### *Refiguring and Centering Housing in Political Economy*

The issue of "housing" has not been granted an important role in post-war political economy. Housing as *policy* was relegated to social policy analysis and to a growing field of housing studies that have both shown little interest in the issues that political economists are usually interested in. Housing as *market* was likewise relegated to mainstream economists. The latter's obsession with "free markets" and the lack of analysis of state involvement beyond the statement that it hampers the functioning of markets, has also broken ties with an integrated analysis of housing as a crucial part of political economy. In recent years, there has been a growing recognition of the increasing centrality of housing to the political economy of advanced capitalist societies. Yet we still lack a coherent and relatively comprehensive conceptualization of the "place" of housing in the contemporary capitalist political economy.

This paper sets out to try to offer that – partly to help bring together existing but typically self-standing arguments about different elements of the political economy of housing, and partly to help frame and connect up ongoing research in this area. It argues that housing is implicated in the contemporary political economy in numerous critical, connected, and very often contradictory ways. It makes this argument – and offers its conceptualization – by going back to what it is arguably the central category of political economy, *capital*, and identifying the multiple (and ever more material) roles of housing when "capital" is considered from the perspective of each of its four primary, mutually-constitutive guises: *as social relation, as process of circulation, as accumulated value, and as ideology*.

### *Political Culture and Communication: A Study of Forthcoming General Elections of India*

The paper makes an effort to present the cultural and communication perspective of the general elections of India scheduled to be held in 2014. However, its preparations are on full swing and the political alignments are on for the political battle between the Congress led (ruling) UPA (United Progressive Alliance) and the BJP led NDA (National Democratic Alliance).

The proposed 2014 general elections are symbolic in many respects and hence the political culture has proportionately got mobilized. A glimpse of tussles between the two arch rivals of contemporary Indian politics is going to affect the power structure and corresponding cultural texture of the society at large. Hence, the situation demands hairsplitting analysis of the culture and communication of the political forces shaping and sharing power.

The paper tries to encompass the bipolar political structure and the probability of the emergence of so-called Third Front in coalition era at the centre. The political compulsion of different political parties to align themselves to mainstream national interest is something that Indian politics has yet to negotiate. India appears to be a cake being disputed over by the BJP and the Congress.

The paper reflects the stakeholders of politics being at different camps and at loggerhead for political gains, putting the nation state at stake. The paper also makes an effort to look into the political dynamics having bearings on the functioning of the nation state and its future course of action. The exploratory research design in combination with clinical method is adopted to look into the political forces generating a particular political culture and communication.

### *Conceptual Foundations for Assessing the Meaning of Wellbeing*

For a survey to have content and construct validity, it is first necessary to establish a clear understanding of the concept being measured. Although studies attempting to measure wellbeing in many different disciplines and settings abound, conceptual and theoretical development of the construct has been lacking. This paper reports the methods used, outcome, and benefits of undertaking systemic foundational research to develop a contextualised concept of wellbeing in each of two quite different workplaces. Abbey's phenomenographic, concept-building

approach used innovative interview methods from marketing and education to tap into participants' experiences of wellbeing in their workplaces. The projective value of visual images (selected by participants) as metaphors communicated social meaning, thought, embodied experience and emotions (Zaltman, 1996). Questions based on Sykes et al. (2006) study of Learning from Past Success elicited emblematic personal wellbeing experiences. Resulting data were analysed to derive a multilevel, multidimensional concept of wellbeing for each workplace. Comparison of the concepts suggested that wellbeing in work settings is best understood as a *class* of concepts with a constant structure of three domains – a structure that is comprised of locally contextualised common elements and one domain that clearly differentiates sites. Cross-national survey development can benefit from understanding this domain structure and how elements within it might vary according to site. More critically, the study points to the value of undertaking foundational research in any site to tap local subjective meaning. This will ensure the concepts to be measured using quantitative devices have clearly identified boundaries and constituent elements.

### *Social Quality in Times of Recession*

The economic recession has had an impact on the economies of the EU27 countries. Although the impact has not been felt to the same extent in all countries there has been an increase in unemployment and financial distress in all of them. Yet surprisingly the economic downturn has not resulted in a significant decline in people's social satisfaction across the EU as a whole. Comparing mean scores for subjective satisfaction for the EU27 using the data from the European Quality of Life Surveys (EQLS) for 2007 (before the onset of the economic recession) and 2011 we find that country mean scores have significantly increased in some countries, decreased in others and remained unchanged in some. The pattern of change is not explained by the differential impact of the recession in different countries. We also find that the Social Quality Model explains variation in subjective satisfaction for all countries for both 2007 and 2011. In other words across both time and space the same variables explain the variation in social quality.

In this paper rather than look at differences between countries we will look at differences between groups for whom the economic recession may have had a differential impact namely gender, age and economic circumstances. We will consider differences in life satisfaction between socio-economic groups and then use an index of social quality to examine the ways in which the context of the lives of the members of groups for whom subjective satisfaction changed significantly between 2007 and 2011. The index of social quality includes measures of economic security, social cohesion, social integration and empowerment. It defines the socioeconomic space within which people live their daily lives.

### *The Promise and the Reality: Women's Empowerment in Rwanda*

This paper will discuss the reality of the lives of the vast majority of women in Rwanda, a society that remains deeply patriarchal. Rwanda has become known for its progressive stance on women's empowerment by becoming the first country in the world to achieve MDG target 3 for more than 50 per cent of members of parliament being female. The 2003 Constitution guarantees gender equality and the country's Vision 2020 and Economic Development and Poverty Reduction Strategy make strong commitments to gender equality and women's economic empowerment. Girls now outperform boys in primary and junior secondary education, employment legislation outlaws gender discrimination in employment and at the workplace and 30 per cent of senior positions are reserved for women. There have been progressive reforms including legislation on gender based violence and land reform giving women the same rights to own land as men. Drawing on data from the 2010/11 Integrated Living Conditions and Household Survey, the 2012 Rwanda Demographic Health Survey, the 2012 FinScope Survey as well as quantitative and qualitative data collected by the author over the last five years the author will look at the reality of the lives of ordinary Rwandan women. The majority of Rwandan women work as small farmers, dependent workers on family farms and as agricultural labourers. They have not benefited from Government programmes to transform agriculture and create more non-farm employment to the same extent as men. They are poorly educated with high rates of illiteracy, lack access to basic productive resources and face the double burden of productive and reproductive labour. Women are expected to be submissive and there are high rates of domestic violence.

### "Smelly Mouths", Moral Selves, and the Management of Olfactory Transgressions in Everyday Life

Socially constructed meanings behind odours in everyday life are highly contextual and dependent on how social actors interpret smells. Through these interpretive processes, odours perceived as foul emanating from a person's mouth can potentially be a social impediment and repel anyone approaching him or her. This paper focuses on the sociocultural forces that affix persons with 'smelly mouths' and bad breath – or halitosis – as deviant and interrogates the implications these constructions have on various dimensions in their social life. Within this web of constructions, I discuss three interconnected dimensions related to such olfactory transgressions. First, odours are important markers of moral status. Second, odours are imbued with connotations of social class and with these concomitant notions of lifestyle and presentation of self. Third, and given the often strong responses against persons with bad breath and the disruption to social interaction, I show how persons perceived with bad breath respond to such 'disruptions' by invoking discourses from biomedical institutions and treatment interventions which appropriate and regulate such perceived transgressions as 'medical problems' that have primarily been dominated by rational, scientific models. By closely unpacking these processes, I attempt to demonstrate how and why the basis of the taboo of bad breath is not so much a 'natural' illness per se, but rather a response borne out of contextual, everyday life 'sensory scripts' as circumscribed by different social actors and institutions. This therefore lends support to the notion of the socially constructed roots of halitosis rather than its nature as an inherent, medically treatable illness.

#### *LOCAL Community Resilience in the Context of Global Climate Change: A Case from Maluku Indonesia*

This study driven by two research objectives: to observe the risk and vulnerability of the northern coastal region of Ambon Island due to climate change from the subjective point of view of the Asilulu's fishermen community in particular; to analyze the adaptation strategy and resilience of the Asilulu's fishermen and the northern coastal region of Ambon Island. The research was carried out through qualitative approach with specific observation on fishermen community of Asilulu Village of the Leihitu sub-District, Central Molucca District of Molucca Province, as case study. Two important results arise from the research. First, over the years local fishermen have developed adaptation strategy to cope with the risk related to climate changes such as adapting the fishing period to changing season, temporary seeking demersal fish, reduce sailing risk by fishing together in groups, use of new type fishing boat, develop new fishing gears, revitalize local institution, develop livelihood strategy and social security networks, as well as strengthen the relations and revelations to the God the Almighty. This adaptation strategy could potentially reduce the vulnerability of the Asilulu's fishermen and their surrounding environment. Second, although the Asilulu's fishermen have develop adaptive strategy to reduce the vulnerability related to global climate change, however, based on the eight elements for coastal community resilience (US Indian Ocean Tsunami Warning System Program 2007), the socio-ecological resilience of Asilulu's fishermen and its north coast region of Ambon Island can be categorized as low. The governance, society and economic, coastal resource management, land use and structural design, risk knowledge, warning and evacuation, emergency response, and disaster recovery; are resilience elements that are not fully taking place or exist at Asilulu's village and north coast region of Ambon Island.

#### *Peer-Surveillance and Management of Uncertainty through SNS in Japan: Obligation of Keeping Good Company and Its Impasse*

When the usage of the Internet became prevalent in 1990s, scholars and critics envisioned a coming future where people can expressively interact to each other as Netizen (net-citizen). As two decades have passed since then, many of the Internet dreams have come true thanks to rapid innovations of information and communication technologies. But, the reality of the Net in which we now live is a little bit different from the hopeful vision that the enthusiastic proponents of the digital dream have proposed.

The rapid diffusion and prevalent usage of SNS can be regarded as the realization of long-lasting digital dream. However, paying close attention to what is actually going on through the usage of SNS, we come to discern the moment of peer-surveillance that contradicts the ideal of free, expressive and autonomous communication.

The usage of SNS seems to be a sort of ritualized practice of everyday life among the younger generation in Japan. As the previous studies have clarified, the on-line relationship formed in SNS has closely related to the social activities

practiced off-line. For many users of SNS in Japan, the main purpose of engaging in SNS is more to keep good company through checking and surveilling the detail of everyday life practice to each other rather than to express their opinions and discuss with other people on the Web.

In this paper I will discuss how university students perceive the meaning of their using the Net and in what sense it makes them feel obliged to engage in SNS so that they can keep on good company with off-line friends. Even though they sometimes feel reluctant to keep on ritualized practice of SNS, it is almost impossible for them not to participate in that as it causes the rising sense of uncertainty in making relationship with friends.

#### *How Does Environmental Education Affect the Environmental Attitudes?*

Previous studies have clarified three effects that promote a particular pro-environmental behavior : situational understandings, action costs, and norms. We can assume, in addition, the general attitude toward environment which promote the behavior no matter what the behavior is: ecocentric attitude, anthropocentric attitude, and environmental apathy. The general attitude are also assumed to be formed by education at school as well as that at home. This paper thus explains the effects of environmental education on some aspects of environmental attitudes. Moreover, it specifically explores the influence of attitude on pro-environmental behavior. To this end, we conducted a survey in Minamata, Japan in November 2010. Respondents are all 3rd-grade junior high school students and their parents in that city. Our results are as follows: 1) Between parents and children, the correlation of attitudes toward the environment is weak; 2) the actions of families favorable to the environment and environmental study in school have a positive effect on ecocentric attitudes and the anthropocentric attitudes; 3) the pro-environmental actions of families, experiences in nature, and environmental study in school have a negative effect on environmental apathy; and 4) among the three environmental attitudes, ecocentric attitudes have a positive effect and environmental apathy a negative effect on pro-environmental behavior. Therefore, ecocentric attitudes are significantly improved and environmental apathy significantly reduced by experiences in nature, environmental study in a school, and the action of families.

#### *Language Endangerment : The Example of Yoruba and Igbo Languages in Africa*

This paper explicates how societies thrive amidst a multiplicity of languages in particular cultural, social, economic, political and religious contexts, resulting, invariably in linguistic inequality which affects language attitude, language shift and subsequently, language endangerment. Using 2 major Nigerian languages, namely Yoruba and Igbo, the paper picks the UNESCO (2003) overview of language endangerment, among others; underlying ideology; attitude of the speakers of both languages; and a checklist modified for the purpose of this study to place language endangerment in its proper perspective. Literature reviews cover historical, cultural, religious and social aspects as well as selected previous studies on this subject. The peculiar challenges presented by religious-cultural and socio-political practices to language use in a country like Nigeria are highlighted particularly when the society is expected to ensure that languages change to outwit change in terms of adequate allocation of functions. The paper observes that indigenous languages in Nigeria have become endangered while English language continues to flourish.

#### *Addressing Domestic Violence in Canada and the United States: The Uneasy Co-Habitation of Women and the State*

For decades, feminist sociologists, activists and the anti-violence movement have drawn attention to how violence against women is closely linked to structural

and cultural factors that subordinate women. We have underscored how gender inequalities intersect with other forms of inequalities, such as, for example, those due to immigration or minority status; how limited rights, lack of equal access to resources and exclusion from participation in decision making processes impede the elimination of violence against women at the micro, meso and macro levels.

In this paper we interrogate the role of the state in addressing domestic violence, especially in the context of immigration in the neo-liberal era. By doing so we problematize state regulation of gender itself. Mobilization by the battered women's movement in the last few decades, increased media attention, and legislation at the state / provincial and federal levels have increased both government awareness and support to address violence against women. However, activists and researchers have also critiqued the problems with invoking the power of the state in seeking a solution. Drawing on a multi method approach, we critically examine how Canada and the U.S approach the problem of domestic violence. In particular we focus on how domestic violence has been framed; how the US and Canada engage at the micro, meso and macro level in ending domestic violence; how abused women and mainstream and immigrant organizations that address domestic violence encounter the state; and what are the most common forms of intervention and outcomes. Finally, what the gaps in the discourse are as they emerge from the experiences of domestic violence in the US and Canada.

### *The Role of Reciprocity in the Creation of Reputation*

We seek to identify social mechanisms which explain the production of reputation in economic relationships between actors. Reputation is often assumed to be freely available in social systems. However, since people have to give away exclusive information the production of information is not for free per se. The higher the costs of producing reputation, the stronger is the necessity to overcome this obstacle by appropriate incentives. Since reputation has been shown to play a crucial role in economic and social systems, the identification of such mechanisms is crucial for our understanding how exchange between actors work. We argue that reciprocity can be a strong driver for information transfer in social systems. Based on the idea of an effective norm of reciprocity in social and economic systems we derive hypotheses on the role of reciprocity for the production of reputation in small networks. We distinguish between direct and general reciprocity and argue that both may foster the flow of information about exchange partners in economic systems. Moreover, we examine the interdependency between competition and reciprocity. The hypotheses are tested by employing an experimental design. A standard trust games is used where reputational information can be exchanged between individual agents within a population but does not become public. We assign a competition and a non-competitive treatment and compare the role of reciprocity in both setting. Multi-level panel models reveal that direct as well as general reciprocity is an important driver for the transfer of information about a seller among a group of buyers. Moreover, competition dampens the production of reputation considerably.

### *A Factorial Survey on the Inheritance Tax and Compliance Norms*

This paper builds on the tax compliance (evasion) literature as initiated by the work of Allingham and Sandmo (1972). Within the last decades a vast empirical and theoretical literature evolved, incorporating norms as an important determinant of tax compliance behavior. We add to the literature, which is mainly focused on income tax evasion, by providing an evaluation of the inheritance tax. It is shown that closeness of relationship (family principles), type of inheritance, scope of evasion and income of heirs play a role for the judgment on acceptability of evasion, which is in line with theoretical predictions. The results indicate that a general compliance norm can be abated by conflicting norms, such as fairness considerations, equity principles or family principles.

### *Globalization and Third Way Theories: The Beleaguered Family and Marginalization of Women*

The neoliberal logic of globalization that shape today's world imposes a certain role for the family and the community as important social units to regenerate civil society. This is done best through the reform discourse of third way theories. The concept of the third way of thinking resurfaced in the vacuum created by the collapse of the Soviet bloc, the retreat of socialism, and, the inadequacy of unfettered neo-liberalism to emerge as an effective alternative.

The move of third way theories to create a public space through the family and the community—that is separate from the structures of the state and the compulsions of the market place to foster "dialogic democracy" and civil morality—is very problematic for women. The first relates to the renewing of the family and the community both of which are "essentially contested concepts" without addressing the inequities embedded in these units. The second concerns the shift in the onus of renewing and regulating democracy from the state to the civil society in which individuals gain agency erasing class/caste/gender/race and other structural differences. Globalization intersects in ambivalent ways with already existing caste/class/gender/race relations making the notion of using these social units as tools for civil regeneration, complex.

Third way theories do not necessarily re-invent the family and the community as social units but they merely re-orient them to the demands of neo-liberalism. These theories must locate the family and the community within the global context of restructuring of capital itself and perceive capitalism as both setting limits to the extent to which these units can be reformed or regulated.

I will discuss these theories in relation to India.

### *Obstacles To Childcare Services For Low Income Families: How Important Is The Cost Of The Service?*

Recent research has highlighted the existence of a social bias in the extent to which children have access to childcare. In general, children living in higher income households are more likely to be cared for in childcare centres.

While the existence of a social bias in access to childcare services has been clearly demonstrated, we currently lack a clear explanation as to why this is the case. This paper uses a unique dataset based on survey data collected specifically to study patterns of childcare use in the Swiss canton of Vaud (N= 1,900). The paper takes advantage of variation in the fees that parents have to pay for using childcare services. Childcare is a municipal policy, as a result of which there are 28 different systems in operation in the canton. Fees are progressive everywhere, but variation is nonetheless substantial. For exactly the same household income and same service, the parental contribution can vary by a factor of 1 to 5.

This peculiar institutional setup provides an ideal situation to examine the importance of variation in the cost of service for parents as a determinant of childcare use. The paper will test the hypothesis that the cost of service is a major obstacle to the use of childcare services by low-income families, in spite of the fact that fees are progressive. It will use a multilevel design, with the first level of analysis represented by households, and the 28 childcare systems constituting the second one.

**Expected findings:** an initial exploration of the data suggests that the pro-rich bias in childcare service use is strong in the canton as a whole, but that in a few municipalities where for various reasons fees for low income people are particularly low, the bias concerns only the upper half of the income distribution.

### *Enabling Policies: Capacity Building and Gender in Science and Technology in Brazil*

Brazil has today one of the most ambitious capacity building program in Latin America. In 2012 it has conferred 42 thousand MSc and 12 thousand PhD titles in all scientific areas. An interesting feature of the Brazilian system, however, is that women are the majority of MSc and PhD graduates: in 2008 women accounted for 54% of MSc and 51% of PhD graduates. This paper will look at the reasons for this success and discuss whether this has resulted in a full and equal participation in the science and technological system of the country. The paper will look at the extensive graduate system and discuss its characteristics and specificities that lead to the massive presence of women scientists. It will show that large number of women are present in the entry levels of the system, but that their participation

at the higher positions is still weak and that differences in pay are important when they enter the workforce. It will conclude that in spite of a complex and sophisticated policy framework put in place in the last sixty years, further steps should be taken if Brazil wants these highly trained women scientists to participate fully and to be involved in the highest decision making positions of the system.

#### *Gender Equality in Science and Technology in Brazil: Successes and Remaining Challenges*

The paper will discuss the policies, factors and actors in the Brazilian national STI systems which affect the participation of women and girls, using the framework on Gender Equality and the Knowledge Society. In the last decades, Brazil has advanced considerably towards addressing social issues and reducing social inequalities, although there are still many problems to be dealt with. With a steady economic growth and contained inflation since 1994, Brazil has managed to uplift 35% of its poorest inhabitants out of poverty and has vastly increased its middle class. It is also today an urban country, with 85% of its population living in urban areas, 30% in metropolitan areas. Brazil is today a thriving democracy, with free universal elections for president every four years and an active congress, both at the lower house and the Senate. Women economic, political and social rights are guaranteed by the 1988 Constitution, which ensures complete legal equality between men and women in public and private life. So Brazil stands out well in the majority of the indicators, including education, where women are the majority of graduates at all levels. Brazil is today one of the few countries in the world where women are the majority of PhD graduates, the result of a steady effort of capacity building in the last sixty years. However, when you look at the higher decision making positions of the STI systems, women are still few in number. The paper will make an attempt to understand why this is so and what are the steps needed to have women participating fully in the Brazilian knowledge society

#### *Racism in Children's Advertisements: Two Content Analysis Studies in Brazil*

The main objective of this research is to understand representations of Afro-descendants in advertisements directed at children in Brazil. Two studies of content analysis were applied to evaluate the advertisements in our sample. One of the studies investigated advertisements in children comic magazines and the other one assessed television ads *exhibited* while children programs were presented. SPSS TREE analysis was conducted on the data and the results revealed that this ethnic group is portrayed in secondary roles, in non-family relationships, in business or social contexts and less frequently represented as adults.

Investigations related to representations of Afro-descendants in the media in Brazil are welcome because, in spite of this group constituting 50.7% (being that the Mulattos are 43.1% and Negros 7.6%) of the population of the country (Varella, 2011), most studies have demonstrated that compared to the composition of the population, it is still, percentage wise, little portrayed in the media (Araújo, 2000; Barbosa, 2004).

In general, the results of these investigations reveal that roles associated with the Afro-descendants are impregnated with social stigmas (Barbosa, 2004; Carvalho, 2003; Rodrigues, 2001). Moreover, analyses of speech demonstrate that there is a depreciation of this ethnic group in the media. In fact, research on the subject has identified that the new stigmatization strategies of Afro-descendants in the media are more subtle and complex. Studies on the subject pointed out that messages in mass communication reflect the racism that is ingrained in Brazilian society (Araújo, 2000; Carone and Bento, 2003; Carvalho, 2003; Rodrigues, 2001).

It is on this context of concern that the present investigation is founded. The *goal* of this research is to examine *how portrayals of Brazilian Afro-descendants in specific advertisements (those which appear in children comic magazines and those presented while children's programs are being broadcasted) are displayed to children.*

#### *Roles Portrayed By Women: A Content Analysis in Brazilian Television Advertisements*

The main purpose of this paper was to examine female roles portrayed by advertising. More specifically, the questions that motivated this research project were "What messages about women have been given to society through advertisement?" and "Have these portrayals been changed during the past decades?" The study consisted of a systematic content analysis of Brazilian commercials from 1973 to 2000. The population from which this sample was drawn consisted of Brazilian commercials which got an award in international and national festivals. A probabilistic sample procedure was employed. Ninety five pieces were selected. The categories and operational rules used in the study were developed based on previous research. This study has proposed that female images in advertising are depicted in three different ways: stereotyped, idealized, and plural portrayals. Our results have revealed that some specific images have changed, however, they continued to be stereotyped and idealized.

Research related to female portrayals in advertising has been the focus of attention of many academic studies because mass media messages about women have often depicted them in a stereotypical manner, such as women are irrational, fragile, not intelligent, submissive, and subservient to men (Courtney & Lockert, 1971; Venkatesan & Losco, 1975; A. Belkaoui & J. Belkaoui, 1976; Goffman, 1978 Blackwood, 1983; Bretl & Cantor, 1988; Jolliffe, 1989; Luebke, 1989; Kang, 1997). In addition, these investigations have shown that these portrayals haven't reflected changes in female roles in modern societies. Indeed, mass media has concocted women's image mainly as sex object, wife, and mother whose primary goal in life is to look beautiful for men (Kosimar, 1971).

#### *Employment Crisis and Instability Among YOUTH: A Comparative Analysis Between Formal and Informal Economy in Mexico 1995-2013*

The global financial crisis that began in 2008 has caused negative imbalances in all economic areas, both in developing and developed countries. Specifically in global labor markets, decline in job creation has driven high unemployment rates and overall precarious working conditions. International reports indicate that young people (15-24 years) have been most affected by job insecurity. Specifically in Latin America the youth employment situation is alarming in the short term and urgent inclusive policies are needed. In the case of Mexico, in this study, we demonstrate a comparative analysis between formal and informal economy, that the instability of youth in the labor market may not be as extensive and damaging, as affirmed by international reports. Early results indicate that youth labor instability coincides with international studies as the same stratum pushes to work in informal economy, however, when reviewing the labor dynamics there are some typical issues which are undervalued by the international studies. According our analysis, population occupied in informal economy recorded lower rates of imbalances compared to population occupied in formal economy or underemployed. Youth occupied in informal economy indicates that they have good and stable prospects of labor.

#### *Socioeconomic and Health Condition of Elderly Migrants in Monterrey City, Mexico*

Present paper attempts to analyze the socioeconomic condition of elderly migrants and their impact on health status. About 156 Mexican elderly migrants were interviewed in Monterrey Metropolitan Region during 2010-12. The study found that, majority of elderly migrates in search of a better economic opportunity in urban areas. Once they arrive to city, they absorb in informal economic sectors. Our results indicate that most of the elderly do not have any job contract as well as they also earn very less compared to younger migrants. Most of the time employers ask them to work more hours without extra salary, which has adverse effect on their health. Elderly migrants were reported numerous health problem, whereas many of them were suffering from high risk diseases such as heart problem, obesity, high & low blood pressure, asthma among others. Pres-

ent study concluded that socioeconomic difference has great impact on health status of the older population.

### *Use of Education and Inclusion Subsidies By Children in Low-Income Families: Who Is Left behind?*

Economic deprivation among children and adolescents is a highly relevant issue in Germany, as children face a high risk of living in relative poverty and their poverty rates are even on the rise. Therefore, Germany increased political efforts to overcome this problem. In 2011, the Federal Government introduced "Education and Inclusion Subsidies" for children in low-income families. These additional means-tested benefits are aiming at improving material welfare as well as social inclusion, e.g. through covering costs for school trips, daily meals or cultural activities. From the very beginning, the question was raised whether the new benefit program really meets its objectives. One major problem is that complex and restrictive bureaucratic procedures of the program may provoke serious inequalities in terms of access to subsidies due to lack of information and opportunity costs. Claiming for subsidies may require substantial resources, such as knowledge of eligibility rules, expenditure of time as well as availability of participation possibilities at the place of residence. Thus, claimants with a low level of resources might be less likely to get access. Our main research questions are as follows: Are descendants from immigrant parents with limited knowledge of German and children with several siblings underprivileged groups who are left behind? Do the usage patterns differ across urban, suburban and rural regions? The analysis is based on representative micro-level data from the most recent wave of the German Panel Study "Labor Market and Social Security" (PASS), which is available from October 2013. PASS is a novel dataset in the field of labor market, welfare state and poverty research in Germany. The questionnaire includes several items concerning knowledge and usage of "Education and Inclusion Subsidies" for the first time. It also contains comprehensive information on the income and living conditions of different types of households.

### *Gendered Migration Decisions: Shifting Priorities of Highly Skilled Chinese in Japan in the Life Course*

Japan, although suffering from a shrinking population in times of economic stagnation, fails to tap the full potential of women and retain international talent in the national labor market. For highly skilled female migrants, this makes Japan an even less attractive destination, as they struggle to advance careers and fulfill roles in families. Yet, with the notable exception of Liu-Farrer's (2009) work, this group has not featured in scholarly literature on labor migration to Japan, which tends to focus on (highly skilled) male migrants and reduces female migration to less skilled migrants. To improve Japan's immigration policies and increase female labor force participation, not only policy and economic frameworks need to be examined but specifically individual decision-making processes have to take center stage.

This paper focuses on Chinese highly skilled migrants' (re-)migration decisions. It analyzes factors influencing Chinese men and women in Japan in three influential spheres: perceptions of a) responsibilities to the family (e.g. towards ageing parents, for children's education, spouse's preferences), b) career considerations (applicability of skills, income level, career chances) and c) personal preferences (life style, political values etc.). Migrants aim for the best balance between those factors. In addition to these considerations, migrants' decision-making processes are influenced by the position in the household (influence of parents, partners and children), and migration policies and economic development of return and migration destinations. Priorities shift with life stage and differ with gender. Based mainly on qualitative and statistical analyses of interviews conducted in 2011–12 with 56 female/64 male Chinese migrants to Japan, this study sheds light on the status and agency of women in Chinese and Japanese societies and labor markets. It identifies gendered differences in migration decision-making behavior and provides the basis for better understanding and for improved policies to support badly needed female labor migrants.

### *Revisiting Life Choices: Remigration Decision-Making of Highly Skilled Chinese in Japan in the Life Course*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

The economic rise of industrializing nations leads emigrants of these nations to reconsider their (re)migration decisions. With a return of the "lost brains", the destination countries that often face demographic change and ensuing skills shortage may lose important talent, challenging their competitive ability. However, with the notable exception of studies by De Jong & Gardner (1981) and Kley (2009), migration decisions remain underresearched and little understood. In case of highly skilled migrants, migration decisions are often reduced to rational career considerations or a macro-perspective on economic development gaps.

This study addresses this oversimplification and fills the even larger gap in research on return migration decisions by analyzing decision-making processes of highly skilled Chinese in Japan. Drawing on a qualitative study based on interviews with 120 Chinese migrants to Japan (interviewed in China and Japan in 2011–12), the study categorizes factors influencing return migration decisions and traces their influence for both genders in different life stages. By examining migrants' struggle to combine what is best for themselves, their careers and their families, this study analyzes which combination of factors is decisive for staying, delaying the return decision or returning. While it adopts an individual perspective, the position of the migrant in the household, developments in his profession and the economy as well as politics of both nations are serving as the larger framework. It hypothesizes that with rising responsibilities within the company and for family (ageing parents, spouse and children) priorities shift and decisions are revisited at life course events (e.g. end of training in a company, promotions, marriage, birth of a child, start of schooling).

The resulting model of return decision-making in different life stages refines overly simplified existing models. In addition, the understanding of influential factors can be used to better support highly skilled migrants (and retain talent).

### *Changing Reproductive Behaviour and Migration As Response To Climate/Environmental Change: Evidence From Rural Northern Ghana*

The Upper East Region is one of the poorest regions in northern Ghana. With a predominantly rural population, over 70% of the population is engaged in agriculture and its related activities. As a pro-natalist society, the area is characterised by high fertility levels and large family sizes. Aside the population density in the area which has led to pressure on the existing limited arable land, climate change over time have resulted in rainfall variability, prolonged dry spells, environmental degradation and loss of soil fertility with implications for agricultural production and yields. The physical-environmental stress being experienced in the face of population growth have undermined the livelihoods of the people and exacerbated the already appalling poverty and food security situation.

With the Bongo District as the study area, the study draws on the 'theory of multiphasic response'. It is noted that aside the many responses that households make, it has been observed that people also migrate to southern Ghana and have changed their reproductive behaviour by reducing their fertility levels. Using qualitative interviews and secondary statistical data, the study highlights the role of rainfall variability, environmental degradation, crop failure in the face of population growth in influencing migration and fertility change in northern Ghana. This will provide explanation or fill the gap between the seemingly lack of correlation between fertility change and contraceptive usage in northern Ghana and also contribute to the on-going population-environment nexus debate.

### *Negotiation of Gender Roles Among Young Muslim Women in Britain: Career, Family, and Faith*

The purpose of this presentation is to investigate how British Muslim women manage plural social roles and identities, and to scrutinise the negotiation strategies which they adopt in this process of integration. Consequently, the presentation discusses young (aged 16–35 years) Muslim women's attitudes regarding career, family, and faith, on the basis of interview data that were collected in England. Overall, the research participants are able to make their own choices regarding their career and future. Furthermore, the data demonstrate that the younger the participants are, the more frequently they think that their family accepts their choices. It also shows that the development of religious institutions, such as mosques and madrasas, in communities and the use of information technology influence the participants' attitudes about gender roles. These developments increase the chances of their participation in the wider society as Muslims by making them more knowledgeable about Islam. The knowledge of Islam helps the participants distinguish religious practices from cultural ones, some of which

are perceived as being oppressive to women. Some participants use Islam to negotiate with their family about the duties imposed on women and to justify their own life and career choices. This does not necessarily mean that the participants are critical of all ethnic and cultural practices; rather, they recognise some social and emotional advantages to their ethnic backgrounds. By referring to Islam, they find compatibility between following some gender roles assigned by their family and building a career. The analysis results provide a complex picture of young British Muslim women, who endeavour to negotiate their gender roles and participate in modern society as Muslims. The presentation also contributes to the sociological theory on reflexive modernity, which emphasizes the importance of agency and information to reproduction and change of identity and society.

### *"Sem Medo De Ser Feliz!": Brazilian Horsewomen, Cowgirls and Equestrian Leisure*

Equestrian sport and leisure activities are often praised for their ability to "democratically" integrate different types of people. Women and men of all ages, with differing levels of physical ability and often from different social backgrounds, may find a place for themselves within equestrian cultures, which include a wide range of modes of practice. In Brazil, although people often associate equestrian activities with elites or well-off members of urban middle classes who take part in dressage and show jumping, our own research has shown popular equestrian traditions engage people from across the social spectrum, men and women, girls and boys, in activities that range from casual leisure riding to rodeo competition. Furthermore, the ideas that are so often expressed in popular international literature – whether fact, fiction, or lying somewhere in between – claiming women's special connection to horses, or women's "empowerment through horses" – are also disseminated in Brazil. In this research, we focus on women and leisure riding activities. Taking off from our own previous researches looking at three different Brazilian equestrian milieu and gendered interactions therein, this paper works with the life stories of women who vary in terms of class, generation, educational, occupational and marital status, looking at what horses represent in their lives, and what kinds of conflicts they face as they negotiate access to the time and resources their equestrian activities demand. Their struggles are poignant testimony of both persistent inequalities and prejudice, and current gains relating to gendered structures of leisure and the pursuit of happiness and well-being.

### *"Construct Metro Not Roads"*

Middle East Technical University (METU), (Ankara, Turkey) is located in a 45 km<sup>2</sup> forest campus planted by the students, academics and the military in 1960s. The reforestation programme received Aga Khan Award in 1995. One of the few green areas in the city, the university campus is under the threat of destruction – with rapid urbanization and road based transportation policies-by various road construction plans in 1983, in 1994 and the most recent in 2013. The first era of environmental movement in 1994 "Protect METU No to the Highway" led by university students and local environmentalists was successful. In 2013, the major of Ankara insists on constructing an 8 lane highway that passes through the forest and another highway which will cross the campus via tunnel. Consequently, 3000 trees, the nearest neighbourhoods and the wildlife in the forest will be affected severely. The Prime Minister in response to the movement declared that "If you want forest go and live in the forest. Road is civilization." The study will focus on comparative framing and discourses of 1994 and 2013 movements. In addition, it will discuss various relationships around road construction of the students, NGOs, the university and the major. The study will further explore the motivations of participants and the impact of the movement on the daily transportation behaviour. Most research on the social backgrounds of environmental activists has concluded that they are disproportionately highly educated and employed in the teaching, creative, welfare, or caring professions and, especially, the offspring of the highly educated (Rootes 1995). However, grassroots environmental movements involve a broader cross-section of society than do the major national EMOs, in part because locally unwanted land uses are more often imposed upon the poor. Hence, the study will outline the profile of environmental activists.

### *Rethinking The Conceptual Foundations Of Social Policy: Theoretical Insights and Lessons From The Global South?*

This paper starts with a set of arguments regarding some of the contemporary foundations for Social Policy theorising. We commence with the proposition that Gøsta Esping-Andersen's notion of "de-commodification" (and "commodification") in characterising social collectivisation of risk misrepresents the processes involved. While driven more by Karl Polanyi, Esping-Andersen, nonetheless, suggests that he drew from the other Karl (Marx).

First, the idea "commodification of [the] workers" is misleading. Second, transfer income in welfare regimes involves, in large part, ensuring that people continue to engage in commodity relations. Third, even from the side of social services, the proposition that something stops being a commodity because you are not paying for it at the point of consumption misses, fundamentally, the point about circulation of capital across various departments. Here, Polanyi becomes less helpful and we must turn to Marx. Fourth, and where Marx was himself wrong is in the idea of "generalised commodity relations": at best an ideal-type capitalism but which should not be confused for actually existing capitalism, economy, or society.

As a starting point for rethinking the conceptual foundations of Social Policy we argue that rather than Polanyi, Amartya Sen may offer a more viable conceptual handle on the processes at work: 'entitlement', 'capability', 'functioning', concerns with substantive equality, and Public Reasoning. Sen, we propose may offer a better inspiration for making sense of what encompassing and transformative social policy are (and should be) about. We supplement the conceptual offerings from Sen with insights drawn from social practices that we often characterise as "non-formal" social policy, especially around the norms of solidarity and social reciprocity.

### *Exploring the Narratives of Sociology in 21st Century Nigeria: Some Prospects and Challenges*

The trajectories of Sociology as an externally induced discipline in Nigeria are the production of theories and methodologies equal to the European tendencies and ideas as well as the knowledge of domination initiated from outside. However, these trajectories have created avenue for serious crisis of relevance to the extent that the discipline now has more critics than admirers. Some of the major challenges that face the discipline include the belief that it contributes little to nation building in terms of policy formulation and implementation, as well as produce graduates who by training have little to offer by way of gainful employment and as such constitute a problem to the society. For Sociology to overcome these criticisms, there is the need to assess critically the past, present, and future opportunities open so as to make the discipline attractive both as an academic and practicable discipline. To demonstrate the utility of Sociology, this paper considered two fundamental intellectual dispositions of practitioners to societal issues which are scientism and critenism. The paper argued that contemporary Nigerian situations tend to push the discipline more towards practical and cultural hemisphere rather than the present practice of recycling pure externally created theoretical and methodological perspectives. Against this background, the paper suggested the paradox of *entrepreneurial sociology* as a viable option for making the discipline more relevant both as an academic, practical and pro- people oriented discipline. Challenges that may face new option are also addressed.

**ADEWUMI, FUNMI\*** (Labour Studies & Human Rights Education, [funmiadewumi@rocketmail.com](mailto:funmiadewumi@rocketmail.com))

### *Workers' Rights in the Era of Globalisation: How Protective Are International Labour Standards*

International labour standards, coded in Conventions and Recommendations, remain the main instruments employed by the International Labour Organisation (ILO) to ensure that people work in dignified and humane conditions. These instruments contain minimum conditions under which workers offer their labour power while also conferring on them some basic rights. This paper looks at these international instruments and the extent to which they have been able to protect workers' rights, particularly in the context of a global economic order driven by the desperate quest of international finance capital for competitiveness, profitability and survival. It is argued that rather than complying with the provisions of the labour standards, investors and employers usually insist on lowering them because they view them as inhibitions to the workings of the free market economy. Given the inadequacies of these standards, lowering them would further spell doom for working people all over the world. The situation is worse in developing countries, where governments, lacking the political will to protect their own people, leave workers almost totally at the mercy of employers who put the health and lives of workers in jeopardy. The end result is that the lot of the working people has worsened under the neo-liberal economic agenda. It is thus concluded that working people, their organisations and allies need to embark on a concerted struggle to force employers and governments to respect their rights as enshrined in international labour standards and national legislation. It is one way of realizing the decent work agenda being pursued by the ILO as well ensuring the well being of the worker-citizen.

**RC32-564.9****ADISA, WAZIRI\*** (University of Lagos, [adisawazira@yahoo.com](mailto:adisawazira@yahoo.com))*Gender Inequality In Party Politics In Nigeria: Insights From South-West Nigeria***ABSTRACT**

Gender inequality has remained a persistent phenomenon in many developing countries. Even in the developed countries, some countries still grapple with gender discrimination and women marginalization in politics. But in the poverty-stricken African nations, gender inequality is more of a serious development issue. The reason is that, many women still remain trapped in age-long discrimination in national politics occasioned by traditions, colonialism and imperial capitalism. This paper argues that, gender inequality is still a serious problem in the South-Western Nigeria using Lagos, Oyo and Osun States as case studies. The paper reports a survey carried out on women politicians of two major political parties in the South-West i.e the ACN and the PDP. The survey was carried out between March and April, 2013 on 200 women politicians in the South-West. This method was complemented with 20 In-depth Interviews of women politicians. Findings from the study showed that, gender inequality, gender discrimination and marginalization are still the major constraints to women participation in Nigerian politics. Based on these findings, the paper recommended greater emphasis on the "Affirmative Action" recognized by Nigerian laws.

Key Words: Gender Inequality, Women, Politics, South-West, Nigeria.

**RC18-313.1****ADISA, WAZIRI\*** (University of Lagos, [adisawazira@yahoo.com](mailto:adisawazira@yahoo.com))*The Middle and Political Transformation In Nigeria: A Critical Appraisal Of The Role Of Asuu and Nba***ABSTRACT**

Since the end of the Cold War in 1989, many African countries have come to the conclusion that, political transformation is an inevitable process of attaining political and economic development. This process, is expected to engender economic growth, guarantee their citizens' unfettered access to good governance and sustainable democracy. In order to achieve these objectives, many African countries have embarked on deliberate reforms of basic state institutions like the judiciary, the Police, the education sector, the oil and gas sector, the banking industry, the aviation industry, the electoral process, as well as the legal system. In these transformations, many state actors and non-state actors have participated nationally and internationally in order to ensure that African countries are re-democratized. With concrete empirical data and qualitative interviews, this paper argues that, the middle class in Nigeria, has been very central to hitherto Nigeria's political progress. The paper argues that the Academic Staff Union of Universities (ASUU) and the Nigerian Bar Association (NBA) are some of the forces behind the current Nigeria's political change. The paper avers that, despite its contributions to national development, the middle class has remained one of the most marginalized classes in the federation.

Key Words: Middle Class, Political Transformation, State, Nigeria, ASUU, NBA

**RC26-461.1****ADOLF, MARIAN\*** (Zeppelin University, [marian.adolf@zu.de](mailto:marian.adolf@zu.de))*New Modes of Integration: Individuality and Sociality in Digital Networks*

The proposed paper connects some of the loose ends of current debates regarding the social impact of the new media with a discussion of social integration in contemporary modern societies. Globalization, individualization, diverging interests of increasingly detached social groups and milieus, it is feared, lead to a fragmentation of contemporary democratic societies and render them unstable in a socio-cultural sense. Contemporary media change, i.e. the ascent of digital media is often blamed for contributing to the downfall of communicative social integration and the decline of the public sphere.

The paper provides a theoretical framework for researching how digital media may contribute to social cohesion by providing communicative references and new forms of sociation. The latter depend on referable sets of culturally available signs, traditionally provided by central social institutions, especially the mass media. While the advent of decentralized, highly variable media usage in the wake of digitization has initiated new patterns of communication and social interaction, these new phenomena are not necessarily detrimental to social integration.

The contribution suggests that we are witnessing an important moment in the organization of societal communication given the current conjuncture of long-term socio-structural change processes with the advent of new technological and individual ways of communication. Contemporary internet-based media technology – above all Social Network Sites (SNS) – may provide the groundwork for a new form of communicative integration through the emergence of what may be called Networked Individuality. This amounts to a restructuring of the very architecture of societal communication as social media and their technology enable an

exchange-based mode of sociation. Based on a discussion of classic and contemporary sociological theory, some of the central mechanisms of the new societal role of the emerging communication paradigm are sketched out, and subsequent potentials and risks for this new mode of sociation are discussed.

**RC44-739.8****ADRIAENSSENS, STEF\*** (KU Leuven,[stef.adriaenssens@kuleuven.be](mailto:stef.adriaenssens@kuleuven.be))*'Kaľboj' or 'Sanitary Management Assistant'? Precarious Work at the Bottom of the Occupational Ladder*

Some see an increasing polarization between attractive jobs and jobs at the bottom in Western labour markets. Indeed, there is evidence that jobs that fall between the two extremes, have become less important in recent decades. Some juxtapose interesting jobs with a corresponding salary, job security, prestige, career opportunities and attractive working conditions against precarious jobs where people are expected to work in flexible work schedules with little chance to develop skills, all that in return for a low salary. Some denote these bad jobs as 'precarious'.

What is missing in this literature, is a reliable job level empirical approach of the growing numbers of workers in the precariat. This contribution reports of a research into an previously neglected occupation: lavatory attendants. Their job is likely to exist of low paid and flexible work with limited social protection, low employability and non-existing prospects of a career. There is a stark parallel between the lack of social-scientific interest and the apparent social unease about this job. For instance, the Polish 'kaľboj' contaminates the Polish word for a lavatory attendant with phonetics for excrements ('kaľ'). Other terms cloak the job in vague terms (the 'sanitary management assistant').

With the help of standardized questionnaires and in-depth interviews taken from a sample of these workers in Belgian cities, we document the score of lavatory attendants on precarity, job status, access to collective bargaining and social benefits, income, skill utilization and job strains. Also, because agency and self-assessment is so important to understand processes of polarization and precarization, toilet attendants are asked what they see as the main problems of their jobs and status. The results of this survey allow us to partially evaluate the effects of the Belgian flexicurity policy, aiming to provide workers with social security while allowing for flexible labour market policy.

**RC12-221.1****ADRIAENSSENS, STEF\*** (KU Leuven,[stef.adriaenssens@kuleuven.be](mailto:stef.adriaenssens@kuleuven.be))*'Pacta Sunt Servanda': Contract Breach and Contract Enforcement in Prostitution*

The bulk of the social-scientific attention paid to the regulatory aspects of prostitution shows signs of a rigid judicial centralism. Usually one focuses on formal laws regulating the position of commercial sex. This means that the discussion of criminalization or liberalization of sex work gets most of the attention. However, there is more law and regulation concerned with sex work than just the formal aspects.

One important question is *how* relations between sex workers and clients are governed by contracts. Prostitution implies that people are engaged in commercial transactions where physical sexual services are exchanged for money. Because the relationship between a sex worker and his or her client is organized as an exchange, it necessitates a contract. These contracts, however, are virtually always of an incomplete nature. For one thing, written contracts are absent. Also, the incompleteness is strengthened because parties do not even orally agree upon essential aspects of the contract. Usually there is no more than a vague agreement about the price and the services provided. Misunderstandings and disagreements therefore occur frequently. Quite often these disagreements may increase the risk of violence used.

This contribution is built on a quite unique dataset documenting (more than 35,000) exchanges in commercial sexual encounters in the Low Countries (the Netherlands and Belgium). The analysis builds on a quantitative analysis of the causal factors behind these breaches of incomplete contracts. Privileged hypothetical factors are the private and public order institutions allowing for contract enforcement, unilateral enforcing power of contracts, reputation mechanisms and socialization. Estimation is performed with multilevel logit analyses, both random effects Bayesian estimations and fixed-effects regressions.

**RC01-39.3****ADVINCULA-LOPEZ, LESLIE\*** (Ateneo de Manila University,[leslielopez1211@gmail.com](mailto:leslielopez1211@gmail.com))*Shifting Identities: The Emerging Roles of the Armed Forces of the Philippines*

Since the 1950s, the Armed Forces of the Philippines (AFP) have been utilizing civil-military operations (CMO) as one of the main strategies in combating local insurgency. The diversity of insurgency movements with its complex cultural, religious and historical origins necessitates the evolution of CMO strategies implemented through the years. In the latest Internal Peace and Security Plan of the AFP (January 2011) called "*Bayanihan*," the role of the non-combat civil-military operations and development oriented activities of the AFP was once again reiterated.

Broadly, this paper examines how the emerging CMO technology being adopted by the AFP impinges on the construction of the self-identity of the members of the Philippine Marines. The study finds the shifting of identities from that of a "warrior" primarily concerned with the management and application of violence to that of a "protector" defining themselves as primary agents of peacekeeping and humanitarian work. At the same time, these reformulations of identities also provide the avenue for the members of the AFP to redefine the character and nature of their relationships with the other agents and institutions of the Philippine state.

#### *Gendered Life Courses and Personal Networks in Switzerland*

Individual life courses may be defined as sequences of status profiles. They are multidimensional in the sense that they unfold simultaneously in various interdependent life domains such as family and occupation. In the Swiss welfare state system, family is considered as a private matter and only limited extra-familial childcare facilities are provided. Hence, in Switzerland, transition to parenthood often leads to life course gendering regarding these two central domains. While most men follow full-time employment trajectories, most women withdraw, temporarily or not, from the labor market by choosing part-time jobs that are structurally more compatible with raising children. Correlatively, the personal networks of relationships in which individuals are embedded are also gendered. Fostering relationships, either with family members or with other close people, has often been described as a woman's role. This gendered social participation of women and men further leads to the development of differentiated social resources and relational interdependencies. This raises several questions. What are the main differences between personal networks of women and men? To which extent are these differences explained by gendered life courses? Do women following full-time employment trajectories develop similar networks as men do?

Based on a representative sample of 803 individuals living in Switzerland and belonging to two distinct birth cohorts (1950-55 and 1970-75), this communication explores women's and men's personal networks in light of linked occupational and familial trajectories. First, using multichannel sequence analysis, we create bi-dimensional typologies linking occupational and familial trajectories. Second, using personal networks composed of the very significant others, we distinguish several kinds of resources (exchanges of emotional support, network size, socio-economic status of network members, etc.). Results show that a multi-dimensional perspective of trajectories helps explaining "structural doing gender" by providing a better understanding of social resources and relational interdependencies.

#### *Technologies of Subjectification in Intercultural Contexts: Humanitarian Action and Entrepreneurship in Northern Chile*

This paper examines humanitarian action and promotion of private entrepreneurship as an arena where new technologies of subjectification are deployed within polycentric power relations. How health and economic welfare technologies affect social relationships? How are these technologies connected with the experience of inequalities? Can they create new forms of identity? In this text I explore these questions by the analysis of the processes of reconfiguration of welfare experience, subjectivity and control in urban intercultural contexts of Arica, northern Chile.

#### *Empowering Indigenous Communities Against The State and The Business To Tackle Group Conflict: The Roles Of NGOs In Balancing Power In Democratized Indonesia*

After independence in 1945 the state power was strengthened in Indonesia, while the power of civil society was weakened. Before that, the society was strong, marked by its elements struggled against colonizers in any islands. After indepen-

dence and during New Order their power was deteriorated by the state, while the state grew much stronger in power. That socio-political condition created deep political power inequality in the country between the society and the state and the business. This is responsible for the happening of political crises and communal violence during 1998-early 2000s. 1998 was the watershed of democratization in Indonesia leading to decreasing political power inequality. Based on research in the field of agrarian conflict this article is to show how the deep political power inequality between the society and the state as well as the business created wide spread social unrests and the increasing balance of power among them contributes to the creation of peaceful relationship among them. This article would also scrutinize the role of NGOs in empowering society against the state and the business to create just and peaceful Indonesia. The argument of this article is that the creation of equal political power between the society and the state as well as the business is prerequisite of justice in the utilization of agrarian resources and NGO contribution is vital to that.

#### *Women's Religious Authority in a Sub-Saharan Setting: Dialectics of Empowerment and Dependency*

The western scholarship on religion and gender has devoted considerable attention to women's entry into leadership roles across various religious traditions and denominations. However, very little is known about the dynamics of women's religious authority and leadership in developing settings, especially in sub-Saharan Africa, a region of powerful and diverse religious expressions. Guided by a conceptual model that intersects religion, gender, and power, this study analyzes women's religious authority and leadership in a predominantly Christian yet denominationally diverse setting in southern Mozambique. It uses a uniquely rich combination of household and institutional survey data with in-depth and focus group interviews collected over several years of fieldwork. I first identify the prevalence and patterns of women's formal leadership across different denominational groups. I then define and examine four main pathways and forms of women's church-based authority: office authority gained on their own merit; office authority gained by virtue of association with husband congregation leader; charisma-derived authority acquired through prophesizing; and agency-based authority gained through church women's groups. In conclusion, I reflect on how these forms of women's authority both defy and reassert the gendered constraints of the religious marketplace and the broader gender ideology in this developing setting.

#### *Transformation of Medical Professionalism in Turkey: Erosions and New Divisions in the Wake of Reforms*

This paper aims to examine the impact of recent market reforms in the Turkish health care system on medical professionalism and identifies new divisions within the medical profession. The research team carried out 60 interviews in the summer of 2010 in Istanbul, Turkey, at two different public hospitals. The findings suggest that the new economic and social context of medicine, which is marked with marketization, consumerism and managerialism, is significantly transforming medical professionalism in Turkey. Physicians indicate growing frustration as the reforms such as introduction of pay-for-performance methods or practice of full-time employment of physicians in public hospitals are being implemented and public hospitals are reorganized as autonomous entities. Physicians report lower levels of professional status, lack of respect on the part of the patients and policymakers and increased violence from patients and their relatives. Many physicians blame the government for erosion of the public trust in physicians and growing violence, claiming that the reformers undermined the credibility of the physicians by defining them as "service providers". Institutional complaint mechanisms that have recently been established as part of the reforms appear to strain the doctor-patient relationship even more. On the other hand, physicians who occupy managerial positions in the same hospitals provide a somewhat different assessment of the reforms. The discourse of these physician-managers include contradictory elements: while they complain about the inefficiencies in the public hospitals and view some steps like pay-for-performance payments as useful incentives to get their colleagues work more efficiently, they hesitate to embrace the reforms aimed at granting autonomy to public hospitals. They also agree with their colleagues that the patient complaint mechanisms are not working properly. The paper highlights serious threats to erosion of professional status of physicians and emergence of new hierarchies among the practicing physicians and physician-managers in Turkey.

*Same-Sex Sexual Relationships in South African Female Prisons*

Although same-sex sexual relationships in female prisons have been a topic of scholarly discourse, it has mostly been concentrated in the United States of America. Same-sex sexual relationships between females in African prisons have received little attention by researchers since studies on prison sex in Africa tend to focus on the sexual relationships between male prisoners, especially the coercive nature of such relationships in male prisons.

Drawing on the retrospective narratives of five female ex-prisoners, this study examines same-sex sexual relationships in South African female prisons. The dynamics and socialization process involved in such relationships, as well as the different forms that it takes are analysed. Specifically, research participants discussed the prevalence of same-sex sexual relationships in female prisons.

The findings of this study show that sexual relationships among females in South African prisons can be either consensual or coerced. Some of the participants believe that the motivations for female prisoners' engagement in sexual relationships with other females in prison are the desire to satisfy material and sexual needs. However, other participants opined that the motivating factors for participating in same-sex relationships in female prisons include not just material and sexual needs, but also emotional needs, and the desire for friendship and companionship. Some of these relationships are characterised by jealousy and violence. The reactions of female prisoners to same-sex sexual relationships behind bars vary from indifference to amusement and dislike.

*Technologies De Communication Et inégalités En Côte D'ivoire*

Au début il n'y avait que la radio nationale en Côte d'Ivoire à l'échelle nationale, et internationale : RFI, BBCI et VOA. C'est 3 ans après l'indépendance, en 1963 qu'est née la télévision nationale. Les deux media nationaux n'étaient pas accessibles partout. Il a fallu un programme d'installation des stations relais pour permettre aux chefs-lieux des départements d'accéder au média d'Etat. Le manque de couverture totale et parfaite demeure toujours dans les localités les plus reculées. Ce n'est pas le cas des media internationaux. S'agissant des presses écrites d'Etat et celles étrangères, même aujourd'hui, les quotidiens papiers ne parviennent à certains bureaux de presses des chefs-lieux de région qu'en fin d'après-midi. Quant à ceux mis sur internet, ils ne sont pas accessibles par tous et dans toutes les régions pour des raisons de manques d'ordinateurs et surtout de réseaux de communication ou de perturbations constantes de couverture de ces réseaux.

Depuis 1990, un développement rapide des technologies de communication se fait. Les chaînes de télévisions étrangères se sont multipliées par le canal satellitaire. Les radios de proximités ont pullulé du fait de l'avènement du multipartisme. Pendant la guerre, une télévision des rebelles a fonctionné dans la zone occupée. Cette hétérogénéité de ces technologies pose un réel problème de maîtrise des flux informationnels, tant montants que descendants. Le contrôle des émissions devient de plus en plus difficiles tant dans l'éducation même des jeunes que dans l'information de ces jeunes et des adultes. Certaines personnes ferment leurs appareils récepteurs pour cette situation et celle de la perversité. La question des non-usages des media est complexe en Côte d'Ivoire. L'accessibilité de tous aux media qui était vue sous le seul angle de la démocratie et des libertés, révèle des effets pervers de diverses natures. L'étude empirique vise à mieux cerner le tout.

*Kenya's Green Belt Movement: A Collective Effort Towards Gender Equality and Environment*

Kenya's Green Belt Movement, a social movement with a difference was founded by Wangari Maathai (Noble Prize Winner) in 1977 as a way to empower poor women. With over one-lakh members, this civil society organization believes in bringing the socio political change by consensus instead of traditional conflictual approach. The first decade of the movement focused on transforming the social arena through reforestation and education. The next five to six years of Kenya's Green Belt Movement were openly challenging the political arena. Later, it expanded its wings in many African countries as the Pan African Green Belt Network and also as Green Belt Movement International. It integrates the principles of sustainable development into country policies and programmes; tries to reverse loss of environmental resources and works for the promotion of gender equality and empowerment of women. Its branch 'Women for Change' helps young girls and women to face the challenges of growing up, making complex

decisions about their sexual and reproductive health, and gaining knowledge and skills to protect themselves from HIV and AIDS (UN). It provides different ways to promote bee-keeping, economic empowerment, and healthy eating habits of indigenous food crops. This paper tries to analyze the contributions of Kenya's Green Belt Movement and also examines the issues raised and strategies adopted in relation to the goals sought.

**AGNES, UTASI\*** (University of Szeged, [utasi@mtapti.hu](mailto:utasi@mtapti.hu))

*Community, Social Participation and Education*

The starting point for the experiment presented in this paper was the conception that active communal and social life creates an increased individual demand for participation in public life. Consequently, active social participation could renew the democratic functions of society. At the beginning of the research it was assumed that under the present social circumstances of new capitalism the reformation of democracy, its 're-democratisation' is essential. We observed the proportion of those communities and people in the society who are capable to formulate and enforce their interests, and we also considered the possibilities how this proportion could be increased. Social participation was measured with a persistent index in which the indicators of social life, public attitude and public praxis were aggregated.

The level of social participation was described in our national representative survey (Hungary, 2009, N= 1051) with a 5-category hierarchical index that we derive from cluster analysis.

Only 3, 6% obtained the top-level index and 17, 4% got the second highest results. The members of these two groups had a wide range of social relationships, an intensive communal praxis and demand for social participation; moreover, their public attitude, their public participation and their public-political praxis were significant as well. According to the statistics of linear regression, the chance for getting into the two upper groups depended on participants' childhood social praxis and their level of education. In other words, the most active participants of social and public life already started to form social connections in their childhood. Later, in their adulthood, the high level of education enabled them to comprehend the necessary information about public issues and initiates their active social participation.

*La Compatibilité Des SHS Et Des STIC Pour Une Analyse Des Usages*

L'objectif de la communication est de montrer que les inégalités d'usages et d'appropriation dépendent d'une double analyse : celle des objets techniques (STIC) et celle des représentations et/ou compétences liées aux usages (SHS).

