in Ghana – a 'poster-child' for globalised market led development strategies – and traces through its impact on urban development in terms of 'informalisation' (Meagher 1995) and its corollary the growth of 'wageless life' (Denning 2010). Particular attention is given to the implications of these developments for children as both dependents and workers, and the impact of this on processes of socialisation. As structural adjustment finds a parallel in processes of domestic re-regulation, this paper argues that children's value to their household is progressively being re-constituted. The consideration of the informal – activity 'outside the regulative ambit of the state' (Harriss-White 2010) – is also pursued through attention to new forms of urban living. As urbanisation becomes increasingly synonymous with the development of 'slums' and illegal settlements, this paper considers the rise of informal urban childhood through inadequate housing, overcrowding and a lack of basic services for children.

#### *The Effects of the Ethnic Business Enterprise on a Local Shopping Mall in the Central Tokyo*

This paper is concerned with the way the development of global migration has made its impact upon Japan's urban communities. Nowadays in Japanese metropolises it is common for individuals from various backgrounds to be found living together and in recent years the rate of such interaction has been growing constantly. The major focus in this paper will be upon the Ikebukuro district, one of the major transportation terminals in the central Tokyo. Previously, the district surrounding the City centre was descending into urban decay as this community confronted a serious shortage of appropriate local labour combined with its ageing population. Since the late-1980s, this district has attracted newcomers, among workers in the 20 to 30 age-group, from foreign countries owing to its business development, offering many jobs especially in service industries. Subsequently, and particularly since the 2004-2005, the district has become the subject of media investigation of plans to establish a new 'Chinatown'. But this is a new kind of 'Chinatown'. Here we do not see the traditional Chinatown gates that can be seen elsewhere in Japan's other major Chinatowns, such as Yokohama. Nor do we see the concentration of Chinese shops, though there has been some Chinese business development that is evident in selling Chinese cuisine and groceries. Rather, the unique character of this area is ascribed to the numbers of Chinese commuters who travel to and from the precinct, as well as to the various free Chinese papers which inform Chinese residents of applications for visas or accommodations and so on, apart from various advertisements of fashion or cuisine. This area is the place for publishing the many Chinese community papers with considerable circulation, and hence this district has become the location of an ethnic town for commuting compatriots.

#### *The Sociology of Fatherhood and Consumption: Empirical Evidence from Soon-to-be-Parents in Japan*

Japanese society has been undergoing tremendous transformations in recent years. One of them is the change in family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called *ikumen*: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and father figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the *ikumen* in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the-field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation and expectations for the near future in terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

#### *Institutionalization Among Older Adults in Japan*

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan, 2000. Previous research shows that the level of informal caregiving, and caregiver's capability, rather than the older adult's declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have seldom been examined from the perspective of its impact on risk for institutionalization. Using ordinal logistic regression, we analyze the claims data on LTCI service use in one city in Japan from 2000 to 2006. The preliminary results show that after the launch of LTCI, the caregiver's preference for services is the significant risk factor for institutionalization, among other predictors related to risk of institutionalization, such as living arrangement, characteristics of both the care recipients and the caregivers. LTCI provides diverse home-based and institutional services for families and individuals, and in our claims data, those who utilized home-based services the most turn out to be the least likely to be institutionalized. And for the elders institutionalized the most, their primary caregivers had expressed their preferences for institutional care services at the time when applying for the LTCI services, and they utilized the least home-based services. Therefore, we gather some evidence that LTCI had provided sufficient home-based services to reduce the possibility of institutionalization due to lack of informal services. Despite the home-based services provided, the key risk for institutionalization is the primary caregivers' preference—whether they prefer more involvement of LTCI services or not, and whether they prefer the services at home or in institutions. Therefore, we conclude that the LTCI services have a double-edged effect on family aging care, and the family has great influence on whether the older adult will be institutionalized or not.

#### *Implications of Social Capital for Family Life: The Case of « Non Statutory Parent »*

My communication is on the subject of the « non- statutory parent », i.e. the person who, within a couple, fulfils the role of « parent » for a child not legally his or her own, but the offspring of his or her mate. The main results I will present is that the family's environment of friends, and kin represents a social capital that plays an integrating role through its validation of the NSP's right to

be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectiveness of link choices versus their contingency; balanced mobilisation of the parental networks versus skewed emphasis on one or two SP's or NSP's network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the couple, and degree of embeddedness of close personal relationships within organised collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and *fixing* the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context.

The study is based on a sample of twenty couples living in various family configurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

#### *Inequalities Between Man and Women in Social Work*

Inequalities between women and men stem from the assignment of the "care" work to women; yet in Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skills within the framework of their professional practices denote two different ways of conceiving the place of "care". "Care" is a stake in the context of the "active social state", because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work- the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by the immeasurability and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out "bad" care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the "good" care, which can be organized rationally, is measurable, and is thus considered more productive.

#### *Emerging Society and Sociological Discourse in India*

The sleepy, slow moving and traditional Indian society which has a historical past of several thousand years is undergoing through a process of rapid social change and unprecedented social transformations. The biggest change has been the emergence and strengthening of democracy. While people in several countries all over world are still struggling and clamouring for a democratic state and institutions, the Indian citizens are exercising their democratic rights strongly whenever occasion arises. The civil society in turn is also becoming stronger and empowerment of the marginalized sections of society such as women, tribals, dalits and the so called backward classes and communities is also taking place. Indian society moved from three percent "Hindu rate of growth" to eight percent in recent years, which was one of the highest in the world. This unprecedented economic growth not only led to the emergence of a massive middle class but also created lot of confidence in the masses about the capability and the strength of the Indian State as well as their own. However, this sudden economic growth and the consequent all round development while on the one hand raised all round prosperity and riches, it also led to the growth of inequality in society and to the marginalization of certain other groups which until recently did not felt marginalized. It is commonly said that while the rich are becoming richer, the poor are becoming poorer. Such a situation has also led to the increase of corruption in all walks of life. As such the Indian sociologists are facing several contradictory situations and are becoming conscious to focus their attention and to study the emerging phenomena and are trying to go beyond to what they have been studying for long and as such moving towards a new sociological discourse.

#### *The Work – Family Interface Among Dutch Navy Personnel and Their Spouses*

Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separations. The increase in operational tempo over the past several decades in combination with trends of downsizing and restructuring (i.e., fewer human resources performing an increased number of tours) imply even more frequent separations, sometimes with little time in between. During sailing tours, communication with the home front is difficult and sometimes even impossible. Research on the impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

#### *The Middle Eastern Origins of Dictatorship and Democracy*

How do we assess Arab Spring/ Occupy almost 3 year later- the hopes for the emergence of popular democracy have now faded-or have they? We might note that the traditional dynamics of the rise of democracy or dictatorship in West, contestations/alliances of various groups, esp landlords/peasants did/does not really apply today. Most of the MENA countries were the legacies of anti-colonization and struggles for independence and democratic self-government, but Enlightenment ideals did not emerge. Contemporary conditions differ, 1) neoliberal globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top, 2) there are growing classes and cadres of the discontented, educated precariat youth, (today's lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the "waves of democracy" and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implosions of dictatorships, the only groups that were well organized were the various fundamentalists from Moslem Brotherhood to Enhadah-which were ill equipped to shepherd a modern economy. But without having experience in actual governance as opposed to critics w/o power they did quite poorly. However dismal the short term, and it may get worse, structural factors intersect, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been/are in practice, they were democratic in form and now there can be no going back to unelected "presidents for life". Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, cronyism and corruption, articulating new kinds of identities based on dignity, empathy community and self-fulfillment with hopes, visions and ICT-social media skills to realize "another world is possible"

#### *Immigrant Access to Training in France*

Few studies in France have focused on immigrants' access to vocational training. This lack of data is surprising in a field which has otherwise been extensively studied. Indeed, one of the stated goals of 'lifelong learning' is precisely to compensate for educational inequality, and immigrant access to lifelong learning is therefore essential. The recent study conducted by Gelot and Minni using data from the 2003 FQP survey is a key contribution in this area. They have shown that the rate of immigrant access to continuing education is lower than that of people of French origin and that these differences persist even after controlling for individual characteristics (age, gender, level of education, type of employment).

The aim of this paper is therefore to go one step further by focusing on the differences which exist within the immigrant population, particularly in matters of administrative status. The hypothesis tested here is that the category established by the immigration authorities when awarding first residence permits is an important line of divide, impacting immigrants' later access to continuing education.

Descriptive and multivariate analyses will be undertaken using data from the TeO survey (Trajectories and Origins, INED-INSEE 2008-2009), including interviews of 5,000 immigrants who arrived in France as adults, after completing their initial education or who never attended school. Data from the ELIPA survey (Longitudinal survey on the integration of first-time immigrants) conducted on the 14,000 signatories of the 2009 Reception and Integration Contract (CAI) undertaken in 2010, 2011 and 2013 will also be used.

*Living Parental Home : Hopes and Constraints of Young People of Immigrant Background in France*

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguéro, Santelli, 2010). The great majority of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class (Frickey & Primon, 2002). Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds, especially North African backgrounds. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live independently. Another factor is the cultural and subjective attitudes towards independent living that the young people share with their parents (Hamel et al., 2011).

This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of finding a place to live is a major obstacle to young people's entry into adult life. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

**MOHAMED, GISHMA\*** (Nelson Mandela Metropolitan University, [Gishma.Mohamed@nmmu.ac.za](mailto:Gishma.Mohamed@nmmu.ac.za))

*Dysfunctional Schools: A Mentoring Framework*

During transformation (1994 onwards), the South African government instituted different interventions within Education as an attempt to redress learner achievement and throughput. However, various researchers and opinion leaders still view the quality of education in South Africa as disparaging and deficient as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring framework through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises the generic mentoring framework can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of sustained transformation which gravitates towards whole school development and culture that envisions quality education for all.

*Exploring the Socio-Economic Coordinates of Tourism: A Case of Kashmir*

*The state of Jammu & Kashmir being the abode of Himalayas represents an epitome of natural beauty and, hence, has emerged as one of the top most tourist resorts of the world. The variegation in states tourism sector in the form of nature, cultural, adventure, pilgrimage, leisure tourism etc. has attracted tourist of every nature irrespective of space as a result of which, this sector has been the mainstay of state's economy. Pertinently, all throughout the turbulence when the valley was reeling under the cycle of violence and when life virtually went into sabbatical, this sector especially through the pilgrimage tourism remained the only viable option with the people to relieve themselves from the imposed agonies. Further, in the absence of a well established private sector and given the fact that this sector has been the main agency of employment generation, a complex sociology of tourism has shaped up in the state involving administration, hoteliers, houseboat owners, etc. and the tourist. Unfortunately, the unscientific management and irrational interaction of the public with such tourist places has jeopardized their very delicacy which has, in turn, immensely harmed the states otherwise rich diversity of flora and fauna. This has generated a need towards a proper organizational structure in order to sustainably harness the tourist potential in the state. In the absence of inadequate infrastructure and specific and sound interventional measures at place, the state couldn't secure properly at many counts be that guest-host relationship, conforming to the environmental norms or drawing the expected dividend. This paper endeavors to explore the sociology of tourism in Kashmir with a due focus on socio-economic dimensions of tourism besides highlighting the*

*need towards the eco-tourism in the state so that the tourist potential can be optimally realized that too, on the sustainable basis.*

**MOHANTY, ADITYA\*** (Central University of Bihar, [mail.adityamohanty@gmail.com](mailto:mail.adityamohanty@gmail.com))

*Informality and the Forging of an Assemblage Urbanism in the Indian City of Patna*

Right from the Almritra Patel case of branding slums as public nuisance (Ghertner 2001) to the conceptualisation of slums as sites of 'deep democracy' (Appadurai 2001), critical urban scholarship on the Indian city acknowledges the resilience of 'informality as a way of life' (Roy 2004) in the Global South. In another vein, slums have often been considered as a patchwork wherein the hegemonic construct of the aesthetic urban space of the new bourgeoisie persuades urban planners to cleanse slums off the map of neo-liberal cities (Baviskar 2011). In fact in recent times, processes of urbanization in the Global South seem to have engendered shifting patterns of formalization and informalization so much that new logics for claim-making has re-invigorated the very salience of 'splintering urbanism' (Graham and Marvin 2001).

It is in this context that the proposed paper shall elucidate upon these issues by presenting a comparative ethnographic vignette of one *in situ* rehabilitated and another displacement-induced rehabilitated slum site in the Indian city of Patna. The key templates of assessing the resultant assemblages within such an formal/informal labyrinth are: (a) the economy-induced exigencies of translocation and (b) the graying of formal spaces of habitation. Most importantly these elucidate upon the role that circuits of materiality play in re-configuring the very imbrications within the formal vs informal dichotomy. Lastly in so doing, the paper squints at the emergent forms of urban citizenship, by catapulting the understanding of the formal/informal labyrinth from the 'political economy' framework to that of, what may otherwise be termed as, an 'assemblage urbanism'. In other words, the paper probes into the ways in which stratagems for urban renewal array in the right mix of communitarian ethos, historical circumstance and political location, so as to make it possible for agency to effectively mutate itself!

*Cultural Capital and Educational Inequality: A Lesson from India*

**Cultural Capital and educational inequality: a lesson from India**

**Byasa Moharana, Sai Thakur and Shweta Choubey**

Education is supposed to play a major role in bridging the gap between the haves and the have-nots through generating cultural capital. In case of third-world countries such as India, the quality of education that is provided to the poor has been grossly inadequate for the purpose. As a result the gap between the elite and the masses is increasing every passing decade. With liberalization of economy in India since 1990s, the state is increasingly withdrawing from welfare sectors, and therefore, the quality of education has suffered. While the elite depend on the private schools, the rural and the urban poor depend on the poor quality of education in government schools. In terms of content of the syllabus and the pedagogical methods adopted to teach them, schooling is not a pleasurable experience for the children coming from disadvantaged backgrounds. Thus they drop out from the school or are poorly qualified to receive higher education.

While this is the dark reality, there is a ray of hope as some of the organizations have stepped in to help tackle the situation primarily through alternative pedagogical interventions. These new methods of teaching science and mathematics etc. have helped the poor students to perform better in schools and get motivated for higher education. In fact, the program was adopted by one of the provincial governments in all schools, but later discontinued due to pressure from World Bank.

Analysing field-based data, the authors argue that these methods, though not the only solution, are one potent way of providing an enabling platform for generation of cultural capital for the rural and urban poor to compete with the elite students.

**Key-words:** Education and inequality, Cultural capital, alternative pedagogies, Education in India

### **MICRO Sociological Analysis Of Nationalism: The Fluidity Of Ethnic and Civic Identity In The Workplace, Malaysia**

*Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However the forces of development, modernisation and globalisation show that ethno nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organizations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyser, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. There are two departments within these luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify "the Hotel" as an "advanced social laboratory" for the study of ethnic relations. Focussing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as "the Hotel" can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger "cross-cutting ties" along group boundaries. Transforming these inter-ethnic differences in "the Hotel" may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.*

#### *Refugee Fathers: Negotiating Fatherhood during Resettlement*

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalization has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalization victims, such as refugee and forcibly displaced families. Moreover, much of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structure around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to distinct aspirations they hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

#### *Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013 – Comparing the 1990s Depression and Post 2008 Recession*

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased especially in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

We use microsimulation models for evaluating the impact of reforms on the poverty reduction effect of the tax-benefit system. We are especially interested in comparing policies chosen in the 1990s depression and post 2008 recession. We have estimated the counterfactual poverty rates during 1993-2013 by using the SISU microsimulation model of Statistics Finland. Household disposable incomes

are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have lowered the poverty risk rate. Changes in taxation had a considerable larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

**MOKHAHLANE, PHAKISHO MICHAEL\*** (North West Univeristy, South Africa, [drphakiso@gmail.com](mailto:drphakiso@gmail.com))

#### *The Evolution of Language-in-Education Policy in South Africa*

During the apartheid era, South Africa's language in education policy was ideologically driven by racism and the desire to suppress the indigenous languages of the majority of South Africans. The policy was fiercely resisted and led to unprecedented episodes of collective violence.

In post-apartheid South Africa, the language-in-education policy takes into account the socio-linguistic reality of South Africa's multilingualism and bestows upon the individual the right to choose his or her own language of learning and teaching.

The political climate in South Africa underwent dramatic changes with the unbanning of political organizations in 1990. A new policy, emphasizing multilingualism, evolved. The sociolinguistic reality of multilingualism in South Africa was eventually recognised. The new Constitution of the Republic of South Africa (Act 200 of 1993), which was hammered out and forged by South Africans of all political persuasions, reflects the linguistic diversity of South Africans and recognises their right to exercise their freedom in choosing their own languages. Constitutional Principle XI provides that "The diversity of language and culture shall be acknowledged and protected, and conditions for their promotion shall be encouraged".

In the presentation, I intend focusing attention on the apartheid language policy in schools in South Africa. The major thrust of the paper will be devoted to sketching the genesis and evolution of a new language policy for schools in post apartheid South Africa.

#### *The Declining Relevance of the Environmental Nation-State*

The Environmental state is not a formal category, but a substantive one. It came up in the late 1960s/1970s, changed in character since then and we will have to see how long it will last and in what outlook. A historical analysis of the environmental state in the OECD region should distinguish at least five periods: until 1960 (near absence), 1960-1980 (establishment and institutionalization of the environmental state), 1980-1990 (state failure and neoliberalization debates/pressure), 1990s (redefinition and legitimization of environmental states internationally). Many scholars note that since the new Millennium a new period has emerged: the environmental state shows a growing irrelevance.

The claim of weakening environmental state institutions seems to be part of wider concerns of the positions of states versus markets under conditions of globalization. Quite some scholars claim that under neoliberal globalisation the strengthening of the power and influence of (global) market institutions came together with declining roles of political state institutions. But that is not clearly evident regarding all agendas, as the recent regaining influence of political institutions on global financial institutions. So, is there something special at stake with respect to environmental state institutions? Is the interpretation of the current waning role and position of environmental state authorities correct? If so, how can we explain this decreasing power and position of environmental state authorities and how is it related with our capacities to cope with environmental problems? And how do we normatively assess this decreasing impact of state authorities in mitigating environmental problems? These questions are central in this paper.

#### *Assessing the Measurement of Science Knowledge in the Wellcome Monitor Surveys: An Item Factor Analysis*

The Wellcome Trust Monitor Surveys (2009 and 2012) are fielded to two samples : adults (aged 18+), and young people (aged 14-18). The survey contains multiple items designed to assess science knowledge and engagement with bio-

medicine. Analysis of the first Monitor Survey yielded a curvilinear relationship between age and high and low levels of scientific knowledge. High scorers were lowest among those aged 65 years and over. The proportion of high scorers for the middle age groups was around three in ten (of those aged 35-49 and 50-64). For low scorers, the reverse pattern holds true, and for young people, 14-16 year olds were less likely to be high scorers than 17-18 year olds. A possibility is that a given knowledge item has a different probability of generating a correct response from different age groups even if each age group has the same underlying level of knowledge. This study will evaluate the performance of the literacy items and the extent of any age-related bias. The results will feed into the design of the next wave of the survey but also speak more generally to the question of how to evaluate science knowledge in heterogeneous populations. I propose a single group IFA-IRT model to evaluate the performance of the items for a pooled sample of respondents, and a multigroup IFA-IRT model to identify the presence of differential item functioning (DIF) by age group. Briefly, the procedure is to fit a series of IFA models to the data, assessing the adequacy of fit for the scales within each subpopulation. The second stage is to look at evidence for DIF/measurement non-invariance on any of the test items with a series of increasingly restrictive nested models. Finally, results from the multigroup analysis suggest that partial measurement invariance across age groups holds.

#### *Examining the "New Normal" and Inequality in the Housing Transitions of Young People in Canada*

In Canada, young people's housing transitions have become increasingly protracted and are marked by lengthier periods of cohabitation with parents and returns to the family home. This has been occurring in a context where access to postsecondary education has widened but at the same been subjected to increasing tuition and housing costs in most large urban centres, and especially in some provinces. Most young adults in Canada today are therefore receiving considerable support from their families over the course of their housing trajectories and, arguably, this trend now constitutes the "new normal" in the transition to adulthood. However, young people from lower class backgrounds, those who leave home for the street, or those who exit child welfare systems at the age of majority often cannot count on parental support for housing, and experience much more problematic housing transitions. Our paper will first provide the context in which these housing transitions are occurring, by focusing on available statistical and quantitative data on youth housing transitions and the housing policy environment. The second part of the paper will present qualitative data based on retrospective interviews with two sets of young people: street-involved youth and young adults enrolled in high school vocational training programs. Using a life-course approach, the paper will examine how these young people depend upon and interact with housing markets, services and supports, and discuss how these types of housing trajectories contribute to the structuring of inequality over the course of the transition to adulthood.

[verena.molitor@uni-bielefeld.de](mailto:verena.molitor@uni-bielefeld.de))

#### *Included By Means of a Broadcasting Language? the Case of Language-Based Minority Construction through the German-Speaking Radio Shows in Poland*

The language of diaspora communities and minorities can be considered as a boarder- making instrument, as a mechanism of exclusion and inclusion (or rather of both simultaneously). The minority-or diaspora language media can as well function as means, instruments or mechanisms of border creation, boarder maintenance or inclusions.

The paper deals with media offers for language minorities and especially the German-speaking minority in Poland, focusing on the German-Speaking radio shows in the Voivodships Silesia and Opole. In these regions two stations produce radio shows in German; the very availability of non-polish-speaking media is a transformation phenomenon. Due to the novelty of media offers in German language as well as to the fact, that those, who define themselves as "German minority" partly do not speak German because of the minority languages ban during the socialist period in Poland, the central question to be posed in this presentation arises: Which function does the German speaking radio have in the creation of borders, inclusions, exclusions, interties and belongings?

My research concentrates not on the radio listeners but on how the radio stations by means of programme planning foster a regional identity, create a picture of the self and the others, and which role German as broadcasting language plays in these processes. I will demonstrate the integration function of the media and simultaneously its function within a diasporic consolidation, focusing on how the

radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how is it possible, if German is positioned as "mother tongue" which is "to be learned first".

### WG01-887.1

**MOLITOR, VERENA\*** (University of Bielefeld,  
[verena.molitor@uni-bielefeld.de](mailto:verena.molitor@uni-bielefeld.de))

#### *"Media Diasporas - Diasporic Media" - the Construction of Regional Identities through Radio Programmes*

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of *people*, but from shift of *borders*, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

#### *Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education*

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households' relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progressivity, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household's relative income. This research fills a gap in the literature because there are surprisingly few studies that examine inequality by both family structure and education, and even fewer that examine relative income cross-nationally and longitudinally. Theoretically, our contributions are to structural vulnerability theory. Structural vulnerability theory aims to consider how the individual, or the household, is structurally located within a context. Our analysis provides a better test of structural vulnerability theory than previous studies because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

**MOMOKI, BAKU\*** (Kyoto University, [momokibaku@gmail.com](mailto:momokibaku@gmail.com))

#### *Rethinking the "Exploitation of Self-Realization" Model in Japan*

The purpose of this report is to examine the problem of the "exploitation of self-realization." In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Honda has called the same problem the "exploitation of 'Yarigai'" (the word "Yarigai" refers to the pleasure derived from doing decent work). They point out that certain companies exploit young people who seek self-realization out of work. These days, such companies are called "black companies" and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-

cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the "exploitation of self-realization" has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a "contribution to society." This viewpoint compels us to rethink the "exploitation of self-realization" model.

#### *Emotions and Collective Identities in Contexts of Exclusion. the Case of the Protest for the Rights of Asylum-Seekers in Germany*

**Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.**

Since the 1980s, social movements' scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements' strategies, grievances, emergence, evolution, and impact.

Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einhöner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: 'Caravan for the rights of refugees and migrants'. This network mobilizes against what is defined as a context of exclusion: the 'residence obligation' law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of 'identity construction for emotional benefits', I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

#### *The Symbolic Representation of Borders in the Protest Against 'Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants*

**The Symbolic Representation of Borders in the Protest against 'Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants.**

In the last two decades, the integration of member-states' immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states' territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be encountered across countries.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed.

This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

#### *Age and Gender Differences in Relationships Among Sociodemographics, Disease, Psychosocial Stressors, and Mental Health in Older Japanese Adults*

This study aimed to identify age and gender differences in the relationships among sociodemographics, disease, psychosocial stressors, and mental health status among older adults, using nationally representative data in Japan.

This study included 8733 adults aged 65 years or older, who were respondents in the Comprehensive Survey of People's Living Conditions (CSPLC) conducted in 2007 by the Japanese Ministry of Health, Labour and Welfare (MHLW). Participants were stratified by gender and the following age groups: 65-74 years (young-old) and 75 years or older (old-old). Univariate and multiple logistic analyses were used to assess the relationships among sociodemographics (living arrangement, working status, and equivalised disposable household income), disease (the top five responses chosen by each group), psychosocial stressors (the top five responses chosen by each group), and mental health.

In all groups, the psychosocial stressors of "one's disease/long-term care," "disease/long-term care of other family members," "income/family budget/debts," and "motivation in life" were found to be significantly related to mental health. In young-old men, equivalised disposable household income, working status, and the psychosocial stressor of "one's job" were significantly associated with mental health. In young-old women, significant associations with mental health were found for equivalised disposable household income, eye diseases, lower back pain, and the psychosocial stressor of "relationship with family." In old-old men, the psychosocial stressor of "relationship with family" was independently associated with mental health. In old-old women, lower back pain and the psychosocial stressor of "relationship with family" were related to mental health.

In addition to reducing stressors, socio-economic support for young-old men, and prevention of lower back pain for young-old and old-old women effectively promote mental health.

This work was funded by a research grant from the Ministry of Health, Labour and Welfare (H22-seisaku-shitei-033). We thank Kenji Shibuya and Hideki Hashimoto for their academic support.

**MONTAGUT, TERESA\*** (University of Barcelona, [montagut@ub.edu](mailto:montagut@ub.edu))

#### *New Forms of Participation in the Social Welfare in the City of Barcelona*

A new form of intervention is emerging in local welfare systems. This new way requires a change of attitude and involvement from citizens, public authorities -at all levels- and private organizations. It can be defined as a "social innovation" in the sense of the implementation of an idea that is new and that breaks with the prevailing routines and structures in a given system or setting. "Social Innovation" is widely used from many academic, political and social perspectives. No wonder that, in a context of uncertainty and transformations, becomes essential to search for new policies. In particular, in the field of social welfare the experimentation of new policy proposals and social practices has begun in a lot of countries.

The paper will analyze new citizen participation forms in the field of social welfare in the city of Barcelona from the theoretical perspective of social innovation. The research is the result of work carried out within the European research project WILCO (*Welfare Innovations at the local level in favour of cohesion*).

The paper has three parts. First, there is the discussion of the concept of social innovation and proposes a methodology to use them. Secondly, following the conceptual and methodological proposal presented, discusses one policy of the City Council of Barcelona, the program: "Citizen's Agreement for an Inclusive Barcelona". This program is an example of Social Innovation that increases the co-operation and democratic participation. Finally, it presents challenges and opportunities of this municipal policy for new models of work on local Social Welfare.

#### *The Interplay Between Work and School Outcomes Among Adolescents in Brazil: The Role of Prior Orientations and Aspirations*

In Brazil and other developing countries, empirical evidences usually suggest that the participation of children and adolescents in the labor market tends to hinder educational outcomes (academic performance, high school graduation and dropout, etc.) and, therefore, lead to inequalities in educational and occupational status over the life-course. However, a body of research argues that the interplay between work and school: 1) depends on the intensity (hours) of work;

moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

#### RC26-460.1

**MONTANARI, ARIANNA\*** (University of Rome, [arianna.montanari@uniroma1.it](mailto:arianna.montanari@uniroma1.it))

#### *Old and New Models of Federalism in Europe*

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created a limited set of institutions allowed to control the imperial power.

In the same way the tragic experience of the II<sup>o</sup> World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Union is one of three great empires, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable to not be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union institutions. In this way, the nation states have lost a significant portion of their power. At the moment in Europe there are states with limited sovereignty and increasing power and autonomy to regional and local administrations.

#### *"Ethnic Relations Between Gypsies and the Majority Populations in Spain during the 21ST Century"*

Since their arrival on the Iberian Peninsula during the beginning of the 15th century, the Gypsy minority is one of the most relevant "other" ethnicities in Spanish society. According to the Gypsy Secretariat Foundation, between 750,000 and 1,000,000 Spanish Gypsies live in Spain. The ethnic minority's history in Spanish territory is characterised by a singular and intense cultural integration, a course of relative ethnic homogenisation, a sense of having a strong collective identity, and a widespread social marginalisation. This paper analyses the relationship between the political and economic frameworks in Spain after it became a democracy, and the context of interethnic relationships between the Gypsies and the majority population and the applicability and metamorphosis of the sense of collective identity among the Spanish Gypsies in recent years.

Two axis of analysis will be laid out;

1. In the context of intra-ethnic relationships: The fragmentation and progressive sense of differentiation of the differentiation of identities among Spanish Gypsies derived from the extensive process of urbanisation and transformations of political, social, and economic conditions after the 1970's.
2. In the context of intra-ethnic relationships: The process of mobilisation and collective action against the Gypsies during the 80s and 90s and continuity of a strong sense of ethnic boundaries during the 21st century.

This paper forms part of the doctoral thesis of the author, funded by the Spanish Government (Subprogram FPI-MICCIN) as part of the Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux (GERICR) research program

#### RC22-397.4

**MONTAÑÉS JIMENEZ, ANTONIO\*** (Universidad Complutense de Madrid, [amjsociologia@gmail.com](mailto:amjsociologia@gmail.com))

#### *"the Global Evangelist Movement of the "Gypsies". in Spain's Case"*

The aim of the paper is to highlight some of the most relevant phenomena which occurred to understand the aforementioned expansion, the intimate relationship of the Pentecostal religion with the articulation, re-composition and renovation of the identities found in ethnic communities, and presents the particular case of the expansion of Pentecostalism among the ethnic Gypsy communities in Europe in general, and in particular, Spain. Gypsy Pentecostalism has designated itself with the special mission of evangelising the Gypsy people throughout the world, offers a biblical interpretation of the origins of the Gypsy people, placing them in one of the 12 lost tribes of Israel, and a historical interpretation of the unfortunate journey they faced in this world, culminating with the ethnic genocide during the II World War. Gypsy Pentecostalism promotes the conservation of some of the most deep rooted elements of their ethnic tradition and confronts the production of ethnic identities and collective destigmatised representations.

The proposed paper deals with the expansion of the Pentecostal religion on three levels;

At the supranational level. The Pentecostal religion's role in the emergence and promotion of an ethnic sense of global diaspora, which remains articulated in organisational and institutional networks and movements.

At the national level. The role of Pentecostalism in the renovation of the Spanish Gypsy's ethnic and cultural identities.

At the local level. The role of the Pentecostal religion in the articulation and re-composition of the different identities among Spanish Gypsies and non-Spanish Gypsies (above all Romanians) after the intensification of the arrival of transnational migratory waves of European Romanians to Spain in the 21st century.

This paper forms part of the doctoral thesis of the author, funded by the Spanish Government (Subprogram FPI-MICCIN) as part of the Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux (GERICR) research program

#### *Post-Repatriation Careers of Japanese Knowledge Workers*

A key element of the globalization of knowledge work involves the international transfer of executives. Yet despite the importance of this process, the repatriation of business people is still an under-researched area. The majority of existing research into the phenomenon is based on cross-sectional surveys and interviews of North American and European business people. The emphasis is typically on how to make the process more effective for companies, for instance, by improving failure rates, and largely assumes the existence of Anglo-Saxon style labour markets for the management of 'talent'. Consequently, certain empirical and conceptual elements remain unexplored. We don't know much about repatriates from other nations, and more specifically, about their career perceptions post repatriation. This paper addresses this gap by looking two Japanese business people and asking how they make sense of their unfolding careers. To do this, the author followed their subsequent careers and career perceptions after their return from assignments in North America, interviewing them over an extended time period (seventeen months and twenty four months respectively). The main finding of the research is that (these) Japanese repatriates do not have explicit and pre-planned career paths. Furthermore, this lack of a career path does not concern them. Instead, their careers are subject to a fuzzy career logic that depends on circumstances. Given the extensive literature on protean and boundaryless careers, as well as the 'need' for individuals to take charge of their own careers, this is a significant finding. The theoretical contribution of this research is the idea of fuzzy career logic, and the paper will show how it not only provides a robust framework for understanding how Japanese repatriates navigate their careers, but also how it gives an important alternative to, and critique of, the view that careers should be planned in a strategic manner.

### **Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review**

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security of older people as pillars of quality of life. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interoperable (healthy, productive, successful ageing, ...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

#### *Transnational Aging in Mexico. the Experience about Elderly Foreigners, and Return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support*

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de migración de retiro que tienen estos dos grupos y las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han retornado de ese país a sus lugares de origen (Guanajuato y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración en el periodo de retiro laboral, los cambios en su identidad y el apego al lugar, redes sociales y prácticas culturales.

La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que ha crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad al retornar a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México.

#### *Policy Advisors and Scientists' Mental Models Of Policy-Making: Validating An Elicitation Method*

Policy development is characterized by connecting problems with viable and equitable solutions. Individuals' mental models (cognitive structures that define reasoning, decision-making and behavior) influence how problems are defined and alternative solutions prioritized. We used qualitative (interviews and influence diagrams) and quantitative methods (self-report and repertory grids) to elicit senior policy advisors and scientists' mental models of the role of scientific evidence in invasive species policy-making. Thematic analysis of the interviews revealed four mental model types which suggested that the majority of scientists supported evidence-based policy (risk management and scientific authority mental models), while policy advisors supported more community-oriented approaches to policy-making (political and community acceptability mental models). Network analysis of the influence diagrams supported these results: the majority of policy advisors believed the community was more influential and connected in the policy-making process than evidence; scientists believed evidence was more influential and connected. We triangulated these results with the quantitative data, which showed that the vast majority of policy advisors and scientists believed that policies should be at least 70% evidence-based, and all participants considered evidence to be more credible, and most considered it to be more effective, than input from the general community. For the policy advisors, these results contrasted with the qualitative results. Our research suggests that policy advisors' mental models of the policy-making process were influenced by context, social norms and responsibility, revealing a difference between what they say (espoused mental model expressed through qualitative methods) and how

they act (in-use mental model expressed through quantitative methods). Using appropriate methods to elicit and share mental models is critical in redressing complex environmental problems.

#### *Framing Matters: Effective Framing and Movement Success*

This article examines variations in framing among four different Korean women's movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women's rights to sexual autonomy. I analyze organizational documents of the Korean Women's Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

#### *Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective*

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives' in the concerns of labor, surprisingly less attention has been paid to the role of the labor that 'adds value' to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative 'labor' more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

#### *Agricultural Mindsets Across Social Networks in Four African Countries*

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition

to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Coughenour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the 'risk averse' small farmer that has informed indigenous knowledge for generations. We contend that agricultural production networks form the basis for shared mindsets and the potential for mindset change among small farmers. This paper combines a standard attitudinal analysis of mindsets with findings from social network analysis (SNA) to explore network and mindset relationships within eight agricultural communities in Kenya, Uganda, Lesotho, and Mali. The questions to be addressed include: (1) how do agricultural production networks vary by region (2) how do network relationships affect shared mindsets and (3) how does an actor's position and power within a network promote conservation agriculture perspectives?

#### *Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan*

Based on ongoing research, this presentation explores the ethnic identity formation of second-generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth's parents' experiences in Japan play in shaping the youth's ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly "Peruvian" or "Japanese." Preliminary findings indicate that the youth report a range of identities (*hāfu*, *Nikkei*, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is symbolic, reduced to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic. Immigrant and mixed-race people in Japan are also racialized as *gaijin* (foreigners, outsiders). This has resulted in identity quandaries for many *Nikkeijin* migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

#### *Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain*

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously merges with racism. In this paper, I consider the effect that the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia which leads them to withdraw from participating in social spaces but, perhaps more crucially, from participating in institutions, out of fear of being discriminated against. Thus, it will be apparent that the Islamophobia that some say exists because Muslims refuse to 'integrate' is actually a factor in discouraging Muslims from 'integrating'. The situation is more nuanced than this though as I will also argue in this paper that despite Islamophobia, Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as 'traitors' by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown much resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in combatting Islamophobic rhetoric. While much still needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to Islamophobia as a term, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.

[memoraga@uc.cl](mailto:memoraga@uc.cl))

#### *The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control*

Comparative data from Latin American countries in 2006 locates Chile among the countries with the highest rates of tobacco consumption in the last month throughout various ages. Additionally, Chile has shown the highest rate of marijuana consumption within South America during the last decade, and consumption among Chilean students has grown in the last years related to an important decrease in risk perception on marijuana use.

This research analyzes the pattern taken by the relation between school bonding and the involvement with behaviors that usually are considered as risky, like substances use, from a perspective based on social control applied specifically in the Chilean context. The previous descriptive analysis shows i) an increasing prevalence of truancy as students get older, ii) a reduction of students happiness while in school, iii) a decrease in the importance of good grades, and iv) reducing the importance that students connect to the generation of positive opinion on teachers. Besides, truancy more than duplicates the odds of tobacco and marijuana consumption in the upcoming years. While the students happiness in school, the importance of good grades and the relevance assigned by students in the generation of a good impression on teachers reduce the odds.

The analysis was based on a panel data from a longitudinal study of tobacco, alcohol and drugs throughout school populations, made by The Pontifical Catholic University. They collected information from variables related to family, school, pairs and substance use of Chilean students in seventh grade during 2008 (N=4.387) from townships with a population over 30,000 across the metropolitan region. The students were annually re-interviewed until 2011.

[ana.morales@postgrad.manchester.ac.uk](mailto:ana.morales@postgrad.manchester.ac.uk))

#### *The Effects of Socio-Economic Background and Parental Involvement on Children's Early Cognitive Development: The Case of Chile*

Children's development has been demonstrated to be an important factor in later life outcomes. Studies have also shown that income and parenting style, engagement and relationships are important predictors of the level of cognitive skills at earlier stages of life. Using data from the First Longitudinal Survey of Early Childhood (ELPI in Spanish), this study implements regression models to estimate the effect that socio-economic conditions and parental involvement have on the scores obtained by Chilean children aged between 36 and 60 months in the Spanish version of Peabody Picture and Vocabulary test, also controlling for parents' and children's characteristics as well as geographical location of the household.

Results show that parental involvement, which is a threefold indicator composed by positive parenting, parental stimulation and ineffective parenting, does make a significant difference, where positive parenting and parental stimulation are positively associated with the cognitive development scores, while ineffective parenting is negatively associated with the scores. On the other hand, results show that cognitive development scores are significantly higher for children living in the wealthiest households with respect to those in the poorest ones. Furthermore income can moderate the effect of parental involvement, where a high level of positive parenting has a stronger positive impact on poor children, while the negative impact of ineffective parenting is stronger on children from the higher quintiles, and finally, parental stimulation has a stronger impact on the wealthier children.

From these results, it is possible to assert that parental involvement has the potential to contribute to reduce the gap in the cognitive skills achieved by children according to the level of income of the households they live in, which can be of particular relevance for reducing the inequality-related gap in later life outcomes.

**MOREKHANOVA, MARINA\*** (Russian Academy of Sciences, [mayurm118@gmail.com](mailto:mayurm118@gmail.com))

### *New Factors of Social Differentiation in Local Rural Communities*

The paper addresses the social consequences of proliferation of innovation practices in local rural communities. Particular attention is paid to the susceptibility of different rural social groups to mastering innovations in the fields of production, consumption and leisure and to the impact of proliferation of information and computer technologies on social differentiation processes.

The paper is based on the results of the sociological surveys of the processes of proliferation of and familiarization with innovation practices in local rural communities conducted by the Institute of Agrarian Problems of the Russian Academy of Sciences in one of the Russian regions (Saratov's oblast) in 2010-2011 with personal involvement of the author.

Despite the remaining differences between the city and the countryside in terms of availability of modern opportunities and technology, rural residents are increasingly active in mastering innovation goods and practices. The advancement of modern technology per se does not cause the existing differences to blur, but, on the contrary, gives rise to new forms of differentiation, notably to "digital inequality" not only between the city and the countryside, but inside local rural communities as well.

The analysis of the empirical data allowed:

- identify the features of propagation of individual innovative practices, high-tech goods and services in local rural communities;
- identify the principal social groups, differentiated by frequency of use of innovative practices in the fields of production, consumption and leisure;
- make a comparative analysis of the quantitative and qualitative characteristics of these groups, their life and work strategies;
- propose ways to provide equal access to the new knowledge and skills required for mastering new technologies to different social strata and groups of rural population.

### *Disambiguating and Re-Conceptualizing Social Investment*

Since the late 1990s, 'social investment' has appeared in the policy discourse of international and European organisations, as well as on the policy agenda of several governments across Europe and elsewhere. As a strategy that aims to combat social risks while enhancing economic performance, the social investment perspective seems to have appealed to a variety of governments. Indeed, policy analyses show how the notion functions as somewhat of a 'catchall' strategy. This is true also on the theoretical side, where social investment is both over-determined on the ideational level, and under-conceptualized. This paper aims to contribute to a finer conceptualisation of social investment by 1. assessing and re-specifying its normative and social dimensions, 2. by offering a discussion of how we can conceptually and empirically identify investment-oriented policy instruments, and 3. by taking stock of existing analyses of the distributive consequences of social investment policies. In doing so, the paper aims to contribute to a reconceptualization of social investment that goes beyond an analysis of its economic returns to also address the social basis and social returns of a social investment strategy, and its possible pitfalls.

### *Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)*

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns in different countries based on the analysis of individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lyonette, 2005; Pettit and Hook, 2005). However, very few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women's employment patterns over the family life course in different local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in different contexts (Pfau-Effinger, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to analyse from a qualitative methodological perspective how women's education partly explains differential patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

## RC31-538.16

**MORGAN, CHARLIE\*** (Ohio University, [morganc3@ohio.edu](mailto:morganc3@ohio.edu))

### *International Couples Shaping Migration to Japan*

The Japanese are living longer and having fewer children than any other industrialized nation in the world. Immigration is seen as the key long-term solution to a shrinking tax base and a shortage of workers. Despite the reluctance of the Japanese to allow a large number of foreigners into the country, immigrants have been integrating into Japan via international marriages for decades. Whether arranged (starting in the 1980s) or for love (dating back to 1600), these couples are important because they represent the most intimate relationship possible and are an indicator of social distance and integration, both in how the couples cope and how other Japanese view these couples. I interviewed 40 individuals involved in international marriages in a rural area of Japan (Joetsu, Niigata). I transcribed the interviews and coded them using a computer software program called Dedoose. I analyzed the data using the guidelines of grounded theory, namely coding and memo-writing. I focused on the differences and similarities between those international couples who married for love (typically Western males and Japanese females) and those that were arranged (typically Japanese males and Southeast Asian females). There are important differences between the race and gender of these two types of couples, as well as the reasons for why they chose to marry a Japanese national and live in Japan. On the other hand, there are many similarities between these couples when it comes to having to adjust to living in a new culture, learn Japanese, raise children, and deal with extended family members. These similarities and differences offer a unique and intimate window into how the Japanese view foreigners living in Japan.

## RC05-110.6

**MORGAN, CHARLIE\*** (Ohio University, [morganc3@ohio.edu](mailto:morganc3@ohio.edu))*The Utah Minuteman Project and Symbolic Boundaries: Legal Status, Nationalism, Culture, and Race*

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members conflate legal status with nationalism, culture, and race, whereas other members maintain clear distinctions between these symbolic boundaries. In the end, this calls into question the social boundary that defines the group they are fighting against as the symbolic boundaries are used to create the social boundaries between the average Utah citizen and undocumented immigrants. It is the accumulation of symbolic boundaries that defines the social boundary.

**MORGAN, MYFANWY\*** (King's College London, [myfanwy.morgan@kcl.ac.uk](mailto:myfanwy.morgan@kcl.ac.uk))

BRADBY, HANNAH (Uppsala University)

*Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK*

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions.

The centrality and compatibility of religious beliefs with organ donation varied between ethnic/faith groups and generations. Although few regarded organ donation as prohibited by religious scriptures there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain sensate for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

**MORGNER, CHRISTIAN\*** (Hitotsubashi University, [k131017m@r.hit-u.ac.jp](mailto:k131017m@r.hit-u.ac.jp))*World Art Cities: Theoretical Considerations*

The presentation will deal with the topic of 'world art cities'. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of

artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.

## RC21-361.3

**MORI, CHIKAKO\*** (Hitotsubashi University, [c.mori@r.hit-u.ac.jp](mailto:c.mori@r.hit-u.ac.jp))*Transformation of Public Housing Policy and Its Impacts on the Residents in Japanese Suburbs*

A lot of critical debates relating to Japanese suburb (ageing, juvenile delinquency, absence of local identity, etc.) have not made inroads into the myth of a *homogeneous* and *stable* space populated by non-foreign residents from the middle classes. However, with installation of the "precariat", driven out of the city center by gentrification on one hand, and with transformation of Japanese public housing policy on the other hand, a new face of the suburbs appears: public housing for insecure populations (old people living alone, handicapped people, single-parent households) or semi-public housing hired by companies for their temporary workers including precarious foreigners make it a space of exclusion characterized by *heterogeneity* and *instability* where the whole range of "wasted lives" (Bauman, 2003) is concentrated. It is a very-known fact that territorial fixation is one of the major difficulties for the people of segregated districts, who are not able to "escape" from there (Wacquant, 2007). But that should not make one forget another difficulty: that is the difficulty of not being able to stay in one place, by having to be constantly moving. Because staying in one place also means settling down (establishing a family, sending one's children to school, having regular dealings with neighbors as a member of the local society, possibility of borrowing money from banks, etc). On the basis of a survey in the Tokyo suburb area, this paper examines the impact of those changes on (semi) public housing residents, especially where they go and how their lives are changed by their movements.

## RC53-854.3

**MORI, IPPEI\*** (The University of Tokyo, [chatchan777@gmail.com](mailto:chatchan777@gmail.com))*Correcting Errors without Undermining Students' Individuality in the Classroom*

Classroom education is an institutional interaction meant to transmit the knowledge considered "right" by our society to children. However, recently in Japanese schools, emphasis has been placed on respecting students' "individuality." How are educational interactions organized to accomplish these seemingly incompatible tasks? We intend to answer this question in the paper.

We analyze video data of a lesson on national language in a Japanese first-grade elementary school classroom from the viewpoint of ethnomethodology and conversation analysis. We focus on the organization of "correction" and "repair" in conversation. Correction is applied to errors of utterance, and repair, to inaudibility or incomprehensibility of utterance. According to Douglas Macbeth, correction and repair often cooperate in classroom interaction.

Based on the above, we can rephrase our initial question as follows. As teachers must teach "right" knowledge, they must correct students' "wrong" knowledge. However, this correction threatens to undermine students' individuality. How can teachers organize the process of correction so as to avoid this undermining as much as possible?

The results of our analysis are summarized as follows. In the analyzed video data, a student read out his imaginary story. There were two errors in the story. His teacher corrected these errors without undermining the student's individuality: on the one hand, by conducting "repair" with use of a preference for affirmative answer (=implicit correction) instead of explicit correction and, on the other hand, by configuring a cooperation of correction and repair in the order of "repair-applause-correction."

## RC47-776.1

**MORI, KEISUKE\*** (Hitotsubashi University, [k\\_k\\_japan@hotmail.com](mailto:k_k_japan@hotmail.com))*Toward the Post-Colonial World Connections: Relativizing the Eurocentric Social Movement Theories to Assemblage the Citizenship Beyond Nation-States*

This presentation examines the Eurocentric social movement theories from contexts of the genealogies of decolonization, demilitarization and anti-development movements on Okinawa Island. Okinawa has its history of the marginality

as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, led by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, *Kibo to Kenpo*, Ibunsha) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-pacific artifact by the US-Japanese homo social "complicity". In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoji, Kokichi, 2006, *Shakaigaku no Shatei*, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

#### *Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area*

Since the 1990s, mainly in advanced countries, policy makers have been paying increased attention to new forms of school systems that work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of "neo-liberalism". Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens' participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

#### *Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan*

The systems of providing welfare services interact with older people's everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level and shape what roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people's understandings of their interaction with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions; how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older Danish and Japanese couples experienced mutual support and communication with children, grandchildren, parents, neighbours and friends? How do their understandings exert influence on the forming of expectations and views for the future? The empirical core of the analysis is the qualitative data derived from semi-structured in-depth

interviews with couples aged 65 and over in Denmark and Japan. The interviews are ongoing and will be concluded by February 2014.

#### *Transnational Mobilities in Europe: 'Living Apart Together' and Gendered Outcomes*

Historically women have been associated with immobility and passivity, for a long time invisible or regarded as dependents rather than migrants in their own right, their migration tied to migration of men. Restrictions to autonomous women's mobility still persist in some countries or they face moral stigmatization at some stage of their itinerary. And yet the capacity to be mobile is sometimes easier available to women than to men because of labour demand in specific economic sectors. Being a woman becomes even an advantage so they increasingly become mobile family breadwinners, sometimes pioneering migration even in societies with traditionally male dominated patterns of migration. Women are therefore exposed to contradictory pressures, relating to their double role: as breadwinners, requiring emigration and absence and that of family carers habitually assuming physical presence in the vicinity of those they care for. They are therefore typically the first ones blamed for the social costs of migration and the disruption of a gender order.

While for both men and women crossing of borders can lead to more autonomy and challenging of established gender norms, more opportunities in using the acquired social capital within a broader migratory space, it can also lead to new dependencies and reinforce existing gender boundaries and hierarchies. Gender order seems resistant to change in migration, even in situations of apparent reversal, when women become main breadwinners. Rather than speaking in terms of gains and losses this presentation looks at the ways contradictory outcomes are negotiated. In several examples of transnational mobility, it will be shown how the gender order is challenged, apparently preserved, but also how "handicaps" are turned into advantages and traditional patterns relied on in pursuit of own objectives.

#### *Title: Sociology of W.E.B. Du Bois: Why Du Bois Is the Founder of American Scientific Sociology*

W.E.B. Du Bois was one of a handful of scholars of the 20th century with a sustained global impact on sociological, literary, and political knowledge. In this paper, Morris will draw on evidence from his forthcoming book with the University of California Press to demonstrate that Du Bois was the founding father of scientific sociology in the United States; that is, American scientific sociology was founded in a segregated black university by a black man. This paper disconfirms the accepted wisdom that American scientific sociology was founded solely by white sociologists in elite white universities. This paper will explore the methods Du Bois pioneered and his novel theorizing that laid the foundations for subsequent sociological analyses. The paper will offer an account of the dynamic forces that generate scientific schools of thought and that undergirded knowledge production in social sciences during Du Bois' era.

#### *Negotiating Safety in Relationships: Children's Agency in the Context of Family Violence*

This paper reports on the findings of qualitative research undertaken in Australia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or step-father and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenomenology, ethics of care and dialogical ethics.

The aim of the study was to hear children's voices in primary care research about children's safety and resilience in the context of family violence. The research questions sought to understand children and mothers' perspectives on children's safety and resilience; establish how children's safety is realised in the context of family violence and determine how children's voices inform a primary care response.

The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the 'Model of Children's Agency'. Informed by the model, implications for policy, practice and further research will be considered.

#### *Moving Through Space*

Spaces in urban geography are rich with symbols and signs related to national as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which 'trouble' our society.

I will examine two case studies. The first is Gregor Schneider's 2007 work, *21 Beach Cells*. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government's actions of indefinitely detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring vision with the landscape of the Guantanamo prison. The second work is Doris Salcedo's 2007 work, *6 y 7 Novembre*. Salcedo installed a sculpture over the Palais of Justice building in Colombia's capital city, Bogotá. The work remembered the events of 6 to 7 November 1985 when militia stormed that very building – the High Court of Colombia.

Salcedo and Schneider reclaim these meaningful sites to create *affect* between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is effectively brought into the present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therein lies the transformative power of the artwork.

#### *Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec*

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates emerged within the context of a restructuring of the nature of nation and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a *citoyenneté québécoise*, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic conception of the nation. The de-ethnicisation and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a 'crisis' related to the measures adopted to promote this conception of such a nation. Of particular focus have been the practices of 'reasonable accommodation' for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect 'national values' from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The proposed paper examines the manner in which these two seemingly oppositional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

**MORROW, VIRGINIA\*** (University of Oxford,  
[virginia.morrow@qeh.ox.ac.uk](mailto:virginia.morrow@qeh.ox.ac.uk))

#### *Modern Moralities? Children and Social Change in Vietnam*

This paper explores the effects of 'modernity' on children's lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children

and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries ([www.younglives.org.uk](http://www.younglives.org.uk)). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grandparents/parents, and children. For example, there is clearly a rapid process of marketization taking place, with consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. Thus, three sets of values are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about 'social evils' affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived as bringing risks to children and young people. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers – and express concern about unfairness and injustice. The paper explores whether there are 'new' moralities emerging, and describes how parents and children are managing these processes.

#### *'I Have to Help and Improve Their Life': Young People's 'transitions' in Ethiopia and Andhra Pradesh, India*

**'I have to help and improve their life': young people's 'transitions' in school in Ethiopia and Andhra Pradesh, India**

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries ([www.younglives.org.uk](http://www.younglives.org.uk)). The paper emphasises the ways in which boundaries between childhood, youth and adulthood are blurred, by exploring young people's past and present experiences of school and work, and their anticipated futures. The paper uses descriptive statistics to show trends in leaving school, and then draws on qualitative longitudinal research from a series of case studies to explore children's experiences of leaving school and why. The paper argues that many of the assumptions underpinning international policy discourse that conceptualise early school leaving as 'dropping out' fail to engage with the realities of young people's lives in rural areas that experience numerous economic and environmental 'shocks'. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to constrain young people's choices and trajectories. The paper questions the utility of the concept of 'transition' and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are 'left behind'.

#### *Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar*

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent's past experiences provide a context for retrieval of autobiographical memories and they are used as anchoring points and time landmarks for remembering. While there is a general agreement that the LHC methods improve accuracy of retrospective data even for different populations and cultures with a non-linear representation of time, the reasons for this performance (i.e., retrieval processes) are less clear. The literature suggest that the LHC performance is amplified by the interviewer-respondent interaction via conversational and flexible interviewing, either in CATI or CAPI. However, studies using self-administered LHC on youth sex behavior argued that LHC can be used also using self-administered modes reducing social desirability bias.

In this study we present data from two surveys conducted in Switzerland (the Swiss Household Panel pilot study and the Family tiMes survey) between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of residential moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewer-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even

higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar model in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

### *Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study*

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that *contemporaneous* parental orientations and attainments influence children. Children of more highly educated parents receive more parental encouragement and observe successful parental role models. A second approach posits that *prior* parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third "selection model" posits that parents' stable traits, observed during adolescence, influence parents' pathways, their attainments, and children's orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2's adolescence) and 422 of their G3 children age 11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2's and G3's orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2's educational attainment and entirely mediated the effects of G1's expectations and G2's academic orientation in adolescence on G2's achievement. Finally, supporting the third perspective, G2's academic orientation during adolescence significantly predicted G2's expectation for the G3 child more than 20 years later. The G2 parent's orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Dogan's (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

### *What's Another Word for "Ruling Relations"?: Translating IE Research to Community, Government and Academics in Medicine*

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct groups were interviewed: 1) caregivers of children with an FASD diagnoses; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interviewed frontline staff. In addition to interviews, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my three main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to "speak IE" in a language that can be understood.

### *The Forgotten One of the Triad: Why Did Rene Worms, and Not Emile Durkheim or Gabriel Tarde, Fail ?*

Rene Worms (1870-1926) was a brilliant young philosopher who entered sociology at the beginning of the 1890' while combining a career of university professor and high civil servant. His first contribution was institutional, with the creation of the first French academic journal dedicated to sociology (the *Revue internationale de sociologie* in 1893), one of the first monographic series (*Bibliothèque de sociologie internationale*) and national and international organizations (Institut international de sociologie, Société de sociologie de Paris). He gathered dozens of intellectuals around these different initiatives. Theoretically, he was at first a strong advocate of organicism, even if he was very open to other theories and currents in his journal and his collection. Very few academic works have been published about this author, considering he played a minor in the history of French sociology. Without rejecting totally this assertion, this communication will try to reassess his role in the development of the discipline, and to provide with explanations of his failure and of his forgotten memory. We will focus on several factors such as his will to internationalize the discipline while it was still very weak nationally, or the consequences of his theoretical choice. We shall also insist on the paradoxes of the durkheimian memory for the writing of the history of French sociology.

### *Transformation of Drug Policy in Poland: From Complete Depenalisation of Drug Possession to Its Absolute Criminalization*

Last three decades witnessed crucial transitions in Poland towards market economy and multi-party system. This process severely affected all spheres of life, including drug consumption and public policy in that area. Definition of drug abuse evolved. In the beginning of the 1980's drug abuse was interpreted as an expression of inter-generation conflict. Its victims, young addicts could only be saved outside their original milieu, in therapeutic communities offering them a new, safe, drug-free environment and bright prospects. Adoption of this definition led to depenalisation of drug possession in a drug law of 1985 which could be seen as a landmark of transition from military government to civil rule. The depenalisation, however, could also be read as a symbol or avenue of social inclusion of young addicts. Sudden changes in political and economic life in the beginning of the 1990's led to enormous shifts in power and wealth. Fundamental reconfiguration in social structure, new powers and new wealth as well as growing poverty and social exclusion demanded moral justification. A number of social problems have suddenly become moral issues, subject of vivid moral debates and accusations in fight for moral supremacy. In result, legal provisions had to be introduced to symbolise new moral order. In 1997 drug possession was penalised. A number of drug-related crimes sky-rocketed from several thousand prior to the penalisation to eighty thousand ten years later. In a decade, several hundred thousand, mostly young people underwent legal prosecution, most of them got recorded in criminal registers which reduces their prospects in the labour market. Despite softening of the drug laws in the recent years, criminalisation of drug possession widened a generation gap and excluded significant proportion of the young generation labelling them as criminal deviants.

**MOSOETSA, SARAH\*** (University of Witwatersrand, [Sarah.Mosoetsa@wits.ac.za](mailto:Sarah.Mosoetsa@wits.ac.za))

### *The Micro-Politics of Poverty and Inequality: Implications for the Real "Hidden Abode of Production" in South Africa*

Almost two decades since South Africa celebrated its political freedom; unemployment, poverty and inequality remain undeniably high. The dominant narrative by most South Africans is "awukho umsebenzi" and "asinalami" – there is no work and we do not have money. South Africa's transition to democracy in 1994 was thus flawed, as it did not bring about economic emancipation for the majority of its people. More than three in every ten South Africans are unemployed. Neo-liberal policies and the welfare system, aimed at addressing economic failures of the apartheid state, have had limited success.

High levels of unemployment and inequality that followed South Africa's entry into the global economy have shifted the focus of survival and economic activity from the factory to the household. In the absence of an effective welfare state, the poor have retreated to the household and adopted diverse livelihood activities. Contrary to views held by traditional economics, households are not just places of consumption and leisure but significant places of production and the provision of

services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival – the real “hidden abode of production.” Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use becomes a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

#### *Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils*

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants' adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants' responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

#### *Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg*

Johannesburg's inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a 'vacuum of belonging' (Gotz and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, diseased street children, criminals and their victims (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation examines the relationship between urban and social regeneration as well as the practices and methods utilised to achieve these aims. Of particular interest is the relationship between physical and social space and how this structures social relationships and notions of belonging. Furthermore, it explores the ways in which community is formed in a context of urban transition, insecurity and hyper-diversity. Utilising the framework developed by Henri Lefebvre (1991), it examines the perspectives of residents living in the inner-city and the ways in which they are able to or prevented from exercising their spatial imaginations and abilities to appropriate spaces in the inner-city and the effects this has on the formation of community and notions of belonging. Particular focus is on residents living in social and low-income housing's perspectives about what community, security, appropriation and belonging mean in a situation of urban transition, social decay and insecurity, as well as what the limits of community are in these conditions and how these boundaries are drawn and reproduced.

#### *Neoliberal Reconstruction or Urban Regeneration? the Private Sector and the Provision of Low-Income and Social Housing in Inner-City Johannesburg*

In academic literature, urban regeneration is more often than not treated as a code-word for gentrification or dismissed as a term developers use to sugar-coat the commercialisation of space and the destruction of public housing. Reinvestment in urban spaces and public housing is seen as part of a global strategy of capital and both a cause and symptom of the spread of neoliberal politics and practices around the world (Smith 2002). Using the case of inner-city Johannes-

burg and the provision of low-income and social housing in the area, this presentation argues that more nuanced and contextually sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely revanchist or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu's notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision. Cities are part of broader social contexts or milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg's inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

#### *Youth Policy in Ireland and India: A Comparative Study*

##### *Youth Policy in Ireland and India: a Comparative Study*

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either 'a problem' or a 'human resource'. This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has been done within Europe, there is very little research which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, his paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough's (2008) "five I's": industrialization, interests, institutions, ideas and international environment. It examines the major 'factors and actors' that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, demography, culture(s) and other economic and social factors. However there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration.

The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of 'subsidiarity' in Ireland can be fruitfully compared with that of 'Panchayati Raj' in India). In India, however, there is no forum for NGOs and the government to come together whereas 'social partnership' has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

#### *Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles*

In a heteronormative society, disclosing one's non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to one's parents. On the other hand, parents to whom a child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a "family crisis" (Williamson 1998), because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does "family crisis" mean to the parents of a non-heterosexual child?

Previous research on parents' reactions to coming out in the West have shown that mothers and fathers react differently; mothers are found out to be more likely to react positively, and feel less guilt and responsibility than fathers (Ben-Ari 1995). Moreover a parent tends to be more accepting of a non-heterosexual child of the same gender than that of the opposite gender (Ibid). However, what are the reasons for these differences? Moreover, can the same be observed in the case of Japan?

This paper explores how gender influences a parent's reaction to coming out in Japanese social settings. In particular, it discusses how mothers assume gender roles in coping with their children's disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The

research revealed that mothers of a non-heterosexual child were especially afraid of the collapse of the family they created (i.e. "family crisis"), while father did not present such narratives. Mothers react strongly to the "family crisis" due to traditionally given gender roles, in which they are expected to be more accountable for family affairs. Yet interestingly, these gender roles also influence mothers to overcome the "family crisis."

#### *Contentious Politics and the Global South*

Referring to new challenges in the study of contemporary social movements, Tarrow claims that "To the extent to which we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them" (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement society in two trends, a more contained in the "West", and a more transgressive in the "Rest", leaves out many issues around which movements in the Latin America have been contending.

However, attempts to explain the particularities of Latin American social movements has led to the development of specific theories, treating the region as *sui generis* (Costa 2010). Thus, in the analytical openness and systematic character of the framework on Contentious Politics lie its main virtues: it invites for dialogue and results in a collective process of knowledge construction. It has a serious limitation for that purpose, as Brinkel (2011) objects: instead of its claimed epistemological turn, "Contentious Politics" is an ontological movement, a change on *what* to study (action and structure, relational dynamics by mechanisms and processes). The epistemological turn is yet to come, by the incorporation of epistemologies from the Global South.

This paper attempts to contribute to this challenge, based on claims raised by Latin American scholars and movements, organized in five elements: the spatiality of contentious politics, in particular subaltern strategies of place based identity building; the commodification and the coloniality of knowledge; the potential of contemporary peasant and indigenous movements; the social question as a cross-cutting issue; legal mobilization based on non-individualist conceptions of rights.

#### *Fighting GM Crops in Argentina and Brazil: Global Constraints, National Opportunities?*

When one looks at current figures, in which Brazil and Argentina are, respectively, the second and third world's biggest producers of genetically modified crops (GM crops of GMOs), the social movement struggles that surrounded and keep revolving around the issue are difficult to visualize. However, the adoption of the technology has been disputed for almost two decades. A major difference was the capacity of Brazilian movements to jeopardize the interests of the pro-GMOs coalition: they had to wait for a decade until soybean production had been converted to GM seeds, what took four years in Argentina. This created a widespread recognition of a controversy over GM crops in Brazil, what never happened in Argentina.

There are many other factors differentiating the cases, but also similarities between them. Frames were similar; because movements participate in transnational advocacy networks, where frames circulate. Different from many conflicts in the Global North against GMOs, in these countries there were not only issue-oriented groups, but also identity politics, as peasant movements were important actors. The Via Campesina frame "food sovereignty" is very prominent.

A major difference lies in the organizational bases and forms for resisting GM crops. The great power of the Brazilian movements lies in the building of a sustained campaign among environmental, consumer rights, agro-ecology, human rights and peasants groups. A coalition was formed with dissident scientists, allies in state agencies and politicians. They engaged in legal mobilization and developed a strong communication front as early as 1999, with a weekly newsletter and a blog. None of these factors are found in the Argentinean case.

The belief that by acting together there was a possibility of affecting social change makes a crucial difference: Argentinean activists perceive more global constraints to their fight, whereas Brazilians perceive more national opportunities to theirs.

#### *Sociologists and Believers: Alliances and Protectorates in Brazil*

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theological stage. As secularization and disenchantment advance in the country and religion decays, in a supposedly unilinear process of undetermined duration, sociologists and anthropologists take up upon themselves the task of managing the remnants of religion, according to the parameters of modernity. Due to their lack of an elaborate theology concerning sin and guilt, the AfroBrazilian religion has become the object of explicit and enthusiastic approval from leading names in social science departments all over the country. On the other hand, scholars of international reputation (Brazilian and at times foreign) have contributed to give the cults a systematic theology supposedly based on originally tribal African memory. This has been called the "holy alliance" of social scientists and cultists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in "sciences of religion" that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrariwise, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal churches, viewed by many members of the scientific community as authoritarian and intolerant of all forms of individual diversity.

#### *The Protestant Ethic Thesis before Weber: Forerunners in France and Brazil*

It is well known that the "Protestant Ethic" thesis had existed for quite some time prior to Max Weber's own formulation. Some specific cases of anticipation of the thesis are represented by Émile de Laveleye and Napoléon Roussel, in the French speaking world of the 19<sup>th</sup> century, and, in the same century, by Brazilian writers Tavares Bastos, E. Carlos Pereira and a certain number of missionaries of English and North-American background who worked in Brazil, like Zachary Taylor and others. Even details of Weber's thesis, concerning, for instance, the emphasis on the consequences of sectarianism ("Sektentum") are present in mid 19<sup>th</sup> century's Tavares Bastos. It is very unlikely that Weber ever read Bastos (who wrote in Portuguese), or even knew he had existed. While such forerunners do not necessarily reach the same level of theoretical, indeed of theological refinement as does Weber, they view adhesion to Protestantism (albeit, at times, in a rather cultural and secularized sense) as a necessary condition for modernization and economic development. A common source to Weber and, on the other hand, the forerunners, may have been Hegel's *Lessons on the Philosophy of History* which, directly or indirectly, did not take long to reach Brazil and, of course, France. Weber's own formulation of the thesis seems to represent a largely secularized version of a central tenet of Protestant apologetics. Again in largely secularized terms, this is still, in early 21<sup>st</sup> century, a fully living, indeed burning issue in both France and Brazil, being but a continuation of the *Kulturkampf*, the culture war, which has for so long opposed the Protestant and Catholic conceptions of society and modernization.

#### *The Challenge of Sociology of Language: Living in Society, Living with Words*

Nowadays, « sociology of language » is explicitly identified in the research groups within the I.S.A. although many sociological associations all over the world don't seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to « sociology of language ». The cause is probably that it is difficult for sociologists to work on language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canonic principles of Saussure for whom language has to be studied beyond the social context ; it is significant that a scholar as influential as Chomsky still follows the « saussurean dichotomy » and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by living and doing; moreover, since Austin, we know that it is often as long as certain things are told that they can *perform*, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social

reality is always something we reach with language (that is socially constructed) – how could we do things to each other *without* words? Do we need an autonomous sociology of language indeed? Or should we try to persuade the sociologists that all sociology is *inevitably* a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

##### *Homogenous or Not?*

"Homogenous or Not? Content Analysis of Japanese Anti-Nuclear Editorials, 1954-1970"

**Abstract:** This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japan's major daily newspapers are homogenous in their news reporting and editorials, and that Japanese news coverage of the anniversaries of the bombings of Hiroshima and Nagasaki is ritualistic and avoids controversy. 53 memorial editorials appearing from 1954-1970 in the *Asahi*, *Yomiuri*, *Nikkei* and *Sankei* newspapers are surveyed and coded for indicators of progressive-conservative and universalist-particularist orientation; the content analysis undertaken indicates a diversity of newspaper editorial positions along progressive-conservative and universalist-particularist continua, with the *Asahi* the most progressive and universalistic of the four publications surveyed. While relative unanimity of opposition to nuclear arms is also found, the analysis indicates that nuclear arms were opposed for a variety of motives which could be characterized as either universalistic or particularistic. Further differentiation is observed on contextual issue positions such as aid for *hibakusha*, United States accountability in the bombings, and the influence of the domestic communist and socialist parties on the anti-nuclear movement.

##### *The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City*

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and normatively disparaging construction – of urban informality exercised by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy private interests employ the attribute of informality to stave off "Third World" settlements and enable a "First World" lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent "informality" takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elite.

Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and confinement on various levels. Firstly, the self-enclosing of the urban elite in "gated communities" is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of interactions between those private urban developments and surrounding marginalized settlements. These interactions, ranging from conflict to alliances, suggest to question the hypothesis of a generalized confinement.

##### *Network Analysis For Discovering Political Conflict In Standardized Interviews*

This paper proposes a new usage of standardized interview data: instead of studying contingency tables of individual attributes, the author suggests to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or con-

sensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with their intra-group conflict. Similarly, by looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages.

A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftist or both a rightist political orientation are linked by a relation of political *consensus*. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political *conflict*. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

##### *Active Citizenship and Rights Awareness Of Roma In The Czech Republic*

The goal of this paper is to question the reasons for low participation rates of the Czech Roma in political and civil society organizations considering such participation is theoretically perceived as crucial for excluded minorities' empowerment. Issues related to active citizenship and rights awareness are somewhat low on the public agenda compared to overstressed agenda of social inclusion. Although most Roma face discrimination, there is no mobilization process that would lead to significant empowerment when it comes to political or civic engagement. The Czech government in its annual Report on the State of Roma Community in 2007 defines as one of the 3 priorities of Roma integration the human rights dimension focused on equality and protection from discrimination. However there have been no Roma political parties either in national, regional or local elections therefore there are no Roma representative in the Czech Parliament or any other elected body. Furthermore, the Czech Statistical Office does not desegregate votes by ethnicity, so it's not possible to say how many Roma vote and for which political parties. However, there have been rumours in media about Roma selling their votes to some parties. Such rumours have not been confirmed before the court but further damage the public image of Roma and possibly discourage their participation. There are 52 civil society organizations concerning in various ways Roma related issues. It is hard to divide them into Roma and other civil society organizations since often bigger civil society organization have special Roma programs and often employ Roma. It's noteworthy that Roma organization the Association of Roma in Moravia came out of a Roma political party, the Roma Civil Initiative. There are other Roma organizations in the field of media and culture.

##### *Segregation Of Roma Children In The Czech Educational System*

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities one half, of Roma children receive education in these type of schools. The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children's access to education and the aim to abolish segregation in education. One part of this is making changes to the work of pedagogical and psychological centers (which have to diagnose a child with disorders in order for it to be placed in a special school) in terms of improving their diagnostic methods and their work with socially disadvantaged children. In April 2010, the Czech Ombudsman concluded that the disproportionately high number of Roma children who are placed in such schools based on recommendations of the school counselling institutions, without being diagnosed with mental disorders, is indirectly discriminatory. Due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. By analyzing governmental policies, the psychological tests, which promote segregation and by interviewing civil society activists who seek to change the discriminatory practice I hope to explain in this paper how it is possible in the EU context to carry on with detrimental and costly policy of exclusion of some

of the Czech citizens from the education process and what are the main consequences of such approach.

#### *Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood*

Young people's transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people's choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

#### *Loosing Control in Western Canada: Private Equity Firms and Land Purchases*

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the concomitant social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose effects remain largely unknown and unstudied given that the practice was non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of community, culture and food supply, and a deteriorating environmental and ecological condition? What effects, if any, will this have on land quality, use of resources and food security?

While private property is strongly engrained in the socio-cultural experience of farmers, as well as corporations, their definitions could collide when those of the former relate to *identification* of time and place and those of the latter relate to profit and exploitation. Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Through an analysis of federal and provincial policy, examining the content of interviews undertaken with officials and politicians from both levels of government as well as with farmers and senior management from private equity firms, and an evaluation of industry documentation, my paper will seek to answer the questions posed above.

**MUIRHEAD, JACOB\*** (McMaster University, [muirhej@mcmaster.ca](mailto:muirhej@mcmaster.ca))

#### *The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South*

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatized in its ownership and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN's Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a business-to-business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and

harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift.

By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests in mind of the broader public and the disadvantaged, in particular.

#### *Cross-Border Marriage: Tale from Haryana, India*

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Haryanvis of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. So on one hand, scenario reflects the dynamics of continuity of such marriages with differential acceptance and denial. On the other hand, the inbuilt centrifugal mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time.