Dès lors, le problème vient de la multitude des approches SHS possibles et de leur réduction à une modélisation (STIC) dans un objet technique et son cadre d'utilisation. L'usage est donc d'abord une vue de l'esprit qui associe les interactions humaines, la médiation des outils, la cognition et les intentions qui permettent à l'utilisateur d'agir sur des problèmes concrets. Au-delà d'une faiblesse méthodologique qui amalgame savoir, croire et faire, la notion d'usage prend donc son sens dans la perméabilité entre les champs de recherche et sa réduction à un simple amendement d'un modèle linéaire entre des logiques de conception et des logiques d'action.

Le corpus théorique proposé pour l'analyse des usages articule l'approche des outils (Simondon, Norman), celles des représentations (Goody, Verges) et l'analyse de la tâche et de l'activité (Leplat, Hoc). Elle met clairement en évidence la relation qui existe entre la représentation que l'on a d'un objet technique et les compétences mises en œuvre pour son appropriation. Nous y discutons particulièrement la notion de dispositif numérique d'action conjointe (Foucault, Widmer) qui crée un dédoublement du social qui fixe à la fois les règles et les ressources que l'on retrouve dans les usages.

La méthode présentée reprend une expérimentation dont la finalité est la construction de l'interface d'une application pour le web qui doit aider des décideurs à constituer une équipe projet. Nous présentons particulièrement comment nous avons utilisé les représentations saillantes des individus pour faciliter l'appropriation de l'interface.

Enfin nous discutons et mettons en perspective la nécessité d'une telle démarche pour replacer l'utilisateur au centre des développements des applications et usages des objets numériques.

*Gender & Legal Profession in India: A Critical Sociological Analysis*

The Constitution of India not only grants equality to women but also empowers the State to adopt measures of positive discrimination in favour of women for neutralizing the cumulative socio economic, education and political disadvantages faced by them. However, the ground reality of the socio-cultural reality shows heavy gender based inequality in occupations, particularly legal professions. This further jeopardizes any effort at effective empowerment of women. The proposed paper attempts at a critical sociological analysis of the situation. This would be specifically justified in view of the following statistics for instance:

A total of 20.4% women were employed in the organized sector in 2010 with 17.9% working in the public sector and 24.5% in the private. The labour force participation rate of women across all age-groups was 20.8 in rural sector and 12.8 in urban sector compared with 54.8 and 55.6 for men in the rural and urban sectors respectively in 2009-10 (NSS 64th Round). The female share of total Central Government employment stood at 10.0% in 2009. The share of female employees in the scheduled commercial banks was 15.9% in 2009 which rose slightly to 16.6% in 2010.

In 2012, women occupied only 8 out of 74 Ministerial positions in the Central Council of Ministers.

There were 2 women judges out of 26 judges in the Supreme Court and there were only 54 women judges out of 634 judges in different High Courts.

#### *Specialization in Caregiving Networks*

Decades of change in marriage, divorce, and cohabitation have resulted in diverse social support networks for aging individuals. The extent to which these growing networks of weak ties can provide needed care to older persons with chronic disabilities has been called into question. Research has shown pronounced differences by relationship, gender, and distance in the type of assistance that family members are most likely to provide. Families also tend to negotiate responsibilities, especially among siblings and task specialization often follows gender lines. Understanding the social organization of caregiving networks has been limited by a longstanding focus on "primary" caregivers and consequent lack of data on the division of labor across helpers.

This study uses new nationally representative data from the U.S. National Health and Aging Trends Study (NHATS) to examine the extent to which caregivers work alone or share tasks, and the characteristics associated with caregiver specialization in aging families. The NHATS was designed to help understand the consequences of late-life disability for individuals, as well as comprehensive networks of their families, social networks, and helpers who assist older persons with self-care, mobility, household, and medical care tasks.

Multilevel models are used to examine characteristics associated with the propensity of caregivers to work alone or to share tasks with others, controlling for shared family characteristics, and the health needs of the older person.

Results show the majority are sharing with other caregivers (70%) though almost one-third are the only caregiver, and a small number (about 5%) work alone even though there are other caregivers. Spouses are more likely to be solo caregivers and children more likely to share tasks. Stepchildren are minimally involved in care to their stepparent and when they provide care they are more likely to act as a "backup," sharing a single task with other helpers.

#### *Institutional Reforms on Social Policy and Changes in Income Distribution after the 2008 Financial Crisis*

This paper reviews the institutional reforms on social policy that responded to the 2008 financial crisis together with an analysis of the changes in the distribution of household income since then. We do so for diverse group of countries clustered under the Welfare Regimes. We draw on the Luxembourg Income Study (LIS) microdata and we use methods based on the relative distribution to gain an overview of the changes that occurred on the distributions of income as of the crisis. Secondly, we focus among households that are the main objective of social security redistribution (i.e. containing children, old-age people, female-headed, less educated) to display the particular changes that has affected them and to provide measures to characterize how the change has happened. Under the background of rising income inequality, the experience varies between and even within Welfare Regimes.

#### *Political Processes and the Women's Movement in Brazil*

The paper discusses the reemergence of social movements in Brazil, to include the women's movements, pointing to the processes of institutionalization of the early organizations that were born after the military dictatorship, during the forging of the 1988 Brazilian Constitution, built with participatory ideals. It depicts what happened to the early women's movements that appeared at a time of democratic construction, their priorities and professionalization, to comprise their official inclusion in the governmental apparatus, achieving Ministerial Status during the Worker's Party presidential election victories, discussing the parallel process of elitization and autonomization of party politics, the exclusion of women of parliamentary representation and the voice given to religious fundamentalist groups in the Chamber of Deputies and Senate. It also discusses the changes undertaken by the movements that helped to forge the 1988 Constitution and their transformation into NGOs. The enlarged participation in the executive has been achieved through careers in the administrative machinery rather than in party politics. The paper portrays the emergence of the new women's movements: some independent of party politics and with high international influence; other with national concern, tied to party politics; or to rural trade-unions, and discusses each of these organization's priorities and how they stand in relation to feminist issues and the response given by the political system: the parliament, the women's secretariat; the women's police stations, in the cases of violence against women; murder cases and rape, discussing the action of fundamentalists so as to propose strategies to withdraw some of the conquests made by women related to cases of rape and abortion. It also portrays the response of the women's movements to these political challenges, and some of the still incipient concrete propositions of reform, widening women's representation in parliament, while women's issues can only be politically debated through participatory practices.

#### *The Determinants of Time Use By Women and Men in the Performance of Housework, Paid Work and Leisure Activities in a Brazilian City*

The paper discusses the use of a regression model designed by Heckman to study the determination of paid work by women and men, also to ascertain the determination of time used to perform housework, and other time use variables, when there are wide differences in the frequencies of these activities reported by women and men. The methodology literature discusses well the regression models to be used in order to handle the wide number of zeros that occur when respondents do not report a given activity on the research dates that the time use diary is answered, but may well have performed that unreported activity on another date. The paper is concerned with another source of zeros, socially determined, as the differential enacting of housework, paid work and leisure presented by women and men in their daily lives. It is argued that the zero activities reported are not likely to be performed on another date, as they depend on gender attributions. The paper uses the Heckman double hurdle model in which the probability of performance of an activity is calculated along with the factors that determine the amount of time used in each activity, by women and men, in each variable examined. The paper uses as a source of information, a probability survey in the city of Belo Horizonte, Minas Gerais, Brazil, in 2001, with 1124 diaries answered for the days of the week and 1133 diaries for the days of the weekend..

#### *Toward a Sustainable Migrant Workers Community on Adonara Island: How They Adopt and Cope with State Policy and Their Culture*

International Migration has been one of the significant elements of national development in Indonesia since the 1980s by expanding work opportunities abroad and increasing access to foreign capital (Lindquist, 2010: p119). The proportion of migrant workers in Adonara, a small island near Flores, eastern part of Indonesia is almost a quarter of the island's population but they have broader social and economic impacts towards the development of the region. In contrast to their contribution, migrant workers often face unsolved problems during departure, pre departure and post departure processes.

Migrant workers originating from Adonara, who are usually categorized as self-migrating, mostly work in Sabah, West Malaysia. They go abroad as part of their family strategies for survival or social mobility (Asis, 2003:105). In the case of self-migration like in Adonara's community, the government failed to protect and fulfill their rights because they argue that their duty is only to take care of the migrant workers with legal documents. So, migrant workers from Adonara are considered to be choosing to opt out from the government protection scheme just because they don't have legal documents. However, the idea to ease the process of obtaining documents on very much alienated island from the center of development is not easily applicable due to several reasons.

"Safety migration policy" as a new approach of migration studies in Indonesia is not found it ground yet. People from alienated island tend to repeat their proponent who has been migrating for more than a century rather than obey to government policies on safe migration which cannot guarantee their safety. This abstract would like to explore how is strategy of migrant workers on Adonara Island to create a sustainable migrant worker community

### *Political Empowerment and Social Transformation*

Local self government known as Panchayati Raj Institutions are vital for self-governance at the grass-root level and provide an ideal forum for decentralised planning and implementation for development work in accordance with people's needs and aspirations. With this assumption the government of India made 73rd Constitutional Amendment in December, 1992. An important radical measure underlying this legislation is regarding the reservation for women, scheduled castes (SCs) and scheduled tribes (STs) not only in membership but also in positions of office such as sarpanches/pradhan. It was expected that the new amendment would usher in an era of egalitarian society in place of the present unequal, stratified and hierarchical society. The main focus of this paper is to address the question of empowerment of the hitherto excluded categories, the scheduled castes and women. How the process of their inclusion in the local self government transformed their social position in society?

### *Postmodern Organization and Service Delivery: An Empirical Exploration of Structural Transformation in the Nigerian Banking Industry*

#### ABSTRACT

Post structural banking has employed electronic based practices that have challenged the continued dominance of the traditional Weberian bureaucratic model to improving service delivery. These global practices are anchored in postmodern organization. In a bid to be globally compliant and to improve on service delivery, the Nigerian banking industry adopted a postmodern structure in its operation in spite of the country's low technological and infrastructural development. Post-modern theory, Structuration theory and theory Z were used to explain structures of postmodernism, extent of postmodern organization, employees' actions within the work environment, the role of external environment and effect of post-modern organization on service delivery. The study was conducted in six banks selected from the twenty one existing commercial banks in Nigeria. It employed both quantitative and qualitative methods of data collection and analysis. The findings suggest that the adoption of postmodern organization by the banking industry in Nigeria has significantly improved service delivery, though implementing some key features of postmodernism such as, decentralization and employee empowerment have created local contradictions leading to poor integration of existing traditional structures with postmodern features. The role of the wider Nigerian socio-cultural, technological and infrastructural environments in the emergent scenario is highlighted. It was concluded that the level of technological development of a society has bearings with the level of success achievable in the adoption of postmodern organization for banking.

### *Japanese Women Professional Wrestlers' Embodied Experiences and Their Identities*

Women professional wrestlers in Japan develop muscles as well as fat for professional wrestling. As a result, their bodies are very different from the ideal female body in Japan (i.e., thin bodies without muscles and fat). The author conducted in-depth interviews with 25 women wrestlers between 2004 and 2005. Through interpreting women wrestlers' narratives, the author explains how the bodies of women wrestlers provide them with physical and/or mental strength. Women wrestlers who acquire physical strength are indeed "empowered" based on the definition of empowerment. Kubota (2005) argues that "empowerment" means the process where people who have been prevented from fulfilling their

potential regain it. In the current Japanese society, most women cannot reach their potential in terms of physical strength. In contrast, women wrestlers have obtained a physical strength not yet acquired by most women in Japan. Therefore, women wrestlers are in fact empowered. On the other hand, some women wrestlers face several conflicts because their bodies disturb the normative sex-gender boundary which requires that if one is a biological female, one has to adopt "feminine" clothes, hair style and physique that let others perceive that one is a female. First, some cannot fit into cute clothes sold in Japan that are targeted only for the ideal female bodies. They, however, do not take it seriously because they gave priority to becoming a wrestler. Second, some are mistaken for men in daily lives. The reason, they believe, is that they have specific physical characteristics such as short hair, casual clothes and big bodies. Since they decisively identify themselves as women, they want others to perceive them as women regardless of their physical appearance. They, however, do not attempt to change their bodies to let others perceive them as women. Therefore, they *unintentionally* challenge the normative sex-gender boundary.

### *Éléments De Reproduction De La Division Sexuelle Des Rôles Domestiques. Enquête Menées Auprès D'un échantillon D'étudiants Universitaires Japonais*

"Pourquoi vous ne voulez pas vous marier ?" Cela a été la question la plus fréquente parmi celles que un groupe d'étudiantes japonaises de l'université de Saga a posé à leur collègues français, au cours d'une série de rencontre qui ont eu lieu à l'université de Toulouse II (le Mirail) en février 2013. Même après avoir assisté à un séminaire du sociologue Daniel Welzer-Lang ayant comme sujet la situation actuelle de la vie en couple en France, ces étudiantes japonaises (filles âgées de 19-20 ans) n'ont pas cessé de considérer le mariage en tant que préservation de la vie en couple ainsi que garantie du sentiment amoureux. Au Japon, le divorce touche un couple marié sur quatre. Cependant, les jeunes japonaises ont du mal à imaginer que cela puisse leur arriver un jour : au cours d'une enquête que nous avons menée à l'université de Saga auprès d'un échantillon d'étudiants en couple, nous avons pu remarquer leur quasi complète confiance dans le mariage en tant qu'élément de consolidation de leur liaison. Pourtant, le mariage au Japon signifie aussi, en bonne partie, assumer une spécifique division sexuelle des rôles domestiques et familiales : en effet, le 51,6% des japonais (48,4% parmi les femmes et 55,1% parmi les hommes) considèrent que les femmes mariées devraient rester à la maison. Au cours de notre communication, nous irons présenter les résultats de notre enquête menée auprès d'étudiants japonais, celle qui vise en premier lieu à analyser la dynamique de reproduction de la division sexuelle des rôles domestiques.

### *Financial Trading for the Masses: An Ethnographic Study of Independent Israeli Day-Traders*

Sociologists and anthropologists of finance have noted the development of a mass financial culture that is marked by a widespread involvement in and a popular infatuation with financial markets. Most ethnographic studies on the topic have nevertheless focused on financial professionals and elites. This focus is problematic and can only constitute a partial depiction of financial market cultures which have spread far beyond the bounds of professional contexts and elite networks. Presenting data from an ethnographic study of the day-to-day lives of independent, non-professional Israeli online day-traders, this study explores the complex set of cultural orientations which inform and shape these traders' understandings of financial trading, their beliefs about and imagines of the market and market processes, and their experiences with speculation. Relying on in-depth interviews, offline and online fieldwork in sites such as trading courses for the general public and financial blogs, forums, and internet trading rooms, the paper maps out the terrain of popular, online day-trading in this context. Moreover, it discusses the types of self- and social-awareness that are implicated by the traders' speculative enchantments and financial dealings and preoccupations. It shows how market outcomes become a form of self-reflexive grammar through which the traders define and experience expertise, maturity, and personal weakness. Moreover, it unravels the paradoxical ways in which these market outcomes are simultaneously endowed with and deprived of social meaning and significance for the traders.

### *The Meaning of National Identity in Global Financial Trading: The Case of Day-Traders in Israel*

Over the past three decades Israel has adopted a series of neoliberal financial reforms in the context of which many have become actively involved in financial markets. This study explores the cultural orientations that shape and that are

shaped by actual engagements in these markets. It presents data from an ethnographic study of the day-to-day lives of independent Israeli day-traders who pursue global online financial trading. Relying upon in-depth interviews, offline and online fieldwork in sites such as trading courses and financial forums, blogs, and internet trading rooms, the paper explores three interrelated questions: how are notions of national identity (re-)constituted by the discourse on global financial trading? How do the traders make sense of and experience the globality of the market? And what meanings do they attribute to nationality within the market? The findings indicate the traders' sense of a meritocratic "freedom" from the symbolic baggage of national (and other) identities: their sense of global finance as a field of economic activity where one's success is not dependent upon the politics of identity that is characteristic of global organizational contexts and paid work. Nevertheless, while in this sense losing significant symbolic weight as a marker of personal and social identity, national identity figures heavily in traders' abstract, calculative evaluations of the value of financial assets and markets. The paper discusses the implications of this aspect of the financial and calculative reconstitution of the meaning of national identity within the global, computerized networks for our understanding of the impact of financial globalization on national imagines, cross-cultural perceptions, and "glocal" market cultures.

#### *Economic Regression and Change of Life Satisfaction of Families with Children in 18 Countries*

Many countries faced economic regression in 2009-2010. The paper analyses how life satisfaction (LF) of people living with children was shaped by these changes and how family policies reacted to economic changes in 2006-2010. We start with a hypothesis that more comprehensive family policy will diminish the economic vulnerability of families with children. The paper analyses individual and country level components of LF of parents with children in 18 countries and change of these components during social changes. We are interested in how and why LF of parents with children deviates from the rest of the population and how why it changed. It is assumed that the total LF is influenced by individual resources and the environment where individual live. From individual level characteristics we concentrate on analyses of economic coping, health, personal relations, trust of democracy. The role of the government is measured with different family policy incentives and policy rhetoric, and social environment described with level of wealth and social norms about children. It is assumed that stronger support from the society raise LF of families with children.

Data of 18 European countries, facing clear economic recession and participating in European Social Survey are used for analyses. Individual level data are combined with official statistics about family policy, family norm, and general level of wealth during 2006-2011.

Results demonstrate that parenting is generally associated with higher LF in many countries. Time trend shows decline of LF of parents in 2008/2009 and recovery during 2010/11, however essential country differences can be observed. Although individual differences are the most important factors of fluctuation of LF, their share seems to diminish and the role of country environments increase during observed period. We also found, that strong social norm for children does not make families happy. For family policy measures we find different results.

#### *The National Human Rights Programs in Brazilian Weekly Magazines: Human Rights Representations in the Brazilian Media*

From the press coverage of Brazilian magazines of general information about the National Human Rights Programs (PNDHs, in Portuguese), this text seeks to analyze how the Brazilian media works the representations of human rights. It also aims to thematize as the battles of the political and economic interests linked to it influence the agenda of discussions on human rights. This is qualitative research, which try to define and contextualize the role of human rights and the media in contemporary society, in order to highlight the potential and limits of the effectiveness of those, especially in regard to design of public policies for human rights education. To do so, based on the theory of ideology and methodological framework known as depth hermeneutics (HP, in Portuguese), both proposed by John B. Thompson, carried out the examination of journalistic texts produced by the four major Brazilian weekly magazines, *Veja*, *Época*, *IstoÉ* and *CartaCapital*, at the launch of PNDHs 2 and 3, this in late 2009, the Lula government, one in mid-2002, the FHC administration. Thus, the development of programs take place in different contexts and policy guidelines. The choice of these communication vehicles – the published opinion – is a function of holding power to influence public opinion, either directly on your readership, is on the agendas of other media segments, and have an important influence over discussions made in the political dimension. From the results obtained, there are also links between the representations of human rights that magazines create and/or reproduce, business

interests and business conditions enjoyed in the Brazilian editorial market and also the political guidelines that are line.

#### *Who Is Responsible: Situating Mental Illness within the Family in Niger*

**Who is responsible: Situating mental illness within the family in Niger**

Most studies in social sciences (cf. theories of pathological communication for example, the school of Palo Alto, and these of labeling) concerned with understanding the relation between the family and the mental illness have been greatly influenced by the paradigm of *family responsibility*. These studies likewise did the contributors known under the umbrella of movement of de-institutionalization of the psychiatry in Europe and USA in the second half of twentieth century emphasized the family role by considering it as the main support of the individual patient. Following this lead, they paid attention to emotional and social aspects of the family as a relational entity. This body of knowledge foremost, however, not all, developed by sociologists, is characterized by a lack of attention paid to the every day interactions of the patient within a relational field of the family. This is what informs the perspective of my paper.

Based on empirical material collected between September 2011 and December 2012 in Niger, I will highlight the *social consequences of the mental illness* within the family. Using both an attentive approach to interactions at the quotidian and "long-term analysis" aiming at examining the personal biographies of the patient, I specifically interrogate the dynamics within the family resulting from the mental illness. I present several cases from my fieldwork to describe the "negotiated interactions" of how relatives of patients deal with mental illness. Here, I centrally pay greater attention to economic, therapeutic and the choice of the place of residence defined by these. In fine, the paper shows how important is to place the family within an extended field of relation in order to comprehend its implications at practical and etiological levels and how these, ultimately influence the trajectory of the person ill.

#### *Comparative Study of Ability and Examinations in Post-Manufacturing Societies, from Interview Surveys in the United Kingdom and Japan*

In the 2000s, both British and Japanese societies were faced with new social changes caused by post-manufacturing industrialization. Education policymakers are changing and updating national examinations to measure the new skills needed in these societies.

Our interview survey was taken by various persons, including statesmen, local government officers, company managers, school leaders, and local educational authorities in both the United Kingdom and Japan, over three years. From the results of this survey, we identified new relationships between examinations and abilities in these post-manufacturing societies. These new relationship have emerged in part as a way of trying to cope with social polarization and construct new school systems that sustain excellence and equality in society. In the present era, social polarization leads to a situation where that some people with high talents are educated to have very high levels of skill related to some professional role; in contrast, others learn attitudes towards work rather than advanced skills because they do not require such skills. Our survey supports the presence of this tendency in both societies; however, we find some differences between the societies as well. For example, Japanese voices often place importance on communication skills and on proficiency in English or other languages. In contrast, British voices often emphasize more basic numeracy and literacy or their own (English) language rather than foreign languages. These differences may reflect the image of the skills needed to succeed in the workplace in each society.

#### *Does Embodied Musical Experience Remain in Children's Memory?: A Study of Longitudinal Analysis of Japanese Junior High School Students*

This study analyses whether embodied musical experience remain children's memory. To find out whether this premise is true, we examined the case of Japan's most famous classical music festival *Saito Kinen Festival Matsumoto*. Every year, this festival invites students of 70 junior high schools in the local area for

opera performances. Every year, around 6000 students get to attend the excellent opera performance, free of charge.

We used an experimental design to collect data. Surveys were carried out three times in some schools, before and after the opera performance, and after six months. About 600 responses were collected who answered all three times. The survey questionnaire tries to gauge students' attitudes in the performance, their musical or cultural interest, and their consciousness to music education or school learning. We analyse these variables related to their media environment, school achievement, family background, and economic and cultural situation.

According to our analysis, we observed the increase of the interest of opera just after the performance; however, this effect was diminished for many students after six months. But some students remain these interests for opera or classical music. The cause of the difference derived from the method of teaching to embody musical memory. That is to say, some teachers succeed that students embody musical experience through the lessons held before and after the opera performance. We will indicate these causes and effects by the longitudinal quantitative analysis and the interviewed voices from school teachers.

#### *Work-Family Conflict and Coping Strategies Among Women: Evidence from Commercial Banks in Nigeria*

Work-family conflict has been an issue of concern to both employees and employers of labour, and occupies top priority in government and organisation agenda. Balancing family and work roles place serious demands on working women most especially in African traditional setting where women are by design home keepers. Work-family conflict remains a challenge for women employed in the Nigerian labour force especially the banking sector because of the time related stress arising from demands of both work and family roles. The paper investigates predictors of work-family conflict and paid special attention to the coping strategies adopted by women especially in time demanding banking sector. The study adopted quantitative research method and structured face-to-face interview among female workers of randomly selected commercial banks within urban states in Nigeria. Data were analysed using univariate and multivariate regression analysis. The findings show that age of the respondents, children ever born (parity), marital status, staff category and religion are significant determinants of work-conflict. The study also revealed that although organizations have introduced a number of work-life balance policies, these policies have not cushioned the work-family conflict experience for working women making women to engage a range of individual coping strategies. The study recommends a purposeful and effective policy intervention from organisation and effective family support from the family base to reduce the complexities of balancing work-family roles.

#### *Discursive Constructions of Borders in Online Feedback Platforms*

This study applies Van Dijk's (2001, 2004, 2006) socio-cognitive approach to Critical Discourse Analysis (CDA) to the study of discourse structures and patterns in online media feedback platforms in Nigeria. An investigation of discursive constructions becomes necessary because it is observed that they are laden with ideological processes that reflect exclusion and resistance among Nigerians and therefore raises the question of oneness and unity in the nation, more especially in relation to the global village. Data comprises 200 purposively selected Nigerian online newspaper readers' comments on two social crises in Nigeria within 2012 and 2013. The study reveals that writers apply ideological discourse strategies such as "us-them categorisation", "generalisation", "evidentiality" and "polarisation" in the expression of their interpersonal relationships and socio-cultural realities. These help to clearly negotiate social and ethnic borders. The study also shows that the new media (the Internet) has created platforms for border formation and maintenance amongst Nigerians.

#### *The Variety of Influence of Social Capital on Health in Welfare State Regimes*

The purpose of this study is to clarify the differences of influence of social capital on health in welfare state regimes.

Recently, studies in sociology, political science, economics, and social epidemiology have addressed the relationship between social capital and health. Large number of studies have found that social capital improve health.

However, the influence of social capital on health may differ in welfare state regimes, because there is a possibility that absence of state support is compensated by social capital. Therefore, we need research to identify the differences in the importance and meaning of social capital in welfare state regimes. This study examines whether the influence of formal and informal social capital on health varies among welfare state regimes through international comparative analysis of a multilevel model.

Using data from the 2007 International Social Survey Programme (ISSP), we analyze the individual-level data which have been linked with national-level data. And we use the random slope model to examine differences in the influence of formal and informal social capital on health among different regime types. Dependent variable is self-rated health, and independent variables as social capital are civic participation, generalized trust, informal social contact with family and friends.

The analysis produced two main results. (1) Informal contact with family has a stronger positive effect in the familialistic regime. (2) Informal contact with friends has a stronger positive effect in the post-socialist regime. These results demonstrate that there are the differences of the importance and meaning of social capital in welfare state regimes. Therefore, we need further research to clarify the differences of the mechanisms by which social capital compensates for the lack of welfare.

[akagawa@l.u-tokyo.ac.jp](mailto:akagawa@l.u-tokyo.ac.jp))

#### *Comparing "Harmful Publication" Issue With "Non-Existent Youth" Issue: From a Perspective Of Natural History Model Of Social Problems*

Joel Best suggests in *Social Problems*(2008) that a social problem has a cycle of concern. Concern increases until it reaches a peak, then interest falls off. In Japan, youth issues including revision of juvenile law, youth bashing, counter measures for low birth rates, and regulation of pornocomics for juveniles have cycles of concerns (also see Goodman, Imoto, Toivonen(2012)). This work focuses on the social problem process of the regulation of pornocomics for juveniles, which become prevalent every five or six years. It especially compares "harmful publication" issues in the 1990s with "non-existent youth" issues in the 2010s, then investigates process in which concerns for the issue were differently constructed and developed.

The Tokyo Juvenile Sound Upbringing Ordinance was first enacted in 1964, and revised in 1992, 1997, 2001, 2005, 2007 and 2010. Once a book is categorized as a "harmful publication" by the authority, sale for juveniles is strictly prohibited. Every time it was revised, regulations have become stricter. This work explores the difference between the construction in the 1990s and in the 2010s by utilising natural history model proposed by Joel Best, (which consists of claims-making, media coverage, policy-making, public reaction, social problem work and policy outcomes) and proposes two concepts: "top-down" natural history model and "path-dependency" of a social problem. Both help us improve a natural history model which is applicable to non-western societies' social problem process.

This work assumes that a "top-down" natural history model in contrast with "bottom-up" one can give us better understanding of youth issues in Japan, and the concept, "path-dependency" of a social problem, which means brand-new claims-making activities take place in condition that they are affected by previous controversies and its past backgrounds, helps us explain how and why claims-making or policy-making have different courses and their own unique histories.

#### *How Can Social Systems Observe?: Toward an Elaboration of Sociological Systems Theory*

Nonetheless the term "social system" has been a typical technical term of sociology, it has not been understood properly even in the circle of sociologists. For example, usually we cannot distinguish between social systems and societal system(s). This paper explores what kind of upgrade is needed to elaborate the concept of social systems in the context of sociology with reference to the rise of social media.

There are several reasons why the concept of "system" is introduced in sociology. Among them, we pay attention to the definition of social system as an observer, or the definition of the social as an observing system, in Niklas Luhmann's theory. Even though the definition of the system as an observer is not derived from the tradition of sociology, we can safely say that it is sociologically important.

ant because the expression "social systems observe" is almost equivalent to the frequently used expression "realities are socially constructed". By using systems approach, we will be able to define precisely what is meant by the term "social" in such context.

In Luhmann's theory the component of social systems is not defined as action, but as communication or communicative event. However we consider the definition of observation, the unity of distinction and indication, is not satisfactory to define social system (i.e. system of communicative elements) as a particular kind of observer. We insist that the definition of social systems should imply duration or continuity of observation as with the other observing systems. At last we conclude that, especially in the era of social media, we should distinguish between "the social (i.e. communication) as an element of social systems" and "social systems (i.e. system of communicative elements)".

**AKAHORI, SABURO\*** (Tokyo Woman's Christian University, [akahori@lab.twcu.ac.jp](mailto:akahori@lab.twcu.ac.jp))

### *Systems Thinking and Sociological Thinking: Observing from an Asian Perspective*

In this paper we raise a question: How can we connect systems theory to sociology properly and effectively? In the process of answering this question, we will examine whether the Asian tradition can contribute to develop sociological systems theory or not.

Generally speaking, systems theory offers us a tool to see things otherwise. Therefore it could be useful to develop sociological way of thinking. However, introducing systems theory to sociology is not an easy task. Here we regard it is because of so-called "epistemological obstacle" in western way of thinking. To overcome this difficulty, we have to get rid of the obstacle.

It seems that non-western tradition does not have something new to develop systems theory itself. Rather, it could be bridge systems theory and sociology because systems theoretical perspectives are similar in some respects to the Asian traditional thought.

In conclusion, beyond the distinction between western and non-western, systems theory could be a tool to think sociologically but it needs something that has bridging function between systems theory and sociology. Asian tradition could serve a role of bridging the gap between them.

### *Kinship Networks and Pentecostalism in South-Western Nigeria*

The increasing number of Pentecostal churches is having a divergence influence on the protestant and orthodox churches. It focused on ways in which the Pentecostal practices marginalizes the old, poor and less educated. The problem of Pentecostal preaching's, pamphlet etc. that urge Pentecostals to cast off ancestral curses and ungodly association to all kind, effectively excluding most people's extended families, especially elder relatives. The perception of the non Pentecostals by the Pentecostals was considered and what the elderly and illiterate as well as all the Pentecostals like *Gbaweremesin*. It also provides information on how the ignorant or unbelievers see the so called Pentecostals especially when speaking in tongues. The study, explained the influence Pentecostalism had or in having of kinship system in southwestern Nigeria. This study examined the relationship between kinship and Pentecostalism, the degree of effect of Pentecostalism on kinship. More so, the study examined the people's orientation towards Pentecostalism, the influence of Pentecostalism on Development and impact of kinship on family. The research design comprised of four qualitative methods, which are ethnography (participant observation) for a long time in-depth interview (IDI) which were nine in number key informant interviewing (KII), and focus group discussion (FGD) which were Twelve in numbers with 30 respondents in total to understand the presence and impact of Pentecostalism and religion in Nigeria and the world at large.

## RC09-173.5

**AKHMEDOVA, MUSLIMAT\*** (Russian State Social University, [muslima11@rambler.ru](mailto:muslima11@rambler.ru))

### *Sustainable Development in Terms of Social Inequality*

The evolutionary process is always the unity and interaction of two tendencies which balance each other - the stability and instability. Both groups in their contradictory unity are necessary for the development of the system. At the same time, there are various forms of conflict resolution between the above tendencies, and one of such forms is to achieve balance. But if one of the tendencies dominates the other, the development will stop. Even in the case when the stability prevails over the instability, the development of the system is exposed to an ex-

ceptional damage. The social history of humankind for centuries demonstrates a confrontation between two types of social dynamics. In one of them there is a strong guiding action to the ideas of natural selection and the struggle for existence as an engine of progress. Further ascent of humanity is seen by struggle and displacement of the weak and unfit forms. The purpose "to displace" and not "to develop" won't be able to ensure the survival in the long term. This is the technical dynamics, commercial, parasitic, leading to the establishment of a rigid unipolar world order. To achieve the harmonious development of humankind, the concept of sustainable development refers to the need to reduce the gap between the rich and poor, and make greater efforts to protect the environment.

### *Culture of Innovation in Higher Educational Institutions*

In modern society one of the most significant goals of higher educational institutions is to support the development of innovative culture. The modernization of all sectors of economy and society depends on the formation of new skills and patterns of behavior for the new generation.

In Russia the culture of innovation is forming under the influence of rising territorial inequality, stratification of higher education institutions (the allocation of specific types of high schools), growing diversity in organizational, personnel, technological conditions in different types of schools.

The paper analyses the culture of innovation upon the integration of education and science. The positions of the two main subjects of innovative process are observed: teachers and students. It is based on the survey of academics and students from different types of universities (federal, research, regional – that types are result of the Russian education reform). Using the results of the survey, we can show what model of integration of education and science is emerging and what are the prospects of this interaction in building of innovative culture.

### *Filipina Wives in Rural Akita*

This paper examines the migration and integration process of Filipina wives in rural Japan. Southern Akita in Tohoku Region has long been plagued by the stagnant economy, aging population, and out-migration. Since the 1990s a trickle of Filipino women working as "talents" married local Japanese men, forming transnational families in the traditional agricultural community.

Through surveys and interviews with the wives as well as with local leaders and government officials, we look at how gender and family has played an important role in the migratory process of these women and the manner in which they were incorporated into the family structure of rural Japan, and by extension the local community.

Gender has at times constrained choices that these women can make, while it has also become an empowering factor, as Filipina and Japanese women meet in schools and local cultural institutions and forge bonds over childrearing and care-giving in their families. Local language classes, staffed by volunteers (mainly local Japanese women) as well as support organizations (again led by local Japanese women) have played a critical role in the incorporation of Filipina wives into the local community.

Now one or two decades into their residence in Akita, these wives are facing a critical juncture, whether they be changes in their careers, the departure of their children from their homes, and the care of their now aged in-laws. Once again, their position within the society, both in regards to their "foreignness" and their gender, is being tested. We will therefore add to the existing literature on Filipina wives by examining their experience in later stages of their life in Japan.

### *Workers of the Globalized World: Explaining Difference in Workers' Attitudes to Globalization*

Workers of the Globalized World: Explaining Difference in Workers' Attitudes to Globalization

Without any doubt globalization affects the life and work of workers. Increasing international trade and labor mobility poses challenges to individual workers. Labor movements' response to these developments are to protect national (and regional) labor markets through further regulation of labor markets, in order to soften the blow for those workers who are the 'losers of globalization'. However, workers are heterogeneous and the way in which globalization affects the life of workers is not equal for all workers: some groups of workers will have a lot to gain from globalization.

How do workers perceive the effects of globalization? In this paper we explain individual workers' attitudes towards the impact of economic globalization on several aspects, such as their selves and his/her family, the organization they work for, national employment. We explain their attitudes by demographics, labor market positions, occupational variables and political affiliation and attitudes.

After a review of the literature, we formulate hypotheses on which workers will perceive globalization as a negative development and which workers will feel that globalizations is a positive development for different aspects of their lives, their career and employment.

For the empirical analysis we use data from the web based survey "Distributional Conflict in a Globalized World, 2011", a representative survey of the Dutch population (N=600).

Our study contributes to our understanding of the consequences of globalization by analyzing individual level attitudes of workers. In an era of continued trade union decline, knowledge of different types of workers attitudes towards globalization may better enable the labor movement to represent the interest of all workers. Knowing which workers view globalization as a threat, and for whom globalization offers opportunities, helps labor organizations to developed more informed and differentiated mobilization campaigns.

**AKSEER, TABASUM\*** (Queen's University, [t.akseer@queensu.ca](mailto:t.akseer@queensu.ca))

*Governmentality and the Construction of Muslim Masculinities and Femininities in Canadian Domestic and Foreign Politics*

The murders of Aqsa Pervaz in 2007 and the Shafia sisters in 2009 increased the public's interest/concern in honour related crimes and religious accommodation in Canada. The Muslim identity of the victims and perpetrators was a crucial factor, as evidenced in subsequent media reports which erroneously linked honour related violence with the Islamic faith/culture. Many extrapolated these murders to the justification for the 'war on terror'. The media illustrated to Canadians that Canada was involved in Iraq and Afghanistan to save similar Muslim women from Muslim men. This resonated with literature which argues that 'war on terror' is represented through the interactions between three characters; the 'dangerous' Muslim man, the 'imperilled' Muslim woman, and the 'civilised' European. It is through the interplay of these characters that democratic Western nations use excessive political, military and legal force to protect their citizens from third world threats; domestically and internationally. The government uses excessive force domestically to realign themselves within the 'war on terror' and continue their rhetoric on "protecting Canadians." These measurements are linked to governmentality. The threats against which society must be defended are manifold, thereby permitting the state to employ harsh, perhaps even racist, measures to protect itself and its' citizens. This paper intends to critique Canadian legal and political discourses as a point of departure in investigating the extent to which Islamophobia thrives as a tool of governmentality. How is the construction of Muslim masculinities in the West used to dominate/justify the war on terror? How are Muslim masculinities treated in Canadian domestic politics? This paper will illuminate the legal and political realms of government control/surveillance over immigrant bodies though highlighting the role of popular media as a realm wherein the West triumphs its Orientalist dominance over the Muslim male.

*National Security Measures: Subjectivity, Risk and Uncertainty in Pre-Crime Canada*

Since 9/11, national security measures have increased in Western nations. Such security measures often come at the victimization of particular ethnic and religious groups. Certain legal measures suspend rights in the interests of national security. These measures are described as state-of-exception, state-of-emergency, war measures or state-of siege measures. State-of-exception measures, according to Giorgio Agamben, refer to the suspension of laws within a state of emergency or crisis, which can become a prolonged state of being. During such times, certain forms of knowledge can be privileged and accepted as truth. Only certain voices can be heard and valued, as many others are ignored. The Canadian state-of-exception status has legitimated the use of security certificates used specifically towards non-citizens in efforts to deport individuals to their country of origin. Ericson (2007) identifies security certificates as a form of counter-law, a preventative approach, characterised by precautionary logic and the adjustment of legal standards according to these parameters. Larsen (2008) expands this definition and argues while the aim of counter-law is to manage uncertainty,

uncertainty is future oriented. The risks of moving towards a pre-crime society start to emerge.

While reigning discursive practices often point a finger at discriminating American neoliberal practices in the form of national security measures and movements toward pre-crime society, there is substantial evidence that sheds light on similar Canadian law and policies. What contribution do surveillance and security certificates make towards the Canadian construction of a pre-crime society? How does uncertainty and risk intersect in consideration (or in investigation) of the surveilled subject? The purpose of this paper is to not only address these questions but also investigate the intersection between national security measures and the citizen to provide a better understanding of risk and uncertainty.

*Privacy and Security Issues Of Mobile Phone: Perceptions Of University Students*

Mobile industry experience fastest rate of in Bangladesh in South Asian region. Bangladesh has 9 crore users of mobile phone at present out its 15 crore population. When this mobile industry is booming, the safety and security issues related to the use of mobile phone become very serious concern for both users and regulators. The privacy and security of mobile users become a serious security risk. This study concerns about how personal, social and economic safety and security, and privacy issues related to the misuse of mobile phone (threat, harassment and....). This study also concerns whether the crime committing has become more organized with the help of mobile technology and whether there should be a clear law to protect general people from harassment through mobile phone. The target population for his study is the students of private universities in Dhaka. The sample size is one hundred and four. The structured questionnaire based on Likert scale has been used to ask the respondents to indicate their agreement or disagreement on a five point scale ranging from strongly agree. The study comes up with the findings that misuse of mobile phone (threat, harassment and ....), is a regular activity. Student population donot trust the use of mobile phone anymore. Security issue could come up due to phone tapping by government, access to call list by unauthorised people, etc. Privacy issues come up from exposing the personal mobile to public, un-timely call, un-wanted call. etc. The respondents blame the government for lack of law to protect the interest of the users. A strong pro-user regulatory board is expected by them. The study also finds that the security concerns will be more significant in the coming days than before.

*The Environmental Refugees: A Comparative Study of Displaced Women in the Coastal Districts Khulna and Bagerhat, Bangladesh*

It is well recognized that unsustainable development projects all across the globe, especially in the developing global South, have resulted in various kinds of ecological hazards like salinity, floods and so on displacing a huge chunk of population, known in the current text as the 'environmental refugees' from their ancestral homes and conventional livelihoods. In this context, it has to be kept in mind that all people who are displaced and are termed as 'environmental refugees' do not migrate. The decision to migrate in crisis situations like environmental hazards depends on a host of institutional and structural factors. Thus, not only the degree of vulnerability of an individual or a family in crisis situations depends on the institutional and structural factors as observed by various studies, but the capabilities and opportunities for mobility also depend to a large extent upon these factors. Keeping this in mind, the present paper through an ethnographic field study in a few salinity-prone villages of the most backward coastal districts (in terms of Gender Development Index and Human Development Index) of Bangladesh, namely Khulna and Bagerhat districts, tries to find out how institutional and structural factors affect the migration decision of women belonging to various social and economic groups. The cases of Khulna and Bagerhat represent a unique situation of displacement of huge number of population, caused partly by the salinity due to sea level rise and partly by the cyclone Aila and Sidr. The main finding of the study is that migration in many of the cases, especially for the women-headed household, has often proved to be an enabling experience. The decision to migrate has often saved these households from the perils of starvation death caused by loss of cultivable land and other livelihood resources from the engulfment hazards.

*From Social Taboos to Economic Evaluation: The Construction of Quality in the German Funeral Business*

From a sociological perspective, the funeral is a rite of passage in which the deceased individual is symbolically excluded from the world of the living and transferred to the realm of the dead. While the goods necessary to perform this transition were for a long time collectively provided by members of the family and community, funeral goods are nowadays produced by professionals for a profit and are exchanged on markets. But due to the structural and moral specifics of this market, buyers and sellers scope of action is highly constrained. There are strong social taboos against many strategies of profit maximization that are used in other economic fields such as extensive marketing and prize competition. Despite of this, funeral directors must take measures to attract customers and to gain advantages over competitors. In this analysis I look at how morticians in Germany circumvent the moral taboos in the market in order to establish trust and construct and communicate quality. I argue that the structural and moral specifics of this market create opportunities for entrepreneurs to deceive customers in order to pursue profit. This analysis therefore addresses key issues in economic sociology concerning the assessment of quality in markets and the translation of value from one scale of value to another. In doing so the study helps us to better understand the moral preconditions and social constraints to the operation of markets in modern capitalist economies. Data for the analysis stem from participant-observation, expert interviews, and document analysis.

### *Testing Agnew's General Strain Theory on Drug Use Among College Students*

This study aimed to examine the core assumption of Agnew's General Strain theory in drug use among University of Jordan students. It aims to identify level of strains among students such as (failure in achieving the goals of positive value, negative emotions, loss of positive emotions, negative feelings) among students of Jordan University. A social survey was conducted, and a questionnaire was developed by Al-Badayneh (2012) was used in this study. A random sample of (965) students from the University of Jordan was selected. Findings supported the Agnew's core assumption of the general strain theory in drug use. A significant positive relationship was found between the negative emotions and strains (the failure to achieve the goals, and the loss of positive Stimulus, having a negative Stimulus  $r = 0.419; 0.357; 0.269$ , and  $0.18$  respectively). Negative emotions also found correlated with drug use.

### *"Last Year Your Answer Was ...": The Impact of Cognitive Effort, Life History, and Dependent Interviewing on Measures of Change*

Longitudinal surveys allow for studying response change within respondents not possible in cross-sectional studies. Prior studies, however, suggest reports of change in longitudinal studies are potentially error-prone. Proactive dependent interviewing (DI) reminds respondents of previous answers, asking if there has been any change since the last survey, and is a possible method to reduce errors by assisting recall and reducing cognitive burden. However, DI also may lead to satisficing, allowing acquiescence by stating that the situation is the same when it is not, leading to underreporting of change.

The Innovation Panel (IP) survey in the UK has conducted experiments on wording of several DI questions (both subjective/objective and categorical/continuous) across 5 waves. The first two waves asked questions independently (no DI); waves 3 and 4 asked two versions, reminding respondents of previous answers and asking either "Is this still the same?" or "Has this changed?"; Wave 5 (mixed-mode face-to-face and web) includes both wordings as well as two forced choice versions including same/changed options.

Results indicate that first, DI does not always produce lower levels of change compared to independently asking questions. Second, asking the unbalanced "still the same" version leads to less change in general than other versions, suggesting possible acquiescence in DI. Third, the web survey elicited significantly less change, again suggesting that reductions in change using DI may be in part due to reductions in cognitive effort. Fourth, people who change responses in any given wave were significantly more likely to also change in the next wave, suggesting a respondent component, either in response style or actual volatility in status.

We explore these findings further by including measures of cognitive ability and other respondent characteristics as well as volatility in status, captured through life course histories. A discussion about the impact of DI and possible improvement concludes.

### *The Experiences and Meaning of Empowerment for Omani Women in Tourism Entrepreneurship*

This paper describes a doctoral study, which focuses on female tourism entrepreneurs within a Muslim cultural context. The paper outlines current thinking on the research and reflects critically on the key theoretical and methodological issues. The paper also presents emerging findings from the fieldwork.

There has been limited research conducted on women in tourism entrepreneurship and this has made it difficult to identify key emerging issues surrounding this area for women. There is also scant research that has looked specifically at female tourism entrepreneurs in Muslim countries. One key emerging issue that has been frequently addressed in existing studies is women empowerment through tourism entrepreneurship. However, a critical analysis of tourism entrepreneurship opportunities for women and the subsequent implications of these opportunities is needed in order to determine the potential for tourism entrepreneurship to empower women. The experiences and meaning of empowerment for female tourism entrepreneurs in Muslim countries may have distinctive characteristics due to their social status. Such empirical evidence can further develop existing knowledge regarding women empowerment through tourism entrepreneurship. Thus, the study aims to explore the nature and experiences of female tourism entrepreneurs in Muslim countries with particular regards to empowerment.

The fieldwork for this research will take place in Oman during 2013-2014. Tourism entrepreneurship is a fairly new activity in Oman and there are a small number of women whom are involved in tourism entrepreneurship activities. The participants of the study will include two groups of collective entrepreneurs and a number of solo entrepreneurs involved in tourism entrepreneurship activities.

The theoretical paradigm that guides this study is critical theory and a case study methodology will be used to design the research. Information about the women will be collected through the use of participant observations and interviews in order to develop different cases studies.

**AL-ORAIMI, SUAAD ZAYED\*** (UAEU, [S.aloraimi@uaeu.ac.ae](mailto:S.aloraimi@uaeu.ac.ae))

### *Women in the UAE Gender Empowerment & Disempowerment*

In recent years, there has been an increased scholarly interest in the topic of women's Empowerment. In the United Arab Emirates (UAE), the modern age now requires enlightened capacities from women. The state encourages women to advance themselves and the nation. Thus, a clear line of distinction to be drawn between classic and highly modernized society with due respect to the old tradition. Legislative reform is taking place and women are encouraged to pursue leadership positions. This reformation comes with a new paradigm shift, and thus, women are starting to play different roles in public and private spheres. They try their best to eradicate male supremacy from top positions; however, with the government officially subsidizing the empowerment of women, but society does not recognize women as full citizens. Traditional society is still uncertain about the competence of women in the political arena. Therefore, women are in limbo between state's empowerment and social disempowerment and are standing on unpredicted space. In this context, this study explores the status of Emirati women as political leaders. It also illustrates social attitude and deportation of women. The study aims to explore an unidentified area of study in a tribal based society and to clarify the state's philosophy of women's empowerment. Hence, the study can be an additional contribution to a feminist theory of women's empowerment.

### *Transnational Intimacy: Negotiations on Gender Relations in the Context of Marriage Migration By Moroccan and Turkish Men to Germany*

Under the conditions of globalized and displaced love (Petersen 2012; Calloni 2012) some new forms of family and (bi-cultural/ multicultural) intimate relations are emerging in transnational migration context. Marriage migration through familial networks and ties, which is also known as the *transnational marriage* in the literature, constitutes one specific type of newly emerging world-families (Beck & Beck-Gernsheim 2011). The authors who work on the issue of marriage migration draw especially attention to the fact that marriage migration should be understood as a subtype of family-led migration (Kofman 2004), and in this sense it entails a gendered migration experience (Beck-Gernsheim 2007). Though the "imported brides" is a much discussed phenomena in the migration literature, there has been done little research on the "imported grooms". Focusing on Turkish and Moroccan male migrants, who could migrate to Germany through a marriage with

a female descendant (second or third generation) of migrant families resident in Germany, this paper looks at the asymmetrical power relations between the couples (pertaining to the citizenship, labour market, language competency, knowledge of dominant norms and rules of the receiving country) and examine how the notions of womanhood and manhood will be renegotiated in the context of transnational intimate relations. Thus, drawing on the concepts of transnational family networks and the concept of world-families combined with the insights of sociology of intimacy (Eva Illouz 2012), the paper raises the question whether the male marriage migration might be ending up in the change of constellation of familial power relations, and in gender relations between married couples, hence denoting the reversal of gender order in migration context. The paper is based on biographical- narrative interviews conducted with Turkish and Moroccan couples in the frame of the research project "Reversal of the Gender Order? Male Marriage Migration to Germany by North African and Turkish Men".

#### *Exploring Factors Associated with Willingness to Donate Organs Among Migrants Adults in Lisbon: A South Asian Comparison*

This study represents a community-based death perspectives assessment of a hard to reach population in Lisbon. It aims to attain a South Asian comparison concerning willingness to donate organs, while exploring gender, age, educational and religious-related differences.

A cross-sectional population-based study was conducted among immigrants from Bangladesh, India and Pakistan. Snowball non-probability sampling technique was used, through interviewers with privileged access to the target-population. Between November 2012 and February 2013 trained interviewers collected qualitative and quantitative data through face-to-face interviews, namely socio-demographic characteristics and health conditions, willingness to donate organs (subjects were asked if they would like to have their organs donated; 'yes', 'no', 'indifferent', 'don't know/don't answer') and other attitudes towards death. Logistic regression was performed to identify factors associated to willingness to donate organs in univariate and multivariate-adjusted models for each population and gender.

Willingness to donate organs was higher among the Indian (41.7%), namely Hindus, and lower among the Bangladeshi (9.5%) and the Pakistani (15.8%). For all the three populations, a bad/very bad self-rating quality of life was associated to willingness to donate organs. Bangladeshi women were more willing to donate organs than men, while among the Indian and Pakistani, educational level was a more important variable in what concerns the explanation of organs donation commitment phenomenon. Among the Bangladeshi men, migration length was also related to willingness to donate organs; and an increased number of self-reported diseases among women.

Models by country of origin highlighted inter-and intragroup differences. There were gender-based differences on organs donation among the groups. Religious commitment was not an explicative factor.

Previous studies indicate that the act of organ donation can be perceived as involving personal costs, namely costs related to religious beliefs, and that the meaning of organ donation is more than just being and having a body (Hayward, Madill; 2003).

#### *Language, Informational Capitalism and Industrial Relations. a Study on Linguistic Autonomy of Workers and Collective Bargaining*

This paper shows how linguistic criteria have become central when defining job categories in the Call Centres sector in coordinated economies. It is well known that language adopts a central role in the production processes of informational capitalism, even though how linguistic production affects collective bargaining, its arguments and outcomes is unknown. This paper argues that, even when lin-

guistic criteria are already a key part of the collective agreements, social partners still try to introduce different types of argumentation. Trade Unions push to reproduce Fordist arguments along with linguistic criteria (the greater the argumentative independence from the script, the higher the level of the occupational category) to build high skill categories on the sector, while employer's aim is to use economic decision autonomy to define job categories.

Several methods were used to carry out the investigation: in deep interviews and documentary analysis. Workers holding different job categories from the largest companies in the sector were interviewed (31). Social partners who have participated in Call Centre Collective bargaining were also interviewed (7). Several documents were analysed: the five Call Centre collective agreements, Company Agreements, five judicial rulings concerning the relationship between linguistic autonomy and occupational categories, conversation scripts, protocols and training documents. This research is funded by the Spanish Ministry of Economy and Competitiveness (FFI2012-33316).

#### *Diferentes significados da la llamada Agricultura Moderna: El caso brasileño*

Nos proponemos discutir el concepto de "modernización". En el caso brasileño los conceptos de "agricultura moderna" "complejo agro industriales" y "agronegócio" han sido utilizados generalmente como sinónimos, no obstante, aunque sus fronteras pueden parecer ténues, de hecho remiten a realidades sócio-económicas y políticas diferentes.

El uso de insumo modernos y de maquinas es uma presencia constante em los três casos, no obstante el énfasis em la exportación no tiene en los dos primeros, el mismo peso que en el último. La integración agricultura-industria no estaba em gran destaque cuando se hablaba de agricultura moderna em los años 70. Por outra parte, el gerenciamiento de um negócio que supone mucho mas que uma planta industrial ou um conjunto de unidades agrícolas es uma de las tónicas de la idea de "agronegócio".

Finalmente, aunque em todas las situaciones, la gran propiedad territorial está asociada a las 3 formas, em el caso del complejo agro-industrial está asociada também, mediante la "integración" a los pequenos produtores, y em el último caso, aunque las grandes propiedades son uma marca del "agronegócio", la referencia a la propiedad territorial desaparece en las formulaciones de sus técnicos que la asocian a determinadas maneras de producir.

#### *The Struggle for the Public SPACE in the Historical Center of Latinamerican Cities. the Case of Mexico City and Sao Paulo*

The struggle of the public space in the historical center of Latin-American cities. The case of Mexico city and Sao Paulo

The expansion of the street hawkers in many cities of the emerging countries is the last link of a legal and illegal commodities value chain coming from Asia through the "globalization from below". Informal economies have multiplied and internationalized as a result of local, national and global political, economical and social interactions: economic liberalization and crisis, demographic growth and migration, social inequality, poverty and unemployment.

Low income population has adapted to these changes by creating survival jobs as local distributors of global production. However, these activities are in conflict with many local and national laws, and confront governmental and private interests set upon the "renewal of the historical centers".

These paper aims to analyze the corporatist and clientelist relationship between the hawker's organizations and the government as well as the use of tolerance and repression tactics from the local authorities regarding the use of public spaces in the center of the cities.

*A Decade of Turbulence and Mismatch—Changing Child Care Policies in Changing Economic Times in the Canadian Context*

This paper brings together findings from two studies that I have been working on that focus on child care in Canada. The first study (with Professor Rauhala in Ryerson's School of Journalism) maps the coverage of child care over the first decade of the 21st century in four Canadian daily newspapers. It shows that the voices of mothers and child care providers are virtually absent from policy discussions. The second study involves interviews with mothers and child care providers in two policy jurisdictions, with two very different approaches to child care—in the provinces of Ontario and Quebec in Canada. This paper provides a look at the impact of the rise of women's non-standard, service sector employment on gender roles, identities and relations, and compares the complex task of creating and managing formal and informal non-parental childcare in rural and semi-rural communities in two policy jurisdictions (Provinces of Ontario and Quebec). It seeks to understand the ways in which the neo-liberal reconfiguration of local economies impact on the experiences of employed, non-urban women with young children – mitigated by provincial policy decisions – through documenting the strategies mothers adopt to cope with new and increasing challenges when managing this family-market-state nexus. This paper focuses on some of the unique challenges some rural mothers encounter and the strategies they develop to manage their changing child care needs. It also shows how absent these realities are from the coverage of child care in Canadian newspapers.

**ALBERTI, GABRIELLA\*** (Leeds University Business School, [g.alberti@leeds.ac.uk](mailto:g.alberti@leeds.ac.uk))

*Organizing Intersecting Identities: Trade Unions and Precarious Migrant Workers Across the Atlantic*

A key challenge for trade unions in this period of globalization is not only the need to rebuild power and survive as organizations, but also to overcome workforce divisions in fragmented labor markets where migrants tend to be employed under poor and precarious conditions (Alberti et al. forthcoming; Standing 2011; Wills et al. 2009). This paper draws from a comparative study on union strategies towards immigrant workers across four countries: Germany, France, the United Kingdom and United States conducted between 2008 and 2011 (Adler et al. 2014). It explores the ways in which migrants workers' identities are mobilised and become 'strategic' in labour organising campaigns. Three campaigns where unions collaborated with community groups to advance the working lives of low-paid migrants have been selected, namely: the 'CLEAN' Carwash campaign in Los Angeles and the 'Justice for Cleaners' and the 'Hotel Workers' campaigns in London. The findings point to the persistence of barriers to migrants' involvement in unions with a strong industrial tradition, i.e. those that target industrial sectors in which immigrants 'happen' to be found rather than identifying their specific issues (e.g. language, legal advice, immigration problems, temporary contracts). In contrast positive examples emerged where unions engaged with workers while taking account of their migrant background through a mix of individual case-work and collective mobilisation; where a clear choice was made to collaborate with migrant-based organizations such as worker centres; and where unions' receptivity of the organizing tools and cultures that diasporas bring with them was higher. The main argument highlights the need for unions to make their structures more porous and develop forms of 'contingent membership' able to accommodate the specific demands of precarious migrants and diasporas that are still 'in transit', while valorising the political and educational baggage held by those who are part of already organized communities.

*Transitioning out of Care: An International Comparison on Aging out of Foster Care*

Aging is a universal phenomenon of life yet it is not universal in experience. While aging is often perceived as the natural progression through life stages, the societal consequences for these transitions are socially constructed and culturally specific, with particular ages carrying with them varying freedoms, expectations, and restrictions. Some demarcations are fairly widespread in their range of international acceptance, yet others are more variable – such as age of retirement and marriageable age. For foster children who are supported within state care, the significance of the cultural link of the age of majority, the age that children become adults by law, carries especially weighty consequences: forcing them to exit the foster care system. This often involves cutting off much needed resources

and supports from these already disadvantaged individuals, which may help to explain the high rates of homelessness, incarceration, unemployment, and poor mental and physical health found within this vulnerable population. This research compares how Organisation for Economic Co-operation and Development (OECD) countries manage the transition of young people from state care. National and state legislation designating services received both before and after children become adults are examined along with specific programs and efforts aimed at easing the transition from 'foster child' to 'independent adult'. Comparison on this scale shows massive gaps in national transitioning programs for this population, yet offers the opportunity for cross-country discussion of policy arrangements. This research will enlighten scholarship on the complex relationships between governments and the life course, including how governments succeed and fail at overcoming gaps in life course transitions. Questions pertaining to the importance of using a set age of majority are then discussed and the need for program outcome measures is brought to center stage.

*The Transition to Adult Life in Times of Crisis. a Case Study in Spain*

From the start of the crisis in Spain in 2008, the increase of the youth unemployment has been continuous and progressive.

At this moment, at the end of 2003, the unemployment rate is 44.6% for people between 16 to 34 years old and 57.2% for boys and girls of ages 16-24 years old. And for young people working, jobs have been characterized by flexibility, precarity and temporality.

In addition, the high price of housing in Spain with a string family culture has resulted in a large number of young people still living with their parents and that only 22.1% of boys and girls between 16 and 29 years old are living on their own.

The aim of our paper is to show the differences in the transition to adulthood related to several aspects, such sex, age, level of education, training, social class, ethnic group and rural/urban area in order to design a typology of the different transitions that are taking place nowadays.

To do this, we used a qualitative methodology and we performed 40 interviews to young people with different profiles.

*Inequality in Post-Socialist Mongolia: A Case Study*

Since the collapse of the Soviet Union, Mongolia 'de facto' a sixteenth republic of the USSR (Murell 1999, 216) started its transition into market economy and democracy in parallel with other former communist countries. In contrast to the belief that 'recession will be short and sharp before better times', transition in most countries including Mongolia, have been a very 'difficult, long and painful process' (Luvsandorj and Nixson 2000). Today, Mongolia is worse off in terms of quality of life, unemployment, poverty etc. than it was in 1989 and despite the significant increase in per capita growth, the high level of human and social development achieved during the socialist era has been left to deteriorate.

Nonetheless, over the past two decades, the majority of studies on Mongolia's transition has focused on the country's features of economic transition and political development rather than emerging social issues in general and inequality in particular. As there has been little discussion about the role of development policy choices Mongolia has adopted in lingering social inequality, this paper attempts to fill this gap by measuring, documenting and comparing the depth, forms and changes in social inequality in Mongolia since 1990.

The paper differs from other studies on Mongolia by employing different aspects of inequality and by examining its interrelations with social mobility, historical and policy legacies and current economic growth. It also uses a mix of quantitative and qualitative methods. The paper finds that not only there is an increasing polarisation, but also there are various excluded groups and strata emerging in the society within these polars.

*Measuring Homophobia in the Philippines*

In June 2013, local media reported a survey done by US-based Pew Research Center that ranks the Philippines among the most gay-friendly in the world. In the report entitled "The Global Divide on Homosexuality", only 17 countries had

majorities that agreed with the statement that homosexuality should be accepted by the society, with the Philippines ranking 10<sup>th</sup> among the 17 countries.

Filipino gay rights groups, however, were not impressed with the survey, which they believe are based on the perception of accepted stereotypes of gays. They mentioned that once a gay is outside of the accepted stereotypes, that is where they encounter rejection.

In June 2013, Social Weather Stations (SWS), a non-stock, non-profit research institution, developed questions in order to look deeper at how to measure homophobia in the Philippines. This survey was conducted among Filipino adults 18 years old and above. It found that Filipinos believe that: a) gays and lesbians have the right to be protected against any form of discrimination, b) they contributed a lot in the progress of the society, and c) being gay and lesbian is not a form of mental illness. But the most notable finding that the survey found is majority believes that when they have a gay or lesbian in the family, they would like to change them to become straight men and women.

The paper will also delve into new topics in the forthcoming SWS nationwide survey to be conducted in December 2013. The new topics will measure agreement/ disagreement with the following statements: *Being gay or lesbian is contagious; Acquired Immuno Deficiency Syndrome or AIDS can be considered as a sickness of gays and lesbians; and gays or lesbians are just as trustworthy as any other Filipino.*

#### *Overseas Gap Years and Working Holidays in the UK and Japan: Insights from a Comparative Approach*

The overseas "gap year" has emerged recently in Japan as a topical issue. In the UK, the benefits of "structured" and "constructive" gap years for education and employment are often emphasised in government, employer, university, provider and media discourses. In Japan in recent years, a number of government committees, employer stakeholders, and universities have drawn on this UK example, and advocated the promotion of such gap years. A tension has, however, been identified between discourses about the benefits of international mobility on the one hand, and its possible negative consequences in Japan on the other.

Building on this, my doctoral research involves comparative analysis of discourses about the "gap year" and "working holiday" in the UK and Japan; qualitative interviews with former working holidaymakers, careers advisers and employers; and existing quantitative datasets. The comparative perspective allows an explicit consideration of the influence of socio-cultural factors on the motivations, experiences, perceptions and outcomes of contemporary forms of youth mobility. More broadly, I am interested in how young people are enjoined to, and aspire to, develop their selves in each context.

In this paper, I highlight how the comparative approach has strengthened the research and facilitated a more rigorous approach to analysis. First, it has required me to explore and specify more precisely the characteristics of working holidaymakers and their positioning within each socio-cultural context. Second, it encouraged a focus not on unelaborated generalities about "cultural" differences, but on specific factors (e.g., recruitment practices) that may be associated with differences in each context. Third, the research design allowed the identification of important factors in societal discourses in each context, to be used as sensitising concepts for interviews across contexts. I illustrate these arguments by using preliminary data from interviews conducted in both the UK and Japan.

#### *The Reform of Policing in China: Continuities and Discontinuities Under New Challenges*

This analysis approaches the problem of policing in China, rendering focus on the process of policing reform not isolated in itself but rather embedded in the social context. The study allows for the envisage of the complexity implied in the broader institutional reform setting in China from 1978 to the present day. Continuities and discontinuities in relation to some past practices are the stakes of this phenomenon. As new normative and legal measures might offer some restraints to the "rule of men", policing reform is followed tentatively by the Chinese Communist Party authorities. This process is oriented towards a discrete and gradual – but not inexorable – abandonment of essentially ideologically driven practices within institutions of social control. The idea which has guided this research is that the modification in both the organization and the operational policing practices in China was necessary to deal with the ongoing broader reforms the country has been faced with.

#### *The Origins Of Modern and Cultural Contemporary Sociology*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

This presentation will trace the origins and development of the "strong program" in cultural sociology. In the face of the unproductive struggle between a functionalism that equated culture with social integration and a conflict theory that negated culture altogether, there emerged an effort in the 1980s to reread the classics in cultural terms that would undermine the tradition/modernity divide. One result of this rereading was that the late Durkheim (1912) of sacred/profane, symbols, rituals, and solidarity displaced the middle period Durkheim of Division of Labor, Rules, and Suicide. Alongside this rereading, the effort to create a new sociological approach to culture turned to developments in the humanities -- to the linguistic turn in philosophy, to structural linguistics and anthropology, to semiotics and post-structuralism, and to narrative theory in literature. Some of these developments had already been made available to sociology in the writings of the trio of cultural anthropologists that had emerged a generation earlier, the 1960s and 70s -- Mary Douglas, Victor Turner, and especially Clifford Geertz. There had also been a "cultural turn" in European social science, motivated by these same developments, which produced a turn toward culture in the critical works of Foucault and Bourdieu and the Birmingham school of cultural studies. The strong program argued that these European reactions to the cultural turn failed to recognize the relative autonomy of culture. Sociologizing a series of key concepts in the humanities, the strong program developed a way of thinking about culture in a new way.

#### *Social Networks, Careers and Quality Improvement: New Developments in Applied Social Network Research*

Social Network Analysis (SNA) in applied, practical settings has made significant advances in the last decade. This paper reviews the new research designs they utilise and their practical research applications. The paper begins with the best known, sociometric 'whole network' WN-SNA research tradition used in organizational and educational research (Kilduff and Tsai 2003). The paper then maps the differences between WN-SNA and ego-centric network (egonet) approaches used by survey researchers. The key difference turns on the full identification of a respondent's contacts in WN-SNA as compared with the egonet practice of using de-identified IDs only. In recent studies Ron Burt (*Neighbour Networks*, 2010), a key proponent of egonet survey methods, has shifted to collecting data on fully identified contacts in contexts where this is sensible. This paper argues that this move, combined with important features of Burt's earlier research practice (*Structural holes*, 2001) creates an important new, 'partial sociometric', research design for social network research. It outlines the methodological coherence of this new research design and notes some interesting overlaps with the methodologies of Socio-Cognitive Mapping (SCM) used in educational research (Kindermann 2007). It describes Burt's latest work on quality improvement in health delivery to illustrate this research design and discusses an application of this design in a local participant-observation network study.

#### *The Economic Sociology Of a Globalized Industry: Multiple Networks In Australian Mining*

Economic sociology investigates the detail of economic, inter-organizational and social networks in business and industry. It explores embedded patterns of activity and interaction across the economy and the impact on people and societies. Inter-organizational networks involve operational partnerships mixed with relations of finance, investment, and control. Businesses may also work together through industry associations to establish product standards or labour market regimes. Seen from below these structures are the worlds where individuals make their careers within an industry. In turn their endeavours create inter-personal networks of professional contacts and shared experience. This paper reports on

a study of the Australian mining industry that investigates the complex overlap of multiple inter-organizational networks and additional linkages with inter-personal networks. There is a large amount of information available from industry handbooks and we report on methods for coding and categorizing inter-organizational relationships for the purpose of subsequent network analysis and the integration of personal network data in this framework. The dominance and centrality of global corporate players in the inter-organizational networks is mirrored in the memberships and networks of industry associations across the mining industry. Finally we report a case study of industry mobilisation against the Rudd government's proposed Resource Super Profits Tax (RSPT) in May-June 2010. This case study illustrates the dominance of the global corporates in framing an 'industry' strategy for dealing with the government but also their success in creating a comprehensive and appealing self-identity for the industry and its workforce that glosses over the actual divisions within the industry.

### *Capitalism and Injustice As Seen through the Lens of Massive Inequality and the Marikana Massacre*

Capitalism and Injustice - As Seen Through the Lens of Massive Inequality and The Marikana Massacre

The paper explores the relationship of capitalism and injustice, doing so through the lens of South Africa's massive social inequalities and the 2012 massacre of 34 strikers by the South African Police. These inequalities are extreme but they are not exceptional, and Spain, among others, now has a higher rate of unemployment than South Africa. Treated as what William Sewell defines as, an 'event', the massacre is used to reveal key aspects of social structure. Different meanings of 'injustice' are discussed and these are related to the workings of capitalism.

[galexis@monmouth.edu](mailto:galexis@monmouth.edu))

### *By Any Other Name: Neoliberalism, Post-Secularism, and Establishment Religion*

"... The paramount goal is compassionate results, and private and charitable community groups, including religious ones, should have the fullest opportunity permitted by law to compete on a level playing field, so long as they achieve valid public purposes, such as curbing crime, conquering addiction, strengthening families and neighborhoods, and overcoming poverty."

...George W. Bush in 2001<sup>[1]</sup>

Then-President Bush made this statement in connection with establishing a White House Office of Faith-Based and Community Initiatives ("WHO-FBI") to cultivate contacts with the religious sector. Under massive "welfare reform" legislation, U.S. welfare recipients may only remain on the welfare rolls for a two-year period, after which time they have to enter the workforce. It was the task of the WHO-FBI to recruit religious groups as third-party contractors to provide job-readiness skills to the nation's welfare recipients. Whatever euphemism one uses – be it "massive welfare reform," "Compassionate Conservatism," or "Neoliberalism" – the retrenchment of the welfare state from providing a safety blanket for society's downtrodden has pushed religion to the forefront of the public sphere.

By drawing upon the U.S. experiment with "colonizing the poor" under the religious sector, this paper elucidates the threat to religious liberty posed by the faith-based initiatives that are becoming the modus operandi of the *Neoliberal State*.<sup>[2]</sup> In addition to delving into the diminishment of individual autonomy – e.g., the right to be "free from religion" -- the paper explores the diminution of religious pluralism occurring as minority religious groups vie for space in a public square in which a majority religion has served as the prototype for what constitutes *religion and religious practice*.

### *Democracy Light: Religious Liberty In The Coe Community*

Being resolved, as the governments of European countries which are like-minded and have a common heritage of political traditions, ideals, freedom and the rule of law, to take the first steps for the collective enforcement of certain of the rights stated in the [UN] Universal Declaration.....

...Preamble to the European Convention on Human Rights

The above quote from the European Convention on Human Rights ("the Convention") sets forth its intent to carry out in the context of a newly integrated Europe the proclamations of the UN Universal Declaration of Human Rights ("Universal Declaration"). Indeed, under the Convention, the 47 European countries constituting the membership of the Council of Europe (COE) covenant to uphold fundamental rights such as the right to religious liberty provided for in Article 18 of the Universal Declaration. Here, it is noteworthy that except for the inconsequential reordering of three words, Article 9(1) of the Convention is a verbatim adoption of Article 18. Nonetheless, the quality of religious liberty enjoyed by residents of the various COE states is uneven. Whereas Muslims residing in Scandinavian countries can manifest their religious beliefs through modes of attire, Muslims residing in France or Switzerland are prohibited such overtly visible modes of religious expression. There is also disparate treatment within the COE community of Jehovah Witnesses; those residing in Greece, do not fare well raising conscientious objection claims to avoid military service and they are prohibited from publicly bearing witness for their religious beliefs. This paper will focus on the inability of religious minorities to obtain equal protection of the laws within the newly integrated Europe and analyze its implications for COE's claim to be a democratic union of states.

### *Social Capital, Governance, and the West: The Paradoxes of Civil Society in the Arab Region*

Many societies around the world have adopted—either by choice or by force—liberal democratic systems of governance, often to the detriment of their pre-existing social structures. This process has been driven by the worldwide spread of a political principle: that the optimal system of social organization is characterized by strong civil societies, underpinned by social capital, capable of acting independently of state control. Some scholars have suggested that global civil society is spreading cosmopolitan values and thereby enabling the development of modern liberal democracies throughout the world. Others believe that the concepts of civil society and social capital are inextricably tied to specific social, economic, and political backgrounds, rendering them applicable only to Western societies. This paper considers the Arab region, where regulations are devolved and enforced through tribal coalitions on the one hand, and tribe-state alliances on the other. Many Arabian societies reject the concept of civil society as a foreign philosophy that has stemmed from liberal democracy rather than their Arabic literature to which they are strongly connected. The paper argues that Arab societal ideologies and tribal structures have fundamentally shaped understandings of civil society and social capital, and how these ideas play out on the ground.

### *Religious Minorities in Post-Soviet Lithuania: Some Aspects of Social Exclusion*

The paper discusses the aspects of social exclusion of religious minorities within homogeneous religious field of post-soviet Lithuania. Academic literature states that main agent of social exclusion is considered to be the society. Social exclusion of religion manifests in governmental and spatial spheres and on the individual level through religious discrimination.

The paper is based upon the data of research that was conducted in 2012 in Lithuania. It consisted of participant observation, semi-structured interviews and survey of religious minorities (N=372). The research data allows stating that in the governmental and spatial spheres the regulation of activities of religious communities in Lithuania reveals the privileged position of Roman Catholic Church and other so-called traditional religious communities. At the same time so-called non-traditional religious communities are marginalized, dislodged to the peripheries of public life. According to research data, on the individual level members of non-traditional religious communities experience religious discrimination through stigmatization, psychological and physical violence.

**ALLASTE, AIRI-ALINA\*** (Tallinn University, [alina@iiss.ee](mailto:alina@iiss.ee))

### *The LGBT Activism in Estonia: Gender Perspectives*

The history of the gay movement in Estonia is largely undocumented, since during the Soviet period, gay networks were completely 'underground', no official organisations existed, and accordingly, no official records of it were available. During the Soviet period, homosexuality was illegal; male homosexual acts were

decriminalised only in 1992. There were signs of an emergent movement since the late 1980s and a number of pioneering NGOs were established in the 1990s, although a strong umbrella organisation remained absent. In the most recent period several NGOs have been established but subsequently closed down for various reasons.

Today, Estonia's LGBT activism is very much a youth movement, rather lesbian-centred, loosely connected and with a number of distinguishable clusters of activism. Different NGOs focus on various issues and in some represent smaller groups. A specific cluster in the movement is related to political art and feminism, which is becoming rather visible in Estonia. Theoretically Estonian LGBT movement is conceptualised as identity-based movement in search of strategies of involvement.

The empirical part of the paper considers the findings of participant observation in various events organised by LGBT activists in 2012-2013, and in-depth interviews with them. In particular, the paper considers: how LGBT activism is defined by individual participants involved at the moment; explanations of the female-centeredness in LGBT activism, and gender specific differences on these explanations.

#### *The Future of Teaching and Research in Universities: Global Transformations*

Around the world, global transformations have been affecting the structures, dynamics, and outcomes of universities. Indeed, acute transformations in information and communication technologies (ICT) have reshaped academic labor via MOOCs, distance learning, assessment, and for-profit higher education. In the United States, for example, the professoriate has become dominated by contingent labor rather than full-time employment. Outside a core of prestigious research universities, academic labor has been progressively marginalized. Even within universities, academic capitalism or commercialization has proliferated, spreading a virus that has distorted humanistic and scientific learning away from basic research or theoretical questions. Academic freedom is precarious, compromised by the dictates of applied research. Public higher education has been engulfed in this tsunami of social change for decades, carrying along the academic professions in the merry-go-round of politics.

Two decades of sociological research exists on these matters by this author and other scholars in *The Almanac of Higher Education* published during 1993-2004 by the National Education Association of the United States. Thus, this article will examine data sources from the National Center on Education Statistics, the National Science Foundation, the Royal Society of the United Kingdom, the Office of Economic and Cooperative Development, the European Union, the United Nations, the National Study of Postsecondary Faculty, the Library of Congress of the United States, and other venues to provide a scientific analysis of future trends or scenarios transforming research and teaching in universities. While ideas and evidence will center on conditions in the United States, international comparisons will be made wherever possible. In the same way that alert climatologists monitor climate change, sociologists must continuously investigate 'academic climate change' on a global scale.

#### *Ecological Identity: Underpinnings and Expressions*

In a presentation to the National Congress on Behavior Change for Sustainability, Stern (2010) suggested that private sphere behaviors such as recycling have large intent quotients but relatively minor actual impact on environmental quality. Activism, on the other hand, has an ability to influence governmental and corporate policy and may be the most impactful activity. It is also an activity that requires a critical mass of public support to achieve that impact. To change policy or behavior, the activist relies on the power of mobilizing public opinion or resources to force accommodation from a government or corporate entity. One potential way to achieve and sustain that critical mass is through identity-based group formation. Membership in such a group may also increase the likelihood of an individual participating in public activism.

In the research reported here, identity connected to environmental concern was explored in a small (125) cohort of environmentally-committed respondents. Specifically the relationships between pro-environmental values as an enduring basis for an identity, environmental experiences, the presence of an "ecological identity" (Thomashow, 1996) or self-identification with nature, and the management of that identity as a social role were examined. Using measures from Stern, Dietz & Guagnano (1998); Burke & Stets (2009); Clayton (2011); and our own experience items, we found that environmental experiences and pro-environmental values coincide strongly with the presence of an ecological identity, but that nei-

ther have a significant effect on how an individual manages the expression of that identity in relation to other identities held.

#### *An Evaluation of the Effect of Mode-Switching in Panel Surveys Using Recall Data*

A key concern about the web survey data quality is difficulty garnering a probability sample because there are no good frames of email addresses for a general population. In a panel survey, it is possible to switch respondents to web mode after initial recruitment via face to face methods (F2F), thus mitigating the problem of sample selection and allowing the collection of rich information at lower marginal cost. However, web respondents generally seem more likely to take shortcuts than respondents in interviewer-administered modes (e.g., Heerwegh and Loosvelt, 2008). This may even be exacerbated by switching from F2F to web: by contrast to an interview, self-administration feels particularly "unsupervised" and, without an interviewer to motivate them to be conscientious, web respondents may take shortcuts and minimize their effort compared to their style of participation in previous F2F interviews. This raises the more general issue of whether it is possible to maintain the integrity of time-series in which there is a midstream mode switch (FTF to web). In this paper, we report results of an experiment in a panel survey (the UK Household Panel Survey Innovation Panel (UKHLSIP)) that compared the accuracy of past event recall, validated by responses at previous interview, comparing respondents who were switched to web mode with those that continued to be interviewed F2F. We also assess how asking for pre-commitment to careful answering might mitigate any potential loss of data quality resulting from switching to web. More generally, our results allow us to understand a little better how mode-switching interacts with cognitive processes underlying survey response to produce data of varying quality.

### RC23-403.1

**ALLWOOD, CARL MARTIN\*** (University of Gothenburg,  
[cm@psy.gu.se](mailto:cm@psy.gu.se))

#### *Social Science in Development: The Indigenous Psychologies and the Concept of Culture*

The so-called indigenous psychologies are currently a lively reaction to mainstream psychology, mostly in Non-western countries (Allwood & Berry 2006). Their origins can to a large extent be seen as a post-colonial reaction that became clearly visible after the independence of many Non-western countries after World War II. What they react to is basically what is seen as the culture basis of mainstream psychology and their aim is to develop a psychological science that is based on the cultural features characteristic of their own society. The indigenous psychologies aim to be pragmatically relevant to their domestic society and to be rooted in the culture of their own society. In this presentation I will review some recent debates in English written literature on the indigenous psychologies on the consequences of being rooted in the culture of one's own society in a way that makes one's research applicable to one's own society in the sense that it can help solve societal problems. The first theme to be discussed is the idea held by some researchers in the indigenous psychologies of letting the social organization of the specific local indigenous society be designed according to principles derived from the indigenous researchers' conceptions of their own culture. This theme hooks in to the second theme that relates to the type of culture concept most useful given the goals and assumptions of the indigenous psychologies. Here the question of whether an empirical oriented culture concept or a more traditional culture concept held by many researchers in the indigenous psychologies that argue for a more collective clustered and abstract culture concept is best suited for the indigenous psychologies will be dealt with. Consequences and tentative conclusions from these debates with respect to the universality of research in psychology and research in general will be drawn.

#### *Young College Students: Within Physical and Numerical Territories, Different Processes for Individuation*

The intention of this research is to present the results of the comparative study made between young college students connected to two Brazilian universities: a public-state university located in an urban environment marked by agribusiness;

the other being a public-communitarian institution located in an urban-metropolitan environment, marked by a strong and vigorous industry base. The two groups that were studied circulate in physical territories, as well as in numerical/digital territories. In the socialization and sociability processes that they experience, they reveal circulative practices marked by similarities and differences. The majority of the youngsters connected to the public-state university exercise a student-life in a style that is termed "social moratorium", circulating through the territories of family-home, university and cyber space. Many of them undergo transient or permanent migratory processes. On the other hand, a significant percentage of youths connected to the public-communitarian university combine their university-student condition to a job, where they work, and this is why they add working time/space to the circulative processes experienced by the public-university youth. Thus, if there are intersecting points that mark the condition of these young college students, there is also a diversity of juvenile experiences that differentiates the two groups much beyond the social differences/inequalities caused by gender, race/ethnicity and place of abode. Therefore, throughout their student life cycle, they demand distinct "supports" and experience dissimilar individuation processes.

#### *Complementary and Alternative Medicine and the Reprofessionalisation of Medical Doctors in Portugal*

The aim of this paper is to present an ongoing project entitled 'Towards the camisation of health? A theoretical and empirical framework for analysis'. My previous research focused on the countervailing power of complementary and alternative medicine (CAM) practitioners in relation to Portuguese mainstream healthcare, having acupuncture and homeopathy as two case studies. It also developed the concept of 'camisation', which refers to the process of legitimising CAM treatments and solutions for everyday human problems. Furthermore, it analysed the attitudes of key actors within healthcare towards camisation. For example, although the position of the Portuguese medical profession towards camisation has been fluid and changeable over time, there has been a growing number of medical doctors 'incorporating' (Saks, 1995) CAM into their medical practice as a strategy to cope with CAM practitioners' encroachment into Portuguese healthcare. Acupuncture and homeopathy, for example, have been incorporated by Portuguese medical profession both at the institutional and interactional level. This paper aims to theoretically explore the consequences of medical incorporation of CAM for the medical profession, from the point of view of the sociology of professions. The topic of reprofessionalisation of medical doctors who committed themselves to CAM therapies is under-explored in the sub-field of sociology of CAM and might be useful to understand recent trends within the medical profession in Portugal. Reprofessionalisation means the restructuring of education and redefinition of boundaries of knowledge. This paper discusses the extent to which the incorporation of CAM by the medical profession can be viewed as reprofessionalisation, in order to meet new challenges and threats posed by camisation and CAM therapies.

[joana.almeida.2007@live.rhul.ac.uk](mailto:joana.almeida.2007@live.rhul.ac.uk))

#### *Theorising Camisation: The Case of Acupuncture and Homeopathy in Portugal*

The aim of this paper is to present an ongoing project entitled 'Towards the camisation of health? A theoretical and empirical framework for analysis'. My previous research focused on the countervailing power of complementary and alternative medicine (CAM) practitioners in relation to Portuguese mainstream healthcare, having acupuncture and homeopathy as two case studies. It also developed the concept of 'camisation', which refers to the process of legitimising CAM treatments and solutions for everyday human problems. Camisation is closely related to the concept of 'medicalisation', the process whereby human problems come to be defined in medical terms. In Conrad's (2007:5) words, 'the key to medicalisation is definition. That is, a problem is defined in medical terms, described using medical language, understood through the adoption of a medical framework, or 'treated' with a medical intervention'. In a similar way, the key to camisation is also definition. CAM language, its framework and interventions are major elements in this process. Furthermore, while medicalisation has been encouraged by a faith in science and the prestige of the medical profession, camisation has been encouraged by the opposite tendencies, i.e. a lack of faith in science and the erosion of medical authority in society. Camisation can thus be seen as a counter trend to medicalisation and a step toward demedicalisation (although at the same time reinforcing medicalisation (Lowenberg and Davis, 1985); furthermore, growing 'incorporation' (Saks, 1995) of CAM in allopathic medical practice can also be leading to remedicalisation, by restoring the medical definition of certain health conditions. I want to develop this conceptual framework further. I also want to discuss the role of key actors in healthcare (the medical profession, the

State and supra-State agencies, the lay populace and health corporations) whose countervailing actions can legitimate (or not) camisation and promote the demedicalisation or remedicalisation of certain health conditions in Portuguese society.

#### *Rules for Solidarity: Reporting an Experience of Collective Construction of Rules in an Informal Solidarity Economy Cooperative*

It is proposed to present and discuss one of the experiences of the Incubator of Solidarity and Popular Economy Initiatives (IEPS/UEFS - Incubadora de Iniciativas da Economia Popular e Solidária da UEFS), extension program of the Universidade Estadual de Feira de Santana-UEFS (State of Bahia, Brazil): the process of incubation of an informal group of people (mainly women) that explores, since March 2013, one of the University canteens. Among others activities, the IEPS/UEFS accompanies the group in the drafting of the rules governing its operation, with respect to the principles of self-management, cooperation, solidarity, democracy and appreciation of work. The adopted methodology begins from interviews with individual members of the initiative, picking up aspects of their personal experiences, expectations with the cooperative work, their advantages and difficulties. Afterwards there have been "conversation circles", where rules on division of labor and its fruits, rights and obligations of the group members, procedure for making decisions, sanctions, conflict mediation and organization of activities have been collectively discussed and constructed. Even though it looks forward to the further elaboration of a traditional statute, in order to make possible the legal formalization of the group, it was elected as a priority the construction of rules that are able to discipline the coexistence in a original and constructive manner, strengthening in particular the ideals of solidarity and self-management that guides the Solidarity Economy. The process prioritizes the use of informal language and effective participation, in order to guarantee that the group rules reflect the relations of power and senses of morality and justice concretely experienced by its members - even if it stays outside the state law.

#### *Fathers, Work and Family in Sweden and the US*

This paper investigated Swedish and US fathers' experiences of work-family conflict, possible solutions, and actual changes to their work situation in relation to becoming a parent. The Swedish data were drawn from interviews completed in 2008 with 16 fathers with a child born in 2005 or 2006. The US data came from interviews conducted between 2005 and 2007 with 26 fathers with at least one child age five or younger. The semi-structured interviews were analyzed according to grounded theory. In terms of conflicts, half of the Swedish fathers mention time pressures or stress, with some referring to work-life balance as a puzzle. Findings indicate that the US fathers think that they work too much overtime as well as shift hours, and they also mention arguments with their partner about responsibility at home. At the same time, a majority of both US and Swedish fathers emphasize family as a priority over work. In terms of possible solutions, a common theme among Swedish fathers is to mention that ideal work hours would be less than their current hours, with some wishing for a shorter work week (e.g., 4 days) and others a shorter work day (e.g., 6 hours). US fathers most commonly wish for a more flexible work-life situation. In terms of actual changes, several fathers adjust their work lives in response to their family life. Among Swedish fathers, the most common changes involve working fewer hours, adjusting their start and end times, and taking advantage of flexible hours. Swedish fathers also emphasize trading off with their partners, including 'shift parenting.' As for US fathers, some have changed their job to be more at home, some changed from working three shifts and some fathers solved the situation by intense work during a limited time.

#### *Politics of Land Grab-Driven Agrarian and Labor Regimes Change in Guatemala*

Changing land resources access and control relations due to sugarcane and oil palm agribusinesses-led land grabbing since the mid-2000s is a major catalyzer of political contention in the Maya-Q'eqchi' populated Guatemalan northern lowlands. Arguably, such contention does not have to do so much with a Polanyian (1968) counter-movement against land and labor commoditization as with a contestation of the ways in which such commoditization is happening. The combination of Market-Led Agrarian Reform and freehold land titling on facilitating access to local land resources to "outsiders" with the international politico-economic scenario of multiple crises which sees land resources as global commodities has allowed for extractivist accumulation interests to mushroom. Elaborating on research since 2006 this paper argues how Maya-Q'eqchi' lowlanders' unrest is rooted in historical agrarian grievances and in those emerging from the 'terms of incorporation' (Du Toit 2004:1003) to the emergent, hyper-commoditized 'labor regime' (Bernstein 1988) into which many feel have been adversely incorporated through flexible labor arrangements either as plantation workers or as contract farmers. Such grievances are amplified by narrowing or breaking inter-class reciprocity mechanisms (Thompson 1971, Scott 1976) which if anything allowed for the continuous (re)negotiation of minimum survival standards between dominate and subordinate classes. Unrest is turning into practices of resistance framed as "defense of territory" and articulated through a repertoire including 'everyday' and more militant forms of contention. Dominant state and social actors frame their governable space-making efforts as "developmental" and "responsible", employing a repertoire based on "divide and win" and "rule of law" strategies articulated through discursive, regulatory and violent mechanisms. Indeed, land grab-driven agrarian change has triggered a new 'cycle of contention' (Tarrow 1998), its outcomes being not a story foretold but the becoming of multiple politics between, across and within state and social actors in contention at different scales and places.

#### *Inequality in Social Capital Transition within Family: Time Diary Evidence*

In this paper we investigate inequality in social capital transition to children using time diary evidence from American Heritage Time Use Study (2003-2012). We first identify set of activities that are particularly salient in social capital acquisition and examine whether parents involve in these activities together with their children in daily life. Specifically we look at absolute and relative differences in parental time spent in (i) leisure activities at home (ii) out-of-home leisure activities (iii) meal time together and (v) volunteering activities. We also look at time spent in watching TV as this is identified as one of the reasons in decline in social capital in the US (Putnam 2000). The study shows significant inequalities in social capital transition by parental education and ethnic background. Low-educated parents spend more time watching television in the presence of children both in absolute terms (total number of minutes) and relative terms (in proportion to total time in watching TV). For example, *ceteris paribus*, white mothers with post-college degree spend 50 minutes less in watching TV daily while they have their children in care. The corresponding figure for white fathers is 37 minutes. On the other hand, high-educated parents are far more likely to involve their children in their out-of-home leisurely activities relative to their low-educated counterparts.

#### *Young People's Time Use Patterns and Future Labour Market Outcome: Does Studying Pay-off?*

Time use data is not adequately exploited to understand adolescents' time patterns (Furstenberg 2000) and life course perspective is, "nearly absent in time use research" (Gauthier and Furstenberg 2002:155). In this paper we address this gap and investigate the effect of young people's time use patterns through life course perspective using a novel dataset that combines longitudinal study and time diary evidence.

We exploit the four-day time diary survey collected for the 1970 British Cohort Study (BCS70) respondents in 1986, linked to previous and subsequent waves of BCS70. We test a series of hypotheses linking the accumulation of various sorts of embodied capitals (social, cultural and economic) out of daily activities, to the result of deployment of these capitals later in life. We ask, for example, whether time spent in school-related human capital formation activities at the age of 16 predicts earnings or probability of being in employment at later ages; and whether this effect varies by gender and class.

Preliminary findings suggest that regular studying in adolescence positively affects future earnings even after controlling for parental background. However, the effect of time spent in school related activities has a stronger effect on future earnings of those coming from better-off households. The effort in adolescence is not enough to compensate for gender inequality in earnings later in life.

#### *The Concept of Good Life in Ecuador Between Indigenous Movement, Mestizo Intellectuals and State Politics*

The concept of Sumak Kawsay, Buen Vivir or Good Life has entered the political discourse in Ecuador since the years 2000 to 2002. After a slow integration into the discourse of the indigenous movement that understood Good Life as a territory and identity-based harmony between individual, society and nature, the Constituent Assembly 2007/2008 lead to a further dissemination of this concept. In this context, two other discursive streams won importance: a left-leaning group of mestizo intellectuals on a Latin-american level, amongst them Alberto Acosta and Eduardo Gudynas, and the Ecuadorian State that declared the Good Life in the 2008 Constitution as its central principle. Both groups differ from the indigenous definition, highlighting -in the case of the intellectuals- the contact points to other discourses, such as socialism or environmentalism or -in the case of the state- the possibilities of implementation. In both cases, the territorial and identity-tarian implications are downsized.

This presentation will resume the history and development of the concept of Good Life, concentrating on the different conceptions of Good Life by the three main groups that work with this notion. By this, the different political backgrounds and implications and the conflicts that are based on them will be worked out.

#### RC47-770.2

**ALTMANN, PHILIPP\*** (FU Berlin, [PhilippAltmann@gmx.de](mailto:PhilippAltmann@gmx.de))

#### *The Ecuadorian Indigenous Movement As a Social Movement*

For more than two decades, the indigenous movement in Ecuador has been –and despite a recent crisis still is– one of the most important social actors in Ecuador and Latin America. Its specificity of being mostly based on ethnic identity seems to have impeded a coherent interpretation of this movement as a social one, that is, an interpretation based on theories of social movements. Indeed, most analysis of this movement tend to focus on its discourse, its fight against racism and exclusion or its relationship with state and government. Only very few try to apply social movement theories on this social movement. This presentation will be one of them. Given that this research has an exploratory character, the theory used as an interpretative base will be resource mobilization theory, correcting its shortcomings, especially concerning discourse and culture, with other theories. The development of the organizations of the indigenous movement and the relations between them will be studied, highlighting the political, discursive and strategic differences and points of contact. By this, not only a compared history of the different organizations will be achieved, but also a specification of the thesis of the "crisis of the indigenous movement" in Ecuador. The special relationship with Rafael Correa and the subsequent efforts of unity and attempts of division will be another focus of this presentation.

#### *Recognition, Trust and Reputation in Youth Travel Practices*

The study investigates the issues of recognition, trust and reputation focusing on the dynamics of an online community promoting worldwide free hospitality: the *couchsurfers*.

With the only guarantee of the information displayed in users profiles, this website enables a potentially risky exchange, where people share their private spaces and time with unknown travellers. I analyse the process of trusting a stranger in terms of recognition of a cross-national common ground and of strategies that users can adopt in order to orientate themselves while dealing with global diversity. Mutual hospitality is here seen as a concrete experience of Kant's cosmopolitan right, based on a willingness to engage with foreigners and on a sense of belonging to humanity that is perceived, pursued and performed by youth.

In order to illustrate this process, I have collected the data from 5 networks of 11 users, 482 online references and 15 qualitative interviews. The 3 key-elements that my work identifies are: 1) the expression and recognition of three cosmopolitan ideals that create that sense of *commonality* that enables the communication among members: the value of *Sharing*, the search for *Authenticity* and the desire of learning while travelling (the *Bildung*); 2) the creation of pathways of trust that can diffuse cooperation through the same global mediums as those of risk and fear; 3) the development of 'social devices', like the use of a system of public online reputation, for decoding transnational reality and for engaging with others worldwide.

[alex.altshuler@gmail.com](mailto:alex.altshuler@gmail.com))

### *Are We Protected? Model for Predicting the Level of Perceived Secureness in the Face of a National Emergency in Israel*

**Introduction:** National emergencies are characterized by a destructive potential of causing a severe damage to a community's social fabric, worsening the psychological well-being of citizens and even causing death. A war and major earthquake are among the most relevant types of national emergencies in the Israeli case. **Aim:** The aim of the current research was to construct an innovative comprehensive analytical model for understanding the mechanisms that characterize human perceptions of national emergencies prior to their occurrence. Towards a broad understanding of the phenomenon, a novel measurement tool and a new holistic concept of "perceived secureness", that encompasses both risk perception and perceived preparedness, were created. **Results:** The results of this first of its kind analytical and empirical study indicate that regarding an earthquake in the Israeli context there were found strong and significant relationships between the three dimensions of perceived secureness: national and local ( $r=0.86$ ,  $p<0.001$ ), national and household ( $r=0.79$ ,  $p<0.001$ ), local and household ( $r=0.82$ ,  $p<0.001$ ). However, the results regarding a war reflect a different pattern: the relationship between national and local perceived secureness was found insignificant ( $r=0.08$ , n.s.) as well as between national and household secureness ( $r=0.08$ , n.s.), while the relationship between local and household secureness was found strong and significant ( $r=0.93$ ,  $p<0.001$ ). In addition, all the cross-context (earthquake, war) relationships between the perceived secureness' dimensions were found insignificant. **Conclusions:** The novel parsimonious concept of perceived secureness was found to be context-and-dimension-sensitive. In terms of context, it distinguished between an earthquake and war and in terms of dimension, it distinguished between the national, local and household level. Consequently, it may serve as an effective tool for scientific analysis, risk communication monitoring and public policy consolidation.

#### *Gender Policing in Latin American Societies*

Latin American policing is among the most conflictive and low quality government services in the continent. In particular, policing street people and particularly young people is an area with great opportunities of improvement. This paper compares ways of policing in five countries in L.A. Argentina, Brasil, Colombia, Guatemala and México. Will make an effort to show the more problematic areas of the relations between police and the youth. I will also make a strong content analysis of gender bias policing in this countries. The paper will draw from a set of individual and group interviews in ten cities of the countries marked. I will describe the different types of verbal and physical encounters between police and young women, evaluate the quality of the encounter and make an interpretation on how gender is define and or exercise trough this encounters.

RC29-506.4

**ALVARADO, ARTURO\*** (El Colegio de México, [alvarado@colmex.mx](mailto:alvarado@colmex.mx))

#### *Justice, Legality and Legitimacy: Youth Sense and Use Of Legal Norms In Urban Contexts In Latin America*

In the midst of an extremely violent war against drugs, against gangs and organized crime, Latin American elites have implemented a series of disputable institutional reforms to the justice and legal systems. This implementation has been corroded by the inability of the same elites to perform and even respect these regulations, because there is strong corruption and impunity mainly among the political elites.

In the middle of these battles, youth population has been targeted—blamed for the major crimes that are committed by different armed legal actors. One important issue is youth involvement in these illegal activities. Another is juvenile perception of changes and, even more, socialization and acceptance of the new limited legal norms (such as the provision policies against drugs).

This paper will present a result of a comparative study of youth conceptions of norms and their sense of legitimacy and justice in 10 Latin American cities.

This paper claims that in spite of the sociological general opinion about legal cynicism, juvenile population in Latin America knows and even accept legal norms, and use them to a certain point in more practical terms than the rhetorical strict social behavior. But they contested certain conceptions that they consider unfair and unjust. They know that laws and regulations are very limited, some of the unfair, particularly when they target-label youth people as potential criminals. They consider this new context unfair, discriminatory, but they tend to accept and aspire to an overall fair and equal system of justice, a regime that political elites and regulations have not been able to provide for this population. The paper is based in focus groups and surveys develop in 2012 in 10 Latin-American cities, about the uses and acceptance of legal norms.

**ALVARES, LETICIA\*** (Universidade Estadual de Campinas, [leticiaalvares@hotmail.com](mailto:leticiaalvares@hotmail.com))

#### *Bodily Practices of Elderly and the Methodology of Oral History*

The category of bodily practices refers to phenomena that are shown primarily in body extent, of which constitute cultural expressions and are expressed as a form of language (FALCÃO & SARAIVA, 2009). It is also understood that the bodily practices refers to social phenomena such as dances, games, leisure, physical exercise, sports, the gymnastics, martial arts (LAZZAROTTI, 2010).

Brazilian public policies and social programs aimed at health promotion that have bodily practices as an axis, in general, they have been structured with the anatomical and physiological issues as central references. (SILVA & DAMIANI, 2005) This character is also present in programs offered specifically for the elderly where, in general, only strictly biophysiological goals are important to be conquered in order to combat the physical declines that come with advancing age.

Opposed to this narrow look of the body presentation in these program offerings, the category of bodily practices seems to offer us the opportunity to think about the bodily expressions beyond of their biological condition. This category has been increasingly defined making use of theoretical and methodological frameworks from the social sciences and humanities in order to look for a body that also presents a condition that is social, historical and cultural.

Reflecting on the possibility of enhancing the bodily experience of an old person, in other words, looking beyond the achievement of goals that only combat physical decline, one can think of the potential of the memories in order to know about bodily practices that this old person experienced along his life by making use of the methodology of Oral History (VON SIMSON, 2003). Memory narratives produced in the elderly can evoke about how bodily practices may vary by gender, culture context, social class and education in a life course, producing different body experiences at this stage of life.

#### *Language and symbolic thought in Albert Einstein's relative space-time: new interdisciplinary perspectives in Einstein's Mechanics of relativity*

Our paper discusses Albert Einstein's conceptual ontology with special focus on the grounding of RELATIVE SPACE TIME concept. It understands that Einstein's ontology given its tropological nature, it builds essentially the concept of relativity among the relations between language and thought according to a semiotic perspective. So, the main objective of our paper intends to analyze Einstein's Relative Space according to Semiotic approach when it intends to discuss the role of language and thought in Albert Einstein's categorization, figurativisation, metaphorisation of relative space-time. The second objective aims to present new interdisciplinary perspectives between Anthropology and Semiotics, when it analyses Einstein's innovative method in Modern Physics. Einstein's method verified in May, 29<sup>th</sup> 1919, in Sobral, Brazil, as it took a total eclipse of the sun as a new method of investigation in Modern Physics. Our approach takes an interdisciplinary perspective, and it considers the main contributions of prominent theorists in Structural Anthropology, Hermeneutics and Semiotics, such as Charles Sanders Pierce, Ferdinand De Saussure, Emile Benveniste, G. Frege, Claus Emmeche, Winfried Noth, Claude Levi-Strauss, Gaston Bachelard, Gilbert Durand, Clifford Geertz, and Paul Ricoeur in order to discuss the role of language and symbolic thought in the modes of reality comprehension, taking Einstein's relative space-time conceptualization, figurativisation and metaphorisation. Since Einstein's innovative scientific experience is considered to be one of the most important contributions to Modern Physics, we argue that our confirmations so far obtained and here presented on the Physics of Einstein, if they do not completely solve Einstein's long standing enigma of relative space-time conceptualization, they point at least to some beacons in this very much complex but fascinating field in the relations of man-language-myth-world relations.

#### *Leadership Development Programs in Organizations: New Dimensions, Impact and Evaluation*

We want to identify how the concept of leadership has evolved in recent years, the implications of that evolution for managers' work, and the impact of leadership development programs on the lives of organizations and their employees. We will describe the main sources of evaluation of the effectiveness of these programs. We will focus on the learning transfer process from the classroom to the

companies and people in the real world. Leading change in organizations entails changing people's behaviours and, in order to do that, appropriate metrics and rewarding mechanisms need to be developed.

Leadership development interventions will be analysed and their forms of assessment such as: interviews, feedback forms, in-depth consultation. Participants in those programs draw very interesting conclusions contrasting their newly acquired knowledge with their previous first hand life experiences. Implications for business schools, universities and learning institutions in general are also to be considered, particularly with respect to their role as change agents and mobilizers of knowledge.

We will describe the new leadership dimensions and how they affect the roles and responsibilities of those holding a leadership position. Is there a change in the role and purpose of business leaders? What are the main characteristics of that change? Does this change extend beyond business boundaries? What are the effects of this change for people in organizations? We will further analyse concepts such as Community and Collective Leadership, Distributed and Shared Leadership, and others closely related to them: corporate social responsibility, coaching, relational management, motivation, communication, empathy and personal connection, commitment, engagement, career development, work/life balance.

Our investigation will be based upon the last five years' published research from Ashridge Business School, a very well recognized institution for translating theoretical organizational knowledge into best practices in organizations.

*The Gemeinschaft at the Dawn of Argentinian Sociology: The Contributions of a. Poviña and F. Ayala*

The paper that we hereby present looks into the singular ways in which the problematization of Gemeinschaft-Gesellschaft was "translated" into Argentinian sociology in the 1940s, prior to its institutionalization as a scientific discipline in the context of the University of Buenos Aires (UBA).

In our work we test, in a preliminary way, the hypothesis that, in this conjuncture, more prone to essayist writing than to methodical and scientific inquiry, "community" acquired a "culturalist", "essentialist" or "primordialist" meaning, closely related to the concepts of "nation" and "pueblo".

To carry out this task, we will explore, fundamentally, some works of the Argentinian Alfredo Poviña and the Spanish Francisco Ayala.

The first of them, Alfredo Poviña, presents a changing profile, mainly regarding his political orientations, which first leaned him close to Peronism and then to authoritarian projects of communitarian stamp, such as the J. C. Onganía's dictatorship (1966-1970). He developed his work, mainly, in the National Universities of Córdoba and Tucumán. In particular, we will analyze his presentation for the First National Congress of Philosophy in 1949 in Mendoza ("The sociological idea of community"), as well as his work *Ontological Sociology Issues*, published that same year.

On the other hand, Francisco Ayala, a Republican exile, played, from the National University of the Litoral, a prominent role in the Latin American academia; at the same time as an editor-translator (among others, of F. Tönnies's *Community and Society*) and as a producer of texts. Among the latter, his work around the "sociological concept of Nation" (1941) stands out and will be the focus of our analysis.

*New Citizenship, New World. a Theoretical Analysis of the Last Social Movements in Spain (2003-2013)*

Citizenship was articulated as a social science concept by the differentiation between civil, politic and social rights that Marshall proposed in 1950. Nevertheless because of globalization, translational migrations, new social movements and the transformations of identities and their referents, Marshallian citizenship has been questioned. New claims, new demands of recognition and new social practices have transformed the classic references on which citizenship relays, such as time, space or nation. In this paper we explore the different academic proposals and we will revise at least three major perspectives of analysis (structuralism, the liberalism and social actors) that aim to address the future of citizenship, social movements and political practices and systems of Western liberal democracies. We will focus our analysis in the Spanish context and the last well-known social movements as the 15M or "No a la Guerra", but always taking into account the complexity of the local-global realities.

**ALVAREZ-BENAVIDES, ANTONIO\*** (École Hautes Études Sciences Sociales, [alvarezbenavides@gmail.com](mailto:alvarezbenavides@gmail.com))

*Spanish Integration Model*

This paper arises from a doctoral thesis defended in November 2012 focus on the integration / marginalization and the reconstruction of collective identity of Moroccans in Madrid. The purpose of this paper is to show that even if the access to citizenship in Spain is complicated, our autonomic decentralized system and the consequent plurality of planes integration have made actors the principals of the integration process, particularly in the local area. In Spain there is not a national integration system that is why I defined this system in the text as the Spanish integration non-system or the integration without a system. Migrants and civil national have played a central role in the integration of migrants, as well as migrant's informal networks and civil society. Even if there were some racist attitudes and practices, we also found that taking into account the speed of the migration process and the large number of migrants who came to Spain, we had less conflict than in other countries especially in areas of everyday life. In the process of integration was required, therefore, the involvement national and migrants, a process of communication and working together. There is a loaded term in Spanish with a strong symbolic power that defines when and where this situation occurs: "convivencia" (living together). "Convivencia" is the process by which people communicate, interact and share. The local area is a place of living together, but obviously following the logic local-global and transnational processes, the effects of these living together practices have an impact far beyond the local level. Integration from the point of view of "convivencia" produced cultural pluralism (or interculturalism) maintaining some cultural differences and promoting equal insertion of migrants.

**ALVAREZ-GALVEZ, JAVIER\*** (Universidad Loyola Andalucia, [javiralvarezgalvez@gmail.com](mailto:javiralvarezgalvez@gmail.com))

*Network Models of Minority Opinion Spreading*

The shaping of public opinion through process of social interaction has been subject of significant interest in social sciences. At present, this topic has gained especial relevance due to the proliferation of online social media such as Twitter, Facebook or Youtube, and rising social movements related with the use of these platforms (e.g. Arab revolts, May 15th, Occupy Wall Street, etc.). Despite there are different models in literature that analyze the dynamic of opinion formation, less attention has been paid to explain how the structure of social network and contextual circumstances can influence the course of public opinions. This work is aimed to ask three basic questions: (1) how can affect the structure of social networks to minority opinion spreading, (2) how committed agents can influence in this process, and (3) how mass media action, as a contextual factor, can vary different agents' opinions and network composition. Agent-based modeling (ABM) is used to perform a network model of preferential attachment that is used to explore how phenomena of minority opinion spreading can evolve under different simulated scenarios. This study shows that the success of minority opinions depends on the network structure and composition, and thus external factors such as mass media action that can mediate the strength of these determinants. In spite of people tend to remain silent when they feel that their opinions are in the minority pole, our findings suggest that prevailing majority opinion may be replaced by formerly minority opinion if core agents in the network structure support this view. These results might be relevant to understand the communication process involved in formation of public opinion and the emergence of collective behavior in complex social systems.

*El Concepto De Comunidad: Teoría Sociológica, Historia Conceptual e Historia Intelectual*

Desde hace al menos tres décadas la noción de comunidad se ha vuelto central para una variedad de disciplinas asociadas al campo de las humanidades. El así llamado "renacimiento de la comunidad" supuso la tarea de retrazar la historia de esta noción desde sus orígenes griegos hasta el presente. Como es sabido, el surgimiento de la teoría sociológica a mediados del siglo XIX impactó de manera decisiva en la formación y el desarrollo del concepto de comunidad. La indagación acerca de las transformaciones en los usos y significados de dicho

concepto a lo largo y a lo ancho de la tradición sociológica parece requerir de una exploración, discusión y evaluación de las potencialidades de diversas herramientas y propuestas teórico-metodológicas provenientes de perspectivas no específicamente sociológicas. En este trabajo nos proponemos, entonces, analizar de forma crítica y programática las posibles confluencias de la investigación teórica o metateórica en torno al concepto sociológico de comunidad con dos enfoques de uso generalizado y cada vez más extendido en las ciencias sociales y humanas contemporáneas: la "historia conceptual" y la "historia intelectual".

##### *Constructing Cultural Identity, Displaying Belonging. the Role of Positioning in Migrant Children's Cultural Identity*

In the last years the sociology of childhood has introduced relevant issues concerning children's active role in social processes.

However, despite the proliferation of studies which call into question the idea of universality of childhood (Prout, James 1990; Holloway, Valentine 2000), the perspective of children in migration studies remains still marginal.

So far, studies concerning children and migration have privileged the issue of second-generation's integration in multicultural societies (Baraldi, 2010), rarely focusing on children's voices and the relationships they maintain with their parents' countries. On the other side, works that focus on migrant children's cultural adjustment or their sense of belonging, as well as dominant discourses inside schools, construct them as subjects stuck amongst cultures, forced to choose a cultural identity to adhere to. This perspective emerges from a reified and essentialized idea of culture as well as identity, that takes both of them as given (Piller, 2007), denying individuals the possibility to be active participants in social processes.

This paper aims to investigate how children living *place polygamies* (Beck 1999), due to experiences of temporary return to their family's countries, actively participate in the discursive construction of their cultural identities in the interactions.

Cultural identity is here observed from the perspective of the Positioning Theory, thus highlighting its processual and relational nature. This perspective allows us to observe cultural identity not as a final product, defined by the belonging just to one place, but rather as a discursive construction, which gives rise to several possibilities as in perpetually negotiation. In this process migrant children are active participants showing their social competences.

##### *Desafíos Éticos De La Circulación Internacional y Acceso Abierto Al Conocimiento Científico y Tecnológico*

En el marco de las políticas de integración económica mundial, y de integración regional y nacional de los sistemas de ciencia y tecnología (CyT), se han propuesto políticas para impulsar la circulación internacional del conocimiento científico y tecnológico que están transformando los procesos y las prácticas de información y comunicación de la investigación científica. El propósito explícito de las políticas mundiales para promover la circulación internacional del conocimiento es la integración de un sistema mundial de información de acceso abierto (*open access*) a la investigación científica para cerrar las brechas cognitivas entre países desarrollados y en desarrollo. Sin embargo, las complejas relaciones entre la circulación internacional y el acceso abierto a la investigación científica y tecnológica, que caracterizan el nuevo paradigma de información y comunicación, plantean desafíos éticos a los investigadores de diversos campos de conocimientos. La presente exposición deriva de una investigación sobre las redes internacionales de conocimiento de los científicos jóvenes de la Universidad Nacional Autónoma de México. La estructura de la argumentación se presenta con base en tres ejes transversales de análisis: a) las políticas mundiales de información y comunicación de la investigación científica de la última década; b) las reformas a la *Ley de Ciencia y Tecnología* en México para garantizar el acceso abierto a la información científica; y c) las declaraciones de investigadores, expertos y profesionales sobre los desafíos éticos del nuevo paradigma de circulación internacional y acceso abierto de la investigación científica mexicana.

##### *Leaning Against the Wind or Sailing with It?*

Global warming or climatic change rests on two main strategies: mitigation and adaptation. Both raise some important issues such as monitoring the relation between a society and its environment. Does the transition from one stage to the next denote a "normal" gradation in monitoring "our" relationship with the environment or does it mean an inflexion, even a rupture, of it? To answer this question, we will provide further clarification on both strategies to identify their

similarities and their differences. Mitigation as adaptation goes together with the recognition of climate change. While mitigation aims for the preservation of our current climate stakes, adaptation works on the degradation of the current climate. In this perspective, mitigation and adaptation are linked in time as a logical succession. Nevertheless, their relationship isn't such evident because of the uncertainty surrounding adaptation. If mitigation works on the reduction of the greenhouse gases, the goal of adaptation stays obscure: "Who should adapt and which direction should be taken?" Mitigation's strategy clearly aims for a stable stage while adaptation goes together with the idea of perpetual change. It integrates the principle of climate change. This distinction matches an inflexion of "our" relationship with global issues such as climate change. Mitigation keeps the myths of struggle going while adaptation breaks with this imaginary. Adaptation opts for a new horizon, a new frame that fits, depending of how you look at it, with a certain sense of reality or for helplessness. Does adaptation signify that "we give up the fight" or does it rise of a new maturity, less ambitious in its goals but much more ambitious in its approaches? This is the question we would love to kick in the discussion.

**AMELINA, ANNA\*** (Goethe-University Frankfurt, [amelina@soz.uni-frankfurt.de](mailto:amelina@soz.uni-frankfurt.de))

##### *Reconstructing the Multiple Meanings of Belonging: Some Notes on the Power of Definition, Regimes of Translation and the Researcher's Positionality*

In their recent studies scholars of transnational migration identify various categories of belonging (including gender, ethnicity, class, sexuality, disability and age) as being decisive for the formation actors' subjectivity. Moreover, some scholars indicate that mobile individuals who simultaneously relate to the sending and the receiving locality experience the so-called double location, meaning that they may have different positions in the hierarchies of the sending and the receiving countries. For example, migrant care workers from the Ukraine who reside in Germany may experience a subordinated position (in terms of gender, ethnicity and class) in the receiving setting, but are perceived as having 'made it' in the Ukraine. In other words, the gender-related (or other) categories may have different meanings in different national and also transnational contexts (such as diaspora, for example).

The paper suggests combining the intersectional analysis with cultural sociology, transnational, postcolonial studies and reflections on the researcher's positionality, in order to be able to reconstruct the (potentially) multiple interpretations of categories of belonging. Three questions are of particular importance:

First, how should we reconstruct the multiple interpretations of belonging without essentializing them and without bounding them to the particular national setting? Here scholars benefit from the analysis of ways by which categories became nationalized or transnationalized.

Second, we need to ask how actors and (imagined) communities negotiate various interpretations of a particular category (like 'gender'). Under what conditions, do some interpretations become dominant? How do diasporas and other cross-border arenas develop the 'regimes of translation' of particular categories of belonging?

Finally, we need to clarify the question of who carries out multiple interpretations: the researcher or the researched subject? This reflection should not only include the obligatory disclosure of the researcher's subjectivity, but also a careful self-reflection of positioning towards the sociological discourses on belonging and identity.

##### *Difficulty in the Implementation of Land Reform in Africa: The Case of Tanzania*

Property rights in Tanzania –former socialism country in East Africa having diversity of ethnic groups including of nomadic hunter-gatherer tribe– provided in the "Village Land Act, 1999" differ from modern property rights in Western law particularly with regard to the "customary right of occupancy" and differ from limited rights, known as the "commons" of community members in villages.

The World Bank's land policy has considerably affected Tanzania and other African countries. An overview of the World Bank's land policy, a shift from the neo-classical theory of new development economics to the recognition of an informal system is presented in this article.

Although there has been strong pressure by the World Bank and other donors to implement the Village Land Act since the enactment of the Act, practical enforcement has made little progress in Tanzania. This article examines two projects for the promotion of titling in villages. In general, village authorities and the land sector are largely being left behind by the Local Government Reform Programme and all levels of government, except the central government, which is eager to create a progressive agenda on land reform. For example, many pilot projects for titling have been conducted and have become successful; however, these projects have never been spread to the villages. From this conclusion I could mention that

Decentralization on land titling has not led to the enforcement of the Village Land Act.

Practical enforcement has been little seen as mentioned however established "Village Land Act, 1999" has been very unique and ideal for current stage of Tanzania. I would like to introduce this Tanzanian Village Land Act that is based on informal customary law and indicate to be ideal for current stage for other post socialist countries including Africa.

#### *Good Press: Why Movements Get Covered and with Substance*

When did and why do movements and SMOs sometimes gain sustained newspaper coverage and when and why is this coverage sometimes substantive? Our story-centered argument holds that the social organization and operating procedures of the news media account for its differential treatment of institutional political officials and movements, but also provide openings for sustained and substantive coverage for movement actors, a potential cultural consequence for movements. We argue that the main routes to both sustained and substantive coverage are for movements to mimic and challenge institutional political actors and processes, such as by contesting elections, preempting legislative processes, and launching court cases. Other routes include mounting successful strikes and waves of protest. Routes to sustained coverage that are not expected to be substantive include investigations, trials, violent opposition, and occupations. We use the data from the Political Organizations in the News project to identify the longest sustained coverage "runs" for SMOs across the twentieth century. The results show that 37 high-profile SMOs gained sustained coverage 302 times. Analyses of the subjects and the assignments of authors in these coverage runs provide preliminary support for our story-centered arguments.