The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as 'inferior others'. These women are facing a situation of paradoxical hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana society, nothing much can be expected by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

#### *Local Construction of Global Standards: How Gender Diversity Has Become Corporate Social Responsibility in Japan*

After decades of reluctance and resistance, Japanese firms have recently begun to embrace the cause of workplace gender diversity as part of their response to the emerging global standards of corporate citizenship. We examine how gender diversity has been locally constructed as an urgent CSR issue for Japanese

firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the within-firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

*Resistance or Alternative Alienation?*

This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individuation processes to, instead, focus on a single model of Japaneseness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the anachronism and rigidity of its job-hunting system; the curriculum of homogeneity and individuality suppression that begin in the school and echoes in society; the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging perception amongst the youth. Since there is a lack of imaginable structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeter, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argue that these strategies come from a feeling of alienation and purposelessness within the hegemonic Japanese society. However, through the study of the phenomenon of Visual Kei, narratives of individuation and subjectivity can be composed and professed, both by language as well as by behavior and appearance. Through Visual Kei, it is argued, Japanese youth find a way to resist the oppression of their individuality in the name of the group mentality and the ideology of harmony that causes a lack between what the youth is made to achieve, and the impossibility of fitting this commodified life with no appeal to individuality. However, such communities of resistance bring forth new cases of alienation and normativity that operates in addition to the ones from everyday life.

*The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born*

The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of outmigrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education. Moreover we find that the self-selection process is negative, namely, the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

*The Impact of Unemployment on Temporary Workers. Why Foreigners Are Most Vulnerable during the Great Recession?*

The current economic crisis is having a strong impact on the whole society in all developed countries, but especially on vulnerable groups such as immigrants. The case of Spain is unique and at the same time remarkable for three reasons.

First, because of its high unemployment level, well above those of other countries in the OECD. Secondly, because of the strong incidence of the temporal rate, with levels close to 30% since the first Labor Reform in 1984, and third, for the extraordinary inflow of migrants in the first decade of the XXI century, representing a foreign population of 3,6% in 2000 to 14% only ten years later.

This paper aims to examine to what extent nationality influences the risk of job loss among the most precarious workers, in particular those with a temporary contract. This study seeks to test the assimilation thesis in a segmented labor market during a recessive economic period. To do this, panel data from the Spanish Labor Force Survey (2008-2010) are used. Analyses based on logistic regressions show that some differences in the socio-demographic profile contribute to understand the initial disadvantage of immigrants. However, controlling for education, time of residence in the host country and tenure does not fully explain the gap between groups. Only after taking into account professional status (occupational level and sector), we can understand their disadvantage since the collapse of the economy. The results of this study show that immigrants are harmed twice. First, by their greater propensity to hold fixed-term contracts; and second, and above all, because the nature of their temporal contracts is associated with activities related to low-skilled jobs and seasonal work, typical in sectors like construction, agriculture and tourism. It seems that the precariousness faced by foreigners is chronic rather than a step towards more stable jobs.

*Effect of Economic Crises on Work Orientations Among European Countries*

An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing interest for self-actualization and quality of life. Concerning to work, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources- in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an enriching experience that allows one to enhance their personal development and self-expression-.

The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a return to the instrumental views in detriment of the expressive work orientations, as a response to the uncertain and risky labor conditions.

The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crises on such evolution. Data analysis will consider the impact of the economic crisis on work orientations at a double level -aggregated and individual-, and will be based on relevant data from the European Social Survey (2004 and 2010).

*Evaluación Del Uso De Edublogs Desde Una Perspectiva Comunicativa*

Nos proponemos analizar y exponer los principales problemas y las ventajas encontrados en la aplicación de edublogs en la docencia universitaria. Recogemos la sistematización de las experiencias prácticas desarrolladas en el marco de una red de innovación docente, formada por un grupo interdisciplinar de 43 profesoras y profesores de 9 universidades diferentes, en un proyecto financiado por la Universitat de València. La principal herramienta desarrollada en esta red han sido los edublogs (destinados a asignaturas diferentes), orientados hacia el aprendizaje colaborativo, tanto del alumnado como del profesorado.

Focalizamos la atención en los edublogs en tanto que canales que median en el proceso de aprendizaje colectivo, facilitando la colaboración en un entorno comunicativo. Desde esta perspectiva, describimos y analizamos las cuestiones problemáticas relativas al **edublog como canal** en las dimensiones del **emisor** (quién crea el mensaje), el **mensaje** (los diferentes tipos de contenidos), la **re-cepcción** (relacionada, entre otros aspectos, con la gestión de los contenidos), el **contexto** (cómo se inserta el edublog en el programa docente) y el **feedback** o retroalimentación.

Esta revisión de la dimensión comunicativa es imprescindible para superar la posible emergencia de situaciones cercanas a lo que Adorno y Horkheimer llamaron **aislamiento por comunicación**: las disrupciones o simplemente las dificultades en el proceso comunicativo dificultarían la efectividad de los edublogs. De este modo, nuestro trabajo pretende contribuir a la mejora, desde la práctica, del uso

de esta herramienta docente en la creación de un conocimiento compartido y, como diría Habermas, pleno.

#### *The Influence of Linguistic Inequality on the Vitality of Two Otopamean Languages of Mexico: Chichimeco Jonaz and Tlahuica*

In this paper we explore the influence of linguistic inequality on the vitality of two related Otopamean languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

#### *Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes*

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants Represents the second biggest Japanese descendent group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. The sushi and sashimi awakened the curiosity of Brazilian people generating a growing consumption of Japanese cuisine. It is important to mention that this consumption is not restricted to high level income market, but with the increase of restaurants by weight, the low income people is consuming Japanese food. In order to analyse the culture deployed from this habit, this article has the objective to identify the values linked to the attributes pointed by the consumers of Japanese food. The research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, product attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal values. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013. The laddering technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionate relationship and friendship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

[dmw@queensu.ca](mailto:dmw@queensu.ca))

#### *Local Policing in the Global City: Community Safety Development in Tokyo*

In large Global Cities, the 'command centres' of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particular social forms of mutual human surveillance are still undergoing an uncertain transition in the encounter with global neoliberal capitalism.

Since 2002, under the last Governor of Tokyo, crime prevention has been managed through the Anzen Anshin Machizukuri Jourei (or Community Safety Development Ordinance) which decentralized responsibility for crime prevention to communities, supported by local (ward) government. However, both National and Metropolitan Police Authorities have also initiated their own schemes, including public space video surveillance, crime mapping and so on. This paper reports on empirical research from five case study areas in Tokyo with very different characteristics: a central district partly dependent on the night economy and associated disorder, a wealthy central residential ward, a working class neighbourhood with a large traditional outcaste population, and two middle-class suburban areas. It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central police initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.

**MURAKAMI WOOD, DAVID\*** (Queen's University,  
[dmw@queensu.ca](mailto:dmw@queensu.ca))

#### *Smart City, Surveillance City: Ubiquitous Computing, Big Data and Urban Life*

'Smart cities' combine ubiquitous computing and urban management, and are characterized by pervasive wireless networks and distributed sensor platforms from video surveillance to meteorological stations, monitoring flows from traffic to sewerage and providing information in real-time or in anticipation of risks. These have extended from small projects for example, shopping / business complexes with integrated building control systems combining video surveillance, fire detection and crowd flow monitoring or other kinds of customer tracking, through larger but temporary initiatives like the command and control systems established for sports mega-events, to permanent whole-city initiatives like Rio de Janeiro's Smart City, sponsored by IBM.

Although largely civic, corporate and managerial, these schemes have strong influences from police and military sources, from crime mapping and predictive policing models, to new forms of urban warfare involving forms of distributed sensor platforms, and computer analytics, to enable forces to get a 'clear picture' of the complexities of the urban landscape and its inhabitants. In some cases in the USA, these have come together in overt ways, for example in the new 'Domain Awareness' initiative in Oakland, California, which extends an existing port security project way beyond the maritime 'domain' into the surrounding city, combining military and conventional civil government.

Drawing on work in science and technology studies, media studies, sociology, geography and surveillance studies, this paper considers the smart city as the archetypal urban form of the ubiquitous surveillance society. The paper considers the place of human rights in a broad sense, not simply privacy but also equity and access to services and justice, and the ability to flourish, in cities in which flows of people are managed like goods or natural resources and asks whether such rights can be 'designed in' in any meaningful way, or will be written out.

#### *Meaning and Frame Resonance in the Linkage of Social Movement Groups - Comparing Three Mile Island and Fukushima*

This study examines why some social movement groups successfully create linkage while other groups fail to do so. Past studies of the development and growth of social movements have provided an explanation from a view of structural and cultural factors. The former theory explains the linkage from existing organizations or networks; the latter employ such conceptual devices such as framing, emotions, collective identity, ideology, symbols, and themes. Comparing the anti-nuclear movement that occurred following the 1979 Three Mile Island nuclear power plant accident and the 2011 Fukushima nuclear power plant accident, this study explores the prerequisites and conditions with which multiple movement groups create linkages. In the 1979 campaign in the US there was a successful linkage between the national movement organizations and the local movement groups, whereas in the 2011 campaign in Japan, such linkage did not appear to be established. The results of the analysis suggest that a successful resonance of frames results in a linkage between movement groups. But for such resonance to occur I emphasize the importance of meaning. Frame resonance is necessary to establish the linkage across social movement groups, and to attain the resonance the convergence of meanings each participating group attribute to their activities is necessary in addition to conditions laid out by framing theory. Drawing on the understanding developed in the area of framing theory, I argue that the establishment of such a linkage heavily depends on the extent of frame resonance and that frame resonance is attained through the convergence of meanings attributed to the actions taken by respective movement organizations and groups.

*There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme*

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and radioactive contamination of wide areas. As a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying 'damages' would satisfy victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers' involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

*Effect Of Men's Educational Attainment On Their Fertility*

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types.

Some research questions will be under study:

What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

GGs data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrollment, educational attainment, calendar year, etc.

*Knowledge Workers' Subjectivities. Precarisation and Transitions of Young Highly Qualified*

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neo-liberistic logics, that juxtapose to the current precarisation processes phenomena like under-payment and misalignment between subjects' education and their working activities (Eurofund, 2011; Standing, 2011; Samek, Semenza, 2012).

Which relation does it hold between educational levels and possibility of effectively deploying the acquired competences and skills? How do knowledge workers represent and face their precarious conditions?

Our reflections are based on results obtained in two recent researches conducted in Italy (Armano, 2010; Murgia et al. 2012) – in the areas of Bologna, Milano, Torino and Trento – during which narratives of about 70 subjects, aged between 25 and 45, have been collected, with reference to the transitions between education and employment. All interviewees were holding high degrees of education (bachelor, master or PhD) and at the time of the interview were employed with autonomous or dependent temporary contracts.

The research inquires on the one hand the risks of depauperation of knowledge and deskilling of highly educated young workers; on the other hand, the

strong lack of adequate forms of representation and of policies aimed at facing the specific precariousness of knowledge workers.

In the present article we discuss the precarious and invisible face of the condition of knowledge workers, that collides with the official one, that superficially considers them as "independent and professionals", though they are experiencing the effects of the further precarisation brought about by the crisis, without a union or political representation.

[smurguia@sky.miyazaki-mic.ac.jp](mailto:smurguia@sky.miyazaki-mic.ac.jp))

*Religion and Risk: Pana-Wave Laboratory and the Risk Society*

This paper documents the rise and fall of a Japanese new religious movement known as the Pana-Wave Laboratory. Founded in 1977 by Chino Yūko, the Pana-Wave Laboratory was an eclectic form of spiritualism that adopted doctrines from the several religious traditions, as well as a host of pseudo-scientific conjectures about physics, environmental warfare and space exploration.

Led by the aging Chino, a reclusive woman that rarely left the confines of her Toyota van, the Pana-Wave Laboratory established a compound for its religious and scientific practices atop Gotaishi Mountains in central Japan. Believing to have the ability to channel celestial figures and a special knowledge of a communist conspiracy to have her assassinated through electromagnetic weaponry, Chino depended entirely upon the assistance of some forty members of the Pana-Wave Laboratory for her survival.

Through their view of the scientific process, Pana-Wave Laboratory members adopted images of themselves as "scientists," taking on actual roles that contributed to their appearance and occupations as laboratory researchers. Members constructed of a full-fledged laboratory, complete with instruments and data recording devices to manage their research agenda. They then began to fashion white laboratory coats, engage in "scientific debates," and profess their findings in their own "peer-reviewed journal." In a dramaturgical sense, these Pana-Wave Laboratory members used the principles of scientific reasoning and props from a host of laboratory settings to create and re-create their images, while fortifying the legitimacy of the religious claims.

Using a combination of Ulrich Beck's "Risk Society" thesis, this paper explores one group's experiment with creating a science and the consequences of doing so in the full purview of the Japanese media. Ultimately, I demonstrate the pervasive consequences of a religious community bound up in fear of human-manufactured risk, as well as the response of its members in averting their own demise.

**MURPHY, RAYMOND\*** (University of Ottawa,  
[rmurphy@uottawa.ca](mailto:rmurphy@uottawa.ca))

*Nature, Time, Space, and Scale: Confronting the Challenges of Global Environmental Problems*

Non-humans in the form of nature's dynamics have prompted human agents to modify their social practices: earthquakes shook the Japanese population into reinforcing building codes and recently questioning nuclear reactors. For many global environmental problems, such as anthropogenic climate change, there are however enormous time lags and/or spatial distances between causal social practices and environmental consequences and there are issues of scale whereby any one cause can be dismissed as minor. People can discount the future to gain immediate economic benefits and may not experience serious adverse consequences until it is too late to avoid disaster or tip the environment into a new state less beneficial to humans. This is what Giddens labelled as his paradox and what disaster sociologists call the incubation of disaster. Disasters are best conceived of as focusing events that can prompt action, but they can on the contrary be dismissed as Acts of God. Moreover land, water, and atmospheric space on our planet are huge, so it takes an enormous accumulation of pollution and much time to degrade them globally. Some anthropogenic problems are resolved by non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life. This paper re-thinks Weberian sociological theory in terms of i) his neglected concept of non-social action, hence expectations concerning actions of non-humans and time, space, and scale, and ii) the enduring conflict of value spheres, particularly economic versus environmental benefits. It calls attention to the importance of assumptions about non-human actants that underpin society's practices when anthropogenic environmental threats for the distant future are glimpsed, but not known for certain. It brings Adam's analysis of time to the centre of environmental sociology. It demonstrates how this framework can be used to gain insight into contemporary environmental problems like climate change.

**MURRAY, JOSHUA\*** (Vanderbilt University,  
[josh.murray@vanderbilt.edu](mailto:josh.murray@vanderbilt.edu))

## Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalized ties in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of *transnational* interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

## Comparative Process-Oriented Research Using Social Media and Historical Text

Process-oriented methodologies place a strong emphasis on linking theory with empirical methods. However, in the digital age, this can sometimes be difficult to do. For example, much of our social lives increasingly occur online and we leave behind an enormous digital footprint. These data can be understood through a variety of empirical methods. The same can be said about the digital archiving of historical data. However, it is all too tempting to study these data without a clear theoretical framework. This paper seeks to understand partiality and perspectivity within comparative, historical technologically-mediated empirical methods. This paper uses two empirical data sources: one contemporary (Twitter) and the other, historical (Google Books 'n-gram' data) to make an argument that we can use process-oriented theory to conduct empirical research. Additionally, it argues that process-oriented perspectives help bring notions of figuration into data-driven research, which enables sociologists to also see and locate their own figuration. Canonical process-oriented researchers such as Norbert Elias used mixed methods approaches, including visual maps and quantitative surveys. He also used standardized data. This paper argues that quantitative methods are important to process-oriented methodologies and can be successfully used to identify a figuration. Specifically, Social Network Analysis (SNA) does this. This paper uses SNA to visually reveal sub-groups within a figuration using both Twitter data and Google n-gram data. Like Elias, this paper examines historical sources and life documents. However, it extends these to Big Data empirical sources and argues that, for example, tweets can be understood as 'life documents'. Additionally, methods, such as SNA provide important modes to see how a figuration develops over time.

## Tweets As Democratizing or Reinforcing Existing Inequalities?

Social media platforms including Facebook, Twitter, and Tumblr, etc. have become more ubiquitous. Sociology is well-positioned to explore the power and influence of social media economically, politically, and socially. This paper is particularly interested in gauging the value of the Twitter community and whether tweets can be a democratizing force or usually reproducing current social hierarchies and inequalities. The social media website Twitter has been prominently associated with a diverse set of political movements in the recent past, such as the 'Arab Spring'. This paper begins by presenting a review of the literature regarding Twitter and social inequalities. It uses tweet data from June-July 2013 to classify sentiments which are associated with agency and lack of agency to draw macro-conclusions of whether aggregated tweets can be seen as generally empowering or not as an overall corpus of text. The paper provides an empirical answer to Twitter's role in influencing global inequalities, a claim often made in popular media. The paper ultimately concludes that though there are limitations in automated sentiment analysis, interesting patterns of perceived agency against inequality do emerge.

**MUTA, KAZUE\*** (Osaka University, [muta@hus.osaka-u.ac.jp](mailto:muta@hus.osaka-u.ac.jp))

## Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The "comfort" women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insulting reactions from right wingers, including influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) it is a kind of universality that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan's issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize.

This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current 'rape myths' and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettably, tolerance of sexual violence against women penetrates even the law. Consequently, CEDAW, in its 2009 Concluding Observations, urged Japan to revise and change for the better the sections of the Penal Code on sexual crimes against women (Paragraph 33-34, CEDAW/C/JPN/CO/6, 7 August 2009). The Government did not address this point in its response issued in August 2011. Furthermore, in recent years the Supreme Court of Japan has overruled several judgments by the lower courts in rape cases, usually deciding that the victim's witness was not reliable.

My paper will examine in detail the connection between the reactionary response to the issue of comfort women and the reluctance to uphold women's rights in cases of sexual crimes, and will discuss the deeply rooted misogyny in Japanese society.

## Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. There are several reasons for language shift to take place language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting to languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational-developmental progress and needs of the society. Moreover, this kind of existing rigidity in attitudes towards language use and emotionally motivated views might cause problems in the long run for society in getting education or employment opportunities. Language policies has made mandatory use of Malay in education, use of the English language at different levels with power and efficiency, use of mother-tongue languages in education and mass media as far as possible. The present day generation prefers training in job-oriented, application and practice oriented education, so they are forced to shift from their mother-tongue to the national language or English for specific purposes. This is because of the restricted use of their own languages. The present day use also reflects the shift from spoken Tamil to English as the home language of the Tamil community. So, this paper emphasizes the social relevance of the sociolinguistic research that is more concerned with a developing community, especially their language use. More so are the language policy activities in order to approach the problems faced by that community in formal domains of language use.

### *Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan*

#### **Facing the Inequalities in Integration and Reintegration: Indonesian Children of Migrants in Japan**

Successful reintegration into the home country begins in the host country (Kathleen Newland and Aaron Terrazas, 2009). Children are usually not reckoned as vulnerable when migrating with their family. Parents and common people often think that moving temporarily to a developed country will give no distress. However, the true problems have arisen both in integration and reintegration. Indonesian children of migrants have to encounter challenges and inequalities when practicing cultural and religious norms in a country where those are different or do not exist. The interview with Indonesian muslim children revealed a fact that they felt a little "different" when their Japanese friends asked about why they were fasting. Meanwhile, in the reintegration, most of them experienced the phase of silence when they did not feel belong to the society while they know they should. One respondent had experienced an unsuccessful reintegration when his school became one terrifying place because he was bullied for his unreadiness to face language and cultural challenges. He remains friendless until now. In the findings, it is revealed that parents usually claimed that there were no significant problems in both phases. They were all worried only about getting a school and financing the children. While, some children showed the opposite behaviors, telling that their parents did not know their feelings. Some even felt traumatic in migrating to Japan. All children deserve to have a safe place wherever they are in the world. This issue should be well-addressed by parents, schools both in Japan and Indonesia, and endorsed by the government policies to properly support these children in undergoing the adaptation phases, especially the underestimated reintegration.

### *A Game Theoretical Analysis of Heterogeneous Network Formation*

Jackson and Wolinsky (1996) using information value is a typical game theoretical model to explain network formation, however they assume homogeneous actors while real world actors are various. Real world actors choose their friend homophilically, then they form diverse communities. Actors are often familiar to each other in one of these communities inside, but they tend to have no relations mutually on inter-community. This kind of communities are often called *Takotsubo* (octopus pots) in Japanese. Moreover ranking and inequality often arise in such a community. However few game theoretical models explain the community formations. Therefore, I propose a new approach to these models.

### *Reflections on the Future Development of Institutional Ethnographic Inquiry*

Institutional ethnography [IE] is a robust sociology committed to empirical investigation of the social organization of contemporary ruling relations. While the conventions of scholarly writing within IE privilege reporting results of original research, IE practitioners have begun to produce a reflexive consideration of the nature, form and future directions of institutional ethnographic inquiry. This paper responds to the invitation to consider "issues and developments in institutional ethnography" by contributing to this emerging trajectory of dialogue. The paper draws on three principal sites of reflection to structure its engagement with key issues related to the future development of IE inquiry. They include: (1) a critical reading of recent published work that methodologically and/or theoretically problematizes IE; (2) my experiences, over the past 7 years, of teaching IE in a graduate sociology program; (3) my efforts to enter IE into dialogue with insights from Science and Technology Studies and Foucauldian work on governmentality in two recent research projects. Among the issues that the paper raises as areas for ongoing reflection about the practice of IE are the limits and possibilities of a critique of objectification, the place of social theory in IE inquiry, and the relationship of IE to other intellectual projects that investigate contemporary forms of governance or rule.

### *The Role of Qualification in Stimulating Pro-Environmental Behaviour: The Case of Low Temperature Laundry*

Changing consumer behaviour is increasingly recognized as a key aspect of the shift to more sustainable societies. However, insights into how this may be achieved at the large scale remain few. This paper contributes to debates on how to stimulate pro-environmental behaviour change, with a case study of the adoption of low temperature laundry in the UK. The case is particularly interesting because the innovation, which requires consumers to alter their behaviour, has been promoted by detergent manufacturers, via existing products. The processes underpinning the change in practice are explored from the perspective of both producers and consumers. A multi-method approach is adopted, drawing data from interviews with households, actors across the laundry industry and a large-scale survey of consumer laundry habits. While efforts to stimulate uptake of low temperature laundry have met with a degree of success, the paper argues that adoption is constrained by the meanings embedded in existing laundry practices, particularly links between temperature, cleanliness and hygiene. The analysis draws on Callon's (2002) idea of 'qualification' which conceptualizes the dynamic, interactive process through which products are attributed meaning within a market environment. Attention to processes of qualification highlights the role of firms in shaping consumer practices, enriching practice-based accounts of consumer lifestyles which privilege consumers as the main actors in the creation of shared meanings. Conclusions are drawn with respect to the role of firms in shaping pathways for change in consumer practices, through their role in shaping the 'qualities' of goods.

### *Contesting Chinese Capitalism*

As the developmentalist goal of catching-up with the West is gradually achieved, will China's political economy begin to gradually converge on an Anglo-Saxon (neo)liberal variety of capitalism? Or, in contrast, will the 'China Model' of combining a capitalist market economy with a Leninist Party-state continue to prosper in coming decades?

This article argues that to understand the prospects for the future of Chinese capitalism, we need a deeper understanding of the impact of public intellectuals, academics and think tanks in the ongoing ideational battle to define China's national development strategy in the 21st century.

Based on analysis of original empirical data – in the form of interviews with 24 highly influential Chinese public intellectuals – this article contributes a typology of four different 'hegemonic visions' for China's future:

First, the 'neoliberal' vision which proposes to further liberalize China's economy, and reduce state ownership, whilst retaining the current authoritarian political system. Second, the 'authoritarian socialist' vision which also eschews parliamentary democracy, but insists on state-led capitalism as the key funding mechanism for building a paternalist welfare-state from above. Third, the 'liberal democrat' vision which combines a faith in markets and a distaste for state own-

ership with a call for parliamentary democracy. Fourth, the 'democratic socialist' vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

#### *A Transnational Movement In Local Context – The Occupy Movement In Germany*

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy – it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominantly positive attitude towards the movement, shared links, etc. but didn't participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of "Blockupy", a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.

#### *Reinterpreting the Relation Between Motherhood and Paid Work: Second Generation Women in Norway*

A pertinent question in contemporary Europe is whether the children of migrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women's reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather they are challenged and reinterpreted in ways that support mothers' participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

#### *Music As Youth Culture: Case Study in Japan*

The objective of this report is to discuss how Japanese young people relate to music based on "A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness," a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.

Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool.

Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

#### *Poverty and Mental Illness in People Excluded from the Labor Market in Japan*

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as "job-seekers," "jobless people who have a desire to work, but do not seek a job," and "jobless people who do not desire to work." Then, we compared the economic and health conditions of jobless people to those of working people.

The study revealed two main findings. First, the proportion of "jobless people who have a desire to work" increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire to work if they were younger and had smaller savings. Second, in 2010, male "jobless people who do not desire to work" were most likely poor or suffering from a mental illness. For women, however, "job-seekers" and "jobless people who have a desire to work" were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women in Japan.

#### *Political Coverage of Japanese Newspapers in Brazil*

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority's medias? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic medias for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shimbun and São Paulo Shimbun, and to analyze that comparing with immigration's history and context of immigrant descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

#### *What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites*

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various 'applications'. It facilitates exchange of data between nodes in a 'network'. By examining at the nature of the data extracted by the API and its use of the data in defining the utility of the 'application' we can produce a critical appraisal of the nature of the techno-social interaction afforded by the 'networked'/networking society.

The promise of communications technology among other things is the democracy and the user defined nature of interaction of players constituted by it. But the use of 'bubble' (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality..

This paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the 'bubble' generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of 'cultural' capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the the hardwiring of inequality in the era of big data.

#### *Costs For Survival*

The necessary cost to continue the life increase year by year. It is said a baby was born in Japanese assume a debt 7 million one's back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility, nevertheless we aware of the nation is not without persons. For the nation is considering the social-welfare that only taxes increase is able to reform. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = {welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance}, for Incomes = {bonds, taxes, contribution, monetary-easing}. The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages' example simulation to answer that question modeled on Japan where a mayor live and a staff who order public works, a youth and an old on welfare, grant a pension and three children. A bank employs president and a clerk. A company employs top and a worker. We understand that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

#### *Transformation of Labor Market and Legitimacy of Income Inequality in Japan*

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizens' perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen's life differently according to one's industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap

by analyzing what determines "what amount of income people think that they should earn." To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of 'just income gap' between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

### RC13-236.2

**NAGLA, MADHU\*** (M.D.University, [bnagla@yahoo.com](mailto:bnagla@yahoo.com))

#### *Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness*

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the women believed that leisure is not a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are inextricably entwined with their boarder cultural and structural context.

#### *When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994*

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bear the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring "a better life for all", it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic services (water and electricity), in particular amongst the poor. Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnections and mass marches and pickets, to include legal interventions and a constitutional court case, these struggles forced the municipality into its own series of policy formulation processes in response. This paper will explore the culmination of these processes in the City of Johannesburg's most recent indigent management policy, which, it will show, puts forward a "pro-poor approach" that brings together a targeted model of partly decommodified access to services for those identified as "the poor", that are nevertheless delivered within a system that is run along market principles overall. It will argue that the nature of this differentiated system perpetuates inequality even though it might address poverty by encouraging a particular form of life for those identified as "the poor".

#### *Examining the Impact of Health and Housing on Poverty Among Older Australians*

As with most OECD countries, the Australian population is ageing. It is predicted that by 2050, over 20 per cent of the Australian population will be aged 65 and over, compared to 13.4 per cent in 2010. The Australian retirement income system is heralded as an exemplar of the World Bank's three tiers approach, with the means-tested government-funded age pension complemented by occupational pensions subsidised by taxpayers. Home ownership is also widespread among current generations of older people ('the fourth pillar') and the government pro-

vides a range of additional supports to those in old age, including provision of health and aged care services. Existing studies indicate that Australia performs below the OECD average in terms of poverty, defined narrowly in terms of income, but these studies ignore the critical role that home ownership and health care provisions play in maintaining a decent standard of living for older people. This paper compares a range of alternative approaches to estimating poverty beyond the conventional income approach by taking account of the role of housing wealth, housing costs, health costs and health needs in affecting the poverty rates of older people – relative to general living standards and relative to the risks facing other demographic groups. Attention is focused on comparing poverty rates before and after allowing for housing and health care costs and the sensitivity of these findings to poverty line variations. The results are based on integrating reported and imputed data from two national household surveys: Wave 10 of the Household, Income and Labour Dynamics in Australia survey and the 2009-10 Survey of Income and Housing. The findings highlight the roles that home ownership, public housing provision and free access to public health services play in alleviating poverty among older Australians and point to the limitations of a narrow income approach.

**MORRIS, ALAN** (University of Technology, Sydney)

#### *The Centrality of Housing Tenure: Further Perspectives on the Lives of Older Public and Private Renters in Australia*

Recent estimates indicate that around eight out ten older Australians are homeowners, with 70 per cent outright homeowners. Much research has focused on exploring the implications of this high rate of homeownership. However, research on older public and private tenants has been limited. This paper is part of an ongoing investigation exploring and comparing the life circumstances of older public and private renters and the centrality of housing tenure. It is based on in-depth interviews with older renters in the private rental market and in public/social housing and a quantitative analysis of socio-economic household and individual data from the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and characteristics of the neighbourhood and financial stress, income manageability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

### RC44-734.2

**NAIR, MANJUSHA\*** (National University of Singapore, [manjusha@nus.edu.sg](mailto:manjusha@nus.edu.sg))

#### *A Labor Time Bomb? Workers' Unrest in the Automobile Industry in India*

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Pricol, an auto part plant of the Toyota in Coimbatore, and in the Graziano Transmisioni unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor movements in India. These strikes were remarkable due to the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization process in the factories, and hence stood apart from other workers' campaigns inspired by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.

NAITO, ASAO\* (Meiji University, [naitoa@kisc.meiji.ac.jp](mailto:naitoa@kisc.meiji.ac.jp))*From Analysis of Ijime (Bullying) in Japanese Schools to Constructing Theories of Psycho-Social Orders*

In this paper, we examine ijime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo's experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, ijime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of ijime can be ascribed to the psycho-social order imposed on the students' everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e. g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of and countermeasures against the bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

## RC35-613.3

NAKA, NORIO\* (Toyo Eiwa University, [naka@toyoeiwa.ac.jp](mailto:naka@toyoeiwa.ac.jp))*Clarification and Visual Representation of Concept of Power*

Key Words: two ways of inference about power, an "actor-structure-situation-process" model, "conceptual formula" on power, a visual diagram on power

During the last decade, discussions about concept of power became unnecessarily complicated and confusing. Some arguments on power such as one of M. Foucault are "philosophical-sociological" theory rather than empirical-sociological theory. This state of affairs resulted in confusion about concept of power among students of sociology. In addition to this, there is not much effort to visually represent concept of power so that students may conceptually and easily understand power.

Therefore, there is a need to reorganize and clarify concept of power. The purpose of this presentation is fourfold. First, two ways of inference about power will be suggested; a "prospective way" that indicates "power as potential" and a "retrospective way" that indicates "power as an effect on the outcome."

Second, an "actor-structure-situation-process" model will be suggested to understand power conceptually. In this model, an actor means a person (or a group), structure means symbolic-systems, social rules such as customs and laws, and organizational structure in addition to physical structure. Situation means a state in which persons or groups are placed in. Process means interaction processes and communication modes.

Third, "conceptual formula" on power will be suggested as below:

-Simple Power = (power resources { knowledge } × communication skill

-Interaction power = [(power resources { knowledge } × communication skill) × Other's

Perception{truthfulness & legitimacy}]

Fourth, a visual diagram on power will be made to make it easy for students to understand concept of power.

These four, i.e., distinction of two different ways of inference, an "actor-structure-situation-process" model, "conceptual formula" on power, a visual diagram on power, will enhance understanding of students about power.

NAKAGAWA, CHIGUSA\* (Research Institute Humanity & Nature, [chigusanakagawa@chikyu.ac.jp](mailto:chigusanakagawa@chikyu.ac.jp))*The Knowledge Production By the Community Against Inequality of Development Assistance Programs; The Case Study of Mangrove Forests Conservation Activities in the Republic of Guinea*

This study analyses that inequality in the project on mangrove ecosystem conservation programs and its result.

The mangrove ecosystem is established only in the limited area and is one of valuable one to support biological diversity. The Guinean mangrove forest has the value as "an economic forest" producing firewood. Therefore it is important

natural resources supporting the everyday life of coast inhabitants. The mangrove in Guinea is used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the maintenance activity flocks from the foreign country as the urgent matter.

However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. On the other hand, some communities make every effort to receive the benefit of the program without noticing the attitude of pre-established harmony of donor agents. So, does local community that is off a target accept the inequality like this? The question to the answer is to illuminate that the local community has the power to replace process of such inequality with process of growth. This case study would like to evaluate adaptability of local community and conclude possibility of the community-based environmental conservation activities.

NAKAGAWA, KAZUAKI\* (leisure, [gawacyan@gmail.com](mailto:gawacyan@gmail.com))*Positive/Negative on Leisure: From the Perspective of the Difference of Enjoyment and Pleasure*

This presentation aims to examine positive / negative on leisure we participate in. In the examination, we helpfully apply *flow theory* described mainly by Csikszentmihalyi. he has found out the significance of *Intrinsically Reward* leading to *Enjoyment*, as the result he examined the case studies such as rock climbing, everyday work. This study distinguishes the positive from the negative, applying critically *flow theory*. The main issue is the difference of *Enjoyment* and *Pleasure*. According to Csikszentmihalyi, *enjoyment* is useful for the growth of self. *Pleasure* is useful just for keeping the order of self, it exists just on time.

On the one side we have examined the former studies which focus on leisure from the perspective of consumption, we can take positive parts in leisure. But we demand *Pleasure* when we regard leisure as consumption. On the other side, we have examined the former studies which focus on leisure from the perspective on the growth of self, we can take positive parts in leisure. So is the chance which we create *Enjoyment*.

It is the meaningful that we have found out the difference of two meanings of positive, which differ the case we regard leisure as the growth of self from the case we regard it as consumption. That is to say, on the one side, it is the chance of the working off the energy that we take positive parts in leisure regarded as consumption. On the other side, it is the chance growing self that we take positive parts in leisure creating *Enjoyment*.

NAKAGAWA, MANA\* (Stanford University, [manan@stanford.edu](mailto:manan@stanford.edu))WYNN, ALISON\* (Stanford University, [atp5@stanford.edu](mailto:atp5@stanford.edu))*Women On Top: The Temporal Status Of Gender In Elite Professions*

The recent growth of women's integration into "high-status" professions over time has been documented around the world, but stark variation exists across fields of education, government and corporations. However, while there has been much focus on women's labor force participation generally, the literature surrounding hubs of elite workforces is more fragmented. As a result, we lack a holistic view of the experience of gender in high-end professional spaces where women continue to permeate in new and diverging ways from the past. There is of course important research that explores the experience of women in specific industries and organization types, but there remains a need for more studies using comparative frameworks. For instance, across the world, most governments have far less than 50 percent of women members making critical decisions in their countries. In corporations globally, women have progressively taken over greater numbers of high-status positions, but top C-suite levels continue to be dominated by men. While industries in each country have unique drivers of inequality, common mechanisms lead to the overwhelming lack of women in high echelons of professional organizations cross-nationally. In this paper, we provide a meta-analysis of existing literature describing the mechanisms that perpetuate gender inequality within and across international professions. Building on existing sociological research examining gender in the legal profession, consulting and academia, we ask: (a) *What kind of changes have we seen over time in these elite professional spaces?* (b) *How are these changes different from findings in the labor force more generally?* (c) *What does this emergence say for how we think about inequality and stratification in these professions more generally?*

### *Effects of Wives' Relative Resources on Husbands' Gender Role Attitudes Among Dual-Earner Families*

This study examines how in Japan, husbands' gender role attitudes among dual-earner couples with children are associated with their wives' relative resources, namely, income, employment status, and educational levels. Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives' economic contributions to the family income exceed theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives' educational levels or managerial posts are higher, wives' incomes will be higher. The wives' higher incomes are then associated with the husbands' more egalitarian gender role attitudes. However, the wives' educational levels or managerial posts are not directly associated with the husbands' gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives' social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands' gender role attitudes concern their wives' provider roles within the family, but not with their wives' social roles in public. Second, it is speculated that the smaller the difference between husbands' incomes and their wives' incomes, the lower the level of husbands' tendency to adopt traditional gender role attitudes.

### *The Self Measuring Radiation Movement for Alternative Food Networks*

This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990s, the localized agro-food movements have spread in several countries; the United States, European countries and East Asian countries including Japan. These movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation.

On March 11 2011, the Great East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daiichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domestically grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because someone of farmers, consumers or coordinators between them have to check the food secure by themselves. Since the winter of 2011, so many grass-roots groups to measure radiation of foods have emerged. There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government.

This report is based on the author's participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the members can judge the level of safety by themselves based on their own experiences. They can share not only the data of radiation but also the information about how to minimize the effects of radiation. Finally the implications of this study for AFNs will be discussed.

### *The Making and Unmaking of the Global Social Movements in the Japanese Sixties*

Preliminary scholarships in the field of global social movements more or less has been focusing upon successful cases that were able to create alliances with the movements abroad and/or various transnational activities they conducted. However, in order to comprehend the substantial mechanisms of the global movement, investigation of its difficulties and limitations including various obstacles as well as structural and cultural constraints particularly while the social movements attempt to cross national boundaries is decisive. Thus this paper explores, what makes the global practices possible and how it affects the development of global movement through comparing two social movements that aimed to create a cosmopolitan society during the 1960s and 70s in Japan; the Japanese Anti-Vietnam War movement, which created alliance with the movements in the

First World western societies and the Japanese New Left that were influenced strongly from the Third World revolutionaries and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capitals, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shapes the distinct characteristics of the global movements.

### *The Impact of Intra-Party Democracy and the Party-Membership in Japan: The Interaction Between Parties and Citizens*

In the literature of comparative politics, there is a growing interest on the causes and consequences of the intra-party democracy, such as the adoption of primaries for the leadership selection. Our paper examines the dynamics and the developments of intra-party democracy in the main political parties in Japan and its impact on citizens' political participation and partisanship, based on the newly constructed comprehensive dataset on the party-leader selection in Japan.

Our paper consists of three main sections. The first section briefly presents the theoretical framework, including the definition of key concepts as well as the causal relations between the intra-party democracy and the party membership or public support, drawing upon the theoretical debates and empirical findings in the existing literature.

The second section demonstrates the contextual information about the Japanese party politics, including the electoral system, the party system and the party organizations, as well as the summary of the development of intra-party democracy in the main political parties in Japan.

The third section then investigates the impact of the intra-party democracy on the citizens' participation and partisanship, using both quantitative and qualitative methods. This section examines how the change in the method of party-leader selection, such as the adoption of primaries, affected the citizens' party support and party membership, based on the empirical data such as Japanese monthly-based opinion survey. It also presents some compelling case studies on the impact of intra-party democracy on the party support and party membership.

This paper has interesting implications on the changing nature of the party membership in Japan and will be able to contribute to the discussion on the party membership from the Asian and comparative perspective.

### *Mutual Cooperation Due to TFT Strategy Observing Fixed Number of Cooperative Players*

Reputation theories that give a solution to 2-persons Prisoner Dilemma have a common assumption that all players observe what happened in all other players. However, the assumption that a player has to observe all others seems to be unrealistic. To overcome this problem, Nakai and Muto (2008) proposed us-Tit For Tat (TFT) strategy that requires a player to regard another player who did not cooperate with himself/herself and his/her "friends" as a friend, and they showed emergence of a mutually cooperative society. They assume that the us-TFT player doesn't have to observe all other players and observe him/herself and his/her friends. However, when all players become mutual friends, they observe all other players, and hence us-TFT suffers from the same weakness of previous studies. To solve this, we propose a new us-TFT strategy with which a player observes a small fixed number of other players. The players to be observed are selected based on how cooperative they are toward the us-TFT player. We performed evolutionary simulations with ALL\_D, ALL\_C, the us-TFT etc and found emergence of a mutual cooperative society. Especially, in case that the number to be observed is two, mutual cooperation is the most likely to emerge. Therefore, it is concluded that mutual cooperation can emerge without observing all others and it is a new finding. In addition, we examined what mechanism works. The takeoff begins when a player changes into an ALL\_C player by an accident. After that, there appear friendships between the ALL\_C players and us-TFT players. The ALL\_C player is positioned at center of the network, and us-TFT players surround the ALL\_C player. Therefore, the network looks a star-like one and grows into a mutually friendly network.

*Solution To Problem Of Free Rider Through Division Of Production and Sanction*

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of free rider in a collective goods production. The norm requires all persons to be engaged in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person can't play both roles, and examined whether the division can solve the problem of free rider. Specifically, we introduce two kinds of players. One is a player who doesn't engage in a production (that is, he/she doesn't pay a production cost), focuses on a sanction against a free rider with a sanction cost, and is presented a payoff by the other role. We call the player the "guardian." The other is a player who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the "tributary." With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a tributary work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians account for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

[seionakajima@gmail.com](mailto:seionakajima@gmail.com))

*Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)*

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably "cosmopolitan" film, *My Nightingale* (Watashi no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan's ethnic-nationalist period during the Second World War. I ask the following three research questions. First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existent in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria's slogan of *gozoku kyōwa* (peaceful co-existence of the five nationalities) and *ōda rakudo* (heavenly place of virtuous rule) as simple political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repressiveness and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of *My Nightingale* suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

*The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study*

This presentation examines the challenge of supporting people suffering ambiguous loss. "The theory of ambiguous loss" was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization devoted to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The

volunteers listen to families' anxieties about their relatives' safety almost every day. They primarily try to be sympathetic and receptive to the families' narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

*The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)*

Epidemiological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents.

The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care in the health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCVC), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpenetration between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

*Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster*

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents' lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disparities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

*Factors for Regional Variation in Japanese Fertility*

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressure of conventions -- the factor of what is taken for granted on family formation -- how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

*Regional Variation of Gender Stratification Among Japanese Lawyers*

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, engaging in corporate law. Such bifurcation is related to regional differences. For instance, international law firms are only located in metropolitan area, and therefore job opportunities to work for such firms are limited to those who practice in such area. Moreover, traditional gender values are stronger in non-metropolitan areas, and it may affect and limit specialization for female lawyers. On the other hand, the relative shortage of lawyers in non-metropolitan areas could lead to better advantages for female lawyers in finding jobs in those areas. Thus, this presentation sets out to statistically examine regional variation of gender stratification among Japanese lawyers. The index of gender stratification to be used includes specializations, current firm sizes, positions, and income. The data to be used is lawyer's census (*Keizai Kiban Chosa*) conducted by Japan Federation of Bar Associations in 2010.

[fodelsekontroll@gmail.com](mailto:fodelsekontroll@gmail.com))

*History and the Vicissitude of Betawi Ethnicity: Indigenous Batavian Population and the Origins of Its Tolerance Towards "Otherness within" in Contemporary Jakarta*

There has been a presupposition in the explanation of ethnicity as sub-groups of a nation-state that there exist persistent, if not fixed, boundaries between these groups. Many scholars have postulated that the modern nation-state imposes homogeneous notions of groups that people eventually accept, resulting in rigid social demarcation within the population.

The case of Betawi ethnicity, the "Batavian Indigenous" who emerged as a creole in the colonial setting, illustrates a distinct contradiction to such conventional wisdom. Betawi people basically accepted the state-sponsored definition of ethnicity, yet they emphasized the similarity rather than the difference between cultural features of different groups and those of "Betawi culture" officially defined by the government, so that people of different group-consciousness could

tolerate each other within one broader category. The category of Betawi has come so far as to subsume those of foreign origins who were once labeled as non-Indigenous/*Inlander* and excluded from the category of Indonesian Nation/*Bangsa Indonesia*. Today this ethnicity exhibits the potential for delegitimizing the persistent and exclusive human classification of "*Inlander*" or "*Bangsa Indonesia*" which has long been promoted and imposed by colonial authority, as well as by authoritarian rule.

Such notable tolerance to otherness cannot sufficiently be explained by the sole fact that Betawi started off as a creole. The presenter investigates the origin of this tolerance by describing Betawi's genesis as Creolization, where different groups are intermingled and fused; and the group's vicissitude under state cultural policy as Amalgamation, where various ideas of group-consciousness are re-organized and reconsolidated under a broader singular category. The transition of Betawi ethnicity instantiates a paradoxical consequence: universalistic rhetoric of difference that the state has constructed along with the flat-faced demarcation of geographical units in turn become the principle for partial deauthorization of supposedly rigid boundaries and incessant inclusion of different senses of belonging.

*Caste System and Relative Deprivation in Nepal*

This study clarifies (1) how caste system causes individual relative deprivations in contemporary Nepalese society, (2) how these deprivations effect on subjective well-being and dissatisfaction. Caste system is one of the strongest social stratification systems which affect on status, occupations and other social attributions of individuals within that society. Officially caste system has been destruted in Nepal, it still remains influential in their daily lives nevertheless. Relative deprivation which reflects gaps between individual status and his reference group's status is more prominent in society with caste system, because caste group which one individual belongs to is always obvious. Ongoing democratization and globalization is throwing the caste system into confusion; some higher caste group is missing their advantageous positions, some lower caste group is uprising economically. We could define relative deprivation between (1)caste groups and between (2) time(past-present-future). We conducted a questionnaire survey in Kirtipur which contains old Newar community and newly ethno-mixture community in Nepal. Respondents were asked to evaluate their own status in Cantril's ladder(0-10). Furthermore, they were asked status of their own group and other(higher and lower) groups. Status is not only that of present but also that of past, future and ideal. From these evaluations we could define several types of relative deprivations. There are different tendency of deprivations between caste groups. It is confirmed that relative deprivations effect on subjective well-being and dissatisfaction. Individual relative deprivation, which comparing individual past-present-future-ideal, has no effect on satisfactions but caste relative deprivation, which comparing caste group, has effect.

OHTSUKI, SHIGEMI (Tokyo Metropolitan University)  
 WAKITA, AYA (Tokyo Metropolitan University)

*The Effect of Education on Society Reconsidered: Positive and Negative Consequences*

This research investigates both positive and negative effects on society of more people seeking and achieving a higher educational level. For individuals, the result of greater educational achievement has been well studied and documented. It is a major route to higher social status. For a society, however, it may not be universally positive. The economy may benefit, as there would be a greater number of capable individuals available to assume highly skilled jobs such as those in high-tech industries. Greater innovation might be a result, also. But as the number of highly educated individuals increases, the competition within the job market at the higher levels will grow as well. Furthermore, as individuals reach higher educational goals, they will become reluctant to work at a lower tech or lower paying job. What will eventuate, particularly in a poor economy when the number of jobs would be reduced? Is competition always a positive dynamic?

Motivated by such questions, we began to look into unintended negative consequences on society of having more people pursue a higher education in the context of a poor economy. We need to consider a country's industrial structure, using data at the macro as well as micro levels. Also, we need to look at the effect on different age groups. Additionally, we will need repeated data.

We started analyzing the data using the Japanese General Social Surveys and observe some negative effects on society. We will present these and discuss additional results obtained. Further, we will compare Japan and Taiwan to consider how each country attempts to address this issue. Taiwan and Japan share many social dynamics such as the importance of education for social mobility. Yet, they differ in industrial structure, which in turn affects individual job-seeking behavior. Thus, it will be a meaningful comparison.

**RC15-258.7****NAKAO, YUKIE\*** (Kyoto University, [s.yukie.e@gmail.com](mailto:s.yukie.e@gmail.com))*Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania*

In Tanzania, which is one of the low income countries, governmental organizations (GOs) and non-governmental organizations (NGOs) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. *The National Policy on Disability 2004* and *the Persons with Disabilities Act 2010* have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them such as the physical environment and the economic circumstances on a temporary basis. The data used in this presentation will be documents on GOs/NGOs' activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

**RC29-498.2****NAKATA, SHION\*** (University for Advanced Studies, [shionnakata@hotmail.com](mailto:shionnakata@hotmail.com))*Social Care at Japanese Snack Bars*

Snack bar is a special statutory place, where a female attendant (usually there is a female owner called "mama" by customer) is allowed to entertain the customer solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intimate affairs, are employed to allow the customer feel at home or healed after the day's hard work.

Most of the customer is married and belong to companies. They go to Japanese snack bar to see "mama" and after talking and drinking (sometimes singing Karaoke), they feel better than before. It's possible to say "mama" does mental care for Japanese men who needs some kind of care, not physical but mental. So that "mama" has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. "Mama" and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

**RC24-429.6****NAKAZAWA, TAKASHI\*** (Shizuoka University, [takashi.nakazawa1214@gmail.com](mailto:takashi.nakazawa1214@gmail.com))*Distributive Equity in Waste Disposal Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposal-Principle in the 23 Wards of Tokyo*

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of distributive equity in waste management of Tokyo, In-Ward-Waste-Disposal, was significantly influenced by the degree of the perceived necessity for more incinerators. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequity in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Disposal, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-One-Incinerator-Policy. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-Incinerator depended on how much more incineration capacity was assumed to be

necessary given the estimated amount of waste in the future. The incinerators siting to realize In-Ward-Waste-Disposal was facilitated when the urgent necessity to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of Incinerationism as the policy paradigm in waste management, while the siting became stagnant when the urgency was eased as the economy became sluggish and the influence of Incinerationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposal was abandoned and the attempt to find another way to redress inequity began.

**RC28-493.6****NAKAZAWA, WATARU\*** (Osaka University, [wnakazawa@hus.osaka-u.ac.jp](mailto:wnakazawa@hus.osaka-u.ac.jp))*Impact of the Long Recession on Japanese Careers*

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman Brothers crisis of 2008, many social scientists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. However, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condition of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be confirmed as regular workers. In Japan, nonstandard workers are excluded from the social security system because welfare services provided by the government are fragile, and companies only provide regular workers with welfare services. Therefore, it is inadequate to focus only on the duration of stay in a workplace. In this presentation, I propose to use the data from the Japanese Life Course Panel Survey that was started in 2007 and is followed up annually. The data includes information on occupation, working conditions, and educational backgrounds, and will help examine the frequency of change of jobs, the duration of stay in a given workplace as well as the other abovementioned issues.

*Social Gap in Korea: The Effects of Economic Deprivation on Social Capital and Self-identified Social Stratum*

In Korea, the gap between the poor and the rich has become a serious social problem since economic crisis, 1997. Income distribution had been equalized until 1997, but income disparity has taken sudden turn for a worse after economic crisis. The previous studies on social impact of economic crisis include polarization of social stratum, appearance of the new poor population, expansion of irregular workers, popularization of unemployment and dissolution of family, disbanding of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one's socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratum, life satisfaction and optimism for one's future. The economic deprivation such as difficulties of earning daily bread, unstable housing condition, and overdue educational expenses as well as worsening family financial situation are the critical independent factors which negatively affect on the one's social relations and subjective ethos. The economic deprivation has a bad effect on the social aspiration and upwardly mobile expectation. Thus the financial predicaments have been deepening the social gap among the people in the way of decline of social capital and lowering self-identified social stratum and social aspiration. We utilize the national survey data which conducted by Institute for Social Development and Policy Research, SNU in October 2012. Interviews were conducted with male and females age 19 and above. The total usable sample size was 1,000. The sample was selected through a process of multi-stage area cluster probability sampling.

**RC20-348.5****NAM, SANG-HUI\*** (Chemnitz University, [sang-hui.nam@soziologie.tu-chemnitz.de](mailto:sang-hui.nam@soziologie.tu-chemnitz.de))

### *Chance and Risk of Qualitative Interview Methods in an International Comparison*

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new communication technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag still behind. Since foreign language and alien culture come into play, qualitative interviews need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. The study stresses that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thoroughly planned pre-research for cross-border interviews is of great importance. In my study small experiments with interviews about "civil society" with German and Korean interviewees will be conducted. Questions about "global civil society," "global values," and "global discourse" will be asked first with insider's intervention and secondly without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

### *"Viet Kieu" or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand*

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. "Viet Kieu" or overseas Vietnamese has a long history closely linked to the protection and construction of Viet Nam. Approximately, there are 4 million "Viet Kieu" or overseas Vietnamese currently living, working and studying around the world. "Viet Kieu" is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam's economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of "Viet Kieu" community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State about "Viet Kieu", including its distinct policy on nationality management towards these populations, to create favorable conditions for them with a view to integrating them as a part of Vietnamese community. In doing so, the researcher will interview "Viet Kieu" Association in Thailand, analyze case studies of "Viet Kieu" who benefits from the Viet Nam's policy, and review relevant literature regarding the issue.

With illustration of the "Viet Kieu" Association in Thailand, importance of the "Viet Kieu" or overseas Vietnamese community in constructing and developing Viet Nam will be emphasized in the study. Finally, this study will envisage how Viet Nam avails itself of these "Viet Kieu" or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

### *Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement*

Compromise between the formalizing imperatives of modernization and locally-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatter settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-ori-

ented institutional reforms in the electricity sector to a more straightforwardly hierarchical set of relationships among state organizations.

### *Empleo De La Tecnología Para Enseñar Matemáticas En Ciencias Sociales*

Nuestra labor diaria consiste en enseñar matemáticas a los alumnos de las licenciaturas que se ofrecen en la División de Ciencias Sociales y Humanidades (DCSH) de la Universidad Autónoma Metropolitana plantel Xochimilco (UAM-X).

La enseñanza de las matemáticas, por sí misma, tropieza con obstáculos que se ven incrementados cuando los estudiantes a los que se les trata de instruir pertenecen a un área, supuestamente, alejada de ellas.

En la DCSH cada grupo es atendido por tres profesores con distinta formación que trabajan coordinadamente, integrando las diferentes disciplinas que intervienen en el módulo alrededor de un tema eje; es el especialista en matemáticas, quien se topa con más dificultades para lograr la integración de su materia al resto del material.

Esta compleja situación problematiza el proceso de enseñanza y nos conduce a modificar las estrategias apoyándonos en la tecnología para disminuir esta aversión de los estudiantes y mejorar los resultados, haciendo la clase accesible, divertida e interesante.

Para garantizar un buen logro en el proceso enseñanza aprendizaje se considera importante tomar en cuenta el estilo utilizado por cada estudiante para aprender, muchas veces, ni él mismo es consciente de su existencia, por lo que hacer énfasis sobre ella es un primer paso hacia el éxito, pues el discente puede empezar a aprender a aprender si conoce lo que requiere para lograrlo.

En este trabajo se propone un método de enseñanza acorde con los principios conceptuales de la UAM-X, compatible con las actividades fundamentales del sistema modular, que incluye entre sus características:

- Apoyo en la intuición
- Apoyo en lo real y actual
- Utilización de herramientas tecnológicas
- Conciencia de la importancia de la motivación
- Adquisición de los procesos típicos del pensamiento matemático a través del aprendizaje activo
- Enseñanza a través de la solución de problemas
- Balance entre el rigor y la aplicación

### *Hacking the Body : Body Enhancement and the Construction of the Envisioned Future*

This paper concerns the movement defined as "Body Hacktivism", whose goal is to unite hacking, body modification and activism. The body hacking is a current whose enthusiasts are found in different places in Europe and the Americas, and are connected through a network. The voluntary and experimental approach of the "Body Hacktivism" has as extension the creation of new devices that can be added and interacted with the body. For instance, the implant of R.F.I.D. microchips under human skin, subcutaneous magnetic implants which take the form of metal pieces whose main interest is to react to waves and electromagnetic fields, replacement of skin parts by titanium plates that can be used as a receptacle for various components, and also the explorations of sexuality by the creation of virtual and physical reality convergence in the metaverse. These artists' experience and their mise en scène of the self in the context of body modification is usually accompanied of a political discourse, that claims the individual's right to his/her own body. The existence of these discourses has decisive power in forming and unforming conceptions of the future body, excluding and including possibilities. If for the body hackers the future exists first in imagination, their next step is the willingness to make it real through experiments, opening the possibility to make their futuristic dreams become reality. Our line of thinking reconceptualizes "body" in terms of assemblages, relations, practices and distributes agency and knowledge across heterogeneous materials. The Body Hacktivism is actively challenging long-held normative beliefs about what bodies do, what they should look like and how they should behave. They are not only pushing the boundaries of their own bodies, but are explicitly challenging the very definition of nature, culture, and technology.

*Nigerian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries*

Agriculture in Nigeria has performed below its vast potentials of yielding an acceptable living standard for the ordinary farmer in a globalized world. The sector was the main stay of the economy before the exploitation of crude oil. The discovery of the latter led to total neglect of the sector which continues to make significant contribution to world production of several commodities. Agriculture in Nigeria is characterized by small holdings, low technology, little value addition and massive post harvest losses. Government efforts to intervene in the past have been hampered by monumental corruption among other factors. Recently, the government introduced a blueprint to develop agriculture in the country christened 'Agricultural Transformation Agenda' which seeks to transform agriculture from a traditional habit to modern business. The paper examines the concept behind the model vis-a-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that characterizes the implementation environment. The paper concludes by observing some disturbing signals associated with the policy.

*The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM)*

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents ("anchors"), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multi-actor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Great efforts are being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014.

The presentation will (a) explain the scope and the design of the German Family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.

*Corporate Interlocks and the Specificities of Indian Capitalism*

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative typology.

This paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization that makes it a newcomer in the game of free-market economy; 2° The importance of State owned companies (PSU); 3° A long and lasting tradition of conglomerates among business groups; 4° The importance of family ties among Indian groups; 5° The importance of caste in business networks.

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:

1° The 1991 liberalization policies had an impact on the shape and density of networks.

2° Networks are still very much shaped by the stakes the State has in PSU companies.

3° Companies belonging to a business group are likely to be more connected to other companies than independent companies.

4° Connections between firms are likely to be structured by caste and family networks.

5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

## RC51-825.1

**NAVARRO, PABLO\*** (University of Valencia, [pablo.navarro@uv.es](mailto:pablo.navarro@uv.es))

*Social Objects As Tokens for Social Eigen-Behaviors*

This paper puts forward the concept of 'Social Object'. A 'Social Object' would be a sort of imaginary hanger (or better, an imaginary hanger shared by a community of social individuals) which works as a referent consistently targeted by a particular family of social actions and interactions. This set is somewhat fuzzy, and it would be made up by the actions and interactions that satisfy –to some acceptable degree—such social object. For instance, the social object we call 'greeting' would be the 'hanger' or 'imaginary shared referent' of the (fuzzy) set of actions and interactions which satisfy that specific object (namely, which accomplish an acceptable greeting) in a given situation. That set of actions and interactions would include those solving (accomplishing) the act of greeting in that situation, and would exclude those failing to do so. In other words, a social object would be the ontological assumption that enables and orients our interactive success (or our interactive failure, in case we misfire and act in a way unacceptable for our interactive partners).

This notion of 'Social Object' is cognate to the conception of physical objects as "tokens for (eigen-)behaviors", put forward by Heinz von Foerster. From this viewpoint, objects are not realities independent from our actions, but assumptions that guide the cognitive and practical processes of the subject –a subject who "constructs" such objects through his actions. Different types of societies are structured by means of different kinds of social objects. And the sort of social objects that are emerging as typical of today's global society are Social World-Objects (namely, social objects which define their dynamics as unitary systems on a global scale). Many of those Social World-Objects are being generated within and by the Internet.

*Gestión DEL VALOR E Identidad De La Mujer Mexicana*

Los procesos de agencia y resistencia de la mujer mexicana se dan dentro de una cultura de la colonialidad que configuran un modelo centro-europeo-norteamericano; pero las nuevas condiciones de la globalización planetaria hacen que se generen perfiles que rebasan esta primera clasificación por lo que hablamos de una "cuarta mujer", después de Lipovetsky (1997), que responde a las categorías de contemporaneidad y en tránsito de construcción.

La cuarta mujer en tanto sujeto sostiene posiciones de liderazgo que van más allá de la división del trabajo y si establece soportes de sus propuestas de vida como un sistema decisorial dentro y fuera de la pareja. Aparentemente la cuarta mujer encuentra un campo propicio para sortear las desigualdades.

Las desigualdades de la cuarta mujer están delineadas por tres estructuras que obedecen a la educación, productividad y empoderamiento que configuran un perfil estándar del comportamiento social contemporáneo; el ir sorteando las diferentes construcciones de esos tres sistemas la hacen una mujer flexible, educada, ocupada económicamente y con pretensiones de empoderamiento en base al éxito profesional. Es capaz de regresar a valores como la maternidad, pero busca embarazarse sin requerir de la presencia permanente del hombre; es una "mujer emancipada", "dueña de sí misma y de la situación"; sin embargo, las condiciones de resistencia a los peligros de regresar a la tercera mujer hacen, que los valores, se transformen en negociaciones con la pareja. En este proceso ¿dónde queda la masculinidad? La masculinidad que funciona con la cuarta mujer es una que ha abandonado el disfrute del poder total o del goce de la dominación.

Esta ponencia resume y profundiza el análisis sobre la influencia de la globalidad en el estatus de la mujer mexicana contemporánea, y de los pormenores e implicaciones que tiene la lucha por edificar el sujeto femenino.

### *Another Look at Sibship Structure and Educational Achievements*

Studies have shown negative correlations both between number of siblings and educational achievement and between number of siblings and cognitive ability. These findings are consistent with the Resource Dilution Hypothesis, the Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently some scholars have questioned the causal interpretations of the correlations and have simulated quasi-experimental studies to test the hypothesis that it is largely spurious. The results of these tests are inconsistent so far.

This paper attempts to further the understanding of the sibship size effect and its causality. We employ a retrospective life history data set on some 2000 Jewish Israeli men who were born in 1954 and interviewed while in their mid-twenties. The database includes information on several educational and cognitive outcomes measured at different ages; socio-economic background variables, and detailed sibship and household composition measures. We use fixed-effect models to evaluate the causality of the sibship-achievement association. The availability of detailed histories of household composition allows us to estimate the effects of siblings present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

### *Violence Against Women: The Indian Scene*

This paper examines violence against women emanates from the social hypothesis of superiority of men over women. Insubordination of women legitimizes gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

### *Prevent or Cure ? – the New Philosophy of Health Care*

Prevent or cure ? – the new philosophy of health care

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographical changes and particularly - ageing of the society. This induces modifications of the priorities of the health policy, new methods of organization and more complex funding mechanisms. Individual components of the health care system: illness prevention, basic health care, hospital care have different contribution into the health care systems of different countries. The worlds growing awareness that for keeping and improving the population health the governments must create effective and efficient health system leads to the effective illness prevention. It shouldn't be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its place in the health care systems. The crucial significance is to specify the determinant of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.

### *Modern Social Communication in the School System*

Elena Nazarova

Modern social communication in the school system

Information technology today is perhaps one of the most rapidly developing areas, which directly affects the dynamics and to some extent determines the vector of development of a society and a system of communication.

The rapid pace of changes in contemporary social and professional spheres determine the need for such specialists, who would have not only availability, but also the ability to equally rapid self-transformation. Modern specialist is in a situation where information and communicative movement causes him to be creative, constantly speaking in a variety of roles. This fundamentally changes the status and purpose of education.

Education loses its autonomy and isolation, losing the functional role of the "incubator for growing professionals." In a sense, the whole society is the educational system, where experts will not only accumulate information and knowledge in preparation for life, but also to fully live, applying them in practice in process of development.

Communicative competence and information, creative movement and tolerance come to the forefront in the formation of man, describing him as a specialist, who can be integrated into the mainstream of the movement of professional knowledge, and as a full member of the ever-changing multicultural social reality. This is an important aspect of the communicative component of education.

According to most of the school is the main element in the process of becoming a person, is to teach people to think, to respect labor, to encourage children tolerance, and develop entrepreneurial skills to real life, and not just theoretical knowledge.

### *The Dynamics of Migration Processes in Modern Russia : Analysis, Problems and Prospects*

For the present stage of social and socio-economic transformation in Russia is characterized by sharp increase attention to the migration processes, the dynamics of which every year is losing its momentum, a negative impact on the demographic situation in the country. The immigration influx is now no longer compensate for the natural decline in population - as it was in the 90s.

However, in today's globalized world for the skilled work force Russia to seriously compete. Thus, according to the UN, the total annual immigration resource in the run up to 2050 will be approximately 2.2 million people. Half of them will qualify for the United States, 200 thousand - Germany and Canada, with 130 thousand - United Kingdom. Moreover, a number of European countries are already developing programs to attract Russian citizens. Russia left more than 100 thousand scientists involved in such traditionally strong areas of the country, such as mathematics, chemistry, physics, biology. This is mostly educated people aged 35-45 years.

We believe that now in force, with sufficient clarity migration policy came into conflict with the objective needs of the country.

### *Cohort, Gender and Socioeconomic Inequalities in Trajectories of Frailty: Findings from a Growth Modelling Approach*

We have seen a rapid and continuing growth in life expectancy. This, coupled with the baby boomer cohort heading into post-retirement life, has led to significant policy concern with the financial pressures resulting from an increasing proportion in the population of older, non-productive and dependent people. In contrast, the baby boomer cohort is also presented as extremely fortunate, or selfish. As a result of benefiting from social welfare reforms post Second World War, it is suggested that baby boomers are able to retire early and in some luxury, at the expense of younger generations - hence the accusation of selfishness. Coupled with this, there are also suggestions that we are also seeing a compression of morbidity. That is, alongside increasing life expectancy we are also seeing a shorter proportion of later life spent in illness or disability. Baby boomers appear to be a truly fortunate generation.

In this paper we will examine age cohort differences in frailty trajectories to test the extent to which we are seeing a compression of morbidity, and then we will examine the extent to which any change in frailty trajectories is distributed

similarly across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

#### *Financialization and (Global) Class*

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970's, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global "market culture", emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a "global financial class".

**NEGRI, MICHELE\*** (University of Tuscia, [michelenegri@unitus.it](mailto:michelenegri@unitus.it))

#### *Defence and Security Policies in the EU: From Decision Making to Political Culture*

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is involved in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European "Security Research" activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in "civil" security. The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

#### *Les Représentations Sociales De La Dépression Et L'accès Aux Services De Santé Mentale Des Jeunes Dépressifs : Une Question D'identité?*

La question de l'accessibilité aux services de santé mentale ne peut se réduire à celle de l'offre. D'une manière générale, la demande des services de santé mentale varie selon différentes variables sociodémographiques dont l'âge. Les études démontrent ainsi que les jeunes ont généralement moins tendance que la population adulte à demander de l'aide.

C'est dans cette perspective de tenter de mieux saisir la question de la demande de soins des jeunes en proie à des troubles dépressifs que nous avons analysé des entrevues effectuées auprès de 31 répondants âgés entre 18 et 30 ans qui ont rapporté avoir souffert de dépression au cours de la dernière année. Cette enquête qualitative pancanadienne a été réalisée dans quatre sites : Moncton, Ottawa, Sudbury et Winnipeg par la méthode du réseau d'associations et des entrevues individuelles semi-dirigées. L'analyse des résultats obtenus a été effectuée selon la méthode d'analyse intégrée de contenu des représentations sociales.

Le contenu de la représentation sociale de la dépression ayant émergé du discours analysé est organisé autour de deux éléments principaux : désespoir et stéréotype négatif. Ces éléments renvoient à des dimensions descriptive et sociale de la dépression. Le discours activé par ces deux dimensions contraste avec la nouvelle normativité sociale (autonomie, initiative, responsabilité individuelle, etc.), ainsi qu'avec les caractéristiques stéréotypées attribuées aux groupes de jeunes (dynamisme, enthousiasme, joie de vivre, etc.). Cette double tension de nature normative et identitaire mobilise une résistance par rapport à la disposition des personnes à consulter les services spécialisés en santé mentale.

#### *Cynical Vs Empathetic Worldview Schemas and Fairness Perception*

This research explores the contrast between cynicism, as a component of Kwok Leung's human social axioms construct, and a more empathetic or altruistic view of the social world. As such it looks at the contrast between what game theorists call "zero-sum" perception and "positive-sum" perception. What are some of the attitudinal and behavioural differences between people who believe they live in a you-OR-me world, and those who believe they live in a you-AND-me world? Given its implications for inequality, political conflict, and ideology, this seems to capture a critical dimension in human social worldviews. Preconceptions about whether others can be trusted and whether one can afford to cooperate extensively with others to solve difficult problems have many implications for social capital building and dispute resolution between individuals and groups in society. The research explores 'cynical' and 'empathetic' orientations to social interaction, and the ways in which these worldview schemas relate to (1) social fairness perceptions and (2) related aspects of personality and self-conception. Data were gathered using a multi-construct written questionnaire instrument administered to undergraduates in New Zealand, Jamaica and Hong Kong. Results across several cultural contexts show significant differences in both personality attributes and in social fairness attitudes between participants who are predominantly cynical in their worldview (higher scores on 20-item Leung cynicism scale, relative to empathy) and those who are predominantly empathetic in their worldview (higher scores on 14-item empathy scale, relative to cynicism).

#### *Emerging Dimensions of Senior Friendly Built Environment in Aging Societies*

The purpose of my paper is to explore the methodology of my empirical research concerning analyses of senior friendly built environment in aging societies. This methodology is based on a framework of nine emerging dimensions, which result from the relationship between design, spatial experiences and quality of life define senior friendly care housing. The nine emerging dimensions are: 1. Building organisation. Through this emerging dimension I summarise buildings in a way that is relevant to the residents' quality of life. 2. Safety and health and architectural design of senior care housing. 3. Regulations and guidelines as well as their impact to the felling of well - being in senior care housing. 4. Privacy. According to several researchers, privacy is a most important aspect of the environment for older people (Morgan and Steward 1998, Duffy et al. 1996). 5. Ability to personalise the surrounding (personalisation as a factor, which allows the transformation of a care housing setting to a home). 6. Orientation - Disorientation - Confusion regarding place, time, personal identity, or social situation - is common among people with dementia (Cohen & Weisman, 1991). 7. Sensory stimulation is concerned with the different elements of sight, smell, hearing and touch. 8. Conflicts between different building users (because senior care housing is not only a living setting but also a staff's working place). 9. Participation and contributions of older people.

The objective of the presented method is to compile a comprehensive review of senior care housing features essential for residents and exposing potential and importance of design to improve senior quality of life.

#### *"No Time like the Present": Lessons Learned on Timeliness of Disaster Donations*

In the aftermath of each disaster, material goods flow into the disaster affected area. Given with the intention to help survivors, the influx of items often generates what donation management personnel refer to as a "second disaster" or, in other words, an over abundance of items that are inappropriate, difficult to sort, costly to transport or store, and challenging to distribute. This paper takes a closer examination of one contributing factor to the problems associated with the disaster management process: the timeliness of donations. Drawing interviews conducted following several disasters events that struck the United States in 2012 and 2013, as well as interviews following Hurricane Katrina's devastation in 2005, this study explores the extent to which donation supply is often incongruous with donation demand. Lessons learned from these disaster events suggest the need for a system that accounts for the progression of need in affected communities.

The social and logistical pressures on organizations to accept non-priority items are discussed, as are the benefits reaped by organizations that employed time-lines of donations management.

#### *Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany*

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in many shrinking cities all over the world (see Mallach/Brachman 2013 for US or Fol 2012 for France) outmigration was selective: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bontje and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

#### *The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities*

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typical causes are impacts of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5,6 million units, of which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income-fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing estates and regeneration of existing squatted areas) and the influence of development plans and interventions on socio-spatial structures. The objective of the study is to discover which prerequisites assist housing policies' implementation to counteract urban fragmentation and which parameters (i.e. value of lots, decision-making-structures) or/and original specifications (planning-procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments' and housing policies' potentials to better the attendance of intense urbanisation-processes observed internationally.

### RC34-584.3

**NELSON, GLORIA LUZ M.\*** (University of the Philippines Los Baños, [glmnelson2001@yahoo.com.hk](mailto:glmnelson2001@yahoo.com.hk))

#### *Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children*

Children in the labor force are a social phenomenon that has become link with the third world countries. The Philippines is one country in the developing regions where there are many children who are productively earning. The survey was

conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001. Four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per week and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, "boss" is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industrial sector. Factors that affect their recreation in 1995 are long working hours, absence of relative supervisor on the job. Similarly, child workers in 2001 with long hours of work affect their recreation as well as work that provides little illumination. Children working in farming, fishing, and mining have less free time than those children working in other industries. However, regardless where the child works it reduces the playing time since in some cases sleeping is preferred than playing.

### JS-41.4

**NELSON, GLORIA LUZ M.\*** (University of the Philippines Los Baños, [glmnelson2001@yahoo.com.hk](mailto:glmnelson2001@yahoo.com.hk))

#### *Globalization and Philippine Labor Migration Phenomenon*

Globalization and labor migration from the Philippines accelerated almost at the same time. Three revolutions contributed to Filipino labor migration phenomenon: communication technology, economic integration and widening demographic divide between developed and developing regions. As of December 2010, more than 9 million Filipino workers are found working in more than 140 countries with Hong Kong, Qatar and Singapore as the three major destinations of "global Filipino". Using data in 2000, 2005 and 2010 from the Philippine Overseas Employment Administration (POEA), it was found that the host region of Filipino workers are Middle East and Asia. The nature of occupations of the Filipino labor migrants has changed from production related work in 2000 to service work in 2010. Due to this change in the nature of occupation, females more than males predominate the Filipino labor migrants in the last decade. This study supports the World system theory where peripheral countries like the Philippines supplies the labor demands of the core regions. The annual remittances of Filipino labor migrants has kept the Philippine economy afloat and are now regarded as "heroes". Due to the failure of the Philippine government to provide job opportunities for its growing labor force population and in spite of the social cost to the families left behind, the Filipinos will search for jobs outside of the country. Thus, labor migration from the Philippines is a global phenomenon for as long as there are market demands for Filipino labor.