#### *Transmuted Inequalities of Class, Race, Religion and Nation among South Asian Migrant Workers to the Middle East*

This paper examines the intersectionalities of class, race, religion and nation among migrant workers from South Asia going to the Middle Eastern and North African countries. In particular it examines how the class positions of the migrant workers in the "destination societies" are racialized and how exclusions experienced in this racialization process impact on the religious and national identities of migrant workers. By focusing on South-South migration processes regarding religious and national identity, this paper addresses an important gap in the field on identity and migration which has primarily focused on South-North migration dynamics. This paper thus explores how South-South migration impacts religious and national identity and the consequent politics of belonging in both sending and receiving countries. The analysis is based on data collected from 2011-2012 from 275 migrant workers from Bangladesh, India, Nepal, Pakistan and Sri Lanka to the Middle East. We found that South Asian migrant workers, shared an experience of racialization and exclusion in relation to the host country populations, whose content was based on religion and national identities. Exclusion had similar effects on Muslim and non-Muslim migrant workers by shifting their religious identities to become more important and adding a critical dimension to their national identities, while also increasing the sense that their national cultures were better in terms of the status given to women and the treatment of strangers. Using the intersectionality framework for analysis, the paper concludes with discussions of how inequalities of class and nation are transmuted into inequalities of religion and race and how these transmutions are impacting on the societies of origin of the migrant workers. This paper thus allows us to understand how inequalities in the societies of work/destination shape and produce inequalities in the societies of origin.

#### *Linking Socio-Technical Vulnerability to Socio-Political Environment: The Case of Fukushima Nuclear Disaster*

This presentation revolves around the sociotechnical system that generally characterizes the functioning of modern infrastructures. It departs from one central question: Where does vulnerability originate from in the sociotechnical realm? The primary objective of this study is to identify and explain how vulnerability emerges and propagates in a sociotechnical system leading to disastrous outcomes. Searching for the origins of sociotechnical vulnerability allows us to recognize critical areas within complex infrastructure system where vulnerability is likely to emerge due to a combination of technical, social, cultural, and political

factors. Furthermore, this study seeks to reveal how the development of vulnerability at the micro level where human operators and technical components interact is tightly linked to the socio-political environment at the broader level. Drawing on an empirical study in the Fukushima nuclear crisis, two main hypotheses are set for examination in this study. First, it is posited that vulnerability is a process that unfolds over time. As a complex system, the fragility of sociotechnical system is emergent in nature. The more structurally coupled and sophisticated a system, the more fragile it is. Second, vulnerability is likely to be hidden due to the socio-political environment in which conflicted interests may entail pressures to ignore potential risks of system failure. The significance of the proposed study lies in its contribution of a new understanding on the origins of vulnerability and how it is hidden from our observation caused by socio-political structures. Integrating concepts from the sociology of disaster and science and technology studies (STS), this study develops a model of socio-technical network linked to the socio-political environment to describe how vulnerability is materialized into a disaster with profound consequences.

#### *Neither Here Nor There: Transnational Identity Of French Immigrants Employed In Israeli-French Companies*

Recent waves of French immigration to Israel exhibit the unique characteristics of a transnational movement (Bowen, 2004). This movement is distinct in the immigrants' strong and continued affinity to their country of origin, despite efforts to integrate into the host country's job market, and form cultural communities. This pattern of immigration invites scholars to rethink concepts such as: integration, assimilation and national identity, and perhaps even replace them with the terms "global nomads", cosmopolitan, and "children of the third culture". These terms seem to better describe the existential limbo these immigrants experience (and even foster deliberately) (Bell-Villada, Sichel, 2011). We thus feel that a better understanding of life on the borderline between cultures is warranted.

In our case, the hybrid identity cultivated by the French immigrants is maintained and even fortified by their preference for working in French speaking organizations. The research reported here examined the formation of trans-national identity among French immigrants employed in companies providing services in French to French audience. Many of whom are employed in telephonic call-centers, where vast aspects of the work is technologically mediated, and workers are employed under various forms of non-standard employment which deprive them of job security. The present study asks how this employment pattern, and work environment impact the manner in which immigrants' relate to the Israeli culture, construct their identity, form communities of belonging, and integrate into the Israeli society.

Based on 40 in-depth interviews with French immigrants working at various French oriented companies we show how the sense of temporariness and instability characterizing their field of work contributed to their construction of a hybrid ethnic identity. The francophone identity provided an important social and cultural resource that many immigrants felt they should preserve.

#### *Islam, Public Space and Cosmopolitanism in Senegal: Between Local, National and "Universal"*

In Senegal, as well as in other sub-Saharan countries, Muslim communities have been contributing to a development of public spaces. In capital cities like Dakar, Bamako or Niamey, Muslim dynamics framed by various Islamic events (conferences, religious meetings or festivals) take place in different areas in the city, new mosques are inaugurated every year in suburbs, Islamic television and radio networks diffuse their own programs and sometimes broadcast live different activities and rituals (prayers, pilgrimages), etc. Some recent works analyze this trend as an emergence of new modern "public islam" developing in West Africa, promoting Islamic moral and social values through younger generation (Samson) and, in some cases, connected to universal religious revival or "reformism" in Arabic countries (Holder). Today, Islamic dynamics are changing the whole sight of African societies, promoting both local and national identities, developing transnational networks, adapting to various influences and thus, improving what we can even call, new Islamic cosmopolitanism.

Based on case studies in Senegal, this paper analyses the roles of Islamic dynamics and their symbolic performances in the recent political and social change in Senegal. The reconstruction of public spaces by Muslim communities and their cosmopolitanism can be seen as a solution to various problems that State and society are facing today in the process of political modernization.

What are the features of new (local, national or transnational) Islamic dynamics and what are their roles in the (re)construction/(re)organization of public spaces in Senegal? What are the relations between the state politics, Islamic transnational networks and the local initiatives? How local, national or "universal" Islamic

identities are bounded each other through public spaces? What kind of theoretical work can be possible to analyze these socio-cultural and political trends?

#### *Internal Migration Among the Women and Street Trading Activity: A Poverty Elevation or Reduction Strategy?*

A major ingredient for unabated increase in street trading activities within urban centers of developing countries has been the need to migrate from the harsh effects of poverty from the poor households or family and rural communities. Ironically, the activity is shrouded with myriads of challenges and robust arguments on financial benefits or welfare improvement accruing from the activity are very rare. This study therefore questions the role of urban street trading in welfare improvement and probes into its possibility of aggravating the burden of poverty among women who are the most vulnerable. Data was extracted from a pan-Nigeria street trading survey funded by Covenant University Centre for Research and Development (CUCERD), Nigeria. The study locations consist of randomly selected Central Business Districts (CBDs) in three major cities across three geopolitical zones in Nigeria. Data were analyzed using univariate and binary logistic regression analysis. The result indicated that the average daily needs of a migrant woman is far above daily income and that higher education is not significantly related to higher income among the migrant women ( $p\text{-value} \leq 5\%$ ). A daily income level above N2500 would likely enhance a positive change in welfare status of an average woman street trader. The study concludes that women migration and street trading could be escape routes from unemployment but not an escape from poverty among the women. Alternative income yielding jobs are recommended for women especially in urban centers.

#### *Risk Assessment in Men Convicted of Intimate Partner Violence. the Adaptive System Data Integration (ASDI)*

In any society, violent phenomena occur and they always build a complex situation whose study involves considering different perspectives. Inside a relationship, violence against women is a good example. In this context, the analysis of the victim risk is crucial and being a major challenge for researchers.

This paper presents the Adaptive System Data Integration (ASDI). This system is an analysis tool to organize and analyze qualitative and quantitative information (Amozurrutia, & Marcuello, 2011). The ASDI is based on a model that allows continuous updating of their evaluation criteria. Using this method it is possible to link two or more observable data for integration into categories and their representation synchronic and diachronic as text.

In this research, we study a sample of 45 convicted male batterers who participated in a psychological intervention program. The (ASDI) performs a risk assessment from nine variables that collect information from scales: Buss-Perry Aggression Questionnaire, Inventory of Ambivalent Sexism and Attribution of Responsibility Scale (Minimization Subscale). Also we get information of initial interview to offender -before starting the treatment- and the therapist who performs the procedure.

The scores are compared with the Spousal Assault Risk Assessment Guide (SARA) and the therapist's assessment done at the end of treatment. The results show statistically significant correlations between the ASDI and the therapist assessment but no with SARA scores.

#### *Spreadsheet Model for Complex Variable Integration: A Sociocybernetic Approach to the Emotional Component in Violent Actors Interviews*

Sociocybernetic perspective tries to adapt available cybernetic strategies and conceptual resources to problem solution through a heuristic approach (Geyer, 1995). In the case of capricious observable conditions in social analysis there are situations in which empirical information present irregularities difficult to overcome. On the one hand difficulties begin with incomplete information in an observation unit missing several dependent variables (Ibáñez, 1994). In the other hand, there are unstable and very significant emotions behavior that may alter the explicit observables attributes. (Guba y Lincoln, 1994)

Incomplete information in first order techniques present a headache from statistics perspective. It is not possible to accept an observation unit with two or more data missing (Padua, 1982). In second order techniques like discourse analysis the number of observations associated with several paragraphs may not allow an integration of variables into categories for analysis inference (Ibáñez, 1994). Although intelligent analysis may be done out of theoretical principles i.e. that of size definition of samples in statistics or the necessary existence of all variables needed for category integration, in both cases there is not enough theoretical criteria to make it rationally valid.

Emotional issues in violence situations are strongly difficult to record and evaluate. One strategy is to make analogies between real violent moments with post-violence narrations. Text analysis with implicit emotionality contents modifies descriptions, judgments and assessments. Logic in the algorithms that emulate the valuations of these conducts should include the non linear behaviour.

In this paper I present an algorithm that proposes a better alternative to resolve the above cases just referred and the inclusion of emotional behavior. It is implemented in a Spreadsheet language that configures an application for social analysis. The model is applied to a real case involved in interviews of violence actors.

**AN, MI YOUNG\*** (Kookmin University, [myan@kookmin.ac.kr](mailto:myan@kookmin.ac.kr))  
SHIBATA, HARUKA (Ritsumeikan University)

#### *Care Time Diamond and Its Applications to Seven Asian Societies*

This paper suggests a quantitative way of analyzing welfare mix in care provision. It is conceptualized as care time diamond which indicates the distribution of care provision between state, market, community and family, measured in time. Welfare states not only de-familialize the caring function of family but also familialize it. The degrees in which the informal care is formalized may be mediated by familial practices and notion or preference towards provision of care. Care time diamond is an effective tool to understand relationship among the four pillars in care provisions and its changes over time.

As a way of applying the approach, it is suggested to distinguish cared time from caring time and gross care time from average care time. We tried to collect care time data from seven Asian societies but only Japan, Korea and Thailand have developed time use survey which is prerequisite for utilization of the approach (on caring time), and Thailand's data is only about elderly care. Some societies have gross cared time data, and others have gross caring time data. In the mean time, some societies do not have care time data but have cared person data, or data of gross number of children/elderly cared in each sector. Therefore, our discussions focus on Japan and Korea but we draw upon its implications for other societies in Asia. All in all, we highlight the usefulness of the approach as a way to understand the care mix in societal level.

**AN, MI YOUNG\*** (Kookmin University, [myan@kookmin.ac.kr](mailto:myan@kookmin.ac.kr))

#### *Familialism in Transition: The Development of the Chilcare Regime in Korea*

This paper traces the development of the state's intervention in childcare in the Republic of Korea. Building on Leitner's typologies of familialism, the paper shows how Korea has altered childcare arrangements over time. The paper argues that state intervention in childcare in Korea has strongly relied on defamilialisation, characterised by selectively subsidised market provision. The reforms of recent years have signalled a move away from selectivity and towards universality, and the redistribution of care costs have encouraged the role of the family as a childcare provider. These continuities and discontinuities are attributed to a top-down policy process and are driven by the imperatives of economic development and electoral competition. The paper also considers the implications of the childcare regime, with a focus on gender equality. The paper questions whether the market mechanism is the most effective method for facilitating women's paid work and for achieving a regime centred on gender equality, and asks whether more attention should be paid to the redistribution of time, rather than money.

SIMONDAC, SUZETTE (University of the Philippines)

#### *Natural Resource, Economic Opportunities and Population Dynamics Among Badjao Informal Settlers in Batangas City, Philippines*

The dynamic formation of informal settlements are important to consider in analyzing environmental and developmental issues due to its implications for sustainable development and social well-being. Additionally, understanding environment and resource dynamics requires critical consideration for populations

involved within that particular environment. Of particular concern for this study are the *Badjao*, indigenous maritime people originally from the southern Philippines, but some have since migrated toward other parts of the country. One of the cities where the *Badjao* peoples have migrated to is Batangas City, a city in the north-central part of the country with an average income of P400 million pesos or more. As a result of the presence of the *Badjao* community, issues and concerns have been raised by the city local government unit (LGU). At the same time, the *Badjao* also experience social, economic and environmental problems in the city. Using key informant interviews, focus group discussions (FGDs), critical review of related government agency reports and documents, and field observations, this paper examines migration patterns of the *Badjao* peoples and its nexus with the existing environment and economic conditions present in the area.

**ANCELOVICI, MARCOS\*** (Université du Québec à Montréal (UQÀM), [ancelovici.marcos@uqam.ca](mailto:ancelovici.marcos@uqam.ca))

#### *Home Owners As the New Precariat: The Mobilization for Dignified Housing in Spain*

Since 2008, there has been a sharp increase in the number of house evictions in Spain and mobilizations in favor of "dignified housing" (*vivienda digna*) have multiplied. They are mostly based on unemployed home owners facing downward mobility that depart from the traditional profile of radical youths active in the squatters' movement (*okupa*) or the global justice movement.

We contend that these home owners constitute a new segment of the precariat (Standing 2011). They are middle and working class people that benefited from easy access to housing credit in the 2000s, during the real estate bubble. When the bubble burst and they lost their job, they became unable to pay their mortgage and faced eviction threats from the banks.

In order to explain the multiplication of mobilizations in favor of "dignified housing," we focus on a particular organization created in 2009 in Barcelona and which has become the most visible and influential actor of this movement: the "Platform of people affected by mortgages" (*Plataforma de los Afectados por la Hipoteca*, PAH).

We argue that the growth of the PAH is not a mere side-effect of the crisis. Many other categories of people are affected by the crisis but do not mobilize as much. We claim that its relative success stems from two processes. First, the PAH has managed to reframe the housing crisis in terms of fraud and deception rather than personal responsibility and as a systemic rather than individual issue. Second, the horizontal structure of the PAH is highly inclusive, allows for multiple types and degrees of involvement, and feeds the development of a sense of belonging that helps sustain the mobilization over time.

Our research is based on semi-structured interviews as well as participant and ethnographic observation in Barcelona in 2013.

**DUFOUR, PASCALE\*** (University of Montreal, [pascale.dufour@umontreal.ca](mailto:pascale.dufour@umontreal.ca))

#### *Street Politics in the Age of Austerity: A Comparative Perspective*

Based on empirical material gathered in Ireland, Spain, Israel, Greece, the United States and France in 2011 and 2012, we propose to compare street politics along two main lines: 1) how the transformations of capitalism have had diverging effects on protest; and 2) how the critique of representative democracy constitutes the common denominator of the activists' grievances but does not translate mechanically into the same kind of movements.

The 2008 global financial crisis did not produce the same kind of effects in all countries, although poverty and inequality have increased in all the cases considered here. To understand how the crisis affects and possibly shapes the mobilization process, it is important to distinguish instances where the mobilization enjoyed the support of a large segment of public opinion (Greece, Israel, Spain) from instances where the mobilization was relatively isolated and/or did not lead to a spill over onto other mobilizations (Canada, France, Ireland, United States). In all these cases, "relative deprivation" seems to be playing a role in shaping grievances but cannot alone account for the timing, magnitude, and claims of the protests.

Aside from the economic context, the most comment element shared by the recent mobilizations under scrutiny is the fight for "real democracy," largely inspired by anarchist ideas of autonomy, horizontalism, and direct participation. But "real democracy" is polysemic and has different implications.

We argue that in order to understand the practices and claims that have developed in the last couple of years and the way they have disseminated around the globe, we need to look at (1) local legacies, (2) the internal dynamics of groups and networks, and (3) national structural as well as institutional configurations.

#### RC31-526.3

**ANDERSON, HELEN\*** (University of Warwick, [h.o.anderson@warwick.ac.uk](mailto:h.o.anderson@warwick.ac.uk))

#### *Highly Skilled Migration, Race and Economic Integration*

The intended paper will explore the links between the rhetoric of Canada's skilled immigration policy and the realities of highly skilled visible minorities. Canada under the Federal Skilled Worker program, a persuasive media and the need to compete globally for talent embodied in people selects those believed can integrate into Canadian society based on language accessibility, prior work experience and education. The Federal Skilled Worker program is couched in expansive, inclusive, meritocratic and colour blind language that belies the realities of highly skilled visible minorities.

Underutilization of highly skilled immigrants' skills and education is a significant issue for those who have gone through Canada's Federal Skilled Worker program. For immigrants of colour there continues to be barriers to gaining employment commensurate with their education, prior experience or skill. This is compounded by the oft requested and elusive concept of 'Canadian Experience'. The pernicious impact of implementing a colour-blind skilled immigration policy is evidenced in subtle micro-aggressions and a refusal to acknowledge race related patterns in the request of "Canadian Experience" from potential employers of highly skilled immigrants.

There is decline in the economic integration of immigrants relative to that of native Canadian's with immigrants facing more of a bleak future prospect despite increase in high skills since 1990s. This results in feelings of alienation that negatively impacts the financial, mental and emotional health of skilled immigrants. As a result, economic integration and inclusion remains an enormous challenge.

I argue that non-recognition of international credentials and prior work experience is attributed to a deficit model of difference. That non-recognition negatively affects skilled migrants regardless of their gender. In a country such as Canada that considers itself multicultural, one of the tenets of the society is its commitment to cultural pluralism, but Canada's endorsement of pluralism is superficial.

#### *The Resonant Places of Transnational Union Struggles: Reflections on the Organising Strategy of the International Transport Workers' Federation*

This article explores a dilemma at the heart of union organising in Transnational Corporations, namely, how to circulate union power across a broad spatial terrain when actually existing labour struggles are generally restricted to single sites? Reflecting on the experience of the ITF, this paper argues that single site campaigns have been the most tangible aspects of federation's organising campaign so far. It is noted that these struggles are resource intensive, and have few 'spillover effects' (Lipshutz, 2004) within the TNC. At the same time, it is argued that the worker tenacity that defines these struggles is rare, and as such they should be theorised foundational 'resonant places' in a wider global organising strategy.

**ANDERSON, RONALD\*** (University of Minnesota, [rea@umn.edu](mailto:rea@umn.edu))

#### *Combining Economic Trend Data with Suffering Narratives for Disaster-Struck Nations*

Some scholars of suffering have noted that the most intense moments of suffering not only cannot be quantified, but the experience cannot be described in words. To the extent that this is true, empirical generalizations about intense suffering can only be inferred from subjective observations or experiences. Yet, instances of national disaster such as Rwanda's mass genocide, where upwards of a million people were killed with huge knives in 1994, beg to be understood within the quality of life (QOL) framework. Can such instances of mass suffering be related to measures of negative-QOL? And can their effects be observable in national economic trend data? This study attempts to answer both questions using trend data from the Human Development Index as well as narrative descriptions of major national disasters such as Rwanda's 1994 genocide, Zimbabwe's political violence and refugee crisis in the past decade, Japan's 2011 earthquake and tsunami, and Tajikistan's civil war after independence. In these instances of social and political chaos, we find evidence of significant economic downturns but not always in the aftermath of a disaster. And while we find considerable repugnance to the atrocities, world attention to a crisis is sometimes very short-lived or negligible. Speculations will be offered on how wide variation in global attentiveness to human atrocities affects the perception of QOL. This analysis is premised on the need for indicators of human progress that differentiate social change at the

negative end, as well as the positive end, of societal attributes such as civility and social solidarity.

#### *Purposefulness, a Key to Happiness in Selected Developing Nations*

Researchers have long puzzled over the high level of life satisfaction, happiness, and optimism found in most Latin America and several African countries. In these nations, indicators of happiness and well-being are high but economic, education, and health indicators low. Existential psychology claims that meaning and purpose are the central ingredients of personal happiness. Research has found that Latin American adolescents have a stronger sense of meaning than other ethnicities. Observers of Latin American culture claim that close family relationships are a key to understanding the Latin American character: their social values, interaction patterns, and culture. This presentation applies the Gallup World Poll data on responses to the question "Do you feel your life has an important meaning or purpose." Latin Americans were more likely than any other sector of the globe to say "yes." A very large share of the people, 89% across all countries surveyed, claimed to have a purposeful life. None-the-less, there is enough variation across countries and regions, that the patterns add to our understanding of the role of purposefulness in people's lives. Using data from the Human Development Report (HDR 2010), this paper shows that Latin American purposefulness provides a partial explanation for their extreme happiness compared to other global regions. On the other hand, perceptions of social support do not account for happiness or national well-being. If Latin Americans are more likely as individuals to have a sense of meaningful purpose in life, this probably translates into contentment and happiness. Large differences in meaning and social life exist both between and within Latin American countries, which will be examined as well. A taxonomy of meaningful purpose will be offered to help clarify the relationship of purpose and happiness.

#### *Why Inequality Matters*

Sociologists tend to assume inequality matters; economic liberals tend to assume it does not, saying inequality generates dynamic incentives in competitive markets. It is not that there is nothing to this argument, as regards mild degrees of inequalities. However grave inequality has a corrosive effect on social foundations. Why is it that there is a consensus of the need to eliminate poverty, but division over the need to address serious inequality? Beyond this, what are the key reasons for grave inequality being anti-social? This paper engages the economic liberal paradigm, arguing that grave inequality is as socially incapacitating as, and often constitutive of, extreme poverty. It makes a distinction between the 'foundational' problems of grave inequality and its consequential effects.

The foundational problems are that grave inequality: denies the social identity and agency necessary for realising the right to self-determination; blocks individual citizens' active participation in society, necessary for democratic development; excludes children as respected members of society; and is constitutive of poverty and similarly incapacitating. The consequential problems (both as effects and as feedback to the foundational problems) are that grave and persistent inequality: is perceived as illegitimate and thus generates resentment, crime and insecurity; creates disadvantage in a range of key social fields such as education, health and social security; and it drives anti-social feedback effects by undermining social cohesion and entrenching inequity across generations. Identifying these principal or 'foundational' anti-social features of grave inequality, this paper argues, is important to building a broader on the idea that inequality does matter.

#### *Deconstructing Racial Boundaries: Case Study of an Emerging Urban Movement in Tel Aviv*

During the last few years, Israel has been witnessing an unprecedented level of racism against the African refugee community. Not only immigrants are racialized as the "threatening other", but also the spaces they create and inhabit are coded as racialized. The marginalized low-income neighborhoods of South Tel Aviv, the new home of the asylum seekers, became the primary arena of struggles, conflicts, tensions and intolerance. I draw on ethnographic research conducted in South Tel Aviv, to examine the ways in which an emerging social movement "Power to the Community" attempts to provide a radical alternative by constructing a bridge between the Africans and the veteran residents and thereby turning the "place of fear" into a "home for all". I look at the innovative tactics the movement uses to reshape symbolic, relational, and physical boundaries in the

community. In particular, I investigate the renewed victimization and vilification discourses and the ways in which the movement gives voice to insofar silenced concerns about the broader socio-demographic status quo within the city of Tel Aviv and Israel in general. I combine insights from work written on framing, tactics and innovation in the social movement literature with studies of NIMBY-ism and urban geography.

#### *Analyzing the Internal Votes in the French Political Parties*

Analyzing the internal votes in the French political parties  
Since about fifteen years, the political parties multiplied the procedures of internal votes of their members. Then they opened primaries to the non-members. It aims for objective – at first – the revival, the innovation – and the consolidation – of democracy in political organizations. According to organizations, the project of paper suggests reviewing the diverse procedures of vote : nature of the electorate, objectives of the votes, chronology, modalities of vote, participation in intra-party elections, official results and analysis, possible disputes. Beyond an empirical research – which concerns procedures and electoral data – the paper will also review the evolution of the relations between the « party in central office » (politician elites) and the « party on the ground » that shows the development of these votes. Which changes introduces the développement of internal votes in relations top-down and bottom-up ?

From a more theoretical point of view, it will be important to analyze how these procedures question the oligarchical tendencies of the parties. Besides, in what and how these procedures question the evolutions of parties analyzed more recently by A. Panebianco or P. Mair and R. Katz who underline a professionalization of parties or a monopolization of resources – of all kinds – by elites ?

#### *Transforming the SnCF – French State-Owned Company : From Historical Unilateral Model to Multipartite Enterprise*

Since 1970s, the French railway sector has undergone massive changes. The European institutions have demanded the opening of the rail transport market. The sector also faced competition by other means of transportation (especially trucks).

In this context, SNCF (the national state-owned railway company) endeavoured to adapt itself to policy reforms and the competitive environment. The company partially replaced its former model of development (based on public service *à la française*, i.e. offering low-price tickets and committed to egalitarianism) with a new model, identical to that of private companies. The new model transformed the internal functioning of the company (type of employment contract, pay scale, and nature of industrial relations) as well as market strategies (economic model, pricing strategy).

Changes introduced by the SNCF top management encountered resistance from employees, trade unions, transport users associations and some high-rank transport officials. The struggle between all these actors resulted into a hybrid organization of the railway sector. By now, each activity of the SNCF works autonomously: the various divisions of the company develop their own work modalities and have their proper representations etc.

What is the nature of this new heterogeneous organizational model ? How does national railway company, which transformed after structural improvements, strategic realignment of networks and product offerings, internationalization, and efficiency improvements, adapted to structural shifts and uncertain economic and legal context ? Which divisions of the company are the most affected by change ?

This paper will attempt to answer these questions, by examining the deconstruction of an old organizational model and its transition and transformation into new one. Our focus, while analyzing the structural shifts, will be on the description of internal conflicts and representational gaps among different SNCF stakeholders and their effects on the functioning of the company.

#### *The Role of Private Sector in Global Climate Governance*

The private sector plays an active role in implementation of mechanisms concerning the mitigation of climate change, including the Kyoto Protocol. In spite of that, the corporate actors play a limited direct role in international arenas when it comes to negotiating the design of climate regime. The climate governance United Nations system remains state-centric, but the active participation of corporate actors in negotiation of climate regimes is essential to increase the efficiency of the climate governance. Business is not just a subject of a regulatory climate and energy imposed by the state; rather, business is an intrinsic part of the fabric of climate governance, as "rule maker". This article analyses the role of the private sector has been played in the global climate governance. The focus of this study is an analysis of the ways in which the private sector responds to the agenda of climate change and climate governance. The private sector does not only play a "rule taker" role in the climate change regime, as it does not seem to act as passive observer. The results suggest that the private sector is able to play a key role in the changing architecture of global climate governance based on the principle of multi-stakeholder participation in global decision-making.

*The Political, Economic and Social Crises and the Creative Sponsorship of Young People in the Carioca Slums – Rio De Janeiro/Brazil*

This abstract rises from the extension of the research in Cultural Identity performed since 2004 by University of Rio de Janeiro State (UERJ) with teenagers and youngsters at the Cartola Cultural Center (CCC), in Mangueira's Favela. The main results are published in the book "Pink and Green Territory: psychosocial constructions at the Cartola Cultural Center". Alongside the worldwide economic crisis, which has also ravaged Brazil in the form of a lower growth rate than expected, unemployment and violence, the city of Rio de Janeiro is experiencing a housing crisis of devastating social consequences. In the turn of the 19th to 20th century the occupation of the hills of the city began, giving birth to the so-called *favelas*. Since the beginning the *favelas* draw the attention of the government, which tried to come up with a solution to put an end to those types of dwellings. Despite government investment, they survived and today have more than 100 years of history founded on cultural and political creativity, and identity coming from: the time period of its founding, type of occupation, economy, origin of its inhabitants and their relationships, not to mention the intense social life fostered by the cooperation and collective effort of the residents' associations, churches and NGOs. The most recent chapter in the story of the *favelas* has been about the *return* of the State to the territories theretofore dominated by drug trafficking. In 2010, the occupation operation of Complexo do Morro do Alemão\*\*\* was transmitted live by TV broadcasters from around the world with direct comments from residents using the internet. By using blogs and creating profiles and discussion forums, the young people of the carioca *favelas* put their stamp on, and build, creatively, a new perspective for facing economic, political and social crises.

*It Is All in the Family: An Evaluation of Social Class As a Measurement for Family Background Characteristics in Analyses of Sibling Correlations*

Sibling correlations have gained increasing interest in inequality studies as a broad measurement of the impact of family background and community influence on individual outcomes. In this paper we analyse how much of this influence that siblings share in their long-run income is due to social class origin. Data is from Statistics Denmark and consists of 151,484 individuals born between 1968 and 1974. The paper is motivated by studies showing that half of the family and community influence on siblings are uncorrelated with traditional intergenerational measures of family background, such as parental income and education. We use variance component analysis to test how different class schemes explain the sibling similarities. The result shows that a modified version of the Erikson-Goldthorpe-Portocarero scheme that accounts for both the emergence of professional classes and the persistence of old classes of self-employed and entrepreneurs has the best fit and accounts for approximately 3 per cent more than parental income and education alone. When parental income, education and social class are included we gain an even better fit as we account for 12 per cent of the sibling similarities in long-run income.

*Educational Leadership Blind Spots: How Institutional Ethnography Helps in the Rethinking of Administrative Practice*

The nature of educational governance in the US in which there is federal, state and local control of public schooling creates a variety of institutional arrangements for delivering education to students from kindergarten to university. Historically, US educational institutions have struggled with providing equal and equitable education for all students. Laws and policies have been implemented to address these concerns, yet inequalities and inequities persist. Policy implementation usually resides with those in education administration – a profession influenced by many different management and leadership theories. There are scholars who have argued for studies of educational administration that examine institutional processes, ways that schools and universities are organized, how services are delivered and such, however, few have considered the role that Institutional Ethnography (IE) can play in rethinking and reworking administrative practice. At the same time, IE scholars remain puzzled with leadership and management theories and practices as they relate to ruling relations and the organization and coordination of people's everyday work, work that people in places like public schools do. The paper will explore the missed opportunities to show just how inequalities and inequities actually happen given current educational leadership theory and practice, provide examples of how IE adds a different perspective to the organization and coordination of educational work, and suggest ways to improve administrative practice and outcomes by including key elements of IE.

*Between Project Enthusiasm and Routine Demands: Conflicting Logics and Unintended Consequences of e-Health Innovation and Diffusion*

For a long time, and in most corners of the world, great promises have been maintained from ICT innovations in health care, both in regards to quality and efficiency. A related challenge for social science has been to explain the details of ICT diffusion; what makes some ICT innovations succeed and other disappear. In studying a wide range of such innovations (e-health, telemedicine) and diffusion processes in Norway, we have identified a conflicting logic - between innovation enthusiasm and routine responsibility - as a major explanation of how promising projects only rarely are transformed into normal routine. Understanding the detailed aspects of project organisation and enthusiasm-based driving forces, and how these act as system correction/critique, is necessary to comprehend what comes forward as lack of success, or missing diffusion. In this study we have investigated what innovation projects, in the making, bring with them on a managerial level in health care institutions. We have observed that the heterogeneity between innovation and routine within health-care delivery is handled by separating project management/funding from continuous organisational practice. While this separation eases both normal routines and innovative projects, it also delays expected diffusion. What may be technological successes may therefore be organisational failures. Unintended consequences from innovation projects - including learning and understanding action alternatives - are seldom bases for assessment. The paper suggests that a sociological exploration of logics, including financial, professional, technological, as well as organisational, needs to be tighter connected to innovation.

**ANDREJUK, KATARZYNA\*** (Polish Academy of Sciences,

[katarzyna.andrejuk@gmail.com](mailto:katarzyna.andrejuk@gmail.com))

*Defining National Belonging in the Post-National Era: The Case of Polish Repatriates and Privileged Naturalisation in Poland*

European countries are subject to many processes which deconstruct the traditional category of "national belonging" and make the political community more inclusive towards foreigners (developing the category of the European Union citizenship, mass migration flows). However, the notion of an ethnic community and the importance of ethno-national dimension still prevail. This is confirmed by political and legal measures, enacted by different European states which aim at enabling particular ethnic groups to obtain the citizenship of their ancestors. The objective of the presentation is to explore how various groups are included and excluded from a national community defined in ethnic terms. The paper involves an analysis of institutional arrangements regarding the privileged access to Polish citizenship, which have been developed in order to enable faster naturalisation

for some groups of immigrants coming to Poland. The analysis will focus on the normative features of the privileged naturalisation and how they are interpreted by state officials. Various conditions of being acceptable for privileged naturalisation are depicted in the Law on Repatriation and include a mix of objective and subjective criteria which refer to ethnic, cultural and historical aspects of a nation. These measures, addressed to the descendants of Polish exiles, indicate how the category of "belonging to a nation" is constructed on the political and legal level. The presentation, set in a comparative perspective, also aims to answer the question why the policies of privileged naturalisation are commonly accepted in some countries (Poland) and contested in others (Hungary, Germany).

#### *European Educational Migrants on the Labour Markets. Europeanised Professionals or Workers of the DDD Sector?*

The presentation will investigate the question whether the higher education received in the host country facilitates immigrants' access to the primary segment of the job market. According to a prevailing conviction and empirical research, immigrants are most likely to be employed in the secondary segment of the labour market, where they perform works which are described as "DDD": dirty, dull and demeaning. However, this finding may be inaccurate in case of educational migrants, who also work while they study and after graduation. The aim of this presentation is to analyse the situation on the foreign labour market and career paths of mobile Europeans who migrated to take up education abroad. This question is especially intriguing in the light of the European Union attempts to standardize the educational curricula and university degrees in European countries. I will explore the problem basing on qualitative and quantitative inquiry: interviews with Polish students abroad and data from POLPAN (Polish Panel Survey 1988-2013) questionnaires describing the situation of educational migrants from Poland to various countries. The findings will provide an answer to the question whether migrants who receive higher education abroad are able to overcome the pitfalls and limits, imposed on foreigners on the labour markets of the receiving countries.

#### *Mobility, Family Life and European Citizenship: Marriages Between Legally Precarious African Migrants and Peripheral Europeans*

Transnational marriage has become a door opener to international mobility and migrant legality and, as is well documented, aspiring migrants can achieve geographic mobility through marriage by claiming their right in family life. This paper examines the marriages between West African migrants and EU citizens in the Netherlands and analyses a reverse strategy in which international mobility is the means to secure family life and legality. The Netherlands, as many other countries, has imposed many restrictions on family migration (provisions for family reunification/formation) making this process more selective, difficult and costly. Of course, these regulations apply only at the national level. At the same time, EU citizens and in extension their family members can exercise their rights to intra-European mobility, residence and employment. On that basis, legally unauthorized African migrants can legalise their stay in Europe either by getting married in the Netherlands to a non-Dutch EU citizen, commonly Eastern or Southern Europeans, or moving with their Dutch spouses to another EU country (often known as 'the Belgian route'). In this pattern, marriage and family is not a condition that precedes international mobility but the opposite: citizens must move to another EU country in order to claim not as national but as EU citizens their right to stay and work in another EU country along with their family members. In this instance, European citizenship is valorized higher than national citizenship but in order for Europeans to make use of their rights as EU citizens they have to move out of their home country to another EU country. This paper examines ethnographic material collected in multi-sited fieldwork in the Netherlands, Ghana, and Greece and engages into a theoretical discussion over mobility, citizenship and marriage in the EU context.

#### *Ethno Enclaves: Restrictions on Muslim Women's Spatial Mobility*

##### **Abstract: RC 32 ISA**

Ethno Enclaves: Restrictions on Muslim Women's Spatial Mobility.

There been a visible increase in the incidents of violence against minorities, more specifically against Muslims, the violence itself has become more intense and frenzied. The minorities particularly Muslims are moving to areas where they are already in comfortable number.

Muslim women's minority location qualitatively transforms their experiences and perceptions in very distinct way, since their community is one that particularly feels under threat and surveillance, the issues surrounding Muslim women's access to the public and sexual safety become all the more complex. In fact, the restrictions imposed on Muslim women by their own community are closely linked to the exclusion of the Muslim community as a whole. The fact that their entire community is looked upon with hostility and habitually fears violence, means that Muslim women not only have less of a chance to venture out of community boundaries but also that their movements and behavior are more closely policed by their families and their community.

This paper attempts to examine how being a member of a particular religious minority community impacts a woman's access, experience and negotiation of public space. Inquires The areas of concern in the paper are- whether living in 'ethno enclaves' dominated by their own community has a bearing on Muslim women's spatial mobility; if the controls wielded by neo-fundamentalist groups limit their participation in public space; if wearing the veil in fact facilitates movement; how the issue of civic safety is framed in the context of Muslim women whose entire community's safety is often at risk; and finally, in what way does their community's growing exclusion from the everyday civic and political life of the city impact them.

**ANSARI, ARVINDER\*** (Jamia Millia Islamia University, [arvinder2009@gmail.com](mailto:arvinder2009@gmail.com))

#### *Leisure-Time Activities: A Sociological Analysis of Professional Women*

Leisure and dynamic attitudes help in constituting a style of life. One's style of life may be defined as the personal manner in which each individual conducts his or her daily life. The individuality of many a person is best asserted during his or her free-time activities and less during the work that he or she has to perform. Through their activities, the individual has the time and means for developing his style of life, even with respect to his work. Seeking and realizing a style of life, gives leisure its greatest significance. Leisure time appears as the framework of an attitude that is by no means marginal but that is a mediator between the culture of a society or a group and the reactions of an individual facing situation in daily life.

During the last two decades, the importance of leisure behavior has occupied the attention of researchers demanding for more study in this area. Among these studies, the examination of leisure activities via-a-vis the time factor as a result of some empirical contributions has made significant impacts on the conceptual and theoretical understanding of this area.

More women are entering into the professional life; therefore, it becomes important to see what the opinion of working women towards leisure activities is. Furthermore, this paper also tries to delineate the effect of leisure and leisure time activities on professional work of professional women and also vice-versa. Satisfaction and dissatisfaction from leisure time in turn affect the working capacity at work site and also at home. This paper reports the findings of an urban-based empirical study which assessed the impact of time constraint in particular on leisure activities of professional women's.

#### *The Second Mortality Transition: A New Look at Long Term Trends in Mortality Decline*

Demographic transitions occur in stages. We argue that there have been two mortality transitions, and that the European and European-overseas countries for which reliable long-term mortality data exist completed the first stage of the

mortality transition around the middle of the twentieth century. In the first stage, or First Mortality Transition (FMT), from the nineteenth to the middle of the twentieth century, mortality decline occurred mainly at younger ages, survivorship to age 50 increased, and there was a secular growth in the rate of ageing (the rate of mortality increase) over and above that due to the decline in the mortality rate at age 50. By 1950, however, this transition was more or less complete, and the underlying level of survivorship to age 50 began to stabilise. In the Second Mortality Transition (SMT) the main weight of mortality decline thus shifted to older ages, above age 50, and the secular trend in the rate of ageing now shifted from positive to negative, offsetting the continuing decline in the rate of mortality at age 50. There are important differences between countries in the patterning of these changes, and in particular, the patterns differ for males and for females. However, the changes over time have been identical for both sexes. Analysis of country-level variations, by sex, will enable us to understand further the reasons for this shift from the First to the Second Mortality Transition and the differences in the pace at which it has occurred.

### *Lessons from Field Resistance*

Close-up examinations of economic life are necessary to understand the complex dynamics and cultural meanings of commerce. But what happens when these inquiries apparently fail? Put otherwise, what happens when a scholar is faced again and again with strong resistance from field participants to the point of almost derailing a project? Relying on a comparison of forms of resistance in three field-settings that I investigated, my paper aims to draw lessons from field resistance that go beyond any given inquiry and argues that a better understanding of forms of resistance can advance our scholarly work. The diversity of settings discussed (i.e., an aeronautics factory, whole-body donations programs, and a business school) as well as the variety of forms of resistance encountered (e.g., aggression, threats, and silence) motivate, in part, this analysis. The first example entails a study of factory theft and centers on retirees of a French aeronautics plants. The second example is an examination of commerce in human cadavers for medical education and research in New York State. And the last example looks at faculty socialization dynamics at the Harvard Business School, one of the U.S. centers of business education. Overall, the goal is not only to classify forms of resistance in ethnographic inquiries, but also showcase how such a classification exercise illuminates the broader pursuit.

### *Sociological Evaluation of a Serious Game Designed for Building of Epistemic Competency of Military Students*

Serious game applied in education and training is relatively new. Some skills needed for military action could be acquired through traditional (real) training methods, but, at the same time, as the computer games has been evolved, some skills can be obtained through the serious game as attractive and efficient method – virtual method. In terms of costs and risks, using a training solution based on a games scenario is also advantageous.

This study evaluates a serious game (SG) that is being applied in a Romanian Defence University context. It was designed in order to enhance the epistemic competency of the future military commanders at all levels of decision making process. Evaluation is conducted summative, after development of it; the study examines whether the serious game is efficient, appropriate for training goals and well accepted by the learners.

The findings provide evidence that serious game is genuinely beneficial for anticipated learning and training results and it could be used in future training process to assure required skills for new defence missions. Introducing games in the military training is based on all these advantages revealed through the evaluation.

The epistemic competency obtained using serious games can provide necessary knowledge to action in a real experience.

### *Towards a Multi-Plebiscitarian and Multi-Populist Collective Action?*

#### **Introduction**

The aim of this paper is to analyze the transformation of populism and charismatic phenomena in contemporary societies. The argument is that the effects of diffusion of new technologies and structural changes in the functioning of social systems are ceding to increased fragmentation of democracy.

#### **Main Results**

Contemporary social, economic and cultural transformations have been driving Society to both a new public sphere and relationship between populism and charismatic power. Simplifying analytically, on one hand, as a matter of fact, a layer of population, mainly old and/or with a limited

cultural capital, lives (almost) exclusively inside the public space created by mass media, by other collective intellectuals and by the most important public intellectuals. On the other hand, following the prompt coming from new intellectuals that operate through the Net, there is a multiplication of niches of consumption, of ways of living, of political opinions. The possibility of the synthesis declines in this new public sphere. On the contrary, the space of "charismas" grows up. In add, economic dynamics and neo-liberalism thinking makes a pressure to ease in decision-making processes: the myth of the "strong man" rises. Nevertheless, each kind of media advance a different kind of charismatic leaders: thus, we have got several charismatic leaders for each communication and social target group. Charismatic power is not more opposed to rational-legal power: a multiple charismatic groups and leaders represent the normal work of the post-democratic political system. Populism is universal style of this multiple-charismatic politics in contemporary societies. In fact, Populism is not only communication technique but a replacement demand of democratic participation too in a run-way world.

### *The Advertised Crisis: How Advertising Is Facing the Issue of Social and Economic Crisis*

This period is collecting different types of storytelling concerning social and economic crisis the world is facing with, depending on which media and which particular gaze they reflect. We can quote, of course, not only what the media, and especially the news sphere, is telling us about crisis, but also movies, tv fiction, contemporary literature, and so on are depicting a shared frame on it.

But it could be of particular interest analysing how advertising deals with this issue, particularly because it has to talk and engage consumers differently from the past and from its usual patterns. A traditional way to conceive advertising's main scope it's based on the assumption that it has to create and develop a reality totally positive, where everything is at its best in every shade. This led J. Baudrillard to call this totally different reality "hyperreality". But nowadays consumers aren't so well disposed towards this kind of advertising that has to rethink itself in a different way, being more respectful and loyal with consumers, their lives and their feelings.

So I'll mention in this paper different cases and different manners with which economic, social and political crisis enters also the advertising stories and became part of its narrations. We can call it synchronization between social system and advertising (Luhmann; Antonioni) and maybe it could be the right key to the effectiveness of the latter. So I can say that the semantic of crisis affects also advertising, its storytelling and its working routines at different levels that this paper will try to enlight.

### *"Is That Me?" Images of Ageing and the Underestimated Role of Active Ageing in Advertising*

The concept of complexity is one of the most useful to describe contemporary society, because it implies also the leading role of communication and of its dedicated system, that is to say mass media system (Luhmann). But, or in accordance with this perspective, another helpful description could be the one that defines our society as based on images, referring to the primacy of the visual sphere.

This premise leads us to consider the production of images not only as one of the most important for the reproduction of society, but also as one of the most

compelling for individuals and the construction of their composed identities. Following this theoretical background, we have to consider the role of advertising and its peculiarity of constructing an imagery ready to be socially diffused, but also the peculiarity of absorbing – sometimes – the ideas, perspectives and feelings emerging from society or different social groups.

In this sense, it could be of particular interest observing how advertising depicts the reality of ageing, if and in which manner gives back a heterogeneous picture of the different ways of being aged. This kind of research, in fact, tries to clarify which kind of imagery regarding ageing is offered and spread within society in general, but it could also test if the concept of active ageing is practiced in advertising. So in our paper we'll present the results of a qualitative research on images (one of the main traditional research stream of visual sociology) (Grady), taken from the advertising field. The research results will concern the Italian context, trying to compare it with an international context and producing a specific typology. Is our aim also to test this typology with a sample of aged interviewees, trying to prove if they recognise themselves in it or not.

### *Psychological Effectiveness of Interactive Advertising in Russia*

**Purpose.** The investigation was aimed to check the hypothesis that the interactive advertising is more effective than usual one. As the criteria of psychological effectiveness of advertising we allocated trust to advertising and active personal position. So the hypotheses were that during perceiving the interactive advertising the respondents show: 1) the higher level of trust; 2) the higher level of "active personal position".

**Design/Methodology.** 109 respondents were tested online. The control group consisted of 59 people, and the experimental group consisted of 50 people. The experiment included three stages: 1) the respondents viewed the advertising in two variants: a) interactive advertising for experimental group; b) usual advertising for control group; 2) the respondents answered the questionnaire which included the questions about attitudes to the advertising and associations about advertising, the technique of A.Kupreychenko "The trust / distrust of person to other people, the world, yourself" and the scale of psychological effectiveness of advertising elaborated by A.Kupreychenko; 3) 12 people were interviewed to get more information.

**Results.** The hypotheses were partially confirmed. We have shown that there is no difference in the level of trust to the interactive advertising as compared with the non-interactive one, but the respondents perceive it more personally, are involved into the interaction with the characters, and act as if it were the reality. We can conclude that the psychological effectiveness of interactive advertising is higher.

**Limitations.** It remains to be tested if the results will be the same for another countries and cultures.

**Research/Practical Implications.** The results can be used in the development of advertising products for Russian consumers.

**Originality/Value.** The study is the first attempt to investigate the trust to interactive advertising among Russians. The theoretical value is caused by using trust and active position as the criteria of psychological effectiveness of advertising.

### *Military Rule, Economic Recession and Labour Militancy: Evidence from Conflict Resolution Mechanisms Utilised Between 1986 and 1992 in Nigeria*

The study focused on the impact of economic recession on labour conflict resolution under the military in Nigeria. The data show that the military presence did not significantly affect the labour conflict resolution scenario even though a combination of economic recession and repressive military rule produced a tense labour conflict situation in Nigeria between 1984 and 1992. Thus, there was no significant difference in the number of conflict, tools of conflict expression and mechanisms of conflict resolution between the pre-recession and recession periods. In spite of this, the data conceal the fact that the fear of military repression affected labour conflict and the economic recession had an inverse relationship to conflict. Moreover, the military in the period of economic recession made glaring use of corporatist strategy in caging labour. Insightfully, corporatism as a tool of labour-government relations has continued even in Nigeria's current democracy and has implications for the development of a responsive civil society critical in the sustenance of democracy and development.

### *The Uending Matrix: NEPAD, Globalization and African Development*

The paper examines the development prospects of the continent in the prevailing globalisation order under the NEPAD. It argues that the NEPAD while invaluable in keeping the development question in the continent in the front-burner of public discourse falls short of effectively coming to terms with the challenges of globalisation and the position of the continent in the world order. Thus the NEPAD in spite of its lofty goals resembles in so many troubling ways a rehash of the modernization ideology of development that has been the bane of the continent's development since the 1960s. In precise terms, its goals even though well intentioned cannot be accomplished by the development vision it canvasses. In view of the above, the paper suggests that the NEPAD must relate radically to the historical and current constraints imposed by the prevailing international order or globalisation and in a self-reflective manner relate itself to the daunting domestic weaknesses and challenges confronting the continent. It must therefore envision a development process hinged on a focused and critical engagement with the external world on terms genuinely defined by Africans and African needs.

### *Societal Perception of Breast Cancer Amongst Elderly Women: Implications for Management and Intervention Programmes in Nigeria*

The study drawing from a sample of over 1000 respondents in Southeastern Nigeria investigated the influence of socio-cultural factors on the perception of breast cancer amongst elderly women in Nigeria. It discovered a significant variation in perception between rural and urban respondents. However, a general lack of inadequate knowledge about the nature and impact of breast cancer was prevalent in both groups of respondents. The study also discovered that such social attributes as age, education and income are critical determinants of the perception of breast cancer amongst elderly women. Crucially the study found out that over 30 per cent of the respondents were unaware of the occurrence of breast cancer among elderly women. Also, a majority of the respondents were ignorant of the existence of medical services for early detection and management of cancer. The health belief model was especially relevant in the explanation of the perception of breast cancer. Thus, only women who feel susceptible to the disease take actions towards both detection and management of the disease in Nigeria. Interestingly, medical services for the disease were found grossly inadequate and professional social work services are scarcely available. Therefore, the study recommends increased awareness creation; retooling medical services to focus on broad-based cancer services that include elderly women; and the extension of social work services beyond traditional concerns to include breast cancer management and care especially for the elderly who are often neglected from formal health provisioning in Nigeria.

### *Health Inequity Reduction in Thailand: On the Way Toward Healthy Public Policy*

Recently, health inequity initiatives introduced by the World Health Organization emphasizes actions on social determinants of health with collaboration across research disciplinary and organizational boundaries in relatively innovative approach. The recent tackle of health inequity initiatives in Thailand, SIRNet – Social Inequity Reduction Network, illustrates a good instance of this kind of effort. This paper describes the development of the three years collaborative projects among five organizations in Thailand and its attempt to address social determinants of health and formulate a set of effective policy recommendations based on real-world problems in Thai context. The study examines working models across academic and organizational boundaries focused on researches linkage, professional practices, communities and networks actions, leadership skills and healthy public policy process. While a wide-ranging of information collected and knowledge emerged from broad action researches, the academic community states the tendency to the arguments of theories of justice and the consensus of strategy. Therefore, although the strong conceptual framework of social health equity for Thai society is established, the community based policy recommendation is rarely analyzed and formulated by researchers. Although the collaborative programs are initiated among the organizational leaders, the implementation process includes only few people into the working group. Hence, the change seems to be presented in individual and network level, but not in the organizational level. We need effective models of collaboration to bridge various gaps between researchers, social workers and policy makers.

*Informalising the Formal: Women in Ghana's Banking Sector*

Despite the conventional policy wisdom that formal work more closely approximates "decent" work, the process of informalization of the Ghanaian economy increasingly makes difficult a straightforward dichotomy between 'good' formal work and 'bad' informal work. The paper discusses the nature and impact of the use of employment agencies in the banking sector. We argue that the activities of employment agencies have introduced informality into an area of work that was quintessentially formal. We examine the impact of employment agencies on work conditions and work cultures, highlighting the ways in which female bank workers experience these new sets of conditions. We find that female employees hired through employment agencies experience conditions of work that resemble conditions in the informal economy in terms of contracts, security of tenure, wages and channels of negotiation or redress. We link the advent of employment agencies and the kind of labour relations in which they participate to the macroeconomic reforms that Ghana has undertaken which are themselves part of a global phenomenon of economic liberalisation. These processes connect the experiences of female agency workers in Ghana with women in other parts of the world whose work conditions are becoming increasingly informalized, thus challenging the idea that women's progress on the economic front can be charted by their entry into formal work. We rely on survey data among banks in Ghana, as well as interviews with both full time/permanent and agency workers in these banks and find that while agency work has opened new opportunities for women in the banking sector, it has also introduced new strictures and transformed banking culture more generally.

*Constructing Shared Narratives of Sustainable Local Development*

Contemporary societies are facing and generating social and environmental crises, which involve multiple dimensions and different actors at various levels. Policies have to deal with them and guide communities transformations. Therefore, in Developing as well as in Western countries, it is not just a matter of finding and providing financial resources, but to tailor them according to contexts and addressing communities' governance and capabilities building. Moreover, policies' orientations and goals should always consider the consequences and transformations (material and immaterial) that can be induced by their implementation – and that cannot be foreseen a priori – and therefore should develop the capacity of being adaptive and self-reflexive. But how to? And how can local communities participate in the design and implementation of their own change?

The aim of this paper is that of providing some theoretical and methodological reflections on how to conduct and proactively observe local development processes, focusing on two case studies based in Southern Italy's mountain and rural areas: the Green Communities (GC) project, a one year long project, top-down driven, funded by the Italian Ministry of Environment and the EU, and Rural Design, a bottom-up driven project initiated by some of the political representatives, technicians and "active citizens" previously involved in the GC project. Through them we will discuss different orientations to sustainable local development, but also a new evaluation approach, the Dynamic Evaluation (DE), developed within the Emergence by Design project (FP7-ICT-2011-C program). The DE is based on the complex systems approach and on the hypothesis that the iterative generation of feedback loops contribute to the construction (and enactment) of shared narratives that can help in dealing with unpredictable settings, where goals and consequences are emerging and changing rather than being predetermined and fixed.

## RC24-432.34

**ANZOISE, VALENTINA\*** (European Center for Living  
 Technology, [valentina.anzoise@gmail.com](mailto:valentina.anzoise@gmail.com))

**SARDO, STEFANIA\*** (European Centre for Living Technology,  
[stefania.sardo@unive.it](mailto:stefania.sardo@unive.it))

*Narrative Analysis of Local Resources Management*

The aim of this contribution is to provide a methodological reflection on the following issues: how to frame and conduct local development and innovation processes dealing with cultural and environmental resources, and how to proactively observe them and evaluate their impacts? How to take into account all the people

and organizations that will be affected by their consequences? To what extent the current trends in research and evaluation methods are providing outcomes and feedbacks that can be constructively used to design and implement policies?

The Green Communities project, a one year long project, funded by the Italian Ministry of Environment and EU, based in the mountain and rural areas of Italy, will be analyzed and discussed.

The broader aim of the project initiators was that of providing local communities with new tools and procedures to identify and manage natural and cultural assets, and to deliver pilot feasibility studies on buildings' energy efficiency and forests' sustainable management from where communities could start a sustainable process of change. Nonetheless, the project team underestimated the importance of communities' engagement in the construction of a new collective perspective that could "ensure" they could take charge of the project's outcomes after its official end of the project, in December 2012. Conflicting orientations and narratives undermined the full deployment of the project's generative potential.

Therefore, in the paper we will discuss the need for a different approach to innovation processes evaluation, the Dynamic Evaluation (developed within the Emergence by Design project, FP7-ICT-2011-C program). The DE approach is based on the complex systems approach and on the hypothesis that the iterative generation of feedback loops, contribute to the construction (and enactment) of shared narratives that can help in dealing with unpredictable settings, where goals and consequences are emerging and changing rather than predetermined and fixed.

*Social Problems of Parents Who Have Children with Schizophrenia in Japan*

**Background:** In June 1995, The Mental Health and Welfare Act was enacted in Japan. This act makes families with mentally disabled children responsible for looking after their children, regardless of their children's age. In addition, social services which care for people with mental disorders are absolutely lacking. Because of these harsh conditions and these situations, some families suffer great anguish. Tragically, these circumstances can drive parents into making the terrible decision to take their child's life. Actually, in June 2008, a murder case happened in prefecture X. A mother killed her daughter with schizophrenia because of her despair over her daughter's future. Since July, 2010, I have continued the research necessary to comprehend complex parents' feelings with children affected by schizophrenia. Schizophrenia has a lot of inherent characteristics which afflict their parents. In addition, incomplete social system tends to force their family member, especially their parents, to bear the full burden. Most parents care for their children by some sense of duty more than the law.

**Aims:** The purpose of this study is to illustrate social problems of parents who have children with schizophrenia in Japan. Especially, how traditional family norm in Japan influence their parents be focused largely on in this study. Thus looking at family which meditates the interaction between Japanese society and individuals in great deal will offer the social norm as social problem.

**Method:** The life story approach is appropriate because it allows for the researcher to know how and what the social problem is personalized. Researcher myself has a side of suffering mental illness and having intense conflict with my parents. In the sincere dialogue between interviewer and interviewee, we can create a social reality and realize master narratives. The respondents in this survey are some parents who have adult children with schizophrenia.

*Identity As a Variable for Violent Protests - a Case Study of Korean Student Movements in Democratized Korea -*

Literature of collective violence has argued that violent protests decrease in the democratic countries. However, Korean student movements chose forms of violent action, such as Molotov cocktails, even after the political democratization in 1987. Why did student movements continue to employ violent actions in democratized Korea?

Existing studies on Korean student movements have pointed out that the influence of North Korean *Chuch'e ideology*, which is the North Korean state ideology of self-reliance which justifies violent revolution, as the cause. Yet, as ideology is an inflexible notion, ideology oriented studies failed to determine the process in choosing violent actions in protest. In order to overcome this limitation, this paper applies collective identity, through narratives, symbols, and rituals it manifests, as a variable.

Identity is viewed as a key variable in social movement studies. However, with the exception of Charles Tilly's work, there is no research that examines the reciprocal relationships between collective violence and identity construction. In his seminal work on collective violence, Tilly argued that the construction of exclusive collective identity severs the inter-movements networks which results in polar-

ization of a group, and finally accounts for the collective violence. This paper applies Tilly's perspective □--identity-polarization nexus□-- to explain the choice of violent action forms by Korean student movements.

This paper conducts discourse analysis in three levels. At the first level, the statements and memoirs of the activists establishing new student organizations will be analyzed to reveal if inclusive/exclusive collective identity accompanies polarization of student movements. And the second level, the statements on violent and non-violent events exercised by these student organizations analyzed will be dissected to confirm if the exclusive identity activates the violent actions. Finally, this paper compares collective identity of student movements under the authoritarian regime and the democratic regime to analyze its historical continuance and distinction.

[momokoano@gmail.com](mailto:momokoano@gmail.com))

#### *National Leisure Policy in Japan from 1966 to 1974*

In Japan the first national leisure policy was made from 1966 to 1974. Before 1966, it was a regulation of manners and customs. Moreover, it was divided vertically into divisions. However, in 1966 Japanese government begun to pay attention to leisure as a social phenomenon. Finally, government made special leisure departments at the Ministry of International Trade and Industry (*Tsūsyō Sangyō Syō*) and the Economic Planning Agency (*Keizai Kikaku Cyō*) in 1972.

It had three purposes. First, in those days, rapid industrial development caused urbanization, rationalization and mechanization. Human alienation was so increasing that juvenile delinquency was one of the social problem, and productivity at factories was falling. Government estimated that leisure can restore national humanity. Humanity was thought as the base of productivity and much pleasure from leisure activity expected to satisfy young desires.

Second, at that day, farming, fishing and heavy industries had been replaced by tertiary industry. That means Japanese government had to spread domestic market. For that purpose, government thought that leisure industry is a good new market. For example, Discover Japan Campaign by Japanese National Railways (*Kokutetsu*) and Expo '75 in Okinawa (*Okinawa kokusai kaiyō hakurankai*) were main plans for promoting leisure and tourism industries.

Lastly, the leisure policy is the start of "discipline". In this policy, "Wholesome leisure" is an important keyword. Government assumed that tourism and sport were good leisure for people, but gambling and watching TV were type of unwholesome leisure, because they were decadent and defensive. In short, Japanese government tried to enlighten Japanese people in leisure policy. Today we are forced to have self-responsibility for our daily life and self-defense from social problem such as poverty. It is a result of national leisure policy from 1966 to 1974.

#### *Anxiety and Refusing Food: Consumers' Attitudes and Understanding of Radioactivity*

After the accidents of Fukushima, large area in the east part of Japan were exposed by radioactivity. As a result, foods from those regions were contaminated by radiation, but producers have made great effort to produce less contaminated foods at their land. Gradually they began to sell them at the markets. But prices are still far lower than before the accidents.

We investigate consumers in the metropolitan area about consumption of those foods, especially about images of radioactivity, understandings, degree of anxiety, and information seeking behaviors for those foods by focus group interviews.

Our results are as follows.

1) Participants have ambiguous but significant degree of "fear" for the health effects by the radioactivity. Their images of radioactivity are not based on scientific evidence, but images from TV documentary programs, movies and other images on mass media: a cracked flat glass, skin disease, airborne dirt. Participants expressed "invisible", "bad for our health", "no chance of recovery once contaminated".

2) Participants seldom "measured" actual level of radioactivity at their home. They have almost no attention to the level of radioactivity of foods, although local governments or local NGOs offered those measurement services. It seems that participants refuse "right" information. They just seek information that tells them worse or worst cases, from friends or families.

3) Although there were some participants who are more knowledgeable, and have deeper understandings, they told us, "knowledge and emotion is different, though we understand those foods are safe enough, my feeling cannot admit to eat them."

4) We have one group of people from Tohoku region, they told us "people in Tokyo did not recognize that their excessive response to radioactive contamination of foods suffers us. They ignore our efforts and also sufferings."

Those "divided" consumer-producer relationship makes people face economic difficulties in many aspects.

#### *Climate Change Governance and Media : Media Exposure , Public Opinion and "the Most Important Issues," By the Japanese Public*

This paper explore the relationships among media exposure and public perception towards the climate change issues, to understand the role of the media and public opinion for better climate change governance of Japan. After the Great earthquake in March 2011, it is said that public has lost their interest with climate change issues, but for the Japanese government, the nexus of climate change-energy option- nuclear power has been paid more attention than before. Using the results of our public opinion survey in 2008, 2012, 2013, and monthly survey from 2005, we discuss the role of media, economy, and nuclear power generations from the Japan's climate governance point of view.

In addition to the earthquake and climate change, the perceived importance of the national and global economic situation also changed over time. During our survey period, the world experienced a serious economic crisis after the collapse of Lehman Brothers. These events with global impacts clearly revealed the environment-economy trade-off. After the earthquake and tsunami on March 11, 2011, Japan's economic situation worsened. However, the nuclear accident at the Fukushima plant forced the Japanese people to think about energy issues, which are closely connected to climate change mitigation.

#### *Reversal of the Gender Order? Male Marriage Migration to Germany By North - African and Turkish Men: New Forms of Gendered Transnationalization of Migrant Generations in Europe*

Marriage migration is today the main possibility of legal migration from outside the EU to EU countries. Studies of marriage migration published in recent years have focussed on women as migrating subjects. Although these studies also notice that men as well as women are migrating, there is no study focussing exclusively on migrating men in the context of marriage. My paper -in contrast- presents the results of an investigation regarding the phenomenon of transnational marriage of male Muslim migrants.

My hypothesis is that this marriage migration does not necessarily have a traditional background. On the contrary: women of the second or third generation of well integrated migrant families within Western EU countries are hoping for a realistic chance of establishing a family and bringing up children by marrying a partner from the country of origin of their parents or grandparents, while they continue to work and remain the breadwinners in the country of immigration and thus strengthen their autonomy (while their husbands wait for work permits and/or job opportunities and meanwhile have to take over care obligations within the family). In general, I want to show that male marriage migration can be seen both as *cause and effect* of changing gender orders

By means of the biographical analysis of narrative interviews with male marriage migrants from North Africa and Turkey and their spouses, the related ongoing research project at Frankfurt University (2011-2014) is dealing with the debates about problems of language and integration into the labour market, gender relations and dynamics within the migrant family, (un)changing conceptions and visions of manhood in migration processes and the contestation/negotiation of migrant masculinities.

#### *Coping with Climate Change: The Role of Local Knowledge in Rural and Peri-Urban Communities in the Eastern Cape, South Africa*

National and continental studies on climate change in Africa mostly measure the extent of climate change and its related impacts. Little attention is paid to how local knowledge helps communities to cope with adverse environmental conditions. Despite the wide-ranging contestations about the role of indigenous knowledge, studies conducted in Mexico and some Asian countries reveal that one of the factors that have increased people's vulnerability to the adverse impacts of climate change is the low priority that policy makers and environmental institutions attach to indigenous knowledge, especially in the planning and management of climate change responses. This factor combines with others such as political

weaknesses and the use of inappropriate technology. It is against this background that this paper explores climate change-related adaptive mechanisms that are embedded in local cultural (and particularly agricultural) practices in South Africa. The paper reveals the ways in which indigenous plant medicines, water-conserving hedge plants, and specific uses that local people make of indigenous social capital help households to cope with adverse climate change impacts. The paper is based on interview, focus group and community survey data obtained from five rural and peri-urban communities around East London and Port Elizabeth in the Eastern Cape Province. The paper highlights the need to take the local context seriously in dealing global environmental challenges.

### *Disrupting Professional Hierarchies : New Interprofessionnal Collaboration Between Artists and City Planners*

Urban projects are political, technical and social entities where public authorities and urban planners work with a growing number of stakeholders such as property developers, non governmental organisations and citizens, who have different professional cultures and academic training. Thus urban projects are multi-actor systems where interprofessionnal collaborations occur at different levels:

- among professionals from different technical fields (architects, landscape architects, urban planners and engineers),
- among professionals of different affiliations (public or private)
- among professionals from different competences (political, technical and social).

The relationships between these different stakeholders remain largely hierarchical in spite of the literature that advocates for collaborative and heterogeneous processes. A recent phenomenon, the introduction of artists to this system, not as a creator of art works in public space, but as an actor of the urban project process itself seems to shake up established order and existing professional hierarchies. This paper presents the results of a research based on five case studies where artists have worked with urban professionals on issues related to urban projects in France such as architectural heritage, uses of the public realm, risk awareness. We will first discuss on how the implication of artists in the project disrupts internal hierarchies inherent to political and administrative structures in charge of the project. How does the implication of artists transform relations within and between technical departments and among different hierarchical levels? We will then show how the artists question the relations between the contracting body and the service providers. How do artists (i.e. the service provider) manage their relations with the contracting body (i.e. the city officials) and his requirements? In which way this disrupts professional routines of the contracting body?

### *El Uso De Las Tecnologías De La Información y La Comunicación En El Alumnado Universitario*

#### Introducción

Desde la generalización del término "nativo digital" (Prensky, 2001) se da por supuesto que las generaciones nacidas bajo la influencia de las nuevas tecnologías de la información y la comunicación (TIC) presentan patrones similares tanto en la comunicación interpersonal como en el proceso de aprendizaje.

#### Objetivo

Describir el uso y apropiación de estas tecnologías por parte del alumnado universitario, analizando su presencia en las actividades cotidianas así como en el desarrollo de su proceso formativo.

#### Metodología

Encuesta personal en una muestra aleatoria (N = 920) de la población matriculada en la Universidad Complutense de Madrid (España), curso 2012-13. Selección según cuotas de sexo y área de conocimiento. Análisis estadístico mediante el programa SPSS v.20.0.

#### Resultados

Se evidencia un importante y constante uso de las TIC en la vida cotidiana, tales como el teléfono móvil de última generación. No hay diferencias significativas según sexo o edad, siendo los indicadores parejos. Con respecto a la plataforma virtual de la Universidad, sí se muestran diferencias significativas en su acceso y uso según área de estudio: mientras que el alumnado de las humanidades y ciencias jurídico-sociales lo utilizan preferentemente para tareas de carácter administrativo (inscripciones y matrículas, consulta de agenda y calificaciones), los estudiantes de las carreras experimentales y técnicas lo emplean también para descargarse material de lectura y apoyo en el proceso de formación, trabajar co-

laborativamente o participar en foros, chats o blogs mantenidos para la comunicación entre alumno-profesor.

#### Conclusión

Más que a la generación de pertenencia o al sexo, la utilización de las TIC está claramente asociada a la adscripción de los alumnos a una rama determinada de conocimiento. No obstante, nuestro estudio no permite conocer si ello es achacable al perfil tecnológico docente, más débil quizás entre los profesionales de las humanidades y las ciencias jurídico-sociales, lo que resultaría en una menor motivación para su incorporación y uso generalizado por parte del alumnado.

### *The Financialization of Housing Developers and Cooptation of Social Housing Policies. Territorial Impacts of a Market Policy*

The paper examines the restructuring of real estate sector in Brazil and its relationship with political changes implemented in the last 10 years, with a special focus on analysis over the territorial impact of those process on Rio de Janeiro metropolitan Area.

Since the late '90s the real estate sector began a restructuring process focused on two dynamics: the financialization of real estate developments and the spreading of activities of few construction companies over the country through a monopolization process.

Between 2003 and 2004, other processes reinforced these previous trends: (a) Real estate companies have made IPO on the Stock Exchange, capitalizing on and diversifying their operations; (b) Changes in regulatory funding policies expanded exponentially the credit conditions; and (c) Economic growth has been fostered by government policies, with a progressive fall in general interest rates and increases in wages and incomes for lower and middle classes.

The 2008 crisis strongly affected real estate sector that by then had invested large amounts of capital in land banks. As a solution to the crisis in the sector and as a countercyclical instrument to foster economic growth, the government launched a new housing program called "Minha Casa Minha Vida". The scope of the program has intrinsic impact on urban structure, inducing increase of urban inequalities.

Since 2005, a continuous and sharp increase in property prices, supported by the credit expansion and also by local policies aiming the preparation of cities for the mega-events (World Cup and Olympic Games), influenced the configuration of urban space of Brazilian cities, emphasizing the social segregation. As an empirical case, this paper will analyse the location of MCMV projects in Rio de Janeiro combining the spatial pattern with the changes of housing prices. The paper will explore the economic, social, political and territorial sustainability of this model.

### *Nose Picking in Vietnam: A Comparison of Colonial and Post-Colonial Practices*

This study focuses on nose picking, a regularly observable occurrence in Vietnam. Elias said that in the civilizing process self-regulation is a gathering force and the act of nose picking is not perform in public. To better understand the reasons why nose picking is a regularly observable occurrence in Vietnam, I analyze content from *Thanh Nghi*, a magazine published from 1887-1945 during the French colonial era and created by Vietnamese intellectuals to further the spread of French civilizational ideals. This study has two purposes: first, it clarifies the role of *Thanh Nghi* as an intellectual proponent of French colonialism. Second, it explores different aspects of the civilizing process. By achieving these two aims, the study illustrates the effectiveness of the civilizing process in colonial society.

### *Youth Choosing Bad-Careers for Social Success: Youth Subcultures Referenced in Gyaru and Gyaru-o Tribes*

This paper clarifies the social perspective of youth subcultures with a focus on members of tribes formed by youth referred to as gyaru and gyaru-o.

The author spent 5 years participating as a member of a gyaru/gyaru-o tribe that conducted club events held in the streets. Afterwards, through 10 years of participation-based observation as a researched, the author conducted quantitative research to form the following opinion.

These tribes practice heterosexual lifestyles, committing anti-social acts to the extent that will not result in arrest. They life lifestyles based on "bad" values and seek to gain attention through provocative means. They view these "bad-values" as a career that will lead to future self-realization.

They believe that establishing both the "bad" career gained through their activities and an official career will lead to future social success.

And they hold dramatic, story-like image for self-fulfillment wherein embracing these careers will lead to success in normal society.

The youth observed in this research have been deemed to be passive towards what is generally considered success in normal society. However, this research has shown that these youth are proactive towards self-fulfillment in terms of forming careers that will lead to future social success.

In previous research into youth subcultures where it is has been shown that youth believe their "bad-careers" will benefit them in the future, this was defined merely as phase to which the individual would progress or as an internal phenomenon of the same subculture.

However, this research brings a new view to youth subcultures research in showing that these youth view their "bad-careers" as something that will benefit their success in general society, thus as something that transcends the framework of any phase or subculture.

#### *The Power of Wives of Merchant Families*

In this presentation I will describe the wives of merchants in Osaka and the changes they underwent with the modernization of the merchant business. The Osaka area had been the center of business in Japan. Osaka has been known for commerce since in the 16th century. Many people had come to Osaka to be merchants from about the 17th century to the middle of 20th.

Traditionally, the wives of the Osaka merchants had great influence and considerable power in the management of the family business. In Osaka merchant stores, the merchants' families lived with their employees, and the workspace was also the living space. The wives of merchants had the role of caring for, disciplining, and managing the boy apprentices both in the house and the store. Especially, the women's role of providing discipline to make the apprentices good merchants was very important for the family business. These relationships between the wives of merchants and the employees continued for a long time. Under these circumstances, it seems inevitable that women took on a dominant role in the management of the house, as well as the store. It was this merchant family system that gave them much power.

The merchants in the Osaka area continued to operate under this family business system for a period of twenty years after the end of the Second World War. However, as the merchants adapted to economic development, along with democratization and rationalization after the war, they chose the modern management system of separating their homes from the store. Owners and employees began living separately, and the roles of the husband and wife changed with the husband working and the wife staying home. As the stores become larger, the wife stopped being involved in the business and instead focused on being a housewife.

#### *Mental Health of Immigrant Adolescents in Spain*

This paper explores and explains migrant-native differentials in psychological health of adolescents in Spain. As a recent immigration country, research on integration outcomes in Spain is attracting, significant levels of international academic attention both because Spain was the second largest destination of international migration only after the US from 2000 to 2007) and the impact that the Great Recession is having among migrant families and other disadvantaged groups. Our paper is inspired by a growing body of research from United States showing that Latin American origin adolescents tend to show highest risks for mental health even after controlling for age, gender and socioeconomic status. Despite of the large number of Latin American immigrants in Spain, research on immigrants is underinvestigated and more importantly, research on mental health and psychological wellbeing of immigrant youth is particularly limited due to the absence of appropriate datasets.

In this paper we take advantage of a special data set, the *Chances* (2011) survey, which sampled schools and students enrolled in the 3<sup>rd</sup> and 4<sup>th</sup> grades of secondary education within in the municipality of Madrid (n=2,734). The survey includes a large number of immigrants and information on the life of adolescents, including their mental health and other socioeconomic outcomes, relation with their families, friends and school mates. The Chances data also allows us to examine the impact of contextual factors such as schools and neighbourhoods. The data also include information about family conflict and other family characteristics collected from sub-sample of parents (n=1,239).

Our findings suggest worse mental health outcomes of children of migrant families compared native families in Spain. Using several indicators of mental

health outcomes (e.g. difficulties to concentrate, sleep) as dependent variables, the paper examines the effect of parent characteristics, family conflict, and school and neighbourhood context on adolescent mental health.

#### *Differentiation and Individualization*

Social differentiation has been identified since the so called sociological "classics" (Durkheim or Simmel) as one of the most important structural features of the emergence of modern societies and modern individual. The evidence of this thesis was never thoroughly questioned despite the criticism offered by historians, and especially that by anthropologists. Departing from empirical evidence resulting from a study on individuation processes in current Chilean society, this paper aims to discuss in which sense and under which parameters it is possible to conceive the relationship differentiation – individualization nowadays. Based upon our results we will specifically discuss four theoretical – methodological issues: (1) The relationship between social differentiation and social complexity. (2) The sociological registers of individuality. (3) The relationship between structural changes and forms of individuality (in a sociological sense). (4) The meaning that must be assigned to the notion of structural diversification from a methodological perspective. This discussion should lead us to the basic argument of this paper: It is necessary to interpret the sociological forms of individuality taking into account the plural modalities that structural complexity acquires in each society, and, consequently, the plurality of experiences confronted by individuals. This does not imply that everyone is modern, as supporters of globalization or multiple modernities due to different reasons seem to affirm. This demands us to understand how in every society, at present or in the past, at the "center" or at the "periphery", social structures – due to their distinctive features in each one of them – induce divergent social forms of individuality. The former implies that we might understand the foundational sociological narration about differentiation and individualization simultaneously as a general interpretative model and a very specific historical path.

#### *Gender Wage Gap: The Impact Of Capital Human, Cultural and Social Capital*

The average wage gap between men and women is well known. The wage inequality between men and women across the income distribution is, however, unknown in Brazil. The goal of this dissertation is to evaluate the income gender gap of individuals who are in the labor market conditioning the differences on their levels and types of: human capital, occupation, social capital, cultural capital and marital status over the wage distribution of men and women. The following questions guide the study: To what extent the increased education of women was able to reduce the gender wage gap? Could be argued that the income gap is larger at upper levels of the income distribution? To answer these questions we used data from the Instituto do Milênio, 2008. The results show that after controlling for other attributes, women earn on average 54% of men's wages. This gender gap is practically the same of fifty years ago, estimated at 60%. The last percentile of wage income showed greater gender inequality. At the 99th wage percentile, women earn 44% of what is earned by men.

**SANGALI BARONE, LEONARDO** (Fundação Getúlio Vargas)

#### *Differentials in Labor Market Outcomes in Brazil – 2000-2010*

In past research (Guimarães, Barone, Alves de Brito, 2013) we argued that the transformations that the Brazilian labor market went through in the past 50 years (from 1960 on) meant the consolidation of a movement towards "marketization" of the labor force. This movement seemed closely related to increasing participation rates especially between women, at a different pace compared to what was observed in other countries, as opposed to race differentials in those chances, that didn't seemed to change so much in the period.

That meant a decrease in the differential between participation probabilities of men and women in the labor market through the period that we were analyzing. But that doesn't say too much about the outcomes of participation, and the decrease in the differential on chances of entering the labor market does not necessarily mean decrease in the differential of outcomes between men and women once they decide to sell their labor force in the market. That's the intend of this proposal. Drawing on the analyzes of Guimarães and Biderman (2004) which

shows how, in a scenario of employment retraction, the sex and color attributes tend to have a very important role in determining wage differentials, we want to analyze how the effects of those attributes vary in a context of increasing formal employment, like we observed in Brazil between 2000 and 2010. With our current research we had seen that the chances of labor market participation between women had dramatically changed and with this proposal we want to go further in that investigation in order to access what kind of effects this change in the chances of entering the labor market meant changes in labor market outcomes between men and women.

#### *Preparing for a Career in the Sociology of Aging*

Session Organiser: Sara Arber, Professor of Sociology and Co-Director, Centre for Research on Ageing and Gender (CRAG), Department of Sociology, University of Surrey, Guildford GU2 7XH, Surrey, UK ([s.arber@surrey.ac.uk](mailto:s.arber@surrey.ac.uk))

Session Chair: Anne Martin-Matthews, Professor of Sociology, University of British Columbia, 6303 NW Marine Drive, Vancouver, BC, Canada. V6T 1Z1 ([amm@mail.ubc.ca](mailto:amm@mail.ubc.ca))

**Abstract:** This session is targeted to trainees and early career researchers in the sociology of aging. A panel of RC11 members (with editorial board experience and experience on research grant making bodies) will make brief presentations on key issues in successful publication and grantscraft in the fields of sociology of aging and in social gerontology. Issues of disciplinary strength and multidisciplinary collaboration are discussed.

Confirmed presenters:

Merril Silverstein, Syracuse University, USA; Editor, *Journal of Gerontology: Social Sciences*

Christina Victor, Brunel University, UK; Editor, *Ageing & Society*

Anne Martin-Matthews, University of British Columbia, Canada; past Editor, *Canadian Journal on Aging*

Sara Arber, University of Surrey, UK; Co-Director, Centre for Research on Ageing and Gender; Member of various Grant funding bodies.

An open discussion session with opportunities for input by all session participants follows.

#### *Sleep As a Potential Mediator Between Marital Status, Marital Relationship Quality and Health*

A wealth of literature suggests a link between marital status and health. Consistently, and across populations, evidence has shown that married people live longer, happier, and healthier lives than their unmarried counterparts. However, much of this literature has conflated marital status with marital quality and nearly all studies have ignored the role of sleep as a potential mediator.

This paper examines the following research questions: (1) How is marital status and marital relationship quality associated with health in the UK? (2) How do marital status and marital relationship quality influence sleep? (3) To what extent does sleep mediate any link between marital status, marital relationship quality and health, and how does any mediation by sleep differ by gender?

The paper analyses data from a nationally representative UK survey (*Understanding Society*, n=34421), 2009-10. Mediation models are run using SPSS. The independent variable is a derived variable which merges marital status with a 'perceived quality of relationship' scale (giving the categories, 'single'; 'married and in unhappy relationship'; 'married and in happy relationship'; 'separated but legally married'; 'divorced'; 'widowed'; 'lives with partner and unhappy'; 'lives with partner and happy'). The dependent variable is self-reported health.

Findings highlight how it is not just the 'form' that marital status takes, but also the quality of the relationship. Being in an unhappy cohabiting relationship, for example, has a greater negative impact on health than being in a happy cohabiting relationship. Sleep acts as a significant mediator of the link between marital status/marital quality and health – even when controlling for other mediators; such as subjective financial well-being and number of children. The role that sleep plays as a mediator differs for men and women. This is most notable for those who are divorced, where sleep takes on a greater role in the pathway for women.

#### *Changes in Exposure to Industrial Air Pollution Across the United States from 1995 to 2004*

At the basis of a large part of the environmental justice literature is an interest in understanding how exposure to industrial toxins varies by race and class in the United States. However, since the beginning of this field deindustrialization has

created dramatic declines in industrial air pollution, the toxicity levels of these pollutants, and shifts in the spatial patterns of racial and economic groups. Current work in this field has rarely taking these trends over time into account. Because environmental justice theories in this area are based on industry and how it puts some populations at risk more than others, to understand how these industries are changing over time is important for evaluating the continued usefulness of current environmental inequality theory. This paper addresses these limitations by examining the annual exposure to 572 industrial chemicals weighted by their toxicity to human health across the United States for the years 1995 to 2004. Results show that greater socioeconomic success does not translate into increased protection from exposure to industrial toxins in the same way for African-Americans, whites and Hispanics. These results provide an argument to amend current environmental justice theory to consider how federal environmental regulation of industry interacts with changes in demographics.

#### *Corruption, Trust, and Inequality in Modern Societies*

Social inequality and corruption are now the significant economic and social problems, not only in developing countries but also world over.

Often, corruption is studied in the context of economic development, and social inequality is considered in conjunction with the social structure of society. We suggest to pay attention to this issue as the relationship of corruption and inequality in modern societies, and to expand it with the category of trust, which is certainly an important concept in modern societies.

There are different points of view of modern research on the relationship of corruption and social inequality. We propose to examine this relationship and to interpret it based on the current social situation.

First, it should be noted that there is a direct link between the levels of corruption and inequality. The high level of corruption is usually associated with high levels of inequality. But the hypothesis of a strong direct relationship between these concepts is controversial.

In this linkage is missing one important element, which is also a significant problem of modern societies and is closely linked with corruption and inequality. It is a problem of trust.

Trust is one of the socio-psychological foundations of social cohesion and largely determines the dynamics of the basic social processes, the integrity of the society.

The path from inequality to corruption may be indirect through trust, but this relationship is a key to understanding why some societies are more corrupt than others.

But it is not so simple. If we look cross-country studies, the correlation between inequality and corruption is weak. But exactly correct to say that inequality leads to corruption increase by the trust. Inequality and corruption are not directly related, there are deviations from this relationship.

#### *Studying Doctor-Patients Interaction through Narrative Inquiry: Advantages and Concerns*

Studying Doctor-Patients Interaction through Narrative Inquiry: Advantages and Concerns.

There is clearly greater recognition of the advantages of the study of narratives in the field of health care. Nevertheless, most of the narrative interviews are focused on the study of illness experiences, while there are relatively scarce attempts to understand doctor-patient interaction through narrative study. This paper examines stories which people tell about interactions they had with their doctors. The study draws on data from qualitative in-depth interviews with 22 middle-aged middle-class Jewish Israeli men and women, generally healthy, who were asked to describe interactions they recently had with doctors. The stories they told us were classified according to their performative characteristics and self and other positioning. The data point to a large gap between the narrators' expectations of the interaction with their doctors and the actual experiences. The paper discusses the advantages of narrative inquiry for the study of patient-doctor interaction, and in particular the fact that it allows for expressions of deep notions of vulnerability which usually stay un-voiced. The study also raises questions and concerns regarding the 'tellability' of stories about 'good care' vs. the tellability of stories about 'bad care'.

## *Life-World of Youth in Japan: Focusing on the Social Attitudes and Social Consciousness*

It is often pointed that the transition process has become unstable and the individualization has become one of the dominant key words in modern society. And it is said that the unfairness and inequality among people has become serious issue. With these as a background, this study focuses on social attitudes and social consciousness of young people in Japan, for the purpose of understanding more about their current life situation.

The data we use is Youth Cohort Study of Japan (YCSJ), which monitors the educational and vocational trajectories of young people and surveys their attitudes once a year in autumn. With this date, we analyze sense of self-responsibility, praise of meritocracy, a feeling of dissatisfaction with the government and/or social welfare system, recognition of opportunity and needs for redistribution. And we consider who might be more precarious and difficult situation among the young people.

To analyze the differences among the young people, we focus on some factors, such as gender, educational background, job status and trajectory patterns. Then, we get some findings from the analysis, for example, levels of sense of self-responsibility increased during 2008-2011 especially among secondary school graduates and jobless people, who were less satisfied with their current situation. We can see that some young people who experience difficulty might strengthen the consciousness of self-responsibility instead of sense of social welfare and redistribution.

### *Figuring out the "Figuration" of the Kishiwada Danjiri Festival*

The purpose of this paper is to clarify the "Figuration" (Elias 1969) of the Kishiwada Danjiri Festival, focusing on its management, by tracking competition within and around the organization as well as the members' career paths in the festival.

The Kishiwada Danjiri Festival is one of the most famous float festivals in Japan, known for its dangerous performances. Running in rhythm to the music of bells, flutes and drums, about a hundred people tow the three- to four-ton floats (named *danjiri*) as fast as possible. The highlight of the festival is called *Yarimawashi*, wherein the float turns the corner without slowing down. To achieve the perfect *Yarimawashi*, the team members are required to have strong ties of solidarity and flawless techniques.

The festival is managed by two organizations, one that tows the float and another that controls the whole festival. The former is called *cho-nai*, which recruits members from neighboring districts to perform *Yarimawashi*; the latter is called *nen-ban*, which selects and associates members from the *cho-nai* organizations to run the festival. Examining these two organizations, the *cho-nai* organization is vertically structured, based on seniority, and the *nen-ban* organization is horizontally structured, based on the members' careers.

This paper analyzes every aspect of competition between organizations, groups, and individuals. Because the festival is run by two organizations, a unique and original career path is created and produces "festival-elites." These elites alternate between and experience both organizations to develop a network and skills by competing with others, to obtain "capitals" and become the future leaders of the festival.

In addition, we reveal that the mechanism of this festival has a nested structure in which competition and solidarity coexist. This paper shows the figuration of the festival as a complex and dynamic cultural event.

### *Communal Life Practices in a National Sanatorium for Hansen's Disease*

The purpose of this study is to clarify the various aspects of communal life practices of patients in a national sanatorium for Hansen's disease in Japan. I take up an example of small groups which lived in a national sanatorium called *Touhoku Shinsei-en* in the 1960-70s in order to describe the characteristics of communal life practices of the patients under heavy segregation policies.

The Japanese government's policy towards the patients of Hansen's disease was very cruel in the past. Almost all these patients were obliged to be segregated in national sanatoriums. However, the patients kept struggling for creating better living conditions. In order to make this sanatorium a better place, they had recourse to various activities among themselves, often taking informal, sometimes even non-admitted methods.

Besides clarifying the processes of the creation and development of such communal life practices, this study also examines the effects and meanings of these practices for the participants. The case in this study shows light upon that these patients kept trying new communal life practices again and again not only for financial interests, but also for the fertilization of their own lives. Concretely to

say, the following meanings about their practices can be distinguished: (1) one refers to the securing of various autonomous living zones in the sanatorium, by distributing "employment" roles among themselves, (2) another one refers to the creation of slight hopes saying that their lives were worth living, and to sharing these hopes with other patients, (3) the third one pertains to the extension of their living area by making contacts between patients and non-patients. By understanding the meanings of these practices through which the patients of Hansen's disease attempt to fertilize their lives, we become able to explore new aspects of their extremely difficult every-day life.

### *Further Thoughts on Developmental Patterns in the Islamicate Civilization*

At the last World Congress of Sociology in Gothenburg, I proposed historicizing our paradigm for analyzing the relation between Islam as a world religion and the Islamicate civilization that grew around it from the Nile to the Oxus. Among other things, the proposal required moving away from the monistic and ahistorical, one ideal-type one-religion approach followed by Weberian, and applying instead Max Weber's own notion of developmental patterns to axial civilizations in their formative period(s) and beyond. In this paper I explore the implications of this historicizing approach in connection with a pluralistic conception of axial—in my case, Islamicate—civilizations as consisting of normatively autonomous (*eigenesetzlich*) domains, each with its own developmental pattern that can interact or conflict with those in other domains. Each domain, is furthermore, capable of engaging in encounters with other civilizations largely in its own terms. I will illustrate my analytical framework with examples from the interlinked religious and political domains concerning the legitimacy of monarchy and the normative regulation of the political order. My aim will be to demonstrate how these two domains are brought into a measure of meaningful consistency (*Sinnzusammenhang*) in the context of the historical contingent developments in the Islamicate civilization.

### *Revolution and Constitution-Making in the Arab World and Iran*

Considering constitutions as the formalization of the political reconstruction and the establishment of new ruling bargains for regimes, constitution-making in the three countries where the Arab revolution of 2011 succeeded in toppling old regimes: Tunisia, Egypt and Libya. The paper compares the pattern of constitutional politics in these countries as the struggle for the new political order among competing social and political groups and institutions that will entrench

the emerging ruling bargains by making new constitutions. The comparisons are centered around four sets of variations: variation in the traditions of the rule of law and those in the character of the old states and the power structures sustaining them, a distinction between negotiated revolutions, where the old state persists and negotiate a new ruling bargain with the opposition, and the ones in which the state is destroyed and the revolutionary power struggle among competing groups determines the outcome of the revolutionary process. The mode of negotiation for the new ruling bargain differs considerably in the two cases. Tunisia and Egypt fall into the first category, Libya, in the second. The last comparisons concern the constitutional placement of Islam between Iran and its Islamic revolution and the 1979 Constitution of the Islamic Republic of Iran, and the role of the Islamist parties in the constitutional politics of the Arab revolutions of 2011. The Iranian constitution was based on a clericalist Islamic ideology that made Islam the basis of the new political order and its constitution, whereas, with the passing of the age of ideology, Islam is proposed by the Arab Islamist parties in the suspended Egyptian Constitution of 2012 and in the Tunisian constitutional laws as a limitation on the legislative power of the state and not the basis of a new democratic political order.

**ARMESTO, ALEJANDRA\*** (Universidad Autónoma Metropolitana, [alejandra.armesto@gmail.com](mailto:alejandra.armesto@gmail.com))

#### *Voters' Mobilization Where Partisan Attachments Are Weak. Mayors and Electoral Mobilization in Mexico*

Political parties are expected to play a central role in mobilizing citizens to participate in election. In new democracies, where party attachments are weak and parties and elections might lack legitimacy, the absence of a stable party membership makes canvassing efforts more difficult. In nascent democracies that have undergone decentralization, electoral mobilization is likely to rely on local level politicians, who are responsible for providing basic services crucial to citizens' well-being. I explore this proposition by looking at the influence of mayors on electoral results in Mexico, a polity that has recently experienced transition to democracy and remarkable fiscal decentralization. Because of their expenditure responsibilities Mexican mayors have comparative advantages relative to other local politicians who are not directly responsible for delivering policy benefits (e.g., local legislators and city council members). Besides, due to the perceived closeness to their constituencies, mayors are stronger vote brokers than local politicians with executive powers but whose constituencies are larger or more diffuse (i.e., the state governor). The hypothesis is tested by analyzing the effects of mayors' party on the electoral results obtained by the three main Mexican parties, PAN, PRI, and PRD between 1990 and 2012 in all elections (federal, local, executive and legislative). The analyses control for the socio-economic determinants of the vote and for historical voting trends. The causal mechanisms are explored through in-depth interviews with 20 local politicians. The results show that mayor's party has a positive and significant effect on the vote shares obtained by each party in all elections. These findings contribute to the discussion about voter mobilization in new democracies.

**ARMINEN, ILKKA\*** (University of Helsinki, [ilkka.arminen@helsinki.fi](mailto:ilkka.arminen@helsinki.fi))

#### *On the Sociological Relevance of Ethnomethodological Conversation Analysis*

Ethnomethodological Conversation Analysis has occasionally been criticized of lack of sociological relevance. However, I will suggest that it has minimally sociological potential because of three grounds: 1) ability to identify and detail social action, 2) provide a micro/macro linkage between action and social structure, and 3) be sensitive to social change by identifying new kinds of actions. CA analyzes the ways in which participants in interaction form a joint focus of attention, where the perception of perceiving formation of a joint focus forms the basis of a joint social action. Therefore, the analysis of a sequential accomplishment of action in interaction allows CA to explore emerging social actions. Most of the CA studies are not essentially sociological, they explore sequential properties as such, or topicalize them from an interactional linguistics point of view. CA's sociological potential is eminent in such studies where social categories become procedurally relevant for the achievement of action (e.g., C Goodwin on Rodney King trial). In as much as CA studies decipher and reverse engineer the constitutive socio-structural resources for the activities in interaction, they themselves provide evidence of the structuration in force. The analysis of the ways in social structures become demonstrably relevant and consequential for formation of action, provides CA's answer to the duality of social structure, i.e., that structure exists only through its structuration (e.g. Knorr-Cetina on global micro-structures). The sensitivity to the defining details of the constitution of social action enables CA to become sensitive social action. Following strictly its procedures, CA ends up describing in detail the semiotic resources that become relevant in the formation of situated social action. This situated sensitivity to details of social action makes possible to discern

new kinds of actions indicating social change, or its potential (i.e., Licoppe on connected presence, Kitzinger on heteronormativity in interaction).

#### *Online Screen-to-Screen Interactions and Their Interface to Face-to-Face Interactions*

The development in the analysis of social interaction in the 1960's was made possible by a meeting of intellectual advancements and emerging new data management technologies. Currently, online social interaction still waits for a formation of research interests that would transform the abundance of new data into sets of findings. There is not yet available any systematic methodology for the scrutiny of online communicative behavior. I will focus on three central interrelated issues: 1) the construction of an online communicative act, 2) the nature of screen-to-screen interaction, and 3) the interface between screen-to-screen and face-to-face interactions. The establishment of a research field requires a distinct perception of the research objects, that is, the units of analysis, a theory about their systemic relationships and positioning of the field within established fields. For instance, the well-known simplest systematics of turn-taking (1974) formulated conversations as a research object consisting of turns at talk with systemic relationships, and a relative autonomy. As for online communication, we may explore the sequential units, such as turns in a chat or a forum thread, as independent units. Alternatively, the communicative acts may be inspected contextually as a part of a situated offline activity. Both positions are sustainable, but distinct and alternate. It would be tempting to unite them, but that may not be feasible in terms of resources, or efficacy. As for the systemic relationships between online communicative units, Karen Knorr-Cetina's notion of synthetic situation is fascinating providing some methodological hints for the advancement of the area. Finally, irrespective whether we start from the autonomous units or contextual reflection, we end up inspecting the embeddedness of online interaction to offline world, which forms the ultimate challenge for studies on online communication. Instead of a final solution, I will discuss some examples with the help of which we may address the interface between screen-to-screen and face-to-face interactions.

**ARMSTRONG-HOUGH, MARI\*** (Meiji University, [mjah@meiji.ac.jp](mailto:mjah@meiji.ac.jp))

#### *Performing Prevention: The Construction of Risk and Its Consequences in Japan during H1N1 2009*

Japanese policy makers and health care providers mirror American Centers for Disease Control (CDC) recommendations for most public health matters, frequently citing them as the gold standard for best practices. In the case of influenza, however, standard Japanese recommendations and practices significantly diverge from the U.S.-based recommendations. While the CDC recommends that individuals wash their hands frequently and avoid contact with infected people, the Japanese medical associations add frequent gargling and the use of surgical-style masks. The order of priority groups for immunization have also historically differed. Drawing on approximately 89 semi-structured interviews with patients and medical professionals in Japan and ethnographic fieldwork during the H1N1 outbreak of 2009, this article elaborates on the work of theorist Anthony Giddens to examine continuing differences in prevention practices in the face of communicable disease outbreaks like H1N1. The concept of risk creates the possibility for prevention—behaviors intended to "reorganize the future of suffering" (Frankenberg 1993); Giddens calls this the "colonization" of the future (Giddens 1991: 111). But the risk society also necessitates the development of techniques for maintaining ontological security. I argue that faith-like acceptance of recommendations produced by systems of expert knowledge such as medicine and public health is one way to maintain ontological security when normalcy is interrupted, as in the pandemic H1N1 influenza outbreak during 2009.

#### *A Study of Organizational Coping and Resilience: An Academic College Under Fire*

Our research is a case study of organizational coping with a state of war at an academic college in Israel's northern periphery. We defined this situation as an unexpected crisis caused by an external factor beyond the college's control. The study focused on the coping processes initiated by college leaders in their attempt at crisis management. A qualitative retrospective case study design was chosen to explore the ways in which the different sectors in the college perceived,

experienced, responded to and influenced the organization's efforts to deal with and adapt to the threat. Our goal was to describe the organization's coping during the crisis situation by tracing the chain of events, the stages of crisis management, understand issues related to leadership and analyzing the fulfillment of major tasks involved in dealing with crisis and uncertain situations.

Based on insights gained through understanding the main themes of this case study we sum up what we have learned and propose practice guidelines for future situations of organizational crisis of uncertainty.

Organizational coping under uncertain and risky circumstances is a recognized topic for research and discussion. However, coping by an academic institution under fire is a rare topic for academic research and discussion. Unfortunately such situations are not unusual in many war regions throughout the world. By this study we throw light on an important topic in higher education managerial policy. Such case studies along with comparative studies of this topic may contribute to the understanding of this unique phenomenon.

**ARNON, SARA\*** (Tel Hai College, [arnons@mgamla.co.il](mailto:arnons@mgamla.co.il))

### *Relocation of Families after Uprooting with and without the Help of Community*

The paper deals with the question: Does the community's social capital strengthen the practical resilience and emotional wellbeing of its citizen families and support them to establish psychological and social harmony in their lives after a traumatic stressful event?

This question was investigated among Israelis who were evacuated from their homes and communities as part of an Israeli government peace process initiative. Some of the families chose an individual way of life after evacuation and most of them relocated with their former evacuated community friend families. The research compared these two groups, investigating their success in recovering from the evacuation trauma and effectively adjusting to the change in their lives. Data was collected by face-to face mixed structured and open interviews with a sample of 120 people.

The general finding was that the "individualistic" group coped better than the "community" group, both with the practical aspects of life such as working and building a new home, and also with the emotional wellbeing ramifications of uprooting. They approached a new sense of balance in their new lives earlier than those who chose to conserve the community continuity.

Thus, in contrast to general theory, a community is not necessarily a guarantee in advance for better coping of families with situations of pressure, stress and crisis. Its embrace may be double edged and may have two different contradicting influences: It may be a positive influence which strengthens and empowers its members. But it also may be a restricting element that limits and inhibits flexible and innovative functioning and may inhibit establishing new healthy psychological and social life.

**ARORA, PAYAL\*** (Erasmus University Rotterdam, [arora@eshcc.eur.nl](mailto:arora@eshcc.eur.nl))

### *The Leisure Commons: The Makings of a Democratic and Global Fantasycape in the Digital Age*

Within the United States, there are now more than 400 'Disneyesque' amusement parks and if we are to look at Europe, we would find 300 such parks scattered across its terrain. Even the emerging markets have jumped on the bandwagon, in spite of their economic slowdown and continuing issues with infrastructure. At least eight theme parks have opened or are scheduled to open in West Africa alone since 2000. As their youth populations grow and demand novel terrains to experience leisure, Malaysia, China, India and others are well down the line to embracing this new fantasy environment. Furthermore, the influence of traditional and contemporary media companies on fantasy parks is stimulating a new kind of massification of leisure. In 2011, The Angry Birds amusement park opened with much fanfare in China's Hunan province, enabling visitors to literally immerse themselves by allowing them to catapult giant stuffed birds at green pig balloons. Gamespot senior editor Giancarlo Varanini told FoxNews that, "as video game brands continue to grow in popularity, there will undoubtedly be more attempts at using their built-in audience to lure more people into parks that would otherwise not care." Hence, this paper investigates the role of digital games in the democratizing of fantasy parks and the implication of this new avenue of inclusivity on leisure geographies. To situate this novel phenomenon, we start by tracing the historical role of media empires on the architecting of amusement parks and mass consumption of fantasy. In doing so, we reveal the persistence of media empires on amusement parks and the disneyfication of mass culture. We argue that the further democratizing of leisure cultures through gaming fosters hybrid commoditized spaces that pervade even our cityscapes today.

**ARORA, VIBHA\*** (Indian Institute of Technology, [vibhaaurora@yahoo.com](mailto:vibhaaurora@yahoo.com))

### *How Green Are The Dams and Hydropower Projects Of Northeast India?: Divergences In Government Mission and Local Perception Of Energy Security*

Dams and hydroelectric projects taming river waters have long been associated with technocratic pursuit of economic growth, energy security, and the idea of sustainable development. In 2002, the Department of Development of the North Eastern Region (DONER) openly declared India's North-eastern region with its undulating topography containing numerous perennial rivers (such as the Brahmaputra and Teesta) to be India's future powerhouse. This region has a hydroelectric power potential to generate 34920 Mega Watts and governments are pursuing a hydraulic model of development for financing human development and alleviating poverty.

More recently, much debate has been engendered on how green are dams and hydropower? Do dams and hydropower projects constitute a renewable source of energy and exemplify sustainable development? This paper reviews the inter-connections between global and local contours of this debate, and the impact of resistance to dams and hydropower projects on the local-global perception of hydropower as solution to the energy crises. Based on fieldwork and review of relevant literature, I analyze the hydropower projects located in Sikkim, Manipur and Arunachal Pradesh located in Northeast India to understand the divergences in the development vision of the government and the affected local ethnic groups. On the one hand, the power companies, development experts, and the government are advocating the hydraulic model of development and energy security, while on the other hand there is a vocal criticism of such policies and programs by various 'other' experts, environmental activists, and the affected locals (villagers and tribals) whose land and rivers are proposed or already have been acquired and nationalized. This paper highlights the competing visions of poverty alleviation and energy security and the contradictions within the trope of environmentalism and its effective use as a tool for imposing and resisting hydropower projects.

### *Is There a Digital Divide Among University Students?*

#### Introduction

Under the term "digital native" (Prensky, 2001), it is widely accepted that generations born into lives heavily influenced by extensive and intensive use of information and communication technologies (ICT) have similar patterns in interpersonal communication as in the learning process.

#### Target

Describe the use of ICT's by university students, analyzing their presence in their everyday activities and in the development of control of their learning process.

#### Methodology

Personal survey research conducted using a random sample (N = 920) of students enrolled in the Complutense University of Madrid (Spain) in the academic year 2012/13. Students were selected according to gender quotas and area of studies. The statistical analysis was performed using SPSS v.20.0.

#### Results

The results show a significant use of ICT in everyday life e.g. the use of smartphones and households' availability of various devices (pcs, laptops, tablets). No significant differences according to gender or age were found. Regarding access to the virtual platform at the University, it shows significant differences in their use depending on their area of study: humanities and social science students use it mainly for administrative tasks; students in the experimental and technical degrees also use it for support for the training process, collaborative work or to participate in forums or blogs maintained for communication between students and teacher.

#### Conclusion

Rather than the generation or gender they belong to, the use of ICT is associated with the assignment of students to a particular branch of study. However, our study does not reveal whether this is attributed to the background in the use of technology among professors, which is perhaps weaker among professionals in the humanities and social sciences.

**ARROYO, CONCEPCIÓN\*** (Institucion de Educacion Superior, [aguaconflores@gmail.com](mailto:aguaconflores@gmail.com))

### *Cuerpo, Subjetividad y Construcción De Identidad En La Vejez Avanzada: El Caso De Adultos Mayores Físicamente Dependientes*

El estudio explora la dimensión subjetiva del cuerpo en la vejez y su relación con la conformación de la identidad individual y social en adultos mayores que cursan enfermedades crónicas y dependencia en la ciudad de Durango, México. Por lo tanto, este trabajo da cuenta de la representación del cuerpo que tienen las personas de edad avanzada que se encuentran en condiciones de dependencia física y falta de autonomía para las actividades básicas de la vida diaria. En la vejez, al cuerpo se le relaciona principalmente con la enfermedad, con la falta de capacidades, con el deterioro y con la finitud material de la entidad que representa el cuerpo. En nuestro estudio, la discapacidad y dependencia física, como consecuencia de la enfermedad crónica, producen un cuerpo frágil de los ancianos, cuyas imágenes se construyen en torno al dolor, a la falla y/o deficiencia. Desde la metodología cualitativa, se emplearon entrevistas profundas a 20 hombres y mujeres mayores de contextos rurales y urbanos. El análisis de los significados del cuerpo, en los participantes, se centró en torno a la relación discurso/enfermedad/representación del cuerpo, en los cuales destacaron aspectos subjetivos (imágenes, representaciones) y aspectos objetivos (enfermedad, limitaciones funcionales). En los resultados, el uso de metáforas, para expresar la imagen corporal y cómo la representan, da cuenta de la percepción que tienen de su cuerpo enfermo y la constante lucha con un "ideal" del cuerpo que predomina de manera hegemónica en nuestra cultura y que ellos han dejado atrás hace muchos años.

### *Augmented Self: Digital Quantified-Self Practices As Socio-Cognitive System of Self-Regulation*

With the evolution of mobile technologies, digital quantified-self practices have increased considerably, particularly in the field of health (to record walk, weight, sleep, etc.). The measure of self and its performance are not new. The fields of Sport and medical Self-tracking (Wiederhold, 2012) have included the value of these practices for a long time. The new is their generalization to the general public, and their features more and more simple and sophisticated of recording, storing, datavisualisation and sharing data to evaluate its progressions and to change their own behaviours (Arruabarrena & Quettier, to be published).

The Quantified self is a new form of self-attention (Pharabod, 2013) mobilizing the body and human cognition mediated. It is first an act of measurement to digitalize body and cognitive data. But it is also a "performative experience" over time linking the user to himself, and the user to the society (Levinas, 1967). On the one hand, Quantified self crystallizes successive states of self (Bergson, 1888), usually invisible in the stream of consciousness. On the other hand, thanks to the features of sharing data, the relationships peer-to-peer between users through social networks have a significant influence on motivation, but also on the ability of users to change (Lewin, 1967). The QS-technologies allow users to reclaim their social time, and in the reflexive way, their biological, cognitive and social rhythms.

This communication will expose a research program based on the ethnographic study of digital quantified-self practices as socio-cognitive system (Quettier, 2007). This approach to the embodied use allows to overcome the dualisms between *body-mind* to focus on the self as a mode of knowledge. The aim of this research is making sense to how are articulated socio-technical and symbolic mediation in the self-regulation, and in wider sense the construction of self.

### *Personnel of Innovative Economy: The Search for Solutions*

An innovative economy demand from employee to:

- ability to work in conditions of uncertainty;
- the ability to find creative non-trivial solutions;
- skills for work in a team;
- aiming at result (result orientation);
- ability and willingness to training throughout their working activities.

Obviously, the system of general and vocational education doesn't give such competences; it is not its main task. Using the test and examination scales, it only fixes the academic progress and intelligence, believing that this is sufficient for a professional career.

Where and how to generate the desired qualities of an employee? What conditions and factors are necessary for their formation? J. Raven, investigating the formation of competency, highlights some of the necessary conditions. According to J. Raven, the main condition is **developing environment**. In this paper we would like to show the first practical results of the implementing of social policy aimed at improving the quality of labor potential, on the formation of employee competencies required by the innovation economy. To achieve this goal, the city Novosibirsk has created a municipal institution "City Center project creation" for the implementation of the program "Early training of innovative personnel".

In this program, 700-750 school students and 250-300 students of various higher education institutions of the city annually participate.

During the project sessions to solve the paradoxical task participant is in a situation of uncertainty. Resolving the contradiction contained in the task, the student learns to:

- to form an opinion;
- to perceive the opinion of the opponent;
- to conduct discussion taking into account opinion of the opponent.

According to the results of the program can be unambiguously talk about the growth of intellectual and social activities for studying youth and a realization of its creative potential.

### *Footage Surveillance, Social Sorting and Crime Narratives*

The use of surveillance footage by the police for solving crimes is discussed here focusing on marginalized neighborhoods. It examines how the processes of stigmatization and criminalization of these sectors are justified as well as explaining their social sector condition of being at "constant risk" or "unavoidable risk", depending on the social environment in which they live. This enables a discussion which tends to naturalize the violent conditions they suffer through. This discourse contrasts with that which is constructed for other social sectors, in which victims are perceived as having a status of "avoidable risk", while their vulnerability is attributed to "external" factors to their way of life.

### *The 132 Movement in Mexico: How Students Changed the Presidential Election*

This paper examines how a political performance becomes an effervescent social space that feeds the formation of binary discourses in electoral confrontation, and how this opens doors to political change. It is intended to establish the force of an event within the hierarchy and political structure; how the influence of political performance can reach a broader social scale. It analyzes the university student movements called 131 and YoSoy132. They were structured from the performance of the presidential candidate Enrique Peña Nieto of the Institutional Revolutionary Party during a campaign meeting with students. Different political and media actors defined their position regarding the movements, sometimes classifying them as democratic, and in other cases as political gimmicks to benefit a political party. This allowed the formation of a binary narrative or discursive field ranging between integration and exclusion of movements during the electoral scene. In this sense, the paper shows how political performance may give rise to the creation of icons and referents for social change.

### *Exploring the New Generation: The Role of the Past and the Future in the Formation of Identity*

Recently, the field of identity configuration has diversified. On the one hand, social norms guiding processes of identity construction are being de-standardized. On the other hand, individualization means that subjects are being made responsible for their own decisions. From this perspective, a number of scholars are exploring the idea that identity is nowadays the result of a process of reflexivity.

The aim of this paper is to show that the degree of reflexivity depends, more specifically, on the relationship which subjects have with their past and future. To test this hypothesis, we use data produced by twenty-four in-depth interviews where we study the discourses of young people who are in the last phase of the transition from youth to adulthood.

Although it is true that the transition from youth to adulthood is a decisive stage in the formation and establishment of identity, one factor makes the stories of young people who are in this vital phase especially relevant at the present time: this generation, which has been socialized in the ways of identity construction characteristic of the first modernity, is now facing identity configuration modes of the second modernity (standardized identity vs diversity of identities). The struggles and contradictions generated between the stories that they were told in the past, on the one hand, and their living experiences, on the other, allow us access to where the identities of the new generations are coming up for debate and, in turn, to observe young people's degree of reflexivity in shaping their identity.

*Young People's Strategies for Facing Uncertain Transitions to Adulthood: The Case of the Basque Country*

The instability and precariousness surrounding the labor trajectories of young people cause the clash between the future expectations which they built in the past and their present reality. This clash, in this specific transition period from youth to adulthood, leads to a variant of what has recently been called the phenomenon of 'waithood'. Basque young people show that there are multiple strategies to manage this uncertainty surrounding the transition from youth to adulthood. These strategies depend upon two factors: the economic and the cultural one. The economic factor refers to the quantity and continuity of the economic resources that are available to these young people (irrespective of whether these resources come from their salaries or from external sources such as their families). The cultural factor, in turn, alludes to the socialization patterns upon which these young people built their future expectations in the past, and which determine the way they manage the aforementioned clash between these future expectations and their present reality. The main objective of this paper is to analyze the four main strategies that result from combining these two axes: flow strategy, standby strategy, drift strategy and flexibility strategy. To accomplish this task, I will draw from the main findings of twenty-four in-depth interviews conducted between late 2012 and early 2013.

*Changing Trends in Academic Practices in Higher Education – Reasons and Remedies*

Professional engineering education has projects, practical learning and training, and internships as important components, besides the usual lecture and tutorial components. They are important for the application of the knowledge gained through course-work. They also provide an essential exposure to professional work culture and facilitate professional role taking.

Based on fifteen years of teaching experience and close interaction with the students in an undergraduate college located in a metropolitan city of India it is observed by the author that the importance of some of these core academic practices followed in the educational institutes has gradually declined. Their role in transfer of tacit knowledge (Polanyi) through personal interaction is not given its due importance. In some premier institutions of higher learning these practices are either significantly reduced or replaced by information and communication technology enabled virtual learning modules.

An effort is made to explain the reasons for these changing trends in academic practices. Three interrelated mechanisms are identified as having advanced this process, increasing credential value of higher education, academic consumerism and a widening gap between professional education and industrial growth in India.

These changes have important implications on knowledge growth and quality of skilled manpower. Based on the feedback of the educationists and faculty members, recommendations are made to increase the involvement of all the stake holders in encouraging academic practices through experiential learning

**ARUN KUMAR, DURU\*** (Delhi University, [duaruarun@rediffmail.com](mailto:duaruarun@rediffmail.com))

*Role of Reference Groups in Little Science and Big Science: An Exploratory Study\**

Reference group is an important concept and analytical tool to understand an individual's behaviour in an organizational context. It refers to a person or group of people that significantly influence an individual's behaviour. People take the standards of the significant others as a basis for making self appraisals, comparisons, and choices regarding need and use of information. Two functions of reference groups have been proposed by some scholars, normative and informational. Normative function is the desire to conform to the expectations of another person or group, and informational function is an influence to accept information from another as evidence about reality. The occurrence of such influence requires the opportunity for social interaction. Seeking information, complying with the preferences of others and adopting values of others all involve some form

of communication or observation of decisions, opinions and behaviour of the significant others.

In the last fifty years science research activities have grown from localised activities of small groups of scientists and research laboratories or *little science*, to large groups of scientists working in huge research facilities and groups, spanning different countries and spread over several years, also referred to as *big science*. What is the significance of the reference groups for scientists pursuing little science and those pursuing big science, as reflected in their direct and indirect communications? In this exploratory study an effort is made to understand the nature of reference groups in scientific research communities based on interviews of senior scientists who have been associated with little science as well as big science projects.

**ARUNDEL, ROWAN\*** (University of Amsterdam, [rarundel@uva.nl](mailto:rarundel@uva.nl))

*Housing and the Crisis: Changing Housing Positions of Younger Households in Europe?*

Over the past several decades, advanced economies have seen a dramatic shift towards homeownership. Alongside a shift in preferences, government policy in many countries has heavily promoted homeownership. With housing property being the most important source of individual wealth and in the face of diminishing state support, homeownership is seen as key towards securing future household welfare. Nonetheless, housing wealth and access to home purchase remains uneven. A rollback in certain homeownership subsidies, continued relatively high prices, restricted credit access, unstable labour markets, and changed career and education paths have all contributed to difficulties in accessing homeownership, especially among younger people. The financial crisis of the late 2000s has only exacerbated these trends. Using cross-national datasets, the research looks at the situation of homeownership access for younger people across Europe before and after the crisis and evaluates how these changes have potentially contributed or exacerbated intra and inter-generational inequalities. The study examines variations across countries and attempts to understand these differences with regards to varied macro social and economic experiences of the financial crisis.

**ARUNDEL, ROWAN\*** (University of Amsterdam, [rarundel@uva.nl](mailto:rarundel@uva.nl))

*The Role of Intergenerational Wealth Transfers and Family Support in Shaping Housing Positions*

In the past few decades, there has been a strong shift towards increasing home ownership rates across many developed countries and housing has taken on a more prominent role through trends towards a privatized asset-based welfare model where housing property is seen as a key investment and a central component of household economic security. Decreasing support for other housing tenures, high house prices, increased mortgage indebtedness, volatile markets, and unstable labour conditions have contributed to socio-economic inequalities between those able to gain purchase in the housing market and those who are not, as well as differences among those that 'bought at the right time' and those that face high risks on their housing investments. Generational divides have been noted between relatively 'housing wealthy' older cohorts and younger generations that face difficulty in accessing favourable housing positions. Within these contexts, it would appear that family support and intergenerational wealth transfers have become more important in enabling, especially younger, households at gaining better housing positions. Through an analysis of micro-data on households across several European countries, the research attempts to gain an understanding on what extent intergenerational transfers are important in securing favourable housing positions and how these dynamics are mediated by the specific welfare regime and housing system contexts.