#### *Family Policy and Child Poverty in Global Perspective*

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from unilinear. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-being have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes; leaving unexplored the 'black box' of program specific attributes. Almost four-fifths of the world's population live in low- and middle-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy institutions and child poverty to include both high- and middle-income countries in transition. We thus initiate a debate on the role of social policy in reducing child poverty on a more global stage. A multilevel regression approach is used to investigate the role of different family policy dimensions in reducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg (LIS) and new family policy indicators from the Social Policy Indicator Database (SPIN). Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female labour force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be

most important. The reasons for these differences are discussed in the paper, and ventures for further research are outlined.

#### *Just Generational Welfare Contracts and Poverty*

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often "implicit" generational welfare contracts that are embedded with social policy making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

#### *Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?*

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union's 'Social Investment Package'. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches to take a life-course perspective and the risk of 'policy crowding out' in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

#### *Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors*

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors.

Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima.

This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors' life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors' reality of radiation and scientific knowledge affect with each other.

**NEMOZ, SOPHIE\*** (University of Versailles Saint-Quentin, [sophie.nemoz@uvsq.fr](mailto:sophie.nemoz@uvsq.fr))

#### *Addressing the topic of 'Smart Cities' at University: New Challenges for Sociology?*

In recent years, a growing number of urban policy makers are tackling the issues of sustainability with an increasing use of ICTs. In this sense, projects implementing advanced prototypes, systems in Information and Communication Technologies refer to the topic of 'Smart Cities'. This rhetoric leads to questioning their interactions with institutions of higher education, especially since the "World Symposium on Sustainable Development at Universities" (WSSD-U-2012). The paper aims at exploring the on-going relationships between urban sustainability, 'smart devices' and academic actors. To what extent do these interactions contribute to bridging the perceived gap between science and society? What transformation do they induce in university practices? If a new social contract with scientists is announced, how does it redefine the role of sociologists?

Firstly, a review of existing literature and experimentations will examine the varying inclusions of smart technologies in universities with an eye to sustainable development. Our participatory observation in the "Green Campus Summit" (Puducherry, April 2013) also takes part in this international state of art. There will be a particular focus on the implications and possibilities for sociology to develop this field of research. Then, it will be analyzed from an empirical viewpoint. In this regard, the second part will deepen our sociological action research on the project "Smart Campus" carried out by the University of Versailles Saint-Quentin. Making use of innovative methodologies and covering a smart grid that enables the campuses to produce renewable energy and to optimize its uses for sustainable living and transportation, this case study is proving to be of particular interest. In the light of an international overview and local insights, we will finally discuss the challenges of trans-disciplinary collaboration for sociology at the meso-level where university participates in Smart Cities.

### RC15-257.9

**NENGNEILHING, RUTH\*** (Jawaharlal Nehru University, [nnlruthneo@gmail.com](mailto:nnlruthneo@gmail.com))

#### *Women's Health and Healthcare Accessibility: A Study Among Kuki Indigenous Group in India*

Understanding women's health is often limited in the context of women's child bearing functions which only reflects a fragmented view of women's health and women's bodies. It almost neglects the socio cultural matrix in which women's ill develop such as the milieu of poverty, patriarchy, and other life stresses. Similar is the case with the Kuki women, indigenous group in India, whose health concerns are compromised with several confounding factors such as poverty, overwork, and social inequality. The conceptual framework of this paper is within the social model of health theory embracing the context of health and illness beyond the biological model. The barrier to attain maximum utilization of healthcare by the Kuki women is the result of the interplay of many factors whereby the socio-economic, religion, political and cultural factors are being considered in the study. The main objective of is to dwell on these underlying issues that pertain to women's health reflecting on Kuki women. The paper also attempts to explore the prevalent healthcare services and its limitations to women's health care needs. One fifty women were selected for the study through systematic random sampling. The method of study is exploratory in nature and the source of data collection is based on observation and interviews. While both men and women suffer the consequences of an inequitable system and maldistribution of resources, evidently unequal burdens of domestic labor, discrimination in the allocation of household resources, constraints on women's capacity to determine their own sexuality and procreativity, inequalities in waged work and political power. The paper contests that the improvement in the economic, political, cultural, and educational and health status of Kuki women will contribute to improvements and elevation in the life conditions of the society in large.

**HABERKERN, KLAUS\*** (University of Zurich, [haberkern@soziologie.uzh.ch](mailto:haberkern@soziologie.uzh.ch))

#### *Family Practice and Family Structure – Do Policies Matter?*

In most Western countries the family is subject to major changes: marriage and fertility is on the decline, cohabitation and divorces rates are soaring and the share of childless and childfree persons increases. Most countries have developed a bunch of policies to cope with these trends. Two major strategies can be observed: First, governments try to go against the tide and safeguard traditional marriages and the conjugal families, or, second, adjust introduce social and family policies to prevent negative consequences for the emerging alternative families.

However, little is known what the effect of such policies is: Do policies which favour the traditional marriage family increase marriage rates and stability of marriage families? Do policies with a focus on single parents, patch-work families etc accelerate the trend to more instable family relations? Do social policies as an alternative to family security increase cohabitation and divorce rates?

The analysis is based on official national statistics for OECD countries and covers the time span from 1980 to 2010. The analysis shows that social policies and family policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and divorce rates while fertility rates decrease. A generous and benevolent welfare state seems to provide alternatives to the traditional marriage families. Marriage is no more a precondition to avoid or escape poverty. Social security and family policies have lowered the material necessity to enter marriage, and increased the opportunity to exit unpleasant family constellations.

[neuberger@soziologie.uzh.ch](mailto:neuberger@soziologie.uzh.ch))  
**HABERKERN, KLAUS** (University of Zurich)

#### *Family Support and Quality of Life: Structured Ambivalence As Bridging Concept Between the Individual and the State*

The relation between family support and the welfare state as providers of support has been extensively researched in Europe. Most studies thereby focus on the quantitative dimensions, e.g. who provides how much support to whom. Existing research is descriptive in nature and rarely based on a sound theoretical frame. A qualitative dimension that might contribute to the theoretical discussion, however, receives little attention, e.g. what are the motives for providing support to one's kin, and what is the effect of providing support on one's quality of life?

Using the *Survey of Health, Ageing and Retirement in Europe* data with 16 European countries, differences in the effects of family support on the quality of life of people aged 50+ are analysed by applying hierarchical linear models with random effects and cross-level interactions.

The concept of structured ambivalence as a link between micro (individual behaviour) and macro (cultural and institutional context) is used to explain these differences. Structured ambivalence is thereby defined as discrepancy between individual behaviour and contextual factors and assumed to reduce quality of life. Our findings show that support providers' quality of life is not only shaped by individual circumstances, but by cultural norms and social policies. Structural ambivalence lowers QoL, e.g. when family members do not live up to prevailing family expectations and obligations. Doing so, we provide a fruitful application of structured ambivalence as theoretical concept as well as new insights in the relation between social policies, individual action and quality of life.

**NEUBERT, DIETER\*** (University of Bayreuth,  
[dieter.neubert@uni-bayreuth.de](mailto:dieter.neubert@uni-bayreuth.de))

#### *Introducing Technologies in Africa. Between Appropriation and the Challenge of a Trojan Horse*

Current studies on the introduction of technological innovations in Africa underline that we observe a process of appropriation. This is in line with the hypotheses of the science and technology studies (STS) claiming that the development, use and understanding of technology has to be seen as a social process between people and (technological) 'actants'. The findings from mostly anthropological studies focus in the same way as STS on the change of technologies according to the social conditions of their use and emphasize the influences of the local context on the technology. Up to this point STS seems to produce in Africa similar results as in the Global North (or the industrialized societies). However, the introduction of technological innovations in Africa has more consequences than to shape the technology itself. The use of specific technologies may change the behavior and expectation of the users, too. Modern technology also incorporates basic ideas of modernity like the mastering of nature. Once new technologies are used they may act as a Trojan horse of modernity. In Giddens terms the behavioral changes are consequences of modernity. Therefore, technological innovation as a social process takes effect in two ways it shapes the technology but also the users. Which way these changes take is an open question. STS has shown that the development and application of technologies is a social process. When we use this approach outside the Global North we have to admit that the technology itself plays an important role. We have to put more emphasis on the notion and function of 'actants'.

#### *The Ambiguous Relationship Between Middle-Class, Civil Society and Democracy*

Debates on processes of democratization create the impression that the middle-class and/or the civil society are the drivers of democratic change and the backbone of democracy. Seen from this perspective either these groups fight for democratic change or once they have a basic political freedom they will quasi automatically take possession of democracy. This was the expectation in the USA before the Iraq invasion (what we may call the "Rumsfeld Utopia"). However, we have learned that in Iraq, after the Arab spring and in many countries that underwent processes of democratization during the 1980s and 1990s there was no automatic process towards democracy. In these transitions the middle-class played an important role and many of the civil society associations, social movements and especially their political leaders had a middle class background. But the political groups and the leaders that opposed the ideas of a liberal democracy also had support from middle class groups. At least in Africa and the Middle East the middle-class-based civil society represent competing concepts of socio-political order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic rule (or socialism in Latin America). The claim for democratic elections may be used to legitimize any of the socio-political orders.

#### *Can Teacher's Gender Explain The Growing 'Boy Crisis' In Educational Attainment?*

Gender inequalities in education have seen much change, with females gaining advantages over males in ways that have not been anticipated just two decades ago. At the same time, the share of female teachers has grown in almost all countries of the western world. There is an ongoing, contentious debate on whether this growing "feminization" of the educational system, in particular at the lower levels, can account for the growing educational disadvantage of males. In this talk, I review the literature on the "feminization of teaching" argument and present findings from two empirical large-scale studies conducted in German elementary schools which allow me to identify the effect of having a same-sex teacher for different scholastic outcomes ('gender-blind' test scores and more subjective teacher's grades) and across different subjects (Reading Literacy, Mathematics, and Science). My findings suggest that the popular call for more male teachers in primary school is not the key to tackle the growing disadvantage of boys.

#### *The Validity Of Response Latency Measurement In Cati Surveys*

There is agreement among researchers that the measurement of raw response times from surveys requires a treatment for baseline speed of respondents and interviewers. There remains disagreement about the appropriate procedure to transform raw response times to response latency and there is no study that evaluates the different approaches with regards to their potential measurement error, which may have an affect on modeling and causal inference. This article fills this gap by examining the measurement validity of different ways raw response times are treated for baseline speed. This study uses data from three separate CATI surveys conducted in Germany in the years 2012 and 2013 where raw response times were measured manually by interviewers. We apply a Multitrait-Multimethod approach to examine four different operationalizations for response latencies and their relationship to attitude accessibility and indicators of response quality. We conclude with remarks about the levels of validity and potential biases when latencies are used as independent variables.

#### *Trustworthiness As Rational Belief or Unconditional Propensity to Trust – Evidence from a Telephone Survey*

While research on trust and trusting behavior is abundant, less attention has been paid to the study of trustworthiness itself. This seems to be at least a bit surprising, especially with regards to the theoretical claims about trustworthiness as „the crucial variable“ (Hardin 2001) for understanding and explaining successful cooperation based on trust. While several authors share the definition of trustworthiness as a belief, a probability assessment or an expectancy of Person A about Person B to do X, distinct measurement approaches exist depending on the mode of data collection (survey vs. experimental approach) and strategic outset of the study (one-shot vs. sequential games). Additionally, different hypotheses can be derived depending on whether one treats trustworthiness as incentive

based or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI survey (n=706) conducted in Germany in June 2012 and January 2013. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

#### *Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye*

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event's anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a 'new media event'—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski's death and over 400 reports in three major Canadian newspapers, the *Globe and Mail*, the *Toronto Star*, and the *National Post*. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording's electronic nature, we argue, complicated an 'open-shut' case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

#### *Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults*

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve our understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non political reasons. Theoretical and practical implications of the findings will be discussed.

#### *Fighting Against Youth Unemployment: The Hong Kong Experience*

##### **Fighting Against Youth Unemployment: The Hong Kong Experience**

Ngan-pun NGAI (Dr.)

Adjunct Professor & Senior College Tutor  
Shaw College & Department of Social Work  
The Chinese University of Hong Kong

In Hong Kong, the high youth unemployment rate due to the rising uncertainty and volatility of global economy and financial crisis since the late 1990s has driven the Government and various sectors to commit themselves to enforce a series of remedial policies and services to alleviate the problem of youth joblessness and to get youth into jobs and work training. The concrete plan targeting at unemployed youth includes two major categories: First, several pre-employment training programs such as Youth Pre-employment Training program, Project Yi Jin, Youth Work Experience and Training Scheme, and Hong Kong Young Ambassador Scheme, and second, temporary employment opportunities such as Special Job Attachment Program, Program Assistant, Peer Counselors, and Summer Student Helpers. This paper examines issues relating to those policies and training programs aiming at fighting against youth unemployment and proposes plausible solutions to remedy and improve the present policies and practices in dealing with the problems. The proposed measures are: 1) formulating a long-term youth employment policy to provide youth with appropriate training in occupational knowledge and skills; 2) setting up a centralized system to strengthen the information and communication network of the territory's labor market in order to facilitate youth to seek employment resources and assistance; 3) building up closer collaboration between the voluntary service sector and the business sector in order to look for more pre-employment training opportunities, chances of temporary employment, full-time job possibilities, community participation and financial support; and 4) using multiple methods to fight against youth unemployment.

#### *Enhancing Employability Through Youth Training Schemes? The Experiences Of Non-Engaged Young People In Hong Kong*

The process of globalization, the rate of technological change, the convergence of information and communication technologies, and major changes in government policies are leading to the development of a "weightless" economy, to rapidly growing skill requirements, and to what some call the "knowledge economy." Certainly, the labor market is tilting toward extensive increases in the demand for higher skill levels and the labor demand for low skill levels is weakening. In this environment, young people are hit disproportionately hard, obscuring paths to adult statuses, identities, and activities. As such, many young people have been lost in the transition from school to work, with more and more of them not in education, training, and employment. This paper seeks to investigate the school-to-work experiences of non-engaged youth – young people aged 15-24 who do not participate in education, training, and employment. Based on data from focus groups involving 50 non-engaged young people in Hong Kong, it seeks to: 1) examine how these young people are being systematically propelled to the edges of conventional pathways to adulthood; and 2) assess the efficacy of governmental training schemes that aim to develop employability as a strategy for engaging this population. The paper concludes by outlining prospects for future policy development, focusing on gaps and weaknesses in current provision and practice. It is suggested that effective guidance to non-engaged young people must pay adequate attention to the social context within which the individual operates. Assumptions behind the government's individualistic lifelong learning policy are called into question.

This paper has direct relevance to Theme II.3 "Youth Unemployment/Underemployment and Precarity" of the RC34 Sessions at the XVIII ISA World Congress of Sociology as more and more young people worldwide are now living in economic disadvantaged circumstances and facing problems in their school-to-work transition.

#### *Participation of Women and Girls in the National Science, Technology and Innovation System in South Africa*

The importance of documenting data on the inclusion and participation of women and girls in a society's science, technology and innovation (STI) system cannot be underestimated. The paper presents results from the Gender Equality

and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa's reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender machinery has been put into place and operates in all the realms of government. A lack of funding, human resources' constraints and insufficient co-ordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematics at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women's participation in the STI system in South Africa. South Africa has an aging, predominantly white male, scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country

**NGUYEN, CHARLES\*** (University of Hawai'i at Mānoa, [charles6@hawaii.edu](mailto:charles6@hawaii.edu))

#### *For Our Children's Future: Inequalities in Rural Development in Vietnam*

The previous literature on Vietnam's growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government instigated the rural communities to develop into urban communities. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is grounded on a 1080 rural households surveyed through an East West Center, National Science Foundation funded research on Avian Influenza and coupled Anthropogenic systems. My findings show that there are key differences in how traditional, transitional and modern farming communities are affected by and understand rural development. Particularly interesting findings include significant perception differences found between the men and the women surveyed. I predict that the cognitive differences of Vietnamese citizens would not simply be due to differences in resources or education; however, a gradual process in which cultural practices becomes embedded in everyday behavior.

#### *Self-Employment in Tourism Business Among Japanese Expatriates in Bali, Indonesia*

Migration and Tourism  
Self-employment in Tourism Business among Japanese Expatriates in Bali, Indonesia

Ni Nengah Suartini

This study aims to identify the characteristics and motivations of Japanese expatriates establishing their tourism business in Bali, and its impact to local community. Bali as one of the most famous international tourist destination, the number of foreign tourists to Bali is increasing every year. Japan is one of the top five nationalities visiting to Bali and the number of Japanese settlers in Bali is also increasing. As a result of this, there has been increase in the visible presence of Japanese entrepreneurs, particularly in tourism areas. This study is based on fieldwork with a qualitative research approach. Entrepreneurial activity among Japanese expatriates community is studied in four tourism areas in Bali, such as Jimbaran, Kuta, Sanur, and Ubud. The result of this study showed that, 1) The primary reason for migrating to Bali was amenity factors such as tropical climate, myriad of traditional and uniqueness of Balinese culture, natural landscape, and slow pace of life. This also means for them to escape from drudgery of city living in the country of origin; 2) Tourism experience influenced their decision to migrate and kinds of enterprises established in Bali; 3) High involvement of women in self-employment; 4) They recognize the business chance of their area after settling; 5) To maintain a peaceful lifestyle is a higher priority than to extend their business. Entrepreneurial activities among Japanese expatriates community in Bali make a significant contribution towards tourism development, supports local effort for job creations, and deepen mutual understanding between Japanese expatriates and local community.

#### *Ecological Disasters: The Political Economy Of Floods In Pakistan*

##### *"Ecological Disasters: The Political Economy of Floods in Pakistan"*

In 2010-11, Pakistan was struck by two successive flood disasters that wrought massive destruction all across the country, especially three of its provinces that sit ashore the Indus River—Punjab, Pakhtunkhwa and Sindh. Thousands of people were killed, while twenty million, mostly rural residents of Pakistan's farmlands, were displaced from their homes and hearths. The dollar value of these losses was estimated at \$20bn, which was 10% of Pakistan's GDP. The state and its institutions failed to live up to their obligations to protect the citizens during or after the disaster. Their role, however, goes back to the very making of the disaster that arose from the flawed pattern of development. This project, thus, explores the economic and power relations in society that "manufacture" such disasters. In particular, it explores the "man-made" aspect of Pakistan's floods that were presented by the state and its institutions as a "natural" disaster. The paper seeks to embed the disaster in Pakistan's political economy that broadly manifests in its development patterns. In this regard, three empirical indices are chosen to document the development pattern that best explains the flood disasters: (a) diversion of the Indus waters in massive damming; (b) loss of wetlands to the building of dams; and (c) deforestation in the mountainous regions of northwest Pakistan, which was caused by development as well as timber industry.

#### *Violences and Gender Relations: Women in Brazilian Polices*

This research is being developed by a team of the Violence and Citizenship Research Group of the Federal University of Rio Grande do Sul, beginning in January, 2013 and expected to end in December 2014. The aim is to comprehend and explain the dynamics of production and exercise of the violences within police institutions based on the power relations amongst men and women. The focus on such a male and use-of-force oriented space is still not well framed in gender studies. The dimensions of analysis cover working conditions, the career of policewomen and the institutional violence of the ambient. Therefore, the study is using mixed methods, specifically, surveys and focus groups evolving 13 states in Brazil. The fieldwork is pointing out many challenges for the insertion of women in the Brazilian police forces. The working conditions and environment show that the institutions were not properly adapted, as demonstrated by the lack or precariousness of spaces for women, like bathrooms or accommodation. Regarding the career, many limits related to the professional development can be perceived as well. The data from focus groups also allows for the identification of institutional violence based on daily practices, which sets, sometimes, situations of moral harassment.

#### *The shape of Selves to Come: Selfhood without Sexual Difference*

What can the historical persistence of gender tell us about possibilities for future selfhood not defined by gender? Is a more purposive way of being possible that is not reliant on the restrictions of binary sex/gender and if so, how? This paper continues work that proposes that a particular dominant mode of thought (or ethos) about the self and others maintains compulsory sex/gender. This is an ethos of oppositional difference and closure. I extend this theoretical work here to the practical consideration of what a post-gender and queer mode of thought and being, not premised on difference and closure, might look like.

Drawing on a combination of Simone de Beauvoir's existentialist ethics and Judith Butler's ontological and normative impulses, I propose that a non-oppositional, non-gendered alternative mode of thought and being is ontologically possible or potential (although not inevitable).

I sketch the ontological justification for this, and then move on to more practical implications for social life. This considers what this ontological picture means practically for attempting to re-form identity or selfhood according to more reciprocal and open-ended ethos. I argue that it would entail a particular 'queer' subjective mindset, an inexhaustibly reciprocal approach to relationships and the identity of others and sexuality, and enabling social contexts that foster these.

I demonstrate how some of these are already apparent in certain queer social practices. I consider how such social practices may ensure efficacy in their intended

ed aim of fostering more intentionality in the collective project of selfhood and evade closure or imposition of identity.

**NICOLAY, GIAN L.\*** (FiBL, [gian.nicolay@fibl.org](mailto:gian.nicolay@fibl.org))

#### *Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases*

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is unsecured with food. Such livelihood conditions have to be instituted in social systems. The international community has declared the war against hunger as well proclaimed the Universal Human Rights - including the Right to Food- over 60 years ago. Still, around 1 billion people go hungry to bed and 2 to 3 other billion suffer from malnutrition. The various disciplines of sciences dealing with FS- agricultural sciences, economy, sociology and others- are far from providing effective knowledge in order to solve the problem. If these observations are correct, than the main question arises: what can be done better within sciences in general and what can sociological observation contribute in particular? We test four hypotheses based on the Luhmannian systems theory but limited to African cases. (1) The normative character of FS has to be enforced and institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

#### *Aging and China's Silver Industry: Based on a Sociological Survey of Urban and Rural Beijing in 2012*

By 2012, China's population reached 1,354,040,000. The 60+ age group accounted for 14.3% while the 65+ age group alone accounted for 9.4%. Every year, the 60+ age group continues to increase by 8.6 million and will reach one third (32.8%) the population by 2050. At this rate, the 65+ age group will equal 14% of the population by 2026 and by 2040 will reach 316,720,000 making China a super-aged society.

While the population ages at an accelerated rate, traditional care provided by families is declining. In response, the 12th Five Year Plan (2011-2015) encourages China's central and local governments to promote the introduction of private capital into the senior care industry, to cultivate growth of related industries and to take active measures to foster a society which meets the needs of the aging population. Preferential measures and tax benefits for private investors in the senior care industry have also been implemented. The industry is wide-ranging with new opportunities surfacing and growth is expected.

However, China's senior care industry, situated in the largest consumer society worldwide, still lags relatively behind in terms of investment, human resources, awareness, and policies or funding. There is a massive potential market and yet demands both soft and hard are overwhelming the supply and China cannot keep up with the needs of the aging population.

From this backdrop we examine challenges facing China's aging population from a macro perspective including an overview of related policy trends followed by the findings of research funded by the Japanese Government and in cooperation with related institutions throughout China. We surveyed over 400 subjects aged 50+ (August-November 2012) in urban and rural Beijing regarding their lifestyle and consumption yielding a glimpse of their current situation as well as potential opportunities.

#### *Current Social Welfare Conditions in China*

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform.

We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities with fluid populations and examine the issues between the system and actual reality for workers. Finally, we'll suggest ideas for how existing issues could be resolved.

#### *Rights in the Absence of Recognized Status- Challenging or Reinforcing the Rightlessness of Irregular Migrants?*

This paper starts from the assumption that efforts to counter the rightlessness of irregular migrants can be divided into two broad categories. A first strategy seeks to ensure rights through a shift of status- i.e. through regularization- while a second strategy aims at securing access to a number of basic rights (often conceptualized as *human rights*) for all residents regardless of their legal status. Demands for provision of medical care and schooling, as well as ability to access public space without fears, all fall within this latter category. Scholars have conceptualized these claims as an instance where the internal border controls of states are being challenged. This reading stresses the transformative potential of this kind of demands with regard to current citizenship regimes. However, it is also possible to read this strategy as insufficient in the sense that it leaves irregular migrants in a permanent state of exclusion. Hence, the implication of the second strategy remains disputed. Should it be understood as a component in a strategy to undermine border control? Or, rather, to entail the reinforcement of rightlessness and the consolidation of a divided society? Providing irregular migrants with a number of basic rights- while withholding access to full membership- can be seen as integral to the creation of a precarious labour force. Drawing on insights from the Swedish debate about irregular migrants this paper seeks to address these questions. The analysis is guided by the assumption that political demands needs to be analysed contextually as their intervention and implication differ historically and spatially. In accordance with this the paper seeks to provide an account of the specificities of claims-making on and on behalf of irregular migrants in different context with a focus on how this relates to different regimes of citizenship and border control.

**NIELSEN, NIELS JUL\*** (University of Copenhagen, [nnielsen@hum.ku.dk](mailto:nnielsen@hum.ku.dk))

#### *Migratory Work/Family-Practices On a Precarious Labor Market*

This presentation discusses the complexity of migrant lives with regard to the way they travel and make use of border-crossing activities, the diverse conditions they face on the working sites, and the way they structure their family relations and (endeavor to) achieve accountability and stability within their long-term life planning. This session's three thematic lines hence are in very fine accordance with the way I approach my investigation.

My current research concerns mainly Polish construction workers who are commuting between Poland and Denmark in order to improve their life conditions. Following the collapse of the Soviet Union many Eastern Europeans during the 1990s began to work (illegally) in Western Europe utilizing the tremendous gap in wages between the two former totally divided economies. Following the 2004 EU enlargement workers from the former Eastern bloc obtained legal access to the entire EU labour market. In Denmark some 50,000 mainly Polish workers are working primarily in construction, farming, cleaning and other low-wage sectors. I follow groups of construction workers at work sites and in their families (in Denmark as well as Poland), in order to understand the complex relationships between migrant work and family life. Since I regard it paramount to understand this bottom-up outlook also in a more overall perspective, my material concurrently consists of interviews with representatives from organizations in Denmark as well as Poland and moreover with politicians on both national and EU level.

In other words - relating to the two poles of scholarly stand mentioned in the session abstract - I am interested in strategies and mechanisms of migratory knowledge (and everyday life as a whole), but regard it equally essential to understand how this is reproducible and must be understood as an element in maintaining societal cohesion.

*Polish Identity As Entrance Ticked and Barrier On An Altered Labour Market*

Taking its point of departure in current research on Polish migrant labourers in Denmark this presentation will discuss ways to understand how and why different intersections comes to have diverse impacts according to the contexts they are taking place within.

Different 'identities' – such as ethnic, national, religious – have had a very limited importance at the Scandinavian labour market through most of the 20<sup>th</sup> Century. The labour movement and the workers' unions possessed immense influence on the labour supply and were able to prevent uncontrolled influx of workers and maintain union membership as the only prerequisite for employment. Thus the few emigrating workers became internalised in the existing union system and worked on general conditions.

Following the collapse of the Eastern bloc and the success of a neoliberal political and economical regime this order of the day has fundamentally altered. A consequence of this is a major revitalisation of ethnicity as a marker of specific abilities.

The presentation outlines how ethnicity at one point has become a means to get access to the national labour market in the host country, in this case because a certain Polish work ethos is claimed (and, notably, for a lower wage). At the same time however, this opportunity can be a barrier of being regarded an ordinary part on that same market. As a consequence the whole social organization around the migrant workers is impacted of the circumstances, not least the prospective family life.

On the basis of fieldwork among Polish workers on Danish construction sites, representatives from unions and employer organizations in both Denmark and Poland, politicians on national and EU level, the presentation discusses how migrants come by under these circumstances and how the challenges can be tackled within a national and supranational framework.

*No Longer "Believing In Belonging" – Generation Y Challenging Church Membership*

Relationship to the national churches in the Nordic countries has often been described as "believing in belonging". With this term researchers have wanted to highlight the special character and importance of church membership in these countries. For the Nordic people belonging to national churches has been regarded as something special: they want to belong even they don't attend or believe in accordance with the teachings of the church.

However, the new generations seem to challenge this notion. This paper reflects this change based on a longitudinal study of young people from early adulthood to the age 25 in Finland. This period between childhood and adulthood is a time of great changes overall. The latter part of this phase of life (18-25) is often called as the period of *emerging adulthood*. The most characteristic feature of this time of life is the search for identity.

At the age of 15 a great majority of all 15 year-olds are confirmed in the Evangelical Lutheran Church of Finland. However, 10 years later as many as ¼ has left the church and resigned their membership. In this paper I will focus on the relation of young people to the church, their reasons for staying as members and reasons for leaving based on a longitudinal data which allows us to analyze the question in a life-course perspective.

The research shows that for many young people confirmation period serves as a means of maintaining and activating religious observance. However, in early adulthood young people get more relative and ambivalent about religious tradition and non-believing increases strongly. The search for personally meaningful experiences and relations is strong. Church leaving is explained most often by Church having no personal meaning and tradition itself is not an adequate reason for staying as a member.

*Neighbourhood Effects on Migrant Youth's Educational Commitments, an Enquiry into Personality Differences*

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and might therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbourhood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

*Neighbourhood Socialisation of Youth's Employability, the Moderating Role of Personality*

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we look at how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers, and undercontrollers. Resilient respond relatively more adaptively and flexibly to situational demands, while both overcontrollers and undercontrollers are relatively inflexible. We hypothesise therefore that resilient are less likely to be affected by exposure to neighbourhood disadvantage than overcontrollers and undercontrollers. To test our hypotheses, we used panel data (N=203) with longitudinal information on adolescents from age 16 through 25. The findings show, contrary to our expectations, that overcontrollers' and undercontrollers' work commitments are positively influenced by longer exposure to neighbourhood disadvantage. Resilient's work commitments are not influenced. In turn, work commitments do not affect the likelihood for unemployment, suggesting that adolescents' unemployment is unlikely to be socialised by the neighbourhood context. Furthermore, undercontrollers' work commitments and unemployment and overcontrollers' work commitments are influenced by the neighbourhood, while resilient remain unaffected. This finding is in line with the idea that resilient are better able to cope with environmental demands, while overcontrollers and undercontrollers are more likely to be affected by their environment.

*Polish in the Hague: The Stories of Long Term Migrants*

Different sources estimate the Polish population of The Hague around 5% of the city's inhabitants. Images portrayed in media and by politicians give the impression that this group is a cause of social unrest and negative stereotyping is common. In this paper the stories of migrants themselves are told. They live, work, and have started their families in The Hague. The respondents have all lived in The Hague for more than five years; most of them migrated before Poland be-

came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that 'tolerance' is no longer a key component of Dutch society, and tell about the social and economic barriers they face.

Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

#### *Space, Time and Symbol in Urban Indonesian Schoolboy Gangs*

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified 'battlefields' in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt's (1993) argument about the conditional and compensatory nature of collective masculine violence. Second, alcohol plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (*geng(s)*) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

#### *Using Local Cultural Forms To Talk To Youth In The Global South*

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of *talanoa* as a decolonising methodology has become popular in the Pacific, *talanoa* refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is *veivosaki-yaga*, which in Fijian literary parlance means 'worthwhile discussion or conversation'. The term *veivosaki* connotes a neutral sense of conversation and dialogue rather than storytelling. *Yaga* literally means 'useful or worthwhile'. By engaging in *veivosaki-yaga*, Indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of *nongkrong* (sitting around or walking around with friends talking) has started to be recognised by some Indonesian youth researchers as a productive method for gathering data from young people for whom *nongkrong* is their favoured leisure practice with age peers. *Nongkrong* is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like *talanoa* research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

#### *Discovering Ideological Codes in the Professional Work of Daycare Personnel*

During the last decades there has been a tremendous growth in the enrolment rates in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between 'the private' and 'the public' is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is expected and accepted are transformed into public standards and definitions of 'the good' contributing to inform and shape parental socialization goals and practices, and the daycare personnel's appreciation of parental practices and

their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention: the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children's cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardized mapping and personal 'stomach feeling', some distinct ideological codes come into play. What constitutes 'normality'? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of 'ideological codes' and 'ruling relations'.

#### *The Practice of Control in Risk Activities*

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a "technology of the self". With this shift in focus to control, participants in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

#### *Legalizing Internet Piracy through State-Invented Religion? a Case Study of the Swedish State's Acknowledgement of the Missionary Church of Kopimism As Religion*

In 2011 the Swedish Kammarkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopimism (Det missionerande kopimistsamfundet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

#### *A Discourse on Transnational Crisis of Legitimation*

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual

**benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being undermined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in response to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite often enforced militarily by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed (or be misconstrued) as acts of "terrorism".**

#### *Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization*

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people's practices while referring to the temporary transnational migrants in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary labors under the foreign trainees' system. We focus on these trainees, called 'Kenshusei/ Jisshusei,' at agricultural villages as well as the fishery manufactures in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named 'methodological transnationalism,' in parallel to 'actual transnationalism' and 'ideal transnationalism.' While recalling 'methodological cosmopolitanism' as a critique on 'methodological nationalism' by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required, that is methodological transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the 'mediators,' a proximate concept to the G. Simmel's. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the 'bridge-type mediators,' regarding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on conceptions of the nation-state and (civil) society as the most decisive points in sociology. It is the conception of 'society beyond a nation-state' along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

#### *Concepts of "Bonds" and "Romantic Love" in Japanese Women's Culture-- the Representation of the Contemporary Japanese Male Idols*

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characteristic of larger recent women's culture that it is part of. Specifically, through an analysis of articles (text and images) of female oriented magazine media, I will clarify how the image of male idols is constructed by the media. Building on this analysis, I will expand further on the concepts of "bonds" and "romantic love" in recent Japanese women's culture.

Until recently, Japanese male idols, like those from "Johnny's Entertainment" were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendship and relationships of mutual trust between the members of the group are represented frequently. "The every day" of idols, including events at school and communication with friends or family are depicted, and many instances of physical contact and conversation are made to look like expressions of homosexuality. Situations that consist of silly tomfoolery and play by these idols are usually referred to as "WachaWacha-kan". What is important here is that the existence of female fans is not represented at all in the discourse of these articles.

In other words, the current male idols is represented as "ideal love partner" for women, but at the same time as someone who could not possibly ever enter into a heterosexual relationship with the reader of these media. In the social

background of this peculiar development, links can be made with "yaoi" culture (female made and oriented fiction on romantic and sexual relationships between men) in Japan, as well as changes of heterosexual values. In this way, I consider characteristics of recent Japanese woman culture through magazine media.

#### *Polyvalent Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan*

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy.

Therefore it's said that these renewable energy movements are connected with "anti-nuclear" movements. Those who support the anti-nuclear movements construct the dominant discourse -"anti-nuclear", by relating various points at issue with anti-nuclear after Fukushima disaster. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has stated from ten years before, 12 sets of wind power have already worked now.

The results are following: The participants in early community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, their social attitudes become wide, and they had various motivation for the investigation, not only environmental consciousness, but the commitment to windmill and the expectation for a dividend.

If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it's significant for sustainment of social movements to keep participant's various motivations, and the renewable energy movements related with "anti-nuclear" is too simplified.

#### *Re-Entering the Labor Market after Childbirth Among Japanese Women*

This study explores the women's working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated on the issue. However, most of them only focus on the getting a job for the first time after childbirth. This study further explores what happens in women's career after they get job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (JPSC). This study uses data collected from 1993 to 2008. Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe the working career after childbirth and analyze the determinants of it. Results of Kaplan-Meier Method show that the probability that a woman is working when their first child is ten years old is 65%. Results of Cox regression model show that university graduates are less likely to get a job compared to those who completed high school, however, it seems that husband's income is more influential than education on whether a woman get a job or stay out of labor force. Then, focusing on those who started their first job after childbirth as non-standard employees, their working career afterward is analyzed. The results imply that those who graduated from university are more likely to change their employment status compared to those who have high school diploma. Based on these results, Japanese labor market structure and the difficulties of women's career development there will be discussed.

### *Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination*

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientists' assessment of "no immediate harm," others alerted the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that "the sources of danger are no longer ignorance but *knowledge*" (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two "dangerous" and "safe" camps, many have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Slater, Nishimura and Kindstrand 2012), is an important sites where laypeople's experience, knowledge, and logic are contested and negotiated.

This paper attempts to illustrate how popular epidemiology (Brown 1987, 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Yamamoto Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around anti-nuclear policy, and how such online discursive space may have ramification to the transformation of political in Japanese society.

#### *"With a Little Help from Outside" – "Outsourcing" of Domestic Work in Germany*

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades time and employment structures of households have undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to produce these commodities by themselves or to buy services on the market. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations. From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household labor is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyzes the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision-making processes of households. It also sheds light on the changing boundary between household and markets and gives explanations for current empirical developments in this realm.

#### *Mobility Decisions of Dual-Career Couples- New Evidence on the "Co-Location" Problem*

Working couples in general face a "co-location problem". Since it is unlikely that both partners will find their individually best job offer at the same geographic location, at least one partner will have to make concessions when joint locational decisions are made. So far research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outbalanced more easily. However, with the rise in women's employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly less mobile than other couple types. However, recent research is less con-

sistent on this topic, suggesting that dual-career couples are even more mobile than other couples. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasize the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

#### *Institutionalizing 'living Heritage': Ecomuseum Development In Rural China*

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard 'living heritage' and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as 'museums without walls' encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management, and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage protection practices. With the establishment of ecomuseum projects in rural ethnic minority regions, local populations have become subsumed in a new heritage tourism discourse that aims to integrate them and their 'living heritage' as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guangxi in the Yao village of Huaili. Given the emphasis of the project on a community-based approach to safeguard 'living tradition' and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community's view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible heritage discourse impact the local community and shape its value system and identity as multiple forms of imagination and authentication of heritage come into play through the ecomuseum contact space.

#### *Blurring Work-Home Boundaries and Their Impact of Work-Home Conflict and Enhancement*

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even their disintegration altogether. Among the various reasons for these tendencies is an increased flexibility in the hours and place of work (e.g., teleworking from home), causing work and home to become more intertwined. Other contributing factors include modern technical conveniences, such as the Internet, mobile phones and laptops, which make it possible to work and be reached by others almost anywhere and at any time. In light of the increasing disintegration of work-home boundaries, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact? Data for this study were collected through an online survey among employees in nine companies in the German micro- and nanotechnology sector (n=321, response rates between 65 % and 95,5 %). Work-home/home-work conflict and enhancement were measured using the four scales of the Survey Work-home Interaction—Nijmegen (SWING) questionnaire (Geurts et al., 2005). The extend of a blurred work-home boundary was measured with 6 items focused on the work to nonwork permeability (e.g., "I am also available during my leisure time for work concerns (e.g. via cell phone)"). A structural equation modeling (SEM) analysis was applied. Work to nonwork permeability showed a positive association with work-life conflict, but no significant effect on life-work conflict and the both enhancement scales. We finally discuss the implications of these results.

*Ambiguities in Discontinuing Medication: How General Practitioners Make Sense of Discontinuation and Their Strategies for Reducing Ambiguity*

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. Drawing on interviews and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs' strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist's prescription; 3) assessing the likelihood of a positive outcome after discontinuation. Drawing on sensemaking-theory, I outline the strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (whose responsibility is it to discontinue), prioritizing ability (how comfortable is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome). I conclude with recommendations for how to support appropriate discontinuation in primary care settings, including updating guidelines to explicitly acknowledge multimorbidity in patients and the importance of medication prioritizing, creating discontinuation alliances for GPs, e.g. with clinical pharmacists and gerontologists, and developing positive metaphors for 'discontinuing medication' to enable better communication with patients, e.g. drug holiday or medication pruning.

*Re-Building a Conservation Organization: The National Trust for England and Wales in the 1960s*

The growth of conservation organisations was one of the more striking features of post-war social change in Britain. With their roots in late Victorian and Edwardian ideas of preservation and conservation, the membership of these organisations expanded markedly from the 1960s. The two biggest national organisations – the NT and RSPB – saw their combined memberships grow from just under 300,000 in the mid-1960s to over 5M by the turn of the century, making them the two largest conservation organisations in Europe. The increasing size of organisations like the NT and RSPB has given them greater influence as lobbyists in their dealings with policy makers at both the national and supra-national level. It has also, however, generated difficult questions about their relationship to their mass memberships and their internal forms of governance. In particular, it has forced these large conservation organisations to confront the nature of their organisational souls and to ask what kind of organisations they are and what kind of organisations they might become. In this paper, I focus on the National Trust and the soul searching undertaken by the organisation in the late 1960s. As the organisation grew, disputes about the purposes, policy and management of the Trust emerged. These concerns prompted the NT to conduct a review, drawing on evidence from both inside and outside the organisation. Led by Sir Henry Benson, the subsequent Benson Report of 1968 proposed significant reforms to the organisational governance of the Trust, including the relationship between its ruling council, its full time officials, its volunteers and its members. The paper reflects on the source of these organisational reforms within existing management thinking and organisational theory and the model of organisational governance which the Report proposed, considering the family resemblances between the NT's re-built organisational structure and that of other 'conservation bureaucracies'.

*Montée Des « Risques Psychosociaux » Et Redéploiement De La Critique Du Travail : Opportunité Ou Piège ?*

C'est dans une conjoncture d'affaiblissement et de professionnalisation des syndicats que s'élargissent les formes de l'exploitation, qui se traduisent par des atteintes plus fréquentes à la santé mentale des travailleurs. Ces atteintes sont désormais catégorisées comme « Risques Psychosociaux ». Cette notion l'a emporté sur d'autres – comme la « souffrance », ou le « stress » – parce que les professionnels de la santé au travail et de sa négociation collective ont réussi à l'intégrer dans la problématique pré-existante des « risques professionnels ».

La montée en puissance de cette catégorie est à la fois une opportunité et un piège. Elle ouvre la possibilité d'interroger les facteurs collectifs de risque, à la source des difficultés psychologiques et individualisées des salariés. Mais elle peut refermer le débat sur les sources organisationnelles de ces difficultés en mettant l'accent sur la nécessité de « protéger » de ces risques les travailleurs vus comme opérateurs passifs, confrontés à un environnement hostile. Et donc d'ouvrir la voie à un nouvel hygiénisme. L'opportunité offerte de mettre en place des espaces collectifs de controverse sur les enjeux d'organisation, de qualité ou d'efficacité de l'activité n'est pas saisie. Les « RPS » fonctionnent alors comme un piège, tenant éloignés syndicalistes et représentants du personnel des salariés et de leur expertise que ces derniers détiennent sur le travail et les sources organisationnelles de leurs difficultés.

A partir d'une série d'enquêtes de terrains en cours on montrera le rôle des contextes d'action qui sont ceux des équipes syndicales dans l'éventail des situations rencontrées. Elles vont de l'intégration à des dispositifs managériaux visant à « soigner les travailleurs les plus fragiles » à des expériences d'écoute syndicale de l'expérience laborieuse, revivifiant à la fois la pratique syndicale et la critique de l'organisation du travail.

*Does Mass Media Really Provide "New" Knowledge? Non-Fiction Publications About The Japanese Grass Eating Men (sōshoku danshi) As An Example*

"Everyday knowledge" is constructed in the mass media by debating or interweaving academic knowledge and common knowledge. It can be assumed that individuals act and identify themselves on the basis of this knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focussing on the construction of knowledge of masculinity in media products. Since my methodology is based on the "discourse analysis as well as sociology of knowledge", my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects.

In times of social upheaval and crisis knowledge altering or broadening of the social knowledge pool could be the key to adapt and form alternative ways of living, given of course there is "new everyday knowledge" and not only repetition of long established knowledge. Therefore the question arises how knowledge, which has the potential to form and distribute new "everyday knowledge", is being produced by the media.

Taking up the discourse around a media buzzword such as *sōshoku danshi* (grass eating or herbivore men) – describing young men who are said to shy away from women, and by doing so seem to uphold another form of masculinity – will help to understand whether and how these media products are distributing socially important topics to the public. Furthermore, I am concerned with the process in which academic and everyday knowledge is forming a part of the knowledge stock of Japanese society and in which ways mass media is taking up the role to form "new everyday knowledge".

*Comparative Research on Contemporary Youth Social Movements: The Case of the Genind Project*

The year 2011 has witnessed the emergence of new types of social movements, transnational in scope but especially intense in the Mediterranean area, one of which precipitating factors has been the leading role of the new generations and the urban middle classes. The year began with the so-called 'Arab spring', continued with the '#spanishrevolution' of 15-M, the Chilean students protests, riots in some English working-class suburbs, the Occupy Movement in the United States and ended –at least till date– with riots in Turkey and Brasil. The antecedents date back to the 'anti-globalization' movement emerged in Seattle in 1999 and in Porto Alegre after 2001, the revolt of the French 'banlieues' in autumn 2005 and the Greek mobilization in winter 2008, coinciding with the start of the international financial crisis. This paper presents the results of a research project funded: The Indignant Generation. Space, culture and power in the youth movement of 2011 [GENIND]. While it is early to assess the impact of such movements, it seems evident that they respond to a new cycle of social protests, which manifest in public space (both in the squares of cities and in the Net). The project aims to shed light on the nature, causes and recent drift of such movements, taking the Spanish case as a reference point and comparing it with the mobilizations in four Mediterranean countries (Portugal, Italy, Greece, Egypt), and other territories where there was also mobilizations (England, USA, Chile, Brazil). Although it is based on ongoing ethnographic research, their orientation is primarily theoretical. The main

objective of this communication is to present the GENIND project and its main results. It discusses the convergent and divergent elements of such movements, its innovative aspects and its continuities with previous movements and their local and global impact on youth and society.

#### *Geographies of the European Spring: The Case of #Spanishrevolution*

Along the week prior to the past local and regional elections in Spain celebrated on 22nd May 2011, many Spanish citizens took several plazas and streets to denounce political corruption and national economic situation that are deteriorating democracy in Spain. Immersed in a strong economic uncertainty mainly marked by a great lack of individual as collective future, the eternal Two Spains have bumped into themselves. This paper will show how the so-termed #Spanishrevolution names this recent episode of the present history of Spain in which the urban, modern and young Spain has raised their voice against the rural, traditional, pure, old Spain. Mainly based on a sub-regional scale analysis of the #Spanishrevolution, this paper will show how the young, urban, modern Spain openly expresses that it is not willing to keep on badly surviving in the city while the rural Spain continues to lie in their country houses without showing any sign of entrepreneurship, awaiting the arrival public subsidies mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain has said enough to the South. Rather than showing a Hegelian spirit of the people, the # SpanishRevolution is a cry for the modernization of Spain.

#### *Le Travail Migrant Temporaire Au cœur De La Dynamique De Centrifugation De L'emploi Vers Les Marchés Périphériques Du Travail : Une Perspective Canadienne*

La communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l'essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail : 1) les travailleurs agricoles saisonniers migrants embauchés dans le cadre du *Programme des travailleurs agricoles saisonniers* (PTAS) ; 2) les aides-domestiques migrantes embauchées dans le cadre du *Programme des aides familiaux résidents* (PAFR) ; 3) les travailleurs migrants temporaires dits « non qualifiés » embauchés dans le cadre du *Volet des professions peu spécialisées*.

Partant d'une analyse de l'évolution de ces programmes, il s'agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d'une « armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — « externalisables », tout en préservant l'un des plus grands paradoxes du « libéralisme réellement existant » qui fait de la liberté de circulation pleine et entière, l'apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d'une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l'analyse montrera comment les travailleurs migrants temporaires ont également été instrumentalisés lors de la récente réforme de l'assurance-emploi au Canada. Nous mettrons ainsi en relief l'instrumentalisation non seulement en termes d'exploitation de cette main-d'œuvre au rabais, mais, plus encore, aux fins d'une stratégie d'éclatement d'un régime de travail de type universaliste. Ultérieurement, nous montrerons que dans l'après-fordisme, la logique de flexibilisation place le travail migrant temporaire au cœur d'une dynamique de précarisation par la centrifugation de l'emploi vers les marchés périphériques du travail.

#### *Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi*

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized "at the rough ends of the labour markets" (Heery and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have trigger a "jobs' centrifugation dynamic" that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the impor-

tance for unions to refocus on the "organizing model" and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Noiseux, 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different « industries » i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Comeau (2005). It will first examine elements of contextualization regarding the State's role in the development and "regulation" of the informal economic activities, then present the struggle's chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN's action. Finally, it will take a look at the "raising issues" in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called "informal workers".

#### *Organized Reaction to Experiences of Stigmatization: The Identity Politics of a Muslim Organization in Switzerland*

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties.

Whereas the pro-referendum campaigners highlighted the *signal effect* of the legislation as a means to contain the "Islamic threat" in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and to discriminate Muslims.

This perception motivated a group of young Muslims to institutionalize their efforts in countering the anti-Islam activities of the far right. Thus, in 2009, the Islamic Central Council Switzerland (ICCS) was founded.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a "conspiracy" of the far right political circles to "subjugate" the Muslim population.

The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association.

It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call "production of normality" – namely the recognition of Islam as a "normal" religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right clearly aims at eliminating the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it.

It is finally argued that the dialectics of stigmatization and provocation seems to serve the xenophobic agenda of the far right much more than the ICCS strategy of establishing the normalcy of Islam in Switzerland.

The study is a part of a larger project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

#### *Post 3.11 Movements in Japan: A Mental Map Approach*

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants' mentality.

On March 11, 2011, a big earthquake and a gigantic tsunami hit the northern part of Japan. The tsunami also paralyzed the emergency power system of the nuclear power plant in Fukushima, causing power plant explosions. The nuclear accident and subsequent radioactive contamination send a majority of Japanese people in fear and anxieties.

"March 11 (3.11)" ignited a volume of civil actions. Day in and day out, one spontaneous action was followed by another. The movement also spread out geographically, so that residents in different localities have witnessed protest actions taking place successively.

Resurgence of protest actions has prompted researchers to inquire into the nature of the post 3.11 antinuclear movements in Japan. With only few exceptions, however, studies have focused on objectively observable events and other morphological features to understand today's movement. This practice leaves us with little understanding about cultural and mental aspects of the movement.

In this presentation, we focus on participants' mental aspects to characterize today's antinuclear movements in Japan. Using handouts and written materials, we extract meanings campaign participants subjectively attribute to the nuclear

explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existant in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significance from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

#### *Social Movement Transformations in the 20th Century: Japanese Experience*

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan.

Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively calm up to the present. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s.

Why did Japan, as non-western democracy, experience such a huge transformation in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20<sup>th</sup> century, does not allow us to lay out the same explanation. Also the shift is not toward a "social movement society." Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and perceptions toward social movements.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

#### *Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism*

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less performance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of 'organizing professionalism' (i.e. medical professionalism that includes organizational and managerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, including collaborative and managerial roles. We take another approach; we see competency as an *institutional* phenomenon, instead of an individual one, and we focus on medical *routines* in order to analyze institutional competency. Medical routines represent institutionalized aspects of medical acts and practices and might help of hinder the rise and spread of (innovative) hybrid service delivery that is collaborative and well-organized. We especially focus on the many practical and everyday sides of medical routines. We focus on the everyday sides of organizing health care by medical professionals, including multi-professional collaboration and quality and safety management. We (a) explain what we mean by medical routines as institutional competency, (b) describe current changes in medical routines that enable the rise and spread of collaboration and quality and safety management by medical professionals, and (c) trace effects on medical outcomes. Empirically, we focus on changing routines in a Dutch academic medical center.

[nordlundc@ceu.hu](mailto:nordlundc@ceu.hu))

#### *Patterns of the Semiperiphery: Using Valued Blockmodeling Techniques to Map and Specify the Relational Characteristics of Semiperipheral Countries*

Although the trichotomy of the world-system often is specified in terms of properties of each stratum, particular the global division of labor, an increasing number of studies specify and define such strata in relational terms. Parallel to this, the core-periphery concept has also been specified by network scholars as a structural template that captures some of the original relational connotations.

However, even though the semiperiphery has a distinct role in world-system analysis, with several scholar focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery.

Combining a novel approach for blockmodeling of valued networks with a novel heuristic that identifies dependency and dominance in core-periphery structures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, has its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and, respectively, the core and the periphery? Using pre-determined core-semiperiphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of would-be ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-system analysis.

#### *Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System*

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in this process. Gender equality in the higher education sector is still unrealized: Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the "glass ceiling effect". Because of that, equality politics also have take into regard later stages of university education, namely the doctoral and postdoctoral phase.

This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German "Excellence Initiative" is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between heterogeneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These unforeseen consequences arise out of conflicting institutional logics and were never intended by any of the institutional actors involved.

[marianorkus@gmx.de](mailto:marianorkus@gmx.de))

#### *The "Invisible Hand" of Oppression - Symbolic Violence in the Precarisation of the German Labour Market*

When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and which causes and reproduces social structures of domination. Symbolic violence, this "gentle violence [...] invisible to victims" (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimatises itself. It contributes both to the recognition of oppression and at the same time to the misrecognition of its arbitrariness.

This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the social security system.

I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development.

To theorize the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its inveterate persistence.

#### *Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation*

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the views of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel World anti-System etc. Its breakdown was fuelled by promises of anti-communist counter-elites and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20<sup>th</sup> century as "detour from periphery to periphery" (Ivan Berend). After two decades of post-communist transformation, most of them remained in or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the transitological wisdom, economic (shock therapy) or political (revolutionary removal of Communist elite) factors are decisive for the early success of post-communist transformation. The author argues that neither economic nor political explanations are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (continuation, restitutive, emulative, and innovative) of social imaginary and social action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

#### *What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare*

Although fathers' roles have been adapting over the last three decades financial provisioning remains the essence of 'good' fathering and the work schedules associated with fathers' employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers' and mothers' employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents' organise their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (*Community Work and Family*, forthcoming), investigates some of the tensions between employment and a father's involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childraising, including the facilitating influence which statutory parental leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK's Millennium Cohort Study reveals it is

the mothers' employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child's life, independent of what hours the father works. Furthermore, both parent's employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother works when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers' work schedules are more important for fostering paternal involvement in both the immediate and longer term.

#### *Discovering Agency, Material Practices & Marginalization – Examples from an Institutional Ethnography on Hidden Disabilities in Working Life*

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in order to understand individual, interactional and institutional aspects of importance for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its focus on institutional practices and ruling relations allows for an understanding of their material consequences in workplaces and on every day experiences. Discourse analysis *could* stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long debated paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals' bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

#### *"What Do I Do Now?" Post-Retirement Leisure in Japan*

Japan's *dankaisedai*, the generation that was the foundation of the country's "economic miracle," are retiring. As their careers come to an end, Japan's "greatest generation" seem at last to be in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity, but its post-retirement leisure cleaves along lines of class, gender, and age. This paper first reviews leisure trends during the past 50 years, noting how they conditioned inequality in leisure expectations and practices. Three main factors affecting variation in leisure are then investigated in detail. 1) Class. Who actually retires and how? Analysis highlights the roles of retirement bonuses, pensions, and savings, as well as government supports. Japan's elderly control much of the nation's privately held wealth and many who are not rich have been lifted out of poverty, but poor elderly increasingly continue working out of necessity, while others carry on because work gives meaning in life. 2) Gender. In Japan's strongly gendered society, retirement often finds two people whose leisure ideas have grown quite apart looking at each other across the breakfast table. The gendered nature of social participation remains evident in post-retirement leisure activities for men and women. Although "retirement divorce" is a danger, couples with sufficient means may find shared post-retirement leisure activities to be grounds for renewed mutual appreciation and affection. 3) Age. Japan's retirees exhibit significant variation in age (the so-called young olds, middle olds, and oldest olds), which influences leisure practices. As with gender and class, age-related leisure trend differences seen in Japan have parallels across East Asian societies. The paper concludes by considering the usefulness of the framework deduced from the Japanese case for studying leisure other Confucian catch-up economies.

#### *Who's the Terrorist?: Humanism and Moral Ambivalence in the Discourse on Terrorism*

Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grips on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is 'evil' and therefore requires a 'means justifies ends' rationale where humanist ideals are claimed to be the ultimate concern. 'Terrorist' groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularist humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the enculturation of humanist ideals can serve to arrest the violence surrounding terrorism.

**NOURI, ALI\*** (Writer, [nouri54@yahoo.com](mailto:nouri54@yahoo.com))

#### *Investigation Social Factors Influencing on Educational Opportunities Among High School Students of Tehran*

This study sought to determine the contribution social factors on creation and maintaining inequality in educational opportunities among students in Tehran.

Reproduction theorists believe that strong solidarity exists between family background and the level of access to the educational facilities.

Network analysis theory holds that unequal transfer of resources and opportunities leads to unequal educational opportunities. This means that people have unequal opportunities in achieving social possibilities and maintaining relationship with those who control the resources like information and bureaucratic influence, which makes the educational opportunities unequal. Having information of school programs, education and job consultation, friends in upper economy section would be some good examples.

The survey method and questionnaire technique used for this study. The sample volume is 300 and the sampling method is cluster-sample. Face and content validity used for questionnaire confirmation. Cronbach's  $\alpha$  has been used for reliability and 78 percent is result.

According to research data, Tehran schools are run 5 ways: heyat-e-omanayee, people specimen, governmental specimen, non-governmental and normal governmental.

In recent years, normal governmental schools that had more facilities or better quality of education became heyat-e-omanayee or governmental specimen.

Low-income families have problem to access appropriate schools while upper class can register their children to better school using their connections network and affording the school fees. Stepping up in socio-economic class leads to increasing educational sensitivity level of parents, as well as increase in communicational skills of students and boosting up their educational motivation also dire need for access, resulting in educational progress and reducing unequal educational opportunities.

Continuing the recent trend will bring about deprivation of talented students in

low-income families from proper educational facilities. This will deprive the society from part of the nation's talent. Moreover illiteracy and semi-illiteracy of portion of society will lead to subsequences such as inefficiency, crime, disorder and insecurity.

#### *Social Stratification and Inequality in Japan*

##### *Social Stratification and Inequality in Japan*

Silvia G. Novelo y Urdanivia

##### ABSTRACT

When one examines the subject of Japanese globalization, it quickly becomes apparent that international migratory movements occupy a special place of interest. This is due to the characteristics of this country, particularly its insularity, both in the physical and mental plane (*sakoku*). By focusing on the Japanese migratory phenomenon from a historic and structural perspective, this study would analyze possible Japanese population profile scenarios into the middle of the 21<sup>st</sup>

century. The study will focus on migratory movements to the Americas, foreign workforce acceptance in Japan and inter-ethnic relations involving Japanese nationals and their descendants. The analysis has the tentative title of: *The Sociology of Japan in the Post-Globalization Era*.

Within Japan, the labor market as a whole has not been deteriorating. In fact, workers in the most important firms and in the public sector have been protected, while those on the periphery are exposed to ruthless foreign market competition. The *nikkeijin*, people of Japanese descent living abroad, fall into the latter group. Generally, this social grouping does not work for large institutions and firms. This phenomenon has contributed to increasing inequality between the two types of workers.

Persistent Japanese xenophobia is more apparent during transitional periods and has always been a characteristic of internal and foreign policies of the country. It has acquired distinctive traits with the opening of Japan to the world -Meiji age- and the consequent development of a colonialist mindset and territorial expansion.

Will the *nikkeijin* of Latin America be able to overcome the deplorable mentality of *sakoku* and become the solution to the serious demographic problem that Japan is facing?

Key words: *Sakoku*, Japanese xenophobia, *Nikkeijin*, Americas, Japanese migratory phenomenon.

#### *Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts*

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-/South-/East-European, Post-soviet-/socialist countries), the paper focuses on women's (and men's) status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country).

Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of supervisor, congruency of management, feasibility, supportability, transparency, discussability and sanctionability; the leadership practices scale of 7 items, depicting interrelations between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76 at the moment) organizations were selected for comparison.

Results of preliminary statistical analysis demonstrate that the respondents' average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader's gender on the evaluations of CEV are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (respectively, Lithuania and Finland), but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. in a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

#### *Post-Disaster Literacy of a Japanese Local Community*

More than two years have passed since the Fukushima Dai-ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, "collective moral confidence" (Petryna, 2013), suggested that the existing system will overcome the disaster, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through

fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Dai'ichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens' civic education is carried out. What is more, this paper provides what Charles Tilly called the "repertoire of collective action," in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome fatalism and risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

### *Characteristics of Becoming Sociology in Russia*

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a "Notes of the Fatherland", "Business", "Knowledge". One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the "Notes of the Fatherland" was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists.

In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2-nd Petrograd State University. Only in 1916 was an attempt to create a "Russian Sociological Society name M.M. Kovalevsky".

The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: "In Russia the main 'scientific' arguments for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible". Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

### *Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher's Experience (ongoing biographical research projects)*

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly In qualitative research researchers' engagement could influencing on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured on mission abroad, both in terms of these constructions, and the ways in which people manage and negotiate them. My paper focus on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

### *Locating the Materiality of Music Artefacts*

This paper aims to reinstate issues of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hipness of iPods, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite musics, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relate music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

### *Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake*

In this report, I explain how regional developments changed people's risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the Tsunami disaster in The Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, reclamation of the waterfront and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (eg. "My house is located at altitude but the 1st floor was flooded."). But in the process of regional development, this risk awareness changed (eg. "My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor").

In the emergency evacuation phase, because big factories were located within a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate to the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It's important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

### *Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan*

Title: Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

One of the most significant worldwide transformations in education over the past several decades has been the drastic increase in women's access to colleges and universities. However, the narrowing gender gap in higher education does not necessarily mean that gender inequalities in various spheres of society are narrowing simultaneously.

This presentation, first, examines comparable data from the United States and Japan, concerning the following questions: How has women's higher education enrollment changed over time in the context of higher education system devel-

opment, transition, and expansion? How are men and women distributed across higher education? Which fields of study remain predominantly female (or male)?

The study then proceeds to explore the persisting patterns of gender segregation across different academic and professional fields of study, and considers their meanings from the perspectives of women's labor market participation and the shifting gender forms of marriage, childrearing, and other family dynamics. It argues that we should take both labor and marriage market forces into account in order to understand women's agency to make their own education and career trajectory choices.

#### *A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector-*

Climate change has received growing attention in both political and public areas, and now it has become one of the most pressing environmental issues. This presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue? and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPN. This project explores characteristics of decision-making process around climate change policies and the Japan team conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to comparative analyses between companies and industrial associations. Careful examination will show a roll of industrial associations that adjust a diversity of opinion among the surveyed companies. On the one hand, each company has its opinion and measures toward global warming issues. On the other hand, industrial associations have functions to equalize these various opinions. In the process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word "Wa", which means "harmony", is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

#### *A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido*

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenty first century. Accordingly, many of nation states have shown a great interest in promoting wind energy. However, when wind farm construction project is proposed involving local places, different interpretations, values, and meanings are expressed for wind farm construction by local people. Therefore the rejection and approval of wind farm construction in local places are based at different logics depending upon specific context of local situations.

In this paper we present two case studies for successful wind farm construction projects in South Korea and Japan. Our observation was made for Jeju island province, located at southernmost part of Korean peninsula and Hokkaido prefecture, the island located at northernmost part of the Japanese Archipelago. In order to collect information as to locally involved process, we have interviewed leaders of local communities and NPOs from the winter of 2012. In this paper we demonstrate that wind energy can mean different things to local people than anti-nuclear and mitigation measure of climate change. The local people accept or reject the construction plan and its operation according to their economic situation and social, historical contexts.

#### *Territorial Behaviours As The Regulators Of Interpersonal Space*

*Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.*

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable 'mapping' of such types of behaviour, that can be expected in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain social position and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical space co-create a social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociofugal character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

#### *Single Motherhood and Anti-Social Behaviour Outcome in Children*

Family disruption through divorce and separation is increasingly becoming a common phenomenon in many sub-Saharan African countries. A few studies have documented the trend, patterns, determinants and effects, yet, much of the effect on children has not been as well documented as in the more developed countries. In particular, the effect of family disruption on children's involvement in anti-social behaviour has remained largely speculative. This study aimed to contribute to literature on the relationship between single motherhood and children outcome in sub-Saharan Africa using data obtained from Nigeria. Although official census record shows that crude divorce rate in Nigeria was 5.5 per 1000 population and 13.4 for ever married persons in 2006, there are indications from the media and public opinion that the incidence of marital disruption through separation and divorce in the country is higher. This paper utilized a survey of 249 randomly selected inmates of prisons in Osun State, Nigeria to examine the effect of single motherhood on children's involvement in anti-social behaviour. The major research question was: are children of single mothers more likely to be involved in crime than children in intact homes? The mean age of the respondents was 29 years (sd = 7.8). Of the 237 inmates who responded to the question on mother's marital status, 60% had mothers currently in a union, 18% were from homes disrupted by divorce or separation and 22% had mothers who were widows. Preliminary analysis showed that mother's marital status was significantly related to involvement in any type of crime and the odds of being involved in stealing or armed robbery, violence-related offences and other forms of crime was higher for inmates whose mothers were divorced or separated than for those whose mothers were currently married or widowed. Increasing education and high-wage opportunities for women is recommended.

[ntoimof@yahoo.com](mailto:ntoimof@yahoo.com))

#### *Socio-Demographic Factors Affecting Women's Fertility Preferences in Nigeria*

This paper examined socio-demographic factors associated with fertility preferences of women in Nigeria. Women of reproductive age in the country prefer more children than men and women's preferred family size is close to children ever born for women aged 40-49. The country's population is currently estimated at 174m, with the current 2.8% rate of natural increase and Total Fertility Rate of 5.7, Nigeria will be the third most populous country in the world by 2050. The overall aim of this study was to contribute to research, for more effective fertility-related policies and programmes in the country. Socio-demographic factors examined as independent variables were age, marital status, education, religion, husband's desire for children, level of autonomy measured by final say in certain household decisions, number of respondent's siblings, number of respondent's co-wives, age at first birth, and age at first marriage. Dependent variable was reproductive preference measured by a single indicator - ideal number of children. Nigeria demographic and health survey 2008 women's individual recode dataset was used. Result of multinomial regression analysis showed that the odds of pre-

ferring 6 or more children significantly declined with decreasing age, rising education, non-Catholic Christian affiliation and husband's desire for less children. Higher autonomy significantly increased the likelihood of wanting less than 6 or more children, having or not having siblings and co-wives were not significantly related to reproductive preference for 5 instead of 6 or more children. Age at first birth and marriage significantly raised the likelihood of preferring six or more children instead of five. High fertility in a country like Nigeria is rooted in cultural beliefs about children and number, pre-natal control measures should be targeted more at women's attitude to large family. If Nigerian women's reproductive preferences decline, overall fertility level in the country will also decline.

#### RC49-803.5

**NUGRAHA, SUSIANA\*** (Nagasaki University, [susiana.nugraha@gmail.com](mailto:susiana.nugraha@gmail.com))

#### *The Extent of Socio-Economic Factors and Its Influence in Mental Health Condition of the Sixth Batch EPA Nurse and Care Worker Candidates*

The migration of skilled workers such as health care workers has been inextricably linked with globalization process. Although migration can be a stressful event for migrants (Stillman et.al, 2006), people migrate to improve their well being through an expansion of economic and social opportunities. This research aimed to figure out the extent of socio-economic background and its influence in mental health condition of the sixth batch EPA nurse and care worker candidates.

A six-pages long questionnaire has been distributed to 42 nurse and 106 care worker candidates, during pre-departure orientation. Questionnaire contains of: socio demographics background (education, age, gender, education degree, socio economic status), degree of preparation to migrate, degree of knowledge about Japan, Japanese language proficiency, satisfaction with pre departure Japanese language training program, motivation to go to Japan and number of social support. The General Health Questionnaire (hereafter 'GHQ') was used as a marker of mental health status of the respondents.

The result of this study indicated that the 6<sup>th</sup> batch EPA candidates indicated healthier mental health in care workers than in nurses ( $p < 0.05$ ), being younger ( $p < 0.05$ ), being economically difficult to survive in Indonesia ( $p < 0.05$ ), being unemployed at the time they applied for JI-EPA program ( $p < 0.05$ ), having better degree of knowledge about Japan ( $p < 0.001$ ) and having larger number of social support ( $p < 0.001$ ). While language proficiency, satisfaction with pre-departure language training and degree of preparation to go to Japan, had no significant correlation with GHQ scores.

One can assume that the mental health status of the 6<sup>th</sup> batch EPA candidates mostly influenced by socio-economic status of the candidates prior to the departure to Japan. It can be noted also that sufficient number of information as well as social support must be provided for maintaining a good mental health status before leaving for Japan.

**NUGROHO, HARI\*** (Leiden University, [harnugroho@yahoo.com](mailto:harnugroho@yahoo.com))

#### *Politics of Representation of the Workers' Movements in Indonesia*

The paper will discuss the politics of representation of union and different categories of its constituency in the post authoritarian Indonesia. Amidst the pressure of labour market liberalisation that erodes the union power in the workplace, union starts to develop the strategy of community unionism and tries to play a broader political role through local electoral politics. The purpose of such experiment is aimed for mobilizing broader support to increase union political bargaining position in front of the state and employers. The union includes other local social groups such as urban poor, informal workers, and peasants as new categories of constituency. Consequently the integration of workers and the non-workers groups into union constituency results in increasing heterogeneity of the constituency. Workers are not a homogeneous category, let alone the non-workers groups. While the union is mobilizing the constituency, groups within constituency are actually still fragmented within their partial identities and interests. The relations between them and the union are vulnerable to contestation. This condition creates vulnerabilities within the body of constituency. This paper will show the interplay between the strategic homogenization and the heterogeneous realities. It will also discuss the power relations within the process of mobilization in dealing with the problems of representation gap. On the other hand, it will also look at how the labour process as well as external social context influence the dynamics. The discussion in the paper is based on a case of study on a workers' movement in one industrial city in the province of Central Java, Indonesia.

#### *Becoming "Cosmopolitan Japanese": How Japanese Adolescents Employ Transnational Experiences for Their Empowerment*

Reflecting the imperatives of the global economy, both the Japanese government and private companies have recently begun stressing the need to raise 'global talent', especially placing value on English and various other transnational competences. At the local level, such global forces have led overseas Japanese middle-class families to adopt transnational education strategies, which enable them to accumulate what is called 'global cultural capital' (Kim 2011; Waters 2006; Weenink 2008)--English skills and cosmopolitan sociability particularly, at the same time preserving children's Japanese language and cultural attitudes (Nukaga 2013). However, the question remains as to how these children are incorporated into the US host society and how they readapt to the Japanese society when they finally return home. Based on interviews with Japanese adolescents who had stayed in the US with their parents since their childhoods and later decided to return or actually returned to Japan for university, this study examines how they perceive and employ their transnational experiences to increase integration both in the US and Japan. Acquiring transnational habitus, a double consciousness that analyses aspects of both life 'here' and 'there', these adolescents are capable of assessing the value of their global cultural capital and "Japaneseness" in the US and Japan respectively. Although feeling a sense of marginalization in both societies, they attempt to maintain transnational connections and learn to use transnational assets in appropriate contexts for their empowerment. From their own experience, these adolescents are often critical toward inequalities in both societies, yet they show a strong preference to become fully bilingual and bicultural by keeping their feet in two societies. Such strategy leads these 'cosmopolitan Japanese' adolescents to choose a job that transcends national boundaries and allow them to stay connected to two or more countries.

**NURMI, JOHANNA\*** (University of Turku, [johnurm@utu.fi](mailto:johnurm@utu.fi))

#### *Let Go and Remember. Collective Memories and Narratives of Mass Violence in Finland*

Due to its inexplicable and inconceivable nature, mass violence causes a considerable sense of insecurity, the impacts of which are felt far from the center of the incidents. They extend out to touch those who are indirectly affected, and even people who are not personally disrupted by the events. Bystanders to these incidents are involved in the complex process of making sense of violence and death through collective memorialization practices and narratives recounting the incidents. These practices provide a sense of community while also being a source of conflict. Should the community remember and memorialize the incident, or try to push it out of their minds and move on?

In this presentation I explore the bystander experience in two school shooting cases in Finland that occurred in 2007 and 2008. The analysis is based on qualitative interviews with residents of the targeted communities – people who vicariously experienced the shootings. The presentation is especially focused on how these bystanders formed memories of the incidents and recounted their personal experiences in the interviews. To understand how the bystander experience is constructed through collective practices, I examine the collective narratives, recollections, and emotions shared in everyday interaction and the media. Public memorialization, such as attending vigils and contributing to spontaneous memorials, is identified as a defining feature in the bystander experience.

**NUSS, SHIRLEY\*** (Nuss & Associates, [nussphd@yahoo.com](mailto:nussphd@yahoo.com))

#### *From International Professional To Caregiver In Rural America*

In 2002 my father asked me to care of my mother as he was going blind. This meant I give up professional activities for specialized UN agencies and become a full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to a rural community with 8,000 residents. As I traveled from east to west, I entered a community where I never lived and where I knew no one. A new socio-culture came into view as I saw road signs cautioning drivers about a United Nations take-over of the country. My new responsibilities would be complicated by this environment. In order to care for my parents, I would be forced to employ my sociological imagination while also drawing on all skills I learned while working, living and traveling alone in more than fifty countries.