*Creating Learning Opportunities, Creating Protection: Migrant Learning Centers in Thai-Burma Borderlands*

This paper presents results from the study of learning centers, their roles and effort in the education and protection of migrant children and youth around Thai-Burma border in Mae Sot District, Tak Province of Thailand. The past decades saw frequent migration of people from several ethnic groups from Burma into Mae Sot District. Many of these migrants are children and youth whose illegal status deprives them of legal protection. From 1998-2012, the number of migrant learning centers was continuously on the rise to accommodate the flow of migrant children into Mae Sot area. These learning centers have a major role in protecting migrant children. Centers become social institution to provide

self-identity and connection with other people, and the children feel that they become a significant unit in this small community. Learning centers serve as a communication link between children, youth, teachers, parents or guardians, and migrant community. They serve as a platform for negotiating meanings and power as they have to be in contact with local government offices, to ensure safety for teachers and children, to negotiate with employers should the children be child labor, and most importantly, to identify funding sources and to administer educational and personnel affairs. Educational management for borderlands migrant children is especially difficult due to diversity in gender, age, language, ethnicity, religion, legal status, and personal background that may require particular attention or assistance. Children and youth living in borderlands may also face other difficulties and challenges with their family, community, and with conflicts and violence occurred in border areas. This makes them especially vulnerable. Therefore, future educational policy has to consider the roles of centers and schools in rehabilitating and healing these inner wounds.

#### *Resilience Strategies Carried By the Residents and Volunteers: A Study of Great East Japan Earthquake*

OTSUCHI-cho, IWATE prefecture suffered a heavy damage by the great tsunami caused by Great East Japan Earthquake in 2011. According to the population census of 2010, there were 15,000 people in OTSUCHI-cho. Approximately 1,700 people became dead person or were missing, by the great tsunami. The Volunteer Center of Meiji Gakuin University began the reconstruction support project, named "Do for Smile at East Japan". The center called for volunteer to students and faculty members, and composed some volunteer teams. The teams have regularly visited KIRIKIRI, which was one region of OTSUCHI-cho, from April 2011. The purpose of this study is to report resilience strategies that were carried by the residents of KIRIKIRI and volunteers, and to analyze sociologically the meaning of the strategies.

At first, the Volunteer Center began the fund-raising, as the emergency-relief work. The donation was spent as the travel expenses for the teams to go to KIRIKIRI. We helped the KIRIKIRI's residents to move the evacuation center from KIRIKIRI Elementary School to the old KIRIKIRI junior high school, which was not used as a school at that time, and helped teachers to reopen KIRIKIRI elementary school. These activities can be regarded as the respite care in a wide meaning. As the support activities for the residents who have lived in the provisional housing, the members of the teams were taught how to cook the local cuisine, named "KOMA-KOMA-JIRU", by the residents. The reason why the activity to learn how to make local cuisine from residents functions as supportive activity will be explained by the activity theory in social gerontology. Volunteers helped with the reproduction of "the KIRIKIRI dialect dictionary" most of which had been carried away by the tsunami. This activity gave the residents the pride for the KIRIKIRI.

#### *Socio-Spatial Structure Analysis of Tokyo Metropolitan Area: Based on "Social Atlas of Metropolitan Tokyo"*

The purpose of this study is to describe the spatial formation processes of Greater Tokyo since 1960's, with a special focus on leading industries and residential area. In the processes of industrialization, the 23 Wards of Tokyo were divided into two parts, the eastern part, which was the blue-collar residential area, and the western part, which was the white-collar area. According to the industrial transformation from the manufacturing stage to the finance and information stage, many factories have moved to the peripheral part of Greater Tokyo. Because the sites of moved factories were sold as residential area, some white-collar residential areas have begun to appear in the eastern part of the 23 Wards of Tokyo. As a result of the post-industrialization, the Greater Tokyo now consists of the central area at which the tertiary industry is prospering and of the peripheral area at which the secondary industry remains.

#### *Health for All: The Nigerian Experience with Health Insurance*

Health reforms targeting universal coverage have intensified in Nigeria since the dawn of the new millennium, and the National Health Insurance Scheme, in particular, has been hailed as the panacea for and appropriate framework towards realizing the desired goal of "Health for All by 2015". Two years to the target goal however, the reality is bleak and the task of achieving the goal more daunting than ever with a significant cohort of the population still excluded from the

health scheme and from accessing health services. Explanations for difficulties in meeting health targets are discussed, pointing to weak governance, economic challenges, and socio-cultural variables as important interacting factors slowing down the process. The paper concludes by outlining some important emerging possibilities for strengthening the health system, including the liberalization of the health sector, strengthening intersectoral cooperation, enhancing public-private partnership, and for policy makers and international technical partners to recognize key socio-cultural factors in designing health policies towards achieving health goals.

#### *Health Sector Reform in Sub-Saharan Africa: Challenges and Prospects*

Sub-Saharan Africa (SSA) has witnessed significant health sector reform since the 1980s and in the process has introduced user-fee, experimented with various forms of health insurance, and encouraged public-private partnership towards improving health equity and accessibility with the overall aim of achieving universal coverage. Fiscal constraint, starting from the 1980s, which necessitated a partnership with the Britton Woods' institution leading to varying structural adjustment programmes, have conspicuous effects on health care delivery in all countries of the sub region. This paper describes health reforms embarked upon by sub-Saharan countries and chronicles public health care evolution with reference to key features of actors, process, design and context. A comprehensive review of the literature and relevant documents forms the basis for analysis and discussion. The review is guided by three overarching questions: What social and economic conditions necessitated health reforms in SSA? How well have health reforms addressed issues of health quality, accessibility, and equity? How have the reforms improved or worsened health conditions of citizens? Salient lessons to be drawn from the thirty years experience of SSA on health care delivery are highlighted and the future prospects are discussed. It is noted that efforts to meet IMF conditions, the World Health Organization's millennium development goals, and other international health partners' demands without the required capacity and structural machinery to match the design and execution of health reforms serve to unveil the dismal performance of health sector reform in SSA. It also brings to bold relief the need for the sub-region to take ownership of health programmes by designing health policies that are both endogenously crafted and sensitive to local conditions and contexts.

#### *Interrogating Tourism As an Anti-Poverty Strategy in Middle and Low Income Countries of Africa*

This paper considers the proposal of tourism as an anti-poverty strategy used by various African countries to increase foreign revenue and create job opportunities for their citizens. The ability of tourism to attract foreign revenue into middle income countries in Africa is creatively projected through international mass media in the form of adverts and documentaries. The mass media, using picturesque scenes of nature, encourage foreigners to seek for leisure and entertainment away from their home countries. The philosophy that leisure costs money and must be invested, planned and saved for makes tourism a very attractive option for bringing in foreign revenue into Africa.

This paper interrogates this notion and questions just how effective it has been in eradicating/reducing poverty in middle income or even low income countries in Africa. The paper considers inequalities that arise due to tourism in the creation of fantasy scenes and relaxation spots that separate the tourist from the realities of the host country. The economic condition of the host countries means that majority of its citizens cannot afford the leisure and educational benefits their land offers. The paper analyzes the organizational structure of tourism and argues that, as with other foreign investments in Africa, the exploitation of the economy, land and people brings to the front burner, questions of inequalities and oppression in the continent. The question projected is how much of the revenue that accrues from tourism goes into alleviating the poverty level of the population within and around the tourist site. Secondly, how much of the accrued revenue does the government of the host country actually use in developing the country's physical infrastructure, man power, economic advancement, and national growth as a whole. It concludes by suggesting the development of blueprints for tourism that would ensure poverty alleviation, sustainability and national development.

*Reconstruction of Life and Mental Health in High School Students at Two Years after the 3.11 Disaster in Fukushima*

Although Act Concerning Support for Reconstructing Livelihood of Disaster Victims was enacted in 1995, life reconstruction of victims from the 3.11 disaster is progressing very slowly.

Under the social condition high school students living in disaster stricken areas would have experienced changes in three domains of their life such as school life, family life, and community life. Impact of life changes related to the disaster may damage their mental and physical health. Differences in processing life reconstruction may influence their mental and physical health in different ways. We assume that students who are victims from nuclear meltdowns of three of six Fukushima Daiichi nuclear reactors are less likely to reconstruct their livelihoods, so that their mental health would be poor.

We performed a questionnaire survey to examine associations between reconstruction of life and mental health in high school students after almost two years since the disaster. Five hundreds and eighty one out of 627 students in a high school responded. About half of the total was suffered from tsunami and earthquake: 11.7 % the total were victims from meltdowns and radiation with or without tsunami and earthquake: fortunately 34.3% reported that they have no damage from the disaster. Thirty two percent to 40% out of all students report they feel their livelihoods in school, family, or community are still influenced by the disaster. About 56% of the students are sensitive to a lesser tremor because they concern a big earthquake may occur. By our preliminary analyses, mental health assessed by the CES-D was related to unstable economic condition in a family, life changes in a family life, insufficient community resources, and changes in community life.

In our presentation, we will show how students experienced the reconstruction of life and how their experiences are related to their mental health.

*Challenges in Human Resource Development for Rural Leisure Activities in Japan*

This study offers a brief general description of rural leisure activities in Japan. Japan has less land area than many of countries in Asia, but the landscape of the archipelago has a rich and varied terrain broken up by sea, mountains and rivers. This small land itself comes in many varieties, and differs between Hokkaido (in the far north) and Okinawa (in the far south). This variety has aided the growth of various types of rural leisure activities. Mountain villages and small isles offer rural experiences that are unfamiliar to most urban people.

On the other hand, rural revitalization is a serious issue in the management of rural areas. The Ministry of Public Management, Home Affairs, Post and Telecommunications (*Somu Sho*) has established an initiative called *Chiiki-okoshi Kyo-uryoku-tai* (Supporters of Regional Revitalization). In addition, some prefectural and municipal governments have established support organizations aimed at rural activities.

This study explores a few cases in Yamaguchi Prefecture (the far west of Japan) to assess potentials and challenges. The Yamaguchi Prefectural Government is allocating some of its budget for volunteer activities in rural areas. Due to depopulation, volunteers from urban areas are increasingly needed to support rural leisure activities. However, the small number of repeat volunteers from urban areas poses a key problem in developing sustainable rural leisure programs.

**ASANO, TOMOHIKO\*** (Tokyo Gakugei University, [tasano@u-gakugei.ac.jp](mailto:tasano@u-gakugei.ac.jp))

*Leisure Activities and Civic Engagement in Japan*

The research question in this presentation is:

RQ1: Is there a positive relationship among Japanese youth between being a participant in a leisure group activity and civic engagement?

RQ2: What conditions affect that relationship?

In this presentation, the focus is on the function of groups for leisure activities. Robert Putnam argued that in societies where people participate in various voluntary associations, including those for leisure activities, they are also active in social, political or civic activities. That is because, according to Putnam, interaction between people with different backgrounds in these associations develops a general trust.

Since Putnam proposed his thesis about voluntary associations and civic engagement, a lot of researchers have tried to examine it. Some of them could find a positive relationship between membership in such associations and civic engagement, others either could find no connection or a very weak connection. What about Japanese youth? That is the question in this presentation.

It is particularly interesting because, although Japan has been known as a politically inactive society since the end of the 1960s, after the big earthquake and the accident in Fukushima Daiichi Nuclear Powerplant in 2011, many people began to take to the streets and organize various forms of demonstrations ranging from the traditional to newer types like musical parades.

The dataset in this study was collected online. The respondents are around 2000 contracted monitors for a research company. They all live in Tokyo. Their ages range from 20 to 59. The questionnaire is designed to examine the relationship between leisure activities and civic engagement in a broad sense, with some variables that are controlled for.

To summarize the results, participants in leisure group activities are more likely to participate in civic engagement. I will also show what conditions affect the relationship between these two variables.

*How Do Local Community Members Accept the Usage of Commons By Nonlocals in the Under-Used Commons? : An Approach Based on Agent-Based Simulation*

Many Japanese common forests are underutilized due to the increase in imported wood. Furthermore, depopulation in mountainous areas has accelerated the underutilization of common forests. Thus, users of common forests need to accept nonlocals who pay usage fee to access common resources. Hayashi et al. (2013) compared the usage rules of commons for nonlocals in 10 common forests at Tadami Town, Fukushima prefecture of Japan. They found that communities could be classified by two types according to how they dealt with nonlocals. The first one has institutions to accommodate nonlocals' entrance, and the second one has institutions to exclude nonlocals' entry. Why do some communities actively accept nonlocals, and some communities exclude nonlocals? Most previous studies do not consider the situation of under-use of commons.

This study examines the effect of usage rule of commons on welfare of local community members in under-use situation, using an agent-based simulation. Here, I consider three types of rules; (a) <Accommodate I>, which has entrance fee system by voluntary monitoring staff and the entrance fee share local community members evenly, (b) <Accommodate II>, which has entrance fee system but entrance fee is distributed among monitoring staff, (c) <Exclusion>, which exclude nonlocals by voluntary monitoring staff. The simulation shows that the difficulty of monitoring nonlocals determines the benefit of usage rule for local community members. First, <Accommodate II> operate in favor of local community members' payoff when it is difficult for local community members to monitor nonlocals. Second, <Accommodate I> is more efficient than <Accommodate II> as the difficulty of monitoring is removed. Third, <Exclusion> works well when it is easy to monitor nonlocals.

**ASATO, WAKO\*** (kyoto university, [w\\_asato@hotmail.com](mailto:w_asato@hotmail.com))

*Over-Qualification / Under-Qualification of Care Work in Ageing Asia: Towards Regional Framework of Care Provision Regime*

Skills harmonization is one of the urgent challenges in international migration of healthcare workers. This is significantly due to the increase number of *de facto* care worker migration within Asia in the forms of domestic work, care work, nursing and even nuptiality corresponding to ageing. The complexity of care worker migration is because of absence of equivalent qualifications of care workers between the sending and receiving countries. This absence in migration trigger in a dual sense. One is under-qualification of care work, such as a domestic worker engaging in a skill-required home care such as suction, NGT, stoma and so forth. The belief of domestic work as naturalized among women is also another factor in the facilitation of the under-qualification and hence legitimate familialism of care provision from the viewpoint of welfare regime. On the other hand, over-qualification is overt especially in institutional care to avoid skills shortages or to secure qualified care. This is why nurses in the sending countries are recruited to destination countries. More than 20% in Taiwan and surprisingly more than 90% of care workers in Singapore are nurses from the sending countries. This is not merely a deskilling of individual nurses but also creating insufficient allocation of nurses in the region even though most of sending countries run short of nurses especially in the rural area. Since the current bilateral agreement basis of care work migration is not endowed with a sustainable migration system, multi-lateral or regional framework for the management would be necessary.

### *From Cosmopolitan Ideal to Nationalistic Calculus: Discursive Change of Japanese Media Framing on the Kyoto and Copenhagen Climate Conferences*

Recently the studies on media coverage of climate change have increased significantly. Many scholars have extensively analyzed "framing" of climate change in the media. However, the focus of existing literature is only limited on the "science" of climate change, but not on the "politics". In light of "mediatized politics", the media has become part of the fundamental nature of contemporary politics, and therefore media coverage can have a significant impact on policymaking processes. The international negotiations at the UNFCCC/COP has been one of the important spheres of climate discourses, can be seen as a "critical discourse moment" which transform and create public discourses on climate change. Both COP3 in Kyoto and COP15 in Copenhagen have marked a significant momentum to adopt international agreements. While the former succeeded in achieving the legally-binding agreement, the Kyoto Protocol, the latter has resulted in "failure" which only achieved a non-legally-binding agreement of the Copenhagen Accord. In this study, we explore how the Japanese media represent COP3 and COP15 negotiations, and try to identify the dominant media frames regarding the COP negotiations and negotiating parties. Methodologically, we apply discourse analysis of the three most circulated Japanese daily newspapers: the *Asahi Shimbun*, *Yomiuri Shimbun* and *Mainichi Shimbun*. Our analysis reveals the *responsibility* and *conflict* are the dominant frames both in COP3 and COP15 coverage, which emphasize the responsibility of international communities to achieve the legally-binding agreement with paying closer attentions to controversy among parties. Moreover, there is the discursive shift of media frames from COP3 to COP15: in Kyoto the media are engaged in the *cosmopolitanism* discourse to imply the media's idealistic hope toward the international negotiations whereas in Copenhagen the media rather focused on the realistic condition of negotiations to imply the *nationalism* discourse that criticizes the "ineffectiveness" of the Kyoto Protocol.

### *Research Career Development in the Brics Countries: Comparative Analysis of National Academic Systems*

Last decade the BRICS countries have been catching up rapidly in terms of both economic growth and investment in knowledge, as expressed by investment in tertiary education and R&D. These countries adopted policies to promote science, technology and innovation as the result of greater recognition by governments of the crucial importance of science for socio-economic development. The BRICS countries are investing considerable heavily in the R&D sector to improve their position in the scientific output. For these reasons it is of strategic importance that a satisfactory recruitment of talented people to the science sector is secured, that the scientific profession is attractive for (potential) researchers. Employment opportunities, payment conditions, research facilities, career prospects are of major importance for career development.

Academic careers considerably differ between national science systems. This paper presents the results of a research conducted by the Center for Sociology of Science and Science Studies, Institute for the History of Science and Technology, St. Petersburg Branch, Russian Academy of Sciences, whose main interest was to examine the social context, factors and mechanisms of the academic career development in the BRICS region; to analyze the impacts of international mobility on the professional trajectory of researchers, his/her career development. The paper will also highlight the policies for research career development in the BRICS nations, the special features of academic job market, the mechanisms of reproducing scientific elite and academic leadership.

### *The Adaptability of Populist Discourse: Greece and Finland in Comparison*

Scholars commonly interpret populism along structural, cultural-historical, or economic dimensions. However, its emergence cannot altogether be reduced to this type of causal inference. Europe has recently witnessed populist triumphs both in the Nordics, previously presumed 'immune' to populism due to stable party systems, social cohesion and robust economies, as well as the South, where these 'preventive' conditions were traditionally absent, with the situation further aggravated by the Eurocrisis. Comparative research based on a most different systems design can provide clearer insight and improve our analytical framework.

We contrast two successful cases of populist mobilization in the Eurocrisis context: the Independent Greeks and the True Finns, which, while unfolding within different environments, present striking affinities in discursive produce. Our methodology comprises of a content analysis of party documents and speeches, within which we identify and assess 'populist frames' and their composition. We argue that, given the opportunity, populist discourse which pits the 'moral people' against the 'corrupt elite', can be constructed in countries with widely diverging political, cultural, and economic conditions, with equal success.

Populists in Greece and Finland may well understand each other as foes, with the True Finns portraying Southern Europeans as economically reckless recipients of undeserved aid, while the Independent Greeks argue against Northern Europeans who blatantly intimidate the Greek folk with cruel austerity demands. However antithetical these populist framings may seem, containing opposite constructions of 'the enemy', they are indeed identical in terms of structure, confirming the overarching significance of the moral distinction between 'people' and 'elites' when it comes to forming populist discourse. Having shown what dissimilar contents populism can accommodate, we contribute to the literature on the concept by comparatively illustrating the importance of this discursive structure. Thus, we argue for a focus on the form, rather than the specific content of populist appeals.

**ASOCHAKOV, YURY\*** (St.-Petersburg State University, [yasochakov@yandex.ru](mailto:yasochakov@yandex.ru))

### *Liquid Stability in Theory and Society*

The legitimacy of sociological theoretical knowledge cannot be provided by just a simple logical proof of its categorical system. It is provided by the presence of a relevant system of meanings and denotations, objectified in the practices of everyday life. Specialized sociological theories designate different social objects, and by describing connections between these objects they offer interpretive models of the social world - i.e. define the project of social reality - to the individuals acting in the world of everyday life.

In simple and traditional societies, presuming high stability level, the institutionalized monopoly on the projection of social reality was possible and also desirable as a factor of social-structural stability. Their models of official symbolical universe were resistant enough to withstand emerging "heresies" (alternative symbolical projects) suppressing them through the therapy and the denial.

This paper argues that contemporary societies as complex "life worlds" are based upon a type of "liquid" stability and presume such a level of permanent structural flexibility and mobility that not only provides for a possibility of the inclusion of alternative versions of the symbolical universe but also creates the need and the necessity for the existence of such. The very historical project of sociology as a new science about society supposed its development as an alternative version of social reality which was still non-existent. Its further advancement is connected to the presence in its theory of the different irreducible theoretical tendencies that cannot fit into the frames of a single paradigm.

Social theory of the contemporary society cannot exist in a form of an enclosed self-sufficient complex of propositions, it tends to become an active self-challenging and self-alternative theoretical context of the efficient first response to the unlimited possibilities and uncertainties of social dynamics.

**ASOR, BUBBLES BEVERLY\*** (National University of Singapore, [bubbles.asor@nus.edu.sg](mailto:bubbles.asor@nus.edu.sg))

### *Mediating Between Exclusionary/Inclusionary Politics and Migrant 'Model Minority'*

Regulatory migration regimes implemented in South Korea have evolved from a strictly exclusivist ethno-nationalist position into a more 'inclusive' and accommodating stance. Exclusionary policies (i.e. non-citizenship for migrant workers, non-family reunification, short-term work contracts, differential citizenship rights) continue to be implemented alongside efforts of employing inclusionary approaches (multicultural plans for ethnic Koreans and marriage migrants, the Employment Permit System, the amended Nationality Act, etc). In this paper, I posit that the exclusionary tendencies of these policies are not only steered by the strong ethno-nationalistic sentiment but also by developmentalist politics which gives primacy on economic development over migrants' rights. Despite the political and cultural barriers, policy outcomes suggest that there has been both 'relative success' and 'foiled attempts' in making migration regimes more inclusive through the concerted efforts of Korean civil society for migrant advocacy and the accommodation of migrants' demands by the Korean state. As a result, inclusiveness is present in selected policies with an attempt to integrate migrants in a "stratified and segmented" manner. However, this very same inclusiveness sometimes turns into a facade for exclusionary tendencies that are still entrenched in the structures.

Through in-depth analysis of existing Korean migration policies and multicultural project, I draw out the inclusive/exclusive stipulations of Korean migration strategy and how these influence the various strategies for claims making and

informal politics of migrant-serving mediating structures which serve as bridge between the Korean state and migrants being reconfigured as 'migrant model minorities'. Based on a 12-month ethnographic research in South Korea from August 2012 to September 2013, I examine the two-pronged mediating roles of migrant civil society in (1) mitigating the developmentalist exclusionary aspects of migration; and (2) cooperating with the Korean state to reinforce inclusionary migration policies.

### *Risk and Reform in the Japanese Education System*

This paper argues that the Risk Society paradigm developed by Ulrich Beck provides a framework that can reconcile the twin developments affecting Japanese education at the start of the 21<sup>st</sup> Century: the parallel trends of individualization and globalization. In Japan, education reform proposals from the 1980s onwards have aimed at encouraging a freer educational environment that can nurture strong individuals and future entrepreneurs. The Ministry of Education has also consistently argued for reforms that can better prepare young people for the challenges of globalization. Traditionally, however, educational practice in Japan has stressed group harmony and cooperation and so the forces that resist change are considerable. Most efforts to reduce pressures to conform to the group, therefore, have had disappointing results, as have programs designed to encourage greater communication with foreigners.

The government's inability to bring about meaningful reform to the education system has resulted in a failure to prepare young people for the challenges of contemporary society. Young people who do not have the skills to negotiate the new social and economic landscape are increasingly falling into low-paid, insecure employment, or withdrawing completely from society. This has given rise to the phenomenon of *hikikomori*; wherein large numbers have confined themselves to their rooms and cut all connections with the outside world. Also, many young people are deciding against having children – a trend which has resulted in a crisis of low fertility and a shrinking population. To use Beck's terminology, these are people who have been unable to adapt to their role as 'risk manager' of their own life. The education system has failed to prepare them for this role because it is stuck in a prior phase of Japan's post war development and is unable to adapt to social and economic transformations at the global and national levels.

### *Structuring of Current Religious Practices in Polyconfessional Regions*

Start of XXI century synchronizes with the next stage of secularization, transition to new cultural policy in world's social space. Oppositely, for Russian civilization it's a period when a religious identity is forming up. It's a time of rational religious self-identification, time of reflecting about personal relations with sacred. Simultaneously, we can trace two main trends. First, we fix the modeling of religious practices on the basis of extended submissions about correct religious behavior. Second, new practices, that represents religious-life intensions comes into existence. Restoration of religious tradition base is going on.

As an example we'll take religious practices, connected with body. Body practices may be separated into two general groups: connected with body as such (body border demarcation, pose, purity), and connected with body's life sustenance – especially nutritive practices. Practices of various ethnic communities, connected with nutrition, initially had definite religious sense that was gradually lost as secularization went on. Nutritive religious practices during religious control and religious traditions lost their significance had must been loose and even disappear, but no.

Keeping of nutritive practice become one of the elements of religious identity, retaining of own choosen and upheld priorities.

Important mark: either in islam and orthodoxy a tendency of forming the doctrinal basis of nutritive practices, earlier free of such a basis, exists. Religious practice, connected with everyday life can prevail over mystical practice.

Everyday structures that work upon modeling religious practices may be described through the following characteristics: 1) Cyclicity; 2) Stereotypization/rating scale; 3) Temporal dimension; 4) Topological localization; 5) Individual route of everyday life.

### *Interweaving Time and Space: An Analysis of Superflat and Japanese Lolita Fashion*

In recent years, Lolita, a Japanese youth fashion and community that emerged in the 1990s, has perplexed scholars. Its name mirrors the 1955 novel by Vladimir Nabokov, and yet, its members, while often dressing in childlike attire, starkly oppose reference to it. They borrow and allude to historical periods both from their own country and others. They selectively prune Victorian, Rococo, and Belle Époque clothing, mannerisms, and ideals. Simultaneously they reach back to *shōjo*, the girl culture that originated in the Meiji Era, which initially revolved around literature composed by and for female youth. In this paper, I will explore how their fashion relates to *superflat*, a term coined by visual artist Takashi Murakami, which examines the 'flattening' of time and space in the contemporary era. Through the lens of *superflat*, I will investigate Lolitas' allusions to historical periods in differing geographical locations, and how they integrate those allusions into their community, and the wider Japanese society, through material means as well as through performance.

### *The Organization of Precarious Workers in Argentina: Between Marketplace, Workplace and Associational Power*

In the global context, previously accepted divisions between formal and informal employment are losing ground. The last three decades of neoliberalism, rather than reducing the gap between protected and unprotected workers, have made work more precarious. Not just workers traditionally employed within the so called informal sector of the economies have increased in number. Precarious conditions of employment are becoming the standard in formally regulated systems of employment and this across the Global North/Global South divide. Despite common tendencies, the possibility for collective organising among precarious workers however differs consistently, between countries but also between different economic sectors of activity within the same country.

Drawing on fieldwork research currently conducted in Argentina, the paper aims to give a country overview of the factors that can explain the forms and strategies adopted by different groups of precarious workers in their attempts at collective organizing. Argentina in the last two decades has passed through deep crises and economic recoveries, processes of de-industrialisation and partial reconversion to industrial production and has moved, in a relatively short time span, from a formalized and extended system of work protection and workers' representation, close to the one existing in postwar Europe, to a system of employment that remains based, despite recent economic growth and government's policy changes, on the precariousness and informality of the majority of the working population. In this sense and for its history, Argentina might be considered as a good example of the way in which structural processes continuously shift the borders within which precarious workers' action takes place. Socio-political context, institutional framework and history of workers mobilizations are the general factors that can be outlined. However, the level of precariousness, skills, strategic location and technological development of the sector in which workers develop their activities also profoundly affects possibilities for action.

### *Using the Social Ties. an Ethnographic Analysis of a Snowball Sampling*

Modeled by James Coleman and others researchers of the Columbia University, the snowball sampling method is now neglected in the social networks analysis. In particular, this method is very difficult and hard to apply and the non-representativeness of the samples that it produces dissuades from using it. However, this sampling method presents many over kind of resources for ones who want to study social networks. First, when the limits of the groups are not know, it permits to identify chains of relationships in a more precise way than "name generator" devices. Moreover, it gives us the opportunity to understand the logics of exchange and structuration which characterized the individuals and groups studied. A reflexive appraisal of the construction of the snowball sample gives us an access to this kind of information.

The aim of this communication is to present the conclusions of a critical feedback from a field experiment during which three snowball sampling waves were conducted between 2009 and 2012. The experience consisted in a transfer of questionnaires person-to-person within subjects' social networks. The members of the first sample (N=10) have distributed some questionnaires to some of their relatives, friends, neighbours or co-workers who have done the same, and so on. The reflexive analysis of this sampling procedure shows us: 1) The motivations of the subjects to be involve in an active way in a sociological survey 2) The social logics which have oriented the transfer of the questionnaires.

This ethnographic feedback suggests that snowball sampling, beyond the question of statistical representativeness of the samples, maybe inadequate with the concept of social network, allows us to access to realistic networks data.

*Caring Universities? Entanglements and Cavities of Politics of Gender, Excellence and Care in Austrian and German Academia*

Models of the academic profession are under transition due to the recent 'economic shift' in academia and democratization that opens up universities inter alia for women and other social groups. We argue that both processes become entangled, but also show cavities, nevertheless questions of care are placed on the agenda of universities.

In the international competition for 'excellent' scholars universities refer more and more on gender equality policies that stem from human resource strategies, like Diversity Management, to become attractive employers. These policies do not only aim for promoting gender equality, but also go along with the market-efficient re-organisation of universities. As one part of this also care responsibilities, for children fewer for elderly, are questioned.

Results of our qualitative research projects (documents and expert interviews) show how the entrepreneurial universities are transformed into (more or less) 'caring' ones, which are combining contradictory aims and concepts of gender, excellence and care politics.

In our conclusion we discuss the universities' care concepts. They follow the tradition of social policies of the company. Recently a new mixture of caring activities can be recognized which is embedded in the entrepreneurial university's care management and administration and in the welfare regime of the two countries.

DAMMAYR, MARIA (Austrian Association of Sociology (ÖGS))

*In and Beyond the Crisis. the Relations of Gender, Race and Class in Care and Care Work Illustrated By the Austrian and German Case*

The paper argues that in the contemporary crisis of finance, economy and the welfare state a fundamental problem of modern and especially capitalist societies arises in new forms: By prioritising the market economy capitalist societies are not able to care for their members in respect to life as the end of caring instead of caring as a mean of economy. In the first step this connexion will be elaborated by a feminist and intersectional discussion of Marxist, Weberian and contemporary analysis of the relations between capitalism and crisis. Main issue will be the fundamental relations of gender, race, class, by which the division of the public and the private sphere, of paid and unpaid work, of different societal sectors are shaped. Second, the contribution focuses on the Austrian and German case and analyzes how care and care work are organized in and between the profit and non-profit sector, the public sector and the private household. Through the lenses of the approach of institutional logics and the concept of intersectionality and empirically the third step shows, how the economic shift is reorganizing the relations of these sectors; this process profiles care work in a wide range between its commodification / deprofessionalization, professionalization / deprofessionalization, formal / informal organization and is underlied by and embedded in gender and migration regimes. It can be shown, how these regimes economically, politically and culturally are regulating the division of labor between women and men, native and migrant people, skilled and unskilled work. By this way the Austrian and German care regimes can be considered as an example for dealing with the crisis by reorganizing the relations of gender, race and class.

AURET, HENDRIK (University of the Free State)

*The Site of Recaptalizing the Spiritual Capital of the City: Welcoming the Stranger with Intention and Architectural Edifice*

Violence during the protests in Tahrir Square, buses driving through London that threaten undocumented foreigners with extradition, and xenophobic attacks in South Africa. These events divulge a spiritual capital bankruptcy in the city of our era. The dominant reaction to this spiritual bankruptcy is analysis, but the spiritual capital present in the city is not analytically-complicated, it is (counter) intuitively-complex. Rather than an Analyst narrative, we need the Lacanian opposite: a Master narrative, which offers solutions to the spiritual capital bankruptcy. In our paper we offer a Master narrative of spiritual capital that moves beyond the

Analyst narrative. This we do by combining our two fields of study: Spirituality and Architecture. The Master narrative of spiritual capital comes in the form of the Stranger, who passes through the city. The Stranger, as political neighbour, has the potential to recapitalize the city spiritually. Then, we move to conceptualise and visualise an architectural edifice that can facilitate the spiritual recapitalization of the city in the Stranger's movement in and through the city. This architectural edifice will aim to recover a historical aspect of spiritual architecture that has been neglected: architectural edifices as build expressions of kindness extended in acceptance to the Stranger. From the intricate systems of asylum offered by medieval churches, to the social functions embodied in the Ottoman Külliye, spiritual architecture traditionally upheld the way of life of the place, while being open to the influence of the Stranger. The above-mentioned edifice will be conceived as a re-interpretation of Norberg-Schulz's formulation of 'belonging' to the 'vocation' of the place, inspired by Heidegger's concept of 'sorge' (care). As an expression of the art of care, the architectural edifice extends kindness to the Stranger and provide a location for the spiritual recapitalization of the city.

**AUTHERS, BENJAMIN\*** (Australian National University,  
[benjamin.authers@anu.edu.au](mailto:benjamin.authers@anu.edu.au))

*"We Target the World's Worst Crimes": Creating Symbols of Justice in Human Rights Watch's Annual Report 2012*

This paper examines how evocative and emotive images and text are deployed in human rights reporting as symbols of rights violation and protection, and considers how Human Rights Watch (HRW) locates itself in that figurative order as a necessary intermediary between wrongs and their redress. In its *Annual Report 2012*, HRW focuses on its involvement in "the international justice movement." Images and textual descriptions of atrocity sit next to depictions of the work of law in the *Report*, of human rights abusers subject to adjudication in international courts and tribunals. Linking violation and justice in the *Report* is HRW, represented in words and visuals as "an effective force for justice."

Through an interdisciplinary methodology that brings a critical analysis of the *Report's* rhetoric into dialogue with interviews with HRW report writers, this paper examines how the *Report* creates a narrative in which HRW symbolises an effective response to human rights violations. The *Report* employs a human rights aesthetic to create visual and textual symbols that denote the work of justice in a legalised, global form. Framing the organisation as part of an international justice movement, the *Report* positions HRW as exemplary within that movement, an actor who has proven to be indispensable in bringing about justice through its research into, and witnessing of, rights violations. My analysis will demonstrate how the *Report's* creation of a symbolic lexicon of justice is co-constitutive with HRW's own self-representation, a self-fashioning that produces the organization as an ideal NGO within the international human rights regime.

[avdeeva@niiss.ru](mailto:avdeeva@niiss.ru))

*Information and Communication Resources Is Laid the Foundation Stabilization of the Society*

Global crises have contributed to the destruction of the basic values of capitalist civilization, which were based on the domination of the economic system over all others. The perception of the economy has been built on the theological principles. All sectors of society were directed to obtain the gross earnings. This contributed to a gradual merging of economic and political interests, which led to formation of the new political elite. A statesman is not a «servant of the people», he becomes a businessman. This contributed to the rejection of society from the state, which leads to confusion.

Reduction of the growing resentment of the society about the established political system may contribute to make of bilateral open dialogue between the state and society. This is possible through using of information and communication resources. In addition, organization of communicative and informational process in correct form helps to establish trust between society and government that leads to creating an entirely new model of interaction of two opposite spheres. The possession of information allows both parties to navigate in a particular situation, change it, plan some actions, to monitor the effectiveness of solutions, avoiding a particular risk, control each other.

The modern society has new information technologies, which allows people always being in the process of communication. Development of communicative environment is developed public control, and also contributes to the formation of public opinion, which could resist the state will. Moscow is the initiator of the development of information and communication resources among the subjects of the Russian Federation. The government of Moscow created government portals aimed at the creation of direct communication of the authorities and the population. These measures have helped to increase the level of loyalty of the population to the authorities.

*Inequality of the Russian Population: Quality of Life and a Preferred Social Order*

Contemporary state of social inequality is especially dependent on level of life quality. Our analysis shows that interconnections between social inequality and quality of life influence people's view of social order. Based on sociological surveys across Russia, analysis shows the current state of social inequality in the country depending on type of settlement and region. Used synergetic method showed different preferences of Russian citizens towards different types of social order, including social democracy, liberal democracy and "middle" type and their dependences on quality of life in these regions and settlements. Unequal social positions of different groups correlates with their choice of social order and, therefore, ways of increasing their quality of life. According to the theory the higher is the person's quality of life the less probability is there for him to change social order. But this pattern is non-linear and multidimensional which current survey tends to prove.

*Gender Inequality Through Sonography Centers In Maharashtra, India*

Dr. Smita Awachar,  
Associate Professor, Dept. of Sociology,  
Dr. Babasaheb Ambedkar Marathwada University, Aurangabad, India.  
India has one of the worst gender ratios, indicating gross violation of women's rights in the world. The main reason behind this is the practice of 'Dowry System'. It is considered that the birth of girl child in the family indicates the beginning of financial ruin and hardship. Indian society considers woman as burden on the family's resources. This attitude gives boost to avoid a girl child's birth. This problem is getting worst as scientific methods of sex determination are evolved and performance of abortions has greatly increased since last 25 years. This facility is easily available even in rural areas in India. Hence female fetuses are selectively aborted though Government of India and Maharashtra are trying to implement strict laws for the declining child sex ratio. As a result during 2012-13 several sonography centers in Maharashtra were sealed.

The attempt has been made in the paper to identify the gaps in implementation of law and how the sonography centers are affecting the child sex ratio. The content analysis has been done of different newspapers during May 2012 to July 2013. It has been suggested that the rigorous, fast and efficient efforts are required to control over the declining child sex ratio by Government agency.

**AWADA, HALA\*** (ISA member, [haawada@yahoo.com](mailto:haawada@yahoo.com))

*Graduates of Lebanese Institute of Social Sciences: Which Equality in Learning, Which Equality in the Job Market?*

The Lebanese Institute of Social Sciences was established in 1959. This institute teaches Social Sciences among four private universities in Lebanon. In its mandate, research and teaching are the two pillars for its work.

This Institute was working in light of this aforementioned direction till the Lebanese civil war erupted in 1975 which resulted in hindering its activities. However, during this period, while the situation of educational institutions in Lebanon remained static, higher education witnessed significant structural changes at the world level with the increasing impact of globalization.

In 1990, with the civil war coming to an end, Lebanon entered a rehabilitation and reconstruction phase, and the institute of Social sciences like other educational institutions, was launched into many structural mutations. For instance, since 1990, the institute turned to mass education and is consequently stamped by the highest level of enrollment in comparison with other universities teaching Social Sciences in Lebanon. Moreover, it is the only institute in the Lebanese University which did not yet adopt the LMD system. However, the curricula was not substantially updated to keep pace with the evolution of the job market.

In light of this fact, one of the most important questions to raise: does the equality of chances in enrolling in higher education programmes in the Lebanese University provide the same equality in the job market?

Another pressing question to be answered is about the capacity of the local tertiary institution, which has no opportunity to coin its own conditions of graduation and its own job market, to make a fair integration in the labor division of the scientific world.

*Third Food Regime, Agribusiness Companies, Food Security and Poverty Alleviation: The Case Study Of Contract Farming In Antalya Kumluca-Turkey*

Rapid increase in the demand for high value export crops has been propelled by the needs of agricultural industries. Contract farming through which high value export crops are produced has been heralded as a 'golden opportunity' for producers for its ability to ensure optimal resource use and poverty reduction. This paper, based on a fieldwork carried out in Kumluca region of Antalya in the summers of 2012 and 2013, aims to challenge the contentions about poverty reducing and resource optimization impacts of contract farming. It specifically questions the optimistic visions of the World Bank, the Ministry of Agriculture and Transnational seeds and agribusiness companies by arguing that under the 'Third Food Regime' developing countries' countryside is being transformed in such a way that a new process of re-peasantisation is gradually underway. Contract farming enables international capital not only transform the countryside to ensure the production of high value crops needed by agricultural industries and supermarket chains but also to take advantage of patriarchal cost calculation of peasants in the process of production. The empirical material collected in Antalya region in Turkey shows that contract farming has extremely complicated new forms of labour relations. Instead of using their own family labour contract farmers utilise share cropping arrangements with migrant farmers traditionally involved in grain production but no longer able to survive due to cuts in state support. The paper argues that greenhouse production of vegetables for import markets through contract farming arrangements utilises pre-capitalist forms of labour while using the most sophisticated production techniques and inputs controlled by transnational agribusiness firms. As such family labour of migrant workers is over-exploited.

ed while seed firms, local intermediaries and international supermarket chains manage to accumulate capital. Thus the claim that contract farming manages to mobilise the poverty reduction mechanisms is far from the reality.

SUELL, SHIKIRA N. (Arizona State University)

#### *Examining a Paradox: The Differential Effect of Years Lived in the United States on Birth Outcomes for Latina Women*

The unique stressors often faced by Mexican women living in the US, particularly for immigrant women, through limited financial resources, cultural beliefs regarding health and illness, lack of social support, and inadequate English language mastery, have been associated with poorer birth outcomes. Drawing from the Latino health paradoxes, birth outcomes are expected to be better for recent immigrants through health selection, health behaviors, or living in neighborhood ethnic enclaves. Conversely, birth outcomes are expected to worsen as Latinas acculturate within the US. This study examines the effect of maternal years lived in the US on birth weight. Data for this study come from a randomized control trial of 440 pregnant Latina women (81% Mexican origin) visiting a hospital that provides services to low income, prisoner, or immigration detainee populations. Upon enrollment, participants completed a baseline survey. Once the baby was born, medical outcomes from electronic medical charts were obtained on 332 of the participants. Using linear regression, the impact of the maternal number of years lived in the US on the baby's birth weight was examined, and models controlled for number of contacts, income, age, number of pregnancies, and current cigarette and alcohol use. Results indicate a significant curvilinear relationship between years lived in the US and birth weight ( $B = -40.83$ ,  $p < .05$ ), with women living in the US between 6 to 15 years having higher birth weight babies, while women living in the US less than 1 year and women born in the US having similar lower weight babies. While the majority of all births fell within the average full-term weight between 2700 and 4000 grams, these analyses point to the complexity of the Latino Health Paradox, as both recent immigrants and those born in the US had lower weight babies, an unexpected finding.

#### *Crime Location and Reporting Practices of Victims in Lagos, Nigeria*

*Differential concentration by government of its development projects on urban areas at the expense of rural upgrade causes variation in the character of victimization and citizens' responses to crime from rural, through semi-urban to urban communities. This paper examines the influence of crime location on crime reporting practices among residents of Lagos, Nigeria.*

*Both quantitative and qualitative methods were adopted. Multistage sampling procedure was used in selecting 948 respondents for the survey. Six In-Depth Interviews, 12 Key Informant Interviews and 10 Case Studies were conducted with divisional crime officers, crime victims, victims' relations, traditional rulers, landlord associations and religious leaders to elicit complementary qualitative data. Data analysis involved the use of simple percentages, chi square and content analysis.*

*Findings showed more respondents (62.5%) were victimised at public than other locations in the study area. Crime locations without light (49.3%) and those lacking network coverage for police notification by phone (49.3%) discouraged crime reporting. While 53.3% of respondents identified some crime incidents as too trivial to deserve reporting, fewer respondents (46.8%) insisted that serious crimes will be reported despite the crime location. About 59.1% rural, 47.1% semi urban and 46.7% urban respondents acknowledged crime location influenced their crime reporting practices, implying that 40.9% of rural 52.9% semi urban and 53.3% urban respondents did not report their victimisation experiences. Chi-square analysis indicates that location and crime reporting were significantly related in the study setting ( $P$  value  $< 0.05$ )*

*The study concluded that disparity in resource allocation and security commitment to the diverse communities of Lagos accounted for respondents' differing responses to crime through reporting. While public policy gives equal development and security concern to the communities in Lagos, the study suggests that police authorities should pay renewed interest to human safety to reduce residents' vulnerability at public spaces in the study area.*

### RC29-504.3

**AYODELE, JOHNSON\*** (Lagos State University,  
[johnson.ayodele@lasu.edu.ng](mailto:johnson.ayodele@lasu.edu.ng))

#### *Public Confidence in the Police and Crime Reporting Practices of Victims in Lagos, Nigeria*

*Despite government's recent huge budgetary investment in the police, the level of public confidence in the police continues to decline with corresponding fall in crime reporting by victims and witnesses of crime. This paper therefore examines the influence of public confidence in the police on crime reporting practices and associated factors for the absence of public confidence, among residents of Lagos, Nigeria.*

*Both quantitative and qualitative methods were adopted. Multistage sampling procedure was used in selecting 948 respondents for the survey. Six In-Depth Interviews, 12 Key Informant Interviews and 10 Case Studies were conducted with divisional crime officers, crime victims, victims' relations, traditional rulers, landlord associations and religious leaders to elicit complementary qualitative data. Data analysis involved the use of simple percentages, chi square and content analysis.*

*Findings indicated bribery (51.4%), ineffectiveness (49.1%), corruption (48.1%), lack of integrity (47.4%), complicity in crime (40.0%) and nonchalance (33.3%) as some of the factors responsible for declining public confidence in the police. Besides, rural dwellers have more confidence in the police than their semi-urban and urban counterparts. Thus, crime reporting diminishes in intensity from rural through semi-urban to urban communities of Lagos State. Though there is no significant association between public confidence and crime reporting, victims' fear of offender revenge, crime and court processes, crime location and socio-cultural conditions of victims are responsible for low crime reporting in the study area.*

*The study concluded that declining confidence in the police results from the failure of the regulatory body to enforce professional ethics among personnel. This negligence has caused the reluctance of citizens to engage with the police to tackle crimes by making local intelligence available through crime reporting. Therefore, the study suggests that the police commission should enforce police codes of ethics and retool the police to earn public approval of their services.*

#### *Intergenerational Transfers in Families Across Welfare Regimes*

Intergenerational Transfers in Families across Welfare Regimes

This paper presents a comparative study of intergenerational transfers (financial and social support) in light of recent financial crisis based on the most recent OECD, SHARE, and EU data available.

In this paper, I consider the following information to measure intergenerational transfers: (i) occurrence and amount of financial support from or to someone within or outside the household; (ii) occurrence and amount (in hours) of social support such as personal care, house work, child care, and other social help from or to someone outside the household. Similar to previous studies, I expect to find that a common transfer pattern which is a net downward flow from the older to the younger generations, both by financial transfers and by social support. Transfers from the elderly parents to their children are much more frequent and also usually much more intense than those in the opposite direction. I also expect to find some evidence that show differentiated patterns that correspond to a four-fold welfare regime typology.

#### *Work and Life Balance: New Challenges for Women in Turkey*

This paper highlights the roles of the family in welfare distribution and how work-life balance has been affected by the social policies, with particular emphasis in recent family provisions and labour market reforms. Furthermore, it examines whether a neo-liberal economic process leads the Turkish welfare regime to adopt the characteristics of the Liberal welfare regime. There are two main objectives in this chapter. First, it aims to highlight major characteristics of the Turkish welfare regime and its family policies. That is, it seeks to examine how the welfare regime has evolved in view of actors representing the interests of state, market, family, and local actors. Second, it aims to analyze the ways in which the Turkish

welfare regime and its family policies are affecting the welfare of the different cohorts and genders. That is, it seeks to scrutinize how changing families affecting equity across gender and generations. This paper shows that despite important gender equity reforms and significant increase in women's labour force participation, the Turkish welfare regime has still some inequality problems in terms of generations and genders. This also affects work-life balance of women.

Changing family structure and work-life balance will be analyzed in light of welfare regime theoretical framework. Turkey has revealed significant similarities with other Southern European countries through its familialistic structure, the residual nature of social assistance, and patronage. The methodology to be used in this paper depends on quantitative secondary data and previous studies on welfare states and family policies. I will use mostly comparative data on family policies, labour market, and demographic indicators from the OECD and the Turkish Statistic Institute to understand the transformation of the Turkish welfare regime and family structure.

### *A Global Profession: Pilots of Helicopters in Brazil and Mexico*

La profession de pilote d'hélicoptère au Brésil et au Mexique est symptomatique des deux traits constitutifs de la globalisation, l'uniformisation et la différenciation. Elle illustre dans quelle mesure, partant d'un cadre contraignant, les acteurs bousculent l'existant pour l'infléchir et éventuellement imposer leurs marques. Ce processus est propre à la construction de toute profession. Dans le cas examiné, la démarche visant à légiférer une profession en plein essor, au Brésil, est mise en tension entre, d'un côté, les exigences liées à la spécificité de la profession et, d'un autre, la préservation des droits et statuts des travailleurs au vu de la recherche de flexibilité voulue ou subie par les professionnels. Au Mexique, les différends sont d'ordre institutionnel ; ils portent sur l'accès à la profession et la professionnalisation des pilotes. Il en ressort que la manière de gérer les dissensions diffère sensiblement d'un pays à l'autre.

Ainsi, même pour une activité professionnelle aussi normée que la navigation aérienne, soumise à des règles dictées par la législation internationale, le cadre réglementaire institué localement ne rend compte ni de la richesse des interactions ni des réalités. L'institutionnalisation de la profession fait appel à deux ordres différents. L'un, qui renvoie à la construction des normes, met en relief les tiraillements entre militaires et civils au Brésil, entre civils au Mexique ; il illustre les arrangements institutionnels propres à des arènes de pouvoir en voie de consolidation ou qui font encore l'objet de négociations. L'autre, celui des pilotes d'hélicoptère, fait appel à la consolidation de la profession dans un univers institutionnel instable ou en construction, rendu plus difficile par son caractère dispersé. La bataille qui s'est nouée récemment au Mexique autour de la profession est symptomatique des tensions qui prévalent dans la construction des normes et leur capacité à s'imposer.

### *Restructuring Foreign Worker's Policy in Malaysia*

This paper attempts to analyze current regulations regarding foreign workers policy in Malaysia and how Malaysia can learn from the experience of several friendly-foreign workers countries. Malaysia is one of the most rapid growth economies in Asia and she is now facing shortage of labor to fulfill this growth. As far as current regulations and enforcement of foreign workers is concerned, Malaysia needs to reform these regulations, so that foreign workers can be fully integrated in the process of long-term economic transformation towards vision 2020. Empirical experience from friendly-foreign workers countries such as Canada and Sweden has shown that both countries benefited greatly from forming a dynamic policy and regulations governing foreign workers. This paper is based on secondary data from empirical studies of friendly-foreign workers countries and primary data from interviews foreign workers and local authority in Malaysia. The combination of both data will contribute to new inputs for restructuring of foreign workers policy in Malaysia. The result from this study shows that one of the conditions towards vision 2020 will be based on the superior of her labor market policy.

### *Socio-Cultural Influence of Gender Roles in Women's Health Care Utilization in South-West Nigeria*

Socio-cultural factors are threat to women's health and well-being. A culture reinforces the gender role and life style of husband and wives. No matter how equipped a health facility is, it is the patronage that makes the difference to good health. People's socio-cultural background play vital role in seeking and acceptance of health care. The consequences of these factors on the use of health facility among pregnant women is a major cause of maternal morbidity and mortality and a powerful brake on the road to the achievement of MDGs as well as overall development. Maternal mortality in Nigeria is very high, with an estimated 52,900 Nigerian women dying from pregnancy-related complications out of a global total of 529,000 maternal deaths. It is not encouraging to note that 62 percent of births in Nigeria occur at home and 96 percent of women who received no ANC services delivered at home). Several factors lead to health care facility utilization and among these the less studied is the socio-cultural dimension and hence the focus of the paper. The study was carried out in Ado-Odo/Ota local government area with 260 eligible respondents, selected randomly from the eight wards in the local government. Interview approach was employed with the aid of structured questionnaire to elicit required information from the respondents and data analyzed using SPSS. The main objective of this study is to understand the influence of socio-cultural factors influencing health care utilization among women during pregnancy and child birth. The findings show that husband perception of pregnancy complications, age at marriage, who pays ante-natal bills, family type, treatment place decision are significant towards use of health care services by mothers. Paper provides recommendations for improving the use of maternal health delivery services in the study area and beyond.

### *Influences of Electric Media on Fanzines in Japanese "Otaku" Culture*

Today, it is easy for ordinary people to widely disseminate their message and works over the Internet. Nevertheless, many people still disseminate information by paper media. For example, people known as *otaku*, who are fans of anime, manga, video games and so on, often create fanzines binding manga and novels they produced themselves in Japan. They then sell these fanzines at events in which fanzines are sold. With the growth of the Internet, *otaku* also exhibit their works on the web. But many *otaku* still use paper media to publish their works. This paper considers the influences of electric media on paper media and the merits of paper media as a tool for personal publications, based on my interview research for *otaku* who create fanzines.

Originally, fanzines created by *otaku* have four functions: publishing fan works, informing others about their creative activity, talking about one's favorite works and characters, and interacting others who share the same interests. As *otaku* use online tools for their creative activities, electric media have replaced paper media for informing others about their creative activity and discussing their favorite things. But paper media have advantages in publishing works and interacting with others. Paper media is more suitable for placing manga and treated better than electric media. By selling fanzines at events, *otaku* can enjoy face-to-face communication with others. They can also directly gauge the reader's response to their works. Although works created by fans are provided free of charge on the Internet, fanzines are traded with money. The people I interviewed who create fanzines regard receiving payment for their works as a sign of appreciation for them and feel strongly that their readers should accept their works. For these reason, the creative *otaku* I interviewed prefer paper media in the age of the rising Internet.

*Mobilising Hope: Infrastructural Activism in Post-War Beirut*

Lebanon has been described as "post-war," but not "post-conflict." A fragile peace has been held together since the early 1990s by a precarious network of elites in a power-sharing arrangement spread across the institutions of the state, the media, and the very surface of the earth, consolidating what architect Karl Sharro (2003) has called 'warspace' in peacetime. This atmosphere has made the work of rights-oriented urban activists very difficult; how does one advocate for territory-spanning policies and/or infrastructures when urban space appears so hopelessly fragmented and policed?

This paper, based on empirical research on the public transport sector, and taking 'assemblage urbanism' as a framework of analysis, will trace recent efforts to turn urban mobility in Beirut into a matter of concern. In turn, this investigation will highlight how a heterogeneous public is being formed around mass transit, 'the public domain' and their disjunctures.

The paper will argue that this creative public has enlivened the politics of urban development and infrastructure, and in so doing, provided a subterranean means for mobilising hope against a political arrangement built on the preservation of spatially-inscribed allegiances. However, by successfully lengthening some relations (e.g. embassies, media outlets, 'creatives,' etc) rather than others (e.g. trade unions, bus drivers, state employees, etc), this constellation of activists has yet to be successful in bridging the unequal 'warspaces' of Beirut, and hence pose a threat to 'the regime.' By telling this story, this paper aims to demonstrate how assemblage thinking, far from being merely descriptive, can be a form of critical political engagement or activism in itself.

*Global Convergence in Economic and Social Structure*

The macroeconomic structure of the modern world-economy has been incredibly stable over time. According to data from Maddison, the 188-year correlation of national income levels for the 8 major world regions is a remarkable  $r = 0.956$ . There has been virtually no change in relative incomes for at least two centuries. This structural stability contradicts both standard neoclassical convergence models and standard world-system mobility models. Nonetheless, structural convergence is occurring: convergence in the demographic, distributional, governmental, industrial, and other internal structures of countries around the world. These trends presumably create pressure for macroeconomic convergence, but monte carlo simulations suggest that any resulting macroeconomic convergence is likely to be very slow indeed. It is also likely to be very different in character from standard "catch up" models that presume convergence to US/EU standards of living. This presentation focuses on the macrotrends of global convergence, with particular attention to the four "BRIC" countries (Brazil, Russia, India, China) and the "Four Tiger" economies of east Asia (Hong Kong, Korea, Singapore, Taiwan). The macroeconomic trajectories of the BRICs since 1980 can all be seen as disparate cases of evolution toward equilibrium: stagnation for Brazil, convergence down for Russia, and convergence up for India and China. All four countries will soon have near-identical demographic profiles and near-identical macroeconomic characteristics (except India, which is at a much earlier point in the curve than the others). The lead cities of the BRICs are also coming to closely resemble those of the Tigers (again with the exception of India). The interesting feature of all these countries is that the equilibrium point to which they are converging is not one best represented by the US or the EU, but one best represented by Brazil and the other large countries of Latin America.

*The Global Diffusion Of Inequality Since 1970*

Since 1970 income inequality has been stable or rising in almost every country in the world. It has not, however, risen at the same time or at the same rate throughout the world. This suggests the globalization, skills premium, and technological change explanations that prevail in the economics literature are likely incorrect, since all of these processes should in principle have relatively uniform global impacts. Instead, the timing and geo-cultural patterns of rising inequality bear the hallmarks of a diffusion model. Inequality has not arisen simultaneously around the world; it has "spread" from country to country in recognizable and sensible patterns. The diffusion model offers a simple, intuitively-appealing

alternative to extraordinarily complex regression models of rising inequality. Diffusion can occur either through emulation (a macrophenomenological mechanism) or through coercion (a macrorealist mechanism). These two mechanisms are not mutually exclusive. Either or both can be used by national elites to effect major changes of policy regime. Diffusion by emulation and diffusion by coercion are two macro-level mechanisms that can be used as a template for understanding the implementation of inequality-increasing social and economic policies in diverse countries around the world. They can be differentiated through examination of the micro-level mechanisms through which diffusion occurred in specific historical cases. This injection of agency into the inequality debates requires extensive micro-level work on individual countries, but the clear existence of macro-level trends suggests that this micro-level work should be done within the context of some form of macro-level diffusion model.

*The World Social Forum As a Transnational Agency and Process? - from a Perspective on Transformative Entrepreneurship*

The World Social Forum (WSF) emerged as an alternative response and project to the World Economic Forum. It is envisioned and mobilized to construct "Other Possible Worlds," thereby advocating a planetarian alternative to neoliberal globalization. The WSF is made of a great variety of alternative and grass roots movements, associations and peoples coming together in an "open space." Seeking and constructing alternative ways to deal with the ongoing world global crisis, which include alternative lifestyles and systemic changes to effectively confront and solve the global climate crisis. This is why it can be linked to recent development in entrepreneurship research and practice, beyond its conventional scope, seeking to enlarge and broaden its conventional view. By so doing, entrepreneurship is reclaimed as a vital societal phenomena and as a social force for change in our times (Steyaert & Katz, 2004, Spinosa, Flores&Dreyfus, 1997, Berglund, Johannisson&Schwartz, 2012). Our aim with this paper, based on extensive experiences from participation in WSF activities, is to identify entrepreneurial dimensions and features observed in World Social Forum. To achieve this research objective, we focus on types and levels of interaction and networking taking place within the World and European Social Forum processes. WSF can be approached as a social space, as an organization, as a process and/or as a movement of movements, exhibiting a very extensive and activist-oriented kind of entrepreneurship (Gawell, 2004), that might entail a number of different balancing acts. For instance, between an open and democratic process at the grassroots level, while being also partially centralized and restrictive in various ways. From the perspective of entrepreneurship theory and praxis, one finds a delicate balance between concerted attempts to construct collective entrepreneurship to achieve greater impact, while also trying to act as a venue for a variety of distributed entrepreneurial initiatives, innovations and interactions.