This paper uses participant-observation as its methodology and, thereby, draws on extensive notes documenting this transition from international professional to caregiver. It discusses methods used to organize support and outreach beginning with the few adult children who also became caregivers for elderly parents. As medical responsibilities were reduced due to better nutrition leading to improved health, I used the internet for overcoming obstacles to quality care as well as to address legal remedies for limiting their financial exploitation in this rural community.

Some of my findings may be shocking, but most surprising is the revelation that the elderly are not dependent in this rural community; to the contrary, they form the hub of economic activity and income for a wide range of entrepreneurs. The paper concludes with recommendations for caregivers and policy-makers that take account of the elderly as increasingly forming this emerging economic hub of rural areas, rather than viewing them as economically dependent.

**RC11-203.4****NUSS, SHIRLEY\*** (Nuss & Associates, [nussphd@yahoo.com](mailto:nussphd@yahoo.com))*Predators, Parasites and Ambulance Chasers: Financial Exploitation Of The Elderly In Rural America*

This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents - predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profit from work for the elderly relative to other age-groups. Some parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.

**RC47-774.4****NYKLOVA, BLANKA\*** (Charles University in Prague, [nyklova@email.cz](mailto:nyklova@email.cz))*Stumbling over Emotions When Researching the Czech Feminist Scene*

Since the fall of state socialism in what is today's Czech Republic (CR), a feminist scene has emerged. It consists of sometimes contradictory activities on the level of (limited) grassroots activism in the form of zines and festivals, NGOs (such as the Gender Studies, o.p.s., Czech Women's Lobby, Czech Women's Union) and academia (a BA programme in Brno, an MA programme in Prague and a research centre within the Sociological Institute of the Academy of Sciences of the CR). The theoretical stances of those constituting the scene via their various, sometimes contradictory and conflicting activities has become the focus of my research. It consisted of a discourse analysis of materials produced by the scene as well as of interviews with the scene's representatives.

Despite having been driven to the research mostly based on my own long-term interest in feminism and familiarity with the omnipresence of emotions in all walks of (not only) social research (e.g., Hesse-Biber 2012), the share of emotions manifested in the research was surprising. In my paper, I try to address the different emotions as they emerged in the research process in order to show how they impacted on the analysis. Besides the emotions informing the focus of the research and its design, three main sites were detected. Firstly, there were emotions showing up in the process of conducting the interviews. Secondly, there were emotions revealed in the coding process. Thirdly, there were my own emotions in response to the former two areas. Positive emotions are related to successful cooperation and achievement. Frustration and vanity stem from tensions and perceived unequal distribution of power and agency across the feminist scene as well as from the resulting limited potential to protest.

**RC04-95.8****NYSTRÖM, ANNE-SOFIE\*** (Mälardalen University, [anne-sofie.nystrom@gender.se](mailto:anne-sofie.nystrom@gender.se))*Facing Potential Failure: Men, Masculinities, and Self-Worth Protecting Strategies in Highly Competitive Learning Contexts*

The aim of this qualitative project is to explore how male students' self-images and self-worth are negotiated in higher education and, particularly, in an elite program and in relation to potential failure. How do masculine and student identities intersect in a context signified by class privilege and high ability and achievement? How is failure/success constructed and what kind of implications does it have socially and in terms of male students' identities and engagement?

Research on boys and schooling pinpoints how high-status masculinity is associated with 'effortless' achievement, and diligent work and anxiety with femininity in Western countries. To explore if such discourses influence students' identities and practices in HE, or are contested, is thus of interest. While a large proportion of research on education and masculinity has focused on students-at-risk or subordinated groups, there has been a call for more research on privileged groups for a deeper understanding of educational and societal inequalities. Law studies are among the most prestigious and competitive higher education programs, in Sweden and internationally, and are dominated by high achieving students with privileged class backgrounds. Prevalence of test anxiety, antisocial and manipulative behaviour has been reported as a part of avoiding failure and striving for top-positions in such high performance oriented and competitive learning culture.

The study has an interactionist approach; consequently, identities are examined as relational, situated and accomplished in interactions. The design of the study, both theoretically and empirically motivated, is to reside on interviews law student counsellors and Swedish law students. The project is work in process, and expected to contribute to knowledge on how students and staff construct masculinity and student identities in privileged and performance-oriented contexts, particularly how gender and class informs strategies of avoiding potential failure. This small scale study is partly funded by SRHE's Newer Research Prize 2013.

**JS-2.6****NÄRE, LENA\*** (Senior research fellow, [lena.nare@helsinki.fi](mailto:lena.nare@helsinki.fi))*Neoliberal Postcolonialism in Skilled Labor Mobility - Filipino Nurses Coping with Deskilling, Discrimination and Ethnic Hierarchies in Finnish Elderly Care*

European societies are facing the crucial question of who will provide care for the ageing populations in the future. In many European countries the answer has been migrant worker force, and Finland has recently started to follow suit. Since 2007, private companies have been recruiting registered nurses from the Philippines to work as practical nurses in Finnish elderly care homes. The paper has two parts. First it argues that the recruitment is based on a neoliberal postcolonial logic according to which the Philippines is perceived an endless source of labor force for the needs of ageing Finnish society and international mobility as individualized risk taking based on economic calculation. Secondly, the paper analyses how Filipino nurses cope with the deskilling inherent to the recruitment process and with the everyday discrimination and ethnic hierarchies they encounter in the work places. Moreover, the paper explores how the nurses find dignity in their everyday work (Stacey 2005). A common strategy is to create a moral hierarchy based on ethnic differences according to which Filipino nurses have a better work ethic based on fictive kinship, while the Finnish nurses are claimed to have an instrumental approach to their work. The old discourse of care as 'labor of love' is then given new meanings in the global hierarchies of care work. The paper draws on ethnographic case study of the Filipino nurse recruitment including qualitative in-depth interviews with Filipino nurses working in Finland (N= 20), representatives of the recruitment company and the private care companies employing the nurses (N=14) and a content analysis of the media coverage of the phenomenon (2007-2012).

*A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims*

Within Australia success in native title claims for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian native title legal processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimization of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that 'the tide of history' had 'washed away' the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content of the knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered 'legitimate'. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

**O'CONNOR, PAT\*** (University of Limerick, [Pat.oconnor@ul.ie](mailto:Pat.oconnor@ul.ie))

*Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions*

This paper identifies key elements facilitating/ inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multilevel phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in interactional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlying tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that are seen as most economically important (EU, 2012). Gender inequality is affected by the strengthening/weakening of other structures and the promotion of other societal or organisational priorities (including neo-liberalism; managerialism; definitions of excellence). At an organisational, interactional and individual level, agents of change include men and women who embody resistance as 'tempered radicals' (Meyerson and Scully, 2011) on any basis (gender inequality; care; other occupational experiences; collegiality etc). Finally, experiences in particular contexts may not be gendered (Ridgeway and Correll 2004), thus increasing the possibility of the emergence of coalitions.

This framework will be located in a cross national study of senior management, focusing particularly on Irish universities, and including a case study of one university where the proportion of women at professorial level increased from zero to 34 per cent over a 15 year period (O'Connor, 2014a &b)

**O'DAY, ROBIN\*** (University of Hawaii, [roday@hawaii.edu](mailto:roday@hawaii.edu))

*The Street Politics Of The 3.11 Disaster*

In the weeks and months after the Tohoku disaster on March 11, 2011, tens of thousands of people took to the streets in Japan to protest and voice their concerns about the government's role in exacerbating the crisis. Of particular focus within these protests were the perceived mishandling of the Fukushima Daiichi nuclear accident, and the broader dangers associated with relying on nuclear energy.

These protests were significant since they were some of the largest street protest to occur in Japan since the 1960s and 1970s when hundreds of thousands took to the streets of Tokyo to oppose the revisions of the US-Japan Security Treaty (AMPO). How should scholars, therefore, interpret and explain the recent anti-nuclear street protests within a broader perspective on popular forms of political dissent in Japan? What can these protests tell us about the nature of civil society in Japan? How did such a catastrophic event affect civil society groups already engaged in different social struggles? In an effort to help answer these questions, this paper approaches these questions ethnographically from the perspectives of different Japanese activists that were organizing public protests around irregular employment and growing economic inequalities before the disaster. What role did these groups play in the post-3.11 protests? How did they shape the street politics of the 3.11 crisis? Conversely, how did the crisis shape their politics?

**O'NEILL, PATRICIA\*** (University of Oxford, [Trish1385@gmail.com](mailto:Trish1385@gmail.com))

*Inequality and Emotion Management in Parental Caregiving By Chinese Daughters*

In the past, normative values in historically Confucian societies strongly demarcated the roles of sons and daughters with regard to the care of elderly parents. Whilst sons were charged with responsibility for parents' wellbeing, daughters-in-law or daughters carried out the hard work of hands on caregiving.

Today the rigid family hierarchy is undergoing change due to ubiquitous education and professional employment of women. Asian daughters are becoming self-sufficient. Their domination by and dependency on the family has diminished to a great extent. Gender based roles and obligations associated with family membership have nonetheless not abated. Though daughters may now contribute as much as sons to parents' financial support, culturally sensitized norms suggest caregiving remains within the woman's purview. And, perhaps surprisingly given their modern lifestyles, daughters continue to be committed to this filial obligation.

Within the framework of Hochschild's theory of emotion management, this paper explores the emotion work Chinese daughters undertake to justify and sustain their caregiving activities. Specifically, it examines the importance of emotional investment in caregiving and how daughters overcome unhappy feelings related to son favouritism in order discharge kinship responsibilities.

In furtherance of this research, fifty-five Chinese women born between 1946 and 1980 participated in semi-structured, in depth interviews in Hong Kong and Singapore during 2011 and 2012. Findings indicate feelings of affection rather than duty may mediate the quality and length of care daughters are willing to provide to elderly and disabled parents. If feelings of affection are absent or weak, caregiving may be unsustainable and alternative behaviours may be result. The ability to manage emotions, therefore, may not only be critical to the relationship between caregiver and care recipient but determinative of whether care is subcontracted to foreign domestic workers, parents and in-laws are placed in nursing homes, or parents are abandoned or abused.

*Strategic Transitions For Youth Labour In Europe: The State Of The Debate*

We examine how different comparative frameworks for international research have defined the 'problem' of youth unemployment. Reviewing national and European policies we argue that increased labour market flexibility in the context of an expansion of higher education and the legacy of long-term unemployment results in increasing polarisation for youth. Understanding youth unemployment cannot be limited only to the sphere of economic production and a narrow focus on skills attainment; it also needs to incorporate the role of families and social reproduction to understand how differential trajectories for young people have been created and are being reproduced. What distinguishes this phase of youth unemployment in comparison to the 1980s are family legacies inherent from previous recessions and the growth of work-poor households, the consequence decline of traditional employment careers as a result of labour market flexibility, and the very significant role of the European Union in funding new policy initiatives. This paper draws on the EUFP7 large scale projects funded by the European Commission on 'Overcoming Youth Unemployment'.

**OBINGER, JULIA\*** (University of Zurich, [julia.obinger@uzh.ch](mailto:julia.obinger@uzh.ch))

*From Underneath the Radar: Japanese Alternative Activists and Urban Protest after 2000*

The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group *Shirôto no Ran* in Tōkyō, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the *Freeter*-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerged as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their strong cooperative and creative commitment beyond the restraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how *Shirôto no Ran* as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly "invisible" activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

### RC47-771.3

**OBINGER, JULIA\*** (University of Zurich, [julia.obinger@uzh.ch](mailto:julia.obinger@uzh.ch))

#### *Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo*

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan's societal norms but also its highly privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the prefigurative: struggling with the oppression in the use of public space, they introduced a countercultural infrastructure of small "autonomous zones" in some lesser-gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social and cultural participation.

Moreover, long before "Occupy" even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnevalesque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homeless rights to insecure employment, from state legislation to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, considering their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalization and deliberate externality to the mainstream social and political institutions. Tackling this seeming contradiction, my paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of "social movements" in Japan on the basis of concepts like *subpolitics*, *prefigurative politics*, and *DIY-politics*.

#### *Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media*

The National Statistics Office (NSO) estimates 2.220 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. The study aims to analyze how the advent of social media influences in communicating among families with OFW members.

The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to improve their quality of life. It is argued that there are inherent tensions in this process since communicating with their families becomes a challenge. A specific purpose of communicating with their families through social media and internet is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipino adults, the study seeks to address the following questions: (1) What platforms of social media do migrant workers use to communicate with their families in the Philippines? (2) How often do migrant workers communicate with their families in

the Philippines? (3) What challenges do families encounter when communicating with their families using social media? (4) How does mediated communication affect the dynamics of family relationships? (5) If a member of the family is non-dig- itally-literate, how then do they communicate with one another?

Here, utilizing empirical research and Filipino familial theory is analyzed to explain the benefits and disadvantages of communicating among families with migrant workers through social media.

#### *Care Regimes and De-/Familialization in Asian Seven Societies*

As the first paper of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women's employment, changes in family life and welfare retrenchment are the reasons behind people's growing concern on care. However, these are phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies social background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as "care diamond," and discusses how to modify the frameworks to apply for Asian cases. The concepts of familism, familialization, de-familialization and re-familialization are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the societies under consideration. The major findings are;

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways through promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.

2) The role of the market is increasing dramatically in most societies.

3) People's expectation for the community is increasing in many societies.

4) Socialist countries are showing different paths from other countries. The paths of socialist countries in Asia demonstrate commonalities and differences in comparison to the experience of post-socialist countries in Europe.

#### *From Cultural Globalization to Aesthetic Cosmopolitanism*

'Cosmopolitanism' is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday cultural consumption (Cicchelli and Octobre, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this "*de facto*" cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

Do young people become cosmopolitan via the globalization of the cultural products they consume and their cultural habits (information media, cinema and theater attendance, Internet use and language practices, etc.)?

This perspective enables a reformulation of the question of "distinction" (Daloz, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the "cultural distinction" and the cultural legitimacy it is based on, either in Bourdieu's classical view (1979), or in modernized versions, such as omnivorism (Peterson, 1996), or individual plurality (Lahire, 2006). Second, it calls into question the "social distinction", through the reconfiguration of secondary factors which mark new lines of fragmentation in young people's cultural universes (Octobre, 2010). This talk will address these question through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

### *Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment*

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender gap in human capital and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular and irregular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capitals, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males' wages go up and females' wages fall.

### *Japanese Brazilian Migrants' Views on the Status of Ethnic and National Categories in Japan*

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic "groups" or "communities" by focusing on the transnational spaces and the hybrid practices that connect migrants' sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnationalism that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants. In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialism is to take ethnic or national categories that are rather essentialist as a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist categories about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

### *Child Bearing and Good Mothering: The Case of Turkey*

According to most critical social scientists, the body of woman is accepted as a means of political aspirations of politicians. In this presentation, how the capacity of woman to give a birth is politicised by government of Turkey today. Almost one year ago, the Minister of Health Affairs in Turkey started to not give permission to use the method of caesarean. And support this policy by using the good mothering discourse. This presentation is examined the attitude and behavior of pregnant women related to this policy by using qualitative technics. How the participants express themselves as good mother and is there any relation between this feeling and this discourse are the basic questions of this presentation.

### *Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV*

Objective : To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care providers, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method : A narrative interview that was conducted in 2009 with a male hemophiliac in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results: At first he concealed his hemophilia, HIV, and HCV status after receiving 'notification of HIV' status, because of prejudiced and discriminatory public perceptions about AIDS at the time and worries about restrictions at work, or dismissal. Then, after 'two hospitalizations for the side effects of interferon treatment', he quit his job, because he had experienced "a sense of crisis about revealing his health status," which became necessary because he used public health insurance and medications. Also, he had experienced "medical workers' true feelings" and noticed "the prejudice of other professionals." However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in a different 'medical institute' he talked about his illness experience and revealed his HIV status. Here, he was "accepted by professionals." This was a turning point for him. Revealing his status enabled him to 'work flexible despite his condition.' However, he faced new difficulties caused by 'confusion about his multiple roles as a patient and a medical worker.' This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

### *Intermarriages and Inclusion. Time and Space of Love, Laws and Norms*

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. "Intermarriages" refers here to couples formed by a European Union citizen and a "Third Country National" (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy UE citizens/TCNs), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization [Strik & al., 2012; Hajjat, 2010] display an overlapping of these categories [Groenendijk, 2006].

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogeneity may affect the sense of inclusion and modify the concept of "otherness" according to the configurations in which the members of these couples act [Saskia & al., 2011].

Bi-national family biographies suggest that what is "normal" for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of "biographical policies evaluation" [Delcroix, 2013; Apitzsch & al., 2008] allows understanding the effects of categories as citizenship, *denizenship* [Bosniak, 2001] and *dis-citizenship* [Wodak, 2013] on these families and the

strategies adopted by their members (e.g. "doing being ordinary" [Varro, 2004; Inowlocki, 2000; Sacks, 1984]) to deal with, or at least to report, their perception of inclusion.

#### *The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria*

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue people are today faced with great ecological and climatic problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man's activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggravated stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

#### *Forms of University Elite Sport in South Africa*

The paper looks at the phenomenon of elite sport at a university in South Africa, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three categories of institutional complexes that foreshadows particular institutions. There is the enlightened context of sports practices, and there is the resistant context's that sees forms of resistance against such 'elitism' of sports, and there are the benign forms of elite sport practices or contexts.

While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even if S.A. sport is competitive, it's organizational base is low, universities see a growth spurt in sport through private-public understandings (e.g. 'Varsity Sport'), and thus the changing the nature of the public university from a position outside of its traditional core or academic work, even though there are taught courses and modules in sports related fields (Sport Science, Human Movement Science and the like). Most of these are predominantly natural science and functionalist oriented, though there are exceptions.

The paper will examine the trajectory of one or more of these sports types at (a) particular institution(s) in South Africa, in the three dominant sports of the country, i.e. soccer, cricket and rugby from which a comparative perspective can be gained. While sport remains non-core to most universities globally, it has shifted somewhat on the ground, particularly with elite sportspersons emerging from that level. Various forms of elite sport thus need to be studied in terms of the forms they assume in different university contexts.

#### *Improving Quality Education/Learning Using the ESD Learning Performance Framework*

The Education for Sustainable Development (ESD) concept, although strongly linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality education/ learning. Through an action-reflection process cycle of relaying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise ((RCEs) selected from East and Southeast Asia) and the educational/

learning theories and methodologies grounded in the literature, both process and content characteristics that underpin quality education were clearly and comprehensively identified and developed into a learning performance framework (LPF).

The framework therefore has the capability of 1) fostering the evaluation of ESD best practices at the local level through better identification and subsequent translation of the ESD agenda into a new global education/learning framework, and 2) enhancing quality education in the formal education sector, particularly a) developing a holistic and relevant school curricula with transformative educational contents and teaching approaches, b) improving teacher competence in relation to the LPF elemental characteristics, and c) providing a safe learning environments for students. Furthermore, recommendations are made for users identified through their links to aspects of the framework where their areas of operation are strongly associated.

#### *Experiment Workplace Innovation in Elderly Care*

By order of the Dutch national association for long term care, ActiZ, the Utrecht University of Applied Science has carried out an Experiment of Workplace Innovation for Elderly Care to develop a new innovative organizational design that is intended to improve the quality of care, work and efficiency. BrabantZorg, a large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar innovation process in their own organization. The experiment was finished in the summer of 2013.

The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

[judith.offerhaus@gmail.com](mailto:judith.offerhaus@gmail.com))

#### *The Type to Train? Impacts of Psychological Functioning on Further Training Participation*

Evidence is plentiful that especially level of formal schooling and occupational rank determine access to and participation in employment-related training. However, this paper shows that human capital acquisition during adulthood is not only stratified by classic markers of social inequality, but also by indicators of psychological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratified by intra-individual differences in the Big Five and Locus of Control beyond socio-economic markers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

This research proceeds in two stages using data from the German Socio-Economic Panel from 2000 to 2010. Following the debate on stability or change, I first show that intra-individual personality characteristics are remarkably stable between two measurement points in 97% of the population sampled. In a second step, I apply random-effects logistic panel regression models to 39,833 observations of 4,981 individuals. Findings reveal that those who are more open to new experiences and have high internal control beliefs are more likely to participate in further training, and this holds true under different model specifications. Contrary to the predictions of personality hypotheses, Agreeableness, Extraversion and Neuroticism do not impact training, whereas the training effect of Conscientiousness is more complex. I also show, regarding reverse causality, that further training does not lead to significant changes in psychological functioning. I conclude that in addition to the classical determinants of further training such as education and occupational status, there are personality traits which characterize healthier psychological functioning at work, meaning that personality differences lead to stratified training and career outcomes.

#### *Transitioning through Recession? Labor Market Entry Patterns for Hard and Soft Fields of Studies before and during the Financial Crisis*

Transitioning from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are differ by field of study with those from hard study areas (science, technology and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the financial crisis. It assumes that pathways into employment are more diverse during times of economic paucity such as after the Great Recession; however, this should not be the case for all subject areas. Instead, hard fields of study are less impacted by economic downturn as they are more protected by their specialized knowledge, showing a clear and direct link between higher education and the labor market, while graduates from softer areas suffer from the crisis and show even more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by difference in human capital specificities which favors specialized over general skills. Economic fluctuation has a stronger impact on demands of general skills which translates into more fractured transition patterns.

[himawarimido@nifty.com](mailto:himawarimido@nifty.com))

#### *Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan*

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of "social sorting" shed a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone's benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. In spite of its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and watched population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers' own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and interactive features of electronic technologies disguise equality and democracy. Yet, unmonitored or unrecorded sites highlight the unequal landscape of surveillance society before social sorting starts.

[shu16384@gmail.com](mailto:shu16384@gmail.com))

#### *Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market*

The purpose of this study is to investigate how employers evaluate high school graduates' ability when they make hiring decisions. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers' preference and employers hiring decisions by using partial observability probit model (Sakamoto and Powers 1995). This model assumes two underlying equations for one observable outcome and can make a behavioral process more explicitly. Using a nationally representative data, we analyze how high school graduates' attain their first jobs. Previous studies have shown the importance of

long-term networks among schools and employers (Rosenbaum and Kariya 1989). We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers' hiring decisions, rather than students' vocational skills or academic achievement. Moreover, the result doesn't confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded (Granovetter 1985) in the labor market.

**OGAWA, REIKO\*** (Kyushu University,  
[reigogawa@law.kyushu-u.ac.jp](mailto:reigogawa@law.kyushu-u.ac.jp))

#### *Coping with the Ageing Society? : Migration of Care Workers to Japan and Taiwan*

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performed in the intimate space entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. Building on the rich literature on gender and migration, the paper focus on care work undertaken by the migrants in relation to the national long term care system and examines the inclusion and exclusion of the migrants in the host societies including career prospects, citizenship and racism.

#### JS-12.6

**OGAWA, REIKO\*** (Kyushu University,  
[reigogawa@law.kyushu-u.ac.jp](mailto:reigogawa@law.kyushu-u.ac.jp))

#### *Searching for the Nexus Between the Care Regime and Migration Regime*

The discussions on the nature of welfare states in East Asia tend to focus on the link between the economic development and social policy or emphasize on the heavy reliance on the family to provide care. However, what has not been explicitly discussed is the role of migrants in providing long term care. As the population aging accelerates care work has been increasingly undertaken by migrants who constitute an integral part of the care workforce in East Asia.

The presentation will compare Japan and Taiwan which receives migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalization of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receives migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a 'regional common good' in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

**OGIDO, ROSALINA\*** (Faculdade de Medicina PUC,  
[rogido@pucsp.br](mailto:rogido@pucsp.br))

#### *The Working Mother and the Access to Childcare*

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed. Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three

were working . Of the two unemployed , one had no one with whom to leave her son and for the other, she received help from relatives . Of the three who were working, two have daycare for their children and one received aid from their parents .

Thus , it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working period , is a difficulty common to working women and, unfortunately , it remain current .

Moreover , given the lack of childcare facilities , the mother who does not work and that only studies , situation of many teenage mothers , suffer a disadvantage when trying to place in daycare , further hindering the continuation of studies and future insertion in the labor market.

**OGINO, MASAHIRO\*** (Kwansei Gakuin University,  
[ogino@kwansei.ac.jp](mailto:ogino@kwansei.ac.jp))

#### *Postmodern View of Time in Sociology*

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which moves away from that kind of past-present-future, straight-line perception of time. In the postmodern view, the past exists only as memories. The important thing here is that for modernity to exist, it requires not just the modernist historical view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view of history. Modernity, after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan. Theoretical framework of Sociology is based on the postmodern view of time. This paper try to show the possibility of this perception of time in order to make a general theory at the time of globalization.

#### *Women's Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria*

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle to significantly improve maternal health. Annually, an estimated 50,000 to 59,000 Nigeria women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of reproductive health issues as their prerogative, issues in which the compliance of their wives is taken for granted. The study employed the women's data from the 2008 NDHS to examine the relationship between women's decision-making autonomy and exposure to mortality risks. Given that the study was interested in the risks of maternal mortality in the country, the analysis was restricted to only the women who had at least a birth in the last five years (preceding the survey). A total of 17635 women out of the 33385 women interviewed nationwide in the 2008 NDHS, met the inclusion criteria. The analysis was done at univariate and bivariate levels. Also, using logistic regression models, multivariate analyses were performed to estimate the odds ratios for each of the predictor variables in the models. The study shows that 36% of the women did not make a single antenatal visit to a hospital during the duration of their last pregnancy; as many as 63% did not deliver in a health facility (government or privately owned); and about 60% did not deliver with the assistance of a skilled provider. After controlling for the confounding influence of some other independent variables, the study suggests that the "strong authority" of women in household decision-making gives them a voice that is heard in the house and ability to initiate moves to obtain healthcare without necessarily waiting for "administrative clearance" from adult males within the husband's family.

#### *Social Historical Context Of Health and Illnesses Attributions In West- African Countries: A Comparative Analysis*

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of overtime; attributions play an essential role in the formation of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. Without mincing words, in order to effectively treat these illnesses, remedies must be both material and spiritual that is (herbal remedy and amulets Vaughn, Jacques & Baker (2009). This paper therefore attempts several aspects of how culture affects the health and well-being of patients in West African countries which are significantly different from those of Western world. Because cultural issues have increasingly become incorporated into medical care as there has been greater recognition of the intimate tie between cultural beliefs and health beliefs.

**OGURO, MEGUMI\*** (The University of Tokyo,  
[karuraen@yahoo.co.jp](mailto:karuraen@yahoo.co.jp))

#### *Students' Learning and Career Choices in the Vocational Course of a General High School in Japan*

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school.

Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground.

There is still a serious problem that must be addressed, however. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider the unification of academic and vocational education, but previous studies have lacked this perspective. This study attempts to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficient specialist skills, but because they can take more academic classes compared to students in a vocational high school, more of them are able to enter college or vocational technical schools. By revealing how the actual practice in this kind of school affects students' learning and career choices, this study aims to consider a new concept of vocational education that bridges the dichotomy described above.

#### *Change of Employment Structure and New Labour Movements in Japan*

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the "organization-oriented," and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practice is confronted with the pressure from globalization, and it is becoming difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on shrinking union membership and its bargaining power in Japan.

**RC34-600.3****OH, HELEN\*** (Sogang University, [helenoh1@daum.net](mailto:helenoh1@daum.net))*Healing Programs for School Bullies and Their Parents in South Korea*

This study presents several social problems related to the South Korean government's new policy declaring bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies' families. Schoolteachers and policymakers hope for "deviant" families to transition into a "normal" condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as "deviant." In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as "normal" in the healing program, but this is a context outside of school. Therefore, after they complete their course in the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e. the psychological threshold when transitioning from one stage to another) or social normality.

**RC42-716.1****OH, HELEN\*** (Sogang University, [helenoh1@daum.net](mailto:helenoh1@daum.net))*Is There a Path to Well-Being for School Bullies?*

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e. the psychological threshold when transitioning from one stage to another).

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as potential criminals. Consequently, this study demonstrates the limit of healing programs in that wounded students and their parents have no choice but to drop out of the school system and find alternative education centers for the sake of their well-being and social integration.

*What Determines the Parent-Child Relationship?: Filial Piety, Economic Dependency, or Intimacy*

Family structure and culture have been rapidly changing in Korea. Whether to follow traditional values or individual autonomy seems to be the crucial issue of family problems in the modern world. Previous studies explored the significance of various factors such as filial piety, autonomy, communication, intimacy, etc. in a parent-child relationship. But, what factors can positively effect on the building-up of a harmonious parent-child relationship? Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

This research aims to answer the question what factor influences most positively on harmonious parent-child relationship during the process of child's future decision making of selection of a spouse, which is still the greatest family issue in

Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parental economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. However, parental economic support for children, on the side of the child, does not appear significantly. This research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

**RC22-397.9****OH, SEIL\*** (Sogang University, [ohseilsj@gmail.com](mailto:ohseilsj@gmail.com))*Religion, Trust and Public Society in the United States*

Social integration beyond constituents' diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor): the major conundrum for a post-secular society (Jürgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into questions. I, therefore, focus on "trust in immigrants" as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

This study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation), (2) cognitive types of belief (including images of God, New Age interests), (3) ideologies (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnostics, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants ( $p < .05$ ). Neither religious pluralism nor moral liberalism appears significantly related to trust in immigrants. Religious experiences in a traditional sense are not significantly related to trust in immigrants whereas spiritual/mystic experiences leads to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone – appear to be highly related to trust in immigrants.

**RC14-256.14****OH, YOO RA\*** (The University of Tokyo,[yoora.oh.505@gmail.com](mailto:yoora.oh.505@gmail.com))*Cross-Bordering Japanese Culture in the Changing Media Environment: Focusing on Japanese Popular Culture in Korea*

When the animation *Attack on Titan* aired on Japanese television, it ranked No.1 on the Internet hit list in Korea, and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media-globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998–2004, meanwhile Internet has rapidly proliferated in 2000s, young users shared manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industry, its effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existed fandom and extends throughout the new-media as *Attack on Titan* case indicates. Moreover, refracted cultural phenomenon has observed on new-media such as translating contents, parodying, using as signifier. Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like *Hanayori-dango*.

Recently, Japanese culture can be seen through formal platform IPTV or Internet contents-store besides pirate copies. However, there is limitation on interface because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is required to provide interface with easy-access and diversified contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.

*Acquisition of Ballet Technique: Collective Teaching in the Ballet Studio and Social Control*

This paper examines the acquisition of body techniques in a ballet studio from the perspective of social control theory (Hogetsu 2004). To achieve this objective, I conducted participant observation at a ballet studio in Takasaki, Gunma Prefecture, Japan, and interviewed 3 teachers and 10 students who belong to this studio. There are three notable characteristics in the institution of the ballet studio. Firstly, students are divided into classes according to their skill level. This division is practiced primarily as the prohibition of students from joining classes intended for higher skill levels. Secondly, since there is only one instructor in each class, the instructor does not always pay attention to every student, but normally addresses particular individuals to correct her posture with words and gestures. Thirdly, even when the instructor is addressing individuals, those who are not addressed responds and reacts as if she were addressed individually; each student responds as if, even though, in reality, another student being the focus of attention by the instructor, the instructor is personally addressing her. On the basis of these dimensions, students acquire ballet technique through what we might call "over-understanding" of teacher's coaching.

*Influence of Childcare Experience on Women's Dietary Habits: Analysis of Public Opinion Poll on Health*

In Japan, food and people's eating habits have changed quickly in the postwar era. Externalization of household functions has reduced domestic work; however, people have lost the opportunity to acquire sufficient skill and knowledge in cooking. Notably, a social problem of children's unhealthy dietary habits has arisen. Furthermore, some studies have found that mother's food consciousness or dietary behavior affect the related dietary habits at home. However, few empirical studies have examined the correlation between women's dietary habits and whether they have children or not. This study examines the effect of childcare experience on women's dietary habits by focusing on their food choices and dietary habits. Analysis of a public opinion poll on health data with logistic regression reveals that childcare experience affects dietary habits in women. Compared to childless women, women with children "eat all three meals" more regularly but are not conscious of "avoiding eating snacks." Moreover, women who are more conscious of their food choices tend to be older, unemployed, and have a high standard of living. The result revealed the following points. First, women equate the responsibility of nurturing children to disciplining them rather than caring for their children's physical health. Second, childcare experience has both positive and negative effects on women's dietary habits. Therefore, these factors should be considered when encouraging and promoting improvement in women's dietary habits.

*Past, Present and Future Of Japanese Cultural Sociology*

This paper examines the historical development and the theoretical features of Cultural Sociology in Japan. By discussing the past works such as views of Shotaro YONEDA (1873-1945), Jun'ichiro Matsumoto (1893-1947), Kazuta KURAU-CHI (1896-1988), the present works such as Keiichi SAKUTA (1922-), Munetsuke MITA (1937-), Shun INOUE (1938-), and the contemporary several movements toward the future cultural sociology, we will elucidate the historical and theoretical characteristics of Japanese cultural sociology in the following way.

It is true that Japanese cultural sociology has been influenced by the Western sociological thoughts such as German sociology (in particular, Alfred WEBER, Max WEBER, Georg SIMMEL), the French sociology (Emile DURKHEIM, Gabriel TARDE), the American sociology (Talcott Parsons, Jeffrey ALEXANDER), the English *CULTURAL STUDIES*, etc., However, today, Japanese cultural Sociology is going to present its originality or uniqueness by fusing these Western cultural theoretical impacts with the Japanese cultural tradition and contemporary social situations in a global setting. That is, Japanese cultural sociology should advance from "moon-light sociology" (Yasujiro DAIDO) -- a passive mode of sociology -- to "sunshine sociology" -- an active mode of sociology. Thus, we will make clear one aspect of Japanese cultural sociology.

*Searching for the Global Standard Recruitment and Employment of Border-Crossing Nurses and Care Workers: Findings and Recommendations Based on Fieldwork in the Asia-Pacific and Europe*

Most developed countries are faced with major demographic problems such as increasing aging populations and rapidly declining birth rates. Parallel to these same phenomena, governments have accelerated the introduction of nursing and care workforces from abroad in order to fill the shortage of domestic nurses and elderly-caregiving workers. However, such cross-cultural and transnational care projects are not easy for each host country, and employers have to consider the challenges of hiring overseas-born workers who come from various educational backgrounds and care cultures, and speak other languages as mother tongues.

The author investigated the problems of transnational care especially in the case of the Japanese government's project to accept Southeast Asian nurses and caregiving workers under Economic Partnership Agreements (EPAs) concluded with the governments of Indonesia, the Philippines and Vietnam. He explored some structural flaws and faults of the EPA project, and then explains how this led to a broader investigation to research alternative policies and programs adopted by some governments in the Asia-Pacific region and Europe.

This paper presents a critical evaluation of Japan's EPA project based on the research team's various surveys in Japanese hospitals and care facilities as well as Filipino/Indonesian nurses and care workers in Japan. Then, it examines the Asian and Western trend of governmental policies on migrant nurses and care workers, and makes some recommendations towards the establishment of a potentially sustainable Japanese model. It finally discusses the possibility for a global standard recruitment and employment system for border-crossing nurses and care workers.

**JS-16.3**

**OINAS, ELINA\*** (University of Helsinki, [elina.oinas@helsinki.fi](mailto:elina.oinas@helsinki.fi))

*Femen in Tunisia: Came. Stripped. Conquered. Conquered What?*

The paper examines different responses to the activist group Femen's practices and messages by young activists in different political alliances, including feminist groups, in Tunisia in 2013. The Tunisian Femen context is especially interesting as it captures so many contemporary tensions regarding social change, youth and political engagements, transnational movements, cultural conservatism, generational clashes, politicized embodiment and shame, public sexualization, and changing fundamentalisms. While Femen has challenged global feminist movements and provoked unusually explicit anger, ridicule and dismissal among women's movements and conservative religious authorities alike it could potentially evoke other types of responses from activist youth, especially in the aftermath of the initial revolution and later frustration in Tunisia, where a generational conflict on issues of rights and freedoms and bodily integrity is often explicitly politicized. The paper analyses the ways the Tunisian responses frame the meaning, or meaninglessness, of Amina's action, explicit agenda and the followed media turmoil. The first interviews were conducted during the first on-line appearances of the Amina Tyler's internet action in March 2013, and continued in several phases as the event received international media attention and analytical narratives became consolidated. The Western responses provoked counter-responses and thus the Femen event can be seen to have become one analytical window to self-understandings of gender politics among youth in the aftermath of the Revolution in contemporary Tunisia.

**OINAS, ELINA\*** (University of Helsinki, [elina.oinas@helsinki.fi](mailto:elina.oinas@helsinki.fi))

*HIV, Stigma and Agency*

Stigmatization is here studied through interviews with HIV treatment activists and voluntary HIV treatment counsellors in an urban township in South Africa. While being also patients, the counsellors form a support and advocacy group within the clinics where they volunteer, as well as in the community and society at large. I will examine how they talk about their views on expertise and knowledge, health care, authority, biomedicine and community. These patients describe their lives, care and survival as an entangled net of different relations that sustain them, a net of relations that produces healthier embodiment including both human and non-human actors: for example, help, hope, food, laboratory results, transport to the clinic, and last but not least, the pills. Activists who politicize access to medicine and therefore add the dimension of rights and global injustice to the spectrum of questions that the biomedicalization and pharmacologization theses should consider, tackle stigma by a de-individualization of shame as a side-effect of politicization. The paper asks what destigmatizing strategies the less vocal clinic volunteers use, as they also indicate that a major bulk of their work deals successfully with stigma. Different meanings for silences, intimacy, secrecy, confidentiality and rights are analysed.

**RC55-885.4****OISHI, AKIKO\*** (Chiba University, [oishi@le.chiba-u.ac.jp](mailto:oishi@le.chiba-u.ac.jp))*Social Exclusion and Health Outcomes of Single-Mother Households in Japan*

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has significant and negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow-up.

**RC42-699.3****OKADA, SOSUKE\*** (University of Arizona, [sokada@email.arizona.edu](mailto:sokada@email.arizona.edu))*Structure of Cultural Rejection*

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals' perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified positions correspond with individuals' perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

**RC02-57.4****OKAMOTO, NORIAKI\*** (Ryutsu Keizai University, [nokamoto@rku.ac.jp](mailto:nokamoto@rku.ac.jp))*The Relationship Between Financialization and Accounting Standards: A Japanese Perspective*

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of "financialization" is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard's concepts of "simulacra" and "hyperreality." This study also analyzes the recent changes in Japan's accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is re-considered from Takeda's "spiral development" perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies.

This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda's framework, which

distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard's concepts of "simulacra" and "hyperreality" to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japanese accounting regulations such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda's theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

**JS-88.3****OKAWA, KIYOTAKE\*** (Teikyo University, [ezm05033@nifty.com](mailto:ezm05033@nifty.com))*A Comparative Study of Effort and Examinations in Japan and England*

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as "examination hell."

It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture perpetuates the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies' approaches to effort and examinations.

**TG06-966.4****OKBANI, NADIA\*** (Science Po Bordeaux, [nadiaokbani@yahoo.fr](mailto:nadiaokbani@yahoo.fr))*Giving Sense to Social Policy Implementation and Its Evaluation Analyzing the Institutional Work: The Case of a French Social Security Local Organization*

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Suddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this communication intend to analyze how organizational context, economic crisis and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explain how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some prospect for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outputs for beneficiaries.

**RC30-517.2****OKE, NICOLE\*** (Victoria University, [nicole.oke@vu.edu.au](mailto:nicole.oke@vu.edu.au))*Australia's Temporary Migrant Work Programs and Its Neighbouring Regions*

Temporary Foreign Worker Programs have boomed in Australia over the last two decades, with this group of migrants now comprising the largest category of migrant entrants. Overall, migration from Asia and the Pacific has likewise expanded over this time. TFWs are employed in Australia on a range of visa types; but – with a few exceptions – the visa categories open to migrants from Asia and the Pacific are a skilled worker program (the 457 visa), student visas with work rights, and a 'migration and development' styled program with some nations in the Pacific (the *Seasonal Workers Program*). TFWPs are one aspect of the formation of regional and global divisions around work. The focus in this paper is on the

ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers from the lower-income states in Asia and the Pacific working in lower paid work, in casualised sectors of the economy. While not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

#### *Transnational Engagements: Footscray, Transnational Migration and the Making of Place*

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne's inner West, formed in part by overlapping waves of migrants. The Vietnamese diaspora, and more recently migrants from African countries, influence the contemporary mix of people. Migrants' engagements with more than one society and in various forms of transnational networks are an evident in the way migrants make place in the suburb. The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvements in transnational politics. Participation in networks of Asian commerce is demonstrated in shops through the suburb. Indian students undertaking a transnational education work in Footscray, including at the Vietnamese market.

Migrants' transnational experiences, connections and networks are part of the uneven resources available to different groups and individuals as they become embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnic worlds" (Werbner 1999: 25). But the places in which these networks are located shape the forms of these networks and the resources they offer. Drawing on Smith (2001), these networks "criss-cross" and in doing so interact, challenge and shape one another. To take economic examples, transnational connections provide some migrants with access to capitalisation. But for other migrants their embeddedness in more than one society is a financial constraint, as the payment of remittances can be. Both shape the ways migrants engage in the suburb, and with each other. Local dynamics, too, shape the different strategies available to migrants in negotiating transnational lives and the meanings given to inclusion in more than one society. The inflections towards Asia allows for one set of strategies, while the politics of race in the suburb suggested another. These issues are explored in this paper drawing on interviews and documentary sources from Footscray.

#### *Perception of Security Operatives on the Nature, Causes and Consequences of Corruption Among Security Operatives in Kauna State, Nigeria*

OKESHOLA B. Folashade  
 AND  
 MAMMAN A. James  
 DEPARTMENT OF SOCIOLOGY  
 AHMADU BELLO UNIVERSITY,  
 ZARIA, NIGERIA  
[shadeoyz@yahoo.com](mailto:shadeoyz@yahoo.com)  
 ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints, questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was collected from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment of persons with questionable character, poor salary, embezzlement and lack of good pension scheme. However, some of the challenges facing security operatives as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities (VIPs), issuing counter orders by superior officers and lack of adequate accom-

modation. Also, some of the consequences of the above includes lack of good governance, marginalization/frustration of public officers and diversion of public funds. Moreover, it is recommended that in order to win the war against corruption, there is need to reduce government involvement in all economic spheres as well as improving accountability and transparency in financial disclosure. This will eliminate opportunities for corrupt dealings.

#### *What Is Diagnosis? : Medicalization of the Children with Developmental Care Needs in Medical Checkups and Preschools in Japan*

Background: A nationwide study reported that 6.3% of normal class students seemingly had developmental disorders. These students or children in Japan called as "kininaru-kodomo" or children with special care needs. However, there is no legitimate definition of children with special care needs. Therefore, its relationship with developmental disorders is ambiguous according to the professionals' viewpoints. This study explores its definition through the hybrid model of concept development.

Methods: The hybrid model is composed of a combination of literature review, fieldwork and analysis. The databases Japan Medical Abstracts Society (1983-2013) and Citation Information by NII (1991-2013) were systematically searched. Participant observation was conducted at multiple parent organizations. Moreover, narrative data was gathered through a key informant interview. These theoretical and fieldwork data were analyzed to hypothesize the relationship between the term's concept and the presence of medical diagnosis.

Results: A literature review revealed that medical professionals used the term of "kininaru-kodomo" as the synonym of children with developmental disorders. On the other hand, teachers of preschools and primary schools regarded them as children with troubles in group actions regardless of the presence of diagnosis. However, the tide of medicalization had occurred in schools and a public health nurse stated that preschool teachers asked municipalities to pick up the troublesome preschoolers as a possible case of developmental disorders at an infant medical checkup. In a medical professional's perception, "kininaru-kodomo" was considered a children who could not be diagnosed because of their normal intellectual ability. Moreover, the distinction between "kininaru-kodomo" and normal children was considered blur.

Conclusion: The hybrid concept analysis demonstrated the arbitrariness of the application of the diagnosis of developmental disorders to children with special care needs. Making a common definition of "kininaru-kodomo" is necessary to keep any professionals from overlooking the care needs of children with or without developmental disorders.

#### *Young People with Debt Problems: Uncertain Transition to Adulthood in Finland*

Gaining financial independence is a part of becoming an adult in Finnish society and culture. In this paper, we discuss the debt problems faced by young people who struggle to gain agency in their early adulthood of age 18-25. The aim of this paper is to see what the transition to adulthood means in relation to debt problems. Official data on registered debt problems by young people will be analyzed in this paper. The data was gathered by using the official debt enforcement register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems start to accumulate and what kind of specific debt problems young are facing. Socio-demographic background is taken into consideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 19 debt problems increase dramatically and involve most importantly debts from consuming. Registered payment defaults by young people have been increasing in recent years in Finland. Instant loans with high interest are one major source eventual escalation of debt problems, and new concerns have arisen on unpaid rents. Finnish young people are struggling to gain agency through economic independency, but at the same time they have to balance the financial risks they are taking. Since most of the young people and young adults study until their mid-twenties, youth in Finland are placed in a waiting period between youth and adulthood. The current economic crisis in Europe has intensified the risky outcomes of this age of transition.

*Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey*

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV's agency in managing the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: 'cultural immunity' and 'rights-based' discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, 'modernisation' and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma at individual and collective levels. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants' reconstructions of HIV through narratives of 'injustice' and 'neglect' are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

*Reconstructions of HIV and Its Stigma through Biographical Narratives of People Living with HIV in Turkey*

The paper aims at exploring the subjective perception of living with HIV and its stigma through the biographical narratives of people living with HIV (PLHIV) in Turkey. Primary data were generated with 24 PLHIV, following Biographical Narrative Interpretive Method (BNIM) and with 32 key informants, including doctors and civil society workers providing services to PLHIV.

Biographical narratives of PLHIV are analysed to understand the implications of the discursive structures around HIV/AIDS in Turkey for PLHIV's construction of social identities. The analysis is guided by the literature on illness narratives for the identification of narrative forms and by an intersectional approach for the identification of power structures that combine with HIV-stigma.

PLHIV's biographical narratives demonstrated the ways in which the meaning of HIV/AIDS and its stigma is being reconstructed through PLHIV's interactions with healthcare professionals, with civil society workers in peer-counselling services and with the overarching concept of 'the state'. The paper focuses on three types of narratives, with respect to these three milieu: Narratives of 'uncertainties and distrust in medical profession', the 'positive reconstruction of being HIV-positive' and the narratives of 'injustice and neglect' reflecting a politicised illness identity.

Finally, the implications of the above-mentioned narrative reconstructions of HIV on the social identities of HIV-positive individuals are pointed out: A reconstruction of illness detached from fear and self-blame is framed through support networks. However, the potential empowering effect of this perception of illness is hindered by the stigmatising practices faced in healthcare settings and by the perceived denial and inaction at the state level.

*An International Comparative Study on Sport Development System in Communities for the Disabled Between Germany and Japan*

**Aims:**

This study is to explore the community sports development systems for the disabled after the World War 2, between Germany and Japan.

**Backgrounds:**

Recently, in Japan, community sports system is reconstructed, referring to community sports system in Germany. In this study, the sport promotion for the disabled is focused in order to explore how the community supports the disabled to increase in sport participation rates of the disabled. To understand each characteristics of two countries, this study attempts to identify similarities and differences between Germany and Japan.

**Methodology:**

To achieve the aim of this study, this study employs meta-analysis, and semi-structure interview methods.

**Results and Discussion:**

In Germany, Medical insurance system was applied for rehabilitation sports as a part of the social security system. The insurance system is promoted mainly by Deutscher Behinderten-Sportverband e.V, which is the Germany Disability Sport Organisation, was established based on Deutscher Versehrtensportverband e.V. Before the World War 2, in Germany voluntary sector systems and spirit of mutual aid had been existed. Germany has attempted to develop sport for the disabled mainly in the community although the philosophy of the community sports for the disabled has been based on the promotion of social participation. On the other hand, taking the opportunity of the 1964 Tokyo Paralympic Games, disability sport has been developed under the government administration. The sport development for the disabled has been developed as a rehabilitation tool, in particular under the philosophy of vocational rehabilitation. From these point, the difference of the political system and the position of sport in the society, had a major impact on the establishment of community sports promotion system after the post-war era in the two countries.

*Pharmaceuticalization and Social Inequalities: An Examination of Problems Relating to Depression in Japan*

The growing number of people suffering from depression has become a social problem in Japan. Over the last decade, the number of those consulting medical institutions about depressive symptoms has more than doubled, and the number of those taking sick leave from work due to depression has increased. Accordingly, mental health strategies have become an important issue for both the nation and companies. The problems associated with depression in Japan have been influenced by the pharmaceuticalization of mental health. This trend further promotes the individualization of social problems and encourages people to seek hospital consultations. Since selective serotonin reuptake inhibitors were introduced to Japan's pharmaceutical market in 1999, demand for anti-depressant medications has rapidly expanded. It seems likely then that the efforts of pharmaceutical companies, as part of their marketing strategies, to increase people's awareness of mental illness have led people who are not actually depressed to have medical consultations and drug treatments for it. This phenomenon is known as 'disease mongering' and has been reported on. Problems exist from the medical perspective also and include the following: expansion of the diagnostic criteria for depression as formulated in the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders; treatments that rely heavily on drugs; and biomedicalization. Another reason for the increase in medical consultations is the declining function of communal bodies such as companies and local community, a move that has left individuals to deal directly with organizational and social problems. This has resulted in individuals struggling psychologically, for example, with anxiety, worry, and depression. In summary, this sociological research has analyzed the problems of depression in Japan and revealed how the pharmaceuticalization of mental health accelerates the individualization of social problems, thereby creating new social problems and social inequality.

*A Variation Study of Dialect Contact and Obsolescence in Japanese Community in Mexico City*

Ever since the first migration to in 1897, Mexico has hosted the mass influx of Japanese immigrants, resulting in the formation of the largest Japanese community Mexico City. Although Japanese is often used for communication amongst the community members even today, linguistic aspects of the language used there have not been well investigated in previous research. Since the first generation of immigrants in the community migrated from various places in Japan, there must have been contact between Japanese regional dialects among them. This study intends to find out what sort of dialectal features are used in the current community as a result of contact between different dialects which were brought by the first generation. The data consist of over 5000 minutes of collected through my fieldwork in 2012 and 2013 in Mexico City. The informants are more than eighty of Japanese immigrants and their families. The linguistic variable examined in the analysis is negation suffix. The negation form is realized in different forms according to dialect. The major variants are *-nai* and *-n*, the former is mainly used in

eastern dialect speaking region of Japan and the latter in the western. My ongoing variationist analysis on the negation system in Japanese spoken in Mexico City reveals that both the Founder Principle (Mufwene 1996) and Dialects in Contact (Trudgill 1968) helped account for the negation system in this diaspora variety of Japanese.

#### *Edgewise Community: Real Estate and Asian Settlers in Tokyo*

After the latter half of the 1980's the number of Asian people has increased as "new comer" in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called "edge-wised community." Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents' motives in acquiring the housing and in having relationship with the network and other surroundings. Especially by focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes(1931): Chicago School third term, in his research of "Chicago real estate Board" housing land and building dealers are classified in five groups. In this report, combining both Hughes's classification and the reporter's classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between "cooperative channel" and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to "cooperative channel" centering housing land and building dealers in "edge-wised community," improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

#### *The Medicalization of "Depression" Across the Globe*

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical schemas used. Yet, little data exist to show whether and how individuals, across societies, construct the set of symptoms that are used in formal psychiatric diagnoses of depression. Specifically, this question of global medicalization raises issues of how individuals label problems of living and what attributions they report as underlying the problems. Drawing from the "layers of belief" concept, we examine the multiplicity of attributions and labels that individuals across 17 societies assign to a scenario meeting DSM-IV criteria for an "official" diagnosis of depression. These include social, biological and moral causes, and, designations of physical or mental illness or "the ups-and-downs of life". Here, we directly address the global spread of the medicalization of depression among the public in 17 societies as diverse as Brazil, South Africa, Germany, China, Iceland, and the United States. This is particularly important as more recent insights from medicalization theory highlight consumers as one of the major engine of medicalization within and across societies. Our findings indicate that there is a great cross-national variation in the medicalization of depression, yet a significant proportion of the public in all societies relies on Western scripts when formulating their ideas about what depression is and what should be done about it.

#### *"Cultural Toolboxes" of Mental Health Care: Depression and Public Construction of the Set of Appropriate Responses in 17 Countries*

Central to understanding illness behavior is an understanding of how the public constructs what constitutes an illness and what are appropriate responses to potential illnesses. However, we know little about these cultural toolboxes of

scripts, schemas and habitus for depression. Here we ask: How do individuals' construct the meaning and response to a set of behaviors that are consistent with DSM-IV diagnoses of major depression? And, how do individuals' past experiences with mental health problems shape these patterns? Using data from the Stigma in Global Context – Mental Health Study (SGC-MHS), we examine how nationally representative samples of individuals in 17 countries label and suggest what individuals should do, if anything, in response to a vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine social construction in a standardized survey results from the design of the instrumentation. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

#### *Housing Well Being and Social Inequality in Europe: A Comparative Analysis*

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there is an increase in housing costs and in social inequality. Though around three quarters of Europe's citizens own their home, the costs of accessing and maintaining a home have continued to rise and cannot only jeopardize housing security and quality, but can also stand in the way of life projects.

The paradox is that home ownership does not exclude housing deprivation.

The hypothesis is that households' social class plays a role in enabling owners to combine home ownership and well-being.

On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergence/convergence hypotheses stemming from the analysis of trends of living/housing conditions throughout Europe.

To support this claim, two main dimensions of housing inequality are identified: tenure and housing well-being. A micro level data analysis is performed, in order to take account of individual and family costs of access and maintenance of ownership in settings and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home owners cannot be regarded as a privileged category per se. Italy represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

#### *Social Mix in Deprived Areas: A Solution to What?*

##### **Social Mix in deprived areas: a solution to what?**

The research study refers to the results of a housing mix policy in Turin (Italy) based on the conversion of the real estate complexes built at the time of the 2006 Winter Olympic Games into public and subsidized housing and aimed at creating a housing mix capable of generating a social mix.

Social mix policies put together two main approaches to urban/housing policies: the *people based* (addressed to empowering and supporting people in their crucial life-housing transitions); *area based* (addressed to improving physical and social infrastructures of the neighborhood). The policymakers' expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwelling; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster contacts between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment. Starting from those expected results, the premises and outcomes of this specific attempt have been investigated. In the observed neighbourhood social mix has not produced all the hoped-for effects. The greatest benefits have been

in *limiting* the negative effects. The effects as regards *developing* resources have been more disappointing, both at the neighborhood level and in terms of interaction. It is possible that these latter effects need more time to make themselves felt. Or, perhaps, social mix is at most effective to curb vicious circles, but not to be "automatically" a source of virtuous circle.

**OLBROMSKI, CEZARY JÓZEF\*** (The Alexander S. Onassis Public Benefit Foundation, [colbromski@yahoo.com](mailto:colbromski@yahoo.com))

#### *Representations of the Social in Digitalized [and Cyber] Domains of the Non-Dedicated*

The paper is a part of the Author's project focused on creating new kinds of the natural by the social. The main thesis is that the social creates autonomy of the natural. Communication is abounding with symbolisations enough to force out traditional perception of the natural as something external. Civilization and culture are abounding with symbolizations enough to construct the autonomous natural. Up-to-date culture is dominated by hermeneutics, re-creations, and re-productions of achievements. It is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

The Author analyses presages of constructing of the natural as representations of the social. The natural becomes an autonomous domain of the social because it does not create the dedicated. The dedicated has been a kind of exaggeration, exemplification, and preservation of meanings. Creating-the-natural individual human beings are not referred to any non-verifiable external. Physical, digital, and cyber acts of creation of the natural are representations of the social and they are not participating in something given as unknown. In other words, acts of [self-]uncovering are connected with acts of [self-]creation of social subjects.

The Author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. The beginning of the next stage will be signed by rejections of the dedicated and it will be directed towards *creations* and *constructions* of the natural. An individual human beings become autonomous-as-non-dedicated subjects of the social. The up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneousness as the natural. The consciousness introduces itself as the natural. New kinds of cognitive and non-dedicated absorption will re-define—but without reference to ethics—Socrates' cognitive valuation. The subject is the reason.

**OLCON-KUBICKA, MARTA\*** (Polish Academy of Sciences, [marta.olcon@gmail.com](mailto:marta.olcon@gmail.com))

#### *Handling Money in Close Relationships in Young Family Households in Poland*

The paper discusses the monetary practices in close relationships in young family households in Poland and shows mutual influence of life and economic strategies made by young Poles who constitute the "free market generation." Young adults (18-35) who were growing up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. This generation is interesting as undergoing the transformation of models of family life, the process of individualization, and a shift in family roles. They develop new habits regarding money and consumption, and are subject to new kinds of risks and uncertainties.

In order to show the social context in which young family households' monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. Discourse analysis is focused on reconstruction of underlying assumptions ("common knowledge" and 'taken-for-granted' issues) about money in young family households and on identification of language patterns related to the issue.

The research has identified money and "monetary rules" as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare provided by a grandmother be rewarded financially by her daughter working full-time? How many bank accounts should a cohabiting couple open: one that is shared, two where each has a separate one, or three where each has a separate one and there is an additional one for household expenses? With a wide range of existing patterns related to the monetary practices in young family households the paper focuses on the process of rules establishing in the making.

#### *Moving out of "Their Places" – Structural Factors for Post-Independence Ukrainian Migration to Australia*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

Using a combination of migration literature analysis and practical experiences of Ukrainian migrants in Australia this paper examines systemic differences in actual mechanisms for incorporation and integration, depending on the period in which Australia accepted immigrants and Ukrainians left Ukraine. Particularly, it explores the role of Ukraine/Australia structural factors in generating post-independence Ukrainian immigration wave. Emerging from the dynamics of regime change in Ukraine and changes in Australian migration policy, the paper suggests there are 3 distinctive periods of post-independence Ukrainian immigration to Australia, the first decade: from 1991 until 1999; the second decade: from 2000-2009 and the beginning of the third: from 2010 until 2013. 51 "personal" stories enables to understand determinative structural factors that deeply influences migration, such as state policies, economic situations, and transnational networks, through comparative perspective in effecting the capacity and choices made by each migrant depending on his/her immigration period. It puts forward the idea that these factors strongly influenced and shaped migrants' life strategies and mechanisms of integration in recipient society as well as formed the way this ethnic minority incorporated itself in labour market of Australia.

**OLESEN, ANNETTE\*** (University of Southern Denmark, [aol@sam.sdu.dk](mailto:aol@sam.sdu.dk))

#### *Ex-Prisoners Debt: An Indirect Criminal Risk Factor*

Studies of criminal risk factors illustrate that the ex-prisoners, who successfully stay employed or begin an education, are less likely to find their way back on a criminal path.

However, the aforementioned preventive factors of criminal relapse become less effective due to the ex-prisoners debt. According to the Danish Administration of Justice Act, the state has a right of recourse against criminal offenders to recover legal costs (expenses to defense lawyers, DNA-tests, technical and accounting investigations etc.). Denmark is the only Scandinavian country, and the only country in the European Union, who does not take the income level of the convicted into consideration, when calculating the legal costs. Nor do they have a common practice of remitting convicted's considerable legal costs.

Thus, we must regard most ex-prisoners in Denmark as highly indebted to the state. The ex-prisoners debt is generally understood as causing financial problems, but legal regulation, as an unintended consequence of the indebtedness, is still poorly explored. My research is based on interviews and follow-up-interviews with 41 ex-prisoners. The interviews and follow-up-interviews have been carried out in Denmark during a 2.5 year period. In-depth insights into the ex-prisoners' indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workfare poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners' farther from the legitimated socio-economic advantaged affiliations because of their debt to the state.

#### RC29-504.1

**OLESEN, ANNETTE\*** (University of Southern Denmark, [aol@sam.sdu.dk](mailto:aol@sam.sdu.dk))

#### *The Al Capone Method in the Danish Police*

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method). The Al Capone Method employed by the police is named after, and draws inspiration from, the case against the infamous gangster-boss Al Capone in the 1930s. The federal prosecutors worked for years to build a case against Al Capone based on suspicions of murder, gambling, bootlegging rackets etc. but could only pin charges, and convict him, of tax evasion.

The (re)invention of the Al Capone Method combines monitoring and registration of high-risk-profile gang members. According to my research the method in general has an impact as desired by the Danish Government. However, research has not yet shed light on the unintended consequences associated with the method in a Danish context.

Taking the viewpoint of the gang members I will highlight and discuss these unintended consequences and examine their impact. My research is based on interviews and follow-up-interviews with 16 gang members, carried out in Denmark during a 2.5 year period. Additionally, the underlying basis of the research consists of a six months long field study of two gangs in Denmark.

The (re)invention of the Al Capone method in the Danish police force is based on a close interdisciplinary cooperation with the Tax Authority, Prosecuting Authority, Danish Financial Supervisory Authority, Danish Bar and Law Society, Public Prosecutor for Serious Economic Crime, Ministry of Justice, Ministry of Foreign Affairs, Danish Business Authority a.o. The interdisciplinary cooperation manifest

itself when policemen and staff members of the Tax Authority e.g. execute visitations and confiscations, tries to levy distress and conduct stop-and-search zones in high-risk areas.

**OLESEN, THOMAS\*** (Aarhus University, [tho@ps.au.dk](mailto:tho@ps.au.dk))

*Social Movements and Transnationality: A Conceptual Discussion*

In June 2009 a short grainy video shocked people all over the world. The video, recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dying from a gunshot inflicted by a regime related shooter during protests against the fraudulent Iranian presidential election. Neda almost instantly became a transnational injustice symbol representing the unjust nature of the Iranian regime. The case of Neda is interesting for social movement scholars for a variety of reasons, including the role of new media and the power of photography and citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptual as well as methodological questions about *the transnationality of transnational movements*. Because while Neda's televised death, motivated various activist organizations and interest organizations to act and criticize the Iranian regime, the activities around the Neda injustice symbol was much broader. Apart from activists, three categories of actors in particular were vociferous and active: politicians/political parties, media, and networked citizens all expressed outrage and demanded change on the basis of the footage.

This propels us to ask how we can best conceptualize the activities surrounding Neda's death. Was it a transnational social movement – or something else? In the paper I argue that it was in fact a social movement. Accordingly, I contend that the defining element of a movement is not the actors involved, but rather the *kind* of action expressed. I also propose that this way of understanding social movements may be especially pertinent in a transnational context where information circulates rapidly and where actors are increasingly networked, connected, and visible and able to engage in numerous and often different political issues at the same time.

*Economic Crisis and Health Inequalities in Italy*

In recent years Italy has been hit by a severe crisis, not only economically, with worrying repercussions on the health of its citizens. In fact, the current economic situation threatens to undermine all dimensions of well-being of a population. The situation is still ongoing, the timing and outcome is impossible to predict, but that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin et al., 2010; Cylus et al., 2012; Artazcoz et al., 2004) and data made it possible to substantiate the effects of unemployment and increasing poverty on health inequalities.

In this paper we will try to verify the consequences of the economic crisis on health in Italy, what is the state of health inequalities and what are the risk factors for proximal (material, psychosocial, occupational, environmental and behavioral), most affected by the economic situation.

Using data by "Health for All Italy" will rebuild the health status of the Italian population in the last 10 years to demonstrate the changes and estimate the consequences of the current crisis, and increase social inequalities.

In time of crisis it is even more necessary to ensure access to health services, especially to the weaker member of society, since the health needs may grow rapidly. Moreover, given the particular situation and conformation of Italy will

place the focus on geographical differences between the north and south of the country.

The first results show that, indeed, in recent years are increasing cases of suicide and depression, and all diseases related to the area of mental health (Costa et al., 2012). Health outcomes that are affected by an economic crisis ranging from subjective health, physical health, mental health and may vary in relation to socioeconomic status and place of residence.

*Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women*

Social, economic and political changes in the Brazilian society since redemocratization have strongly impacted relational and material conditions of low-class families. Acute transformations took place especially in the realms of motherhood, women's participation in the labor market, division of domestic labor and domestic violence throughout the last decades, as reflected in the life course of women. This paper presents results from qualitative research with two or three generations of women in urban, low-class families in Brazil. The interviews were conducted with several families as part of two research projects in recent years.

The reconstruction of women's life stories and biographical self-presentations will highlight the reproduction or transformation of social patterns against the backdrop of new socioeconomic configurations and social policies. This reconstruction will trace, on the one hand, the changes in the perception of women's role in society and family as it relates to gender equality. On the other hand, it will be discussed how women experience their embeddedness in family structures as influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities in Southeast-Brazil will be presented. The analysis of the narrative interviews, following the reflexive-reconstructive biographical method, focuses on how the interviewed women define their life course between opportunities and constraints. This is seen in close relation with the social developments taking place around the subjects, as postulated by the biographical policy analysis. The research results can also cast a light on different patterns of generational intercontingency found in the same social milieu.

*The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel Honneth's Critical Theory*

Together with Charles Taylor, Axel Honneth is among the most important proponents of a theoretical paradigm for the social sciences centered on the idea of "recognition." This notion has, of course, entirely different meanings in the various contexts in which it is called upon. In Honneth's specific case, it is of decisive importance the fact that his theorizations around the centrality of recognition relations for human self-realization are rooted precisely in the negative experiences of *denial of recognition*: disrespect or misrecognition. Despite the more than twenty years that separate us from the publication of Honneth's *Struggle for Recognition*, however, it seems that the theoretical genesis of this important book has not yet been grasped in its full potential for understanding today's modern societies and for a revitalization of the social sciences in general, and of Critical Theory in particular. This is due, as I see it, to the misreading of Honneth's works as much as to the author's insistence on making the philosophical work of Hegel the logical point of departure of his theory.

In this presentation, I intend to cast light on other motives that animated the formulation of this recognition-theoretical critical model, aside from the Hegelian works from the period of Jena: namely, the sociological and historiographical studies that convinced Honneth of the undeniable *moral character* of social struggles, that is, the American and especially British Sociology of the Working Classes that flourished in the 1980's. This influence reveals a closer relation between Honneth's work and empirical social research than is made visible in his books. I argue, finally, that this connection is a most fruitful one and that Honneth, however, partially abandons it in his recent works – despite its precise meta-theoretical formulation under the name of "normative reconstruction" in his latest book, *Das Recht der Freiheit* (2011).

*Indicators for the Social Impact of Social Sciences and Humanities Research: The FP7 IMPACT-EV Project*

There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor impact of funded SSH research has been the object of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7<sup>th</sup> Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation (ex-ante, in itinere and ex-post) and comparison of the impact and outcomes from SSH research, taking into account the latest quantitative and qualitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize indicators for both ex-ante and ex-post evaluation of the social impact of SSH research. In this paper, first results of the IMPACT-EV project will be presented to an international audience.

### *The Student Movement in the (Mexican) Democratic Process*

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition -from a seven decades hegemonic party rule to a right wing government- Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral frauds and social unrests. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was the cornerstone of social polarization, because it deepened inequalities both in opportunities for access to education and the struggle for democracy. Part of the explanation is a differential educational discourse, between public and private. This makes perceptions on democracy and social justice impact contradictory the identity of student groups.

Thus, in the middle of the election campaign the student movement "#yosoy132" emerged. It claimed the defense of democracy and faced the imposition of the old- regime candidate, due to his intricate web of complicity. The movement, originated in private universities and extended to the public, could articulate values of social justice and democratic liberties: radical transformation of mass media, for better education and against neoliberal economic model. It was expressed in a wide repertoire of demonstrations, rallies and plural networks with working and middle classes.

The differential impact of this movement on the national politics and media democratization, based on the previously discussed, is in the present debate contradictory. These are the aspects that will be developed in this paper.

**OLLINAHU, OSSI\*** (University of Geneva, [ossi.ollinaho@unige.ch](mailto:ossi.ollinaho@unige.ch))

### *Ontologies of Matter in Sociological Institutionalism*

I study ontologies of matter within sociological institutionalism and discuss their political implications with regard to environment and inequality. I categorize these ontologies in four distinct classes: 1) materiality as action; 2) materiality as a stage for social interaction; 3) materiality as tools employed in social interaction; and 4) materiality as required and transformed within social interaction. I refer to these ontologies as, "immaterial", "solid", "stuck", and "loose", respectively.

Marx saw materiality as technology and metabolic "rifts" – "stuck" and "loose" matter. In Veblen and Weber materiality takes mainly the form of "solid" matter to which social interaction adapts through habitualization and cultural refraction. However, they certainly also saw humans as affecting this materiality. For Durkheim material was mainly physical objects – "stuck" matter. Due to the cultural turn, materiality was subsequently neglected; at best, materiality was the "solid" background for social interactions. Materiality was rejuvenated in the end of 20th century as actions that together with cognitive dimension constitute institutions. This ontology left physical matter outside the picture.

Recently, this "immaterial" conception has been problematized by conceiving materiality as physical objects – "stuck" matter. Scholars have analyzed how technology affects and is embedded in institutionalization and institutional change. This ontology, however, fails to perceive the human influence on the environment. It belongs to the human exemptionalist paradigm, in which technology is seen to solve any problem that the "progress" might produce. I propose to integrate physical matter required to run social practices (e.g., food, energy, raw materials) and transformed within practices (e.g., to waste, pollution) to institutional theory. Without "loose" matter institutionalism cannot perceive the growing "rifts" that humanity is producing, most prominently embodied as climate change and the depletion of raw materials. The ontology of "loose" matter has direct implications on institutional change and indirect ones on inequality.

### *Austerity amidst Affluence: Cross-National Contrasts*

#### **Austerity amidst Affluence: Cross-National Contrasts**

Poverty has long been one of the most pressing social problems across the nations of the wealthy, advanced capitalist world. The poverty in wealthy countries is not on the same order of magnitude as in many less developed parts of the world, where grinding impoverishment is ubiquitous, and its impact and death toll staggering. Yet poverty is not only a 'Third World' concern. It is often suggested that many poor people in wealthy lands would be considered relatively well off if they were living in a poorer developing nation. But they are not, and the social and economic circumstances of the poor in rich nations often requires a much higher level of income, and access to many additional goods, amenities and services just to reach similar levels of capability and inclusion as those of many poorer people in developing countries.

This paper examines this urgent issue in Canada, the UK and the US where, despite their great prosperity, the rates, severity and consequences of poverty have intensified under neo-liberalism. It also provides cross-national contrasts examining poverty in the Nordic nations which, despite notable increases in inequality and social policy restructuring, still outperform their Anglo-American counterparts. This paper also critically examines dominant and popular theoretical perspectives and explanations that have been advanced to explain how poverty is generated and sustained and assesses the possibility for its eradication.

### *Distributed Expertise and Professional Collaboration: Recognizing Relational Interdependence in Healthcare*

#### **Background**

Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the complexities involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Bringing this knowledge together in every instance of patient care requires, amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

#### **Study and methods**

The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well as by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and more nurses than doctors participated, which reflects the ratio of nurses to doctors.

#### **Outline of paper presentation**

The purpose of the presentation is to describe how different modes of expert knowing gives rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

*Party Nomination of Candidates and Under-Represented Groups in Nigeria: A Study of Local Council Elections in Enugu State*

This paper is premised on the nomination of 17 council chairmen (not Chairwomen) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party's policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties are not inclusive, and the candidates they nominate for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political 'godfather' and women underrepresentation in municipal politics in Enugu state since 1999.

**OMOBOWALE, AYOKUNLE OLUMUYIWA\*** (University of Ibadan, [myuiwaking@yahoo.com](mailto:myuiwaking@yahoo.com))

*Patronage in Pre-Colonial and Colonial Ibadan, Nigeria*

This paper conducts a comparative analysis of patronage in pre-colonial and colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a military settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a military empire with sovereignty over a large spectrum of Yorubaland by the end of the 19<sup>th</sup> Century. Ibadan developed a unique patronage structure based on the *babaogun* clientelistic system. The *babaogun* system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the *babaogun* system into governance, equipping the chiefs with economic and coercive powers, which of course sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general could be traced to the political economy of colonial patronage and succeeding neo-colonial system. Using archival and ethnographic methods, this paper provides the context of patronage in Ibadan in pre-colonial and colonial eras.

*Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa*

The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of 'unfavourable inclusion' suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living of different categories of people within a society. This paper looks at the implications of the activities of micro-credit institutions as a mechanism of deprivation, even when people are included in the form of being actively employed. In fact, employment has become a conveyor belt that drives people to these institutions in the South African context. We will argue that identifying the social institutions that propagate deprivation of capabilities and functioning as the target of social policy transcend the limitations of social exclusion and inclusion debate.

*The "Romantic Love" of Young Adults in Japan*

Since the 1980s, the late marriage and non-marriage action has become remarkable and decrease-in-the-birthrate problem has started gaining people's attention in Japan. In these social backgrounds, the importance of research on "romantic love" before marriage was also started recognizing. However, the study accumulations of "romantic love" are still not enough in the area of family sociology. This study aims to consider how young adults in Japan meaning their "romantic love" by focusing on their rhetoric and gender perspective. The research data are based on 4 group discussions and 4 semi-structured interviews with hetero-

sexual single men and woman, born in 1983 to in 1993. Each group is divided by social positions such as students, company employees and gender. Using these data, I found that Japanese young adults tie the construal relationship by declaration and whether they are dating officially or not is quite important to have sex because it can be the permission, which shows their sexual relationships are right socially. Moreover, the analysis proves that there are not big differences about sexual behavior by gender; however, it shows that there are some differences in awareness of the marriage and "romantic love" by gender. Especially, women group members tend to set the time limit to 30 years old to get marriage and to think that they should date one who is the right for marriage otherwise they feel they are wasting time. However, from the narratives of survey respondents, it suggests conditions required for marriage and conditions required for romantic love are ambivalence. In Japan where a modern family ideology and a love marriage ideology are left firmly, it could make not only marriage but also "romantic love" difficult.

*Transformation of Framings of Seafood Sustainability Certification Schemes*

International sustainability certification schemes have been widely accepted at industries and markets partially because of their common basic structure represented by transparency, science-based measurable standers, and third-party auditing. In result such certification schemes provide alternative regulatory mechanism goes beyond borders depending on types of commodities targeted. Particularly certification schemes dealing with seafood, both wild and farmed, have been showing great expansion in the world. As they come to the fore, the number of research pointing out their shortcomings also increases.

While maintaining common basic principles of third-party certifications firmly for their credibility purpose, the framings of each scheme shows gradual transformation corresponding to criticisms. Drawing on three different international seafood certification schemes namely Natureland's organic seafood, Marine Stewardship Council and Aquaculture Stewardship Council, this paper analyzes the transformation of framing of seafood certification schemes in which each scheme integrate knowledge other than scientific ones into standards and structure of scheme. In other words, it is a new function in certification framing to achieve fine balance between credibility and critical mass.

*Comparative Sociology of 11 to 18 Examinations in Thailand, England, and Japan*

This paper proposes a comparison of 11 to 18 examinations and the changes they have undergone in Thailand, England, and Japan. This has valuable significance as a focus of Comparative Sociology; this series of examinations has had common and persistent importance in various societies, which makes them an appropriate frame of reference for comparison.

The first objective of this paper is to demonstrate, by using the *socio-cultural network* concept, that there are profound similarities and differences in the changes in 11 to 18 examinations in these areas. These results will reveal a *process* that have not been detected by previous single-case studies.

The second objective of this paper is to propose methodological innovations for Comparative Sociology. It combines qualitative and quantitative methods, not by simple mixture but by close connection. Through this innovation, the Comparative Sociology of 11 to 18 examinations will serve as a way to resolve the eternal tension that sociologists face between science and literature.

*Reconstructing Sustainable Communities through Mutual Help Networks in East Asia: A Comparison of Mutual Help Networks in Japan, South Korea and China*

One way that man has maintained society throughout history is through networks of mutual help. The purpose of this paper is to show that such traditional mutual help persists in East Asia, but has been transformed in the transition to modernity and has contributed to the development of both South Korean and Chinese modern society. Mutual help in these two societies is compared with the already well-studied Japanese case. The phenomenon is divided into three categories. One is reciprocity in helping to plant rice and re-roof houses by exchanging labor. The second is redistribution. In exchange for the right to get goods from a common store, local people have the obligation to maintain a common pool of resources. Finally, unidirectional help refers to support in funeral and wedding

ceremonies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions has continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

### *Life Experiences of the Children of Marmara Earthquake and Adults of Today: An Example from Adapazari*

Study will be focusing on the impact of disasters to the life experiences of adults of today but who were the children at the time of Marmara earthquake in 1999.

There are inadequate number of studies basing on merely findings which were derived from children of disaster periods. The coexisted studies reveals that there are differences in the impacts of disasters on children in disaster processes. Survival rates of children according age, gender and accumulated disaster culture may differ according to different factors (cultural, economic, social, political etc.)

This study aims to find out post earthquake impact of disaster on children up to their adult ages.

Methodologically study bases on a field work which will be conducted on a student group of a primary and secondary school teacher's classes at the time of Marmara earthquakes in 1999. Students will be traced 14 years after through snowball sampling in the Adapazari, Turkey in 2013.

The data will be derived from questionnaires, interviews and video records. Literature reviews and visual data analysis will be used. Qualitative and quantitative approaches will be used together in triangulation. SPSS program will be used for quantitative analyses.

The findings will be presented within comparative perspective, through references to findings from coexisted studies and examples from the world.

The study will be consisted of five main parts: namely introduction, methodology, review of coexisted studies, findings and conclusions.

## RC24-436.4

**ONER, ILKNUR\*** (Firat University, [ihgmavi@yahoo.com](mailto:ihgmavi@yahoo.com))

### *The Second Group of Keban Dam Studies in Upper Part of Fýrat Basin*

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and later on similar to many projects in the world. However, there are on going high dam projects in many countries on the neck of many rivers and river basins. Kariba, Aswan, James Bay I-II, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focus of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas inclusive of collaboration of all scientific areas without isolating local issues. The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project And recent developments, rural-urban and environmental policies in the upper part of the Keban dam and upper part of the Fýrat Basin. The findings will be discussed comparatively. A special attention will be given to the protected natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

### *The Competency of Midwives in Independent Practice: Their Supporting Mothers' Autonomy in Childrearing*

The objective of the present study is to clarify the competency of private midwives through examination of how midwives help mothers gain autonomy in childrearing. An empowerment approach was used as a conceptual framework. This research was conducted with midwives working at three facilities. Data were obtained by observing each encounter between mothers and midwives; that was realized from the 30<sup>th</sup> week of mothers' pregnancy to 3 months after their delivery. In addition, the midwives and the mothers were interviewed. Data were analyzed by qualitative and inductive analysis. Recorded data were coded and categorized, and a total of 7 categories and 39 subcategories were extracted. The results showed that midwives build relationships of mutual trust with mothers, empowering mothers through psychological and educational support and helping them to be independent. The competency of midwives in independent practice could be classified into the following five types: 1) based on mutual trust, the midwife builds a relationship with each client to facilitate friendly interactions as a health-care professional; 2) the midwife evaluates situations and assesses the skill set of each client; 3) the midwife becomes close to each client and provides individual assistance; 4) the midwife provides reliable techniques in various situations; and 5) the midwife offers information beforehand to prepare each pregnant woman to become a mother and then supports the new family after birth.

### *International / Military-Public-Private Cooperation in Disaster Relief \ Lessons Learned from Great East Japan Earthquake in 2011*

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private actors from inside and outside of Japan were engaged in disaster relief. These international/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the view point the MOD and JSDF. First, it was discovered that there was considerable room for improvement in Japan-U.S. bilateral and joint operations in the event of a large natural disaster, even though they have a half-century record of collaboration under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Collaboration with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster kept them from exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake.

A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

### *Characteristics of Japanese Policy Making Process -- Finding from the Carbon Tax Consideration History*

After spending more than two decades for consideration, Japan introduced the carbon tax (officially named "Tax for Climate Change Mitigation") on October 1st, 2012. Japanese carbon tax adds a tax rate of JPY289 per ton CO2 emissions above tax rates to the petroleum and coal tax. Compared to the carbon taxes in European countries, its features can be seen in its low tax rate, revenue increase and earmarked for energy-oriented CO2 emissions.

Generally, a policy is established through a certain policy making process where not only rationality of policy contents are considered but also the interests of various stakeholders under political, social and economic circumstances are adjusted. In order to introduce appropriate policies for achieving a low-carbon society, it is essential to find problems of policy making processes and constantly strives for their improvements. Therefore, this study aims at approaching for elucidation of the characteristics of Japanese policy making process by investigating the carbon tax consideration history.

The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to grasp the trends of discussion. For this analysis, the chronological method and a sociological theory called "organization theory" forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue "rational strategies" under "structured conditions" defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

### *Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak's Egypt*

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called 'Arab revolutions' in 2011. Some attribute the young protagonists with more agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

This paper argues that locating young people's activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public dissent occupied only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

### *Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective*

What are the significance and problems in Ulrich Beck's concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of 'outsiders' across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. While Beck's argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that boundaries between insiders and outsiders are constantly being erased and redrawn, ultimately his model of cosmopolitan modernization aims to locate alternative forms of 'with-ness' (or being together with fellow citizens) and thus shares basic traits of nationalism. To this end, this presentation firstly examines Beck's concept of reflexive modernization by focusing on the changes in territorial formations, individual conceptions, and the linear growth model. Secondly, this paper critiques Beck's concept through a specific focus on critical discussions of social space developed by Ghassan Hage, Uma Narayan and David Harvey. Building off of these insights, this paper argues that socio-spatial conceptions that represent 'outsiders' need to re-examined in relational terms. Specifically, this paper proposes Harvey's idea of relational space as a way of taking into account the shifting and emergent boundaries of inside/outside and self/other that characterize the 'uncontrollability' of contemporary social space. It further suggests an integrated socio-spatial perspective for understanding the dynamic tensions within 'cosmopolitan modernization'.

### *How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region*

Recent conflict events in the Niger Delta region have seen the changing faces of the impacts of the conflicts on the women. There is an increasing use of violence and rape of women as a tool of warfare by both the militias and the State security forces, thereby exacerbating the rise in new HIV infections in the regions. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (FHHs) in many parts of the Niger Delta region and Nigeria due to the death of a spouse in the conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole bear the brunt of the conflict in the region due to their low socio-economic position in the patriarchal society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resources, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impassive observers of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women's vulnerability to conflict and conflict resolution.

### *Structurally Heightenstructurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City*

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and industrial estates established by local and foreign investment. These industrial estates require a large pool of low-paid workers who are inevitably employed on a very short-term basis. Thus they are constantly forced to move to the new areas and new workplaces due to the effects of new practices governing the international division of labor.

Although previous community research has focused on community structure and participation rate, it has not grasped the fact that currently, community members are constantly changing. This paper explains the mechanism of heightened mobility of community members, and describes the community around Jakarta mainly based on my own door-to-door survey of 659 suburban residents.

This data revealed that almost all of the residents (83.9%) are newcomers. The people who had lived there before building the industrial estates have already moved, so the activities of the old neighborhood associations (called *Rukun-Tetangga /Rukun-Warga*) have almost stopped. Nevertheless, 62.3% of newcomers still join *Gotong-Royong* (traditional mutual assistance activities) and 32.6% of them are involved in religious (Islamic) activities. This implies that people are trying to search for new ways to enhance social unity, away from the old community structure.

### *Governing Sustainable Seafood*

The worldwide consumption of seafood is increasing year over year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including but not limited to NGO-led initiatives such as the Marine and Aquaculture Stew-

ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalG.A.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g. auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter their own reputational risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

### *The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico*

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislators through lobbying, thus limiting the national Government's possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the possibility of a population's involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions.

The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012.

The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. The results also suggest the vulnerability of these communities when faced with the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

### *Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)*

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of 'less-than-lethal' force options, by Canadian police. The paper explicates the legitimization of CEDs as a function of the intrinsically complex interaction of organizational dynamics, such as growing professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by CEDs legitimization are enunciated as gatekeeping and structuring ideational processes. The paper concludes with a trifecta of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

### *El Ocio Como Agenda Para Nuevas Políticas De Vida*

Mi propuesta de ponencia para este panel aborda el tema del ocio en el siglo XXI como uno que merece mayor atención adscribiéndose así a una agenda de políticas de conciliación social de corte internacional. Lejos de pensar en las prácticas tradicionales de luchas políticas locales e internacionales, mi trabajo se concentra en una estrategia molecular, rizomática que pudiera desplazarse al campo nacional e internacional. En la medida que muchas de las sociedades contemporáneas confrontan serios problemas sociales en los cuales se observa una burocratización de la vida cotidiana, niveles de violencia altos, desempleo, multiempleo, precariedad socioeconómica y economías informales, como actividades que copan los tiempos y generan niveles significativos de ansiedad y salud. Ante este escenario, el ocio aparece como un resquicio cotidiano. En este sentido, propongo analizar aquellos factores socioeconómicos, políticos y culturales que deben reenfocarse para producir unas políticas de conciliación social donde el trabajo asalariado, no remunerado, informal, doméstico, la recreación, el consumo, la cultura y el ocio se recompensen con otra economía digna y sostenible de los tiempos e imaginarios sociales.

### *The Role of Leisure in the Reproduction of Inequalities: Puerto Rico Case Study*

In the contemporary context of enduring economic crisis the concepts of poverty, inequality, inequity, and exclusion claim great discursive visibility and relevance in both, the academia and the media. The global reorganization of capital has intensified capitalism's increasing trend of labor force exclusion and the possibility of a jobless future for younger generations and displaced workers. This is not the only phenomenon that threatens quality of life and social polarization in societies particularly hit by the economic crisis. Leisure practices and rituals have changed in this economic climate. After a brief analysis of the structures of inequality in Puerto Rico, relying on key socioeconomic indicators, recent government policies, enduring colonial-political arrangements, evidence of an increasing deterioration of the public arena and our participants' testimonies on their consumer and leisure styles, we will like to argue that (1) the nature and meanings ascribed to leisure by Puerto Ricans have an impact on the reproduction of economic and social inequalities and (2) some of the activities that are identified as leisure constitute an important part of the strategies deployed by the disadvantage to lessen and neutralize the personal effects of social and economic inequality. Our conclusions will be supported by state of the art quantitative and qualitative research conducted by the Grupo de Estudios del Trabajo (GET) from the University of Puerto Rico during 2013. We will discuss our preliminary findings (a) on time allocation for leisure, (b) the most common activities taken as such and (c) the meanings ascribed to them.

### *Fukushima Nuclear Disaster and Theories of Tort Law*

The Fukushima Nuclear Disaster brought widespread and long-term damage, which forced traditional theories of tort law face with many difficult challenges. According to the case law, a wrongdoer should compensate any damage claimed by his/her victim, if the victim can prove that the wrongdoer's act was a legally sufficient cause of such damage. However, certain types of damage from the Fukushima Nuclear Disaster are not fit into the traditional theories of damage. For instance, how to calculate non-pecuniary loss suffered by an evacuee followed by the governmental instruction? As of August 2013, 81,300 residents (28,800 households) were still restricted their access to their home in varying degree. Among them, 24,800 residents (9,200 households) have their houses in the areas where the annual integral dose of radiation is expected to be 20mSv or more within five years and the current integral dose of radiation per year is 50mSv or more. How to calculate their fear during the evacuation? How to calculate their concern over the risk of radiation injury? How to calculate their uncomfortable life in their temporary housing? How to calculate their loss of hometown? In addition, statute of limitations put another hurdle for the victims. Moreover, the government liability is called into question. Some victims have filed lawsuits against the TEPCO and the government, even though the Dispute Settlement Center for Nuclear Disaster Compensation was established to assisting the victims. Thus, in my presentation, I will discuss the recent developments of tort law after the Fukushima Nuclear Disaster.

**OSAKI, HIROKO\*** (Tokyo Institute of Technology,  
[osaki.h.aa@m.titech.ac.jp](mailto:osaki.h.aa@m.titech.ac.jp))

*Moralistic Trust and Rationality: The Individualization of Trust*

This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin(1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous studies consider that institutional confidence and voluntary association membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people's action. Therefore institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association membership creates trust to members in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as "individualization of trust." Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the internalized moral value is assumed to be rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative-analyses based on the questionnaire survey data in Japan.

**CATARINO, CHRISTINE** (Université Paris Ouest Nanterre La Défense)

*The Migration and Development Nexus: Gender Insights*

Research on development and migration has mostly stemmed from an economic concern (assessing the volume, cost and contribution of remittances to the local development), largely overlooking women and gender issues. The New Economics of Labour Migration (NELM), the transnational paradigm and the livelihood approaches are known to have enlarged the scope of the migration and development nexus (Haas 2010). One aim of our paper is to review how gender studies have also contributed to the shifts in the debate on migration and development and how gender issues have been incorporated.

On the other hand, over the last decade, abundant literature relating to the globalization of social reproduction (the so-called 'global care chains') has helped to make the issue of migrant women more visible. This literature has tended to highlight women's crucial contribution to transnational reproductive labor (Hochschild 2000). However, it largely fails to capture the articulation of productive and reproductive strategies. This paper defends the necessity of rethinking the migration and development nexus according to the articulation of transnational households' productive and reproductive strategies.

We will review the literature on migrations, women/gender and development. Then, on the basis of case studies, we will assess to what extent do migrants' productive and reproductive strategies (care and remittances, saving and consuming, housing, health and education) determine the gender relations and the social mobility of migrant household members.

*Social Networks, Networking, and Ethnic Group Membership in a Talent Pool*

Even among highly educated professionals, minority ethnics are disadvantaged relative to dominant ethnics in access to organizational resources, power, and

rewards. Social capital is an important factor in reproducing such disadvantages, as minority ethnics have less access to and reap fewer benefits from social networks. While the general positive relationship between social capital and career success is well established, limited research has been conducted on how social capital is acquired following organizational entry, and how this process is affected by social group membership in terms of ethnicity and gender. Focusing on the relationship between social capital and social group membership, we collected longitudinal social network data among a diverse talent pool of ten trainees of one of the large urban municipalities in the Netherlands. Data collection started on the first day and continued throughout the first three months of employment. Survey items addressed occasional or recurring contacts based on work-related advice, non-work-related advice, and friendship, resulting in indicators of network size, centrality, and homophily. We followed the development of social capital within the closed network of trainees and their potential open networks with all municipal employees. Also, we conducted semi-structured interviews with each of the trainees after their first year of employment to explore individual networking behavior (building, maintaining, and using social network contacts), and matching career experiences in terms of their access to opportunities and career support. Preliminary analyses suggest differences between dominant and minority group members in terms of network structure, networking behavior, and career experiences. By combining quantitative data on network structure and qualitative data on networking behavior, we address the common critique that focusing on structure and omitting agency fails to enhance our understanding of how practices and behaviors serve in ultimately (re)producing differences in network structures and their consequences.

*The Grimpest Spectre: The Famine Emergency of 1946*

"Let them starve," a Maine farmwoman angrily responded to a *Successful Farmer* pollster about the Famine Emergency of 1946 throughout Europe and Asia. A more thoughtful Idaho farmer explained, "Normal people, in a land of plenty, should not stand by and see any group of people starve." Yet only 51 percent of six million American farmers believed aid should be sent to starving Europeans and Asians. By mid-1946 agricultural economists narrowed this complex issue of famine relief to a simple economic ultimatum of thirty cents more per bushel of wheat. Would Americans respond in a generous, ethically-minded spirit or a miserly, profit-motivated manner?

When the Second World War finally ended, food mattered most. Rations and calories--mostly bread and potatoes--remained below subsistence level in many warring countries but now started plummeting after WWII to record starvation levels. After war's end in Eastern Europe, the Soviet Union, China, and India, more people succumbed to starvation than during the violent conflict. As Winston Churchill proclaimed within his infamous "iron curtain speech, 1946 had become "this period when famine stalks the earth." At the same time, President Truman considered this foreign aid as a "solemn obligation."

To fulfill this obligation, Truman appointed former President Herbert Hoover, whose expertise saved millions of European lives following the Great War, to be chair of the Famine Emergency Relief Committee, and Hoover eagerly embraced the challenge, announcing via radio that half a billion people faced starvation worldwide. Hoover, his name synonymous with relief in Belgium and Poland, would now be visiting the children of the children he had saved thirty years ago, but the death and destruction by 1946 had dramatically escalated. He visited thirty-five countries in less than two months, collecting famine information that would later contribute to the establishment of the Marshall Plan.

*Canadian Immigrant Women Engineers' Work and Life: Experiences and Change*

The number of women in engineering, in Canada, is growing, yet men and Canadian-educated women engineers continue to outnumber immigrant women engineers especially at the upper level of the profession. For the last 10 years, the majority of immigrants to Canada have been mostly comprised of highly educated, internationally trained professionals, many of whom are women. Many of these women hold university degrees in engineering and other academic disciplines and almost all of them have work experience in their professions. Yet few immigrant women engineers are reentering their profession in Canada and only a handful of them advance in their career, despite a decade long effort by Canadian educational institutions, the Canadian government, and Ontario's engineering regulatory body to involve more women into the profession.

In this paper I introduce the analytic complexities that I will examine in my doctoral research whose theme is an intersectional analysis of the changing experiences of immigrant women engineers in Canada, from various educational, ethnic/race/national origin and social class backgrounds. Based on life history interviews, completed by statistical and other research literature, this paper proposes research which will explore influential social and environmental factors that have

shaped immigrant women's professional and life experiences and contributed to their underrepresentation in the profession in Canada for the last 10 years, in an intersectional analysis of gender, race/ethnicity/birthplace, and class relations which considers changes or their absence over time.

#### *"New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities"*

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandoned conscription, there have almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory military training aims at giving participants an insight into how a career in the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with separate facilities. The SAF and the SPES share 50 % of the education and training at the barracks.

Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training.

The paper assesses the effectiveness of this new and original project.

#### *Comparative Analysis of Regional Governance*

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated that designated the ways of managing resources for porcelain production and distribution. With comparative analysis of arrangements of porcelain manufacturing in three regions, the presentation shows how the relationships of political authorities and those who were engaged in the industry shaped the distinctive ways of governing resources in each of these regions. Analysis illustrates regional variations of managing resources for porcelains conditioned by different ways and degrees of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19<sup>th</sup> century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by the regional political authorities and their relations with those who were engaged in production and distribution shaped the distinctive styles of managing resources for porcelain production in each region. Comparative regional analysis illuminates different ways of governing resources for porcelain production within Japan at the end of the 19<sup>th</sup> century. The presentation will invite a further discussion of social changes by bringing other experiences in the world.

#### *Healthcare Information-Seeking Behavior of Evacuees after the Great East Japan Earthquake: A Qualitative Interview Study*

**Background:** The Great East Japan Earthquake devastated the northeast Japan on March 11, 2011. This disaster was characterized by the combined effects of the massive earthquake and tsunami, and the nuclear power plant accident caused by the tsunami. Approximately 300,000 people had to remain evacuees still today (May 2013), having fled to other areas throughout Japan. Subsequently, the evacuees have faced various health problems. Building new relationships with healthcare resources is an important task. This study ascertains the process of healthcare information-seeking behavior of evacuees to restore the access to these resources.

**Methods:** Semi-structured interviews were conducted with 11 participants. They had been staying in City A in Kyoto Prefecture since the disaster and were recruited through an organization that assists evacuees. The interviews were conducted between September and November 2012. Data were analyzed using the constant comparative method of qualitative research.

**Results:** The participants were nine women and two men aged 30–82 years (median = 49 years). Three categories were emerged from the interview data: (a) seeking healthcare information from people around, (b) barriers to connect with others, and (c) community formation. The evacuees had formed relationships with the people from whom they sought healthcare information. In the early stage, community formation was hampered by overreaction to personal information protection by the local government. Women who had left their families and fled with their children out of concern for radiation damage found it particularly difficult to communicate with others. They were finding various opportunities to connect with others and committed to community formation.

**Conclusions:** The evacuees developed relationships with people in their new neighborhood, and sought healthcare information to restore their access to these resources. Assistance with community formation among evacuees has arisen as a new issue of public health.

#### *Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan*

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called "Ho Terasu." These reforms were intended to enhance the people's access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead's study on the quality of legal aid lawyers in U.K. One of the

striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

#### *The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria*

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women's participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety.

In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports.

Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the unique Environmental Agriculture Policy (ÖPUL). In addition, women comprise 36% (2012) of farm managers, a high percentage within the EU.

Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher.

Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved *Meister* status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

#### *Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere*

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought severe conflicts in rural area to challenge local governance in which government and industries maintain robust alliance to convert local natural resources into their own wealth on the one hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a "structure" to be changed by any institutional reform, however, more endeavor to find a fundamental approach to deepen the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Itai-Itai disease caused by untreated industrial wastewater under rapid economic growth in 1950's to 70's, it reminds us a series of lawsuits by victims with their supporters were followed by institutional reform for pro-victims. However, such lawsuits succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although political reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting "dialogue and cooperation" as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of "community roundtable meetings" in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by "micropolitics" among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.

#### *Gender Pyramid Politics: Trends of Global Changes*

Gender Pyramid Politics: Trends of Global Change

Nowadays in the contemporary world the gender pyramid of power is maintained. The low representation of women at the making-decision level is observed both in the public and private areas of employment. It is most evident in the political sphere - the sphere of traditional male domination. There is the opinion, that women can expect to realize their ambitions in this sphere in the last place.

At the same time we can speak about some changes in the presented social scheme. Over the past decades, some states have demonstrated not only the increasing number of women in the government, but also the obvious mental shifts in sharing of gender roles. In this case, it is typical that the culture of these countries have not been traditionally presented as gender-focused, the movement for women's rights has not existed, and the women themselves do not consider their political advancement as "the social breakthrough."

On the contrary, in the states where the issues of gender equality have been raising at the higher levels for many decades, significant neutralization of the principle of gender pyramid can't be noticed.

In this regard, the following questions rouse great interest:

What are the social, cultural and legal reasons caused this situation?

Does the economic aspect of the pyramid change with the political advancement of women? Or is the stay of women in the authority only the question of formality?

What are the prospects of gender equality / inequality in the epoch of globalization?

#### *Subsidized Housing and the Concentration of Poverty in the U.S*

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing policies aimed to integrate low-income renters into lower-poverty neighborhoods. New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty deconcentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

#### *SARC (Scientists/Artists Research Collaborations)*

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well established, international electronic festival called ISEA, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support on the University of New Mexico campus in Albuquerque by CARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program's next phase development. There is currently no pragmatic reality to SARC's ongoing programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.

What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-sci world as it develops at break neck speed. What are the dangers art-sci collaborations will be likely to confront in the cycle of art world attention and what that means. What is the best mix of art and science; should one domain dominate the other? A most important question is how do we judge the collaboration; are some collaborations between an artist and a scientist not art/science?

### *Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development*

Complying with policy requires of practitioners that their actions are held to account; and this applies to the context of sustainable development of the social housing sector and its use of renewable technologies. The building of 'sustainable housing' is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how 'accountability' is promoted by both the UK government's environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council's target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

### *Transforming Energy Provision and Reducing Carbon Emissions*

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and Internet hubs are, for instance, now part of our everyday sceneries. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society will cope with it? Various actors are engaged in initiatives seeking to tackle this problem. Engineers are developing a number of possible solutions by attempting to 're-engineer' the ways in which electricity is provided to so-called end-users: for example, voltage reduction. Focusing on the proposed socio-technological aspects of these solutions, this paper discusses how engineers conceive of the problem of ever-increasing carbon emissions, investigating the framework and assumptions about socio-technological provision and usage. This includes, for example, an analysis of how transformation processes in energy systems are understood and configured. We will present our findings from interviews with engineers who are involved in a large-scale European research project that seeks to offer a solution.

### *Current Situation and Problems of Commercial Sex Workers (CSWs) in Japan*

According to Japan's National Police Agency, 30,133 businesses were reported to act in sex industry in Japan in 2012. The number of CSWs are estimated to amount to at least a few hundreds of thousands. Japanese Anti-prostitution law established in 1956 prohibits paid sexual intercourse. As a result, many kinds of sex work which avoid this law have been created. Most of them offer a variety of sexual services except for sexual intercourse, such as "Fashion health" and "Image

club". But there also exists sex work which includes "unpaid" sexual intercourse, such as "Soap land". In soap lands, CSWs have sexual intercourse with their customers of their own free wills, not as a part of service, though it is an unspoken agreement that sexual intercourse is included. We conducted semi-structured interviews with 17 CSWs who work for a soap land in Tokyo mainly in order to study their psychological tendencies and problems. We found that all of them had experienced other kinds of sex work not including sexual intercourse before they began working for the soap land and that they liked a soap land job best. Despite a lot of social and psychological disadvantages due to sex work, they gave more importance to advantages. It can be said that Soap land is in a gray zone legally, but this problem has been left vague for a long time in Japan. In 1990s, there was a heated discussion about "Should prostitution be made legal?" in Japan. But little attention was paid to the feelings and opinions of CSWs. Presently Soap land seems to coexist with society in harmony with Japanese original culture and law system. It is an important challenge for the future sex work in Japan how to keep this harmony unchanged.

### *Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In a Racist Public Discourse?*

The results of our empirical studies about male youth in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take seriously racist experiences, but also to deal with the young men's discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account.

However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants' successful integration. In these discourses often two racialised images are constructed: the native 'own people' are contrasted by 'Muslim immigrants'. While the former constitutes the 'tolerant' side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the ridge. We have noticed that the focus of attention is shifted to 'their' homophobia which is constructed as an effect of Muslim culture and its primitive and uncivilized patriarchal values, while the racism experiences of the young men are then usually pushed into the backgrounds.

In our paper we will present key findings of our studies and we will share our experiences with the publication of such results. Our aim is a discussion not only about ethical considerations and responsibilities but also about how to actively engage in altering the racist public discourse.

### *Sociality and Individuality of Language in Durkheim and Bergson*

The purpose of this presentation is to discern the role of language which we use to recognize ourselves and objects, and the phase of the sociality and individuality which language has. With this intention, I'll compare the category theory of Durkheim with Bergson's language criticism.

Human being differs from animal in that he uses language. The man synthesizes the special, the accidental and the individual by the reason, and he thinks by means of universal forms. He can understand the empiric things in the framework of abstract concept and, by exchanging this concepts, he can communicate with others who have their own experiences.

About this language, Durkheim emphasizes that it is given by society. A concept is not my concept. He thinks that the concept is essentially impersonal representation. The sign is a system preceding the individual's birth and given by the society. Not until he thought abstractly by the sign did a man become a human being.

Bergson, a contemporary of Durkheim thinks that the self is socialized itself, and the soul of the society is immanent in the language supporting our thinking.

But Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn't consider that the essence of the object can be perceived from the outside, express itself by symbols, being incommensurable with all something else. In opposition to it, he considers that what is gotten by the analysis of the outside

is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state.

In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

##### *Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey*

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the consequences of these conflicts. It comparatively examines three cases that involve different levels of conflicts on the issue of gold-mining in a range of local settings in Turkey, namely, Artvin, Usak, and Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and web sites. Our findings indicate that state authorities and mining multinationals form a 'pro-mining' coalition against environmental protesters, developing common strategies and tactics against the protests. The intensity of conflicts between the environmental protest movements and the pro-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In those cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant party in the Artvin case, the pro-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and pro-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

**OZEN, HAYRIYE\*** (Atilim University, [hozen@atilim.edu.tr](mailto:hozen@atilim.edu.tr))

##### *Radical Left Wing Groups and Environmental Mobilizations in Turkey*

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations proved decisive in the generation of these grass-roots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protesters to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protesters as well as to repress the environmental movements.

##### *What Does Gezi Park Resistance Mean in Turkish Democracy?*

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion about secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half of the voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained preeminence. Consequently, wide-spread popular dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force.

Gezi Park protests were an expression of the "pluralist" anxieties and democratic hopes of the people.

Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21<sup>st</sup> century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21<sup>st</sup> century, such as the Arab Spring, and Occupy Wall Street.

##### *Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)*

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.

*Transnational Pentecostal Entrepreneurship: From Africa to Europe, the Challenge of a New Competitive Christianity*

African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christianity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian denominations and churches in Europe, including the Orthodox Church as is well demonstrated by the huge success of the Pentecostal Church of the Nigerian pastor Sunday Adelaja in Ukraine.

*Regulation: The Third Party in the Transformation of Patient-Professional Relations*

Regulatory arrangements have the capacity to codify elements of the relationship between patients and professionals. They can articulate the expectations that patients can reasonably have of their treating health professional, and also provide a mechanism to notify and address instances where defined standards of professional practice are not met.

This paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for reform, including instances of regulatory failure that led to patient harm. It also incorporates analysis of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia's eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

The transformative effect of ongoing consumer advocacy efforts is also reflected through the legislative requirement for community members to sit on all decision-making bodies that administer the Scheme. Another significant outcome of the Scheme has been the provision of single register of practitioners that provides improved transparency with patients now able to directly access information about the registration status and qualifications of their health professionals.

*The Culture of Women's Soccer in Senegal: Reconciling Dissonance Among Representation*

What does it mean to be a "footballeuse" (a soccer player) in Senegal? In Senegal, women's soccer is more than a game; it is a counterculture that promotes provocation and antagonism of mainstream social norms and conventions. It is a culture framed by the shared experience of struggle that embodies strength, aggression and unconformity. In this paper, I show how the "footballeuse" culture is often in conflict with the dominant gender ideology, religious beliefs, sexual norms and social practices of mainstream Senegalese society. I then discuss how

this dissonance creates perceived dilemmas in the experience of the footballeuse around questions of identity and religion. My analysis explores these dilemmas and demonstrates how these women reconcile inconsistencies among cultural representations by constructing new flexible meanings of femininity. Finally, drawing on Jacques Rancière's theory of dissensus, I show how the "footballeuses" in Senegal use this space of dissonance to claim a stake in society, to break the current order of governance, making the practice of women's soccer in Senegal profoundly political. Data was collected through nine months of participant observation, 40 in-depth interviews as well as analysis of secondary sources such as print, online and televised media.

**PADRON INNAMORATO, MAURICIO\*** (Universidad Nacional Autónoma de México, [mauriciopadron@gmail.com](mailto:mauriciopadron@gmail.com))

*Conciliación Entre El Mundo Laboral y El Mundo Familiar Con Un Enfoque De Derechos. El Caso De México Como Un Ejemplo Particular Para Una Discusión General*

Cuando se habla de la necesidad de conciliar o armonizar la vida laboral y el mundo de la familia, se asume que se habla de un tema que involucra solamente a las mujeres, específicamente aquellas que trabajan fuera del hogar. Pero la realidad resulta mucho más compleja, no es solo una cuestión del ámbito de lo privado, del mercado de trabajo o de las políticas públicas, es un fenómeno que si se aborda de manera integral puede ubicarse en el terreno más general de la justicia social.

Su estudio desde la perspectiva de los derechos, implica partir de un paradigma de justicia que lleva al reconocimiento y a la creación de mecanismos para la exigibilidad y justiciabilidad de los derechos económicos, sociales y culturales.

La perspectiva asumida implica retomar varios ejes de análisis: las transformaciones demográficas, sociales y económicas ocurridas en México en los últimos años, el impacto que estas han tenido en la división sexual del trabajo y en los roles tradicionales de género, así como la responsabilidad y/o corresponsabilidad del Estado en los procesos de reproducción social.

El trabajo permite revisar, discutir y (re)elaborar el marco de referencia para el estudio del fenómeno de conciliación entre trabajo y vida familiar, para dar una respuesta más adecuada a las necesidades relacionadas con la reproducción social; enfoque al que algunos autores denominan políticas para la armonización trabajo-familia de segunda generación.

Si bien el trabajo contiene un aparato teórico – conceptual importante, también muestra desde lo empírico los cambios y las tendencias ocurridas en el país en los últimos años, en relación con los ejes centrales definidos. Para esto se utilizan básicamente tres fuentes de información: la Encuesta Nacional de Ocupación y Empleo, la Encuesta sobre la Dinámica de las Relaciones de los Hogares y la Encuesta sobre Uso del Tiempo.

*Bitcoin: Network Based Currency and Its Self-Organizing Emergency*

Bitcoin is a form of virtual or digital money, a peer-to-peer, electronic cash system. Bitcoins are based on an open-source cryptographic protocol that is independent of any central authority like a Central Reserve Bank or another administrative institution. Bitcoins are created and administrated decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists since 2009 and is in the meantime accepted as a legal instrument of payment in various countries but first of all for world wide Internet transactions. In June 2011, WikiLeaks and other organizations began to accept bitcoins for donations. That became very important after Master-Card, Visa, PayPal and other tried to block WikiLeaks from money transfers obviously because of political pressure by the US-government.

In my contribution I want to analyse this currency-system from a sociocybernetic point of view. After presenting the basic mechanisms of Bitcoin money creation, the value regulation etc. I want to focus the basic processes of self-organization in this high-complex social system.

*Social Media, Open Government and "Liquid Democracy"*

More than 10 years ago André Gorz argued that the use of the term »knowledge society« would only make sense if one were able to demonstrate that relevant radical changes in society somehow related to changes in the handling of knowledge in society. Such a demonstration concentrated on the area of democ-

racy will be the object of my contribution. In my paper I want to unfold the thesis, that the present form of giving people more participation within political processes and providing more insights into documents of governance is an intermediate step to change western style of democracy fundamentally. I want to focus the question how new media, especially so-called »social media«, may overcome the traditional dichotomy between parliamentary representative democratic tradition and grassroots oriented plebiscitary democratic elements. Since some years this question has been primarily debated under the term of »Liquid Democracy«. It stands for the idea to make democracy more liquid, more transparent and more flexible. People should have the opportunity to participate in political affairs complementary to delegating the powers of the sovereignty to a body of human elected from time to time for four or five years. "Liquid Democracy" will give people the possibility to campaign effectively and collaboratively for the issues they are concerned about. The paper will show which social, political and technological concepts for such a liquid democracy exist. Which discourses in different areas and scientific disciplines occur, and which experiences and evaluations are available.

#### *Dialectic of Enlightenment's Critique of the Civilizing Process As Aufhebung of a Debate*

During November and December 1941, the Institute of Social Research delivered a series of public lectures at Columbia University on the question of how National Socialism should be characterized. The positions within the debate could roughly be divided in two major groups: on the one hand stood the conclusion that capitalism had gone through major transformations, leading to a new order, that of State Capitalism (Pollock); and, on the other hand, a depiction of the current capitalist system as a totalitarian-led monopoly economy (Neumann and the others). *Dialectic of Enlightenment* – written by Adorno and Horkheimer in 1944 in exile in the USA but first published in 1947 by the small and actively anti-Nazi Querido Publisher in Amsterdam – followed this debate and is, in a way, a response to the questions posed in 1941, developing however yet another interpretation. I would like to argue that the book does not make use of the State Capitalist thesis, as forwarded by most literature, but can rather be understood through two largely unexplored keys: the racket theory and dialectical anthropology. As early as the 1940's, one can recognize a growing emphasis on a critique of the civilizing process in Horkheimer and Adorno's texts. *Dialectic of Enlightenment* condenses these efforts and can be considered an *Aufhebung* (sublation) of the Columbia debate from 1941. This paper will go about reconstructing the 1941 debate, follow various texts written by Adorno and Horkheimer in the late 1930's and early 1940's, analyze letters between them and approach *Dialectic of Enlightenment* in order to analyze its political answer to the Columbia debate, which is itself based on a critique of the civilizing process founded on a theory of rackets and on dialectical anthropology.

#### *Analyzing the Socially Transformative Capacity of Post-Disaster Reconstruction*

Traditional theories of disaster management have neglected the role of community organizations in building urban resilience to natural hazards. They assume instead that the state, often in coordination with market forces, is the most important agent in dealing with disaster risk. My aim is to challenge this assumption. By studying the emblematic moment of post-disaster reconstruction, I intend to deal with disaster governance issues. My working hypothesis argues that local community struggle for permanent housing provision during the rehabilitation period contributes significantly to transforming multi-scalar disaster governance and building resilience to future hazards.

The paper will start with a zoomed-out investigation of the urban socio-environmental problematics in order to a) identify and untangle the interconnected economic, political, social and ecological processes that together form uneven and unjust urban assemblages, b) trace and clarify the concepts of vulnerability and resilience and c) uncover their underpinning discourses.

This "zoomed-out" identification of the socio-ecological urban problematics and vulnerabilities and the discourses behind them will be instrumental to "zooming-in" on possible entry points for new discourses for disaster resilience and institutional change in disaster intervention. Through the lens of the long-term reconstruction period, I will analyze the potential of the development and implementation of alternative housing policies in a) enhancing empowerment and social resilience, b) promoting integrated modes of urban development, and c) revealing new institutional perspectives in dealing with disaster governance.

The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

#### *Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition*

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide operational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESPON) which set out to examine Europe's position in the networked global economy and the implications for policy: *TIGER - Territorial Impact of Globalization for Europe and its Regions*.

Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state / regional level.

The authors identify two intersecting spatial processes in European APS-generated city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

#### *Positive Ageing and Leisure: Role of Leisure in Healthy Ageing of the Elderly in India*

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines health as "a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity". Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related conditions. The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society.

Hypothesis constructed to direct the study are:

1. Involvement in Leisure activity results in healthy ageing.
2. Type of Leisure activities play a role in the health of an ageing person.
3. Every Leisure activity does not have a positive role in healthy ageing.

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sampling. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:

Health has two broad parameters, mental health and the physical health.

Type of the leisure activity affects the mental and physical health differently.

Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

#### *La Transferencia Tecnológica Como Problema Político En América Latina*

**La transferencia tecnológica como problema político en América Latina**

Una de las cuestiones que viene causando importantes polémicas en la región latinoamericana, es el establecimiento de alianzas estratégicas internaciona-

les, con el objetivo de generar nuevo conocimiento y fortalecer las capacidades científicas y tecnológicas existentes.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China.

No obstante, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la oferta-demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar el deterioro de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

Al mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de cooperación, y en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciben la transferencia tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia dónde debería apuntar la transferencia tecnológica en estos países.

#### *Technological and Political Illiteracy: Its Effect on Social Change in Latin America*

##### **Technological and political illiteracy: Its effect on social change in Latin America**

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in these problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making by the political power.

In some Latin American countries, where are trying to experiment with political processes that resemble with the left thinking, social inequality has generated within the political power the need to counteract all areas in which acts the capitalist model, with regarding to the value and the role of science and technology in the transformations and social welfare.

As a result, it has been created a social symbolism within society, which influences negatively and pushes away the true role of science in social and economic transformations of these countries. At the same time, this symbolism influences and suffers an arrangement within the political power.

What happens is a combination of political and technological illiteracy. This combination is also a clash of ideas and political decision (political inequality) for those who in society own and generate scientific knowledge in reference to those who do not. Thus, it has distorted the development of coherent public policies.

This work attempts to make some comparisons of these practices in Latin America, analyzing more deeply the case of Venezuela.

#### *From Self-Management to Representative Democracy – the Case of Two Kibbutz Industrial Plants*

Theories of new organizational forms usually assume that in the 21<sup>st</sup> century the official trend in the majority of small industrial organizations in Western Society is more worker oriented, more democratic, with flatter hierarchical structures and more worker oriented.

In this paper we would like to show when and why an organization abandons its self-management praxis and changes from a neo-organizational structure into an almost Weberian structure. In order to do so we will show the parallelism between processes occurring in many kibbutz communities by analyzing two case studies of kibbutz plants. This is done by studying the interplay between changes in the kibbutz culture and changes in the plant through life cycle theories and organizational culture theories.

Our research methodology was qualitative and ethnographic interviews were held with kibbutz members employed by the organization, with kibbutz members and with CEOs that had held jobs in the past. The interviews were conducted

between 2009 and 2013. This enabled us to better understand the social and organizational processes that occurred in the community and in the plant.

The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way – the one plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

#### *What Are the Opportunities for Social Investment in the Continental European Welfare States ?*

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways since the early 1990s. The Netherlands has made a strong social activation turn in social security, coupled to a more "flexicure" service-based labour market. In France, there has always been a strong policy legacy of pro-natalist child-care support. Recently, an important policy focus has been placed on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

#### *Feelings of Ambivalence: Ageing Labour Migrants in Vienna*

##### **Feelings of Ambivalence: Ageing Labour Migrants in Vienna**

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Most of them immigrated to Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for late life.

Vienna's labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, even when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

#### *Informalization of Labour : Recent Trends in India's Urban Economy*

##### **Informalization of labour : Recent trends in India's Urban Economy**

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in 'informal' economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come

out in last twenty years, which depict the miserable working conditions of India's informal sector workers.

While workers in the informal sector contribute a considerable amount of output to the country's GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world's labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles.

This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

##### *Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka*

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially play. To better understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for "feeling of security" as well as "maintenance of mother tongue and native culture". We can say this is the manifest function of Japanese Class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers' career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students via classroom activities; an opportunity to re-identify one's own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

##### *Cyberspace and Cross-Cultural Relationships Online*

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride business. It is generally assumed that, when women from developing countries turn to intermarriage dating sites, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the fact that women are seeking 'intimacy' in online contexts?

This research seeks to understand why women in Thailand turn to intermarriage dating sites to pursue relationships online and why intermarriage dating sites appear to be displacing other ways of meeting foreign partners. It draws on in-depth online and offline interviews with 24 Thai women who have experienced dating Western men online. The study shows that the development of ICTs and increased accessibility of the Internet in the context of globalization and transnational networks allows women to consider a wider set of possible lives and partners than they ever have before. Although some women might be confronted with dilemmas or stereotypes of seeking cross-cultural relationships online, almost all of the women interviewed perceived intermarriage websites as an important channel leading them to meet and fall in love with Western men in the Internet era.

##### *Delivery Of Quality Education In Global Era*

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to higher value-added areas of manufacturing and service industry. Education has also played generally positive role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic economies and the global economy. The second was to provide an assessment in each country of progress towards the three goals of 'successful' engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as 'victims', would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.

##### *Voting Behaviour Among the Youth in Malaysia*

Malaysia's 13th General Election held on 5 May 2013 was one of the most exciting General Election in Malaysia's political history. The result showed that the ruling party (National Front) and the opposition coalition (People's Alliance) contested closely in the 222 Parliamentary seats. Although the results showed a rather status quo in favour of the ruling party, the opposition coalition managed to increase their seats to 89 compared to 82 from the 2008 12th General Election while the seats obtained by the ruling party reduced to 133 from 140 seats. This paper examines the young voters' voting patterns to determine the significant of this bloc of voters as both coalition parties were trying to get this inscrutable voters, comprised 40% of the electorate. 12,912,590 registered as voters and the 40% belong to the 21 to 39 years old age group. Before the election, almost 65% of them were labelled as 'fence sitters' who were mostly non-partisan and were seen as the deciders. National Youth Survey by The Asia Foundation indicated that the political thinking of the youths in Malaysia are not static but have changed accordingly. This new shift allows this paper to discuss the position of the youth in Malaysia's 13th General Election; which party benefit from their role and whether youth were the deciding factor or kingmakers in Malaysian politics as reflected before the General Election.

**PANG, IRENE\*** (Brown University, [irene.pang@brown.edu](mailto:irene.pang@brown.edu))

##### *The Right to Exams: Examining China's Citizenship Transformation through a Petition Campaign in Beijing*

Market reforms in China beginning in the late 1970s have initiated the transformation of China's citizenship regime by restructuring the triadic configuration of relations between the state, the market, and an emerging civil society. The gradual erosion of that institution which defined and structured China's bifurcated citizenship—the *hukou* system—by market forces is increasingly shifting the responsibility of distributing resources from the state to the market. Yet insofar as the dissolution of the *hukou* system is incomplete, the access to certain resources, such as higher education, remains legally restricted by the *hukou* system. Using the petition campaign of a group of internal migrants in Beijing seeking the rights of their children to sit university entrance examinations locally as a site of active practice and contestation of citizenship, I examine the nature of the emergent citizenship regime in China and its implications for social inequality. I observe that although the claims of the migrant parents in Beijing are substantively similar to claims that have historically been made by other internal migrants in China under the socialist era, the logic behind such claims and the ways they are being negotiated have changed. I argue that China is transitioning from a collective-based regime of dichotomized (rural vs. urban) citizenship rights to an individual-based regime of stratified citizenship rights. Under the emergent regime of citizenship, individuals' ability to become and act as citizens, as well as their ability to partake in the construction of the new citizenship regime, depends increasingly on their market position. Thus, short of achieving a more equal citizenship, market re-

forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

#### *'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand*

Linfox is Australia's largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world's biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between a Thai conglomerate and Tesco PLC, the world's second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1<sup>st</sup> 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further negotiate with workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an analysis of the struggles confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

[ppantum@hawaii.edu](mailto:ppantum@hawaii.edu))

#### *The Future with Powerful Consumers: A Case Study of Kickstarter*

In our technologically advanced modern age, the power of production has shifted from the producers to the consumers. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private for-profit company founded in 2009 dubbed "the world's largest funding platform for creative projects" (<http://www.kickstarter.com/>). A platform in which producers of any kind (films, games, music, art, technology) can ask donations for creative projects, Kickstarter puts the power in the consumers' hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems simple, yet it is rife with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the 'backers' (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on over funded projects that have not been completed, the sociological expectations and desires of the backers are understood. As new-age consumers supporting local businesses or individual creators, they have a desire to have creative and funding control over the production process. Conversely, the goals of the producers are also analyzed to provide a larger picture on the effectiveness of a possible future of consumer-sponsored production.

#### *Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece*

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related

to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the linkages between immigrant participation in voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be solidly based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

#### *The Creation of Peaceful Neighbors and Calm Swedes*

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shouting Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that that, when asked, two of three Swedes state that they trust other people.

In this short historical exposé the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of "neighbors war against neighbors", in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people and for the creation of an atmosphere of trust. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.

#### *The Day after: The Effect of Diary Timing on Time Data Analysis*

As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random housework-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the 'typical' activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By the means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

#### *From the Global South to the Globe: Pathways to Participatory Budgeting*

In 1989, the city of Porto Alegre in southern Brazil implemented the world's first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States' (US) first experiment in PB in the city's 49<sup>th</sup> ward in 2009. Over that time, PB has spread to over 1500 municipalities in countries across Latin America, Asia, Europe and North America (Baiocchi and Ganuza, forthcoming). This is a remarkable statistic for a practice that has been associated with grassroots mobilisation and which holds the potential to reconfigure existing power structures within capitalist democracies.

For proponents of PB and other transformative movements, there are valuable insights to be gained from studying the mechanisms by which the diffusion of PB has taken place. For example, events such as the World Social Forum, where Chicago Alderman Joe Moore first learned of PB, may have played a considerable role in spreading PB beyond Latin America. But once PB lands on American shores, what kind of support is needed, who are the organisations that provide such support, and which actors from civil society and the state commit to building its success?

In this paper I consider the diffusion pathways for PB, in terms of both the *information networks* that spread the idea, and the *support environment* that makes its implementation possible in a given location. Drawing on social movement diffusion literature, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

Baiocchi, G. and Ganuza, E. (forthcoming) 'Participatory Budgeting as if Emancipation Mattered', *Politics and Society*.

**PAPE, MADELEINE\*** (University of Wisconsin-Madison, [mpape@wisc.edu](mailto:mpape@wisc.edu))

### *Participatory Budgeting in the US: The Role of Key Actors in Shaping Turnout*

Participatory budgeting (PB) has largely been studied in the context of the Global South, with particular attention given to the case of Porto Alegre. Only in recent years has PB begun to gain traction in the United States (US), beginning with Chicago's 49<sup>th</sup> ward in 2009. While the PB projects in the US resemble in some respects the familiar structure of Porto Alegre, the many unique contextual factors suggest that the American experience of PB is likely to be quite different.

A central claim of democratic theorists is that PB provides opportunities for participation to citizens who are marginalized by or excluded from typical democratic processes (Fung and Wright, 2003). In the Porto Alegre case, high participation amongst poorer citizens led to a more egalitarian allocation of resources as well as the expansion of associations in civil society. As PB moves north from the Global South, how is it being adapted, and how do outcomes vary?

In this paper I consider the interplay between state and civil society and their impact upon participation, since *both* sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between *who* participates and the engagement of civil society and the state. The aim is to identify the actors that are driving the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

### *Narratives Of Exclusion In The Discourse Of The Great Terror In The USSR*

The Great Terror in the USSR of the mid-1930s was actually an implementation of a social engineering strategy aiming at exclusion of certain social, political, and ethnic groups by means of their extermination or isolation. This strategy was based on and partially produced by a very specific ideological discourse. Its key element was a semi-fictional image of the ideal Soviet society enclosed within multiple real and symbolic borders that various "bad" and "enemy" "elements" were constantly trying to trespass. Identification/production of the above-mentioned "elements" was realized within the framework of the discourse of the Great Terror by means of the complex of *narratives of exclusion*. In my presentation, I will focus on three main components of this complex:

1) Narratives about traitors, spies, and other "foreign agents" actually or potentially trespassing real or symbolic external borders of the Soviet space. These were used for excluding foreigners-emigrants, certain national minorities, Russian re-immigrants, Soviet diplomats and spies; people who contacted foreigners or simply spoke foreign languages, etc.

2) Narratives about saboteurs, "socially dangerous elements", and anti-Soviet conspirers, terrorists, and propagandists acting from beyond the symbolic

borders of the ideal Soviet social, political and ideological structure. These were used for excluding "kulaks", criminals, tramps, "bourgeois" engineers and scientists, openly religious people, former members of the long-defunct Russian political parties, former members of oppositional groups within the Bolshevik party, suspended officers of the secret police, and others.

3) Narratives about "monsters" and "scum of the earth", who trespassed all sorts of symbolic borders. These were used for excluding suspended high-rank Bolshevik party leaders, both opponents and proponents of Stalin. Narratives of this type were built in the framework of the special ideological meta-narrative based upon archaic mythological imaging of witches and shape-shifters – apparently innocent creatures that turn out to be demons.

### *Hidden Ethnic Inequalities. a Possible Global Educational Exploration Using PISA*

The international educational evaluation programme PISA analysis the variance of school achievement of different countries. In several PISA reports there are described the criteria of successful schools, and the ways the social backgrounds can be overcome. In the PISA framework educational opportunities are distributed equitably if the student's educational success is independent of their own family background. Based on PISA reports one can have a detailed picture about the school integration of migrants, the factors which have impact on their educational outcomes.

It is important to underline at the same time that based on PISA results there is no detailed analysis of non-migrant or native national minorities. In some countries the results are presented following the (regional) minority language of test (e.g. Belgium, Spain, Canada), however a comprehensive analysis of native national minorities is failed.

Using PISA databases one can gain some relevant information about national minorities' school outcomes (in at least 20 countries). By a crosstabulation of the language spoken at home and of the language of test (state language or minority language) one can distinguish at least three main students groups: minority students who learn in their mother tongue (language spoken at home: minority language, language of test: minority language), minority students who learn in state language, and majority students (who learn in majority language, of course).

Having these students subgroups one can test two basic research questions: 1. rather the mother tongue education or the mainstream language education outperform among minority students? 2. rather the native national minority or majority students outperform? These comparison could tend us to interpret the variance in student performance in linguistic/ethnics terms. Moreover if after accounting for socio-economic background these variances still remain we can assume that exists hidden, ethnic-linguistics inequalities among students.

### *The Fluidity of Texts and Structures: Exploring Institutional Ethnography of the Child Protection System in Dominican Republic*

This presentation discusses the challenges experienced in using Institutional Ethnography (IE) in a context other than Global North. I discuss the challenges in attempting to translate both linguistically and culturally some of the important concepts of IE into Spanish and the culturally different institutional structures of Child Protection System in the Dominican Republic (DR).

Based on a five year international collaborative project (Canada-DR) this presentation discusses some of difficulties in implementing a national study of the child protection system, when institutional structures were not clearly identified, and when institutional texts were not clearly defined outside the legal discourse –Child welfare Act. The team of researchers used different IE means of data collection: 1) Mapped out the "fluid" structures of the different organizations working toward the protection of children and youth; 2) completed textual analysis of the rules and regulations –or lack of; 3) completed six months of direct observations and finally interviews of different actors within the system. What characterize the child welfare system in different provinces in Canada is a highly regulated and clearly structured system with standards of practices. What characterized the child welfare in the DR is relations of ruling in constant flux where practices were not based on any written forms of protocols of practices, but in personal experience and political influence of those engaged in the protection children and youth.

Since the team of researchers are now engaged in new project both in the Dominican Republic and working toward future projects in other countries of the Caribbean and Central America, the questions of applicability and universality of IE outside the Global North becomes very important.

### *The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity*

There is an extensive literature on the process of "overmanagerialization of academic work" (Todd, et al 2013). Academics' programs that continue to engage on progressive issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. "Internationalization" of programs has become a buzz idea that most universities in North America are pursuing, but the question remains "What kind of Internationalization? And who is benefiting from this process?"

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an "international Youth Right project" during the past two years. The author discusses the steps taken to textually transform the 'local realities' of the everyday experience of youth advocating for the protection of their rights into textual instruments of control -financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different "project managements processes" required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday living experiences of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

### *SEMI" SIS Y Procesos De Construcci" N De Significado EN La Prensa Digital Colombiana*

La adaptación de los medios de comunicación a las dinámicas de la globalización tienen repercusiones sobre los procesos de producción de significado. Las transformaciones han propiciado formas de interacción comunicativa, sustentadas en los valores de la globalización. Esta manera de construir el significado tiene distintos de efectos sociales que repercuten, en la interlocución y las formas como la ciudadanía construye criterios para participar de la vida colectiva y democrática. Esto es relevante en países con industrias culturales monopólicas y oligopólicas que centralizan el proceso de producción y difusión de la información, y que fomentan lógicas de consumo en lugar de formas de participación directa en los asuntos públicos.

Se propone explorar las formas como la prensa digital construye interacción a través de la organización de las páginas web. Se reflexiona sobre el formato, el componente multimedia y la multimodalidad en los procesos de producción de significado. Se identifican las formas como gráficamente se construyen marcas de deixis, orientadoras del proceso cognitivo y mecanismos de construcción y reproducción ideológica.

El corpus de esta investigación son los print de las páginas web de inicio del periódico ElEspectador.com y la revista Semana.com. El corpus se toma el 1-08 - 2013, tomando como punto de referencia el conjunto de recursos de interactividad, multimodales y multimediales que se apropian para construir significado, con el fin de identificar cómo se propone la interacción comunicativa entre productores discursivos y usuarios-lectores.

**Palabras clave:** medios de comunicación, formas de interacción, multimedia, multimodalidad

### *Precarious Politics: Struggles Against Insecurity in the Global North and Global South*

My discussion will complement Standings' general analysis by focusing on the collective struggles of two insecurely employed, low-income groups at opposite ends of the globe: low-wage immigrant workers in California, United States, and citizens living in poor communities in Gauteng, South Africa. Both groups compensate for their lack of economic leverage by organizing around demands for recognition, dignity and inclusion. Because these demands are largely directed

towards the state, their struggles for economic survival become entangled with struggles around citizenship status. These cases affirm Standing's emphasis on the importance of citizenship and recognition, but paint a more optimistic vision of the precariat's capacity for struggle, and underscore the need for greater attention to differences between the Global North and Global South.

### *The 1988 Seoul Olympic Games and Habituating Developmentalism in Korean Society*

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are restored and legitimized. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples' everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol (conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizens the fruits of the economic development by the Chaebol and the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol's construction companies and 'Apartment' became a typical dwelling form of middle class in Korea. The middle class people dwelling in the 'Olympic village' invented their own consumer culture and lifestyle. That is, 'distinction' in Bourdieu's term began among the citizens.

The middle class's everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

### *A Sequence Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -*

This study intends to analyze career pathway of youth who graduated college(university) in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collected in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth's work careers is different by firm-size and occupation. For example, youth who graduated from provincial college(university) get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college(university) prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college(university) prefer applying for a job to entering secondary labour market. In addition, level of exposure of employment instability is different. Youth who graduated from provincial college(university) have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)entry and exit labour market. Especially, it is distinct between Seoul\*male group and Non-Metropolitan areas\*female group. As results of this study show, we need to consider gap of career pathway within youth. And institutional support should be provided by group characteristic.

### *Solidarity and Empowerment of Women Workers in Asia*

Solidarity has been stressed as one of the most important tools for powerless and marginalized groups of people let alone labor movements. Pressures from globalization create additional demands for workers and activists to extend their solidarity cross the borders. This is not only because globalization has created problems that connect people's lives across national boundaries, but also because it has produced many situations and cases in which workers, and activists face similar problems and circumstances, making sharing and learning from each other useful. Based on my experience working at the Working Women Academy

(WWA), I will discuss some of challenges and key issues of cultivating international solidarity among women workers in different countries. WWA is a women's group in Korea that provides training for grassroots female activists in Asia such as worker-to-worker exchange, capacity building trainings and political education on issues such as gender inequality. The programs are carefully designed in advance to meet the needs and interests of participants as much as possible through pre-visits and pre-surveys. For example, Chinese workers visited Korea to learn and discuss issues related to organizing women workers in 1970s and 1980s, which they could apply to their current organizing efforts. The training programs, which consist of workshops, field visits and intensive discussions in participatory methods, have prioritized the continuity of participants over a series of trainings which take place over a 7 to 9 month period. During this period, participants are encouraged to exercise training contents and to bring their experiences back to the next training. Language barriers have been one of biggest challenges. But the programs always provided translators and utilized focal persons for in-between communications.

#### *Poverty and Inequality of Korean Elderly People: Life Long Effects of Labor and Welfare Systems on Old Age Income Support*

Very low fertility is regarded as a serious social concern in South Korea. Korean government has contrived diverse policy approaches to provide various incentives for reproductive behaviors. More or less, the public response to low fertility tends to be based on the individualistic framework of rational choice and assumes that reducing the constraint and cost for reproduction would increase fertility rate. In this regard, the new government of president Park Keun-Hye pledged to provide financial support for child birth and education more extensive than ever before. Setting aside the question whether the promise could be fulfilled given the limited budget, there are concerns as to whether the incentive approach for the individual rational choice would achieve its intended policy outcome without proper checks to the endlessly rising cost of reproduction.

Instead of the individual rational choice, this paper proposes a structural and historical perspective on the demographic transition and proper policy and practices. In this regard, this paper examines the origins and development of the family planning, which was established as the primary national policy of economic development through the 1960s and the early 1990s, and discusses its implication on social change and the subsequent fertility decline in South Korea.

Fertility declines has proceeded in complex rationalities on which people felt responsible for their own destiny and family, such as the Malthusian ethical check. But also the strong desire for material well being and preferred children's success contributed to the strict birth control and ignorance for unwanted births.

#### *Life History and Family Changes in Korea and Japan*

This study examines important characteristics of family changes and modernities embedded in the life history of Korean and Japanese elders born in the 1920s and 1940s. The elderly born between the periods of the 1920s and 1940s underwent very compressed social changes, such as the imperialism, political turmoil after liberation and ferocious national building, wars, diaspora, and the high economic development. Modern families have been developed and transformed in this vortex of social changes. Reconstructing the memory of the elderly people's own life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from 2009 to 2011. Questionnaire covered detailed information about family in origin, educational environments, experiences of adolescent, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders' willingness to interview.

Several important concepts of modern and family changes are interpreted by comparing life histories of Korean and Japanese elders. Modern construction of patriarchal family and its change are compared. In regard to the period of childhood and the youth, the mixture of kinship and modern rearing, gendered education, and influences of imperial war and Korean war, diaspora and repatriation were interpreted. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, after-death, and family support in later life and social changes were compared.

#### *Making "Koreans" in Japan: Policy, Category and Negotiation*

Japan is known as one of the most ethnically homogeneous countries in the world, where the population of registered foreign residents remains less than two percent. Having their origin in Japan's colonial rule in early 20th century, Koreans have been a typical ethnic minority in the society. Regarding ethnicity as fixed components of society, sociological inquiries on ethnic minorities in Japan have treated Koreans as one of the explanatory variables in social exclusion, racial discrimination, and immigration policy in Japan. This paper examines how ethnic/racial category of "Koreans" in Japan was re-defined through postwar immigration policies formed by both Japanese Government and Occupational Forces just after the Second World War. In dealing with migration from Korea, Japanese government developed immigration control and alien registration system. From documents made by Occupational Forces and the Japanese Government, the following can be pointed out; migration control and the borderlines between peoples were closely connected in both legal and social terms. Alien registration aimed at controlling "illegal" immigration into Japan and later formed an immigration policy of the "homogeneous" society. Alien registration card, which was a crucial ID card for foreign residents after the issue of the ordinance, inherited the registration system that controlled migration during Japan Empire period. From the interview of former "illegal" migrants from Korea, the following can be pointed out; they made the best use of the knowledge and "common sense" which enabled them to obtain their legal identity, alien registration card, which defined them as "Korean" also thus "foreigners". In fact, most of the "illegal" immigrants had lived in Mainland Japan for years before the liberation of Korea, and such migration history and knowledge of Japanese society enabled them to negotiation with Japanese as well as their representation of self in everyday life as "Korean".

#### *The Structured Dynamics in the World-System: A Network Analysis of Trade Patterns 1985-2004*

The purpose of this paper is to analyze the hierarchically structured dynamics of the modern world-system using the network analysis. While the modernization theory presumed that the increase in international trade lead to economic growth for all the participants, the world-system perspective argued that there is persistent underdevelopment among the Third World because all the nation states participating in the world economy are unequally structured. These conflicting perspectives have continued to debate the matter of development. Of all the researchers concerning international relationship, those who used the network analysis did made a great advance in empirical field due to the relational nature of the world-system. However, previous studies have shown the static characteristic of the network of the world-system. In this paper, using bilateral trade data of Standard International Trade Classification(SITC) over 133 countries, we focus on the dynamics of the world system; the range and effects of the international division of labor depend on the sort of commodity. We used three commodities of SITC over 20-years for making clear our research question. We confirmed the main theme of the world-system perspective; a) The relationships between the core were denser than the periphery, b) The semi-periphery acted as a broker mediating the core and the periphery. Also, we found that there are differences among trade commodities in the world-system; a) Machinery(SITC-71) had been transmitted from the core to the periphery, b) Plastics and synthetics(SITC-58) maintained their superior status as the core industry, c) Footwear(SITC-85) showed secondary transmission and division of labor in the periphery and semi-periphery. This dynamics in commodities need to be more sophisticated argument in the field. The long-term changes in the international trades explained how the nation states were structured and also fluctuated by their structural position in the world-system.

#### *Social Patterns of Energy Consumption and Lifestyles: Towards a Low Carbon Society? a Study in Chilean Society*

The growing demand for primary energy consumption in many Latin American (LA) countries is carbonized raising a challenge to move towards low-carbon economies.

Promoting social patterns of low-carbon energy consumption involves analyzing the lifestyles associated with the current energy consumption. Indeed social patterns of primary energy consumption (lighting, cooking, heating / cooling and transport) are associated with lifestyles.

According to the thesis of Inglehart (2000) environmental pro would be a move typical of affluent societies, typical of a post-materialist era. Following this thesis

social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socioeconomic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on qualitative and quantitative empirical sociological research recently conducted in Chile.

#### *'Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters'*

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject's on those who purport to be their masters. With this reformulation of Spivak's classic question from 1988 set alongside the anthropology alluded to by a version of James C. Scott's book title from 2008, the paper focuses on the subaltern's alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of 'power over...') and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effectively shape the power which is ostensibly exercised 'over' them.

How can a 'power to...' be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

#### *Predictive Policing: The Case of Burglary*

This study is designed to utilize large amounts of data from previous time points in the City of Indio, Ca., to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily on the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

#### *Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology*

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the altering of treasured spaces and places. Drawing on Charles Taylor's social imaginaries, Zeubrave's socialization theory and Nassauer's notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development –

from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual's sense of place or identity. Therefore any meaningful transformation of these landscapes toward sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens' deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

#### *The Link Between Disaster and Violence Against Women*

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation reports on the first Australian research into this – a phenomenon previously overlooked in emergency planning and reconstruction after disaster. In the absence of reliable quantitative data, interviews with 30 women in Victoria after the 2009 Black Saturday bushfires provided evidence of increased domestic violence, even in a context that silenced women. Community members, police, case managers, trauma psychologists and family violence workers empathised with traumatised and suffering men – men who may have been heroes in the fires – and encouraged women to wait it out. These responses compromised the principle that women and children always have the right to live free from violence.

Disaster provides an opportunity to reinforce traditional gender roles, and this presentation considers the concept that social cohesion relies on women's sacrifice. Further, it identifies that male privilege plays an important role in ensuring men's interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men's experiences after Black Saturday, with a focus on men's harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

#### *The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies*

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, Australia and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected reduction in the support ratio. The results show that mortality improvement has the greatest effect on support ratios in Japan and in East-Central European countries. Anticipated mortality improvement is of far lesser significance to Northern and Western European and English-speaking countries. The paper discusses the dependency of the estimated effects of mortality improvement on support ratios on the assumed levels of fertility, migration and age-specific labour force participation and the age structure of the initial population.

*Nature Grabbing or Successful Practices for Nature Conservation?  
 Blurred Boundaries in Chilean Protected Areas*

Literature on protected areas (PAs) constantly reanimates an ancient debate that opposes conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on "nature grabbing" have joined the debate, revealing the processes through which property rights and control over natural resources are transferred from 'poor' to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a *success* or a *failure* in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social embeddedness of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal country that has allowed a wide proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

*Rio Museum of Art in Times of Trouble*

Given the growing diagnoses of musealization processes, of the spreading of cultural centers and of the new status assigned to curators, this research investigates the emergence of exhibitory institutions as instruments for intervention in the urban space, in times of social change. I shall here analyze the foundation of the Museu de Arte do Rio, in March 2013, at the Rio de Janeiro harbor district. The aim of the research is discussing the possibility of building an art institution, taking on account the formation of social networks and the negotiations for the emergence of a shared project. To think about these issues, I have been investigating how it is possible to solve controversies and to build consensus around the concepts of modern, contemporary, and a global (and / or creative) city. Built through a decade of disputes, the Museu de Arte do Rio seems to be revealing both of the place destined for museums in contemporary times, and of the negotiations between organized groups and institutions in Rio. Proposed in times of optimism and prosperity in expectation for megaevents such as the World Cup in 2014 and Olympic Games in 2016, the museum was conceived as a new icon for the city's image. Nevertheless, just when it was founded in March, 2013, the museum was, however, the target of demonstrations that anticipated the massive protests that spread in the country since mid-2013, taking to the streets of the city more than a hundred thousand of people in June 17, 2013. This paper seeks to understand how the institution has been the target of new disputes in the city and has been incorporating new categories to face the demands for change.

*A Social Critique of Religious Judgment*

This paper examines the concept of symbolic violence through an analysis of class-based religious judgment within Muslim minority communities. It draws specifically on a two-year ethnographic comparative study of religious communities in France and India. Across the cases, middle-class and elite practicing Muslims overtly judged poor and working-class worshippers as "fundamentalist" and regressive for their gendered and other practices. Practices like the burqa, for example, were more prominent among the poor and subaltern. But to middle-class and elite Muslims (who are also subject to their own symbolic violence in larger society), the burqa represents a vulgar aesthetic, an overly literal understanding of an abstract Quranic principle. The paper presents the cultural processes of exerting such symbolic violence against subaltern Muslims while also showing how this is a symbolic struggle for religious (and other) recognition – in which

the terms of the struggle are set by the language of the state. The comparative design of the larger study allows a deeper exploration of symbolic violence. In France, my subaltern companions in the field were far less complicit in their domination, or unlikely to internalize the 'classifications' of the middle-class. In India, class judgment was interwoven with a long-standing culture of loving paternalism that feeds cross-class alliances and a vast network of Muslim philanthropy. In this context, impoverished Muslims are thereby more complicit in their domination. These differences force us to consider the cultural embeddedness of symbolic violence. They also force us to ask: what is to be gained analytically by viewing such culturally and politically specific dynamics as symbolic violence? The paper explores these issues with reference to Bourdieu, Weber's focus on conscious *belief* in the support of legitimate domination, as well as Frantz Fanon's theorization of internalized inferiority.

*Fukushima, Tsunamis and Earthquakes: The Meanings of Risk in the 21st Century*

The most significant nuclear disaster since Chernobyl in 1986, struck in Japan on March 11, 2011 as the Fukushima Daiichi nuclear reactor failed in the face of an earthquake and subsequent tsunami. In Fukushima, the public witnessed a combination of natural disaster and human error that resulted in local devastation, national trauma, and global consequence. In a global landscape, the representational practices through which the events of Fukushima have gained meaning are central, both within and across national boundaries.

The representational practices of major media outlets gain even greater hegemonic significance when travel to such catastrophes is restricted or complicated by the catastrophe itself. Representational practices not only produce specific forms of knowledge, they also construct what comes to be understood as legitimate forms of inquiry.

In the United States, the presence and meaning of "risk" in relation to Fukushima reproduced very specific relations of power/knowledge. This paper examines over 2100 articles about the catastrophes at Fukushima published in 4 major U.S. media outlets between March 2011 and March 2013. The analysis includes articles from two newspapers, the *Washington Post* and *The New York Times* and two nationally prominent blogs, *Politico* and *The Huffington Post*.

The representational practices that construct "risk" cannot be fully understood without asking "risk for whom?" and "risk to what?" Using a close textual reading and poststructural discourse analysis, the paper deconstructs the representational practices that construct "risk" for plant workers, the general population of Japan, economies, ecosystems and energy resources.

Among the many consequences of the increasing globalization of "risk," is the reality that the presence and meaning of "risk" will continue to be highly mediated. This paper contributes to the discipline through nuanced discussion of representational practices and the increasing globalization of risk. It suggests implications for social theory and social research more broadly.

*Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda*

Melding insights from recent works on the affective, embodied, and symbolic dimensions of transnationalism with multi-sited fieldwork in Palestinian localities across the Green Line between the West Bank and Israel, this paper aims to develop a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help overcome the scholarly tendency to use the spatial and legal divisions imposed on differently situated Palestinians as boundaries for research and to assume that these imposed divisions are the most salient factors in their everyday lives. It also sketches a transnational research agenda on these two segments of Palestinians, discussing how a focus on everyday life and a multi-sited research design can help explore their various transnational engagements from the expression of feelings of solidarity and the pursuit of cross-border family practices to the negotiation of border-related perceptual and material differences. Second, beyond the case of Palestinians under Israeli rule, this paper problematizes the privileged focus on mobility in transnational studies and calls for more attention to the role of transnational histories and forms of belonging in the lives of people experiencing forced spatial immobility and legal exclusion.