*Mystic and Social Movements: Cha(lle)Nges in/for Organizational and Communicative Dimensions*

The mystic is one of the most particular characteristics of the Brazilian Landless Social Movement (MST) that has been extended to many other social movements, both in Latin America and worldwide. It is considered as an undefinable notion that mixes ethics, aesthetics, subjectivity, identity, feelings, emotions and ideas, and takes place through many artistic forms (dance, music, theatre, poetry, etc). A really transdimensional and complex practice that articulates the symbolical, emotional, thinking, communicative and socialising dimensions, the mystic offers an analytical scenario for understanding some of the most important challenges faced by social movements and the changes they set to the notion of "organization". From the case study of the MST, the text aims to analyse how the mystic summarizes, at least, two debates on the organizational and communicative dimensions of social movements, it is, the interrelationships between: 1) emotions and reasons and, 2) visibility and articulation. Given the specificities of the mystic, it challenges the traditional boundaries set by social sciences on these pairs -presented, in some cases, as irreconcilable dichotomies-, giving the possibility of thinking it in terms of interrelationships and dialectic dualities. We aim to explore the innovations this practice sets for the communicative dimension and the organizational dynamics of social movements, as a singular mediation (Barbero) that offers a new sense to the notion of "totality" (given its transdimensional nature) and avoids the tension between action and structure (due to the senses of the mystic practice and the particular individual-collective articulation proposed by it). Going beyond borders (the reason/feelings, or individual/collective divides) the mystic provides a scenario for the analysis of how a collectively organized practice, with an important symbolical and communicative dimensions, generates a strong sense of belonging to the social movement, reinforcing the organizational dimension.

**BACALLAO PINO, LAZARO M.\*** (Universidad Nacional Autónoma de México, [bacallaopino@yahoo.es](mailto:bacallaopino@yahoo.es))

*Reading the Past and the Present, Imagining (and living) the Future: The Practice of Mystic in Social Movements*

Opposite to the so-called revolutionary strategy in two steps (first, to take the power -it means, the State-; and, second, to change the world), social movements propose a process of social change from here-and-now, taking their experiences and practices as an advance of the new society to be built. In this scenario, we aim to analyse the role of the mystic as symbolical mediation between the past-the present where social movements come from, and the present-the future they try to configure. The mystic is one of the most particular characteristics of the Brazilian Landless Social Movement (MST) that has been extended to many other social movements, both in Latin America and worldly, and we will analyse it through the discourses on it. It is considered as an undefinable notion that mixes ethics, aesthetics, subjectivity, identity, feelings, emotions and ideas, and takes place through many artistic forms (dance, music, theatre, poetry, etc). A really transdimensional and complex practice that articulates the symbolical, emotional, thinking, communicative and socialising dimensions, the mystic offers an analytical scenario for understanding this creative temporal tension between past-present and present-future. Given its particular symbolical and emotional dimension, the mystic plays a core role in the process of creation, articulation and -what is more important- "imagination" of projects and visions of future, from a past-and-present based approach, and in the (emotional) mobilisation of individuals around those purposes and the unity for making it real. Finally, we aim to discuss how the mystic's special articulation between emotions and reasons, feelings and ideas, sensibility and reflexion -broking traditional divides- becomes a central mediation (Barbero) in understanding the process of re-invention of new practices proposed by social movements.

*"on the Positive Side I Spend Much More Time As a Dad": Men's Stories about Living with a Career Woman, Shared Responsibilities, and Involved Fathering*

Research has shown that Scandinavian men are participating much more actively in the upbringing of their children than ever before and that the role of the father has been changing from provider to caregiver. This new fatherhood practice has been termed "involved fathering" - a term which has been giving meaning in relation to an idea of a new child-orientated masculinity. This paper discusses the construction of father's identity among a group of Danish men who are married to career women. By examining their stories of being a father, the paper considers how involved fathering is constructed as a tension between individual choice and the necessity of making everyday life work. Even though the interviewed men can be identified as 'involved fathers' and symmetrical parenthood is idealized in their stories, the paper argues that these men's extensive involvement is to some extent caused by the character of their partner's job and her inability to take the primary caring role. In relation to this, the paper discusses how fatherhood is constructed differently than motherhood (different practices e.g. rough play, less emotional and learned - in contrast to an idea about natural and instinct based mothering). However, the paper also shows that the men value the close relationship with their children highly and regard their shared/primary parenting responsibility as a positive outcome of the partner's career job. These observations spur a concluding discussion of the relevance for political interventions like earmarked daddy-days/leave in order to obtain egalitarian family practices.

*Type 2 Diabetes Health Equity Audit in the Basque Public Healthcare Service (Spain)*

Health equity audit (HEA) is a systematic procedure to identify inequalities in healthcare access and use, and propose interventions for their reduction. Type 2 diabetes (DM2) is one of the leading causes of disease burden nowadays in Primary Health Care (PHC), and has shown a relevant socioeconomic pattern. This paper aims to present the results of the "equity profile" conducted on secondary and tertiary prevention of DM2 in PHC, being this the first step of any HEA. This was a cross-sectional and retrospective cohort study and the population studied was that living in the Spanish province of Araba in 2010-2011. Census track based socioeconomic information for each individual was linked to the electronic clinic

history of the public Basque Health Service. Age-adjusted prevalences and incidence rates for preventive counselling, screening, treatment, referrals to specialists and consequences were calculated. Moreover the relative index of inequality (RII) was calculated, adjusted for different confounding variables. Main results show that the prevalence of DM2 (men 5.8%; women 4.8%) followed a clear socioeconomic gradient (RII men = 1.35 [1.26-1.44]; RII women = 1.79 [1.66-1.94]), although the relationship varied with age. The poor metabolic control increased by deprivation especially in women (RII = 1.18 [1.02-1.28]), and the probability of having an annual analytical control (RII = 1.14 [1.04-1.25]). The referrals to specialists were more frequent among low socioeconomic groups, but the relationship disappeared when considering the metabolic control and complications. These results indicate that even if PHC attention is equitable, relevant inequalities in DM2 persist, which implies the need of looking for interventions to reduce them beyond the health service sector.

*The Job-Seeker and The Data Double: How Employers Use Information Seeking On The Internet In The Recruitment Process and Its Consequences For Interaction With The Job Seeker*

Over the past years it has become increasingly more common for employers to search the internet for information on job-candidates, creating a situation where the interaction between the job-seeker and the employer becomes influenced by the information that the employer have retrieved from the internet. The different types of information packages that an employer takes part of during a recruitment process can be understood by Goffman's concept of roles. A person uses a number of different roles in daily life, no one more "authentic" than the other, but always more or less trustworthy in regard to the context of the performance. One can therefore understand the recruitment process as a process of evaluating if the candidate is likely to be able to deliver the role that the employment carries with it in a trustworthy manner. By using information from the internet, employers may come to see job-seekers in their other roles and in setting that can be characterised as front- as well as backstage, and job-seekers will be evaluated based on whether or not these roles are perceived as compatible with the role of being an employee in the organisation in question. In this paper we ask how employers interact with this "data double" and how the data double influences the interaction between the employer and the job-seeker. The study was conducted through qualitative interviews with employers from the private as well as the public sector in Sweden.

*Mathematical Exclusion - Process of Escaping from Mathematics and Its Consequences for Young People Career Paths*

In the Polish educational discourse there is a lot of concern about the problem of "overproduction" of graduates of humanistic faculties and deficiency in the area of technical education. Recently even social campaigns were organized by the government, aimed at encouraging secondary-school graduates to choose technical specializations at universities. However, this revealed another problem: insufficient level of mathematical knowledge of candidates. Many studies show that the problem has to be handled at earlier stages of education.

Mathematics as no other school subject evokes conflicting emotions and contradictory attitudes. Process of studying mathematics requires systematic practice and patience, as mathematical knowledge is of cumulative nature.

In case of mathematical education we can observe a process of abandoning mathematics by a part of students who start to consider themselves as "humanists". It causes serious decisions about profile of education - e.g. class profile. This decision has numerous consequences, it may narrow down possible paths of future education and career, finally resulting in employment and income inequalities. This phenomenon can be named "mathematical exclusion".

In the paper I intend to propose a description of the process of escaping from mathematics in terminology of behavioral economy - time-related preferences, time-discounting and the lack of self-control. I intend to show sources of abandonment of mathematics in negative attitudes towards mathematics and specific perception of usability of mathematical knowledge. I will refer to selected results of two studies on Polish students - qualitative (2010) and quantitative (2011, N=3169).

### ***Polpan 1988 – 2013: Challenges for Constructing Questionnaires for Longitudinal Researches of Social Structure and Inequalities***

The Polish Panel Survey POLPAN is a unique program of panel surveys carried out since 1988 in 5-year intervals, and focused on describing social structure and its change during the last 25 years in Poland. The resulting POLPAN 1988-2013 dataset will be invaluable for the social sciences, as it will allow for testing hypotheses about the impact of intellectual and social resources on individuals' biographies, and more importantly, how the latter shape the social structure. The project's theoretical approach is based on major assumptions of the rational action paradigm and life course analysis developed by Blossfeld and Perin (1998), Mayer (2009), Goldthorpe (2006), diPrete (2006, 2007) and Breen (2010).

Last edition of the study, due to the decision to rejuvenate the panel and the initiation of a new panel cohort, necessarily involved the need of redefinition and reconstruction a way of thinking about research tools used in last waves.

Between 1988 and 2013 Poland underwent transformation - from the "old" and "new" elements in the social structure, differences in the standard of living, labor emigration on massive scale and its impact in understanding career and education paths, patterns of professional and family life with clear implications for social inequalities. In addition, the twenty-one-year-old of 1989 was a completely different person than his peer in 2013 – there was necessity of in-depth analysis of the meanings of questions self-evident in previous waves, take account of the changes of realities and consideration if questions posed during the communist era will be understood and does not change the meaning today. The challenge was to combine the necessary changes and the need of maximum comparability of panel waves.

In a paper I intend to describe most important of mentioned challenges and give examples of solutions worked by POPLAN team.

### ***The Adoption of ISO 14001 Across Korean Business Firms***

This study asks why Korean organizations adopt environmental self-regulation programs; I focus specifically on ISO 14001. My analysis draws on a unique longitudinal data set to offer a new institutional explanation of the spread of ISO 14001 across Korean business firms. I argue that Korean firms have adopted this program in response to the passage of The Promotion Act for Conversion to Environmental-Friendly Industry Structure of 1995. ISO 14001 is more to have been adopted when large firms in that industry have adopted it and when firms have a connection with management standards consultants who have marketed international standards. These findings extend recent theorizing about legal ambiguity and the mechanisms of "coercive isomorphism."

### ***Explaining Intellectuals: A Proposal***

In this paper we assess the potential of positioning theory for explaining intellectual life. Positioning theory pays attention to how intellectuals, like other people, use various rhetorical and dramaturgical devices to position themselves *vis-à-vis* others. The positioning of intellectuals affects the extent and nature of their symbolic and institutional recognition, as well as the diffusion of their ideas. We illustrate positioning theory through a number of case-studies, at least one of which will be dealing with the realm of academia and one with the phenomenon of public intellectuals. We demonstrate the advantages of positioning theory compared to rival perspectives in the sociology of intellectuals such as Collins's network approach and Bourdieu's field approach, paying particular attention to the different ways in which the issue of agency is dealt with by these theories.

### ***Family and Parenting Values of the Youth: Stability in Shifting Russia***

In consequence of long-term depopulation tendency in Russia the issues of the importance of a family, quality of a parenting are actual. Their research assumes the analysis of valuable orientations concerning family and parenting. Studying of youth values is especially important because it is somehow possible to influence views of young people.

The article presents the results of qualitative research of young people's opinion about family and parenting. We used biographical research method and analyzed 147 essays of Russian students at the age of 17-21 years. This survey was

conducted in Russian cities in Ural region in 2013. The childhood and adolescence of respondents matched the difficult period of social and economic reformation.

The analysis of the papers revealed three categories of the respondents who had given different descriptions of a parental family: "gratitude-description", "neutrality-description" and "problem-description". There is a close interrelation between the inherited social experience of the relations in a parental family and image of their own future family. At the description of a parenting there are such words as "pleasure", "happiness", "care", "responsibility", "work".

Results demonstrated the high value of a family in Russia today. Describing the desirable relations in the future family students emphasize stability and indisputable monogamy of its members. They deny divorce. The marriage unions of grandparents are often accepted as a model of marriage relations and positive experience.

Our results inspire a certain optimism about the demographic prospects of Russia. They show that the modern Russian youth who were born at the breaking point of Russian history successfully admitted traditional family values and behavior models. It creates conditions for carrying out the demographic policy oriented not only on growth of population, but also on improvement of quality of the human capital.

#### **RC42-701.2**

**BAHAT, ESTHER\*** (University of Haifa, [stbahat@gmail.com](mailto:stbahat@gmail.com))

### ***Leadership, Person-Organization Fits and Organizational Commitment***

In the 21 st century the world has become a constant changing and turbulent place. Moreover, the economic situation, in recent years, affects us all as private individuals and within organizations. We can reasonably expect greater needs for human resource and less funding to meet them. This study is offering a kind of leadership that develops organizational commitment (OC) not only by calculative factors (satisfaction of needs), but also by psychological aspects: Moral and self-perception (level of value realization and level of self-identity expression). While the OC research literature deals a lot with needs satisfaction as a contributor to OC there is almost no theoretical reference to "self-processes" and no study examined there contribution to OC. This absence seems a bit peculiar given that the social psychology literature has devoted substantial attention to the "self" as a driver of behaviour.

The study examined the relationships of three aspects of person-environment fit (P-O Fit) that contribute to OC - degree of: Needs fulfilment, values realization, self-identity expression, with manifestations of OC: "Identification", "contribution", "presence". The study was based on a questionnaire given to 444 respondents, all members of community organizations who also were workers in business/work organizations. Findings showed fulfilment of needs to be central in its contribution to OC manifestations, and that its highest contribution was to the component expressing "presence". However, satisfaction with values realization and self-identity expression also contributed to OC. Moreover, The three types of P-O Fit were distinct from one another, they contributed differentially to the explanation of OC manifestations, and their respective contributions to the prediction of OC level were additive. Therefore, leaders of organizations that put emphasis on satisfying their worker's needs but also allow realizing values and expressing self-identities should extract a higher degree of commitment from their members.

### ***Analysing Discourses - Analysing Future Politics. a Study of Discourses on Climate-Related Migration in Bangladesh***

Discourses on climate-related migration have recently emerged in Bangladesh and have gained a higher profile in the broader climate change discourse of this vulnerable country. More than 60 semi-structured interviews have been conducted in Bangladesh from 2011 to 2013 with a broad range of social actors and stakeholders - including practitioners, bureaucrats, elected representatives, journalists, NGOs - that are involved in a field concerned with displacements due to climate change hazards (disaster management, migration management, development planning, etc). The analysis of these empirical data with a discourse analysis software (Iramuteq) gives some interesting results to understand how those discourses are constructed depending on the social authority of the producers, their professional and individual background and their institutional constraints. This discursive analysis, that combines both quantitative and qualitative methods, also aims to draw a mapping of those discourses and to identify the motivations and intentions behind them.

Referring to a discourse analysis perspective - in particular the Critical Discourse Analysis perspective - seems particularly relevant to understand how climate-related migration are perceived in Bangladesh and how those discourses shape the future national policy response (or, on the contrary, the lack of policy interventions). In other terms, how those discourses, that are constructed or even manipulated, shape future climate-related migration scenarios and the policies tailored to these new challenges.

Finally, this paper explores – through an original discourse analysis – the importance of problem-framing and social determinants that influence the emergence (or the non-emergence) of a new public problem and its political aspects. Using a set of concepts and methods from different disciplines – sociology of organisations, sociology of public problem, political science, linguistic etc. –, it also invites to transcend disciplinary boundaries and to develop an innovative thinking.

**BAIR, JENNIFER\*** (University of Colorado at Boulder, [jennifer.bair@colorado.edu](mailto:jennifer.bair@colorado.edu))

#### *Lead Firms, Joint Liability and the Regulation of Work in Global Supply Chains*

This paper examines how the concept of joint liability can be applied to labor organizing in the context of global supply chains. It does so by revisiting the history of jobbers agreements in the U.S. apparel industry. Jobbers agreements were collectively bargained contracts that were negotiated between jobbers–companies that marketed but did not make apparel–and the unionized workers employed by the independent contractors that filled their orders. The paper then explains how the jobbers agreement model is inspiring new efforts to negotiate “buyer agreements” with modern-day jobbers: brands and retailers such as Adidas, Wal-Mart, and Apple that sit atop global supply chains. Such efforts leverage creative forms of worker organizing and enlist students, activist consumers and other stakeholders to demand recognition of modern-day jobbers as de facto joint employers.

#### *Disaster Governance for Resilience: From Concrete Ingredients Towards General Menus – a Post-Earthquake Christchurch Case-Study*

Societies can be prepared for disasters, but uncertainties will nevertheless always remain. Although disasters impact all aspects of society, there is a social vacuum in international protocols for disaster management as they privilege a technocratic-oriented approach which proves insufficient when systems are overwhelmed. The objective of this paper is to investigate sustainability transitions and governance practices towards resilient disaster-prone areas, based on insights from Christchurch, New Zealand.

The paper is structured in four parts. First, theoretical connections are drawn between the concepts of institutions, governance, resilience and disasters. We argue that it is impossible to create one recipe for disaster governance, since every context differs institutionally and has its own path-dependent characteristics (Acemoglu and Robinson, 2013; Rodrik, 2007). Therefore, we should think of governance approaches that proved to be general menus for sustainable recovery, instead of a tray of concrete ingredients that should work as a panacea.

Second, we present a framework for examining disaster governance from a multi-level perspective. The shift in disaster studies from management – emergency management and technocratic solutions – towards governance enables multi-level and multi-actor collaboration highlighting long-term recovery processes (Tierney, 2012).

The third part is devoted to the Christchurch case-study. In 2010 and 2011, Christchurch experienced multiple devastating earthquakes. While theories stress the importance of social engagement and multi-level governance in recovery processes for place attachment, people in Christchurch argue that this was not sufficiently central in the aftermath of the earthquakes.

The paper concludes with reflections on the share of governance responsibilities between states and markets, central and local governments and groups and individuals (Ostrom, 2012). We argue that all actors are needed in the processes to reduce vulnerability and increase resilience. Questions remain however, when and how governance should be whose responsibility in order to create resilient pre- and post-disaster places.

#### *Where My Peoples at? New Orleans' Bounce Rap and the Experience of Disaster*

The connection between place and cultural expressions, such as music, is well established by scholars. This is particularly true for New Orleans where multiple forms of music like jazz and brass bands are thought to be both unique to the city and representative of social conditions there. While there have been a number of studies on the importance of New Orleans African American musical practices, little attention has been paid to those native to the city's most disenfranchised areas. Bounce rap is 'New Orleans project music' and is a patently local form of expression that gives voice to life in very poor areas of the city. Since Katrina, numerous housing projects, home to many bounce artists and audiences, have been torn down and replaced with mixed-income developments. Largely lauded as a positive move, the loss of the projects is not without consequence and has further disrupted long-standing communities that were dispersed by the storm. Many residents, including local musicians, remain displaced. Little is known about what bounce rap music demonstrates about the artist's perspectives of life before and after Katrina. We examine this issue through a thematic content analysis of pre-and-post Katrina bounce rap music lyrics. The research addresses what bounce music, as a reflection of life in New Orleans, reveals about changes in the social structures of low-income black neighborhoods of the city. We also discuss if and how this significant cultural practice has been transformed by the storm.

**BAKKELI, NAN\*** (University of Oslo, [n.z.bakkeli@sosgeo.uio.no](mailto:n.z.bakkeli@sosgeo.uio.no))

#### *Privatisation and Income Inequality in Western China*

This article studies the relationship between privatisation and income inequality in Western China, based on survey from 11 Western provinces, collected in 2004-2005. The Chinese government in 2000 initiated a campaign to develop Western China and reduce local and regional inequality. Privatisation has been a central component in the campaign. A key question is therefore whether a higher degree of privatisation contributes to reduce income inequality. As a macro-level socioeconomic structure, privatisation may have great impact on individual social positions such as education and occupation. This can influence individual income levels, and be further aggregated to the outcome of income inequality. Inspired by Coleman's theory of micro-macro relation, the study first explores the macro linkage between privatisation and income inequality. Using multilevel random coefficient modelling, it then studies how the impact of individuals' education and occupation on their income level varies between different regions with different degrees of privatisation. Finally, it simulates the macro income inequality based on multilevel models. The study shows that income inequality appears to be higher in regions with higher degree of privatisation. Furthermore, the study confirms that individual income is strongly affected by education and occupation, which supports the market transition theory in the context of Western China. This relation varies across regions with different degrees of privatisation.

#### *Agriculture-Supported Communities: Experiences in Consumer-Producer Relations in Hungary*

This article presents the case study of a rather underdeveloped and experimental Hungarian CSA sector which gained recognition in recent crisis driven times to show how consumers, small agro-food businesses, non-profit groups and citizens radically enact sustainable food consumption in Hungary. Although their beneficial existence has been widely acknowledged in governance, their economic performance is still quite insignificant, while they also show a substantial awareness raising potential. This study examines the practices of CSAs to understand the economic, environmental and social motivations behind running or joining a CSA operation. Our findings are based on qualitative interviews and data from stakeholder meetings where we facilitated a structured vision to action workshop to identify the main mechanisms and strategies of building alternative food networks. The article presents results on the shaky, non-self-sustaining foundations of CSAs to analyse how they catalyse social change to enhance consumer-producer cooperation and regain control over the ways in which food is produced. The research found that current share prices of CSA farms do not reflect all of the costs of production, and hence might not be an economically viable approach to sustainable agriculture if CSA farms continue their current pricing strategy. This aspect has not received enough attention from scholars and local food advocates who tend to see CSAs as ideal examples of sustainable food systems. The study concludes by pointing at what role they could play in the democratization of the Hungarian food system by providing a model for more profound social transformation.

*Achieving an Adequate 'Distant Co-Presence': Polymedia As Vibrant Matter in Transnational Family Life*

Both mobility and technologies, and their intersections, need to be theorised as integral to transnational family relations. In this paper, I employ a framework of circulation (Baldassar & Merla 2013) as a methodological tool to 'follow the thing' that is, care, across distance and over time, as well as its intersections with various dimensions of social reproduction. I also apply Madianou and Miller's (2012) theory of *polymedia*, combined with Jane Bennett's (2010) notion of *vibrant matter*, to examine how communication technologies are not only sustaining, but transforming, circuits of distant care. These transformations in distant care begin to stretch the limits of some of our distinctions between proximate and distant family life, in particular through transformations in co-presence (the feeling of 'being there'), which challenge the epistemology of intersubjectivity.

*Perverting Autochthony: The Local Festa As a Rite of Institution Informing Public Debate on Migrant Belonging*

The intersections of migrant, racialised, and autochthonous belonging were spectacularly evident during an altercation that took place at the annual patron saint festa in Prato, Italy, 2010. Home to one of the largest Chinese migrant communities in Europe, Prato has been living what the locals refer to as 'a difficult moment' in history. The economic context is shaped by a beleaguered historical textile industry perceived by locals to have been 'stolen' by a new cognate 'ready-made fashion' industry championed by the Chinese migrants. The left-leaning local government, in office for over 50 years, was defeated by a new right government (with links to the Lega Nord) on an overtly anti-Chinese migrant campaign, which appealed to notions of autochthonous centuries-old belongings. These political and economic tensions came to a symbolic head at the start of the annual historic procession through the streets of the medieval town center. The left-leaning Provincial Government invited migrants (many with Italian citizenship) to join their section of the procession. The Mayor intervened to publicly forbid the migrants from participating, explaining that their presence *perverted* (snaturava) the historical ritual. Drawing on Bourdieu's notion of rites of institution, I examine the local government's representations of the local festa over the past few years to explore the shaping of public debate on Chinese in Italy.

*Me? A Secretary? The Moderations of Class and Gender in India's Elite Law Firms*

Following market liberalization in 1991, the Indian legal profession has had more demands for cross-national legal services than ever before. One of the ways in which the country has responded to this global work and clientele, is by reorganizing its professional spaces in new, competitive ways. On the one hand, there has been a burgeoning of new, elite law schools that train young lawyers in comparative, cross-national law and include rigorous clinical curriculum. At the same time, there have emerged, especially over the last decade, a set of big law firms that are, in the Indian context, relatively new legal organizations that deal primarily with transactional corporate work for large global and domestic corporate clients. These firms have expanded and grown institutionally in many unprecedented ways, but a striking feature of their emergence—especially among the largest and most prestigious firms in the country—has been the growth and success of their women lawyers. Preliminary interviews suggest that women in these big law firms are not discriminated against or disadvantaged as compared to their male peers in that they receive similar organizational rewards (pay, promotion, client attention) and interactional status among clients, peers and superiors alike. This is an intriguing finding in that it does not correspond to mostly gender-disadvantageous accounts of women in high status professions universally. We know that critical stratification scholars have long credited the unique power of *intersectionality* in understanding disadvantage and discrimination. I offer that a similar extension of this framework is useful in understanding the success of these big law firm women lawyers. My research probes the ability of class to moderate the impact of gender within high status professional organizations. Put simply, it asks: is this unique "gender-neutral" advantage (to the extent it exists) limited to certain kinds of women?

## RC12-228.4

**BALLAKRISHNEN, SWETHAA\*** (Stanford University, [swethaa@stanford.edu](mailto:swethaa@stanford.edu))

*Women in Black: Gender Negotiation in India's New Organizations*

Over the last three decades, the feminization of the legal profession has been a common feature across the globe (Michealson: 2013). However, the prime exception to this trend has been in India, where women have consistently been less than 10% of the practicing Legal Bar. It is of especial contrast then, than in two most prestigious law firms in the country, women constitute about 50% of the workforce and record similar professional rewards and advantages as their male peers. Using in-depth interviews with past and present lawyers, this research will investigate comparative frameworks to test and explain this unlikely finding about institutional change. For instance, one reason for this advantage might be that both these unique firms emerged as new "global" workspaces following, and necessarily responding to, market liberalization in the early 1990s.

This project is empirically significant because its dissonance is unique to the Indian context as well as everything we know about women in prestigious workforces more generally. Investigating these organizations and women is theoretically significant because it speaks to important literatures on organizational emergence (Powell and Padgett: 2011), gender stratification (Ridgeway: 2012) and the influence of globalization in emerging markets (Meyer & Rowan: 1977).

**BALLANTYNE, GLENDA\*** (Swinburne University of Technology, [gballantyne@swin.edu.au](mailto:gballantyne@swin.edu.au))

*Mobile Ambivalence: Turkish Alevi in Australia*

The idea of ambivalence has emerged as a particularly apt interpretive prism for analysing the experience of migration. The co-existence of contradictory emotions it speaks of provides an illuminating frame for analysing the feelings of loss and new possibilities that are frequently part of migrants' lives, and as analyses in the area have shown, the lens of ambivalence has lent itself to interpretive nuance, distinguishing among both objects of ambivalence (place of origin and place of destination) and responses to ambivalence (negative, positive and mixed). In this paper, I attempt to delineate further distinctions within this framework, exploring a case of ambivalence associated with denigration in a place of origin that has been transported into, and affected feelings towards, a place of destination.

The case is that of the Turkish Alevi in Australia. The Alevi are a socio-religious minority in Turkey with a long history of fraught relations with the region's ruling regimes and Sunni majority. Their markedly heterodox traditions, originating in Anatolia and rooted in but going beyond Shia Islam, have been subject to repression and denigration since the 16<sup>th</sup> century. Australia has been a significant destination for Turks emigrating in the postwar period, and Alevi are a significant proportion of them. My research into transformations of Alevi collective identity in Melbourne suggests that ambivalence towards Turkey stemming from this historical experience is replicated in feelings of ambivalence towards the broader Turkish community in Australia, adding a further layer of ambivalence to Alevi's complex relationship with their country of settlement.

*"Free Movers" and Exchange Students in Europe and around the Mediterranean Sea: Antagonistic Figures or Two Sides of the Same Coin?*

The European student mobility Erasmus Programme, born 25 years ago, has aroused interest and many lay and scientific publications. However student mobility is multifaceted and can not be assimilated to a single type of mobility that could be qualified as "organised" or "institutionalised". To consider the state of the art, on the injunctions and incentives to mobility in Europe and around the Mediterranean sea and the obstacles to students migration, will go back over the main research undertaken in recent years on the subjects in Europe (Erlich, 2012; Ballatore, 2010; Mazzella, 2009; Murphy-Lejeune, 2001; Agulhon, Xavier de Brito, 2009; Cammelli, 1999; Maiworm, Teichler, 1997; Jallade and al., 1996 ...).

First of all, we will take a particular interest in the construction of an European space of Higher Education and its historical link with the Mediterranean area, then we will pass through comparative analysis on European and Mediterranean student migrations, to finally look at projects, expectations and free movers' and exchange students' experiences. We will develop the idea that, general speaking, a part of the European research results leads one to believe that exchange programmes would only foster forms of "in-depth tourism" and would have little to do with others forms of "free mover" migration. The "acculturation" of students would be as temporary as the stay. We will wonder if this mobility could be predictive of others types of migration and conclude also underlining that in Europe

the competition paradigm seems to have won the pot over the cooperation one, which is at the base of student exchanges and that, even today, still lacks a lot of studies and reliable data which would allow one to compare "organised" and "non-organised" mobility, student and professional mobility, as well as more general research on particular types of migration in Europe.

#### *Segmented Labour Markets and the Ongoing Blending of Cultures of the European Commission Skilled Workers*

The European Commission of Brussels is often seen as a European-minded body of privileged civil servants. These civil servants hold varying positions varying between trainees, contractual staff, interim staff and experts. Looking closer at the diversity of the workers in terms of age, gender, social and schooling backgrounds and at the hybridization (In Globalization theory, the ongoing blending of cultures) inside this institution, we can see people performing their activities under different types of job contracts. These are increasingly influenced by the logic of the market and are becoming more precarious. In other words, today in the field of Eurocracy, there are deep differences between permanent and non-permanent positions. The gap between official and contractual staff did not exist previously and has tended to increase in recent years.

In this paper we focus on this new population of highly skill workers, who invest their own resources, empathy and individual autonomy to try to enter this specific labour market. Doing so, we will try to construct a picture of the migratory paths and social backgrounds of these employees before they enter the institution using a survey within the European Commission in Brussels. We will analyse 1234 questionnaires, 22 interviews and some direct observations to develop a critical discussion on the conditions faced by these knowledge workers. We will explore their representation, experiences and the way they see their future. Hence, we will address the question of spatial, national and social inequality for this newly formed European transnational elite.

#### *How Professional Groups Defend Their Interests through Incentives to Parliamentary Members? the Cases of France and Germany*

How do professional groups such as managers, artisans, employees or even unemployed people get in contact with parliamentary representatives and how do they succeed (or fail) to convince MP's to stand for their own interests? It appears that one of the reasons why professional groups succeed in having their interests defended lies on the nature of the incentives that these groups can propose. These incentives can take various forms: financial, symbolical, social or political. Thereby, we would focus on the sociological and political dimensions of the notion of "incentive" and "interest". As a result, multiple questions arise. How do these groups introduce their interests to MP's? What type of arguments do they use? Where do MP's and professional groups meet? How do professional groups suggest their incentives to MP's? Is it necessary to propose powerful incentives to have their interests represented?

Through these questions we would like to propose an analysis of the processes during which professional groups develop the incentives and the interests introduced later to MP's. Also, we would like to propose a detailed answer of the question: Why do MP's agree to defend the interests of specific professional groups against incentives? To do so, we would propose a comparative analysis between France and Germany based on 70 face-to-face interviews with institutional representatives of professional groups and MP's as well as observations led during meetings between these actors and archives (around 900 documents). By focusing on the financial committees in the Bundestag and the Assemblée Nationale, we would propose an analysis of the interactions between professional groups (through their spokespeople) and MP's on different issues related to taxes. More generally, the comparison would allow us to draw some national trends to understand how professional groups succeed in being politically represented.

#### *Gendered Nationalism and Global Citizenship in Nigerian Beauty Pageants*

This paper focuses on the Nigerian beauty pageant industry and its links to the development of Nigerian gendered nationalism. It focuses on the "beauty diplomacy" narrative used by Nigerian beauty queens to present themselves as worthy cultural citizens. This narrative connects them to other ordinary Nigerians and promotes their own voices and that of the public in the national arena. Beauty contestants insisted that they could use the attention garnered through pageants as a tool to amplify their voices, make a difference in the country, and reach for their goals. Throughout the course of the competition and during their subsequent reign, a beauty contestant's sexuality is judiciously protected and projected as "pure." This 'purity' is linked to their ability to be recognized as suitable role models in Nigeria whose charity, development, and goodwill is appreciated. Through their celebrity status they craft special platforms to address issues of national concern and do social work during their reign. These women are not only the face of Nigeria, but also groom themselves as "citizens of the world" through their travel and participation in major international contests. I focus on the complex process these contestants must navigate in representing and propelling their country's progress to a global society. Contestants stressed their own symbolic role in which showcasing their own positive attributes served a larger function of highlighting the good elements of Nigerian society both domestically and to the broader global community.

#### *Aspects of Poverty in a Period of Recession in the Mediterranean Countries: A Gender Perspective*

This paper aims to identify the impact of the economic crisis on woman's poverty in the Mediterranean countries, the most affected by the recession. The research questions are: Is the crisis likely to have affected women more than men? Do salary cuts and decreasing household incomes force women to turn into precarious and informal workforce? Do unequal sharing of unpaid care and housework burdens, gender roles and gender stereotypes compound to produce unequal life chances for women? Can gender perspectives in policy design be a response to the financial crisis?

Based on recent research, this paper's objective is to depict the current position of women in poverty in a comparative perspective. The analysis focuses on the "traditional forms of poverty" from one generation to another and is mainly linked to economic factors and to "the new urban forms of poverty" consisting of a domino effect (loss of job, low income, in work poverty, family breakdown, "delayed" fertility, separations and divorces).

Provided evidence demonstrates that due to the recession even more women have fallen into poverty, with the loss of jobs, wage decreases and with the increase of uninsured people pushing many women into an uncertain and potentially devastating financial situation. The paper also examines another field often overlooked when it comes to discussing the leading causes of poverty among women: The fall from middle class standards due to divorce. Data confirm that typically divorced women especially older women or single mothers are the most vulnerable, while the poverty risks are lowest among married women and dual-earner families. It seems that financial hardship is a major cause of family breakdown. Low-income parents are more likely to break up and to remain poor after the split than others. Consequently, poor economic conditions have strong impacts on fertility behavior.

#### *The Impact of the Crisis on Child Well-Being and Poverty: A Challenge for Social Economy?*

In Europe, around one in three children will experience poverty during childhood. For most, poverty will be transitory; however, for those growing in countries affected mostly by the crisis, poverty persists for many years. Children experiencing such a persistent poverty are more likely to be born into single-parent families, have mothers with low education level and to be unemployed or even in a low paid work not guaranteeing a path out of poverty; Theories suggest that experiencing poverty during childhood may affect one's life social and economic opportunities. Empirical studies confirm that deep and persistent childhood poverty is likely to be passed on to future generations, consolidated, hard to eradicate and aggravating even more inequality in society.

In periods of recession, the social sector of economy can be the driving force for the social integration of children and poor families. Numerous initiatives at local level show that the involvement of actors, workers, stakeholders and beneficiaries in the "social enterprise", can enhance their societal success and contribute to employment creation and to a fairer income distribution.

This paper is based on recent research on social enterprise and partnership initiatives to promote local development, regeneration and combat child poverty and social exclusion in the countries most affected by the financial crisis. The paper analyses the respective impacts of these new 'business-community partnerships', including their legal framework, financial resources and governance schemes on communities and ecosystems on relative poverty and social exclusion. Although this attempt is yet to be completed and the quantitative data are not enough to be able to draw any definitive conclusions, the key finding confirms that social economy enterprises can play an important role in improving equal access to numerous services for families and children, thereby preventing and providing solutions to the increasing poverty problem in society.

#### *System Theory, Computational Social Science and the Challenges of Zettabyte Era*

The volume of information available for research has grown rapidly in recent decades. According to the Cisco Systems, we are beginning the era of Zettabyte. The access and analytical treatment of this enormous amount of information have created a debate in social sciences about new methods, epistemological and theoretical conceptions. This study is based on systems theory, sociocybernetics and new propositions of the computational social science. Four concepts connect the areas of knowledge involved in this project: system, complexity, emergence and evolution. The fundamental premise to make sense of the data is that a social organization evolves or transform over time. Data can be conceived as a registry of how systems are organized and how it changes over time. In the classical sociology, the same idea constitutes the fundamental concept of the social process, which can be identified through social patterns. It means that social phenomena emerge from social relations, even if individuals are rational agents of these changes. The methodological challenge consists in observing and selecting data to reveal patterns of social relations and unravel the interconnection between the components of a system. The intention is to understand emergence of social phenomena (migration, inequality, etc.) and the consequent change in the social system. This study, conduct by the Laboratory of computational sociology (Infosoc - UEL), has approached agent-based simulations in comparison with observed data from social networks. The first conclusions are the volume of data is less significant than the analytical capacity to select specific data in order to identify social interconnections and find patterns of systems complexity.

#### *Sources and Prospects of the Anarchist Method in the Arab Spring*

Drawing on various reports and my own field observations, this paper aims at four objectives. First, it shows how the Arab Spring movements were characterized from their inception by a certain intuitive anarchist method. This method was evident in a general resistance to any collective leadership, and preference for loose coordinating structures in lieu of solid organizations. The paper introduces some propositions about the likely sources of this intuitive anarchist style (to be distinguished from anarchist intention). Second, the paper explores the ramifications of this anarchist style to political developments at the level of the state, arguing that it is likely to give rise to shaky political structures that are not aligned with the broad sentiments that had generated the Arab uprisings, suggesting further crises ahead. Third, the paper explores the long-term ramifications of this anar-

chist style in the culture, showing that it is giving rise to a new culture of engagement and debate, in which individuals constantly revisit the original "meaning" of the revolution, as well as its status as a transformative life event at the individual level. These practices give rise to new realities and new perspectives from below that are missed in most reporting. Fourth, the paper ends by exploring the ramifications of this analysis to anarchist perspectives on social movements in general.

#### *The Social Role of Organic Intellectual: Four Amendments to Gramsci*

Based on a study of the social role of intellectuals in the Middle East, this paper explores evidence that suggest that the role of intellectuals in the public sphere can be analyzed with the aid of four important revisions to Gramsci's old outline of the notion of the "organic intellectual." First, while the organic intellectual may be a product of a social group, that figure may also be understood as a producer of such a group. Second, organic intellectual activity seems to be most effective when it is intertwined with the intellectual demands of complex everyday life, rather than with any specific ideological program. Third, the organic intellectual tends to have a nuanced connection to "high culture," which such an intellectual tends to regards as a vehicle for one's own social program, rather than as its own fetish. And fourth, the effectiveness of the organic intellectual can be measured in the extent to which the intellectual transforms the audience's reality even as he or she claims to preserve it. At the end, the paper suggests that organic intellectuals ought to be seen in a more comprehensive way than in terms of standing in for a specific group. It also suggests that their social role is enhanced through a particular balancing of the dialectics of innovation and rootedness, a dialectic that the organic intellectual is more equipped to handle than any other.

**BANDELIN, SEBASTIAN\*** (PhD Student, [atzeb@gmx.net](mailto:atzeb@gmx.net))

#### *The Democratic Public and the Process of Experience. Towards a Pragmatist Theory of Recognition*

Theories of recognition are an important approach for the development and normative foundation of a critical social theory. One central thesis is here that the formation of a positive personal identity depends on the affirmation by others in contexts of mutual recognition and that this affirmation is the decisive normative criteria for the constitution of social institutions. But insofar as this personal identity is in many cases only conceived as an identification of the actor with his own qualities and abilities, it follows that the social context, in which this positive personal identity is achieved, remains arbitrary. The trouble is here that the affirmation of a certain personal identity may than correspond to the existing expectations of the actor and ensure his integrity, but at the same also reaffirm the power relations of the social context, in which this identity was formed. In the second part of my paper i would like to develop an account oriented towards the social philosophy of pragmatism, which avoids these problems. Recognizing has to be conceived not as a affirmation of an already existing identity, but as a social process. In this process the actors and social groups are always confronted with unintended social consequences of their actions for others and are therefore led to a crisis and reformulation of their actual practical identity. And this holds not only on the level of the individual, but also on that of institutions. The democratic public is the realm in which a common elucidation of problematic social consequences of the existing institutions takes place. This elucidation is then the background for a critical reflection on, and a reformulation of the guiding norms of these institutions. In consequence critique refers to blockades of this process of experience, in which institutionalized rules are questioned and reformulated.

#### *Headteachers' Conceptions of the Professional Competence and Professionalism Among Newly Qualified Teachers*

Education scholars globally are agreed that the teacher is the most important resource in ensuring quality delivery of education. Using data from a qualitative study, this paper focuses on the conceptions of headteachers of the professional competence and general professionalism of newly qualified teachers in secondary schools. Data were collected through interviews from eighteen headteachers. An analysis of findings revealed dissatisfaction from headteachers regarding the professional competence and professionalism of newly qualified teachers. The article's analysis incorporates detailed examination of the concepts of professional competence and professionalism and offers explanations for their lack among newly qualified teachers. It identifies as a gap in teacher professional development the under-prioritisation of matters of professional ethics which lead to most newly qualified teachers having difficulties transitioning from being a student to becoming a teacher. It is further observed that training newly qualified teachers generally lacks regulatory and quality control mechanisms that many other professions are subject to. Inadequate training, uncoordinated professional and organisational socialisation all conspired to create several challenges to the system in general and for the newly qualified teachers in particular in the execution of their duties. There is no significant difference between males and females regarding both their levels of professional competence and attitudes towards professionalism. To address the identified challenges and improve professional teaching practice headteachers used several methods including Continuous Professional Development and deliberated teacher reflection.

#### *The Theoretical Metaphors of Chicagoan Human Ecology*

##### **The theoretical metaphors of Chicagoan Human Ecology.**

The reception of the Chicago sociology in the Russian sociological discourse traditionally was concerned with the "Chicagoan style" in empirical research. Recent re-evaluation of the Chicago heritage put ahead its theoretical peculiarity, namely – Human ecology of Robert Park as the post-Simmelian sociology of space.

The outline of the main metaphors driven from the Human ecology and used to represent the reassessed significance of the Chicago theoretical perspective includes the following ones:

1) *The ontological metaphor*: Society as a "Process" (VS "System/Structure" in the post-Chicago sociology). "CCAA" as the structure of the social process. "CCAA" and "AGIL" – the homology of the contraries. The "Cycle" as a way of functional metaphor for the social process and the recurrent form of the "immortal ordinary society".

2) *The methodological metaphor*: "Dynamic disequilibrium" -- interactionism, atomism and "sympathetic identification" on the micro-level (spatial dimension) and evolutionism (from biotic to social/moral) on the macro-level (temporal dimension).

3) *The epistemological metaphor* -- "laboratory" (Racial relations, or The City). "Empirical bias" rendered as a tutorial problem and as the way of institutionalization rather than a prospective for the discipline development.

4) "Marginalization" and "in-betweenness" as the core of the sociology of Space. The *ideal social type* of the "marginal man" as the embodiment of the "intelligent creativity".

5) "Social order" and "freedom" as heterogeneous multileveled and interweaved phenomena.

#### *The Body in the Brazilian Congress of Sports Science*

This text shows partial data of an exploratory bibliographic research, in which the objective is to identify the principal conceptions of body, aesthetics and health into the scientific production of Thematic Work Groups "Memory, Culture and body" And "Body and Culture" in the CONBRACE, from 1997 to 2009. Quantitative data had been collected from the Annals of the Brazilian Congress of Sports Science (CONBRACE). The focus from the survey was the Thematic Work Groups (TWG) "Memory, Culture and body" And "Body and Culture", and it was considered the production since 1997. Partial results have been shown. Of all the pieces of Work presented in CONBRACE, it had 625 proceedings; 312 in the specific TWG. From the total, 171 were in the TWG Memory, Culture and Body and 141 in "body and Culture". It identifies the increase of proceedings from 1997 to 1999. In the TWG "Memory, Culture and Body, there is a decrease from 1999 to 2003. The proceedings also decrease in the TWG "body and Cultures" in 2009. Of the Selected Works, 97.73% has the keyword body, 17.05% aesthetics, and 9.66% health. The FURN (Federal University of Rio Grande do Norte) was the institution that presented most part of Proceedings in the TWG, moving the knowledge production to the center South-Southeast, becoming the most important center of knowledge production in Brazil around this theme. The research is still in its initial phase, but it is possible to understand the ways, clippings and focuses on how the education is expressed in body, health and aesthetics conceptions in the TWG's productions and its implications to physical education teachers' formation.

#### *Children's Active Participation in Institutional Interactions*

The concept of children's participation enhances different versions of the relationship between children and society. This paper aims to clarify the meaning of children's participation in the relationship between children's individual action and the social treatment and consequences of this action. For this purpose, the paper explores the integration of different theoretical approaches that can shape research on children's participation, looking at interactions, complex social systems that include interactions, and narratives that are produced in these complex social systems. This integration allows the understanding of the ways in which children actively participate in communication processes, the ways in which social structures condition children's active participation, and the ways in which children's active participation can enhance structural change in social systems, through the implementation of "promotional interactions". This theoretical perspective is exemplified in the case of the education system, in which different forms of interaction can have different consequences for children's participation.

#### *The Role of Family Background and Gender Stereotypes in Determining Boys' and Girls' Mathematics Achievement*

The presentation reports the results of the 2010 empirical research examining the role of family background and stereotypes about mathematics as male domain in boys' and girls' mathematics achievement in Croatian compulsory education (N=677, 52.4% female). Individual roles in determining mathematics achievement of both of these variables were widely confirmed (Bourdieu, 1996; Sirin, 2005; Eccles, 1987). This presentation focuses on exploring their possible interaction effects on boys' and girls' math achievement.

Family background was operationalized as a composite of indicators of socio-economic (parental work status) and sociocultural capital (parental education, possession of relevant goods), modelled after Bourdieu (1977). The scale assessing stereotypes was constructed for the study purpose and validated in pilot study. Mathematics achievement was operationalized as a composite of mathematics school grades.

Two-way ANOVAs revealed some gender specificities in the effects of the IVs on DV. Results obtained for girls indicated both main effects and interaction significant. Girls who belonged to higher status families and those who reported lower support for stereotypes achieved better in mathematics. Significant interaction effect disclosed that being from lower status families and supporting stereotypes was connected with girls' worst mathematics achievement. Conversely, being from the higher family background was associated with higher math achievement, regardless of the level of stereotypes endorsement. Thus, originating from higher status families functioned as a barrier for the stereotype effect. As for the boys' math achievement, only family background appeared to be relevant. As expected, boys from advantaged family backgrounds attained better math grades. Although below the significance level, the data trend shows that boys' poor success in mathematics coexisted with the combination of lower family status and

stereotypes rejection, while good math grades related to higher family status and stereotypes endorsement. This analysis uncovers girls from non-advantaged families as most-in-needed group for stereotype reduction programs.

#### *Does European Country-Specific Context Alter Motherhood Penalty and Fatherhood Premium?*

This paper contributes to the discussion on the effects of childbearing on men's and women's employment in the developed countries. While the literature on motherhood penalty due to childbearing is voluminous, there have been no empirical studies that systematically compare the size of the effect of fatherhood on employment cross-nationally net of selection into fatherhood. Furthermore, previous research for women has usually either compared the effects of childbearing across countries assuming exogeneity of family size to women's employment or examined these effects by using methods which deal with endogeneity of family size and simultaneously focused on single countries. In this paper we overcome these shortcomings. We employ instrumental variable models with instrumental variables based on data on multiple births. Using data from European Survey of Income and Living Conditions (EU-SILC), we examine the cross-country variation in the causal effects of family size on employment of men and women across the groups of European countries with diverging welfare state regime and gender norms.

#### *Heterogenous Impacts of Sibship Size on Educational Attainment Across Countries – Results from Meta-Analysis*

The literature reports a negative relationship between the number of siblings and educational outcomes in the US and Western Europe but the pattern is less clear in several other countries. Some researchers have argued that the availability of relatives, who share the costs of childrearing by providing care and covering financial costs, can offset the dilution of parental resources. We expect that the same mechanism applies to the role of state: the state policy may provide services and funds that support parents in raising and educating children. As a result, the inverse relationship between sibship size and educational outcomes should be weaker or even not apparent in countries that implement such policies. We test this hypothesis by conducting a meta-analysis of available studies on the relationship between sibship size and education. Our study contributes to the on-going debate on the way the institutional and cultural context shapes individual educational opportunities.

**BARANOWSKI, MARIUSZ\*** (Adam Mickiewicz University,  
[mariusz.baranowski@amu.edu.pl](mailto:mariusz.baranowski@amu.edu.pl))

#### *Socio-Economic Contradictions Of Capitalism: The Nature Of Social Stratification and Inequality Today*

Sources of contemporary social problems are seen more rarely from the perspective of the direct (or even indirect) causes, because thinking in terms of effects have become a standard analysis of contemporary social reality. By examining current systems of social stratification and forms of inequality especially in developed countries, one can easily fall into the "universalist" pattern of thinking, where divisions and tensions are seen as dysfunctional elements that need to be addressed on the one hand, but not necessarily looking for their sources on the other. Referring to Daniel Bell's *The Cultural Contradictions of Capitalism*, I want to extend the area of the contradictions of the capitalist economic formation by taking into account socio-economic factors, which in my opinion are the basis of unequal allocation of opportunities in modern societies in two dimensions (Herman 2009; Harvey 2006, 2010, 2012; Husson 2011; Therborn 2006; Wallerstein 2001). The first one concerns the distinction between developed countries and their peripheral quasi-partners (e.g. Amin 2011), and the other – often overlooked – focused on rich societies. The consequences of capitalist relations of production together with a system of socio-political representation are crucial not only for the situation of the distribution of social opportunities (stratification systems), but also for the social relationships that may in the future develop a more egalitarian forms of production and governance (Sen 2010, 1992).

**BARANOWSKI, MARIUSZ\*** (Adam Mickiewicz University,  
[mariusz.baranowski@amu.edu.pl](mailto:mariusz.baranowski@amu.edu.pl))

#### *The Welfare State Sociology About Inequality*

If sociology is unthinkable without the subject of power and property (Marx, Weber, Simmel and others), then the issue of inequality seems to be inherent in the structural conditions for the existence of the sociology as science. This is because both the power and property are characterized by asymmetric access, which consequently creates social division (and thus social inequality). This in turn necessitates a comprehensive conceptualization of the problem of inequality, as it is a multi-faceted phenomenon and indexed differently in the context of theoretical and ideological approaches. The proposed paper draws attention to – the above all – the need to articulate the welfare state sociology (Baranowski 2013), which would be a counterweight to the economic and political inequalities shots. Describing the concept of inequality in the context of the polemics of political science and economic dimensions of analysis, particular attention will be paid to the structural dimension of inequality and the so-called "new forms" of inequality (Fitoussi and Rosanvallon 1998). Particular reference will be determined by the issue of (political) power and (economic) ownership, which issues will have been a major redefinition of certain economic and political science approaches on the problem of inequality (the functionalist and conflict theory will be a very topical issue).

#### *Linguistically Mediated Injuries: Differentiation Between Naming and Stigmatization*

This talk seeks to explore the advantages of a discursive approach to critical studies of language use for understanding institutionalized social and cultural inequalities. It will discuss the importance of understanding 'discourse' as a concept that is to grasp the dialectic differentiation of the text/context distinction that is structured by 'plurality' within specific relations of power. The talk will try to challenge the reduction of discourse to sign systems (including language) as well as the binary perception of Foucaultian and Gramscian concepts of 'power'. In order to go beyond the valorization of one side of the binary of positivist universalism of reality versus constructivist relativity of representations, the paper will look at the various forms of linguistic stigmatization over the past twenty years in Hungary and develop a 'constitutive' position, bringing together particular arguments developed by Butler 1993, Sedgwick 1993, Gee 1999, and Harding 2006. With the help of the actual examples of hate speech, the paper will demonstrate why it is important to establish which articulation of hate speech emerges as a relevant point of departure for critique and may result in a potentially more subversive meaning of "linguistic injury".

**BARBALET, JACK\*** (Hong Kong Baptist University,  
[barbalet@hkbu.edu.hk](mailto:barbalet@hkbu.edu.hk))

#### *A Template for the Asian Values Debate: Reactions to Weber on Confucianism*

If orthodoxy is a European phenomenon and orthopraxy an East Asian one, then value debates are originally a western preoccupation, turned into a principle of sociological method by Max Weber. The paper argues that the debate concerning the significance of Asian values is refracted through Weber's account of Confucianism in his work *The Religion of China (RoC)*. In *RoC* Weber presents Confucianism as a 'mentality' that is inherently traditional which bears an antithetical relation to the possibility of capitalist development. This understanding of 'Asian values' parallels the outlook of early modernizers in China in particular and East Asia in general, who regarded traditional and especially Confucian values as barriers to the advancement of Asian societies, especially in their struggle against the colonial and imperial encroachments of Western powers. Since the economic growth of Japan and the four 'Little Dragons' – Hong Kong, South Korea, Taiwan and Singapore – and more recently mainland China, the possibility of a positive role for Confucian culture and Asian values has arisen, and 'Asian values' are advocated by political elites in support and legitimation of state economic development strategies. Coincidentally, Weber's account of the relationship between Confucianism and capitalism is widely criticized from this time in scholarly circles in both the US and East Asia. The paper shall consider both Weber's argument and that of his detractors and also the cases of Singapore, South Korea and China in their alternating treatment of Asian values from the onset of capitalist development to the present time.

**BARBALET, JACK\*** (Hong Kong Baptist University,  
[barbalet@hkbu.edu.hk](mailto:barbalet@hkbu.edu.hk))

*Trust in Chinese Guanxi?*

The paper demonstrates that the concept of trust requires very careful specification if it is to be used in comparative research. It does this by examining sociological treatment of Chinese *guanxi*, an asymmetrical form of favour exchange based on enduring affective ties in which enhancement of public reputation is the aspirational outcome. English-language assessments by both foreign and Chinese authors emphasize the basis of *guanxi* in relations of trust between the seeker and provider of favour. Through a careful examination of the structure of *guanxi* relations it is shown that not trust but relational obligation, third-party monitoring and fear of loss of face serve to support and enforce *guanxi* relations. Rather than trust, then, there are other forms of socially cooperative engagements based on different bases of solidarity. The paper shows that the concepts of trust and trustworthiness must be clearly distinguished and that the understanding of trustworthiness in Chinese cultural contexts operates not as a correlative element of trust relations but as an index of personal intimacy and interactive familiarity that are based on interdependent relations of normative obligation or loyalty associated with role expectations. The paper demonstrates, then, that theoretical and practical problems ensue if reference to and understanding of trust in cross-national comparative studies fail to take proper account of the wider social, institutional and cultural contexts in which socially interdependent relationships occur.

*The UN Rules for the Treatment of Women Prisoners: Human Rights and Clinical Sociological Practice Implications*

In 2010, the United Nations adopted the United Nations Rules for the Treatment of Women Prisoners and Non-custodial Measures for Women Offenders (the "Bangkok Rules"). This was a landmark step in adapting the 1955 Standard Minimum Rules for the Treatment of Prisoners to women. As 'soft law', they are human rights principles that recognize that female prisoners have different needs from male prisoners. They are also reflective of previous reform efforts on behalf of women in prison around the globe. They take into account the presence of high levels of victimization among women prisoners and their greater propensity for self-harm and suicide; the lower risk of most women prisoners yet higher classification levels; the special status of some women prisoners as mothers of children; the distance of women's prisons from home communities and the difficulties of prison visiting; the particular health and hygiene concerns of women; the stigma and discrimination facing women prisoners; the use of prisons as shelters for women's safety, as well as their use for 'immoral crimes'; the need for gender-responsive programs and activities for women in prison, yet on a par with the opportunities given to men prisoners; and the particular needs of indigenous women prisoners and those from diverse religious and cultural backgrounds. They call for gender-responsive and gender-sensitive policies and programs in prison in a wide variety of areas: intake, classification, mental and physical health-care, mothering in prison, searches, women's safety, and the development of pre- and post-release programs that take into account the stigmatization and discrimination that women face upon release from prison. The history and background of these rules will be examined, as well as their implications for clinical sociological/criminal interventions related to women in prison around the world.

*Countryside Ghettos? Immigrants' Settlement Patterns in Italy Outside Gateway Cities*

Italy has been -- and continues to be, notwithstanding the effects of the crisis -- an important destination country for immigration to Europe in the last decades. It is also characterized by plural and diversified settlement patterns, that mirror local and regional differences in competitiveness and position in the global markets. From the tough conditions of seasonal workers in Mezzogiorno agriculture, to the relatively smooth inclusion in Industrial district; from the quite welcomed re-population of shrinking mountain and hill towns to the hostile reception in the politics of fear in small municipalities in Northern Regions, these settlement patterns have in common a challenge posed to small- and medium-sized towns.

After a review of these Italian patterns, based on the literature on State rescaling and superdiversity of post-Fordist migration, this paper will focus on some relevant cases of settlement in Northern and Central Italy: it will be shown that a widespread distribution in small towns doesn't prevent the risk of territorial segregation, with peculiar forms of micro-ghettoization. Abandoned farmsteads, isolated and declining industrial or residential buildings are reused by migrants,

producing also concentrations that -- not so large in general terms -- assume a focal role in setting local agendas on immigration. Here, the right to signify space in small communities is under debate.

Though, it will be shown also that these settlements are constitutive part of the development strategies enacted at local level, particularly consistent with the failures of the "growth machine" strategy enacted at local level.

[mligiabarbosa@gmail.com](mailto:mligiabarbosa@gmail.com))

*The Expansion of Higher Education in Brazil: Academic Bias and Social Inefficiencies*

This article tries to raise some hypotheses to explain, at least in part, social and economic inefficiencies in the Brazilian system of higher education. Combining two sociological models (meritocratic and credentialist), this article aims to comprehend the role of knowledge, experience and schooling (achievement) and social origin or position (ascription) in the determination of returns to higher education. Using the case of technologists we try to understand the social meaning of third level schooling. This level tends to reinforce social origins much more than achievement, even in a context of huge expansion and diversification.

The domination of academic bias in Brazilian education system -- especially in higher education -- seems to generate some of its inefficiencies. These inefficiencies are made evident in its inability to adequately qualify students to job market or in the lack of innovations and patent registration. The most outstanding inefficiency would be found in the social dimension: the new groups who manage to get college degree are excluded from the best positions in society by the devaluation of some titles or certificates and by the subordination of certain careers and types of training to the academic model.

AMARO, FAUSTO (University of Lisbon)

*Older Adults, Social Capital, and the Internet: The Matthew Effect?*

Despite the so-called age-based digital divide, older adults are progressively using the Internet. But older adults are still less likely to use the Internet when compared to other age groups. So, how does this usage (or lack of) affect their social capital? Social capital is defined as the resources that are potentially available in one's social ties. Social capital has been associated with a variety of positive outcomes from status attainment to well being.