### *"He Is Not Clean:" an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel*

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores how the use of political informers by the modern state's security agencies can shape emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting "collaborators" (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents' reputation, and support for the physical expulsion and even violent death of alleged "informers." City residents experience political informing as a form of "symbolic dirt" that circulates in all public and private spaces, ambiguously mixes with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predicament of former "collaborators" who were relocated by the state's security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation among differently situated Palestinian Arabs, this paper aims to theorize the role of the state's security apparatus in shaping emotional relationships and responses among targeted people.

### *Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?*

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the 'Bologna process'.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four-to-six years courses - to a new sequential system of 'bachelor/master/doctoral programmes'. However, the bachelor/master reform have been accompanied by the introduction of long courses ('Ciclo Unico'), which lasted five years and reflected the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, bachelors are legally less valuable than masters and long degrees, and does not give access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give direct access to doctorates.

In the empirical analysis we use data from the ISTAT- 2011 'Survey on the transition to work of University graduates' to examine the early labour market returns of young people graduated from bachelor's, master's and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelors lead to less prestigious and rewarded occupations than masters and long degrees. However, labour market outcomes of long degrees and masters vary widely, although they are legally equivalent. Net of other relevant personal characteristics, graduates from long degrees are less likely to be employed, but gain higher wages and have higher probability to reach the apex of the social hierarchy compared with graduates from master's programmes.

### *Literate and Illiterate Tribal Youth and Leisure*

#### **Literate and Illiterate Tribal Youth and Leisure**

The Education is the one which teaches the educating many ways of spending his leisure usefully and constructively. The various objects of culture such as literature, music, art, religion and philosophy are the creation of leisure. But it is not developed automatically follow if leisure is provided. The role of Education will be seen here. One can perceive the difference if one observes the different ways in which the educated and the uneducated youth around one spend their leisure hours. The uneducated can be seen consuming their leisure in useless gossiping, smoking, quarrelling, sleeping, indulging in alcohol or at the most spending their time in visits to the cinema. On the other hand, the educated individual puts his leisure to better use.

Evidently, then it is only the educated person who can utilize his leisure properly. I have kept this concepts and select so tribal youths for sampling. In this fifty tribal youths 25 are literate and 25 are illiterate. Those who are literate mostly they are graduated and past graduated. I choose some variables to measure dif-

ference between them. These variables are following below. Economic Condition, Morning activity, Noon activity, Evening activity, their talking subjects, drug addiction, visits of cinema, gossip places, their desires, etc. I found tribal youth spend their leisure time an average 3 to 4 hours per day. Educated youth append their leisure time in positive activities. Always they are thinking in positive way where illiterate tribal youth mostly do negative activity and thinking negatively. Illiterate youth mostly meet in a public places like bus stand, grocery shops, near by schools, near by temple, etc. when literate youth meet mostly their parents house. Where parents can watch their activities and some time guide them.

### *Colonial Legacies, Law and Discourses of Inequalities. An Analysis of Poverty Alleviation*

The paper uses the example of a revolutionary poverty alleviation programme (which now is given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a language to comprehend the specific economic and cultural forms and processes that organize inequalities in India at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. It thus cannot recognise the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further freed a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group based representations of domination which are reconstituted from colonial classificatory systems. The Act has little comprehensions of these differentiations and cultural practices as these remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary intersections that manifest differentially in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

### *The Global South and Postcolonial Perspectives in International Sociology*

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

## Gender Inequality and Women's Health: Indian Perspective

### Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk periods in their lives are early childhood and reproductive years. Inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are four major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only complicate childbearing and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistance, resulting to increase chances of infection and death. Due to low status, women are not involved in decision making including use of contraceptive, family size, etc.

The objective of the paper is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women's health status. The paper is based on secondary data.

### Globalisation, Technology Transfer and Growing Inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of workforce. Another outcome of this development is steady decline in proportion of moderately skilled workers by automated systems of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India which had taken up technology up gradation in their plants in the recent past, employing organisational survey schedule. The findings show that technology up gradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the work force. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. Further, disproportionate increase in wages of highly skilled workers has increased work place inequality with unskilled portion of the workforce looked upon as disposable.

### Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon'ble Supreme Court, all the citizens are to segregate the garbage at source.

The waste generated in Kolhapur city per day is 150-165MT. The contract was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for making bio fertilizers. But as the company went into liquidation, this project was closed in July 2011.

KMC had given a contract of collection and transportation of solid waste to Ramkey Group Pvt. Ltd. from 20<sup>th</sup> Nov.2007 to 15<sup>th</sup> August 2013. But the contract was ended by the KMC in June 2011 as the company was not lifting all the waste from the city.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in city. The place at outskirts of the city, Top quarry is under dispute. There is

resistance from people of that area and there is a stay order from Hon'ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon'ble High Court.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.

### Population and Environment: Panchaganga River Water Pollution In Kolhapur District, India

India has rich water resources. The demand for water increases with the increasing population and developmental activities in cities and villages on the riverbanks which leads to environmental pollution. There is surface water as well as ground water pollution due to lack of or under capacity of Sewage Treatment Plants and it has adversely affected human health.

The Hindu Survey of Environment 1991 states that the river Panchaganga is one of the 12 polluted hotspots in India. Along with 39 villages, Kolhapur and Ichalkaranji are two cities located on the banks of Panchaganga River. According to Census 2011, Ichalkaranji Municipal Council had 287,570 population and Kolhapur Municipal Corporation had 549,283 population. The sewage generated from these cities is not treated properly and 39 villages also pour sewage water into the river. Panchaganga river water gets polluted due to domestic and drainage water, commercial and hospital establishments. It has influenced in the form of water borne diseases and claimed 24 people due to outbreak of jaundice in Ichalkaranji in May 2012.

The paper based on the secondary data focuses on the population growth and other factors responsible for Panchaganga river water pollution and how it influenced on human health.

### The Politics of 'other' Women in Indian Cinema

The category of women has never been a homogeneous one. In Indian cinema, a division has always been made between an ideal woman, who has to be necessarily docile, submissive yet standing up for her rights without transgressing her limits, and the 'other' woman who is seen as a threat that would disrupt the supposed normalcy of social order. The politics of 'Othering' the women in terms of her sexuality, dominance and capacity to lure/distract has put the vamps, courtesans (*tawaifs*), lesbians, call girls under the ambit of 'dangerous women'. The paper is an attempt to analyse how further divisions are made within the category of the 'Other' women thereby conveying a message to the society that the place of women needs to be defined and determined within the confines of home. It is essential to undertake a critical analysis of such politics of representations particularly in the Hindi cinema because it has the potential to highlight the plight of such women. The paper would like to draw attention to these issues against the backdrop of recent cases of banning dance-bar girls in Mumbai hotels, reluctance of the government to legalise prostitution, where it has almost become a source of livelihood for several poor women and most importantly not recognising the rights of the sexual minorities i.e. lesbians. Based upon a critique of Laura Mulvey's theory of male gaze, the paper goes beyond simplified versions of patriarchy to a more nuanced approach to understand the political, religious and cultural nexus behind such portrayal of women in Hindi cinema.

### Causes and Social Implications of Educational Inequities in Indonesia

Educational inequities in Indonesia has been existed for many years. Two major challenges with respect to educational inequities are access to and quality of education. Access to primary education is almost universal, while access to junior and senior secondary are still far from the government target. Let alone the tertiary education. The quality of education occurs at all levels of schooling. The twin problem of educational inequities is a major concern of the Government of Indonesia (GoI). Over the past decade GoI has allocated 20 percent of its national budget towards education sector. GoI has made numerous attempts to overcome the inequity issue through, such as regulating the functional assignment between central and subnational governments in providing primary and secondary education, and issuing the minimum service standard for its implementation. Apparently these regulations were not prepared in a systemic and integrated fashion. This

paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

*Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)*

*This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e. the drift toward sustainable technologies. This drift is perceived on the basis of experiences of a developing country like India with regard to misgivings of western industrial technologies and their non-sustainabilities. Noteworthy, that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations that are based on traditional and indigenous knowledge systems and lastly to transform these grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.*

*Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha*

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGOs) there-in for which they have taken plethora of initiatives following both top down and bottom up approaches. Some of those (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide reached and popular than the Self-help group approach. Self-help group (SHG) is a small, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), thousands of NGOs, MFIs, and bank branches give this phenomenon a movement perspective.

This paper is an earnest attempt to examine the evolution and development of the phenomenon of SHGs from social movement perspectives. It examines if the phenomenon is a social movement at all and the applicability of different theoretical perspectives to study it. The paper uses the resource mobilization theory and constructivist approach as the analytical frameworks to explain the emergence and working of SHG system. The political and cultural opportunity structure in Odisha has been very much supportive to make the movement wide spread. At the same time operation and control from the top (Government of Odisha) affects the rigor of the movement. The paper discusses some such complex issues of collective actions.

*The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols*

The research entitled "The transmission of the Chineseness to Chinese descendants in Thai society through the understanding the meaning and religious symbols" aims to investigate the existence of Chineseness in Thai society focusing on the transmission patterns and how Chineseness being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by questionnaire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are two Chinese traditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, God's Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God's Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation relate to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

*A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance*

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes top-down, i.e. offering a central management vision that can then 'colonize' other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure all while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contradict Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance:

- in the funding structure of the public accident insurance (classifying companies into risk groups)
- in research priority setting and prevention campaigns of mutual trade associations
- in inspection strategies of the Lander (risk-rationalizing the use of limited control resources)

These fragmented and scattered risk approaches in German OHS raise the issue of *risk-based self-regulation* as a so far rather misrecognised form of risk governance. To enlighten this blind spot, this paper examines the role of *territorial self-regulation* by the sixteen Lander in OHS policy enforcement and *public self-regulation* by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG relatively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

*Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times?*

In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going economic crises are widening the gap between upper and lower strata of urban societies further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities' capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of democratic and community-oriented police practices in urban areas where minority people live. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and continental European Civil Law societies can be observed very clearly as a common denominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

#### *The Immigrant Childhood As Subject in Social Policy in Chile*

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant communities.

The study is based on the Sociology of Childhood that covers the childhood as a three dimension concept. The first one, as a social construction, which is distant from the essential idea of the childish being, and expressed in different ways across the history in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as "social actors with an agency capacity", that open generational and gender relations of power with other actors, in their families and other social areas. Nevertheless, that social action is not often recognized in the society and in the academic field, due to the adultcentrism that discriminates them against because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2010).

Across semistructured interviews to migrant children aged 8 to 15, and by participant observation in state Offices of Rights Protection, and in an ONG, the social integration of the migrant childhood is analyzed and taken to be the exercise of its rights and the development of transnational practices and how the social intervention hinders and/or provides that integration.

Finally it is completed that migratory trajectories and diverse social factors (such as gender, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrants generations, living in Chile.

#### *The Immigrant Childhood in Chile*

This paper presents part of the results of a FONDECYT investigation that analyzes the integration of immigrant children and adolescents. The study was financed with public funds and was designed to address the policy and social interventions carried out by the State and ONG within migrant communities.

The study is based on the Sociology of Childhood that defines childhood as a three dimensional concept. The first dimension addresses childhood as a social construction, which is separate from the essential idea of the childish being. This social construction has been expressed in different ways across history and in every sociopolitical context.

The second dimension defines childhood as a permanent sociological category of the social structure, although its members are constantly renewed. The third dimension comprises children as "social actors with an agency capacity" that open generational and gender relations of power with other actors, both within their families and in other social areas. Nevertheless, that social role is not often recognized in society and in academics. This is due to the adultcentrism that discriminates against them because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2010).

In the investigation, the social integration of migrant children is analyzed through semi-structured interviews with migrant children aged 8 to 15, as well as by participant observation in state Offices of Rights Protection. It is taken to be the exercise of its rights and the development of transnational practices and how social intervention hinders and/or provides that integration.

Finally, the investigation concludes that migratory trajectories and diverse social factors (such as genre, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrant generations living in Chile.

#### *The Struggle Against Injustice: Towards an Alternative Theory of Normative Power*

The concept of "Normative Power Europe" is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of international actor. According to Manners (2002), the distinctive feature of normative power is its "ability to shape the conceptions of 'normal'", and thus provide classify certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU's distinctiveness as a foreign policy actor, but this paper is based on the premise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Using qualitative discourse analysis (Hansen 2006, Hopf 2002, Laclau 1991, Torfing 1999, 2005) and taking the EU as the model case, it then looks at the normative aspects of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic discourse, based on the struggle against world neoliberal injustice, exists in Latin America, which contributes to the emergence of normative power.

#### *In Search for Collective Identity. the Production of Estonianness By Means of Choral Singing in Contemporary Estonia*

This presentation explores the role singing and performance of national song plays on the (re)- production of Estonian national identity (Estonianness). Starting from the revitalization of the ethnic-civic debate (Brubaker 1996) in Eastern Europe, most scholars have assessed Estonian nation-building as being prevalently ethnic (Laitin 1998, Mole 2012). In particular, choral singing tradition that has long relied on a vocabulary of historicism is interpreted through the prism of nationalism (Bohman 2011). This paper initiates a critique to the above approach by introducing three new dimensions: globalization, Europeanization, and multiculturalism. Informed from a structuralist constructivism (Bourdieu 1989) it combines analysis of social structures and institutions with perceptions of individual social actors. The main focus is on power relations incorporated into singing as a tool for identity production. In particular, it will be explored how the singing tradition responds to identity tensions between 'ethnic Estonians' and 'non-Estonians', namely Russian speakers who constitute 26% of the population (census 2013). Considering singing tradition (1) in a network of social spaces – national and supranational, as well as (2) from the joint perspective of individual experiences and objective structures such as the state, allowing us to examine collective identity building mechanisms in post-socialist context in a nuanced and less deterministic way.

#### *Doing Social Sciences on the Military Field : A Special Operation ?*

##### **Doing social sciences on the military field: a special operation?**

The purpose of this paper is to analyze the production process of scientific knowledge on the military and to reveal the complex and diverse relations – and their effects – between:

- the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)

- the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)
- the researcher's academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his/ her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters; generates a very particular inquiry context and can be used as an asset if and if only the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the "specificity" of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

#### *Ecological Modernization as Discourse: A Media Analysis of Irish Newspapers*

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland's most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers in 2007 and 2008, and to see what types of issues were most commonly discussed. The final level of analysis sampled and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors in Ireland, and that the discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

#### *Institutional Ethnography and The Uses Of Critical Discourse Analysis*

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnomethodology commitments to the local accomplishment of the social with a Marxist insight into people's active participation in extended social relations that can 'overpower' and implicate them in wider 'ruling' relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography of student-equity practices in Australian higher education, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcriptions is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith's focus upon texts and discourses within ongoing and daily interactions, I seek to incorporate within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possi-

bilities for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

#### *Dependency Denied; Health Inequalities in the Neoliberal Era*

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiology supports this, it has been critiqued for theoretical "thinness" and marginalising of agency. For example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process.

In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not 'know their place' in a hierarchy, and detailed knowledge of the extent of inequality was sparse. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women's bodies and homes. Most striking was a discourse of *no legitimate dependency* - an often painful discourse, where all aspects of dependence were disavowed and self-reliance valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism; often expressed colloquially, using the language of therapy. It is manifested by the holding of the self to impossible standards of non-dependence, and through the "othering" of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.

#### *Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria*

Backbreaking Work: Female Food Vendors, Globalization and the Legacies of Indigenous Systems in Southwestern Nigeria.

My interest in the wellbeing of women in Africa comes from a longstanding concern about how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for segments of the population. This paper focuses on the impact of neoliberal globalization on the lives of working mothers: low income female food vendors. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how capabilities developed in an earlier era have been folded into the expanding requirements of economic globalization. The data come from a larger, multi-sample study begun in 1984 that has investigated many aspects of the vendors' lives. I take my lead from Sassen's (2006) use of the term 'capabilities' and her suggestion that we pay attention to systems as well as individuals: How do emerging systems depend on capabilities created within the old order? Much of the economic and social welfare of the pre-colonial order rested on household production in which female economic and reproductive roles were central. With colonization, women continued to work, but with less public assistance than men. Independence brought the promise of increased services: health, education, electricity, etc. However, the quality of life declined and development policies have enabled both the state and spouses to capture women's roles as providing mothers. The paper assesses work environments and the women's position within the economy. Globalization is, for example, destabilizing former negotiations on responsibilities for children (eg. school fees). Under mounting stress women appear to look to individualized solutions to problems. A major focus for them has been religion.

## *The Emergence of Trust in Clinics of Alternative Medicine*

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which western scientific evidence has become the basis for healthcare. This paradox has been the impetus for this paper to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the users pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and eventually widespread in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients' trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2006 to 2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbalet 2009), experiences among clients and practitioners are in focus to contributing new empirical insights on how trust is performed since the basis for trust is not evident. The analysis demonstrates that situated trust in the alternative encounter comprises relational, bodily as well as material aspects.

### *The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases*

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospitalised patients are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: "KRAM screening & intervention", that is registration and detection of patients' so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals, at present in the Northern part of Denmark, eventually all over the country. One key jurisdictional dynamic to be analysed in this paper is: *Jurisdictional disputes and professional settlements* (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical area, nationally as well as in international spheres, i.e. WHO.

### *Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden*

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered.

In my investigation of the relation between criminology and sociology in post-war Sweden, I will argue that changes can be discerned at three levels in the process by which sociology came to dominate the field of criminology: in the theoretical content of Swedish criminology, in the infrastructure for the production of scientific knowledge, and in the Swedish political discussion on crime. These levels are not separated, neither from each other nor from the society surrounding them, but nevertheless theoretically and empirically distinguishable. An analysis of each of these separate levels will contribute to a better understanding of the relation between them, and of the issue of the relation between criminology and sociology.

On a more general level my investigation will address questions of disciplinary and interdisciplinarity. It problematizes the relation between sociology and

other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

### *Urban Restructuring and the Educational Politics of Race and Place in the Global Niche City*

While Detroit is not a center of global finance and has declined as a global production center for the automobile industry the changing relationship among cities, nation-states, and the global economy is manifested in struggles over urban development strategies in Detroit as its leadership attempts to position the metropolitan area as a global niche city. In the process of reimagining the city, the region's largely neoliberal corporate and political leadership deploys particular urban development strategies in the areas of education, housing, public infrastructure, and governance. While such deployments are framed as both inevitable and in the best interest of everyone, they are also deeply implicated in the restructuring of social and educational exclusion, particularly among the cities overwhelmingly impoverished Black and immigrant residents.

My paper analyzes Detroit's neoliberal policy complex in relation to education, urban development, and governance, drawing on documentary analysis pertaining to the crafting of policy. Recognizing the devastating impact of massive home foreclosures, urban flight, rampant segregation and poverty, and the closing of many public schools, I also reference ethnographic work I am beginning in public schools in urban and suburban Detroit to demonstrate the ways in which nostalgia for the city among suburban whites, rituals of place-making, and their intersection with the racial imaginary and issues of territoriality play out in broader struggles over the city and the metropolitan region's resources, cultural representations, and power.

### *Lifecourses, Pensions and Poverty Among Elderly Women in Belgium: Interactions Between Family History, Work History and Pension Regulations*

The precarious financial situation of many elderly women in developed countries is well-established. Nevertheless, in-depth insight into the persistent vulnerability of this group remains largely absent. In this article, we demonstrate how a specific focus on the interaction between work history, family history and pension regulations can provide greater insight into the mechanisms that produce poverty among elderly women in Belgium. To that end, we make use of register data on some 9,000 women aged 65 to 71. Data on the poverty risk of these women is linked to career and family data, spanning over 45 years. We find that pension policy can indeed account for the higher poverty risk of some groups of elderly women (e.g. divorcees) as compared to others (e.g. widows). Similarly, pension policy can, to a large extent, directly or indirectly explain how previous lifecourse events, such as marital dissolution or childbirth, affect old age poverty risk. However, our study also reveals some unexpected findings. Most notably, pension regulations fail to account for the beneficial situation of married women. Indeed, our analyses suggest that capital (income) may prove more decisive than pension rights to explain the low poverty risk of married women when compared to other marital groups. Drawing from our findings, we conclude with some suggestions as to where pension policy should go from here.

### *Conflicts within Finance Capital and Implications for the Climate Crisis*

Particularly in the era of financialisation, the logic of financial capital is to focus on (short-term) profits, often at the expense of environmental concerns in general, and climate in particular. Indeed if this were not so then there would likely be no climate crisis. Yet in recent times many groups, including elements of finance capital, have called for greater emphasis on long-term considerations including on climate. What is it that makes some parts of finance capital focus on climate issues while other parts eschew them? What motivates climate-interested investors and what is their potential for addressing the climate crisis? We address these questions through a combination of qualitative analysis of interviews and

quantitative analysis of the unique Finance and Climate Database containing over 30,000 observations of shareholding units in very large corporations.

#### *Performance Consumptions, Sleep Management and Risk Perceptions*

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about "healthy lifestyles", sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement. The investments that shape consumption patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weight between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

#### *Crossroads - Bolivian Urban Folk Music and Andean Diaspora Communities on the Internet*

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the Internet. What transnational experiences may signify for a music culture, which travels between places and spaces, are discussed through case studies. Bolivian/ Andean urban folk music culture, which contributes to the construction of a relationship between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

I study virtual rooms as leisure spaces where old and new meanings of identity and social relationships based on a sense of community can be observed. Processes of staging social and cultural identities in cyberspace will be described. Aspects about relationships between Andean popular music, Latin American music and Bolivian music, stardom and audiences are addressed.

Questions about defining identities and mixing influences are considered. I also try to show how contemporary social issues and changing identities are juxtaposed in complex collages in the virtual rooms, by musicians and their audiences, through affective links in processes of social production of music. Issues such as how relationships between the local and global music culture and new as well as old identities, articulated on the Internet, are examined. I attempt to understand processes of cultural production as ways of creating new meanings, spaces and a sense of belongingness in cultural activities of diaspora.

#### *Farewello to the Heuristics of Fear? the 'affirmative' Turn in Environmental Social Theory*

Some of the most interesting developments in social theory are presently occurring at the cross-roads of environment and technoscience scholarship. The paper aims to interrogate two especially salient, and remarkably overlapping, trends. The first one is the return of 'materiality'. This trend has been around for some years especially in the form of an expanding 'sociology of practices'. Yet more recently new forms of 'naturalism' have been flourishing, which mark a sharp

break with the long predominance of cultural/discursive constructivism, without reverting to traditional realist cases. Significant examples come, more than from environmental sociology strictly speaking, from post-structuralist orientations in STS, philosophical anthropology and feminist theory, which converge on accounts of the reality of matter in terms of fluidity of organic and inorganic life or of the multiplicity of (human encounters with) nature. The second trend is a reworking of the implications of risk and uncertainty. Whereas, for years, awareness of socio-environmental complexities led to a plea for 'technologies of humility', now an emerging tendency is for taking 'braver' standpoints by which, if uncertainty cannot be 'tamed', then it has not to be feared but rather it has to be 'riden'. This is signalled by burgeoning narratives and techniques of vision, anticipation and resilience, for example as regards 'nanofutures', human enhancement and climate change. If the 'heuristics of fear' has been for decades the trademark orientation of most environmental social theory, this turn towards ontology-focused 'affirmative' standpoints asks for reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obscures a major socio-political, perhaps even an anthropological, transformation?

#### *Ontological Struggles: New Materialisms and the Challenge of Impotentiality*

According to Giorgio Agamben, the most devious operation of power today is not its hold over our potentiality – what we can do – but over our impotentiality – what we can *not* do. Following this insight the paper interrogates the recent turn in cutting-edge social theory from cultural constructionism to new forms of materialism and naturalism. On one side the emancipatory import of deconstructing traditional accounts of knowledge, reality and subjectivity is questioned for its eventual ineffectiveness against domination and inequality. On the other, cultural constructionism is deemed incapable to account for the materialities emerging from technoscience advancements. Traditional 'negative' modes of critique are replaced by 'affirmative' orientations which celebrate the dynamic, 'vital', 'agential', ever-changing character of the organic and inorganic world, and the definitive farewell to any distinction between epistemic and ontological states, substance and information, materiality and virtuality. The *puissance* of life is increasingly played against the constrictions of *pouvoir*. The paper analyzes new materialist standpoints, with special reference to feminist and post-Marxist positions, focusing on two problems. First, as if overwhelmed by technoscience's 'success', new accounts of matter and subjectivity rely heavily on the former's, hardly normatively neutral, images and metaphors. Second, the growing replacement of 'being' with 'doing' implied in new ontologies, suggests we are confronted with a most accomplished expression of the operational paradigm that underpins Western metaphysics. As a consequence, emancipatory *puissance* and dominating *pouvoir* are increasingly blurred in an ontological politics which seems today the ultimate terrain of social struggles – as testified by actual difficulties in distinguishing neoliberal human enhancement programs from new materialisms' post-humanist pleas. Fighting inequality and domination, it is argued, entails pointing to the opposite direction to much post-humanist imagery, i.e. towards inoperativeness and impotentiality. The paper discusses the indications provided in this regard by Agamben and Adorno.

#### *Eating Organic, Growing It Yourself*

There are many things to talk about when discussing organic food, from class to gender, ethics, health, cross-border supply chains, environment, food-security. In Cambodia the discourse of organic food has emerged during this past decade, especially as result of the increasing unregulated food import from neighboring countries. It has become even more worrisome as local farmers wildly use chemical inputs without proper skills and State control.

Ironically, for many rural Cambodians, the question of organic food seems to be less relevant. For them, organic food is *normal*. It is what they produce or source locally in the village. Instead, their important questions are about feeding their families and balancing this immediate need with caring for nature, ensuring that their land remains fertilized and cultivable for the younger generations.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient at the national level and produces surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which they can easily get from the market. Hence rice is not always organic as local people have thought. As such, many high-income households carefully source it from local markets or directly from farmers they know, creating a unique network of producers-consumers. Interestingly, some people have started farming rice for their own consumption and have minimize purchasing it from the

market. We have also seen increasing number of *ethical* organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

##### *Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia*

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consumers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

##### *Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific*

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting "care deficits" represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced "global care chains" that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a "care drain" in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care to those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

##### *Living in Transition: How Returned Women Migrant Workers Re-Incorporate Themselves into Rural Origins in China*

China's internal labor migration has attracted worldwide attention during the last three decades. While studies on rural-urban migration and its implications for China's development proliferated, the reverse flow of these migrant workers and their lives in rural villages or townships upon their return have been largely ignored. In China, many women migrant workers have chosen to return to their rural villages upon their marriage and pregnancy. This paper explores the meaning of city working experience for migrant women and the role of women play both in decision-making of return migration and in establishing their new lives in the changed rural context after staying in cities for an extended period of years. It challenges the stereotypical images of Chinese migrant women who are always depicted as passive recipients of the structural constraints such as the patriarchy system, capitalist market and state policies. Rather than severing their connections with rurality and upholding the modernity they gained from urban experiences, many of them are actively trying in their own ways to reconcile their liminal identity by working on "ruralizing" some "modern" values while others are "modernizing" the "rural" values. Either way they are reconstructing a collective identity for themselves with meanings only they themselves would understand and appreciate. Besides, through critically employing Bourdieu's theory of practice, it puts forward a multi-field perspective in understanding these returned women's identity reconstruction and daily practices and highlights the importance of localization of western theory in Chinese context.

##### *From Motherhood Penalties To Husband Premia: The New Challenge For Gender Equality and Family Policy, Lessons From Norway*

Given the key role that processes occurring in the family play in creating gender inequality, the family is a central focus of policies aimed at creating greater gender equality. We examine how family status affects the gender wage gap using longitudinal matched employer-employee data from Norway, 1979-1996, a period with extensive expansion of family policies. The motherhood penalty dropped dramatically from 1979 to 1996. Among men the premia for marriage and fatherhood remained constant. In 1979, the gender wage gap was primarily due to the motherhood penalty, but by 1996 husband premia were more important than motherhood penalties.

##### *Relocation and Perceived Social Support Among Elderly Persons in Rural China*

In China, recent relocation policies have seen millions of people moved from their homes in efforts to reduce poverty, address ecological and disaster-related concerns, and make way for major construction projects. Many of those who are being relocated are older adults, moving for the first time in their lives away from their rural ancestral homes and villages. Yet, little is known about the implications of relocation for older adults, including its implications for access to social support and care. However, this is an important outcome in the Chinese context where, for centuries, older individuals have relied on family members for support.

This study addresses these issues using data drawn from the 2011 Ankang Study of Health and Well-Being (ASHW) conducted with a representative sample of 613 rural residents aged 60+ living in the Ankang region of China. Over the last 10 years, the provincial government has implemented policies designed to relocate 2.4 million residents or 80% of the total population in the region.

Multivariate regression analyses show that construction-related relocation has no impact on perceived support. However, poverty-reduction and disaster-related relocation are associated with a reduced level of perceived support available from others with the exception of social interaction in the case of disaster-related relocation. Ecological relocation also had a negative impact on emotional support.

These findings support the view that relocation reduces older adults' perceived access to social support. This is particularly evident with regard to poverty-reduction and disaster-related relocation. Possible explanations for these differences are discussed as are the potentially important implications of these findings for future health care policy in rural China.

*"If You Have a Giving Heart": The Framing of Post-Disaster Need and Donations*

The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguin-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman's (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

*Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society*

This paper draws on Bourdieu's concepts of 'capital' and 'field' to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has entailed a new context for youth labor market and mobility. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduate workers, and by a dual youth policy discourse of promoting the enterprising subject and protecting the 'at-risk'. Based on a study of the life experiences of young rural-urban migrant labor workers (n=20) and university students (n=31) in Cambodia in 2011–2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youths in managing their transition toward adulthood. The rural youth rely heavily on their social network and embedded cultural capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embedded cultural capital, for mobility and successful adulthood. The results are to be interpreted in the context of quickly transformed social space, the absence of a welfare state, and the instrumental family of Cambodia. At the interactional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an altered structure of inequalities broadly tantamount to the emerging working and educated middle classes.

**PEOU, CHIVOIN\*** (University of Melbourne,  
[peouchivoin@gmail.com](mailto:peouchivoin@gmail.com))

*Life Course Opportunities and Uncertainties in Transforming Society – Managing the Transition into the Labor Market in Late-Developing Cambodia*

The generalized 'late' modern change, including post-industrial capitalism and increased individualization, has by now become a powerful tool for youth and

life course sociology to describe emerging patterns, risks and uncertainties of modern lives. Although research has increasingly been focused on the risk and uncertainty experienced as part of personal biographies via their socially differentiated positions, a Eurocentric standpoint remains influential as recent life course changes and risks are seen as diverging from the modern industrial 'normal' life course. This paper attempts at a complex exploration of the embeddedness of opportunities and risks in the individual's social context and biographical experiences. First, I will position the contemporary transformation of Cambodian society in the context of modernization theory (Beck 1992; Giddens 1990) and debate on the varieties of modernity (Chang 2010; Eisenstadt 2000; Schmidt 2010) to make a case for a more specific examination of change toward a modern society. I will then reconstruct the processes of Cambodian transformation and how they feed into the opportunities and risks for new life courses. A theoretically informed but empirically grounded typology of biographical management, based on a study of the life experiences and expectations of different social groups of Cambodian young people (n=51), will be used to illustrate how the opportunities and uncertainties in the new life course are differently managed based on socio-cultural and individual resources during the transition into the labor market and toward adulthood. This shows that in the context of compressed modern transformation, not only does the life course encounter both new risks and opportunities, but it also requires a mix of traditional and modern frameworks and resources to deal with inherent uncertainty.

*A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil*

In recent years, the term "gender" has gained visibility in social discourse. That is why expressions such as "gender violence", "gender identity", "gender equality" (among others) appear everyday in mass media. Such discursive proliferation can not be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream.

The area of knowledge we now call "gender studies" was first consolidated at the universities of the central regions (United States and Western European countries). Our Latin American region has not been left out of this epistemological, theoretical and methodological renewal. Therefore, in this paper I am looking forward to: 1) exploring the origins of the category "gender" as a tool for analysis in contemporary social sciences and humanities and 2) focusing on the historical configuration of this interdisciplinary field in two national cases, Argentina and Brazil (and also highlighting some similarities and differences between them).

TOMASZEWSKI, WOJTEK (The University of Queensland)

*Who Settles For Less At Work? Subjective Dispositions, Job Characteristics, and Job Satisfaction*

In recent years there has been growing interest in individuals' self-perceptions of their wellbeing on the grounds that these complement well-established objective indicators of welfare. Wellbeing in relation to work, captured for instance by measures of job satisfaction, has not been an exception. The discourse on work in post-industrial societies has shifted from perceiving labour as a means for subsistence to conceptualising it as an important aspect of individuals' identity and self-realization. Consequently, the utility people gain from their work has become an important feature of modern working life and subject to increasing academic attention. However, individuals' assessments of this utility depend on both the objective circumstances that they experience at their jobs and workplaces and their subjective, idiosyncratic dispositions, such as their aspirations, expectations, or personal evaluation criteria. We add to the literature by formulating and testing a modelling strategy that uncovers how the latter subjective dispositions differ across population groups. We do this by estimating a within-job fixed-effects model which, by controlling for all objective characteristics of the job and workplace, enables us to explore how subjective judgements concerning job satisfaction and other work arrangements are made by different types of workers. To achieve this, we use data from a large-scale matched employer-employee dataset from the UK – the 2011 Workplace Employment Relations Survey (WERS). Following reference group and relative deprivation theories, we expect to find significant differences in the way in which individuals with different socio-demographic characteristics rate the same objective working conditions. More specifically, we expect female, young, elderly, and migrant workers to be more satisfied with equal working arrangements than male, middle-aged, and UK-born workers, respectively. Any such findings would have important implications for how subjective evaluations of working arrangements are to be collected and analysed using survey data and used to inform evidence-based policy.

*The Potential of Telecare/AAL Technologies for Enabling 'Ageing in Place' in Rural Areas in Poland and Germany*

The vast majority of older people wants to continue living independently in their own homes for as long as possible. This preference poses a particular challenge in rural areas where family members are often not available for support since they moved to the economic hubs in the big cities for earning a living and care providers have to travel long distances. Telecare and other ambient assisted living (AAL) technologies can provide an alternative if linked to emergency care services. This paper will explore the potential of these technologies for enabling older people in rural areas to 'ageing in place' in two regions in Poland and Germany with a particularly high share of older people – the Małopolska region surrounding the city of Cracow and Upper Lusatia („Oberlausitz“) to the east of the city of Dresden. Both areas are characterized by outmigration of the younger generations, declining fertility and growing shares of older people.

This research analyzes the potential of telecare/AAL technologies for improving older people's quality of life based on two explorative pilot studies focusing on the provision of telemedical services to senior citizens. Thereby, the analysis considers opportunities as well as risks of telecare/AAL application in older people's homes. In the Małopolska region, a group of older people was provided with telecare/telehealth equipment monitoring bodily functions, such as ECG or blood pressure, which are monitored by telemedical/telecare systems enabling remote examination, consultation, and diagnosis. The German study takes a slightly different approach in focusing on matching older people with an interest in AAL/telecare technologies with providers of the latter. The process will be evaluated in a longitudinal user survey measuring their experiences before, during and after using the technology, which in turn will be compared with findings from an independent sample.

*Auntie Does Not Know What Sociologists Do. Do Not Blame Her: A History of Professionalisation of Sociology in Argentina (1960-2010)*

The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organisational frameworks in which local sociologists have tried to set their professional and academic issues. Third, it presents some data from a research that focusses on the working conditions of sociology graduates in Argentina from three different cohorts. One, a group graduated from 1961 to 1974. It had an early and successful professional insertion, linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and requests for sociological knowledge at academia, state and private sector. The paper looks for an answer on what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.

*Revisitando La Cooperacion Desde La Transferencia Tecnologica*

La transferencia tecnológica no es solo hoy día aceptada como un elemento dinámico en el crecimiento de las capacidades materiales de los países de "menor desarrollo relativo", sino además como un proceso fundamental asociado a cambios en la cultura y la historia. Ha adquirido relevancia en las agendas de los distintos foros de negociación – multilateral y regional, en una vinculación positiva a las necesidades de desarrollo tecnológico y de industrialización; más recientemente se ha tomado conciencia sobre la diversidad de problemas que se generan por la exigencia de factores concretos de asimilación, aprendizaje, apropiación y adecuación, a contextos culturales, regionales, locales, específicos. El objetivo es contribuir al análisis sobre los avances en la cooperación internacional venezolana con países de la Región y como contribuye a la mejora de las circunstancias que rodean la construcción, aplicación, operatividad y consecuencias asociadas a la transferencia tecnológica. Esta investigación, descriptiva, sigue dos vías de análisis, por un lado, desde el planteamiento de "soberanía tecnológica", donde la decisión sobre el país o tecnología fuente se reconoce en el ámbito de lo público, tiene una dimensión política y una nueva agenda de negociación defensiva en fuerte controversia sobre la liberación de los servicios de educación y salud por afectar la protección de bienes sociales que son derechos humanos. Por otro lado, desde las prácticas e instituciones presentes en la complejidad industrial y técnico productiva nacional. Ambas vías desafían la comprensión multidimensional del papel de la cooperación internacional en los procesos de transferencia para reconvertirla estratégicamente hacia capacidades tecnológicas propias. Finalmente, se determina la ausencia de "infraestructuras de interface" que fomentan la interacción conjunta y expanden los conocimientos; ellas hacen factible estructurar formalmente los aprendizajes, establecer las relaciones de complementariedad necesarias y concretar los resultados convenidos.

*A European Mining Boomtown Case Study. Toward a Sociological Theory of Boomtowns in a Global World?*

By mean a case study, this paper aims to test many of the William Freudenburg's theories on boomtown phenomenon. Apart from his contributions to the understanding of the social impact during and the following years after the construction of large scale projects, his theory has been especially enriching to describe the long term social consequences in the so called boomtowns. Judging by the results, the apparently boom experienced might not be such in many cases. It might be simply a rapid urban growth in the vicinity of the large scale project, but in contrast, the region as a whole, i.e. including municipalities around, might suffer, not only after the natural resource exhaustion but from the beginning of the activity, from shrinking. Secondly, results confirm Freudenburg's theory on the additive character of the natural resources dependent economies. Judging by the in-depth interviews conducted among social actors, the concept of development is truly limited to the hope of a new boom as those lived in the past. This hope is nurture by political institutions and trade unions who despite the closure of the mine and the fewer chance to repeat such boom, still struggle for attracting large scale industrial projects. The formers know about the electoral benefits and

the latters would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely "large companies", like nuclear or celluloses. Additionally, evidence suggests that the boom might give way to a very particular community culture that overestimates the importance of the grandiosity for any kind of local affairs. These are some of the conclusion that will allow to build (upon Freudenburg's legacy) a more consistent and global sociological theory on the boomtown phenomenon.

#### *Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland*

This paper aims to examine the perception of the meaning of a "good job" among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the "best business idea", the highlighting of entrepreneurship related subjects in the universities' curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a "good job" among young people, with a special stress on how entrepreneurship is seen. Despite the pessimistic and dominant discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the *top of the mind job*. This accounts for the importance given to the symbolic meaning of belonging to an "international" organization, the social status provided by it and the need of constructing a "modern" identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

#### *Mobilization and Performance in the Public Space in 2011: A Comparative Approach*

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidence of social change. Young people, who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute fusion experiences in which a great charismatic power, able to trigger off social and cultural change, is generated.

These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodical repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive.

The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Day in Madrid (JM/YWD). They are analyzed following the basic elements that shape social performances: actors, audience, collective representations, means of symbolic production, mise-en-scène and power

#### *The Values Of Scientific Ethics: A Way To Face Inequality*

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and

skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subjected to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitiveness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the social justice to the individuals, communities and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researchers from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers' practices; however, social commitment and responsibility seem to be less important to the researchers' work, especially when they have to compete for funding or when complying with the deadline and amount of production.

#### *Vulnerability and Educational Opportunities in Higher Education Students from Mexico*

Higher education enrollment in Mexico has increased considerably since the second half of the 20<sup>th</sup> century. Nowadays, it is estimated that 33% of school-aged young people attend tertiary education. However, the educational system still has many limitations; two of them are the restricted access to vulnerable people and the low rates of retention.

In 2013, the Law to Prevent and Eliminate Discrimination was issued. Regarding education, this Law seeks to eradicate any kind of discriminatory behaviors that might hinder or limit access to public or private education, scholarships or other educational incentives. However, until now, vulnerable people in higher education are underrepresented and there are no official data about the proportion of vulnerable students that are actually registered in tertiary institutions.

This paper is the result of a study that aims to understand the possibilities and difficulties faced by vulnerable people to enter, remain and graduate from higher education. Specifically, we focus on three vulnerable groups: ethnic people, disabled and women heads of households. We also encompass four dimensions: 1) Personal features, 2) Family conditions, 3) Institutional constraints, and 4) Public policies. Each dimension covers an array of factors or variables.

The results showed us that factors such as prior educational background, interpersonal relationships with other students, with teachers and administrators, parents' education, family income and the lack of inclusive policies either public or private tend to affect the rates of admission, retention and graduation of vulnerable students. In contrast, geographical origins and institutional action plans affect retention and graduation, but not admission. This latter is especially true in the case of ethnic people and women heads of households who have family responsibilities and low economic income.

**PERGER, MARGARET\*** (Deakin University, [mcostell@deakin.edu.au](mailto:mcostell@deakin.edu.au))

#### *Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?*

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers' chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Dulfer et al, 2103) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).

This paper presents a methodology for investigating teachers' everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers' work relates to the influences and interests of others by tracing the constitution of social relations, disclosed in relations that emerge between teachers' perceptions of practice and their enactments. In doing so, the being of the social comes into view.

IE's recognition of being in practice is acknowledged. To better understand the impacts of this ontological dimension on practice, analysis of data, extends IE by drawing on Heidegger's (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the significance of Being, itself, and to reveal explicitly the Being of people and equipment in teachers' work.

Analysis of research data offered by practising teachers, confirmed textual mediation in everyday work. It revealed, too, teachers who practised circumspectly. In doing so, the ontological significance of who we are to how and why we enter into social relations was exposed.

##### *Women's Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries*

This paper examines the critical relationship between women's education and infant mortality. This relationship is a key to the demographic transformation of the global South. . This quantitative study examines the relationship between female education and infant survival in 80 developing countries. It is found that the relationship between women's schooling and infant survival is shaped by a set of social and health-related variables. These variables have been rarely studied simultaneously. Evidence in the paper is drawn from datasets some of which have only recently become available from agencies including UNICEF, UNDP and UNESCO. The data is controlled by income level, population size, as well as by the extreme epidemic or political instabilities. Missing data is replaced by regional averages. The path-models on infant survival provide new estimates showing the extent to which women's education influences infant survival in the global South. The study presents new evidence that the most powerful societal covariates determining the relationship between infant mortality and women's schooling, are income poverty, child health services and breastfeeding. Women's education explains 30-40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance. This global update is in line with what smaller N country-studies and survey based community studies have shown. The results stress that the universal social policies including women's education, poverty alleviation and multiple health policies intersect in fundamental ways for better infant survival. And that universal social policies are fundamental in explaining the pattern of demographic transition in the global South.

##### *The Making Of Obedience To Authority: From Binet To Asch To Milgram*

The design of Milgram's Obedience to Authority can be traced back through Asch's classic experiment on conformity to Binet's experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experimentation which is not guided by theory or hypotheses but consists of carrying out systematic variations to formulate empirical rules. Binet conducted two experiments. Binet and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on one board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, "Are you really sure? Is it not the next line?" In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the objects. The students performed this task jointly and the students competed with each other to be the first to give an answer. Years later Asch (1951) would combine Binet's two experiments in his classic study of conformity to groups. The group viewed a model line and then the naïve subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch's experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch's group conformity and Milgram's (1974) researcher/experimenter prodding the teacher/learner "to please continue" and "the experiment requires you to continue."

##### *Transnational Solidarity Of Trade Unions In Europe: Two Cases Of Institutional Work Against The Background Of The Euro-Crisis*

Trade unions and labour movements have emphasized solidarity as a universal principle based on common interests of *all* workers, regardless of borders and boundaries. Despite this rhetoric they have primarily organised national or sub-national collectivities and contributed to establish common identities and moral norms in these contexts. Modern notions of solidarity are thus firmly established at the national level, while at the European level liberal market principles and social indifference predominate. This prevailing social indifference has been challenged by at least two developments: (1) the introduction of a common currency, and (2) European economic governance in response to the Euro-crisis. Both developments have led trade unions to transnationalize their strategies: (1) As monetary integration abandoned the option to devalue currencies as a strategy to improve international competitiveness, wage setting institutions have come under pressure. This in turn induced trade unions in some sectors to coordinate their wage bargaining policies across borders. (2) Far reaching austerity measures in EU countries had a big impact on labour market and social policies - trade unions responded to these developments by organising and mobilising resistance at transnational level, e.g. the European Action Days.

Our empirical research in both fields (wage bargaining and protest movements) is guided by the following question: What constrains and opportunities have trade unions in Europe encountered in their strategic attempts to create and maintain solidarity enhancing institutions at transnational level?

Our central argument rests on two assumptions proposed by the classic sociologist G. Simmel (1908): He states that conflict is an important step from mutual ignorance to social integration. However, the integrative impact of conflict is dependent on legitimized institutions and practices of conflict resolution (Vobruba 2013), which themselves are contested. To explain union strategies in multi-level fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

##### *Collective Practices of Low-Paid Latinos in London. Challenging the 'ethnic Lenses' of Migration and Labour Studies*

###### **Collective Practices of Low-Paid Latinos in London:**

###### **Challenging the 'Ethnic Lenses' of Migration and Labour Studies**

This paper discusses collective contentious practices of migrant workers in Britain who organise to improve their disadvantaged work and life conditions. It will draw on ethnographic data and cultural productions about labour organising initiatives in the cleaning sector such as 'The 3 Cosas Campaign' and 'Justice for Cleaners' whereby migrant workers have been struggling for more dignified and equitable working conditions with the support of their communities, within and without formal and recognised trade unions. This discussion will critically consider the complex relationships that developed between these workers (many of whom are from Latin America) and local labour and community organizations, focusing on the tension between the class-based and so called 'ethnic' identities of the diaspora groups under study.

The paper aims to contribute to the theoretical debate on how to apply the framework of intersectionality (Yuval-Davies 2011) to the study of migration and labour movements. Inspired by recent critiques of the resilience of methodological nationalism (Glick Schiller and Caglar 2006; Glick Schiller 2008), our examination will question prevalent theorizations of collective action and migrants' forms of political engagement persisting in social movements and migration studies. It will also question the ethnocentric and institutionalist focus of traditional industrial relations literature highlighting the benefits of an interdisciplinary approach to the study of migrants' politics across the literature on migration and labor relations.

*Members Vs. Experts in Czech Political Parties. Reflections on a New Dimension of the Party Membership*

Our main research theme is the Policy-related Expertise in Czech political parties, this theme allows us to focus on such topics as the place of experts in the parties, especially in terms of concurrence between „old“ members and experts proposing other resources and legitimacy.

The capacity of expertise is now generally considered as a common and obligatory need and good for every party which try to get into the government, based on the idea of a less political and more technical problems to solve on the national or local level.

For this paper we will focus on some aspects but we will discuss mainly the thesis of a practical mix of intra/extra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, are first that there should be a conflict between two diverse legitimacies but over all that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weaknesses the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately useable without being „real“ members. Secondly this concurrence of intra/extra party legitimacy can be understand practically also as a better and quickest application of experts in the state or local management to the detriment of classical members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

*Strategies of Resistance : Migrant Caregivers Dealing with Social Isolation in Montreal, Canada*

Cette recherche exploratoire est consacrée à la question de l'isolement, compris comme l'appauvrissement chronique des liens personnels et/ou sociaux (Weiss 1973 dans Guberman *et al.* 1993), chez les aides familiales migrantes de la région métropolitaine de Montréal (Canada). Provenant de divers pays « du Sud », les travailleuses admises au Canada dans le cadre du Programme des aides familiaux résidents (PAFR) sont engagées pour effectuer à domicile le travail reproductif (éducation des enfants, soins aux personnes âgées, malades, et/ou en situation de handicap, entretien ménager). L'une des exigences du PAFR concerne l'obligation pour les candidates de résider chez leur employeur. Plusieurs organismes nationaux (Commission des droits de la personne et de la jeunesse, Association des aides familiales du Québec (AAFQ)) et internationaux (Bureau international du Travail), dénoncent cette contrainte au logement en raison des abus qu'elle est susceptible d'entraîner. Parmi les effets néfastes connus, l'isolement des travailleuses est fréquemment mentionné, sans faire l'objet de travaux spécifiques. Cette étude qualitative inspirée des principes de la recherche féministe aborde cette question à partir des interrogations suivantes : Quelles sont les causes de l'isolement chez les travailleuses interviewées, et comment celui-ci se traduit-il dans le quotidien des répondantes? Comment les participantes s'adaptent-elles aux contraintes de logement? Une douzaine d'entretiens semi-dirigés réalisés auprès de femmes immigrantes en cours de réalisation ou ayant récemment complété le PAFR nous indique que certains facteurs tels que le degré de mobilité, les possibilités de socialisation hors du foyer de travail, et l'implication au sein de groupes et/ou associations façonnent l'expérience du PAFR et agissent sur le sentiment d'isolement. Analysées à travers le prisme de la consubstantialité des oppressions (Kergoat 2009), les différentes stratégies de résistance contre les facteurs d'isolement déployées par les travailleuses montrent l'adaptabilité dont elles font preuve devant la rigidité des conditions d'immigration imposées.

[anders.persson@soc.lu.se](mailto:anders.persson@soc.lu.se))

*Internet Chess and Chat As Interaction Order*

**Abstract.** While playing Internet chess and at the same time using a rudimentary chat function with fixed lines, I have also been observing the chess and chat as a rudimentary interaction order. In this paper I will analyze this interaction order, on the one hand on the basis of observations made while playing Internet chess, on the other hand by using the perspective on the interaction order developed by Erving Goffman. My point of departure is that individuals interact with each other whenever they meet, but under different circumstances and those circumstances

conditions the interaction. The paper aims at answering the following research question: How can the interaction order that is developed on an Internet chess site be understood given that the social interaction between the chess players is restricted to the game itself and to a rudimentary chat function? The paper contains a detailed description of the chess play and the chat function at an Internet chess site. What possible interpretations can, for example, be made of one player's offer to end the chess game with a draw? And, how can one understand the expression "Oooops!" in the chat given the different contexts that present themselves in a chess game? And, finally, how can one use Goffman's division between expressions given and given off to understand the two mentioned and other interaction situations in Internet chess?

*Socio-Geographic Effects On Higher Educational Choices*

The main object, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can't be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constrains, often understood as habitus. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of blue-collar jobs. The educational level is below national average. Despite these traditions a minor group of pupils do attend theoretical education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in this group most of the students are applying and attending low prestige higher educational programme at low prestige universities despite their actual more prestigious possibilities. This goes for students with middle-class backgrounds as for students from working class. One suspicion is the existence of a sociogeographic effect on higher educational choices that makes it possible to talk about a sociogeographic habitus, collective in the same way as class-habitus but also unique in relation to other geographic areas. In this paper this is discussed in relation to in-depth interviews with students representative to the above described group.

*The Ontology Of The Global City-Regions*

**The ontology of global city-regions.**

The global world is made of hundreds of city-regions interlinked and networked. Yet the ontology of the global city-region is still to be defined.

It includes a different substance than the XX<sup>th</sup> century metropolis, or the generic and endless city of today. It is a web of contracts much wider and global than in the National epoch. In the past the contract was Principal-Agent: the Principal being the State, the Agent being the City. Whose main role was to provide streets and social housing, schools and welfare. Today the agglomerating substance of global city-region is relational contracting among actors which are global in many cases: enterprises, services, networks. Their places have a variable geometry and geography, functionally defined and no longer territorially bounded.

Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about mobility which is still more selective: those who can move (financial markets, multinational enterprises, big buyers, world experts), those who simply cannot (sub-contractors, client enterprises, contingent labour). Within global city-region governance mechanisms should include new constitutional orderings by bridging social capital and linking divided actors and fields.

*Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory*

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory

The transference of Macao' administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the 80's and 90's of the XXth century the end of a migratory experience in a very specific 'context', frequently characterized as being almost 'colonial'.

Following the hand over, while many Portuguese migrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants

who settled in Macao in the beginning of the XXIth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this 'new' political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the 'colonial' period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period -, is our purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identity terms) highlighting the continuities and changes observed.

#### *The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions*

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO<sub>2</sub>-calculator and its items on self reported behavior were used to estimate households' carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the "Schwartz value inventory", people's perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or "milieu" segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the 'subjective' dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households' income, thus trying to identify different "social milieus", i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

#### *The Stigmatizing Semantics of Methadone Maintenance Treatment*

People who use heroin are often described as one of western society's most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients' lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals' talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinic practice. For example, at the clinics, "drug-free" and "drug-abuse" are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of *when* and *how* the narcotic substances have been used, as well as *who* has decided that they should be used. Analysis shows, that according to the professionals' talk, it is possible to live a "drug-free", "normal" life with methadone, as long as it is distributed by the clinics and ingested according to the staff's recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as "drug abuse", legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients' modes of resistance, such as subversive interpretations of staffs' arguments or "narratives of resistance".

#### *How and When Belongings and Living Conditions Is Made (in) Visible in School*

This paper explores how and when principles of categorizing groups related to residential area and living conditions, are present and are of importance in education and social relationships in school practice. The background to the study is that on the one hand, there is openness and a welcoming of immigrants in Swedish society and in schools, for example, through policy and political objectives. On the other hand, there are clear structural differences and segregation in schools related to the area affiliation and ethnic origin. Interest in gaining an understanding of and explanations for the ambiguity that emerges between policy and what happens in the school's daily life have contributed to the study's aim. The aim of this study is to investigate and analyze whether, and if so, how and when students in a secondary school in a medium-sized town in southern Sweden, are identified and categorized in relation to the belonging residential area and living conditions within education and social relationships, as well as its relevance for pupils in school practice. The focus is on how the changing demands and social relations are managed, organized and perceived by different actors, when school is becoming a common arena for students from different areas and with different living conditions. The analysis is based on an ethnographic study based on observations, interviews and informal conversations in school practice. The study's result show that pupils belonging and living conditions is made visible and contributes to categorization in certain contexts in school practice, while it is made invisible to categorization in other contexts, where other factors connects pupils to a group or network. It is also found that the different categorizations overlap each other.

#### *Does Social Economy Really Constitute a Solution Against Poverty and Social Exclusion?*

*This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective.*

*The research question is: "Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?"*

*The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.*

#### *Mass Media Representations Of Multifarious Violence During The Greek 'crisis' In 2013: A Qualitative Approach*

The multifold violence observed during the Greek 'crisis' corresponds to the many-faceted character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following

presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readership. Secondly, through the method of qualitative content analysis we will focus on the correlation between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the 'crisis'. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

**PETROV, VLADIMIR V.\*** (Novosibirsk State University, [v.v.p@ngs.ru](mailto:v.v.p@ngs.ru))

#### *High Quality Education: Globalization and Problems of National Educational Systems*

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the education systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia.

While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, mentality, economic and political structures of these countries, and finally with mobilization or innovative types of development. But today, under the influence of globalization, we can state a convergence of educational systems in Russia and in the United States within the paradigm of a pluralistic educational system. Russia moves away from etatism, political monism to political system's pluralism which certainly conciliates it to the political system of the United States.

World experience of the recent decades shows that in this area a flexible system of control (often direct and indirect in the form of influence) should be conducted where there is no rigid centralization and where the balance of governmental, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

#### *Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)*

##### **Abstract**

The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfer net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty (based on gender, citizenship status, education level). We selected the countries that have information on wealth from the last wave of LIS, centered around the year 2010: Colombia, Ireland, Israel, Italy, Luxembourg, South Africa and Japan (with available data from 2008). The paper will contribute to the existing literature through a cross-countries comparative analysis of income and wealth from an intergenerational perspective.

#### *Factors Influencing the Careers of Young Scientists during the Period of Their PhD. An Ethnographic Case Study*

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless

– very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture.

In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

#### *The Impact of Contractual Relationships to the Identity and Values of Religious Organizations – a Pilot Study in Sweden*

Part of the growing impact of new liberal economic market rationality is an increasing demand of religious organizations to establish partnerships or contracts with the state. Deregulation and liberalization of (public) welfare services in Sweden has since the 1990s resulted in greater attention to civil society as a resource in welfare provision. While the previous state-based welfare model advocated financial solidarity and equal rights to welfare services, the new marked-based model is based on the idea of the individual's right to freedom of choice and accepts different individual financial capacities. From being advocates for a comprehensive welfare system equal for all, religious organizations are presently invited and enrolled as contracted parts of a system accepting inequality in welfare provision related to the financial capacity of the individual. Indications from previous research show that tensions between their identity and the implicit values of contractual relationships may lead to enforced limitation of the specific profile and qualities of religious organizations which at an initial stage was an important part of the distinctive value of their contribution as social agents, as perceived by both parties. A reduction of the religious organizations profile may be caused by e.g. a demand for professionalization of the contracted services, a demand for toning down the religious profile or a demand for accepting values in conflict with its core values. This paper discusses the short term and long term consequences for religious organizations identity and freedom by entering into partnership or contract with public authorities. One specific question is if these relationships are new forms of state-religion regulation? The paper build on results from the research project Welfare and Religion in a European Perspective (WREP) and a recent pilot study in Sweden analysing formal contracts and written agreements of partnership between religious organizations and public authorities.

#### *Corporate Social Responsibility Practice in Russia and in Western Countries*

The aims of study is to determine the dominant practices of corporate social responsibility in Russia and to compare them with the features of the model of social responsibility of business in developed countries. This allows to quantify the nature of corporate social responsibility in Russia and to find the advantages and disadvantages of the domestic model of corporate social responsibility. The empirical base of the research was information on websites of 570 largest companies in Russia. In study it were examined sections of sites about the activities of companies in the field of social responsibility, non-financial reports, as well as the characteristics of company's interaction with stakeholders in social networks. Content analysis of the data published on the Internet has allowed to identify three areas of social responsibility of Russian companies: operating in the interests of their employees, charitable initiatives and efforts to protect the environment. It was found that the practice of social responsibility in Russia are significantly different from Western models, due to the specific socioeconomic problems, philanthropic traditions, religious norms and the role of the state. The results can be used in future comparative studies of social responsibility of business in Russia and abroad, and to improve the efficiency of Russian business practices in the area of social responsibility and accountability to stakeholders.

*Seeking a Voice: Muslim Organisations in Australia and Germany and Their Struggle for Civic Recognition*

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethno-religious minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change in the 1990s and, more fundamentally, since the early years of the 21<sup>st</sup> century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community groups have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

*Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots in Elderly Health Care*

Our main interest is the professional use of "social assistive robots" (Kolling et al. 2013). We call them "emotion simulating & stimulating robots" as they are designed to fulfill „experiential aspects of belonging" (Klein et al 2013). Our empirical subject is the baby harp seal Paro developed by AIST, a leading Japanese industrial automation pioneer. Whereas this as interactive robot with highest therapeutic effect" praised machine is getting usual in Japanese private households, in Germany it slowly finds its way into Elderly Health Care Institutions. According to that we are interested how the robot becomes embedded in the carer-resident-relationship.

To which aim use carer the robot in their caring activities and routines? Which meaning is transferred with this special usage? Not only the singular performance but also the object with which the action is carried out is a carrier of meaning. However, not only the subjective sense but also the objective meaning of people, places, actions and material things recurs to interpretation (and interpreters). In terms of sociology of knowledge we are interested in the process of objectivation and institutionalization of technical artefacts which is embedded in the communicative processes of the distribution of knowledge. The robot as an in fact impressive technical artefact neither is a social actor or a "sociofact" but an integral and powerful part of social action with the potential to change culture (i.e. of Caring). According to that and in regard to the zoomorphic design of Paro which looks like a pet toy we are especially interested in the haptic use of Paro. As touch and tactility is referred to as special need of the elderly and persons with dementia the impact of this technology may lay in a climate change of the Caring Culture.

*From Users to Adherents – Anti-Aging As a Way of Life. Qualitative Interviews and Biographical Perspectives*

At least since the founding of the A4M (American Academy of Anti-Aging Medicine) in 1993, anti-aging medicine has formed a discrete discipline, implementing scientific findings for purposes of prevention, early diagnosis, reversal or treatment of age-related changes and loss of body functions. In recent years, anti-aging has also been established in Europe, as the institutionalization of anti-aging medicine in Germany shows in an exemplary way.

Despite the growing significance of anti-aging, its impact on the users' everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project "Biomedical life plans for aging".

The interviews show the profound impact of anti-aging on the individuals' biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstruction of the significance of anti-aging for the interviewees' biographies, the *symbolic and emotional potential* of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of *lifestyle* that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

**PFAU-EFFINGER, BIRGIT\*** (University of Hamburg, [pfau-effinger@wiso.uni-hamburg.de](mailto:pfau-effinger@wiso.uni-hamburg.de))

*Diversity of Gender Arrangements and the Work-Family Relationship of Women with Small Children in Europe*

The central question of the paper is: Which are the main patterns of the ways in which women with children 0-2 years combine employment and childcare in European societies? And how is it possible to explain cross-national differences? The paper introduces the theoretical approach of the "gender arrangement" of the author as an explanatory framework for cross-national differences. This approach emphasizes the mutual, and in part contradictory, interrelations and dynamics between culture, institutions, social structures, economic structures and actor's constellations and action, which form the societal context for the structures of care work in a society. The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European welfare states. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women's employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of mother's employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women's employment and child care.

## RC19-329.1

**PFAU-EFFINGER, BIRGIT\*** (University of Hamburg, [pfau-effinger@wiso.uni-hamburg.de](mailto:pfau-effinger@wiso.uni-hamburg.de))

*Erosion of the Boundaries Between Public and Private – New Forms of Care Work in European Welfare States*

The paper discusses the ways in which changes in the structures of care work in European welfare states can be analysed and explained. So far, concepts of dual terms predominate with regard to the concept of care, in terms of the comparison between public and private and between paid formal care and unpaid informal care. According to such thinking, care work takes either place in the private sector where it is informal and unpaid, or it takes place in the public sector where it is formal and paid. It is argued here that the clear embedding of care work into one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself.

Welfare states have established new, paid forms of semi-formal and formal care work within the family household. This change has led to an erosion of the boundaries between the two spheres. These new forms are also connected with a new type of social rights. It is argued that in order to capture this change appropriately, change of care work can no longer be viewed as a change within a dualistic model; as a shift from private to public care, or as a formalisation of care. Instead it must be understood as a multidimensional change.

In the paper, a conceptual approach for analyses will be introduced. Moreover, it will analyse the development of the new forms of paid semi-formal and formal care work in childcare and care for senior citizens in Europe in a cross-national comparative perspective. Finally also it will explain the development with social change and cultural change.

**PFEFFERKORN, ROLAND\*** (University of Strasbourg (France), [pfefferkorn@aoil.com](mailto:pfefferkorn@aoil.com))

*The Sociological Discourse on Inequality and Social Class in France*

**The Sociological Discourse on Inequality and Social Class in France**

Over the past decades social inequality has grown in France, as in many other countries. Paradoxically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to invent clever words and expressions to describe the structure of French society. However, these substitute discourses were soon gainsaid by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of 'class' had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had clear consequences for all significant aspects of people's lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of 'social class' and the undeniable reality of a growing polarization within French society.

**PHAN, LY\*** (University of Sydney, [ly.phan@sydney.edu.au](mailto:ly.phan@sydney.edu.au))

#### *Women's Empowerment As a Determinant of Fertility Change in Southeast Asia*

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries also experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women's empowerment has not reached a consensus. Women's empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women's empowerment includes the percentage of women's education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women's holding manager's positions. At individual level, women's empowerment can be measured by women's educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women's empowerment. Most studies have been looking at women's empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women's empowerment and the framework of relationship between women's empowerment and fertility changes will be reviewed. Furthermore, the current situation of women's empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women's empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women's empowerment plays a role in the region's demographic change.

**PHILIPP, CAROLIN\*** (University of Kassel, [carolina.philipp@gmail.com](mailto:carolina.philipp@gmail.com))

#### *Violent and Non-Violent Logics in Contemporary Greek Protests*

##### *short*

The research is focussed on crisis ridden Athens as radicalisation becomes accentuated during economic and political turmoil.

I will analyse radical views of political activists based on 19 ethnographic interviews conducted with the creators of alternative urban spaces: migrants, anti-nationalists, anarchists, neighbourhood activists, and radical leftists.

From the data discursive strands will be extracted about perceptions of state, society and the extreme right, constructions of oppositions, and refelctions on violence performed by themselves and others.

##### *background*

In the centre of Athens the consequences of increasing cleavages and precarisation by the 'Euro-Crisis' are drastic: intensified unemployment, bankruptcy, and impoverishment. At the same time, the metropolis has developed into a *hub* for migrants and refugees from Eastern European, African, and Asian countries. These two phenomena have turned Athens into a space in-between the Global North and South.

Athens resembles a militarised zone (Kurtovik 2013). The government is perceived as EU-dependent by most citizens, and chooses to demonstrate its strength by demarcating different groups as 'deviants' (Dalakoglou 2013: 30). Radical left and anarchists, as well as migrants and refugees, are constructed by the ruling parties as threats (Zenakos 2013): for public security (Philipp 2013), or as dangerous 'hygienic bombs' for national health (Parsanoglou 2012). Newly-deployed and heavily-armed police forces are ordered to fight the 'undesired' objects. The increased establishment of far right discourses and neo-nazi-activism support this development (Philipp 2012).

The atmosphere of austerity and oppression has deeply influenced alternative activism of this two groups: methods of protest become more extreme, constellations of alliances alter, and clashes between different forces intensify.

##### *presentation*

My presentation shortly outlines relevant historical circumstances before turning to of the activists' discourses themselves.

With its extensive ethnographic material, my research contributes to fill the desideratum (Andronikidou & Kouvras 2012) of empirical in-depth analysis of contemporary contention in Europe.

#### *Kāpo Māori Counter Narratives: Transformative Research Practice*

Recently a research paper on the eye conditions of Māori children was published in New Zealand. The paper sensationalized the reasons for non accidental eye injuries by highlighting the role physical abuse plays in vision loss and blindness in Māori children which in turn was picked up by the media. Not surprisingly, the kāpo (blind and vision impaired) Māori community was not only unhappy with the authors' conclusions but also with the way the 'story' was covered in the media. The community's view was that this was another example of 'Māori bashing' that could potentially undermine kāpo Māori whānau engagement with science. The twin aims of this presentation are to: 1) critically reflect on the methodological implications of doing research bereft of its socio-political and cultural contexts and undertaken by 'outsider' researchers who persist in deficit theorizing to present a 'standard story' of Māori and disability; and 2) argue for a kāpo Māori by kāpo Māori approach to research that leads to socio-politically and culturally nuanced readings and understandings of the issues that face kāpo Māori and their whānau. We do this by discussing the methodology and outcomes of the recently completed research project 'Growing up kāpo Māori: accessing paediatric ophthalmology services'. This project provides a counter narrative to the standard story and as such is more likely to transform social spaces and health practices.

#### *Social Inequality & Academic Achievement Gaps in Developed Countries*

International comparisons of cognitive skills suggest that equitable educational performance is just as important as high performance. Therefore, minimizing achievement gaps between wealthy and poor students is important for countries' economic growth (Hanushek, et al. 2008; Coulombe and Tremblay 2006). Even within high-income countries that share similar levels of economic development, socioeconomic-based achievement gaps vary in size and shape. Nevertheless, the direction of these achievement gaps is consistent—with wealthier students having both greater opportunity and greater achievement (Hampden-Thompson and Johnston 2006).

This study offers a cross-national examination of the relationship between socioeconomic achievement gaps, societal-level inequality, and the role of social safety nets in reducing inequality in both income and cognitive skills. The cross-national variation in income inequality, social safety nets, and academic achievement gaps facilitates a direct examination of societal-level factors that are hypothesized to be important in determining the shape and size of country-specific achievement gaps.

To create country-level measures of income inequality, social safety nets, and achievement gaps, we use data from the OECD Programme for International Student Assessment (PISA) as well as the Luxembourg Income Study (LIS). In an attempt to draw comparisons between countries at similar levels of economic development, we restricted our analyses to 26 countries that belong to the World Bank high-income group (World Bank Country Classification 2013) and also participated in both PISA and LIS.

Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

#### *Ageing and Class in a Globalised World*

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper explores a variety of reasons as to why this might be case. In addition, it considers whether this tells us anything of wider significance about the way in which social gerontology has developed. Would a fuller appreciation of social class add anything to our understanding of later life? To develop these points the discussion reviews, first, ways in which the role of class has been minimised in studies of ageing; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalization and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

#### *The New Political Economy of Generations: Social Class and Social Divisions in Old Age*

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20<sup>th</sup> Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground to a halt during the 1980s and have continued to be affected by a combination of austerity and accelerated globalisation. The paper will examine how a combination of globalisation and long-term economic change is re-structuring core social relationships in old age. The consequences arising from this include: the weakening of the idea of generations as a meaningful unit of analysis; the emergence of new political and social identities in later life; and the growing importance of divisions operating within generational and related social groups. The paper will explore the implications of these developments for theoretical work in the sociology of ageing.

#### *Beyond Alternative/Conventional: Māori Worlds of Food*

Within popular understandings of the food crisis, the global food system is often perceived on the basis of a clear differentiation between 'alternative' and 'conventional'. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of convention theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thevenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1996, 2006) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups – a minority whose culture is based on the concept of sustainability as a cornerstone-

who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with two different approaches in terms of strategies, a reflection is presented on community organisation, food systems innovation and the role of market in food relations.

#### *Who Needs Age-Friendly Cities? Exploring Representations through Participatory and Trans-Disciplinary Research*

This presentation bears on the first two years of a six year participatory and trans-disciplinary research programme exploring what an ageing society means for the city (facts), what the latter could become (ideas / scenarios), what can be done (actions / what is feasible) and what should be done (ideals). The programme stems from societal concerns in the province of Québec (Canada) regarding the rapid absolute and relative increase of people aged 65+ and 80+, and the projected impacts this will have on collective services, manpower, and public as well as private financial programmes such as pension funds. It specifically examines how these concerns and trends might transform the city, including housing, mobility patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectorial panels for scenario development and assessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions in terms of what makes an age-friendly city. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: "who needs age-friendly cities?" In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

#### *Austerity and The University In Britain*

##### **Austerity and the University in Britain**

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst there has been a sustained governmental policy to increase the participation of 18-to 30-year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democrat Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one's life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British "youth in austerity" regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people's responses to the recent decrease in higher education funding and increase in university tuition fees.

**PICKARD, SARAH\*** (Université Sorbonne Nouvelle - Paris 3, [sarah.pickard@univ-paris3.fr](mailto:sarah.pickard@univ-paris3.fr))

#### *Divided and Ruined: The Failed Student Protests In Great Britain*

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government's plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1.500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).

Strikingly, this #DEMO2012 had three themes: "Educate, Employ, Empower," rather than only higher education and it was attended by far fewer demonstrators.

This talk will analyze the social movements organized by young people against higher education reform since 2010 in Britain. It will focus especially on the 2012 demonstration, in order to ascertain to what extent it can be gauged to have been a failure. Drawing on interviews I made with protestors, as well as photographs I took of the demonstration, the talk will reveal that the different types of participants were very polarized about the best course of collective action to take. For example, the extreme-left wing radicals and anarchists accused the NUS of cooperating with the Government, whilst the NUS claimed the extremists were not focusing on the issues at stake. This led to highly confrontational scenes during and after the demonstrations which detracted from criticisms of the Conservative-Liberal Democrat Government and its youth policy. Instead of uniting and fighting, the protestors were divided and ruled by Government cuts in an era of austerity and lack of social change.

### *National Cultures Reconceptualized for the Social Sciences: Basic Elements for an Analytical Framework*

National Cultures Reconceptualized for the Social Sciences: Basic Elements for an Analytical Framework

Globalized state-societies in the twenty-first century are framed by national cultures. This cultural metaframe is insufficiently understood by sociologists and other social scientists. Yet national cultures are full of social mechanisms that shape domestic politics, economic success and failure, and the evolution of global society. To make use of this framework for explanatory purposes, it needs to be underscored that nationalizing mechanisms are sociocultural mechanisms that work in conjunction with better known political and economic mechanisms. Based on a novel conceptualization of national cultures, the contours of which this paper will lay out, it quickly becomes evident why and how in general terms nationalizing mechanisms operate in a broad range of social systems from small groups to large movements and organizations. Whether, where and to what extent the inclusion of nationalizing mechanisms can make a substantive contribution to explanation is an open empirical and theoretical question. The argument presented here reconceptualizes existing empirical and theoretical knowledge on nations and societies in order to open up a fresh perspective and sketch out a basic framework for one of the most misunderstood areas of social reality in the global age. The paper further develops the author's previous foundational work on social systems and nationalizing mechanisms aimed at rehabilitating the central significance of nation for the sociological enterprise.

## JS-49.6

**PIERIDES, DEAN\*** (University of Melbourne, [d.pierides@gmail.com](mailto:d.pierides@gmail.com))

### *Institutional Contradictions and the Organization of Emergency Management*

This paper provides an institutional analysis of Australian emergency management from the early twentieth century to the present and highlights the institutional contradictions that generate conceivable barriers for effective organization. Building on the literature in organization and management theory that focuses on institutional logics, I argue that to understand why emergency management is riddled with these contradictions it is useful to describe the different logics that are elaborated in organizations. Institutional contradictions in emergency management carry traces of tensions between the church and entrepreneurs from as early as the twelfth century, traces of a style of statistical reasoning that emerges in the seventeenth century and traces of the ongoing struggle to produce a legitimate form of government for the state.

Since the 1990s, Australian emergency management organizations, like many other organizations, have been adopting and implementing risk standards to pursue strategic goals, to meet performance objectives and to ensure accountability. The reliance on risk calculation and management has intensified in the aftermath of disastrous floods and fires in the early twenty-first century. These technologies of risk bring into effect markets that deal with the uncertainty of different objects such as vegetation, weather, fire, and so forth. Emergency management organizations are also tasked with the sovereign responsibility to protect the population, a task that is arguably at odds with the dynamics of markets. When the sovereign and entrepreneurial logics are elaborated in emergency management, risk can materialise in monstrous ways, well beyond the reach of formal organization.

**PILKINGTON, HILARY\*** (University of Manchester, [hilary.pilkington@manchester.ac.uk](mailto:hilary.pilkington@manchester.ac.uk))

### *'Loud and Proud': Youth Activists in the English Defence League*

This paper considers the meanings young members of the 'new far right' English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement's trademark slogan 'Not racist, not violent, just no longer silent' denotes more than a cynical PR strategy. In contrast to a 'politics' they reject (understood as 'debating', 'listening' and 'reading the Sunday Times'), participation in EDL actions provides young people with a way of 'getting your point across', 'speaking out' and 'standing strong'. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a 'politics of silencing' in which 'legitimate' political discourse is closed down due to the social distance between 'politicians' and 'people like us' and the legal and cultural circumscriptions on 'acceptable' issues for discussion. Drawing on Mouffe's (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the 'stifling consensus' that has gripped the political system, the paper traces the resonance of these tropes in the narratives of 'the political' among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a 'loud and proud' way might confirm Mouffe's argument that a democracy that 'works' for 'the people' may not be one based on 'a universal rational consensus' managed through institutions that 'reconcile all conflicting interests and values' but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3)?

**PILLAY, KATHRYN\*** (University of KwaZulu-Natal, [pillaykat@ukzn.ac.za](mailto:pillaykat@ukzn.ac.za))

### *"Nation Under Siege from Foreigners": Exploring Notions of Belonging and Exclusion in Post-Apartheid South Africa*

South Africa finally became a democratic country in April 1994 after the first 'free and fair' general elections took place. A commitment was made by the ANC led government to 'non-racialism' based on a Constitution which was inclusive of all the 'races', accepting shared citizenship. In this paper I contend that even though the democratic state acknowledges South Africans of Indian descent as part of the national discourse, and continually affirms 'their' part in the national democratic revolution, it nevertheless still perpetuates the notion of essential 'differences' between 'peoples' which originated in colonialism, was entrenched further after the formation of the Union, and legitimised through various policies during apartheid. Even though the Population Registration Act (PRA) was repealed, the racial categories that were reproduced and legitimised by the Act still exist. 'Race' then continues to be an axis around which South African society revolves. I argue that the continuation of 'race' classification through legislated and bureaucratic guises perpetuate racialisation and 'race thinking', which is evident in self-perceptions and the perceptions of 'others'. The argument is demonstrated by empirically examining how South Africans of Indian descent are homogenised and labeled as a separate and distinct group, and in addition how they are perceived as 'a people' or 'community' with fixed and essentialised identities and ultimately 'belonging' to another country, to which they could 'easily' 'return', as evidenced by calls to 'go home' echoed at various points in time during the post-1994 democratic era. Empirical evidence will be provided to reveal how, as a result of this perpetuation of difference based on 'race', similar processes of othering and anti-Indian sentiment, reminiscent of the political eras prior to democracy, persist in public and popular discourse in contemporary South African society, and is exposed at various junctures.

### *From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning*

In 2003 the Venezuelan government started to implement a variety of social programs known as "Bolivarian Missions". These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different "Bolivarian Missions" offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimization and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been educated, which represents an important gap in the literature that deals with the Venezue-

elan case. Moreover, I will show how the official discourse has transcended into the memories of those who once felt excluded and now feel like triumphers, consistent with the public discourse around the existence of the so-called "Mission Sucre". This work is based on two case reconstructions of the life stories of two higher education students who are currently enrolled at two of the many "Aldeas Universitarias" that operate throughout the country's regions. This work is based on biographical-narrative interviews (following Rosenthal) and ethnographic observations that I conducted for my ongoing doctoral thesis.

#### *From Exclusive Meritocracy to Differential Inclusivity: What Has Changed in Venezuelan Higher Education?*

Since the beginning of the Bolivarian Revolution in 1999, a constant comparison between the so-called "4th Republic" and the rise of the Bolivarian Revolution has divided the history of Venezuela into two major periods. When it comes to the education system, since 2003 the government has implemented a variety of educational programs and a constant process of unprecedented expansion has taken place. At the higher education level, the system has been expanded through the municipalization of higher education. This process occurred in the framework of a political system that aimed at tackling social inequality and its educational repercussions. These reforms and initiatives worked under the assumption that the previous organization of the educational system was meritocratic and exclusive. Although some official statistics suggest that the participation of students in higher education in Venezuela has been widened for all, I argue that the inequalities have not been addressed, given that the current higher education system is divided into two parallel systems of education with different quality standards and student conditions. This paper will reconstruct the creation of Venezuela's Mission Sucre and will analyze the paradox of inclusion in the Venezuelan context from a sociological perspective using insights from Bourdieu's work. I conclude that the implementation of a parallel offer to include students from disadvantaged environments or backgrounds may exacerbate the educational gaps, as well as, the social and political polarization in a system like the one under consideration. This analysis is based on my ongoing doctoral research and presents some reflections coming from the literature review, as well as my empirical work in Venezuela.

**PINET, NICOLAS\*** (Université Paris Diderot - Paris 7, [npinet@wanadoo.fr](mailto:npinet@wanadoo.fr))

#### *Elements for a Grammar of Revolt: Comparative Sociology of the September 1991 Lootings in Kinshasa, Zaïre*

Popular politics and resistance, in Africa as elsewhere, take shape both through the ordinary (Asef Bayat, *Life as Politics*) and the extra-ordinary. This paper focuses on one extra-ordinary case of popular unrest: the riots and lootings that occurred in Kinshasa, Zaïre (now Democratic Republic of Congo) on September 23<sup>rd</sup> and 24<sup>th</sup>, 1991.

Contrary to previous studies that focused mainly on the historical context, this paper sets the analysis in a broader context through a comparative approach. Drawing on both primary (media and testimony) and secondary sources, it intends to scrutinize these two days of lootings while confronting them to the mirror of contemporary Latin American riots: the *Caracazo* (Venezuela, 1989) and the *Santiagoazo* (Argentina, 1993).

This allows to delineate elements of a shared grammar of revolt: lootings always occur in a temporality of breach (Martin Breugh), they are akin to carnival both because they are festive and because they momentarily invert the ongoing power relations; they oppose groups of actors whose positions on both sides of a social frontier appear with more accuracy during this cathartic moment. In Kinshasa, the lootings opposed people who considered they hadn't benefited from the distribution of resources and privileges made by President Mobutu Sese Seko, and those perceived as having benefited from them. The discourses made by the protagonists claim that direct action was made both necessary and legitimate by social inequalities, injustice and deprivation, as noted by E. P. Thompson in a complete different context ("The Moral Economy of the English Crowd", 1971). Finally the collective violence unleashed in the lootings expresses a desire to put an end to a situation deemed unbearable – the generalized use of fire is symptomatic – and start things anew. This last point invites to take also into account, with Carlo Ginzburg, the ritual dimension of lootings.

#### *Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood*

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the "political" (Claude Lefort, *Essais sur le politique*; Manuel Castells, *La Question urbaine*) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often make oneself felt as economic domination. In this context, subaltern political practices take notably the form of tactics (Michel de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper will focus on tactics devised by homeless people living in the area I'm engaged in, before showing that practices that are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of "free" food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables' gifts to visitors or neighbors...).

#### JS-14.4

**PINJANI, PRATAP\*** (Govt. Girls College, Ajmer, [pratappinjan@yahoo.in](mailto:pratappinjan@yahoo.in))

#### *Leisure and Family : A Mutually Supportive Relationship*

W. H. Davies in his lovely poem 'leisure' states the wonder of a life worth living where one has no time for leisure, why we are so full of worry that we can hardly steal little time to stand still and watch the world go by. What is this life if, full of care we have no time to stand and stare. No time to stand beneath the boughs and stare as long as sheep or cows. No time to see, in broad day light streams full of stars like skies at night. A poor life this is if, full of care we have no time to stand and stare.

The loneliness and isolation of an individual has been a persistent theme in twentieth century. We were all born social and need company to live a happy and fruitful life. The institution of family has been with us with a set of cultural patterns as the oldest pattern of social life. Researches by cultural anthropologists, sociologists and psychologists reveal the importance of family in shaping one's personality. The basic psycho-social cultural elements in a family is the fellowship which springs from sharing and caring in leisure hours by way of interaction and inter-communication with each other in their respective roles to create a common familial culture.

It is true that human beings find time to catch up with family and friends during their tea and lunch breaks. Hence they need to find time to cultivate and nurture their relationships and it is all about effective time management.

Leisure time not only builds the self esteem but also self confidence of an individual member of the family. They start sharing a very strong bond with each other which becomes irrevocable. Sensitization towards emotional situation tends to become easier.

**PIOTROWSKI, GRZEGORZ\*** (Södertörn University, [grzegorz.piotrowski@sh.se](mailto:grzegorz.piotrowski@sh.se))

#### *Tu Casa Es Mi Casa: Squatting in Eastern Europe*

Cities have been the arena for social movements actions for long time, however with the recent changes in urban development (privatization of public spaces, reduction of public services, gentrification etc.) recently there are more movements that focus on the city as the focal point of their activism. In Central and Eastern Europe, which is the ground of intensive introduction of neoliberalism the transformative processes are more intensive than in other parts of the world with intensive re-privatization, increasing gentrification, rapid changes in social composition or the emergence of gated communities. Various social mobilizations and social movements are trying to opposing these tendencies and the squatting is the most radical amongst them. It is particularly interesting as it usually tries to combine down-to-earth problem solution (i.e. campaign to save a park or against privatization of a public space) with radical anti-capitalist ideology. Critique of property (through squatting abandoned buildings), consumerist way of life (through D.I.Y. lifestyle) is particularly problematic in the region where cap-

italism is new and was desired and such movements are not deeply rooted and emerged in the last 25-30 years.

This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed many media coverages (both mainstream and activist / independent media). In the paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on two case studies from Poznań and Warsaw complementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

**PIOTROWSKI, GRZEGORZ\*** (Södertörn University, [grzegorz.piotrowski@sh.se](mailto:grzegorz.piotrowski@sh.se))

### *Youth Social Movements and Democratization*

In mid-1980s Central and Eastern Europe have witnessed an interesting aggregation of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissident movement slowly shifting to (neo)liberal positions and losing the touch with the workers base as well as the young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in a unique way.

The popularity of these youth movements partially lays in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing up. Moreover, this subcultural-political connection seems to have an impact on today's radical movements making them mostly a young people's domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements' publications (printed and online) collected over the years.

### *Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society*

This paper attempts to describe the current state of the Argentinean social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretary of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinean social science system (institutions, agenda, researchers' profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinean social sciences; c) a structural study of current social, political and cultural trends in the country.

In this paper, in particular, we present some preliminary findings and discussions related to the first research project (a). In this sense, we maintain that Argentina's scientific field is currently featured by a dynamic, predominantly public and professionalized system that has witnessed a geometrical growth in the last decade. Both the public universities and the National Scientific Council (CONICET) have benefited from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, international publishing and collaborative research. However, some important problems still persist:

- 1) In terms of institutionalization, professionalization and full-time research positions the social sciences are still well behind the natural sciences;
- 2) the structural heterogeneity of Argentina's scientific field, featured by the split between CONICET and the public university system
- 3) the national publishing circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally.
- 4) There are significant differences in the levels of institutionalization, professionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

### *Domestic Workers As Agents for Development? the Migration-Development Nexus Debate Revisited Through the Decent Work Agenda*

At the global and regional level, the current policy discussion of international migration is dominated by a revived interest in the linkages between migration and development. To date, this debate has left out certain forms of migration and alternative understandings of development, and remained especially unfavourable to particular forms of migration that women undergo. Despite the evidence that domestic workers are numerous and that domestic work is increasingly an important source of waged employment for women, domestic work is often specifically excluded from national labour instruments such as the labour standards or the minimum wages mechanisms in many countries in Asia. Moreover, many migration regimes purposely exclude domestic workers from accessing rights that other labour or skilled migrants in the country are entitled to. With growing interest in *return* migration and its relationship to development, there have been efforts to place domestic workers 'back' on the trajectories of the 'productive' economy, especially in the form of entrepreneurial programs and the teaching of return migrant women to use their remittances money *productively* by becoming petite entrepreneurs. Common failures of such programs requires us to question the fundamental bias in creating such programs and the placing of emphasis on productive labour, instead of re-examining the importance of reproductive labour in development.

This paper will provide a systematic deliberation on the meaning of decent work for non-industrial, reproductive work, focusing on fair wages, working conditions and industrial relations. Its overall objective is to trace discursive and research frameworks around gender and labour migration from a development perspective to test the place of domestic work within it and to prompt greater attention needing to be paid by development studies to the realm of reproductive work. We will base this on the specific experience of domestic worker migration in Southeast Asia.

### *The Role of Social Movements in Youth Political Participation*

In the debate of youth political engagement social movements have a crucial role to play. In many contemporary democratic societies political culture is facing a crisis of legitimacy. Scholars around the world have stated that the level of traditional political participation is decreasing, especially among young people. On the other hand, there are opposite views, claiming that instead of being politically disengaged, young people are looking for (new) forms for participating in society, as they simply address social issues differently. Thus, new social movements (as well as Internet and single-issue activism etc.) are considered to be new platforms for young peoples' political activism.

This paper is based on case study of ethical-moral values promoting animal rights movement in Estonia. A youth group that consists of politically minded young people who actively participate in and address different issues of the society. The paper explores the importance of social movement activism in sphere of political participation. Especially, it first analyzes how young people conceive their participation and role in society. Secondly, how young activists address political issues through social movements. And thirdly, what challenges they face when participating in socio-political sphere through social movements. The empirical data set includes open-ended interviews and informal conversations as well as participant observations and secondary data sources.

### *Orthodox Online Communities in Social Russian Nets As an Object of Social Research*

Social nets is new social communication environment and the majority of people are involved into them all over the world.

The leader among existing social nets in Russia and Russian-speaking area is VKontakte.

In the social net of VKontakte there is an orthodox audience which consists of approximately 10% on the part of active audience of this social net. The most active and numerous representatives of the orthodox audience are three age groups which expose relevant portraits of the orthodox audience in VKontakte: up to 18, 18-24, 25-34 years old.

Communities in the social net is main communicative core around which users' interests are formed. For our purpose all orthodox communities in VKontakte can

be divided into four groups: communities of general orthodox theme, communities where the main content is presented by the quotations of reverend fathers and modern members of clergy, and also parables and cautionary tales, issue-related communities (question to priests, for youth, family, devoted to beneficence, etc.), and at last territorially united communities (the communities of bishoprics, youth orthodox unions of certain district, etc.)

Each orthodox group in VKontakte and its own unique target audience on the basis of which the group administration chooses content: by format (articles, news, fillers, quotations), by form (text, photo, audio, video), by the functionality of VKontakte social net (discussions, meetings).

In orthodox communities VKontakte the model of social interaction 'online-offline' is actively developed. Within the framework of this model the participants of communities are informed about offline events running (rapidly erected temples buildings, beneficence, meetings with interesting people, etc.) via VKontakte functionality (messages, meetings). Due to communities participants high degree of loyalty the information about future events is spread by 'virus' method by the means of likes and repost system.

**PITASI, ANDREA\*** (Gabriele D'Annunzio University, [profpitasi@gmail.com](mailto:profpitasi@gmail.com))

### *The Fourth Paradigm*

The paradigm shifts which featured the systemic thinking from the 1980s to the end of the last century and the very beginning of the 21<sup>st</sup> lead to some radical epistemological changes at the crossroads between communication sciences and sociology. This paper on one side reconstructs the key paradigm shifts in system theory from the whole/part one (P1) to the system/environment one (P2) and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather unlikely in systems theory and still the key global economical, technological, social challenges of our times required revolutionary shifts. The other side of this paper is essentially focused on theorizing a fourth paradigm shift which selects the fragments of the late XX century epistemological debate turning them in a systematic (in the Mertonian meaning of the term) redesign of the concept of system itself revealing that design and evolution are two faces of the same coin. *"In any event, we have changed our own evolution but not ended it".*

(Barash 2008: 25)

*"Some increase in plasticity is to be expected [...]. It represents the extrapolation of a trend toward variability already apparent in the baboons, chimpanzees and other cercopithecoids what is really surprising however is the extreme to which it has been carried. Why are human societies this flexible?"*

(Wilson, 2000: 548)

## RC09-176.6

**PITASI, ANDREA\*** (Gabriele D'Annunzio University, [profpitasi@gmail.com](mailto:profpitasi@gmail.com))

### *"Hypercitizenship" and the Evolution of a Global Identity*

The idea of the paper moves from the consideration of autonomous agents and global flows eventually converging by means of autopoietic systems.

This work reframes the topic of the reconfiguration in the evolving social scenarios within Pitasi's concept of HYPERCITIZENSHIP, sketched out by designing a multidimensional and multipolar convergence among different kinds of citizenship.

With its four conceptual dimensions, Hypercitizenship, features the strategic attitude of those areas in which capitalism is turning into turbogenetic capitalism. Its main features are the following: Cosmopolitan, scientific, societarian and entrepreneurial.

The Hypercitizenship concept is focused on the fact that communication about key challenges of our times is increasingly meaning communication and public understanding of science and technology for governance and policymaking on a global, glocal and cosmopolitan scale.

From this point of view, law becomes one of the *à la carte* products to be bought by browsing a global "catalogue" (Mundus) surfing on a technological global platform (Globus) of which the internet is the best metaphor and which can be seen as the most important platform for convergence developments and as a driver of several, key, changes. This new media platform is cosmopolitan and glocal while the mass media often still fall into the methodological nationalism trap. Indeed, the emerging scenarios are more and more shaped by supranational (UN, EU, NAFTA) or multinational (Standard & Poor's, Moody's...) entities and by new localisms which cannot survive outside a global network.

Thus, the emerging *glocality* is witnessing that the "national state" citizenship is too big -bureaucratically speaking-, but too small -in competitive terms-, to be strategic in the merging scenarios.

Hence, the importance of a new conception of citizenship in the glocal age is rising, which we refer to as "Hypercitizenship".

**PITLUCK, AARON\*** (Illinois State University, [Aaron.Pitluck@IllinoisState.edu](mailto:Aaron.Pitluck@IllinoisState.edu))

### *How to Tether an Investment Banker: Observing Innovation and Control in Islamic Finance*

Scholars of alternative economies have noted that financial markets are particularly resistant to social experimentation due to the absence of institutionalized dialogue between finance industry insiders and outside critics. A noteworthy exception is the recent development of Islamic investment banking in Malaysia, where (external) Islamic scholars are in an institutionalized dialogue with (insider) investment bankers.

This dialogue has created an ongoing experiment to create "sukuk," a novel financial instrument designed as a moral replacement for sovereign and corporate bonds. "Conventional" bonds are understood by many Islamic scholars as immoral because they are untethered from "real" economic activity and produce revenue streams based on "interest." In contrast, sukuk are alternative asset-backed securities (ABSs) putatively tethered to the real economy and generating moral revenue streams without recourse to interest. This intervention is ambitious and global: in 2012, \$137 billion sukuk were created (issued) world-wide in a number of currencies.

To theorize the social mechanisms and governance structures that enable such dialogue, this paper investigates two questions centered on how theologians understand and control investment bankers. How do Islamic scholars and financial engineers speak with one another with sufficient expertise so as to co-construct new asset-backed securities that conform both to theologians' interpretations of Islam as well as to bankers' perceptions of marketability and profitability? Moreover, how can religious scholars control financiers sufficiently to enforce minimum standards of moral compliance?

To investigate these two questions, this paper draws on 48 focused, ethnographic interviews conducted in 2012 and 2013 in investment banks with financial engineers and Islamic experts who co-produce sukuk. The paper and presentation summarizes the case, theorizes social mechanisms and governance structures, and hypothesizes implications of the case for other morally-committed financial reform projects seeking to dialogue with and control investment bankers, such as Occupy Wall Street.

**PITTI, ILARIA\*** (University of Bologna, [ilaria.pitti@gmail.com](mailto:ilaria.pitti@gmail.com))

### *Contemporary Adults: Understanding Youth through Intergenerational Comparison*

Although sociology has already deeply analysed the profound changes occurred to youth and paths of transition to adulthood in the last decades, it is often possible to notice two glaring deficiencies in many sociological works: firstly, young people are frequently conceived as a category of its own, a specific social group that is somewhat isolated and studied separately, making at most a comparison with the previous young generations; secondly little attention has been paid to adulthood, the final destination of youth. Adults should be a model for young people's transitions, but within the contemporary context this stage of life's standard model is threatened by contemporary transformations and late-modern processes (individualisation, flexibilisation, globalisation, juvenilisation) and it's become more and more complex to define what is 'young' and what is 'adult', where youth finishes and where adulthood starts, which functions characterise these two ages and which are their reciprocal connections. All that has huge consequences on the (individual and social) identity both of young people and adults, on their intergenerational relationships and on youth transitions. The intent of the proposed contribute is to think youth in a generational way by studying young people in relation and in comparison to the co-present adult generation, lighting up the contemporary features of adulthood. The proposed contribute - based on an empirical research which involved 30 Italian young people aged between 18 and 24yo and their significant adults through semi-structured interviews- aims at contrasting the specific interpretations of adult identity emerging from the representations and practices of adulthood of two generations: the baby boom and the millennial one. Through this comparison the presented research highlights the processes beneath contemporary intergenerational dynamics inside and outside the family, allowing a deeper knowledge and understanding of contemporary youth.

### *The Embodied Mind and Epistemic Difference: Lessons from Disability Studies*

Embodied mind theories in neurocognitive science and philosophy of mind are increasingly cited as a conceptual bridge between neuroscientific and social

scientific epistemologies. Theories such as enactivism, embodied realism, and extended cognition share a preoccupation with grounding mind and consciousness in the lived, active body, with situating these in environment, and with challenging the abstract, disembodied Cartesian subject. In this sense, they echo sociological and feminist views on the epistemic significance of the body. Yet sociologists and feminists argue that an embodied view of mind must involve the recognition of differences between knowers, while neurocognitive theories assume a generic or universal body and pay little attention to epistemic multiplicity. In this paper I argue for the importance of epistemic multiplicity in forging interdisciplinary theories of embodied mind. I also put difference in more literal terms by addressing corporeal variation. How neuroscientific embodied mind theories come out on the epistemic significance of phenotypical variation can be gleaned from the debate over multiple realizability, or the idea that the same mental state can be achieved through multiple physiological processes. This debate focuses on difference only to reinstate epistemic sameness. For more considered reflection, I look to disability studies, particularly the work of Jackie Leach Scully, Tobin Seibers, and Rosemarie Garland-Thompson, to consider what phenotypical variance teaches us about the embodied mind. Disability scholarship shows us that all bodies are variant in some way; this work puts pressure on assumptions of biological universality. The example of disability also shows not only how problematic it is to assume a generic body, but also a generic fit between body and world. I argue that embodied mind theories can best grasp epistemic difference by resisting an *a priori* body-subject whose relevant properties are fixed in advance.

**PIXLEY, JOCELYN\*** (Macquarie University, [jocelynpixley@gmail.com](mailto:jocelynpixley@gmail.com))

#### *Central Bank 'Independence'*

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an 'unfair game', as Hyman Minsky said years ago. This paper investigates 'independence', not only as a sociological misnomer, or a form of central bank 'dependence' on what financial markets 'think' (as Fed members say) but also the effects of central bank quantitative easing since the crisis. The Fed's QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes behind which lie coalitions of interests that defend the *status quo ante*. So far few effective oppositions have risen to urge a firmer path for the Fed, such as that taken by the Swiss National Bank. In 2012 it called the bond trading firms' bluff; in contrast the Bank of Japan is under some 'control' by Treasury. I report on my current interview material in Europe with central bankers and treasury officials.

#### *Barrier and Risk Free Environments for Older People. a Survey Applied to State Provided Units in Chile, the Need of a New Policy Approach*

Increasing ageing and urbanization are two tendencies which together characterize the 21st century as an unprecedented demographic revolution. In this context a large proportion of older people, particularly in Latin America, will live in vulnerable social, economic and cultural conditions in inadequate habitats which should be addressed by public policies. The effects of the built environment has been the less attended in Chile, despite its relevant impact in both the physical and perceptual dimensions of life affecting its quality reflected in inclusion, social participation, autonomy and independence of this age group. Adequate habitability of housing and urban space should be provided allowing aging in place as long as possible. Up to date senior policies in Chile have focused in providing housing for those unsheltered through the provision of new units which have not considered the needs of older persons. Considering that more than 80% of seniors in Chile own their homes (SENAMA-INTA 2010); the addition of public policies focusing in improvement of existing housing is relevant. Considering the high accident and mortality figures related predominantly to falls due to aspects of the built environment and the high personal and economic costs for families and the medical assistance system, design issues become relevant issues.

This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provided by the State of Chile, using objective and subjective techniques. (Direct observation of performance of Basic Activities of Daily Living, (BADL), focus groups regarding findings and dimensional evaluation both of users and spatial conditions). Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and or architectural design mostly related with height, presence of unevenness or lack of elements.

#### *Corps En Mouvement : L'expérience De La Marche Chez Les Femmes âgées Immigrantes à Montréal*

Dans le cadre d'une étude en cours sur les « femmes âgées immigrantes et leur rapport au vieillissement » menée à Montréal, les expériences du vieillissement dans le rapport à soi et à son corps sont notamment interrogées. Les données présentées dans cette communication sont issues de 15 focus groupes, soit 90 femmes d'origines et de communautés culturelles différentes et ayant des parcours migratoires variés. À partir de ces données, le quotidien de ces femmes immigrantes est présenté à travers une pratique commune : la marche. Les analyses comparatives des verbatims ont en particulier permis de saisir l'importance accordée au mouvement. La marche en particulier atteste d'une volonté unanime dont elles font preuve, celle de rester autonomes et indépendantes. Il s'agit là d'un résultat de recherche que l'on retrouve dans tous les focus-groupes. En effet, quel que soit l'âge de la personne, son autonomie, son origine culturelle, ses pratiques religieuses, son parcours migratoire ou son statut familial, la marche est une façon de pratiquer et de vivre son environnement – son espace vécu. Au-delà d'une vision qui pense le vieillissement en termes de limites et d'incapacités, nous mobilisons le prisme du mouvement pour montrer comment ces femmes s'adaptent à leurs corps pour rester autant que possible en cohérence avec leur environnement. Nous mettrons en évidence dans cette session que si le fait de vieillir et de connaître des limites physiques peut représenter des obstacles dans les déplacements de tous les jours, cela ne les remet pour autant pas en question de façon définitive. Par ailleurs, nous montrerons ce que cette attitude de la marche dit de la personne qui la pratique. Les déplacements et les mouvements au quotidien permettent par exemple d'activer les relations sociales.

**PLASOVÁ, BLANKA** (Masaryk University)  
**DOBROTIC, IVANA\*** (University of Zagreb, Faculty of Law, [ivana.dobrotic@pravo.hr](mailto:ivana.dobrotic@pravo.hr))

#### *Trends and Challenges in Care Policies Development in Croatia and the Czech Republic*

Care for dependent family members has become an important policy area which requires substantial reforms in many European countries. Care policies are increasingly restructured, where the trend towards new forms of care governance can be recognised, with a sustainability of care system becoming an important driver of reforms. Still, the policy answers countries opt for and their modes of implementation fairly differ. These are reflection of country specific institutional, political, socio-economic and cultural circumstances, and transnational ideas. That makes care policies an interesting field for further comparative research.

This paper addresses the main reform trends in care policies in Croatia and the Czech Republic. In socialism both countries predominantly relied on state provision of eldercare and childcare, however, due to the lack of care facilities, the informal/family provision of care was quite widespread. With economic, social and political changes during the transition period new ideas and principles become present at the political level such as growing tendency towards increased pluralisation of care providers and enhanced family's responsibility in care. Nevertheless, they varied between the policy areas and countries, and were not fully realised in policy reforms, what resulted in different consequences for both, persons in care need and care providers.

In order to unravel similarities and differences in care policies development in Croatia and the Czech Republic, the structural, organisational, quality and financial aspects of childcare and eldercare are discussed as well as the main discourses and principles behind the reforms. They are additionally placed in the context of accessibility and affordability of services. The paper aims to explain what circumstances led to the reforms and under what logic were the childcare and eldercare systems redesigned and reorganised since the 1990, and what were the reform consequences regarding the access and delivery of care services.

#### *How Can We Characterise National Sociologies?*

National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified [in ways not specified] as leading national social thinkers, though there are also some cases where the contents of leading national journals [identified as such in ways not specified] are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a 'national' sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

### *Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey*

**Background:** The U.S. Institute of Medicine's Report, *Digital Infrastructure for the Learning Health System*, calls for "weaving a strong trust fabric" among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this "fabric" is understudied, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust – fidelity, competency, integrity, and global trust – and key determinants such as awareness, beliefs, and previous experience. **Methods:** To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). **Findings:** Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among health care providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). **Discussion:** The public's trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Understanding the nature of the public's skepticism and uncertainty about the risks and benefits to themselves and their communities of interest can inform future development of information governance and data brokerage.

**PLEYERS, GEOFFREY\*** (Université de Louvain(UCL), [Geoffrey.Pleyers@uclouvain.be](mailto:Geoffrey.Pleyers@uclouvain.be))

### *Concepts and Practices of (Counter-)Democracy in the 2010s Movements*

This paper proposes a cross-analysis of democracy as demand and practices as defined and implemented by young activists in recent social movements. It draws on first hand empirical material from three qualitative research: democratization movements in Mexico (12 interviews, 2012-2013), Moscow (23 interviews, 2013) and Rio de Janeiro (32 interviews, 2013); progressive activists in Europe (7 countries, 37 interviews and a focus group, 2012); and ecological transition activists in Brooklyn (22 interviews, 2010-11) and Belgium (34 interviews and 2 sociological interventions, 2012-13), as well as 7 interviews with Occupy Wall Street activists.

Text analysis (NVivo) and consolidated methods of discourse analysis suggest that four main forms of counter-democracy can be isolated in young activist's discourses: direct democracy, responsible democracy, argumentative democracy and protest democracy. *Direct democracy* at the local level is notably connected to experimentation in horizontal and participatory deliberation processes as well as neighbourhood assemblies. *Responsible democracy* leads to stress citizens' responsibility, whether in their consumption practices (the local transition movements) or in monitoring elected representative and civil servants (often mentioned in Russia and in Brazil). *Argumentative democracy* is mobilized by committed experts, who trust in the impact of rational and well-developed arguments

and popular education. Finally, many activists insist on protests, popular movements and mass demonstrations able to influence policies.

The paper will briefly analyze each of these forms of (counter-)democracy, the cultures of activism it refers to, their subjective dimensions and their relation to institutional/representative democracy. It will underline the heuristic potential of cross-fertilizations among these forms of counter-democracy and representative democracy. Taken together, they offer concrete ways forward for a multi-dimensional approach to deal with structural limits of representative democracy and to explore paths towards more democratic societies.

### *Reducing or Reproducing Inequalities? Ethics and the Researcher's Role in Negotiating Power Relations Between Young People*

A key concern of youth research is the ethical issues that arise through the inherently unequal power relations between adult researchers and young research participants (Brooks 2013, Matthews 2001). However, less attention has been given to the ethical dilemmas that arise for youth researchers when confronted with negotiating their own role in witnessing and responding to unequal power relations and oppressive behaviours between young people during the research process. We know little, for example, about how youth researchers respond to racist, sexist or homophobic behaviour (Curtis et al 2004) or negotiate the exclusionary practices of young people towards each other (Morris-Roberts 2001).

For youth researchers concerned with and committed to challenging issues of injustice and exclusion and/or to adopting a non-authoritarian role with participants this can be particularly troubling (Morris-Roberts 2001). Ethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth club over a 12 month period, I analyse the basis of my reactions, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people's agency and conceptualisations of challenging interactions.

Like others, I advocate for ongoing reflexive engagement with ethical issues as they emerge in the research journey (Sime 2008) and for openness about the everyday 'messiness' and 'sense of failure' that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

**PLUSS, CAROLINE\*** (Nanyang Technological University, [pluss@ntu.edu.sg](mailto:pluss@ntu.edu.sg))

### *Cosmopolitan and Essentialized Socialities in Transnational Spaces*

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, socialities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several societies. These two forms of socialities are new and encompassing characteristics of access and non-access to the resources of different contexts-of-interaction in different places and societies because they merge both, the two basic forms of culture contact (adaptation or differentiation), and social relations of reciprocity, trust, collaboration, and exchange. This presentation will show that the Chinese Singaporeans' explanations of their practices (or lack of practices) of these two forms of accounts for how they perceived of changes in their own characteristics, in the dominant cultural characteristics of their transnational spaces, and of the cultural characteristics of processes of globalization that the Chinese Singaporeans were carriers of. Emphases are on the role of the cosmopolitan cultural characteristics the Chinese Singaporeans acquired through bilingual education in Singapore to establish cosmopolitan socialities in their contexts of work and friendships in Hong Kong with English-speaking people who were from the West, and Asians who had lived in the West; and 'cosmopolitan' work socialities with colleagues in mainland China (the PRC). However, the Chinese Singaporeans' mostly maintained essentialized socialities in their families, and they were largely excluded from the (differently) essentialized socialities of local Hong Kong people, propelling them—paradoxically, to more highly values cosmopolitan socialities with other non-locals in their contexts of work and friendships.

**PODLESNAYA, MARIA\*** (St.Tikhon's Orthodox University, [yamap@yandex.ru](mailto:yamap@yandex.ru))

### *The Models of Orthodox Christian Parishes within Post-Soviet Russia: The Influence of Social Environment*

Vast reconstruction and building of orthodox churches in Russia is a new architectural landscape of modern Russian cities as well as forming of separate social establishments - parishes and their communities. Such communities are variegated and have own features demanding on different factors (mainly of territorial and administrative character).

The sociological researches within Kashirskoe and Nikolsy deaneries afforded an opportunity of distinguishing the orthodox parishes models, which develop as a result of religious activity of last several decades.

1. **"The churches with elderly communities unclosed in soviet period"**. The core of such communities is formed by aged people - as a rule, women and old-timers of church who remember the life of parish in soviet and relating to perestroika periods. The characteristic feature of such churches is a presence of several generations of congregants: those who were in the church in soviet times and those who came there in post-soviet period;
2. **"The parishes with constantly varied community"** are typical for churches at hospitals, shelters and prisons where there is a frequent change of congregants looking for mysteries and services of Church;
3. **"The churches in holiday villages with cottagers communities" and "The guest church"**;
4. **"The parishes with the community of "the active"** are formed around an enthusiastic and active priest, who unites people of the most diverse age and social rank;
5. **"The parishes of specific destiny"**. There are parishes which are known for their unparalleled features, as for instance one of Satio-Russkoe of Nikolsky deanery: here we find both the deposition of respected warrior Evgeny Rodionov (numerous groups come to his resting place), and complicated reconstructed building of the church against the background of luxurious houses raised around and even its own parish tragedy - the murder of a priest.

#### *'seduction': A Pattern of Interpretation*

My talk centres on the ways in which experiences of sexualized violence are dealt with biographically; an experience of violence, which, in the context of National Socialism, for the biographer was raised to the fear of being killed. This fear of being killed is an expression of the real - and fantasized - potential of their National Socialist parents to annihilate experienced by children. The biographical case construction I want to present concerns the life story of a woman born in 1928. Her socialization took place in a family with National Socialist values and within Nazi institutions, and she experienced sexualized violence as a child, by her father and a priest. Based on the diary written by the biographer from 1944 to 1954, and on her life story told 60 years later, I want to show in which manner the biographer addresses her suffering from sexualized violence and her past experience as a young National Socialist believer in her diary, and to which discursive patterns of interpretation her discussion of these issues is bound. My particular focus will be the interpretative pattern of 'seduction', which is structured along gender relationships. With it, the biographer manages to work through her experiences of sexualized violence as well as to embed her National Socialist convictions into her biography after 1945. It is important to take a closer look at two aspects: in which specific way does this pattern of interpretation unfold over the course of a life? And in which way does it enable her to speak about her experience? The pattern of interpretation of 'seduction' allows her to discuss the charged experience of sexualized violence, but also to obscure and to deny her own participation in Nazi society as a teenager, as well as her fear of being killed.

#### *Asian Prosperity and Inequality: Gains and Injuries of Success*

During the past decade or so, the Asian region has experienced rapid growth and expansion. While rising prosperity has led to poverty reduction, social inequality has also widened within and across societies. This paper will interrogate and differentiate the drivers of growth and inequality and its varying consequences to different income groups in the region. In particular, a sizeable lower middle class is fueling the growth of urban economies. By examining the differential gains of economic success within and across income classes, particularly among the emerging middle class, the paper characterizes the intersecting/intertwining social injuries of prosperity, poverty and inequality. In doing so, the paper extends the understanding of injuries of income inequality from the physical to the social and political.

#### *Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia*

For the past two decades, the Asian region has experienced rapid economic growth. While countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region's high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region's challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

#### *Cellular Globalization and the Environmental Awareness in Rural Communities*

A multidisciplinary team of social scientists (sociologists, economists, social geographers and demographers from main Moscow universities under the auspices of the Society of Professional Sociologists) works in the Russian region of Kostroma, which is similar in size to West Virginia and has a population of 800,000. 70 percent of its territory is virgin forest. The Soviet era chemical plants in Kostroma have gone out of business, leaving Kostroma's environment as the region's main asset. Despite the region's seeming isolation from the flow of globalization, a process of "cellular globalization" (Pokrovsky, 2008) is subtly but inexorably changing the character of the region. This process is changing traditional rural 'solidarity in despair and poverty' towards recognizing wealth as a value. Against this social background one can indicate the growth of rural communities made up of the migrant residents from big cities who decided to move out from megapolises in order to establish a new environmental Utopia based on the value of ecological balance and downshifting. In the countryside 'new re-colonizers' continue their basic professional work through Internet and telecommunications, they make use of all modern commodities of life, they travel much on business—they are on the move or in the condition of 'liquid mobility'. Those new 'infocommunication settlers' (ICS) exemplify a much higher degree of social solidarity and vitality as contrasted to the deteriorating solidarity of the traditional population of the region. Is this an early evidence of the forthcoming general turn to 'infocommunication ruralism' in the spiral trajectory of social change?

#### *The Tale of Two Projects: The New Trends of Post/Counter Consumption in Russia – Visual Case Study of Yuri Voichevsky-Katchalov Estate Project in the Vologda Region and the Ugory Environmental Project in the Kostroma Region*

The modern Russian history provides examples and trends in the evolution of consumption among the upper and middle class. Trend, tentatively called the "Abramovich's case" is still showing examples of Byzantine luxury. A new trend is characterized by the removal of (a) the demonstrative signs of wealth, (b) the desire to transform it into humanitarian programs. The paper analyzes the visual indicators of the "Manor Khvalevskoe" – restored by the famous financier Yuri Voichevsky-Kachalov ("Standard Bank"), the family estate of the 19th century in the Vologda Region in northern Russia. The visual analysis demonstrates social implications of the concept laid in the foundation of this project and its manifest/latent consequences including those of architectural design preferences of the 19th century and today. The second case, the Ugory Project in the Kostroma Region in the Near North of Russia, demonstrates an evidence of cellular globalization which refers to the emergence of internalized changes within the individual attributable to the effects of globalization including the preservation of the old traditional architectural style of log houses. This process is slowly changing traditional rural attitudes towards wealth—more rural residents are placing greater importance on wealth than in the past. But the most advanced villagers already realize the significance and value of the 'old style' living. A new migration force is about to radically change the profile of local community life but tends to preserve diverse 'indicators' of old times. The dramatic crisis of urban life enables sizeable groups of middle-class professionals and IT-experts to consider moving to environmentally balanced areas in the North of Russia.

*Informality and Policy Making: Evidence from Post-Socialist Spaces*

Informed by participant observation in public places, informal interviews and a large scale survey this paper explores the way informal practices may impact policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what some have defined as a "culture of corruption" to introduce the concept of "(non-) state socialism", defined as a system for redistribution of welfare based on human interaction, and agency, replacing state agency where and when this latter is ineffective or absent. (Non) state socialism refers to the fact that informal practices of redistribution are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harming the state (like fiscal fraud or bribing) and those harming the fellow citizen directly (trafficking, narco-traffic). Although both "illegal" the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happens, even if the state is not effective, the society re-regulate itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

*Renegotiating Social Policy through Informality: A Post-Socialist Perspective*

This paper demonstrates that informal practices may allow for the participation of a wide variety of citizens in policy making processes. In particular, it focuses on the renegotiation (at the formal and informal level) of social and welfare policies in postsocialism.

Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialised ones. As a result, research has been pre-occupied with possible areas of interventions, and steps to take, in order to speed up this convergence. This assumption has been challenged by an emerging body of literature that, starting from a post-structuralist perspective, suggest that development patterns may differ geographically and historically and that there are alternatives to capitalism (de Soto 2000, Gibson-Graham 1998).

Gathering evidence from case studies (Estonia, Lithuania, Russia, Romania, Ukraine, Uzbekistan) a mix of ethnographic methods and national surveys designed by the authors this paper suggests that: 1) citizens unable to use traditional channels (voting) or consolidated tools (contentious politics) may be able to informally renegotiate a policy that they are unable or unwilling to comply with. In this it builds from a long anthropological tradition of unorganised resistance (Scott 1984) to show the role informal practices may have in the renegotiation, or even rejection, of formal policies; 2) the incapacity of a state to act as welfare distributor does not imply automatically lack of welfare tools in that society. By organising themselves, citizens may be able to create parallel structures securing welfare without necessarily passing through the state. In this the paper will start from Polanyi's (1968) distinction between pre-modern and modern economies to critically analyse literature on the lack of structures and social capital in post-socialist spaces.

*The 1978 World Cup in Argentina, from within Its Political Prisons and Clandestine Detention Centres*

Situated at the crossroads between the study of political repression and the media coverage of a sports event, this paper focuses on the reception of Argentina's 1978 World Cup among those who were imprisoned in clandestine detention centres, in a political context that some have described as state terrorism.

Our examination of testimonial accounts from the oral archive Memoria Abierta has shown that a number of survivors who were illegally imprisoned during the World Cup recall and express feelings about this event. While we expected concentrational spaces to be fully hermetic and insulated from outside information - as total institutions (Goffman, 1961) -, we observe, in contrast, the precarious and crumbling conditions through which the prisoners accessed and either celebrated or scorned football and nation. Indeed, rather than having been censored or concealed by the repressors, the World Cup, as a national festivity and media event, was to some extent integrated to repressive practices.

We will discuss a number of situations evoked by the survivors in which the World Cup and its media broadcast intervene in the power logics of military personnel and their relationship to the inmates (better described as "disappeared" in the case of clandestine detention centres). We will also discuss the effects of the 'informational porosity' of the total institution in the inmates' experience. Our paper will be centered on the subjectivity of social actors: their opinions, expectations, and causes of suffering. We will also discuss the limits of such an attempt to reconstruct these positionings, given the passage of time and the controversial nature of this international sports event.

*Pathways to Citizenship (inclusion) and Conflict (exclusion): Employment Relations in Migrant Workers' Workplaces in Belfast, Edinburgh and Wrocław*

The study explores trajectories of migrant inclusion and exclusion in Belfast, Edinburgh and Wrocław - the major economic centres in the three post 2004 migrant destination countries. Northern Ireland (NI) and Scotland became net in-migration countries in the early 2000s. A significant share of their immigrant population is composed of workers from Poland - a country that itself is becoming a destination for a growing number of migrants.

Previous literature has developed different conceptual understandings of migrant integration into host societies. However, there has been less research about critical biographical junctures at which individuals stop being migrants and become settled in their various communities, migrant and host. By taking a leap into migrant workers' subjectivity, this study investigates, through the analysis of in-depth interviews, how migrants develop and negotiate their belonging and sense of place, and how their understanding of what home is evolves over time. It builds on previous studies on migrant settlement but adds to it by exploring qualitative differences in settlement thus arguing for a more nuanced understanding of the concept that sees it not as a state but a changing process with variant shapes. The study also tries to explain how different settlement trajectories are affected by the nature of employment and the import of political economy.

The research is set in several political economy contexts of new immigration destinations. Being part of the UK, Scotland and NI share many features of liberal market economy and liberal welfare regime but at the same time NI has been characterized as retaining strong elements of Keynesianism. By contrast, Poland is a Dependent Market Economy with a welfare regime that combines elements of both conservative and liberal models supplemented with unique post-communist features.

The study is funded by the European FP7 Marie Curie Training Network "Changing Employment". Website: <http://www.changingemployment.eu>

**POMA, ALICE\*** (UPO and EEHA-CSIC, [alicepoma@gmail.com](mailto:alicepoma@gmail.com))

*Feeling Intensely and Changing Radically. How Emotions Felt in Protest Lead to a Cultural Change*

The aim of the paper will be to present our proposal of analysis that links the emotions felt in protest and the transformations of consciousness and behaviour considered as outcomes of the protest.

Aware of the emotional intensity these experiences have and the importance of incorporating this dimension to the analysis, our objective will be to show how emotions motivate, discourage, radicalize and generate new outcomes out of the experience of struggle, giving a new meaning to the experience of protest. In order to do this, we will analyse the role of emotions in crucial moments of the protest, in which people decide to take part in the struggle and devote themselves to it, changing their way to see the world and their relationship and bond with other people in a process that leads to transformations of consciousness and behaviour and, finally, to their empowerment.

Based on previous empirical research where we have studied different experiences of movements, protest and resistance in Spain and Mexico (*indignados*, *#yosoy132*, two Oaxaca's women collectives, Mexican anarcho-punk movement and a few resistances against dams and environmental conflicts in both countries) we propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics which macro-structural literature cannot perceive. The methodology that we have

developed throughout our research is based on depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

### *Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens' Empowerment and Democratization*

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riaño valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

### *Images des latino americains dans la direction de la composante militaire de la MINUSTHA (Mission des Nations Unies pour la Stabilisation en Haiti)*

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti after the political crisis of the Jean Bertrand Aristide government, which erupted on February 29, 2004. More than eight years since the implementation of the United peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH). The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thought currents with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the «imagined Haitian nation.»

### *Gender Roles In Television Commercials In Asia*

[piyatom@yahoo.com](mailto:piyatom@yahoo.com), [piyatom@sun.ac.jp](mailto:piyatom@sun.ac.jp)

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercial

has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerning the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand, and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television commercial does not correspond with the construction of gender roles in reality. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in term of gender of main character, voice over, age, and roles of male and female character in television commercial.

### *Young College Students and Their Values: A Comparative Study Between Brazil and China*

**Young college students and their values:  
a comparative study between Brazil and China**

**Marilena Nakano  
Marilia Pontes Sposito**

This is a quantitative sampling research held within the scope of the Brazil-China Agreement. It compares the Brazilian college youth with the Chinese, in the 17 to 24 year-old age bracket. The data was obtained in 2012, by means of a same questionnaire in both countries.

The paper will privilege the data related to values and visions about the best and the worst aspects of being a youngster. It will analyze the differences between young men and women. In spite of similarities, what attracts most attention is the configuration of the two distinct modes of being young: a Brazilian and a Chinese.

There will also be some reflections about the research conduction process and the interactions between the researchers and the different cultures and countries are also to be considered.

With regard to the results, the peculiarities of each group are being identified. Thus, for example, for Brazilian college students, the best thing about being young is to have "dreams and objectives" and the worst part is to "not be able to be self-supporting". On the other hand, for the Chinese youngsters that were interviewed, the best thing is "to be healthy and fit" and the worst is "to be insecure regarding the future". It is interesting to note that they fear they can be "easily influenced", whereas this fear is not strongly representative among Brazilians.

Notwithstanding the singularities observed between the youths of each society, it can be observed that there are some transverse points of contact that allow us to go ahead in drawing up the contemporary juvenile condition, incorporating the differences of genders as a fundamental aspect.

### An "Area Studies" Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing "area studies" programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connexions between disciplines, and the need for expertise due to the position of a particular State in the international relations. Well documented in the case of the US, these evolutions are less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950's of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6<sup>th</sup> Division of the Ecole Pratique des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators' background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a "sensitive" geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

MURATET, MATHIEU (Institut national supérieur de formation et de recherche pour l'éducation des jeunes handicapés et les enseignements adaptés (INSHEA))

GUILLLOT, JULIE (Institut national supérieur de formation et de recherche pour l'éducation des jeunes handicapés et les enseignements adaptés (INSHEA))

### From Technical Innovation to Inclusive Education for Students with Disabilities

Since 2005, public policy in France has strongly been encouraging young people with disabilities inclusion within the regular school system. This has found a direct application through technical innovation, intended to help students being more independent within their learning activities. The purpose of this presentation is to underline the manner in which using assistive information and communication technologies may improve the inclusive education for people with disabilities.

Moreover, we will base our work on the distinction between technical invention and technical innovation. If technical invention is generally responding to a need at some precise moment, and is sometimes identifying itself with an unique user and use (Simondon, 1968), the technical innovation has a more collective and social dimension (Mulkay, 1972). Hence, we analyse the use of a software and hardware assistive kit intended for students with disabilities who have visual and hearing impairments, as well as learning disabilities.

A hundred students from Paris area are expected to use this technology within classes during 2013-2014 school year. The study is then both based on quantitative and qualitative methods, including log folder analysis, questionnaires, interviews and participant observations. We eventually submit that the assistive technology kit becomes a kind of « prosthetic device », intended to improve cognitive performances. Nonetheless, the technical abilities of its users (Dodier, 1993), as well as the environmental conditions have to be taken into consideration. Technical innovation could, at some point, be seen as a first step towards social innovation, and therefore towards social inclusion of young people with disabilities.

### Le Héros Handicapé Ou L'autonomie Comme Norme Généralisée

Le point de départ de cette communication est donné par l'existence d'une double manière de présenter le handicap et surtout des personnes handicapées à travers les médias. Les individus y apparaissent le plus souvent comme des victimes ou des héros, les hypostases intermédiaires n'y trouvant qu'une place réduite.

Dans cette présentation nous retenons donc la figure du superhéros associée au handicap. Ce personnage est souvent appareillé et donc pourvu d'une prothèse lui permettant de dépasser ses propres limites. Une image de l'homme réparé et/ou de l'homme augmenté y est construite tout en partant de la réalité des dispositifs techniques de compensation qui encouragent la performance et l'autonomie.

Des articles issus de la presse quotidienne et hebdomadaire française sont ainsi étudiés à travers la méthode de l'analyse du discours. Nous tentons par la suite de mettre en évidence les liens qui s'établissent entre des catégories d'individus et les actions et les caractéristiques qui leur sont attribuées.

Nous observons ainsi que l'individu handicapé est celui qui bénéficie d'une prothèse et dont les performances sont augmentées par ce dispositif. Au final, la personne n'est plus proprement dite déficiente. Elle est "en situation de handicap", mais elle est capable de s'autodépasser, devenant de cette manière un membre de plein droit de la société néolibérale.

### Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproductive Health Lives of women in three countries (Canada, Pakistan and Indonesia) and the proposed study on how gender is negotiated between generations in transnational families. In this paper I look at the particular experience of negotiating ideas about sex and reproductive health between three generations of families in the province of Newfoundland in Canada. The oldest grandmother participant was born in 1910 and the youngest granddaughter in the mid 1980s, which provides a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

BARBOSA, LIVIA (Pontifical Catholic University of Rio de Janeiro)

### Sustainable Consumption Among Brazilian Young: Daily Practices and Political Participation

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of the country, Rio de Janeiro and São Paulo; and (2) a focus group with a total of 51 young with the same socio demographic characteristics, conducted in 2012. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives somewhat secondary. We finally point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these develop depends on the institutional configuration of each society.

### An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member's strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchy of mobility rights exist, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it's hard to find a unique definition general enough to take into account the diversity of families (different migratory conditions) and also to determine its boundaries; for instance, to determine who are involved in the transnational family practices. Second, the predominance of the network's approach (informal connections, remittances, individual strategies)

overlooks other important structural elements, such as the role played by public policies. Third, the evident prevalence of a *a posteriori* perspective in the study of transnational family ties makes it difficult to deeply understand their sociological production; in particular the institutional framework that produces, or at least encourages, the separation of family members. Hence, I strongly consider that we must enrich the knowledge about transnational families by adding a solid background from the field of sociology of the family, instead of only the background from migration studies. Despite their local and culturally determined roots, some contributions related to kinship, parenthood, maternity and paternity are essential. Also, we must include the contribution of gender studies in order to better understand individual and collective experiences of participants, men and women. This epistemological view will thus increase the heuristic value of the concept of transnational families.

#### "Transnational Families" Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for "unskilled" workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants' activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families' lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

#### Encrucijada Latinoamericana en Bolivia: El Conflicto del TIPNIS y Sus Implicaciones Civilizatorias

El presente ensayo busca interpretar las implicaciones civilizatorias que vemos presentes en el conflicto del TIPNIS (Bolivia), resaltando la importancia que para el continente y las luchas territoriales, sociales, ambientales tiene el desarrollo del conflicto del TIPNIS. En la primera parte se hace un análisis desde los múltiples espacio-tiempos que están implicados en el conflicto. En segundo lugar se centra el análisis en las actuales presiones desde dinámicas socio-espaciales, especialmente de ampliación del capitalismo en frentes de expansión/invasión, que constituyen tensiones territoriales sobre y alrededor del territorio y territorialidad de los pueblos indígenas del TIPNIS.

El estudio resalta el papel de los movimientos sociales bolivianos en la configuración de las nuevas luchas políticas emancipatorias en el mundo ancladas a los conceptos claves teórico-políticos como territorio, autonomía, autogobierno, buen vivir, madre tierra, derechos de la naturaleza, estado plurinacional comunitario, resignificando la antigua lucha por la tierra en una otra clave teórico-política, distinta de la liberal y/o marxista. El ensayo destaca la importancia de entender las profundas dimensiones que el TIPNIS nos plantea para tomar las decisiones que están en juego, y que constituyen toda una encrucijada para el continente, el mundo y también para los gobiernos progresistas que intentan empujar cambios en la actualidad.

#### Incivility and Disorder in Urban Public Space of the Czech Republic: Normativities and Instrumental Interests

The paper focuses on the changing definitions of *incivility* and *disorder* in urban public spaces of the Czech Republic. After the fall of the totalitarian regime in 1989, the notion of urban public space as a site of social interaction, negotiation

and conflict appeared, first legally defined in 1990. The following years saw a process of negotiation of the limits of acceptability in urban public spaces. The terms *disorder* and *incivility* were employed by various actors, including courts of justice, local municipalities, activist groups, NGOs and the media, to define acceptable conduct and exclude undesirable elements from the newly emerging public spaces of Czech cities. This paper focuses on how the meanings of *disorder* and *incivility* were defined in the process. Two perspectives are identified in the discourse: (a) normative perspective, identifying the notions of disorder and incivility with respect to values of public order, safety, health and others and (b) instrumental perspective, whereby the notions of disorder and incivility are employed by various actors to promote their particular interests in the conflicts over the use of public space. The conflation of these two perspectives and their mutual relationships are discussed, using the empirical material of local and municipal ordinances and regulatory plans of city administrations. The data shows that the conflicts over the definitions of disorder and incivility point to a larger dispute about the nature of public space and about the notions of citizenship and social inclusion.

#### Out of Control and out of Sight: Defining Deviance in Czech Shopping Malls

This paper presents an empirical study of how deviance is defined with respect to sensory experience in Czech shopping malls. The rise of shopping malls is one of the most important recent developments in Czech cities: the first mall was opened in 1998 in Prague and ten years later, in 2008, there were over 70 shopping malls across the country, making it one of the world's fastest developing countries in this respect. With this development, an idea of a "new public space" came to be prominent, with strict rules of conduct and social control based on surveillance and exclusion. The paper builds on a large body of empirical evidence, including (a) legal documents, (b) house rules of Czech malls, (c) interviews with mall management and developers and (d) interviews with homeless people, in order to understand how deviance and deviant behaviour is defined in these new consumption spaces. It will be argued that visual appearances play a key part in the prevention-based regulation and control over mall space. The data show that, in the dominant representations of deviance, visual cues are conflated with the potential of uncontrollability, which is seen as a threat to the order of the mall space. The definitions of undesirability, applied to groups such as the homeless, are built on visual images and they are associated with specific types of conduct. The rules of acceptability are, on the one hand, vague and open to interpretation by the security staff, and, on the other hand, tailored to exclude groups which, by their appearance, are considered prone to undesirable conduct. This conduct is often defined as a sensory disturbance to the image of the mall.

#### The i-sation of society and post-secularism: towards new inequalities?

In Jameson's classic work, the end of the 20th century was claimed to face the third phase of capitalism, that of late capitalism, the world space of multinational capital. Around the same time, Ritzer wrote about the McDonaldisation of Society which refers to the permeability of (what Weber made reference to as) rational bureaucracy into our everyday life. This paper will argue that we are now in a fourth stage of capitalism, the cyber space of 'denationalised' capitalism, and that with the help of new i-technologies, this penetration of rational bureaucracy has filtered further from everyday life to our personal biographies. Linking these two theories, this paper will present the argument that we are going through a process of i-sation of society (1) in which capitalism is not only dominating our outer life (e.g. global capitalism) but our inner life as well through its expansion on the Internet facilitated by various i-technological applications and (2) in which the McDonaldisation process has now been normalised and religion has been standardised. This paper will address the new inequalities at hand in this i-society, its impact on Habermas' project of post-secularism, and will project the role that various religions will have in supporting and/or countering this process.

#### Public Religions and Same Sex Marriage

It is widely recognized that marriage, and more generally family life, has changed profoundly in the last half century. The causes of change are very diverse

but one important issue has been legal change. The introduction of no-fault divorce in the post-war years contributed to the rapid increase in divorce, and more recently the idea that same-sex marriage will be sanctioned by law has stirred up significant public controversy.

Debates around the legal recognition of same sex-marriage and other related matters such as the legal argument in Germany and California that circumcision constitutes physical abuse of the child have only served to unite and unify otherwise separate and disconnected religious groups – fundamentalist Christians, ultra-orthodox Jews and conservative Muslims. This eruption of religious issues into the public domain – over creationist teaching in schools, veiling in public, circumcision, gay marriage, and *Shari'a* law – illustrates the ideas of 'public religions' (Casanova, 1994) and appears to confirm recent commentaries on post-secularism. The argument presented by Habermas (2008) of post-secularity will be used as a framework to examine the impact of religion as a cultural resource in debate and decision making in the public sphere. The proposed paper seeks to examine whether the inclusion of religious and spiritual arguments in the public debate on same sex marriage positively influences, as Habermas claims, the democratic quality of deliberative outcomes and contribute to the enhancement of social cohesion or whether on the contrary public religions play a divisive role in democratic debate.

Our paper draws on an Australian research grant to study the same-sex marriage debate in Australia and New Zealand, and on a second grant proposal to undertake a comparative study of legal change in relation to marriage in Australia, France and the United States

*Political Decisions in the Area of Public Security and the Action of Death Squads: The Case of the Violence Crisis in 2012 in São Paulo, Brazil*

The purpose of this communication is to present our findings of an original research that is being conducted at the Center for the Study of Violence of the University of São Paulo, regarding the cycle of violence that took place in the Metropolitan Area of São Paulo, which among other incidents, led to a crisis in the public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected from the media. According to it, during the second semester of that year 30 state agents, (specially Military Police officers) and 274 civilians were killed and 200 injured in similar situations – hooded men, shooting their victims from a motorcycle or a car in movement. This suggests that death squads or equivalent group strategies of execution were used. The novelty here seems to be, amongst others, the organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions, around which a dynamics of action-reaction seemed to be installed. For now, our main hypothesis is that previous political decisions, taken in the realm of public security policies, worked as the main trigger to initiate a process of mutual killings between members of the State of São Paulo Military Police and members of the PCC (First Capital's Command) organized crime group.

*Truth and Politics: The Case of the Truth Commissions in Brazil*

This presentation will seek to clarify the underlying principles as well as the routines and different sources of tensions surrounding the politics of truth commissions that are currently convened in Brazil by systematically cataloguing them and presenting reports from their public sessions and interviews with commission members and deponents. Unlike similar initiatives convened in other countries that have transitioned from authoritarian regimes, the truth commissions in Brazil did not occur at the onset of the emerging democratic regime. Instead, they are a recent phenomenon, appearing in the context of an already mature democracy, and acquiring a multiplicity of forms, as they are established at different levels of governments, legislatures, universities and many other forms of organization of civil society. Established by Brazilian president Dilma Rousseff in May of 2012, the National Truth Commission (NTC) forms the main axis of a large net of independent commissions. Through the NTC, the Brazilian State takes upon itself the responsibility of investigating the human rights violations that were per-

petrated by its own agents during past military governments (1946 to 1988), but does so without revoking the Amnesty Law of 1979, which explicitly prevents any criminal investigation or punishment of any transgressions of human rights that may have occurred during this period. Therefore, the NTC holds the clarification of the historical human rights record as a value in itself, and not as a means of informing judicial action. However, this paradigm is not uncritically accepted by all the auxiliary commissions, which, despite operating under the same legal framework as the NTC, often question the general amnesty principle. The value of historical truth as either a goal in itself or as a potential instrument to legal reform and judicial action remains the topic of much controversy, and forms the main analytical thread of this presentation.

*Ranking Regimes, "World Class" Universities, and the Impoverishment of Intellectual Life*

This paper considers the pressure felt by scholars publish in journals that are highly ranked according to their "impact factor." A world-wide movement has pushed scholars to publish in English-language journals, to the detriment, we argue, for intellectual life at the national level. We first document evidence for this pressure, then discuss the consequences of funding mechanisms and research assessment for higher education. Then we review several factors in this movement: 1) the rationalization of expertise as a feature of Weberian bureaucratic authority; 2) the politics of higher education regulation and control, as manifest in the new managerialism and associated research assessment exercises; 3) the pricing and finance of commercial scholarly publishing, which takes advantage of the preceding developments by charging high prices to maximize profits; 4) decisions by editors and their journals to play by the new rules even when they are personally opposed to them and when they value journals for a different purpose. We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the UK, and South Africa.

*The Overseas Chinese Population in Circa-2011*

In circa-2011, there were over 40 million Chinese people living outside China (broadly defined). We discuss the data on the overseas Chinese; we show their distribution among the world's countries and regions. We discuss their patterns of change in past decades. We present recent data on the larger of the non-Chinese diasporas to enable us to better evaluate the significance and importance of the Chinese diaspora. We discuss the major patterns of previous Chinese emigrations. Then we present our data on and analyses of the overseas Chinese around 2011. The overseas Chinese population in the world in 2011 is larger than the population of Poland and Canada, and almost as large as Argentina. The Chinese diaspora is the third largest in the world, behind Ireland and Germany. The overseas Chinese continue to have important and significant influences in many host countries and are certainly not an inconsequential population.

*The Residential Segregation of Homosexual Households from Heterosexual Households in Metropolitan Areas of the United States, 2010*

Residential segregation is a major area of research in demography and sociology. Most of the research has focused on the segregation of racial/ethnic minorities from the majority race/ethnic group in cities of the United States and several other countries. Few if any analyses have dealt with the spatial segregation of sexual minorities from the majority. In our paper we analyze homosexual-to-heterosexual household segregation. There is a void in the literature about the extent to which gay men and lesbians are residentially segregated from heterosexual households. There are some studies of "gay spaces" and enclaves, but most are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves and political force and activism. There are no systematic empirical studies of metropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and lesbian households are residentially segregated from heterosexual households. Our paper addresses this void. We use two dissimilarity measures of residential

segregation with the same-sex partnering data from the 2010 U.S. census to calculate segregation scores for the 100 metropolitan with the largest homosexual populations. We show that there is a sizable amount of residential segregation between these two groups. We also show that gay male households are more segregated from heterosexual households than are lesbian households. And we show that the level of segregation varies positively across the metropolitan areas with the size of the gay male and lesbian population. Our research contributes to the general literature on residential segregation by focusing on a non-racial minority that has heretofore received very little attention.

#### *Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education*

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of "over-education". For the future of potentially "over-educated" societies, evidence on gender differentials is important for education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

#### *HIV, Dating and Mating: An Analysis Of Stigma In Self-Presentation*

While the Universal Declaration of Human Rights counts among its fundamentals the right to marry and found a family (Article 16), it is often informal societal discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS deal with the stigma of their status from both external to and from within the gay community. Often they are legally required to disclose their stigma prior to sexual activity, in essence moving them directly to what Goffman (1963) calls discredited. Despite overwhelming evidence that sero-discordant couples can effectively manage HIV transmission risk through safer sex practices, positive men must negotiate their status in a dating landscape often characterized by stigmatizing language that polarizes gay men in to "clean" or "dirty" states, the latter referring to men who are HIV positive; in effect making their sexual history their calling card. This paper begins with a critique of Goffman that offers an alternative for those who are perceived to be inherently and irreparably discredited, and then presents an analysis of a comparative sample of three hundred personal advertisements across three differently populated American cities: large metropolitan, medium urban, and rural. Extracted from the free and open website [craigslist.org](http://craigslist.org), the advertisements are qualitatively analyzed for stigmatizing language such as "clean only," "drug and disease free (DDF)," and other text used to communicate sero-status. The paper concludes with a discussion of implications and suggestions for researchers interested in studying inherently stigmatized groups.

#### *Persistent School Segregation or Change Toward Inclusive Education? the Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany*

The United Nations Convention on the Rights of People with Disabilities (UN-CRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenges because the institutionalization of special education systems can facilitate—or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD's goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most differentiated and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified general education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated.

Thus, this neo-institutionalist analysis examines both the barriers and the reform mechanisms that impact the implementation of the UNCRPD in a decentralized national context. German federalism guarantees the sixteen *Bundesländer* authority over educational matters; however, ratified human rights conventions demand fundamental reforms regardless of regional policymaking preferences and priorities. Based on historical process-tracing and expert interviews (with policymakers, administrators, scholars, and advocacy groups), we contrast "leader" Schleswig Holstein with "laggard" Bavaria. In the northern state, inclusive education has diffused broadly since the 1970s. In the southern state of Bavaria, implementation is just beginning; indeed, the law's intents are being subverted by government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of institutional persistence and change: power-based, legitimacy-based, utilitarian, and functional. This analysis contributes to the theoretical literature on institutional change and path dependence, to studies on the human rights revolution in education (UNCRPD in particular), and to research on inclusive and special education, long marginalized in the sociology of education.

#### *No One "Likes" Sandy: Facebook and Post-Hurricane Recovery In Long Beach, NY*

Technologies, like social media sites, have made it easier to communicate and can capture the "ephemeral" cultural artifacts found during periods of upheaval and change (Stallings 2006). However, due to its relative newness, social media's role in recovery efforts after natural disasters has not yet been thoroughly explored. This report adds to existing literature and demonstrates how social media technologies supported and facilitated localized recovery efforts and memorializations from below in Long Beach, New York. The Long Beach Hurricane Information Facebook page, created by two transplants to keep out-of-towners informed has since morphed into a virtual bulletin board that provides support and information for local residents. Residents both near and far see this site as a place to share information, organize local responses, and importantly remember. Referencing their personal memories of Long Beach, posters reference local symbols and sayings to perform solidarity and community in this virtual space. This site bears witness to the resiliency, frustration, and strength as well as the shortcomings and failures of institutional recovery efforts. While they struggle to rebuild, they work together; defined and connected by the "Long Beach sand in their shoes."

### *Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin*

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies.

This paper aims to compare, through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show that the city was the scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis shows how these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

### *Socially Innovative Forms of Renewable Energy Provision: Towards a 'Commons' Approach to Sustainability in Barcelona and Catalonia*

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of 'smart city'. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption.

This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it develops different strategies for ensure its activity paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and market-oriented logics. These experiences demonstrate the limits of technological innovation in moving towards a post-carbon society. Urgent changes in how socioeconomic activity is organized are also claimed.

### *Building a National Idea of an International Future – How National Press Tries to Project Futures after International Events*

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping specific historic narratives of those specific nations.

Those narrative structures are figured and refigured to continue to be included in the on-going struggles and challenges – e.g. economic or political crisis and

developments – that are experienced in the context of a nation state. And the national media – in all their forms and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those anticipations?

The proposed presentation will discuss how the Austrian quality press ("Die Presse" and "Der Standard") did discuss potential futures in relation to international terror from 2001 to 2011 and how those futures were continuously included into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information leader? How do the Austrian journalists build those international futures and how do they think about them later on? Do they reference those figures built within a national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

### *Southern European Women and the Economic Crisis –*

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women's state agencies, parliamentary members, and activists in both countries have inserted issues of gender equality and women's empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women's position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have voiced women's interests on these issues and what strategies have they devised to deal with those challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as 'a problem' at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women's state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately. The agencies' focus seems to be more the increase in domestic violence, and less on issues of women's unemployment or the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

### *Southern European Women and the Economic Crisis – Assessing Problems, Policies, and Practices (2009-2013)*

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women's state agencies, parliamentary members, and activists in both countries have inserted issues of gender equality and women's empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women's position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have voiced women's interests on these issues and what strategies have they devised to deal with those challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as 'a problem' at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women's state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately. The agencies' focus seems to be more the increase in domestic violence, and less on issues of women's unemployment or

the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

#### *Residents' Responses to the May 1-4 2010 Boston Water Contamination Incident*

This study used the Protective Action Decision Model to examine local residents' warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, boiled water, bottled water, and personally chlorinated water during the May 1-4 2010 Boston water contamination incident. Most residents received warnings from news media and peers and these warnings mentioned 2.3 of five recommended elements of a warning message—most commonly the threat and the recommended protective action. Consumption of untreated tap water declined, consumption of personally chlorinated water remained negligible, and consumption of boiled water and bottled water increased. First warning source was significantly related to protective response but message content was not. Unexpectedly, risk perception was more strongly related to water consumption before the incident than after the incident. This finding calls attention to the need to recognize that, although increased risk perception can increase protective action, successful implementation of protective actions can decrease risk perception.

#### *Families Apart: Long-term Implications of Canada's Live-in Caregiver Program for Filipino Migrant Workers and their Families*

Canada's Live-in Caregiver Program (LCP) is one of Canada's largest and oldest temporary foreign worker programs. Throughout the first decade of the new millennium, the program grew four-fold, in line with a more general national and global expansion in temporary foreign worker programs. The majority of those coming through the LCP are Filipino women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 24 months of live-in care-work within a 48-month period. In 2010 the Philippines displaced China and India to become Canada's top immigration source country; by 2009 40 percent of Filipinos migrating to Canada came through the LCP. I report on research carried out in collaboration with the Philippine Women Centre of BC that documents the long-term effects of this program on Filipino families settling permanently in Canada, with a special focus on the challenges faced by Filipino youths reuniting with the mothers in Vancouver.

#### *Testimonial Theatre, Transnational Debate and Filipina Labour Migration to Canada*

I have for many years worked with the Philippine Women Centre (PWC) of BC to document the experiences of Filipina migrant domestic workers and their families in Canada. Our latest project, a collaboration with Caleb Johnston and theatre artist, Alex Ferguson, involved creating a testimonial play based almost entirely on verbatim transcripts of interviews conducted with migrant Filipino domestic workers, their children, Canadian employers of domestic workers and nanny agents. In the first instance, we turned to theatre to put disparate experiences of care and need into dialogue and to stimulate wider public debate within Canada. But for domestic workers involved, the theatre project also solidified their desire to narrate their stories of life in Canada differently to their families in the Philippines. In November 2013 we presented the play at PETA Theatre in Manila in an effort to contribute to a complex transnational debate about Canada's Live-in Caregiver Program. I discuss some of the challenges of transnational translation, given that the same migration experience can look and be thought about differently from different locations, and the potential of theatre as a platform for dialogue and organizing and promoting cultures of solidarity and resistance.

### *Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands*

Based on 'Netherlands Employer Work Survey(NEWS) data this paper investigates the consequences of workplace innovation for employee and organisational performance in The Netherlands. The NEWS is a unique, two-yearly held survey among 5,000 establishments of public and private organisations on policies and practices of Dutch employers, concerning work related issues, such as working conditions, employment relations, HR and innovation management.

Workplace innovation is defined by Pot (2011) as "the implementation of new and combined interventions in the fields of work organisation, HRM and supportive technologies. Workplace innovation is considered to be complementary to technological innovation". Taking this definition, which is rooted in the 'theory of modern sociotechnology' (De Sitter) and 'the job demands - control model' (Karasek), as a point of departure, we constructed a Workplace Innovation Index (WPI-index) that consists of the following characteristics: 'active jobs' (flexible but tailor-made employment relations), 'employee voice' (dialogue and autonomy), 'flat organisation' (limited hierarchical levels and teamwork), and 'innovation orientation' (openness to renewal and seeking new knowledge externally).

The relationship between this WPI-index and several performance output measures, such as labour productivity, performance (turnover, profit), sickness absence, work stress, and perceived employee commitment will be examined. Control variables are sector (industrial branches) and organisational size (number of employees). To date, research investigating the relationship between workplace innovation and these outcomes has been scarce. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

#### *Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011*

*It is not uncommon for theories of collective action to differentiate between 'conventional' and 'unconventional' protests. This paper argues, however, that although riots are 'unconventional' protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed democratic politics, as practiced in social movements. 'Riots', although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallize into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and extensive rioting in Greece in December 2008 was one of these instances which although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the 'Aganaktismenoi' (Indignants) responding to the economic crisis in Greece in 2011.*

#### *Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now*

The use of social media during the first wave of protests responding to the crisis and the lending agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek 'Aganaktismenoi' (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless ([www.real-democracy.gr](http://www.real-democracy.gr)). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Prentoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed attempts) rather than new forms of collective identity, this paper is concerned with the influence of the ideological and organizational elements emerging from the use of social media during the protests and their displacement on a variety of socio-political sites: First, the ideological and organizational influence of social media for the creation of Solidarity Networks. Second, the use of social media by the radical left coalition Syriza, which is currently the opposition party in Greece.

*Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle East*

This paper examines individuals' willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5<sup>th</sup> (2005-2008) wave of the *World Values Survey*. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5<sup>th</sup> wave. Analysis with the 5<sup>th</sup> wave demonstrated that individuals' willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate between the 5<sup>th</sup> and 6<sup>th</sup> waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5<sup>th</sup> wave demonstrated that geopolitical beliefs have the most predictive power. Individuals' views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

*The Politics of Intergenerational Conflict: A Comparative Study of the UK and Japan*

Internationally we are witnessing renewed conflict over political settlements and attempts to forge a new moral economy of welfare in economically straightened times. In some (but not all) advanced economies these disputes are crystallising around the concept of intergenerational equity with a noticeable re-positioning of older people as the selfish welfare generation. In this paper we consider the recent resurgence/emergence of discourses of intergenerational conflict in the politics of financing later life, especially pensions and social care, in the UK and Japan. In both countries there are calls in government and public life for a re-balancing of public expenditure in favour of youth, while age-divisive policies set up the intellectual and political debate as a matter of intergenerational tension. Both are wealthy, advanced democracies, with old and ageing populations, facing prolonged austerity. Yet in many cultural, political and institutional respects they are quite different and have historically combined different modes of governing in the interests of social welfare. The UK emphasises free will, individualism and market solutions, whilst in Japan, the emphasis is on balancing free-market thinking with some sense of social responsibility and community, along with calls for reforms of existing collectivist policies, all in the context of strong traditions of intergenerational solidarity and filial piety. We consider how and why this policy prescriptive language has emerged in both countries, what purposes it is serving, and what the consequences might be for the distribution of resources in later life. We then assess analysis of each country in comparative perspective, highlighting factors that contribute to differences or features that transcend national boundaries. We conclude that publicly framing the allocation of financial resources as a matter of intergenerational conflict masks inequalities in the social distribution of resources within all age groups that arise with the increased marketisation of late life welfare.

*What Drives National Differences in Intensive Grandparental Childcare in Europe?*

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparent childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a mother is in paid work in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers' employment, particularly in Southern European countries where there is little formal childcare.

*You Are a Dark Person after All*

In the 1960s I visited one of the first racially mixed primary schools in the Netherlands. Half of the 200 pupils were second generation Moluccan children, whose parents felt forced to leave their home country in 1951 in the aftermath of the decolonization of the Dutch East Indies. Some forty years later I recorded the lifetimes of 35 of my former classmates. This paper will focus on the extent in which the native Dutch, as members of the ethnic majority, and the Moluccan-Dutch, who perceive themselves as second generation political exiles, identify with Dutch society. More specifically, it will analyze how their accounts tap into but also resist dominant discourses of race, ethnicity and culture. While the stories of the native Dutch contain a range of images of the 'other', from special or pitiful to unsettling or inferior, and often express concern about the ability or willingness of 'foreigners' to adapt to Dutch culture, the Moluccan accounts appear to be devoid of any imagery of immigrants as 'other', as well as any concern about cultural integration. On the other hand, while most native Dutch emphatically emphasized that they consider Moluccans to be part of 'us', the Moluccan accounts testified that, due to their different culture or outward appearance, they cannot but identify as 'other.'

*Being Active As a Route to Health and Happiness:*

A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics of infection are gradually displaced by degenerative and avoidable diseases as the chief form of morbidity and primary cause of death. One of the consequences of recognizing such a transition is that the health policies of rich nations have incorporated a concern to promote 'healthy lifestyles' and a personal sense of 'wellbeing' with the ultimate aim of reducing mortality and morbidity rates across the life-course.

One component of a healthy lifestyle is said to consist of sustained physical activity for at least 150 minutes every week, but according to the WHO only around 1/3 of people in Europe achieve this; the reasons why are numerous and complex. In this paper we explore lay thinking about what 'activity' is and what might promote activity rates using qualitative data gathered from 113 people in 14 focus group discussions. The data were collected in the course of researching the use and potential use of a linear park designed for an inner city area stretching across

a range of deprived and affluent neighborhoods in Belfast (Northern Ireland) - see; <http://www.communitygreenway.co.uk/>. Using novel methods of data analysis that focus on semantic networks and how 'things' are connected, we explore lay views about the use of the park as a 'therapeutic landscape', and indicate the implications of our work for health policy and civic governance in general.

**PRIOR, NICK\*** (University of Edinburgh, UK, [n.prior@ed.ac.uk](mailto:n.prior@ed.ac.uk))

##### *Vocaloids, Virtuality and Vocality: The Case of Hatsune Miku*

Where does the voice go in contemporary culture? How is it composed, decomposed, constructed, reconstructed and made apparent? What are its signs and dislocations, its logics and movements? What are the expectations and reasons for the voice's presence as a particular kind of expression and information? In exploring how we might set out to answer these questions, this paper is divided into two parts. In the first part, and drawing on insights from the sociology of culture and technology, it argues that the birth of modern popular music is also the birth of a permanent coalescence of the voice and technology. For the voice does not sing alone, it is always accompanied by, is implanted in and mediated by technologies. Paradoxically, just as it attains the status of a unique expressive carrier and index of untrammelled emotion and personhood, so it is accompanied by a whole plethora of machinery that reveal that carrier to be radically hybridised. The second part takes the form of an exploratory scene assigned to a particular vocal modality. It aims to show how, in the case of the Japanese virtual idol singer, Hatsune Miku, complex entanglements of human and non-human entities are not only radicalised, but also played with, ironised and turned into aesthetic forms that unsettle the foundations on which the voice sounds out. Here, not only does the voice become a pliable object of information, enmeshed in machinic vocalisations and subject to the microscopic transformations of digital technologies, but it also represents a simulacra of the hyper-sexualised female body as a performative object and act. From the Miku phenomena we learn much about how the body, the voice and digital technologies fold into one another in an era of global transformation.

##### *Negotiating Masculinities in the Context of Transnational Bolivian Families*

The transformation of gender identities and family models within migration projects increasingly highlights the gender perspective as an elementary variable of migration because "gender permeates a variety of practices, identities and institutions" (Hondagneu-Sotelo, 2000). While scholarship on Latin American migration and gender has concentrated on women, less research has been undertaken on migrant men; particularly in the research on transnational families.

Thirty percent of the Latin American immigrants to Brazil are Bolivian. Based on the theories of intersectionality and hegemonic masculinity, the paper draws on my research project aiming to understand how transnational Bolivian migrant men residing in the Brazilian capital Brasilia negotiate their masculinities in a context of transnational family relations. To explore this issue, the paper draws on D'Aubeterre's (2001, p.32) observation to understand the transnational family as "a locus of social and emotional support but also as a field of conflicting movement of power relations between different members that constitute the family".

Moreover, according to Sinatti (2013) an intersectional understanding of family relations allows researchers to grasp how masculinities may be redefined as people move across cultural, social, and national borders, and as they encounter and cope with different regimes of power at the intersection of other social categories. The different dimensions the masculinities are negotiated in challenges associations with hegemonic masculinity and intersect with other variables such as ethnicity and class. In the context of the Bolivian migrant men and their families, the multiple localities they are finding themselves in influences the negotiation of the masculinities involving family -, care - and intimate relationships, father- and parenthood- not only within their family structure but from multiple perspectives.

##### *Wellbeing of Return Migrants in Rural the Northeast Thailand: Acquiring Material Wealth to Maintain Subjective Wellbeing*

Wellbeing of Return Migrants in Rural the Northeast of Thailand: Acquiring Material Wealth to Maintain Subjective Wellbeing<sup>[1]</sup>

Buapun Promphakping<sup>[2]</sup>

##### **Abstract**

There has been a popular view concerned with negative impacts of migration of rural people to seek jobs in modern economic sector. This type of arguments

emulated family breakdown, loss of land, environmental degradation, increase indebtedness, etc. This notion therefore suggests that migration will result in ill-being of rural dwellers. This paper explores the implication of migration on wellbeing of return migrants in the Northeast of Thailand. This paper argues that while migrant leave their village in seeking material wealth, they continue to maintain a high value on bonds and relationships to their natal village. The bonds they have to their rural village limited their objective wellbeing, because of low returns of agricultural and low wage works in rural. But the limited seeking material wealth through migration on the one hand also enhances or fulfils their subjective wellbeing. This study also found that the rich seems to be experienced higher happiness after returning to the village, while the poor do not experience subjective wellbeing in the same manner.

**Key words:** wellbeing, migration, the Northeast of Thailand, Development

##### *Symbolic Freedoms: Physical and Structural Violence Toward Christianity Through Peace and Conflict Within Japan, 1549-1952*

The history of Christianity in Japan has been fraught with tumult since the religion's formal arrival in the 16<sup>th</sup> century. In order to properly assess the degree to which both structural and explicit violence against Christianity became immanent in the sociopolitical landscape of Japan since its introduction, this paper provides a theoretical examination of scholarly literature regarding several historical periods of note through a chronological "grand narrative" structure. It is necessary to take into account the political climate surrounding the repression of Christianity during each of the eras mentioned in this text. For in Japan, if there indeed lies a pattern of immanent quality in the violence toward Christianity across these eras, then as Etienne Balibar states, we witness a "systematic use of violence to prevent collective movements of emancipation that aim at transforming the structures of domination." The evidence examined is thereby directed toward the question of violence toward Christians as an institution or a matter of political expediency immediate to each circumstance up to the end of the proscription in 1873, with additional considerations of the subsequent years until the postwar Allied Occupation.

The derived conclusion is that the multiplicity of factors behind the violence at each stage of history elucidates certain specific goals for achieving power on behalf of the oppressor in each case, and not general qualities of the Christian faith being targeted. Thus, the continued repression of Japanese Christians is seen to be a bias of political convenience rather than ideological conviction.

#### WG02-909.2

**PROZOROVA, YULIA\*** (Russian Academy of Sciences, [yulia.prozorova@gmail.com](mailto:yulia.prozorova@gmail.com))

##### *"Intercivilizational Encounters" with the West and Modernizing Moves in Post-Soviet Russia: Civilizational Perspective*

The present paper considers civilizational analysis as an appropriate theoretical framework for the study of transformations and modernization in the post-soviet Russia. Unlike the conceptions of linear westernization, 'transition' or modernization theory and its variations ('catch-up modernization', 'convergence', etc.) civilizational analysis and multiple modernities theory do not disregard indigenous traditions, sociocultural settings, internal contradictions and historical background. The changes in contemporary Russia and the distinction of Russian modernity are mainly shaped by the post-Soviet encounter of the Russian society with its legacy of the "soviet project of modernity" (J. Arnason) and imperial traditions with Western modernity. The first post-Soviet decade was a period of the ultimate 'openness' to the western modernity and the domination of Westernism in political discourse. Acquired Western institutional models and cultural ideas (capitalistic free-market economy and democratic policy with liberal ideology, to name few) have been originally interpreted and mutated while being assimilated into the Russian context. Following Arnason, the encounter between the West and the rest is seen as a 'global projection of the problematic' that remains open to diverse alternative interpretations. To illuminate the outcomes and impact of the Western borrowings and reveal factors affecting their adaptation, the paper proposes to conceptualize contacts between the post-Soviet Russia and the West as "intercivilizational encounters" (B. Nelson and J. Arnason) with a focus on the interaction between different "civilizational complexes" (B. Nelson). The post-Soviet "encounters" induced changes in cultural orientations, interpretation of power,

institutional forms and design, patterns of reciprocities and "structures of consciousness" (liberal world-views, new concepts, rationales and logic of action, market rationality, individualism, etc.). These borrowings are considered with the regard to the peculiarities of the Russian civilizational complex (inclination toward the organization of political power in a centralized, authoritative manner, role of political and ideological/ religious orthodoxy, distinct rationality, etc.).

**PRUISKEN, HENRIK\*** (Bielefeld University,  
[henrik.pruisken@uni-bielefeld.de](mailto:henrik.pruisken@uni-bielefeld.de))

### *Locus of Control and Cumulative (Dis-)Advantage in the Labor Market*

The relationship between Locus of Control (LoC) and occupational outputs has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. This paper, however, has a longitudinal perspective and investigates the mutual influence between labor market experience and the development of LoC. More specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to worse employment opportunities and the worse employment opportunities leads then to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of "Fixed-Effects-Models" I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase of an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

## RC06-125.6

**PRUISKEN, HENRIK\*** (Bielefeld University,  
[henrik.pruisken@uni-bielefeld.de](mailto:henrik.pruisken@uni-bielefeld.de))

### *The Effect of Inequalities within Families on Work-Values of Adolescents*

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents' development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the paper investigates to what extent the sibling constellations and inequalities *within* the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social comparisons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a "de-identification" is harder within these pairs.

The analysis is based on household panel data from the German Socio Economic Panel (GSOEP) for the years 2000-2011. In the GSOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of "Sibling-Fixed-Effects-Models" I estimate the effect of the differences in the perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings. In particular, the effect is stronger for sisters than for brothers.

### *Neoliberal Rationalities in Vocational Higher Education*

The increasing function of universities as institutions for mass education might affect democracy and the universities' contribution to society. Students as choice-

agents need to be involved in these processes. This paper scrutinises how students' practical considerations for future choices in education and occupations correspond to policy objectives of socially productive educational choices. These objectives currently follow neoliberal rationalities regarding how to divide the responsibilities between the state and its citizens. In this context, choice-agents have to learn to identify themselves as economic subjects able to cope with economic transformation.

The aim of our research is to examine the correspondence between educational policy objectives and students' educational choices in practice. The research questions posed are to what extent students' choices and motives reflect a (neoliberal) instrumentality? Is there a resistance against such rationalities in students' actual choice-strategies? This issue is empirically investigated via a semi-structured questionnaire (n=840) with students from 14 vocational Swedish Human Resource programmes in higher education. The case of higher education programme was seen relevant, since weak professional university programmes tend to stimulate rationalities amongst students that ritualise the role of education in terms of its formal credentials. Vocational programs are also a significant growth sector in higher education, with large proportions of non-traditional students.

What is unclear, however, is whether these forms of education reinforce a desired policy ambition with regard to instrumental choices in education. These are policy rationalities that are questioned in the paper from a critical semantic approach indicating that the policies fundamentally rest on manipulative powers where human agency is forced into instrumental decision-making. The results of the study point to patterns where students tend to resist instrumentality and integrate their decisions in education as reflexive and relative autonomous personal projects in relation to the recognized social powers of the labour market.

### *Interrelation Between Organizational Trust and Organizational Innovativeness from a Context Perspective*

The paper explores the interrelation between organizational trust, which is defined as an attitude combined from affective and cognitive components (McAlister, 1995), and organizational innovativeness, an organizational capability to create new ideas, experiment and engage in creative processes and which is operationalized as a five-dimensional construct consisting of product, market, process, behaviour and strategy innovativeness (Wang and Ahmed, 2004). We study the interrelation from the perspective of innovation context and take Lithuania as a case of a low innovation context and Finland as a high innovation one according to Global Innovation Index 2013. The research problem we tackle is whether different components of organizational trust can result in different organizational capability to engage in creative and innovative processes.

The empirical data for this study were collected by means of a standardised electronic questionnaire from 3 organizations in Finland (n=719) in 2011, and so far 4 organizations in Lithuania where a survey is still carried on since 2012 (current n=536, survey to be completed December 2013). Based on preliminary findings of regression analysis, the emotional component of organizational trust has a much more significant effect on organizational innovativeness than cognitive one. Its effect on the dimensions of behavioural, process and strategic innovativeness exceeds its impact on market and product innovativeness. These findings imply that creativity may be malpracticed in organizational setting and more self-purposeful rather than result-oriented.

The research findings will have theoretical implications concerning the role of emotion to organizational innovativeness, discussing the need for golden mean in practicing organizational trust. From a managerial perspective, potential risks arising from high organizational trust and certain dimensions of organizational innovativeness will be discussed considering the innovation context.

### *Successful Educational Actions in Southern Europe: From Marginalization to Educational Inclusion*

The recreation of the successful social and educational actions is achieving the transformation of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUD-ED project, the only Integrated project about schooling from the Framework Programmes of research until its ending in December 2011. There have been 15 universities from 14 countries participating in the project and case studies have been conducted in Spain, Italy, Malta or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-

sending here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of co-existence among students and high levels of conflict between teachers and the families. Through the implementation of the SEA's advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEA's and to carry out the transformation of the neighbourhood. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

#### *New Alternative Masculinities Against Gender Violence*

This paper presents a South's contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian do not promotes a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM), and New Alternative Masculinities (NAM). DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by *Homes en Diàleg* (Men in Dialogue), a men' organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 2001), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different countries. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

#### *From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe*

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state's inherited industrial structure and ties to the world economy prior to 1989. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amass FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that while industrial structure and inherited ties to the world economy form a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

#### *Social Implication of Inequity in Higher Education; A Comparative Study of Formal and Non-Formal Mode of Education in Andhra Pradesh of South India*

ABSTRACT  
SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Education in Andhra Pradesh of South India

\*Dr. P. Koteswara

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization.

As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result in the post globalized era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequent the Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means. India is one of such countries which has been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society.

However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

#### *A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers*

A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn's production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers' suffering from work pressure, anxieties and desperation at an unprecedented level.

#### *Communism Revisited: A Third World Perspective*

As an idea or philosophy, Communism died in the West when the mature form of capitalism didn't succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if you would like to name it.

Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of capitalism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn't vanish but this didn't put an end to the struggle – as many in the West thought – since we see communism as praxis rather than an Idea of History.

There are three reasons for the continuing existence of the socialist state: The failure of Western communist movements to liberate their own working class and their counterparts in the third world. The Cold War required the strengthening of socialist states and develop the socio-economic conditions for socialism. The lack of grass roots democracy and the lack of substantial class forces which could counter-balance the bureaucratization of the party-state.

Although it failed, the Chinese Cultural Revolution was an attempt to address these historical predicaments. Capitalism has conquered most Third World countries and enveloped their life-worlds, thereby creating the social conditions for the final capitalist crisis and the second wave of the communist revolution. A new sociology of communism needs to revisit the politics of class, collective and human emancipation.

*Into the Great Wide Open? a Comparative Study of Cultural Legitimacy and the Arts in British and Finnish Newspapers, 1960-2010*

Classifications and social valuations of culture and the arts vary cross-nationally and historically. Recent studies have questioned the role of classical highbrow culture as a status marker in Western countries and suggested that the self-evident bourgeois "good" or legitimate taste is becoming less hierarchical and more open. The famous idea of cultural omnivorousness, that the taste of the high status groups is no longer exclusive but inclusive, is one way of conceptualizing this trend. Omnivore scholarship, however, has concentrated mostly on the consumption rather than the production side of culture. Changes in the social value and composition of the legitimate taste as expressed in people's dispositions and preferences should nevertheless receive support, or even be preceded, by transformations in cultural institutions which consecrate legitimate art. Since art journalists and intellectuals play a crucial role as cultural intermediaries, the changes in dominant taste patterns should be reasonably recognizable in their evaluations and writings, i.e. in how cultural classifications and aesthetic standards are represented in the media. Sociological studies of such cultural institutions that would include both cross-national and longitudinal dimensions have so far been rare. This paper presents the first results of a research project examining cultural pages of the main newspapers in five European countries, Britain, Finland, France, Spain and Sweden, from 1960 until 2010. Since we are interested in changes in the legitimate taste and the processes that have created space for omnivorous tastes, we pay special attention to the appearance of new (and the disappearance of old) cultural genres and art forms as well as the weight of popular culture in these pages and the boundaries between entertainment and "serious" art. By using both quantitative and qualitative content analyses, we focus here particularly on two countries and the respective newspapers, Britain (*The Guardian*) and Finland (*Helsingin Sanomat*).

[bandanapurkayastha@yahoo.com](mailto:bandanapurkayastha@yahoo.com))

*Bewixt and Between: Web Spaces and Southern Theories*

Traditionally, the dominant forms of sociology have been based on the assumption that theories were generated in the north while the global south contributed mostly confirmatory-cases. Many scholars have challenged this assumption though, given the political economy of knowledge systems, their perspectives have not, as yet, shaken up some of the core orthodoxies in the metropole. At the same time, sociologists who are in tune with theory-making and well-developed knowledge systems in different parts of the world are aware of co-existing frameworks that describe diverse social realities. Some of these co-existing frameworks have been identified and described as Southern theories, indigenous theories etc. I have been a significant beneficiary of different frameworks, especially of the ways it challenges easy generalizations.

In this paper however, I raise another issue. To what extent are our theories reflective of social lives beyond our tangible geographical moorings? Ethno-sociological theories (Connell, 2007) reflect embedded hierarchies (including knowledge hierarchies) within nation-states and between nation-states. At the same time social life on web-spaces—for instance, our political organizing, culture making, doing of families, as well as structuring of political-economies or surveillance through global security blocks—has become a rapidly expanding temporal and spatial realm, enmeshing sections of populations to greater or lesser extents. This space offers multiple and simultaneous opportunities to disengage with some structures, while becoming subjects of others, while enmeshing us in systems of power that are neither contained within national boundaries, nor apart from them. How do we configure power as we talk about 'intersectionality' or 'transnationalism' if we take these spaces into account? I offer some examples of using Southern theories, in my own work and those of others as a way to demonstrate that many Southern theories are better positioned to explain and mark the pathways of power that are shaping new hierarchies.

*Having Lost Collective Goals for Fear of Loosing Personal Benefits. Political Culture, Individual Interests and the Negative Spiral of the Italian Case*

The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled "Federalism, Local Autonomy and Quality of Democracy". In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-classes political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework "imposed" by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familistic (or neo-feudalist) mechanisms of interaction.

The picture that emerges may help to explain, within a constructivist theoretical framework, the Italian lack of engagement towards the "bandwagon" formed by countries that have managed to gain an advantage by the phenomena of globalization in terms of growth, competitiveness, development and democratization of decision-making processes of their political systems (by implementing, for example, inclusive decision-making practices supported by the use of new technologies of information and communication).

The aim of the contribution is therefore a general reflection on the political culture of the Italian political élites and its "weight" in shifting the impact of globalization from a potential added value for both national and local development to the actual practical loss of competitiveness of the whole system.

*"Dilemmas" of Migration Governance: A Case Study of Nepal*

The labor market is complex in every society. Along with one's movement from one place to another, his/her life becomes vulnerable. Though migrants are to be treated not as workers but as human beings with human rights, reports state that labour migrants have been facing a lot of problems not only in receiving countries but also in their own soil. Generally, labour-sending countries in Asia are confronted with the dilemma between "promotion" and "protection". In the face of bleak employment prospects at home and the economic gains from foreign exchange remittances, countries would like to see expansion in overseas migration of national workers. At the same time, they cannot turn a blind eye to the rampant abuses of basic human rights suffered by their nationals abroad. Nepal, being one of the newly emerged countries in sending its labour force to the international market, especially in Asia, has been one of a witness of such dilemma. On the one hand, it exports its labor in order to take some pressure off local unemployment. On the other hand, it has to deal with exploitation and even death situation of its citizens as the recent case of Qatar shows.

Within this background, this paper explores the reasons behind Nepal's reluctance not only to put the labor migration in its policy priority but also to sign/rectify the UN Convention. In other words, examining the link between political ideology of major political parties in Nepal, and its reflections in introducing government policies including the labour migration policies are major two aspects of this paper. In-depth interviews of policy makers and leaders working on the related fields, and analysis of labour migration related policies and programs, and election manifestos of major political parties will be the major sources of data to be used in this paper.

**PYYHTINEN, OLLI\*** (University of Turku, [olsapy@utu.fi](mailto:olsapy@utu.fi))

*On The In/Compatibility Of Giving and Exchange*

The paper argues for the importance of making a distinction between gift-giving and ceremonial gift exchange. Ever since Marcel Mauss and his pioneering

essay *The Gift*, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g. Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Hénaff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only 'in exchange', so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift of ceremonial gift exchange needs to involve some generosity and thus at least be guided by the ideal of the pure, absolute gift, if it is to avoid being turned into sheer market exchange. And, from the other way around, even the gratuitous giving in pure loss seems to presuppose at least a minimum of reciprocity – insofar as the gift is accepted by the givee – if it is not to remain illusory, utopian, and abstract.

#### *Two Social Movements in China: Foreign Foes, Critiques of Tradition and Collective Commitments*

The paper reports on a theoretical and historical research project comparing two contrasting social movements that shaped China's immediate and long-term futures, the post-World War I May Fourth Movement and the Cultural Revolution of 1966-76. The May Fourth Movement grew out of the betrayal of China by western powers at the Versailles Conference, and was the culmination of a renegotiation of Chinese indigenous traditions. It led to political reform and intellectual strengthening. The Cultural Revolution can similarly be situated in China's international isolation during the Vietnam War but rather than a popular expression of future-orientated optimism it was a party-led mobilization of inexperienced young people directed to internal factionalism. It led to chaos, lost opportunities and isolationist cultural closure. The paper explores the characters of these very different movements and also considers some similarities which they share. One common element that will be developed in the analysis in addition to international context and qualified rejection of indigenous traditions is the possibility of characterizing each movement in terms of representative collective commitments. By focusing on the macro-level commitments internal to each movement the paper will relate the movement-level engagements of participants and their psychic investment in socio-cultural and political development in these two quite different but crucial phases of Chinese history.

#### *New Religious and Nonreligious Organisations: Competition, Contest & Communalities*

What are the communalities and differences between religious and nonreligious organisations? With 'nonreligion' I am referring to groups that are generally considered to be not religious but are nevertheless related to 'religion' in important ways. Obvious examples are atheist, rationalist, and secular humanist organisations. Despite their roots in the 19th century, their apparent growth in many parts of the world and their realignment in the contemporary world make them in many ways new forms of (nonreligious) organisations. My engagement with such groups will primarily draw on a long-term study of rationalist and atheist organisations in India (Quack 2012) as well as data from atheist groups in the Philippines and humanist associations in Sweden and Germany. These organisations try to spread an explicitly secular worldview, provide secular alternatives to religious life-cycle rituals, and stand in direct and indirect competition and contest with religious organisations in various ways. To analyse these relationships, I will critically engage with the 'theory of religious and secular competition' devel-

oped by the sociologist Jörg Stolz (2009) to complement the 'religious economies approach' within secularization theory. Based on a relational approach to study 'nonreligious' groups and organisations (Quack 2014), I will further engage with the organisations' struggles for various kinds of capital within institutional and field-related 'logics'. On this basis, I discuss the ways in which nonreligious organizations can be situated within the 'surroundings' of a religious field, thereby complementing Bourdieuan studies of specific religious fields.

#### *Reconfiguring Personal Communities In A 'Divorce Biography'*

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and popular discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral decadence and focuses instead on the way individuals organise their family life and practices. My research argues that divorce creates spaces, however fraught, for individuals to construct what I call 'a divorce biography'. These spaces include the ways in which one terminates an unsatisfying marriage, decides on the terms of divorce, copes with the crisis, organises one's personal relationships and makes plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choice, navigate around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

#### *Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe*

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time-horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WVS, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be cumulated into a common source database for building even longer, denser, and geographically more complete trends.

The present study uses a database of responses to church attendance questions in European surveys, compiled from the survey programmes named above. This database is analysed with respect to possible problems arising from the requirements of harmonisation across time and countries, given a variety of languages, question and questionnaire formats, and other design properties of the individual surveys. The database presently comprises more than 800 time/country samples from 32 European countries or regions and covers almost all years from 1986 to 2010. Analyses aim to establish the presence or absence or particular national and supra-national trends, identify aberrations of samples from trend patterns and investigate possible methodological factors behind such aberrations. Further, the analysis may eventually contribute to answering such questions as what the effects of different response formats, sampling design, administration modes etc. on reported average attendance levels are.

**QUANDT, MARKUS\*** (Leibniz Institute Social Sciences, [markus.quandt@gesis.org](mailto:markus.quandt@gesis.org))

#### *Understanding Patterns of Political Participation – Are National Borders Natural Borders?*

Different modes of political participation are often seen as expressions of the loyalty to or discontent with the society that people live in. Institutionalized, formal participatory behaviors such as voting or petitioning are understood to signal compliance, support and trust for the political system, non-institutional behaviors such as boycotts or participation in demonstrations are understood to signal conflict and risks for social cohesion. Obviously, the likelihood that respondents report certain behaviors depends – besides respondent attributes – on the incentives and opportunities for such behaviors found in their home society. For comparative studies this means that we have to expect cross-national variation in the measurement properties of scales for political participation, even for substantive reasons alone.

This study investigates how such substantively driven heterogeneity in the measurement of protest behaviour can be dealt with, in particular in relation to methodologically driven heterogeneity of the participation measures, which may be also present and which we routinely attempt to exclude. A latent-class item response theory model for a participation scale from the European Values Study 2008 will be estimated and the outcomes analysed in terms of substantive and method-induced variation across countries.

#### *Genre Et Vieillesse : L'expérience De Femmes âgées Immigrantes*

Cette communication présente certains résultats d'une recherche qualitative menée auprès de 90 femmes âgées ayant immigré à Montréal au Canada, dont on ne sait peu de choses. En effet, les données sur les âgées immigrantes sont rares et portent presque toutes sur le rôle de grand-mère (échanges de services, liens avec les petits-enfants, impact de l'éloignement géographique) (Attias-Donfut, 2008; Phillipson, 2002; Treas et Shampa Mazumdar, 2004; Aldous, 1995). Notre recherche visait à comprendre l'expérience – au sens à la fois des perceptions et des émotions ressenties et des actions déployées par les femmes pour organiser leur quotidien (Dubet 1994). Le vieillissement quant à lui doit être compris dans ses dimensions à la fois personnelles (rapport au corps, à la santé, etc.), familiales (place de la grand-maternité, rôles comme aînées dans les relations et la transmission intergénérationnelles) et sociales (rapport à la société québécoise – expériences de discrimination, de solidarité). Les femmes âgées immigrantes rencontrées lors d'entrevues de groupes appartiennent à trois générations (65-74 ans, 75-84ans, 85 ans et plus), sont originaires de différents pays (Haïti, Cameroun, Japon, Roumanie, Liban, Egypte, Croatie, Colombie, Chine, Portugal, etc.) et ont des parcours migratoires et de vie variés. Dans le cadre de cette session du comité Immigration et genre, nous montrerons que la trajectoire migratoire de ces femmes amène des changements et/ou des ajustements dans le sens qu'elles se font de leur place, à la fois dans la société et dans la famille, de même que dans leurs pratiques concrètes. Ainsi, chez certaines, la migration est un facteur de déstabilisation (isolement, repli sur soi, vulnérabilité) alors que pour d'autres, elle est un facteur de « libération » des pressions sociales et familiales vécues dans le pays d'origine, voire d'émancipation.

NOTE: if possible, my preferred format is poster, but if not, it is ok with oral presentation

#### *Regulation of Private Expenditures in Cross-National Perspective*

Over the past decade, health spending in many developed countries has grown faster than gross domestic product, leading governments to search for alternative financing structures, notably through increases in the share of private expenditures. However, as these increases are generally not randomly distributed in the population, these transformations have raised concerns about their impact on both population health and social inequalities in health. Finally, as the extent of private expenditures on health varies between developed countries, it appears that certain countries are better able to limit barriers to health insurance coverage, notably through more generous public coverage as well as greater governmental regulation of the private insurance industry.

This paper will examine this hypothesis with the Health Insurance Access Database (HIAD), by demonstrating the variation over time, by health service and

across countries in the nature of those policies. The HIAD is a repository of policy indicators offering harmonized policy data on public coverage and the regulation of private expenditures. The standardization process used for collecting these indicators allows for comparisons over time (from 1990 to 2010), across health services (data are collected on 8 health services, for instance prescription drugs), and across 10 countries of the OECD (Australia, Canada, Denmark, Finland, France, Germany, Italy, the Netherlands, United Kingdom, and United States). These countries were selected to provide a range of variation (and thus to allow for contrasts) with regards to Esping Andersen's Welfare Regime classification (Liberal, Social Democratic, Conservative), Roemer's type of health system (comprehensive, welfare oriented, entrepreneurial) and the OECD's typology of the role of PHI within that system (primary, primary substitutive, supplementary, duplicative or complementary).

This research will inform and feed the current debate on the future of health care in developed countries and on the interplay between the public and private sectors in these changes.

#### *Quality of Data Collected from a Vulnerable Population: Using the Calendar Method and Third-Party Help*

In the field of social sciences, collecting extensive retrospective data such as life histories has been fraught with recall errors compromising the quality of the data. Collection of life histories gets even more challenging when it has to be done among vulnerable groups, such as poor households who are victims of involuntary displacement and resettlement due to disasters or infrastructure projects. Recognizing this, a tailor-made life history calendar was designed to gather data from households in Indonesia who were involuntarily resettled in a newly-built community. The substantive focus of this study is to obtain 'social capital' histories on the level of neighbourhood, households, and heads of households. In addition to the usual aided recall features the calendar procedure included the option to allow, in certain parts of the interview, the help of "third parties" in the recollection of the requested information. These "third parties" are either household members or friends of the respondent who also reside in the same community. Collaborative recall generally increases accuracy of information that is shared socially between community members, since different people may remember different aspects of the memories. A natural field experiment was designed in which data quality was compared between the conditions 'with help of third parties' and 'without help of third parties'. Data quality was assessed regarding 'numbers' (of household related transitions), 'names' (of community leaders) and 'dates' (years of public services). The study examines whether integration of "third-party help" in the calendar method can enhance the recollection process among respondents and may lead to better data quality. In addition, it was also discussed how "third-party help" may interact with calendar procedures and what consequences arise for related data collection procedures.

#### *Los Egresados De Los Posgrados En Educación*

Los egresados de los posgrados en educación

En esta investigación participaron cuatro instituciones pertenecientes a la Secretaría de Educación Jalisco que ofrecen estudios de posgrado en el ámbito de la educación, se aplicó un cuestionario en línea y de manera personal a 82 participantes de las generaciones 2003-2008 que contestaron de manera voluntaria. El cuestionario contó con 14 secciones que abarcaron las posibles actividades que desarrollan en su ámbito profesional. Tales como experiencia laboral, valores, reconocimiento, relaciones interpersonales, experiencia en la práctica educativa, desempeño profesional, evaluación, experiencia en la formación continua, en el entorno educativo, en la producción académica, en el ámbito administrativo, en la satisfacción del programa, en la formación de docentes y en el ámbito social. Los resultados del análisis estadístico manifestaron que el perfil de egreso de los egresados es congruente con lo esperado por las instituciones, la información generada será útil para la toma de decisiones de las autoridades estatales de educación. El proyecto fue financiado por el Consejo Nacional de Ciencia y Tecnología.

#### *Transformaciones y Retos De La Función Social Del Académico En El Marco De Las Reconfiguraciones Del Conocimiento, La Universidad y Las Políticas Educativas*

El trabajo se desprende de un proyecto de la Red de Estudios Sobre Instituciones Educativas (RESIEDU) todavía en proceso denominado: "Modos colectivos de producción de conocimiento de los académicos en Universidades Públicas Estatales". Parte de 3 ejes problematizadores enmarcados en la sociología del conocimiento, sociología de la universidad y sociología del académico, éste último abordado tanto en su vertiente individual, como en su vertiente colectiva. En este marco analizamos el papel evaluador que la política educativa confiere al estado, bajo el discurso de calidad y profesionalización de la planta académica mexicana, y la manera que impacta en los procesos de gestión institucionales y las dinámicas de los propios académicos y grupos de investigación. El abordaje empírico se llevó a cabo a partir de acercamientos cuantitativos por medio de un cuestionario aplicado a 630 académicos de 49 Universidades Públicas Estatales en México, y acercamientos cualitativos a partir de grupos focales y entrevistas en cuatro universidades mexicanas de los estados de Hidalgo, Chiapas, Tamaulipas y Jalisco. A partir de los hallazgos, se discute el papel de los académicos en las nuevas reconfiguraciones del orden mundial, en el que el mercado va teniendo un papel cada vez más protagónico. Se analiza la manera en que la función social de la ciencia y la función social de la universidad, presentan nuevas configuraciones que impactan en una redefinición de la función de los académicos. Se concluye con algunas interpretaciones de las tensiones que enfrenta el académico entre lo individual y lo colectivo; tensiones entre las demandas sociales, empresariales y del estado que ponen en entredicho su función social; tensiones entre sus formas de organización al interior de la institución (departamentos, academias, cuerpos académicos) y al exterior (redes, colegios), entre otras, y se enfatiza el papel y los retos de la política educativa en estos procesos.

#### *The Problematic of Gestión in the Soft Industry*

La ponencia se orienta a dar respuesta, en base a un estudio de caso en la industria del software, a la pregunta ¿de qué manera las organizaciones, los gerentes y los trabajadores lidian con las tensiones relacionadas con la innovación? La hipótesis es que dadas las características del trabajo en esta industria, orientado a la innovación en conocimientos y con una fuerte autogestión de sus trabajadores, su gestión no puede apoyarse solo en las estrategias de los empresarios o gerencias de RRHH, teniendo éstas que articularse con el componente "humano". Estas nuevas modalidades de gestión por ende deben tener como eje central la construcción de relaciones sociales en la organización. Esto conlleva, una fuerte diferenciación de las estrategias de gestión de RRHH de este sector respecto a otros más tradicionales pero también una fuerte diferenciación al interior de la actividad.

Esta dinámica la pensamos en función de cómo las organizaciones del software resuelven y articulan tres dimensiones problemáticas:

a) *normativa*: Supone dar cuenta de la construcción de normas internas desde una perspectiva amplia que considere tanto las normas formales como las informales, las reglas autónomas como las de control, las normas jurídicas como las de tipo ético. La dimensión es relevante en un mundo que parece poco estructurado en relación a otros sistemas productivos. b) *performativa*: Esta dimensión tiene relación con el concepto de eficiencia, de su construcción *in situ*. En ella cobra relevancia la distinción entre los conceptos de productividad, más acorde al mundo industrial, y el de performance, más acorde a la dinámica del sector. c) *Cognitiva*: Refiere a la reflexividad que emana de la aplicación normativa y la dimensión performativa aportando una mirada dinámica de los procesos de gestión. Importa en esta dimensión la construcción social del conocimiento y las identidades construidas en torno al mismo.

### *Guidelines for the Creation of Laws and Institutions in Order to Eradicate Poverty in Mexico*

Mexico has principles that are set forth in the text of its Constitution. Said legal principles encompass: the concept of the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

In the present lecture, we propose a review that (even though superficial) is fundamental, as it reviews the English Poor Laws that were in force in England from the XVIIth to the XIXth Century. Its results allow us to recover the relevant aspects that said Laws played as an institution against poverty.

The situation we try to elucidate is if in Mexico we could reuse some transcendental aspects of the old English Poor Laws by adapting them to the present context; or what kind of laws may be adopted to solve the growing and searing problem of poverty. As implied by the previous information, in Mexico there are neither laws nor institutions to eradicate poverty, but only a Program related to conditional cash transfers. It is obvious that a mere program does not guarantee the rights that are set forth in the Constitution. What we would like to posit is that actions, both legal and institutional, are required in order resolving this problem: actions that take into account the economic/social context and that contribute to transform it

### *Social Discourse about the King of Spain and Freedom of Speech. Pragmalinguistic Analysis of Slander*

#### **Discursos sobre el rey y libertad de expresión. Análisis lingüístico pragmático de la injuria**

La monarquía sigue siendo hoy por hoy el primer gran tabú informativo en España. Pese a la libertad de expresión que garantiza la Constitución, el artículo 490 del Código Penal singulariza la figura del Rey con especial protección contra calumnias e injurias. No resulta difícil encontrar ejemplos de discursos públicos (tanto periodísticos como políticos), que han sido denunciados como injuriosos contra la Corona, siendo sus autores procesados y sentenciados, algunos con pena de prisión.

Pero ¿qué es exactamente una injuria? Su valor semántico no es estable, y depende del contexto su determinación. La definición de diccionario no nos resuelve mucho en este sentido (según la RAE "agravio, ultraje de obra o de palabra", "hecho o dicho contra razón y justicia", "daño o incomodidad que causa algo", "delito o falta consistente en la imputación a alguien de un hecho o cualidad en menoscabo de su fama o estimación"). Y la interpretación jurídica no es unívoca frente a los mismos hechos o dichos, como demuestra la existencia de sentencias categóricas que identificaban un discurso como injuria, posteriormente revocadas por erróneas por tribunales de superior rango, con el consiguiente debate judicial en torno al valor del término.

Mediante el análisis del discurso de algunos casos importantes (como el caso Otegi y el caso Martínez-Inglés) podemos acercarnos al estudio de la injuria como hecho comunicativo y lingüístico. Un método pragmalingüístico que toma como base la teoría de la relevancia de Sperber y Wilson permitirá adentrarse en el proceso inferencial de interpretación de la injuria, con especial atención al contexto en el que se produce y se recibe.

### *Posibilidades EN La Base De La Pirámide*

Los estudios sobre la base de la pirámide se han centrado, de forma tradicional, en comprender las causas estructurales de la pobreza, así como sus aspectos psicosociales. México lleva a cabo numerosas campañas para apaliar los niveles de pobreza en el país, desde los programas OPORTUNIDADES hasta la "Cruzada contra el hambre". Ambas auspiciadas desde las instituciones y el gobierno e interesadas en los aspectos estructurales de la pobreza y en el impacto comunitario.

Este paper propone una visión alternativa a la percepción dominante en México de la situación de la pobreza basado en los estudios realizados por C.K Prahalad. El concebir a los integrantes de la base de la pirámide como consumidores genera una estrategia de doble dirección. Por una parte permite a las Marcas ampliar sus nichos de mercado. Por la otra ofrece a los más desfavorecidos la oportunidad de acceder a bienes y servicios a precios asequibles, proporcionando dignidad y empoderamiento a las familias de bajos recursos.

Este paper propone una metodología en tres fases:

- Por un lado una investigación sobre los distintos programas gubernamentales y sus efectos reales sobre los individuos y las comunidades.
- Por el otro una inversión en los datos estadísticos como los índices de pobreza del INEGI o el reciente estudio sobre "Pobreza y bienestar subjetivo" realizado por el INEGI y FLACSO México.
- Finalmente es una serie de estudios cualitativos de carácter etnográfico en diversos estados de México realizados en los años 2007, 2008, 2009 y 2013. El uso de las herramientas antropológicas permite comprender los hábitos y motivaciones de los grupos sociales situados en los umbrales de la pobreza, al mismo tiempo que da cuenta de sus mecanismos de supervivencia y proyecciones.

### *Contested Claims over Space: Discourse and Politics Among Fishers and the Oil Industry in Mexico*

This paper examines hybrid forms of resource governance and the involved struggles over space and subjectivity among coastal fishers, the Mexican government and the state-owned oil industry in Tabasco, Mexico. The analysis builds on the study of contested claims over rights to off-shore space in an area established as a security measure exclusively for the use of the oil industry by the Mexican government in 2003. The study is based on research material collected during intensive ethnographic fieldwork among coastal fishers, government actors and oil industry representatives in Tabasco in 2011 and 2012.

The study focuses on the "how" of hybrid mechanisms of resource governance, with particular interest in the strategic use of legal measure, corporate social responsibility programmes and political discourse in the claims over resource space. The research takes part in post-Foucauldian theorizations of space as social arena, constructed in political frictions between private capital, state, society and nature.

We argue that fish-oil governance in Mexico operates as a combination of different logics and technologies that work towards the displacement of fishers as legal subjects from politics and their subjection to ideologies of entrepreneurship. Simultaneously, the multiplication of transnational actors in the oil industry's CSR programmes provides a new political venue for the continuance of the fishers' subjection to clientelist arts of governance while it makes the identification of accountability and responsibility diffuse. In this context, the fishers' resistance is constructed through individual networks and opposition to mechanisms of self-responsibilisation and through fragmented political resistance which keep the extractive politics volatile. Our study of these less visible struggles over resource redistribution and political representation seeks to provide new perspectives to the prevailing forms of environmental governance and the contestations regarding them.

**RABE, LINN\*** (Södertörn University, [linn.rabe@sh.se](mailto:linn.rabe@sh.se))

*Participation and Justice In Marine Governance*

The article combines literature from political science, development theory and social psychology to discuss the relevance of procedural justice to the achievement of sustainable development goals. Participatory environmental governance is framed as contributing to the fulfilment of the equity ambitions of sustainable development. However, there is a tendency within environmental governance to depoliticize environmental issues and decision-making, for example by making participation conditional and by linking strategies of sustainability with the perceived neutrality of bureaucratic regulation. A depoliticized governance process can create situations where controversial issues of ethics and justice are obscured or even avoided; watering down basic functions of democracy, such as representation, dialogue, and accountability. Scholars argue that marine governance has been severely neglected by the social sciences and has not been exposed to sufficient reflection regarding its social purpose, process and implications. The focus of this paper, democratic aspects of governance of the Baltic Sea, is especially understudied.

The theoretical discussion in this article is illustrated by drawing on empirical material from two case studies of marine nature reserves establishment in Sweden and a case study of ENGO participation in regional marine environmental governance platforms managing the Baltic Sea. Interviews with different actors address how procedural justice affects legitimacy of decisions made on the back of this processes. Furthermore, based on the material, unequal distribution of various resources affects the perceived balance of justice between actors in favour of more resourceful actors as participants and agenda setters. The findings show that actors' ability to act upon opportunities given by society seems highly dependent on the actors' access to different kinds of resources/capacities. Weaker actors may risk getting ignored, neglected, manipulated or even abused.

## RC24-436.8

**RABE, LINN\*** (Södertörn University, [linn.rabe@sh.se](mailto:linn.rabe@sh.se))

*Procedural Justice In Marine Nature Reserve Establishment*

Participatory environmental governance is framed as contributing to the equity ambitions of sustainable development. The trend of formal delegation of power to decentralized institutions of various kinds has been extensive. It can be questioned, however, if these more pluralistic approaches can adequately deal with and balance uneven power relationships between stakeholders or if existing power relations are reproduced through these processes. As a result of pre-existing inequalities weaker actors may risk getting ignored, neglected, manipulated or even abused. Marine governance has also adopted these democratic ambitions, but empirical examination of practice has been severely neglected by the social sciences. Arguably, as a result marine governance has not been exposed to sufficient reflection regarding its social purpose, process and implications. The focus of this paper, democratic aspects of environmental governance of the Baltic Sea, is especially understudied.

In this paper, I draw on the concept of procedural justice linked to power to examine and compare the establishment of St Anna archipelago and Gräsö archipelago nature reserves in Sweden. The former case has been characterised by authorities as consensus oriented while the latter has been seen to be conflictual. By employing the procedural justice concept over time in this under studied and novel empirical setting the present paper aims to develop new understandings and formulations of justice and thereby contribute to the literature on participatory environmental governance, marine governance, nature protection, and environmental justice. The paper will show that issues related to legitimacy, identity and representation are substantial in both cases, as well as conflicts between public and private interests and that a long-term struggle for 'independence' is being played out in the setting up of nature reserves.

## RC06-129.1

**RABE, MARLIZE\*** (University of South Africa, [rabeme@unisa.ac.za](mailto:rabeme@unisa.ac.za))

*Will Family Policy Development in South Africa Free Itself from Ideology?*

The aim of this paper is to give an overview of South African family research and to recommend how family policies can match these realities. The South African national department of social development published their draft White Paper on Families towards the end of 2012. This White Paper is believed to be a precursor of family policies to follow. Historically the apartheid government placed the bulk of family care on the shoulders of the extended family but there have been various indications for decades that this burden cannot be carried by families alone. An analysis of African countries, unlike welfare states from the North,

shows a general picture of minimal assistance from the state and a reliance on extended families to take care of individuals. Although there are indications of social security mechanisms in African countries including pensions and family allowances, these may be partly or solely carried by the private sector. However, the current democratically elected South African government developed a multitude of policies and acts in place to support people at risk (e.g. poor or abused people), but these target individuals. In the draft White Paper families at risk are identified, but policy makers are unclear on how to match support to such families with the realities. The Latin American family policy examples, such as Progreso in Mexico (launched in 1997 but renamed Oportunidades in 2002) and Chile Solidario (implemented from 2002 in Chile), did not find support with the South African government. This lack of support for these types of policies is not entirely clear but the principle of expected counter performance (such as progressing in school) did not seem to find favour. Instead, idealised notions of nuclear families are put forward in the draft White Paper but here alternative policy directions will be suggested.

**RABELLO DE CASTRO, LUCIA\*** (Federal University of Rio de Janeiro, [Lrcastro@infolink.com.br](mailto:Lrcastro@infolink.com.br))

*The "Age Complex" in Childhood Studies and the Limits of a Politics of Age*

The present work discusses the significance of age as the cornerstone notion which has historically embedded studies of children and childhood. Naturalized as a handy indicator of change along the life cycle and inherently simple as a quantifiable marker, age has, nevertheless, allowed for scarce questioning concerning its own epistemological conditions of possibility. For instance, can age de- or re-construct the evolutionary temporality in which it was initially conceived? How can age divisions and differences be re-constructed in view of emancipatory ideals of children? Hasn't age contributed to an under-socialized notion of children? Modern childhood owes its origins to the emergent historical importance given to human differentiation along the life course, a principle which came to preside over the formation of organisms, individuals and societies. Chronological age became the index which testified to socially and biologically relevant changes against the backdrop of an individual's identity. How human differentials along the life course should be signified, predicted and legitimated became an accomplishment of age taxonomies or life stages. Studies of childhood emerging in the second half of the twentieth century, like sociology and anthropology, problematized the contextually unbound nature of age changes and its reifying effects on children's subjectivities. Dichotomies and disjunctions in subjective dispositions that were tapped by age were brought to converge, although age, as an explanatory concept, was not entirely overcome lurking beneath the constructionist efforts to understand childhood and children. Age constitutes, then, a "complex" given its overall adherence to modern as well as contemporary perspectives of childhood studies. Problematizing age points in the direction of inquiring about the nature of the disputes and conflicts of age-related social groups and the limits of such a politics of age.

*Ambiguous Collectives - Creative Workers and Their Integration in Urban Space*

Looking at people working in the areas of arts, design, architecture, fashion, multimedia, communication and consulting, it is hardly possible to identify a more or less homogeneous "creative class" (Florida 2002) that would contribute to the competitive advantage of urban regions by producing cultural values apt to create a distinct identity in the global competition. From our point of view, they rather form ambiguous collectives that are continuously reconfigured by the transformation of urban space.

As Marazzi (1997) argues, the organisation of cooperation in post-fordist labour organisation passes from wage form to space form. Creative workers have a peculiar function within this process, because they help to transform urban space into a source for economic production and organisation. They do so by assigning symbolic value to cultural peculiarities of quarters, by exploring the limits between private and public space, between working time and leisure time, between economic interests and cultural values. Creative workers enact the game of exploring these limits as essential part of their professional and cultural identity. Yet, as stated, this form of "identity" is ambiguous, since it indeed may function as a driver for gains in social distinction, for accumulating cultural and social capital (Bourdieu 1997), but distorts and veils real differences in income and social security.

We will refer to two phenomena regarding creative workers' use of spaces: 1) the founding of common spaces like office communities and 2) the organisation of protests against the structures of the social insurance system. This enables us

to address the question if the need for collective organisation is necessarily subordinated to the capitalisation of cultural production via the valorisation of city quarters in terms of real estate prices, or if shared spaces are an opportunity for enhancing participation in the shaping of urban environments.

*"Serious Leisure": Film Festivals As Techno-Audiovisual Capital*  
Author: Rosario Radakovich

Film festivals are considered as par of a "serious leisure" for the audiences. Most of them are considered as a "distinct" cultural activity, also an specific "techno-audiovisual" or "techno-cultural" capital (O'Keefe: 2009). Film festivals give audience the opportunity to be part of an specialized knowledge, a creative and innovative environment –with film-makers, cultural journalists, etc-, be included in premieres, and be part of the atmosphere of contemporary global culture. (Stinger, 2001).

As a result, audiences expect festivals provide a certain "quality guarantee" in order to show to the friends and family the value of this prestigious activity. According to De Valck (2006) festival audiences use the experience as evidence of cultural capital in conversations between friends and family. In this context, what are the forms of "serious leisure" associated to audiovisual cultural capital?

This paper will analyze the case of the International Film Festival in Montevideo organized by Cinemateca Uruguaya, in order to explore the consumption of film festivals as a "serious leisure" in Uruguay. The methodology includes personal interviews and focus group study with film festival "selected" audiences. The results are part of a research about uruguayan audience cinema, developed in the Information and Communication Development Program in the Universidad de la República (PRODIC UDELAR), with an interdisciplinary research team between 2013 - 2015.

#### RC06-118.9

**RADFORD, LORRAINE\*** (University of Central Lancashire, [lradford@uclan.ac.uk](mailto:lradford@uclan.ac.uk))

*Domestic Violence, Coercive Control and 'Risky Parenting'*

This paper will consider the concept of risk in relation to parenting in the context of domestic violence. Since the 'discovery' of violence in families in the nineteenth century and the 're-discovery' associated with the birth of second wave feminism in the 1960s, definitions of 'violence' and 'child abuse' have expanded in high income nations. In the UK the official definition of domestic violence has been changed to include the concept of 'coercive and controlling behaviour' defined as 'an act or a pattern of acts of assault, threats, humiliation and intimidation or other abuse that is used to harm, punish, or frighten their victim' and 'a range of acts designed to make a person subordinate and/or dependent by isolating them from sources of support, exploiting their resources and capacities for personal gain, depriving them of the means needed for independence, resistance and escape and regulating their everyday behaviour'. In this paper, Stark's (2005) concept of coercive control will be applied to fathering in the context of domestic violence. Child care after separation or divorce has become a gendered political issue. The implications of applying the concept of coercive control to fathering for equality, safety and justice in managing violence and risk in post separation relationships between parents and children will be discussed.

#### RC53-858.5

**RADFORD, LORRAINE\*** (University of Central Lancashire, [lradford@uclan.ac.uk](mailto:lradford@uclan.ac.uk))

*The Victimisation of Childhood – Understanding Children and Violence*

The media and campaigning organisations have influenced public perceptions of violence and young people by focusing on rare and sensationalist events such as homicides, extreme cases of child abuse and young people orchestrating riots from smart phones in inner city areas. Representations of children and young people as either 'victims' or 'villains' has consequences for their wellbeing – their experiences of violence are misrepresented and over simplified, fragmented accounts of the causes and consequences hinder progress in policy and practice. Taking a feminist approach to the sociology of childhood and drawing on recent research findings, this paper will consider what is helpful to know about the risks of abuse, neglect and violence when working or interacting with children and young people.

Key questions addressed will be:

What is known about the prevalence and impact of abuse, neglect and violence in the lives of children and young people today?

What are the gender and age related risks? Who does what, to whom? What are the risks to children and young people at different ages from different perpetrators? How much abuse and violence is committed by children and young people? Is the world a more dangerous place where children experience more violence and commit more violent crime than ever before?

Are adults' fears about and responses to child abuse and children's violence part of the problem?

What are the challenges and opportunities we face in putting children's experiences of abuse, neglect and violence and their rights and agency at the centre of thinking and practice?

*Sugar BABY - the System of Medicalization(s) Around Childhood Obesity*

Obesity is considered a pandemic and childhood obesity is considered one of the most serious public health challenges of the 21st century by Who. The medicalization of childhood obesity is a clear example of the medicalization of risk. It is believed that the obese child is more likely to have high blood pressure, elevated cholesterol or of becoming diabetical already in childhood but also in adulthood. The statistics on risk are the basis of any program of health promotion, real vehicle of the system of medicalizations about childhood obesity: the entire life cycle of the child is kept under control and medicalized, from pregnancy to breastfeeding, from food choices for physical activity. In European context, the engine towards medicalization of excess weight in children come mainly from health professionals and major Food Companies. The present paper shows the first evidences about the comparison of health promotion programs on childhood obesity in Europe from the European Charter on counteracting obesity (2006) to the most recent Vienna Declaration on Nutrition and Noncommunicable Diseases in the Context of Health 2020 (2013) made by Institutions, health professionals and european Food Companies.

*How Many Similarities and How Many Differences? the Nature of National Identity in a United Europe*

At the beginning of XXI century Europe is subject to the internal integration on a scale having no historical precedent. In the widespread opinion the very important factors facilitating the process of integration should be sought in a historical-cultural reality of a kind of common European identity as well as in a redefinition of the concept of national interest. Therefore, several interesting question may get our attention: To what extent the countries forming the European community differ, and to what extent are similar in so called national attitudes? What is the nature of European patriotism and a sense of national identity? Are there any divisions here? If so, what is their nature? The author tries to answer these questions by analyzing data from two studies on "National Identity" (1995 and 2003) conducted within the International Social Survey Programme. Description and classification of the European countries on different dimensions of national attitudes leads to the conclusion that Europe is divided into two fundamentally different national-cultural clusters. Their origin results from a huge disparity in the level of collective self-esteem, which is an expression of civic pride in a quality of liberal-democratic state in various aspects of its functioning. It also turns out that the basic division corresponds almost perfectly to the "cultural shift" on a dimension defined by R. Inglehart as survival vs. self-expression culture. What is important and not so obvious, the other central dimension of cultural values, defined as tradition vs. secularization-rationalism, in no way contributes to explanation of the nature of two basic national-cultural European clusters.

*The Impact of the Great Recession on Educational Expectations: Cross-National Trends in Social and Cognitive Inequalities*

Does the Great Recession impact inequality of educational outcomes? Although contributions on the effects of the global crisis on a number of social aspects have started to emerge (e.g., Grusky *et al.*, 2011), little is known about how inequality of educational attainment is affected by macro level trends such as changes in the economic cycle or in unemployment rates. This paper aims to elucidate the interplay of family background, educational expectations (conditional on cognitive skills) and the economic context. Our main research question is, hence: has the impact of family background on offspring's educational outcomes become stronger because of lackluster economic growth?

Using pooled data from TIMSS 2003, 2007 and 2011 – an international survey project of competences among 8<sup>th</sup> grade students– we estimate a set of (multi-level) random constant linear regression models on the expected level of educational attainment. The study covers 24 affluent countries. The recent economic downturn has affected advanced economies to a different extent, producing substantial variation in the context conditions in which educational expectations are formulated. This longitudinal and comparative setup thus provides the opportunity to improve our understanding of the driving forces of unequal educational trajectories of children at the end of compulsory education. Moreover, by examining expectations we take a look into the future of educational inequities.

Our results confirm the existence of systematic cross-country regularities and suggest that economic down times lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence of economic resources on educational expectations is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relation between economic context and family background effects on educational careers.

#### *Building the Case for CSR: Four Decades of Philippine Corporate Discourse on the Role of Business in Social Development*

Corporate social responsibility (CSR) is a fluid and malleable concept. The dynamic, some would even say ambiguous, conceptualization of CSR stems from its socially constructed nature which opens it to the influence of discursive practices and contestations of several actors including business, social development practitioners, civil society, government, and the academe. This paper trains the spotlight on the business side of the discourse on CSR. The paper shows how Philippine companies, through their public communications, contribute to the construction of the CSR concept and the role of business in social development. The paper achieves this through a discourse analysis of corporate communications in the annual reports and some select public documents of Philippine Business for Social Progress, the largest corporate-led social development foundation in the Philippines. The paper looked at thematic changes in Philippine business' CSR discourse from the 1970s to the present and found an increasingly explicit presentation of a business case for CSR over the past four decades.

#### *Reported Premarital Sex: Explaining India's Gender Divide*

The popular media tell us that the Indian premarital sex rates have risen sharply in recent decades. On closer examination, these reports appear to misrepresent the data. Local surveys have been portrayed as national. Research on one age cohort has been reported as if it covered multiple decades. The only multi-decade national survey to ask detailed sexual history questions is National Family Health Survey (IIPS, 2006b). Confining the analysis to sexual and marital history of men and women at the age of 24, it is possible to draw appropriately comparable samples of respondents from this survey representing different age cohorts based on year of birth. This shows no clear increase in the level of reported female premarital sex over time. For male respondents the rate rose from a low of 2.45% for those born in the period 1962-66 to a high of 6.98% for those born in 1977-81. The discussion below suggests some social forces that may have reduced the level of female premarital sex, but these do not explain why the reported rates are not symmetrical between men and women.

#### *Challenges of a Global Sociology: Centers and Peripheries in the Geo-politics of Sociological Theory*

Debate about the possibility of building a global sociology has gained increasing importance in recent years. In dialogue with works that argue in favor of post-national sociologies as well as literature that criticizes the hegemony of the theories formulated in the so-called centers, this article aims on reflecting the idea of global sociology. The main sustained theoretical hypothesis is that the national experiences must be understood as bearing the potential of making important contributions to stimulate the theoretical discussion about sociological

theories and concepts formulated in the centers. By mobilizing some sociological concepts such as public sphere and right to the city, originally formulated in centers, we suggest that peripheral sociologies could contribute to broaden theoretical formulations. In this sense, the theoretical construction of sociological theory must involve an equal dialogue between sociologists from the center and the periphery in order to construct a global sociology.

#### *Deviance and Camouflage City: Sexual Deviance and The Construction Of Invisible Urban Spaces In Post-Revolutionary Tehran*

This study is an attempt to expand on the relationship between sexual deviance and urban space in the context of post-revolutionary Iranian society. It focuses on Tehran, a major metropolis where gender segregation and heterosexual norms in the form of family institution appear to dominate societal norms. But this study instead offers an ethnographic account on various "sexual deviant" practices including homosexuality, transvestic fetishism, sadism, and necrophilia in diverse city spaces to shed light on a hidden world in post-revolutionary Iranian urban life. The notion of "camouflage city" underscores the complex relationship between embodiment and city space and argues how behaviors deemed "sexually deviant" in Tehran continue to undergo illumination for concealment through heterosexual normative practices sanctioned by the Islamist normative discourses and practices. The study specifically looks at transsexual practices both in terms of everyday and institutional life in the context of changing state official and public perceptions of sexual deviancy. It also looks at how such practices tend to resemble a particular cultural life of a distinct urban space, where everyday sensibilities become fused with ways sexual deviance is practiced and made (in)visible in shifting daily/nightly life situations. In the final section, the study theoretically examines deviancy as performative act which is always spatial practice and that it involves a de-labeling process to destabilize the societal norms whose infraction constitute sexual deviance.

#### *Mobile Media, Digital Divide and Social Movements: The Case Of Iran*

This study attempts to offer a theoretical interpretation of the political and social dynamic of mobile technology practices in the context of digital inequalities in the 2009 post-election uprisings in Iran. It shows how the interactions and communications Iranian protesters created with the practices of texting, photographing and live video recording served to characterize not only distinct kind of contentious performances, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances that reimagine the public in affectively contentious ways. Yet the emotive is not "irrational," but a distinct mode of being present in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. The mobile media practices, along with its close connection with online social media, during the 2009 demonstrations, I argue, foster embodied engagements through distinct camouflage practices, largely hidden from the official order of state surveillance. However they do so in a socio-economic context that is shaped by the market and state institutions. The study finally explores the conceptual relationship between digital inequalities (on an infrastructural level), computer-mediated practices and state power.

#### *Asian Migration Policy: A Comparative Analysis*

This paper addresses migration policy of major receiving countries in Asia from a comparative perspective. The paper identifies seven interwoven, underlying features that underscore the edifice of migration policy in the region. The study elaborates these salient features with an emphasis on three major international migration flows: low-skilled labour, skilled labour and student. Despite each individual country's policy-making initiatives that prioritize one's own national needs and interests, this paper reports that migration policy converges in core principles

and practices throughout the region and the exclusionary principles accentuate this convergence in Asia migration policy.

*Gender and The Migration Process: Bangladeshi Migration To The United Arab Emirates*

Drawing on the experiences of Bangladeshi female and male migrant workers in the UAE and the members of their families left behind in Bangladesh, this study examines the gender differentiated migration outcomes among Bangladeshi migrants. In particular, the study seeks to address patterns of recruitment, experiences on foreign soil, and remittances for Bangladeshi migrants in the Bangladesh-the UAE migration corridor. The study argues that we need to broaden the study of temporary migration and gender issues to include major spheres in the temporary labour migration and see migration as a process. This research identifies three major spheres where gender matters: recruitment, experiences on foreign soil, and remittances. Total sample size of the study is 250. Fifty female migrant workers and 100 male migrant workers in the UAE were surveyed through face-to-face interviews. Fieldwork in Bangladesh involves interviewing 50 selected UAE male migrant households and 50 selected female migrant households. These two-way surveys are complemented by participant observations and focus group discussions.

*Institutional Change Of Indigenous Peoples In Response To The Forest Policy In Indonesia*

This study is about the institutional changes of the indigenous people as a response to resource tenure conflicts, to take a place in Kasepuhan Community in Halimun Salak Mountain National Park and the Dayak Iban community in Sungai Utik forest. Legally, forest are controlled by the State. Through existing authority, the State can provide some of its authority to private (Company/ concession holder) to commercialize forest. But in fact there are local community (indigenous people) who have been living for generations in and around the forest. Community has knowledge and institutional governance of forests. The existence of state institutions has clearly hegemony to local institutional, which had an impact on the local institutional change. In Kasepuhan Community institutional change is a response of hegemony of the state, while in Dayak Iban Community, institutional change has strengthened local communities in the face of the State resulting in counter hegemony.

*Unequal Secrets: The Politics Of Information Technology and The Secrets Of The Capitalist Market*

Unequal Secrets: The Politics of Information Technology and the Secrets of the Capitalist Market

In the context of the recent exposures of 'secrets' – Julian Assange and Edward Snowden as leakers – the role of information technology has become critical. Challenges to the concealment of the State's secrets – U.S. military and diplomatic documents and NSA's metadata collected through mass surveillance – have raised the issue whether the disclosures were indeed acts of treason or as Assange claims, attempts to advance transparency, justice and accountability" and to expose dangers to individual privacy. Did the leakers intend to use information technology as a substitute for human cognitive deficiency among citizens and protect individual rights and privacy?

As the leakers avow that their interest in accessing and disclosing the State secrets was to protect the rights of the individual, why are the disclosures made only against the political secrets of the State, but have not extended to the secrets of the Market? Why have strategies similar to those against the State secrets, not been deployed in order to expose the 'secrets' of the Market that have led to the 2008 Financial Crisis and its global fallout? I will apply the concepts of Gilles Deleuze and Felix Guattari : Secrecy, Deterritorialization/Reterritorialization as they

relate to the State and the Market, to discuss the above issues and examine the politics behind the use of technology. Illustrations will be drawn from the market's secrets and their impact, e.g., global financial liquidity/austerity, Sovereign Debt/ Private Accumulation.

*Cluster Dependency, Social Capital and Social Innovation : Insights from the Engineering and Plastic Clusters in Chennai, South India*

In most developing countries a focus on the development of MSME or Micro, Small and Medium enterprises is evident. Operationalising this goal in the Indian context a conscious planning has been adopted not only to strengthen existing enterprises, but also to create 'clusters' of such enterprises. The formation of individual clusters is not new and it has been imitated successfully in the creation of the service clusters -the IT and Biotech industry. However, the traditional manufacturing clusters are still very significant in their contribution to the economy both in terms of labour absorption and capital investment.

In this paper we discuss the nature of functioning of two such clusters -engineering and plastic in and around the city of Chennai, South India. The city however is well known for its automobile clusters. Significantly different in size, technology used and labour utilised, these 'clusters' have 'innovative' practices to mobilise labour, access technology and capital and sustain productivity. Sharply different in terms of their sensitivity to regulations by the state, they nevertheless manifest some similarities in terms of operation. Significant differences are also observed. The plastic clusters face regulations and sanctions to a greater extent in the context of the environment where they are located. As most of their labour is unskilled 'social capital' in mobilising continued labour supply seems essential and predominant in hiring practices.

The paper discusses some of these aspects based on insights obtained from a sample survey of these clusters. Questions raised include

- How do they ensure continuity of labour?
- How do they access capital and technology?
- How do they sustain production and marketing?

Essentially the paper highlights the strong inter-dependency of units among the cluster in a domain of high competition. The insights drawn highlights the innovative practices at the workplace in a developing country like India in the context of MSME

**RAJAN, J B\*** (Kerala Inst Local Administration, [jbrajan07@gmail.com](mailto:jbrajan07@gmail.com))

*The Poverty in the Midst of Plenty: The Case of Fisher People*

The urban poverty being widely discussed among the discourse on urbanization and poverty, the present paper attempt to shed light on the pockets of poverty in the urban area with specific reference to coastal belt and among fisher people. The fisher people living along the coastal belt are subject to all urban poverty problems notably of housing, water and sanitation, health and education. Their living environment is of poor quality and social security measures unsatisfactory. This is in spite of facts that they live in permanent settlement regions i.e. the coast and are skilled labourers in marine fishery defying the general conviction that urban poverty has direct linkages to migration and unskilled labour. The paper is based on the data from the census of households in the coastal wards of Thiruvananthapuram Corporation, urban local body in Kerala. The fisher people dwell in the coastal belt are generally backward in terms of basic amenities and socio-economic conditions. The coastal belt of urban area is also not an exception. This paper highlights backwardness of fisher people in the survey area in education, health, basic living amenities like water, electric power, and clean living environment. Does the Corporation need to usher in more inclusive programmes, efficient management, and delivery mechanisms? Do Policy makers and implementing personnel be sensitized for fair and judicious practices? These are some of the pertinent questions addressed in this paper.

*Re-Establishing the Nexus Between Sustainable Development and Disaster Risk Management: Exploring the Scope and Challenges in Stakeholder Participation*

The stakeholders involved in sustainable development are also involved in risk and disaster related activities. Disaster situations bring together multiple stakeholders. This is one of the complexities of disaster response and management in general in which many actors ranging from public to private come into play. Governmental agencies create new roles to respond to disaster needs. Similarly,

non-governmental organizations with varying interests and objectives interact in new and unplanned constellations. These actors face different challenges in the different phases of disaster management, ranging from organising relief and rescue to help in recovery and disaster risk reduction. While coordination features in all phases, its characteristics differ significantly in terms of stakes, urgency, complexity and transparency for those involved.

With increasing numbers of natural disasters handling economic stress post-disasters becomes extremely challenging. One of the reasons for such losses is the failure to establish a clear nexus between development programs, disaster risk reduction and disaster recovery programs. Given the process of repeated learning after disasters, it calls for mainstreaming disaster risk reduction with sustainable development. This helps in reducing economic losses and various impacts during disasters. It also reveals the importance that states place on issues of vulnerability. It is therefore important to address issues of development during disaster reconstruction. If recovery helps communities to build back better, resilience helps to face future hazards and minimize loss. When disasters are seen as isolated events, disaster response becomes more prominent than building a culture of preparedness and addressing developmental concerns. The paper explores the challenges in mainstreaming risk reduction with sustainable development and thereby the factors affecting participation of stakeholders in the process.

#### *Economic Globalization and Feminization of Labour: The Case of Domestic Servants in India*

This paper discusses the consequences of economic globalization for women in India. It analyzes the neoliberal policy frame from a gender perspective to bring out the impact of economic globalization on the women's work. Economic globalization has generated sources of livelihood and opened up new vistas of opportunities for women. However, labour market regulations based on the neo-liberal ideology have negative impacts on women such as feminization of labour as well as poverty, low-income, exploitation and health hazards. In India, the number of women has increased most in labour-intensive, informal and unorganized and casual job sectors, besides the huge number of those educated women who are working at low level IT jobs. Most of these women such as domestic maids are living in abject poverty and therefore they seek the job of domestic maids in urban areas. As a result of globalization, women in urban middle class families have shifted their burden of home management on to these poor women and they themselves engage in leisure activity or low paid white collar jobs. Poverty makes the maids and the female labour of their likes vulnerable to gender-based violence and HIV/AIDS due to greater susceptibility to infection during unprotected sex, the lack of education, employment and economic opportunities and inequitable inheritance laws, the cultural and gender norms restricting women's sexuality and prevent them from availing themselves of information on sexual and reproductive health and unwillingness of government to publicly discuss the empowerment of women in gender relations and sexual practices. The negative impacts of neo-liberal economic policies have often failed the large segment constituted by the women in India. There is therefore the need to institutionalize regulations and structures to empower women in social relations and sexuality practices in a patriarchal and historically male-dominated society of multiple hierarchies like India.