To explore the relationship between Internet usage and social capital, we surveyed a stratified random sample of 417 individuals living in Lisbon, Portugal, of which 118 are older adults (over 64 years of age). Social capital was measured through three dimensions (bonding, bridging, and resources) and analyzed with Latent Class Modeling (LCM) and logistic regression analyses. We analyzed these dimensions separately and then combined them with LCM to create the variable social capital. Internet usage was measured through frequency of use; grouped into non-users, light users, moderate users, and heavy users. The quantitative data was complemented by 14 follow-up qualitative interviews.

Our findings show that, on the one hand, the selected dimensions of social capital decrease with age but increase with Internet usage. On the other hand, social capital decreases with age but differently for each type of Internet user. The "Matthew effect" (Merton, 1968) is an adequate concept to describe social capital and its relationship with Internet usage: advantage begets further advantage, and disadvantage begets further disadvantage. Education predicts Internet usage by older adults; simultaneously the Internet seems to be compensating for the age effect related to social capital: those who are older and use the Internet are more likely to have a high level of social capital than those who are older but do not use it. The implications of these results are discussed herein.

*Health & Nutritionalstatus of Indian College Girls –Urban and RURAL Conglomeration*

Undernourishment of women is a development-related problem in Third World countries. Poor nutritional status of women leading to 1.1 billion days of illness a year (World Bank, 2002) Vitamin- A deficiency, susceptibility to respiratory diseases and diarrhea (World Bank, 2002), Iron deficiency and anemia ,increased death rate, low-birth weight, impaired growth and retarded cognitive development, low work capacity and low productivity (ACCN/SCN, 2002) are the outcome of it .

West Bengal (23°N and 87°E), an Indian state, covers 2.89% percent land area constituting 8% of India's population ,where 32% population (national figure26.5%) live below poverty line (BPL). 72% children of 06-35 months , 66%

pregnant and married women of 15-49 years suffer from iron deficiency (NFHS-3).

Considering the risk criteria of height less than 145cms & weight less than 38 kg, (Saramma 1989), the present paper tries to reveal the nutritional status, height and weight of 390 adolescent girl students commuting from urban and rural peripheries to a College in Kolkata Metropolis. To correlate family status with women health and to inculcate the high obstetric risk associated with it, the respondents from urban and the remote village background (Sunderban delta) are chosen. Food habits (Rice eater 70% rural students and 90 % urban students are junk food eater) and physical structure correlation is observed through weight and the pattern on sickness Sudden sickness, indigestion, anemia, headache, getting senseless, irritable stomach ache are common rural women symptoms. Obesity or O figure syndrome for urban students. Difference in attention syndrome in the single daughter families and the both sex children families are looked up as an exception in nutritional studies in two difference family structures in both rural and urban centres.

#### *Indian Fathers in Transition; Visionary Father Vs Father in Reality*

The concept Father was totally different in Indian tradition. He had been explained as a figure staying much above the normal family surrounding. He was expected to be a person concerned with food and shelter of the family members and not as a person within the inner circle of a parent child family. Post Globalization families made a drastic change in father image. In the nuclear bread winner parent families, he is expected to be more practical. The role model of a father figure existing in him has been challenged. His outer image to a care taker has been converted into a co-partner and care taker of the children born to a nuclear working mothers families. Considering this significant shift in the role of the father from a father from care taker to Care giver, a role conflict arises in himself. In Indian middle class families, especially to the transitional period (link years of Pre and the Post Globalization era) puts him to a dilemma. From a visionary father he prefers to convert himself to a loving father but is obstructed by his traditional fatherly ego inherent in him. The present paper tries to observe the inner conflict of an Indian father about his own status in the family and his visionary status. The empirical evidences collected for the purpose involved two generation fathers belonging to both the pre-globalization and the post globalization era with an intention to explore the ratio of acceptance of caregiver role among both the transitional fathers and the post globalization fathers. How far they are able to overcome the concept in reality.

The study concentrates on two contradictory fatherhood image present in an Indian male 1. Father as a visionary figure and 2 father in reality.

#### RC40-677.4

**BARDHAN ROY, SUBIR KUMAR\*** (Centre for Strategic Studies, [subirkumar11@rediffmail.com](mailto:subirkumar11@rediffmail.com))

#### *Rice Agriculture and Food Security in West Bengal, India*

West Bengal stands among top three rice producing states in India. Rice is the staple food for the state and cultivated annually in 6.2 million hectare. However the state registered an average of 32% households live below poverty line (BPL) and who cant not meet the minimum daily requirement of calorie. The percentage is much higher in rural areas. It is fourth populous states of India and seventh in global standing. The state remains in moderately alarming category considering the hunger index.

Poverty looms in the rural household at large. Earlier study showed a family of four consume 2kg of rice per day. Daily meal lacks protein at large. The NFHS-3 revealed that 72% of the children 66% of the pregnant and married women and 45% of the are anemic.

The agricultural scenario of the state, having seventy percent small and marginal farmers, is not promising too. Productivity and production of the rice is either staggered or less than average in half of years over a decadal period. Rice production decline by 12.2% between 2002-11 - a negate signal for food security. Predicted climatic change also a danger for this environmentally fragile state.

Traditional Poor rice production system failed to meet food requirement of a ever growing population, was overtaken by modern rice management since 1970's. That too fallen short of requirement in late 90's. Weak rice economy, high inputs cost debarred farmer's adoption of modern rice technology and sustain livelihood.

Seeds of climate resilient traditional rice cultivars depleted significantly because of their low productive sustainability. Indigenous ricers having different health and social value rejuvenated in a limited way under new global market. However high productive sustainable agriculture supported by suitable market only bestow food security to growing rural and urban population of waste Bengal.

#### *Agriculture and Production Process: A Comparative Study Of Three Villages Of Maharashtra*

##### **Abstract**

This paper is based on an intensive study of three villages of the Maharashtra state of India. The selected villages differ from each other on the basis of irrigation facility and development of agriculture. The first village is selected amongst the villages having canal irrigation facility where as the second village is selected from the ground water irrigated villages category. The third village is selected amongst the dry villages which completely depend upon the monsoon for its sustenance agriculture.

The data collected from the field reflects wide variation in the production process of the village agriculture. The canal irrigated village cultivators are more tempted to go for cash crops like, Sugarcane, Soybean, Wheat and other staple food crops because of assured irrigation facilities, where as the ground water irrigated village, cultivators are growing crops like, vegetables, cotton, Turmeric and other staple food crops. The Ground water is costly and not available so easily. In the Canal and Groundwater irrigated villages, cultivators apply more fertilizers, pesticides, and use modern agricultural implements and depend upon hired labourers in the production process. The third, dry village cultivators are cultivating the crops like, Cotton, Soybean and other staple food crops completely depending upon monsoon. The production process in the dry village reveals that the agriculture depends upon monsoon with traditional practice.

The above study reveals that assured irrigation facility has a definite impact on the production process. It has diversified agricultural economy by encouraging farmers to go for cash crops having market demand. Productivity of crops have increased many fold and there by helped in increasing net income of the farmers. This scenario is different in the dry village, as agriculture depends completely on vagaries of nature.

#### *Migrant Labour and Textile Industries: Who Gains In The Process Of Labour Mobility*

##### **Abstract:**

Globalization process in the Asia and let alone in the Globe opened up frontiers of new employment avenues for labor mobility. The present paper deals with the mobility of Odia laborers migrating to the textile Industries of Surat. This mobility reflects upon the mobility of labor from a backward economy of eastern part of India to a developed industrial economy of western part of India. Odias were known as good gardeners. Gujarati merchants in the British Colony of Mauritius lifted a few Odias to work as gardeners in their posh bungalows at home land at Surat. Odia gardeners after staying a couple of years in the city of Surat could visualize the prospect of their employment in the textile industries and gradually invited their kith and kins to engage themselves in the different sections of Jobs offered by the textile industries. The data reveals the fact that during seventies hardly a couple of Odia laborers migrated to Surat to work in the textile industries. The recent census figure reveals the fact that around twelve lakhs Odia migrant laborers work in the textile industries of Surat. Majority of them are youth and highly educated. In this process of labor mobility kinship relation play a vital role. These laborers work for twelve hours per day with no paid holiday. Employment condition is purely temporary with no provision of insurance. Majority of them, live in the slums with a life full of miseries and agony. It is strongly believed in labor mobility theory that migrants used to send money to their home places in turn which brings prosperity and change in the home economy and change in the life style of migrant family. Our observations substantially do not support the dominant theory of socio-economic change.

#### *The Art of Remix in Political Consumerism on the Web – Images of 'Critique Artistique' and 'Critique Sociale'*

In political consumerist and anti-capitalist movements re-mix artefacts have been produced by amateur activists as well as professional artists on the Web. With their semiotic practices of 'cultural hacking' or 'cultural jamming' both types of actors try to semiotically subvert the imagery of dominant brands. Brands are decoded and "verfremdet" in order to expose internal contradictions and power relations of capitalistic consumer culture. The paper theoretically interprets these practices as semiotic expressions of a politics of affects from perspectives of new critical concepts of culture (post-hegemony) and democracy (post-democracy).

Drawing on the distinction between four sources of critique and outrage by L. Boltanski and E. Chiapello selected examples of culture jamming from social movement actors as well as professional artists are presented and interpreted. The paper argues that the distinction between culture jamming practices of collective protest actors and individualist artists corresponds with the general distinction between "critique artiste" and "critique sociale" developed by Boltanski and Chiapello. We find marked differences regarding the dominant sources of outrage in the imageries: While images of professional artists mostly deconstruct branding as source of loss of authenticity and repression of individual freedom, cultural jamming practices of social movement actors mainly criticize commercial branding for its impact on ecological destruction, social inequality or political repression. Apart from that, both types of visual critique differ in their expression of the relation between production and consumption. Finally, the paper analyzes web-based practices of remix and culture jamming by individualized, non-organized actors that transcend the modern differentiation between experts and amateurs.

*Which Tradition Shall I Reject? The Dilemma of Second-Generation Members of New Religious Movements*

Whilst some young people leave the religion in which they have been raised because it is perceived to represent many of the beliefs and values that they want to reject, other young people prefer to stay within the womb of the traditional religion with the expectation that they themselves will carry forward its, their family's and their society's traditions. The situation becomes more complicated, however, when one grows up in a family in which one's parents have rejected the main society and expect one to follow their new Truths.

Research indicates that the first cohort of second-generation members of new religious movements (NRMs) are likely to reject and leave the movements, while the second cohort of second-generation members are more likely to accept the movement's beliefs and practices and stay.

The paper will examine this phenomenon and discuss some of the possible explanations for its occurrence. It will draw in particular, but not exclusively, on some of the author's research into the Unification Church, the Children of God/ The Family International, the International Society of Krishna Consciousness and other NRMs that became visible in the West around the late 1960s. Comparisons will be made between first-generation converts in the 1970s and '80s, and the first and second cohorts of second-generation members. The discussion will focus on what might appear to be pertinent changes in the movements' beliefs and practices.

*Culture and Social Movements: The Case of Disability Protests Cross-Culturally*

Perhaps a naïve observer would think that protests relating to disability would be similar cross-culturally, since the phenomenon of disability has certain medical similarities. However, this is not the case. Despite the fact that mobilization around disability issues is increasing, that there is neither one truly trans-national organization nor one international Disability Rights Movement begs explanation.

This paper explores data from over 2600 cases of disability protest from around the world, gathered from media reports and analyzed quantitatively. While media reports themselves raise cultural and methodological issues, which the paper will discuss, the analyses also show markedly different patterns in protest issues and tactics. One issue with huge cross cultural variation is that of what constitutes disability rights. In protests in cultures which lack a strong rights tradition, issues which are framed as 'rights-related' may actually be framed in others as being 'services-related.' Another cultural difference relates to the types of impairments whose problems become protest demands. In a number of countries blindness-related demands show up more frequently than do other impairment-specific demands or than general or non-specific impairment-related demands. Also, in some countries both non-specific demands and demands related to relatively newer conditions such as autism show up more frequently than in others. There are also cultural differences in types of tactics used. While protests often take the form of marches, demonstrations, or lock-outs, in some countries they are more likely to take the form of self-immolation or hunger strikes. These and other culturally-fueled differences such as the timing of disability mobilizations are discussed in order to illustrate the power of culture over the actualization of this social movement.

*Methodological Issues in Comparing the Disability Rights Movement Cross-Culturally*

Many scholars have compared disability movements in two or a few countries, but few have attempted global comparisons, in part because of the methodological complexities involved. But increasing globalization and increasingly widespread mobilization around disability issues suggest the need to examine such issues.

This paper is drawn from analysis of over 2600 cases of disability protest from around the world. If social movement activities are collective, contentious, and politically non-normative, methodological issues include cross-cultural differences in all of these. What disabilities are involved? What activities are considered to be non-normative? What are the cultural and political meanings, including the threat level posed and the degree of acceptance, of the tactics used? Even defining the Disability Rights Movement raises definitional differences in what constitutes disability (AIDS? Obesity?) and what word can be used to describe it (disability, handicap, impairment, challenge?). Sometimes a specific disability label, such as developmental disability, in one society may refer to a different physiological condition than in another. Defining 'rights' is also problematic: Issues which are framed as 'rights-related' in one context may be framed in others as being 'services-related.' Some types of impairments are more stigmatized in one society than another, which affects mobilization and effectiveness of protestors, as well as, possibly, by the media. Issues related to the likelihood that a protest will be noted at all, as well as the availability and translation of media reports, are also important. Finally, variable coding is often ethnocentric. Unless each variable were coded based upon its own cultural context, biases will occur. However, doing this would add extensively to the time and other resources needed for the research. Thus this paper raises questions about if, and under what circumstances, cross-cultural social movement research would be possible.

*Variety and Emergence in Complex Environments: The Role of Innovation in Organizational Competitiveness*

Nowadays, the advancement of global society and economy along with the rapid growth of Information Technology and Communication (ICT) have created significant challenges for those companies, who pursued both their permanence and their development in the markets where they compete. Thus, enterprises have responded with the adoption and / or generation of innovation mechanisms to maintain or improving their competitiveness. Firms have understood that intellectual capital is a mechanism to add a value to their processes, products or services that they offer to their clients, therefore to maintain their competitiveness advantages that help them to have a better position before their markets.

The aim of this work is to generate a first approach, essentially theoretical in nature, that when seen from complex systems, help to characterize the complexity of this environment and to understand how companies have developed a variety of known responses to everyday problems. Moreover creating emerging nature mechanisms that have served them to generate responses, which have helped them to successfully face the challenges of innovation that the market required in order to maintain its competitiveness.

*How Do Rural Popular Groups Mobilized? Investigation about Local Resistances Against the Closings of Classes in the French Context*

The contemporary reform of the State, in France as in other democratic countries, has various implications on the lifestyles of the populations. It induces for example a reduction of the school offer in the rural contexts. For mainly economic reasons, the pupils are concentrated in the same schools - "school poles" - which often constrain the families with important daily displacements. In parallel, this school concentration induced the closing of proximity small schools of campaign. Then changes of the public services of education are often the occasion of collective actions protesters which enable to question, in an exemplary way, the relationships of the civil society and the State to the prism of these collective resistances. Empirical investigations were conducted on this question in French rural spaces. The ethnographic investigation is based on observations (close to the institutions and social groups), with about forty interviews (with varied elected

members, different administrative officers, and parents of various social backgrounds, militants or not), on archives (administrative and from associations of parents). From these materials and by comparing different cases (closing of class or not, maintenance of closing or reopening further to local mobilizations, etc), this study underlines how particularly marginalized groups as the rural popular groups can attempt to resist collectively to the political reforms and the under State control power by taking support on the experiences of their daily life. The analysis of the release of these mobilizations, dynamics of their progress (repertoire of action, etc), and their conditions of success (or failure) shows that the most deprived populations as the rural popular families succeed to be opposed collectively to the State only while being combined with other more favored social groups (like farmers or teachers) and leaning on political supports (local elected members).

#### *What Mean to be "Citizen"? Ethnographic Investigations about the Various Modes of Exercise of Citizenship in France*

The citizenship was the object of an abundant literature in political science since the first steps of this discipline. Beyond the philosophical and conceptual controversies, I made the choice to conduct several investigations of field to observe since 2006 the methods by which the citizens in France, in their diversity, exercise their political prerogatives. While having recourse to interviews-in depth repeated in time (in ordinary period and in electoral situation from a compared point of view), to ethnographic observations within various authorities where the citizens are invited to take part (dialogue, devices of the "participative democracy" today in full rise, etc) and within the framework of local associations, like that questionnaires, I studied the practical relationships to the politics, to the local institutions and to the State of citizens from different social and ethnic groups in France. These ethnographic investigations underline a plurality of forms of citizenship. French citizens appear in various ways integrated into the political system according to their social and ethnic membership, their local sociabilities and their militant experiences. They are thus very unequal from the point of view to their participation in the democratic authorities as the vote, the social movements, the associative commitment, or the contacting. Although the forms of citizenship evolve historically in France, the diversity of the attitudes in front of the political system and to the public policies remains a constant. The contemporary citizenship lets room to a plurality of manners of being "citizens" which is consubstantial from democratic systems.

#### *Recent Ethnographies on Crime and Violence in Brazil*

Over the past five years, a set of ethnographies produced by young sociologists is bringing new data and styles of questioning the reality of collective violence and crime in Brazil. This paper aims to present the main work of this recent wave of ethnographies, summarizing the characteristics of the analysis undertaken by young authors who developed them. Interfaces crime and morality, crime and politics in the peripheries of large urban centers, crime and police corruption, criminal organizations in the life of prisons and armed clashes in urban areas are the main dimensions of the lifting of the state of the art from these works.

#### *Access Gap to Technology and Usage of Media Contents: A Study on Tijuana's Digital Blackout*

We will show data related to an investigation-in-process related to the digital blackout that was applied in Tijuana, México last year. There is a worldwide tendency to shift TV telecommunication from analog to digital. In 2004 the Mexican government adopted the North American Advanced Television Systems Committee (ADTSC) to start the migration from the current TV analog system to a digital one. The city selected to start this process in this country was Tijuana. This decision was made due to the supposition that a border city such as Tijuana would find it easier to transfer technology from United States and could adapt them to the proposed shift. This did not happen. The project presented several delays and delivering devices to adapt digital transmission to analog TV's demonstrated that the estimations of the number of people with access to analog TV were miscalculated.

After years of delays, the blackout did finally happened on 2013, however there are now many doubts about how this could affect social inequalities, as perhaps 7% of the population in Tijuana has now lost access to TV. Studies on social inequalities have recently focused on the problem of access to different forms of social capital (cf. Rodríguez Gallardo, 2006). Nevertheless, what does it mean for social inequalities to shut down the TV? Particularly, how does access to telecommunications and media affect social capital? Does being able to watch TV diminish social capital as a consequence of individualizing free-time, or does it increase it through a sharing of experience that allows connectivity to society and the world? In this presentation we seek to discuss the practical problems to approach this phenomenon and to reflect on the possible implications they have on a better understanding of the inequality gap on access to communications technology and contents.

#### *When It Rain It Pours: Reality Shows and Charades for Climate Change Tragedies*

In September 2013, Mexico was quashed by two hurricanes during the same week. One came from the pacific and the other from the Gulf of Mexico. The consequences were tragic and colossal. The days prior to the storms the Mexican government was warned by the Mexican National Weather Service about the magnitude of the catastrophes coming, but they were more focused on 'cleaning off' a teacher's demonstration at Mexico City's main square. National TV networks were mainly focused on blasting the teacher's movement. And only when it was too late they started a campaign to help and rescue the victims. One of the actions that became particularly emblematic was the preparation of a reality show screening an infamous TV presenter heroically 'helping' the victims. The farce was unmasked by a very important Mexican political magazine and one of the main journalists questioned the staging, the TV presenter has a very belligerent reaction. The scandal is in progress at the moment of submitting this abstract. Social networks are being particularly virulent at this point. In this presentation, it will be shown how this episode could be explained using sociocybernetics tools and following previous presentations of the author, it will be developed how critical sociocybernetics model would work to explain media performance and the emerging role of cyber-activists in the face of climate change disasters.

#### *Ces Adolescents Venus D'ailleurs : La Prise En Charge Quotidienne Entre Politiques De Protection Et Politiques D'immigration*

La figure de l'immigrant, figure emblématique de l'altérité, apparaît au cœur des discussions et débats politiques et sociaux. Parmi ce public migratoire, un groupe particulier attire notre attention : les enfants et adolescents arrivant en France sans responsable légal. Ces jeunes, dits « mineurs isolés étrangers » doivent, d'après les conventions internationales, être pris en charge par l'institution de protection à l'enfance. Ces derniers demeurent donc au carrefour entre politiques d'immigration et politiques de protection à l'enfance.

Cette communication se propose d'interroger les tensions produites au sein des organisations d'accueil, relatives aux spécificités de chacune de ces politiques prises dans leur confrontation - l'une liée au discours institutionnel sur la protection des enfants et l'autre aux contraintes de la régulation par des politiques d'immigration. Comment ces logiques sont-elles vécues au niveau existentiel par les sujets présents dans des organisations de ce type? Eloignés de leur famille, ces adolescents s'inscrivent dans l'espace du foyer, au sein du « groupe de vie » constitué par les éducateurs, l'équipe technique et d'autres adolescents. Nous verrons comment l'organisation, lieu d'exercice effectif de ces politiques, prend figure dans l'imaginaire des jeunes qui y habitent.

A partir d'une épistémologie de recherche clinique, ce travail s'appuie sur les observations participantes faites au sein d'un foyer de vie dans la région parisienne accueillant des jeunes étrangers. Notre communication portera sur le groupe dans l'organisation d'accueil, mobilisera les théories de la psychosociologie et de la sociologie clinique sur les organisations et les institutions, et s'étayera également sur les concepts de la psychanalyse de groupe (Kaës, Anzieu) aussi bien que sur ceux de la clinique transculturelle de l'ethnopsychanalyse (Devereux, Moro). En nous appuyant sur ces théories, cet article propose de discuter les liens tissés dans cet espace et leurs influences sur la construction subjective des adolescents.

*Community Based Tourism: A Dialogic Proposition Via Local-Base Development*

In the inequality context, the theories about development turn to local spaces and a increasingly number of researches have been approaching the relevance of culture, and favoring local experiences, knowledge, traditions, aspirations and needs. It is necessary to understand that local must be perceived within its relations with the globalization process, its differences, specificities, traditions, and in the continuous processes of change existing in social-cultural processes. The touristic phenomena - intrinsically related to the globalization process- favors multiple visibilities for new social actors, new identities, new references, and new practices. This process of exchange due to the articulation of "local/global" shall foresee the development, innovation, and enhancement within a process of construction and re-construction of place. Besides the globalization process, there is, undoubtedly, the renewal of interest in the local. A conception of development that approaches the local as reference must rely upon the harmonization of endogenous and exogenous factors, recurring to a combination of selective importations adequate to each reality. In such perspective, this research aims to analyze Tourism of Communitarian Base (TCB) as a development proposition, where each city must live its own modernity brought by its own multiple, multiform and multidimensional innovations achieved by the adoption of its own innovative and diversified ways of development. The TCB constitutes a proposition that has great contributions for the local development, as it has as major objectives the social inclusion and equity for the inbound tourist community, the valorization of the culture and traditional knowledge, the experience exchange, and the respect for natural resources.

*Leisure and Participation: A Social and Cultural Issue*

In the context of today's inequalities it is important to consider leisure, as an individual option, and the participation that is produced within the social dynamics by this activity that can be understood as a social and cultural issue.

By this perspective it is important to respect the local social actors in the identification of their own problems, and their ability to develop innovative solutions for themselves. An important issue that arises is how to respond to the commitment to participation in face of development processes aiming life quality improvements.

The major mean and purpose of development is to allow the expansion of individual liberties, so they can be able to achieve better live standards. Within this process of expansion of liberties, the population can reclaim opportunities equality in the face of development in such social integration process where all can be more participative. To achieve this development proposition, it is necessary to conceive quality of life within social sphere and its different relations, where leisure plays a fundamental role.

For Joffre Dumazedier, leisure highlights elements that drive the individual to fulfill their social wellbeing-ness, and to foster a more active participation in the achievement of individual, family and professional, cultural e communitarian orders. Leisure enables individuals with conditions to develop themselves as they receive or increase elements that, recklessly, constitute them. Reflecting about the dynamic of the society, leisure is more than a simple complement to work, it is a source of production for new sets of values. It is necessary to conceive social and cultural valorization of leisure as both social circumstance and global cultural feature.

*Greening the Global City. City Networks in Environmental Knowledge Production and Policy Transfer*

Environmental governance becomes more and more embedded in a set of different scalar institutions simultaneously in which cities and metropolitan regions play major roles. City governments transverse different scales rather than merely act as subunits within a hierarchical state organization. At the center of this paper are two major global city networks that engage with environmental issues on a global scale. *C40 Cities Climate Leadership Group* and *ICLEI - Local Governments for Sustainability*. They are working on developing innovative environmental and climate protection programs and policies and cities often serve in this process as the laboratories for pioneering technologies and policy programs. Knowledge production is thereby incorporated into governance practice that shape planning ideas, policy innovations, and "best practices". This development has led to

an institutionalization of knowledge/policy interfaces (Chilvers and Evans 2009) through policy networks at local, national, transnational and global scales.

To understand how policies and planning practices within the metropolises are entangled with global governance and economic development, it is necessary to look at the institutions, ideologies, and actors and the connections and inter-linkages they establish between different levels. The question is how environmental objectives are framed by institutionalized discourses on a global interurban scale, and how these frames of knowledge are in turn interrelated with local regimes of environmental governance? The study of the two city networks will thereby function as a lens through which global/local re-scaling processes relate to the production of urban environments. In tracing the actors, information, ideas and ideologies on different scales in a 'global ethnography' (Burawoy 2001) the channels of global flows that shape the landscape of intensified interurban relations become visible and concrete.

*School Segregation in Rio De Janeiro Public Schools: A Longitudinal Analysis*

The paper presents school-level figures to analyse the impact of the educational transitions on school segregation for all Municipal Public Schools in Rio de Janeiro, Brazil, from 2006 to 2011. Segregation here refers to an uneven distribution of pupils with similar characteristics across a school system, and this is assessed utilizing the Segregation Index (GS). The methodological approach tracks one specific cohort, that from the 1<sup>st</sup> to 6<sup>th</sup> grade (age range 6 - 11) of Fundamental School. Rio de Janeiro presents an enrolment legislation that combines two distinct approaches. On the one hand, parents have purported freedom of choice. There are no restrictions on allocating pupils regarding family place of residence, and the policy of free public transport for pupils in public schools, which, in theory, allows greater geographical scope in the search for a different school. On the other hand, school principals have partial control over their intakes, especially in the case of oversubscription. Four different indicators of potentially disadvantaged pupils were calculated: a) poverty; b) parents' education; c) ethnic background; d) age/grade "distortion". Interactions among these variables were also tested in order to focus on "superdeprived" pupils. The results indicate that: 1) around one third of the pupils change schools in the first four educational transitions - 1<sup>st</sup> - 5<sup>th</sup> grade; 2) the unfettered movement of pupils presents specific patterns that appear to increase the overall level of segregation; 3) between-school segregation declines in the last transition observed (5<sup>th</sup> - 6<sup>th</sup> grade), mainly due to a massive decline (45%) in the total number of schools. However, within school segregation (also called "school shift effect"), increases in the same period/transition. The interpretations suggest that the results observed can be attributed to bureaucratic patrimonialistic practices and loopholes in an unclear regulatory regime.

*The Ethics of Care and the New Habitus: Rethinking Community in the Age of Shale Gas Explorations*

The lack of care for the environment has often been deemed to be one of the most important contributing factors leading to the overuse of natural resources. While feminist philosophers and bioethicists have developed analytical tools explicating the ethics of care, scholarly debates in environmental sociology have generally overlooked this body of literature. The purpose of this paper is to bring these two bodies of literature in conversation with each other, particularly by linking the ethics of care as articulated by N. Noddings, M. Slote, and J. Tronto, and the notion of social practice and habitus developed by Pierre Bourdieu. Staring with Boudieu's theories of habitus and social practice that have been incorporated in the analyses of community-based natural resource management we expose tensions between care as a mode of living that is oriented towards sustaining and preserving the environment and the limiting effects of routines, social relations, and economic logic on such care. We argue that care about the environment as a social practice is dependent not only on social milieu and culturally embedded class identities but also on normative attitudes of a care-giver. As a case study, we focus on the mobilization of the Zygaiciai community in Western Lithuania against the efforts of the international energy giant Chevron, to explore and extract shale gas in the area. Zygaiciai community has become the symbol of anti-shale gas development in Lithuania and East Europe more broadly, while also spearheading a public debate about the responsibility of the national and supranational states *vis a vis* corporate interests, national security debates, and energy independence. Through the analysis of public discourse, we will highlight the emerging new articulations of care and responsibility and relate it with ethical theory which reveals importance of relationships for developing a caring attitude towards environment.

*How Is Demographic Decline Translated to Bureaucracy?  
 Population Numbers As Calculation Devices of Local Government*

Max Weber's 'classic' ideal type of bureaucracy has inspired organizational theory and research as well as normative critiques of public administration. Both strands of the literature seem to agree that public organizations coming close to Weber's ideal type are ill prepared to adapt to new problems. As a consequence, prescriptive texts recommend the alignment of public and private organizations – often by marketization. The proposed paper presentation will investigate, how local public administrations respond to declining population numbers (in the face of lacking market environments).

Declining population numbers are especially likely to challenge established structures of local government as municipal service provision was established historically during times of growing or at least stable population numbers. Demographically induced changes in demand are regarded as problematic because some of the costs for public service provision will remain largely fixed (e.g. buildings and staff) even if capacities are not used. This diagnosis (from public finance scholars) implies that there are effective organizational devices translating statistically observable demographic changes to changes in demand for public services. The thesis of this paper is that bureaucracy might translate demographic change into relevant administrative problems by its own means. But which are these?

After 1989/90 most countries in the former East Bloc witnessed dropping birth rates and also out-migration. Therefore, the empirical part of the paper draws on 62 expert interviews with decision makers in 21 Municipalities from West Germany, East Germany and Poland (with West Germany providing contrasting cases on the transformation context). From these interviews population numbers emerge as administrative devices for the calculation in-kind of public services approximating changes in local demand.

Interestingly, the empirical material shows that a seemingly antiquated organizational theory proves to be highly relevant for current adaptation processes. Calculation in-kind makes bureaucracy responsive to demographic change without eliminating political discretion.

*Refashioning Sociological Imagination: On the Conceptual  
 Significance of Materiality and Iconicity*

One of the key challenges of meaning-centered cultural sociology is to face the findings of visual and material culture studies and to come to terms with the implications of the iconic turn. The structuralist assumption of arbitrariness of cultural sign is of limited service in explaining the power of complex representational economies and its variability. There is ample evidence that most social signifiers are not just "the garb of meaning," to use the insightful phrase of the American anthropologist Webb Keane. Rather, the actual signifiatory structures and their material/aesthetic properties co-constitute meanings. Sensory formations are as important for meaning-making as discursive formations. Therefore more integrative and multidimensional models of culture in action are nowadays both needed and made possible by emergence of the systematic research agendas organized around such master categories as performativity, iconicity and materiality. This paper is devoted to charting new explorations in these overlapping cutting-edge domains and systematizing their implications for sociological theory.

*Taking Place, Becoming Iconic: What It Takes for Urban Protests to  
 Become Visible and Significant*

We seem to be living in a time of revolutions which do get televised or at least tweeted, or both. Yet, for a given observer, most political upheavals are remote "news" about numerous distant struggles. Today the world is full of conflict and associated visual strife. Struggle for power blends with struggle for recognition, blurring the symbolic boundaries between the two. Each national outbreak has the potential of shaking the international stage and even punching above its own weight, provided it is properly shown and referenced. If this social process does happen, it is possible in no small measure because of sustained visual exposure that helps turn a given local occurrence into a translocal event, or – to use Bruno Latour's parlance – 'a matter of fact' into 'a matter of concern.' Conversely, if sustained visual exposure and iconic contextualization don't happen, even genuine rebellion or protest may come across as underwhelming, or simply go unnoticed. All kinds of media, old and new, are the usual suspects here. Just about any social occurrence is subject to the constraining influence of visual framing and rhetoric.

ical deployment. Thus, visibility and iconography must be thematized, "practices of looking" unravelled and the politics of visual culture scrutinized. Similarly, the importance of the specific spaces at which protests *take place* must not be underestimated. The present paper explores these themes in the context of the Gezi park civil unrest that shook Istanbul and the international community in 2013.

*Happy for How Long? How Social Capital and GDP Relate to  
 Happiness over Time*

What does predict the evolution over time of subjective well-being? We answer this question correlating cross country time-series of subjective well-being with the time-series of social capital and/or GDP. First, we adopt a bivariate methodology similar to the one used by Stevenson and Wolfers (2008), Sacks et al. (2010), Easterlin and Angelescu (2009), Easterlin et al. (2010). We find that in the long (at least 15 years) and medium run (6 years) social capital is a powerful predictor of the evolution of subjective well-being. In the short-term (2 years) this relationship weakens. Indeed, short run changes in social capital predict a much smaller portion of the changes in subjective well-being, compared to longer periods. GDP follows a reverse path: in the short run it is more positively correlated to the changes in well-being than in the medium-term, while in the long run the correlation vanishes. Moreover, we run trivariate regressions of time-series of subjective well-being on time-series of both social capital and GDP, which confirm the results from bivariate analysis.

*Yet Another Junkie Story? Lived Experiences of Drug Policy in  
 Norway and Why They Matter*

Norway is one of those European countries with the highest rates of drug-related deaths. In attempt to improve the situation, Norwegian government chooses a medical approach to substance abuse and removes responsibility for the field from social welfare services. Treatment of abuse became defined as specialized health service, and the abusers' rights became articulated in a new language – language of patient. As a project with moral undertones, the reform created not only new epistemological and organizational framework for treatment, but it also tried to construct new identities. It was designed to "liberate [the abusers] from the established stigmatizing label as a social client". What is the abusers' experience of these changes?

There is little research on how users relate to the various models of substance abuse and addiction. How do they navigate in a landscape of the seemingly incompatible discourses of disease, social pathology and choice? What are the social, psychological and physical effects of these discourses? Life stories of long-term abusers give us interesting answers not only about their own lives, but also about the "social problem" they inhabit, with its powerful institutional, political and moral structures.

By focusing on the internalisation of and resistance toward the various discourses in personal narratives, I will contribute to two ongoing debates. One is on how policies shape relation between user/patient and social/health worker. The second one asks how social and political categories influence the various aspects of abuse: the subjective embodied experience, the physiological dynamics,

the cultural and social constructions, and the social transformations perpetuating abuse and addiction.

Following the analysis of the "inside stories", I will discuss how these stories can be used in social, political and therapeutic interventions. At the same time I will discuss the methodological and moral pitfalls related to life story interviewing of vulnerable individuals.

#### *International Migration and Life Satisfaction in Europe*

A core finding of research on subjective wellbeing – concluding that an increase in one's income does not generally bring greater life satisfaction – suggests that economic migration (motivated by hopes of an increased income) would not result in greater life satisfaction. Income affects life satisfaction mainly via the way it signals status, and many immigrants in wealthier countries have a lower status in the destination society than in their origin society. This paper also considers the economic migration scenario "in reverse": people who move from wealthier countries to poorer ones might attain a higher status position in the destination, relative to the status they enjoyed in their country of origin – and, if so, then perhaps they would experience an increase in life satisfaction. The paper assesses these propositions via analysis of European Social Survey data – in the first instance investigating people moving from eastern to western Europe, and (for the second proposition) on people moving from wealthier countries in northern Europe to Mediterranean destinations such as Spain, Portugal and Greece. In general, migrants do not appear to gain life satisfaction as a consequence of migration – and in some instances (particularly for migrants moving to a poorer country) migration appears to reduce life satisfaction. Migrants certainly expect migration to improve their lives, but it is not clear that these expectations are generally met in their experiences.

#### *Welfare, Religion, and Values: An Investigation of Ultra-Orthodox Jews in Israel*

Welfare states and welfare policies are commonly understood as mechanisms for addressing material deprivation (and, perhaps, the social exclusion that follows from being poor). In some cases, however, welfare programs as experienced by recipients have more to do with a religious and/or cultural imperative: state support enables people to reproduce a particular way of life, especially by making it possible to survive without engaging in full-time work (paid employment).

This paper explores that proposition via analysis of ultra-Orthodox Jews in Israel, where many of the men in very religious families prefer to engage in full-time religious study rather than holding regular jobs. These arrangements are controversial, producing resentment among secular Israelis who believe that ultra-Orthodox men impose unfair fiscal burdens on the state and taxpayers.

The paper argues that welfare systems should indeed consider religious and cultural differences of this sort, rather than assuming that material sufficiency is only relevant value. The Israeli welfare state helps a distinct group of citizens to resist systemic pressures to become "normal" members of society (e.g. focused on conventional goals such as consumption, leisure, and career advancement); with state support, ultra-Orthodox Jews have more scope for pursuing goals and values of their own choosing. In the Israeli case, however, one must balance that view against concerns about the way ultra-Orthodox elites use welfare programs to exacerbate the dependence of other (regular, non-elite) members of that community.

#### *The New Challenges for Health Care System*

Keywords: health care system (HCS), welfare state, trust in healthcare system, ISSP (International Social Survey Program)

The continuous shifts of the modern society are the causes and should account for changes in all the ways society operates. Risk related to socioeconomic changes, economic crisis, demonopolization of medicine, marketization and etc. are boosting the new challenges for the individuals as well as for society itself, and these social changes have also effected modern healthcare system. Thanks to the technologies that are being developed nowadays, medicine can cure infectious diseases; however, the development of medicine technologies can't overcome the social and health inequalities in many countries.

Using the worldwide data of 27 world states (from The International Social Survey) about institution of health and various indicators (such as opinion about efficiency of health care system, trust in health care system, lay knowledge about health preservation, healthy life strategies and etc.), there is possibility to identify the health care situation globally. This presentation aims to showcase this peculiar situation and compare it within various welfare states in the world. East-Central Europe (as post-soviet states) and Mediterranean countries could be distinguished by lack of efficiency, trust and pessimistic beliefs in health care system; while survey showed the biggest trust, efficiency in health care system are in Scandinavian and Benelux countries. These findings draw attention to much wider sociological discourse, that differences could be explained by differences of welfare regimes in various countries.

#### *Changing Technology and Its Implications for Workforce*

Innovations in technology have brought about revolutionary changes in the process of production of goods and providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of workforce. Another outcome of this development is steady decline in proportion of moderately skilled workers by automated systems of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India which had taken up technology up gradation in their plants in the recent past, employing organisational survey schedule. The findings show that technology up gradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the work force. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. Further, disproportionate increase in wages of highly skilled workers has increased work place inequality with unskilled portion of the workforce looked upon as disposable.

#### *Women in Higher Education in India: Patterns of Exclusion*

Women taking to higher education have been on the steady rise in India with many institutions of higher education having women in equal number to men if not more. But there appears to be something more than what meets the eyes since this quantitative shift is not matched by the qualitative content. The present review article seeks to probe into gender considerations and their implications for higher education in Indian context. An attempt is made to analyse and substantiate the situation based on information available with various government and developmental agencies. Having analysed social reality pertaining to the state and status of higher education and the major limitations and constraints in achieving the envisaged and aspired levels of expansion, excellence, quality and access for its inclusivity, the article reveals that several gender considerations come to condition the statics and dynamics of higher education, including access, exclusion, distribution and composition and even the governance of institutions of higher education and the centres of excellence. An attempt is made to ascertain how the quantitative growth in women taking to higher education alone could be misleading and a misconception about the status of women's education without a corresponding change in the qualitative aspects such as relative importance and value of the courses in terms of opportunity for employment, importance of the sector that the courses offered can open for women, that is, the extent to which the higher education being accessed by women can empower them in true sense of the term.

#### *The Problems and Attempts in Training Applied and Clinical Skills to Sociology Graduates: Somder (ASG) Case, İstanbul-Turkey*

In this paper, it is being presented the problems and attempts encountered in a training program, within an NGO, the Association for Sociology Graduates-ASG.

In the first semester of training, group of attendants were 15 people, which long time past out of their graduation. These attendants failed to develop an applied sociology vision, for their theoretically oriented education, and, due to decrease in their interest in sociology through work experience;

and, they showed a reluctant attitude toward gaining applied and clinical skills through participating to implementation an applied and clinical project. For this reason, in the second semester, new group of attendants were 20 people; newly graduated ones were encouraged to apply. The training in the second semester provided for the attendants both, a basic vision about applied sociology and a predisposition in taking responsibility by joining an applied team.

In the third semester, an "applied sociology project development group" was created, by selecting from the second semester successful attendants. During this semester, it was asked from group members to prepare a project by developing the idea of providing advancement for, and through the participation of the sociologists, recently employed in the Ministry of Agriculture. The attendants were taken "European Union Project Cycle Management" training course; and developed a project titled as "Advancement of Applied and Clinical Skills for the Agricultural Sociologists". In the fourth semester, the project started to be implemented by providing the support of relevant governmental institutions.

In the paper, it was presented as a case study 1. the problems -faced in the stages of training, project development and project implementation- of both, the sociology graduates attended the training program through four semester, and the agricultural sociologists participated in the project implementation; and 2. the attempts developed to deal with these problems through all the stages.

#### *Black Immigrant Youth Inequality in Another France*

This paper uses in-depth interviews with first- and second-generation immigrant youth of African descent in France to understand their integration process. I first examine identity, by addressing the following question: Where do these young immigrant descent individuals see themselves fitting in French society? I use respondents' voices to identify cultural and structural factors that define their integration experience, and then present initial findings as they fall within three areas: 1) identity formation, 2) religion as a mechanism, 3) and the importance of race and immigrant statuses. Then, I apply the cultural materialist framework to explain an unequal world and integration challenges using two particular cases: Alita, a first-generation young woman's integration, and the 2005 riots of immigrant youth in France's suburbs.

#### *The Linguodiversity Crisis in the 'Glocal' Age: Factors, Processes, and Policies*

Throughout human history, language varieties have disappeared in an ongoing process that is likely to have accelerated in the twentieth and twenty-first centuries, a period in which major economic, technological, political and demographic changes have had a negative impact at the linguistic level.

Knowing how to take appropriate action to halt current processes of language shift requires developing an accurate understanding of the causes and intergenerational dynamics at work. Sociolinguistic experience in the Catalan-speaking territories, focused on understanding the processes of language shift and the political actions taken to reverse them, can provide us with theoretical models inspired by the perspectives of eco-socio-cognitive complexity, potentially of great use in addressing other similar processes.

From this point of view, a comprehensive grasp of the phenomena of language permanence and abandonment needs to take into account the different levels involved (i.e., cognitive-emotional, interactional, group-specific, demographics, economics, the media and politics) and it must do so simultaneously in an integrated and processual manner. These domains continually interrelate with one another in the sociolinguistic reality, resulting in situations that evolve much as ecosystems or complex adaptive systems do. The need, therefore, is to understand these phenomena in their horizontality and in their multidimensional transversality, like a polyphonic or orchestral score.

As humankind becomes increasingly interdependent and societies face the need for polyglottisation, general principles of linguistic organisation are called for to enable us to reconcile the normal maintenance of the languages of different groups with broader issues of human intercommunication. Toward this aim, the present paper sets out new concepts and principles, such as "linguistic sustainability" and "linguistic subsidiarity", as a basis for a new organisation of human languages.

#### *Girls Rights As Globalized Justice*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

Focusing on the rights of the girl child, I conduct a feminist, sociological, human rights analysis that uses framing processes to describe the development of girls' rights within the United Nations (UN) from 1995-2010. To frame the contemporary process of girls' rights trans-nationally, content analysis with three sets of documents (1) Annual reports from transnational organizations affiliated with the UN; 2) official UN documents; and 3) documents from UN sponsored Non-Governmental Organizations) demonstrate how the UN became the central location for girls' rights within the international community particularly over the past fifteen years.

A discussion of girls' rights can be traced through multiple components of the UN system. Guiding the discussion will be key components of the 'new' sociology of childhood that argues for childhood as a social construction, and for the child as a social actor. Also central to the discussion is a human rights analysis, where the social construction of girls' rights can be characterized as "active in the sense that something is being done, and processual in the sense of a dynamic, evolving process" (Benford&Snow 2000). More specifically within the UN, the social problems of the girl child demonstrate problematic conditions in need of change, girls' rights is the strategy used to bring attention to the social problems and the girl children join forces with adult and institutional allies for creating social change. Being aware of the girl child and girls' rights ensures that both individually and as a society we do not ignore the social conditions and social inequalities of the girl child; for if ignored, the bondage of girl children will continue in more covert ways and we as a society will ultimately fail in securing the due rights of girls everywhere.

#### *Does Religion Make Any Difference?*

Today it seems to be a certain consensus in pointing out that the main problem of a modern society is to answer to the challenge of pluralism without forgetting the aims of social cohesion, equality, liberty and justice.

But pluralism is not a mere amount of different behaviours it is based on common bases that allow each one to chose, and develop, the kind of life he or she wants.

Religion has traditionally have a pre-eminent place in the definition of a pluralistic society even if nowadays there are many other variables used to give sense to life projects and to question the *statu-quo*.

In that conditions which are the functions of religions in modern societies? It is difficult to find in present days a researcher who has not thought about the subject often to underline the role that religion can play in our societies and not only for believers. As one example, Habermas has pointed out that religion articulates the conscience of what has failed and is still missing in our societies.

In an individual level, religion is considered a good tool to be more confident and to face life in a more honest manner.

But, do we have any test to check if all this is in fact happening? Are those that declare their self as religious more honest? Do they trust more the others? Do they participate more in social organizations aiming to create better societies? Which are the variables that go along with religion in the explanation of the possible differences? Does the increasing religious plurality reflect pluralism based in common values?

I will try to answer to these questions comparing three countries (Spain, Germany, Sweden) and using the data of both the European as well as the World Values Surveys.

#### *Interwar Constitutionalism and the Remaking of Social Policy in Latin America*

The establishment of the 20th century welfare regimes has often been viewed as an outcome of continuous processes of national policy implementation conditioned by local levels of economic development, democracy, and position in regional influence systems. This paper concentrates on a normative shift that has become a blind spot in the comparative literature of the welfare State. Specifically, this paper seeks to shed light on the influence of a constitutional reform movement that took place across Europe and Latin America in the Interwar period. The Mexican Constitution of 1917, the Soviet Constitution of 1918, and the Weimar Constitution of 1919 established the recognition of social and economic rights as fundamental rights of the individual. This idea travelled rapidly across Europe and spread towards Latin America over the next decades. I argue that this constitutional movement underpinned the 'universalist' expansion of social policy that characterized the post-war Welfare State by giving the right to welfare the status of an individual right. Empirically, this paper traces how the Interwar constitutional movement took root in Chile (1925) and Brazil (1934), and how this in

turn influenced social policy outcomes in both countries. In its core, by integrating the classical literature on historical and comparative social policy and research on comparative constitutional reform, this is a comprehensive multidisciplinary project that combines a global historical approach with sociological and legal research.

#### *Global Population Challenges in an Unequal World*

This roundtable will engage panelists and attendees in a discussion on the impact of political and social change on demographic transitions; and vice versa, how demographic transitions trigger important social and political change. In this context, panelists will reflect upon what they consider are present demographic transitions and socio/political currents at the forefront of contemporary and future social change. Finally, how concerns over social justice emerge and will continue to emerge within the context of rapid demographic and social change as underscored by all panelists.

Topics for discussion are broad and general and include themes with wide social and political ramifications such as: the impact of poverty on the demographics of Latin America (**Guillermo Gonzalez Perez, Universidad de Guadalajara (Mexico)**); European austerity policies resulting from the deep economic and financial crisis worldwide and its consequences in terms of class and fertility, births and the welfare of the elderly in Spain (**Gerardo Zamora, Universidad de Navarra (Spain)**); the global significance of the Chinese diaspora (**Dudley Poston, Texas A & M University (United States)**), the relevance of gender politics, inequality and education in India (**Rajendra Patil, Shivaji University (India)**); and the race-ethnic transition in the US, as the Latino population continues to grow while the white population declines (**Rogelio Saenz, University of Texas, San Antonio (USA)**).

Discussants for this roundtable will include **Encarnacion Aracil Rodriguez (Universidad Complutense de Madrid (Spain))**, **Farhat Yusuf (Australia)**, **Elena Bastida (Florida International University (USA))**.

#### *Social Justice and Health Outcomes: Poor Health and Low SES Among Native and Foreign Born Mexican Americans in an Economically Disadvantaged Border Region*

This paper presents data collected along the US/Mexico border region to highlight the poor health profile exhibited by native born and Mexican immigrants in this economically disadvantaged region of the United States. A random cluster design consisting of 132 sites yielded a total of 1237 food insecure participants reporting a high number of chronic diseases. Individual self-reported health conditions were further validated through laboratory intakes to include blood pressure; pulse, fasting glucose, and a detailed lipid profile.

Data analysis indicated high numbers of obese and overweight participants with as many as 84% of all participants in these two categories. Overall, laboratory results and self-reported data present a poor health profile for this population, consisting mostly of immigrants to the US (73%) with a median age of 46 years with many receiving no medical care for these conditions. The latter is coupled with low educational achievement, low wages and lack of access to health care, exacerbated for a large number of the Mexican born who do not qualify for social programs, such as Medicaid or indigent care for health services.

The disadvantaged health profile of this population is discussed within the context of existing socio-political currents in the United States which seriously impede their incorporation to the larger society; since it is conditional upon the much broader and frictional backdrop of the present US political environment. Concerns over social justice arise when conducting research with this population since their poor health lies at the intersection of two highly contested political and social decisions that require public consensus and political will to action in order to bring about positive change: immigration and health care. Extensive ethnographic data will be employed to further support the social justice argument.

**BASTIDE, LOIS\*** (University of Geneva, [wamsaya@gmail.com](mailto:wamsaya@gmail.com))

#### *Faith and Uncertainty: Migrants' Journeys Between Indonesia, Malaysia and Singapore*

In Indonesia, transnational labor migrations have become a major source of foreign currency over the past twenty years. New migration routes are shaped by various forms of collaborations between official and irregular actors and networks. In this context, migrating becomes a very uncertain journey, and migrants are often subjected to abusive, sometimes violent or even deadly experiences abroad. Yet, the "migration industry" can count on increasing numbers of candidates. How, then, migrant workers relate to this risky adventure?

As it appears, local conceptions of "fate" help to neutralize fear: the opacity of migration routes is not conceived of in terms of uncertainty; as it is rather perceived in terms of destiny, and since destiny lays ultimately in the hands of God, dealing with it is a matter of *faith*: Only by surrendering sincerely to Allah is one able to insure his future in this dangerous milieu. In this cognitive framework, incidents are lived as *cobaan Tuhan* – godly trials –, full of meanings, which are meant to test one's faith in God. And bad experiences, rather than being seen as *contingent* are perceived as godly signs, which need to be interpreted in order to comply with God's will.

Laying on ethnographic materials collected during a 18 months fieldwork spread between Java, Kuala Lumpur and Singapore, we will try to show how this *ethos* tends to reduce the perception of risk and/or uncertainty under the concept of *nasib* and/or *takdir* (fate; destiny), and through its connectedness to God and faith.

#### *An Analysis of Social Indicators in Brazil after the "Real Plan" (1994) until 2012*

Brazil, during the 1990s, went through a period of profound economic and social transformations. Economic openness advocated in the early 1990s, during the government of President Fernando Collor de Melo (1990-1992), marked by a severe economic recession corroborated by blocking monetary assets generated a serious social and police crisis cooperated to the "impeachment" of the president and demanded a drastic change in relation to economic policy. "The Real Plan", conceived during the administration of President Itamar Franco (1992-1995) fostered a profound social and economic transformation in the Brazilian economy. Implemented in 1994, "the Real Plan" was crucial for promoting monetary stability and exchange rate of the country. From this plan, considerable improvements in Brazilian economic indicators began to be observed, such as: GDP growth, expansion in inflows of foreign capital in the country, the positive evolution of the trade balance and expansion in employment and domestic income. Based on these positive results, the aim of this paper is study the evolution of the social indicators in Brazil after the "Real Plan" in 1994, until the year 2012. The methodologies used for this study are descriptive statistics and literature review. The results showed that the expansion of the economic indicators echoed directly in the improvement of social indicators in Brazil: There was expansion of HDI, improvement in the Gini index by regions, reducing the infant mortality rate, expansion of life expectancy, expansion of Gross National Income, expanding access to public health, significant reduction of the population in extreme poverty, and increasing access to goods and services by Brazilians.

#### *Professional Couples, Stress and Social Support : An Empirical Study*

The present empirical study has tried to explore the role of social support in balancing between work and family among doctor couples in Kolkata. In India, metropolitan cities have certain specific features that are different from that of traditional semi-urban culture. This study wanted to take a snap-shot of the doctor-couples at their very crucial time period when it is important for career building and parenthood as well. As being the members of nuclear family (i) how do they balance between work and family and (ii) how do they perceive the role of social support in this balancing process? We do recognize people who are considered as "supportive" for us, from whom we receive support, and to whom we often give it. Parents are usually our earliest sources of support, augmented and eventually supplanted by friends, spouses, children, and various people with whom we have more limited and specific relationships - workers, neighbours, colleagues, domestic helpers, physicians etc.

The main objectives of this study was to examine the importance of social support in balancing between work and family. This study have identified four types of social support: Emotional, Appraisal, Informational and Instrumental. It also have studied whether utilisation of social support is gender related or not.

In this study population were all the doctor couples (having at least one child and nuclear family background) of Kolkata. Sample size were 100 doctor couples (or 100 male doctors and 100 female doctors). Sampling method was purposive. Data were collected on basis of survey method with the help of interview schedule. Collected data were analysed by SPSS.

It is found that in Kolkata social support has more significant role in balancing between work and family in case of female doctors than of male doctors. Types of getting social support are also gender related.

#### *The Filipino Istambays and Transition Crises: Locating Spaces of Social Sufferings and Hope*

This paper examines the layers of transition crises experienced by a loosely-organized sector of relatively young Filipinos who are "waiting for employment", generally known as "istambays" (on standbys) in the Philippines. It relates the impact of structural crises such as these istambays' poverties and their failure to translate educational capital into employment, which hinder their social mobility into becoming productive adults. It argues how these istambays negotiate their work problems in two-edged realms of protection and disconnection. In times of crises, istambays appear to be protected from discouragement by the cushioning effect of the Filipino "familial-faith dynamic" providing a sense of dependence and resilience among them. On the other hand, istambays disconnection from the state reflects their lack of trust in the government due to its failed attempts to provide them sustainable employment. In the end, this chapter articulates how these transition crises unravel both the istambays' social sufferings and spaces for hope in reversing their "waiting status" into having sustainable futures that address cycles of intergenerational poverties and inequalities.

#### *SHUMILOVA, OLGA\** (Tula State University, [helgash80@mail.ru](mailto:helgash80@mail.ru)) *Russian Modern Educational System and Its Trends*

The article studies the educational system as a two-facet unit. Firstly, as the process of production and transmission of systematized knowledge and skills through studying in specialized institutions. Secondly, as a social institution with the functions of adapting to social and cultural atmosphere, preparing and including young generations into different spheres of social life.

The authors examine the specifics of the educational system in modern Russia, define the tasks, solved under the pre-school, school, and professional education.

The article analyzes the dynamics in the population educational level according to the census data. The authors single out the main criteria of pre-school, general, and professional education in Russia from 1990s up to 2011. They define the basic trends in the development of the Russian educational system under global and national social processes, determined by system transformations (such as changes in volume and structure of the demand for education due to the changes in demographic situation; general growth in interest to education; using by the young of the life strategies that actualizes the necessity for supplementary educational services) and by institutional changes (such as introduction of competence approach, diffusion of integrated institutions of continuous education providing three-way integration "education – science – business", positioning their peculiarities and competitive advantages in the market of educational services.

They especially examine the changes in the legal regulation of the educational system as the most discussable question of the educational system.

#### *Water – a Social and Strategic Issue for National Defense*

A few years ago the United Nations annual report made projections not very good for the future of humanity. The UN noted that in 2050 more than 45 of the world's population will not be able to rely on the individual minimum portion of water for basic needs. According to statistics there are today more than 1.1 billion people with virtually no access to fresh water. These same statistics project chaos in little more than 40 years, when the population reaches the figure of 10 billion individuals. Brazil is one of the richest countries on the planet's water, and holds 12% of the world's reserves of fresh water. This water, however, has a very uneven distribution. One of the main problems that emerged in this century is the growing water contamination. She has been polluted and contaminated so scary, especially in coastal areas and in large cities. What difficulties will meet to draw up a strategic plan for national defense, taking into account this reality? The problem of pollution and contamination, according to the World Health Organization (who), more than 80 cases of diseases in the world resulting from the ingestion of contaminated water, with more than 25 different types of illnesses. Deforestation and pollution of rivers makes this situation even more serious and, as a consequence, almost half of Brazilians (45) have no

access to treated water services and 96 million people live without sewage. From these data we can admit that the next world war could be triggered by lack of water and oil.

As if these problems were not enough, there are still 40% wastage of treated water supplied to users in Brazil.

#### *Contradictory Ruling Regulations in Practice – Empirical Evidence from an Implementation Study on Tolerated Refugees Access to the Vocational Training System in Germany*

In our qualitative implementation study "Vocational Training of Young tolerated Refugees in Germany" we are exploring the pitfalls and challenges in transforming modified ruling regulations into organizational practice. Legal changes that have been introduced on the federal level since 2009 are the background of our research. They are to reduce vocational training boundaries for young refugees who are only timely-limited 'tolerated' and aim at opening up new legal avenues to transit to a legal residence status in the aftermath. This marks a sweeping novelty in German migration and integration policy. So far, tolerated refugees have been object to a broad-based institutionalized exclusion.

Evidence from our interdisciplinary (Sociology, Political Science) research reveals the legal inconsistencies and organisational difficulties in the implementation of the new regulations in various institutional subsystems. Empirically it is based on document analysis and long-term, multi-site fieldwork. Since 2010 we have been conducting semi-structured individual and group interviews with a wide range of experts and participated at expert meetings in order to uncover the organisational practice and ruling relations that may transform the vocational participation opportunities of this marginalized group of young non-citizens. Migration authorities' social practices in the application of the modified legal rulings prove to be of a particular relevance. They may act as institutional gatekeepers either supporting or constraining the vocational inclusion of young tolerated refugees in a specific local context. This results in regionally diverse vocational training boundaries for the target group.

In our presentation we would like to touch upon these questions: How differently are the new regulations being transformed into practice within the relevant organisations of the immigration system? How may we explain these differences? Which lessons do we learn for scientific policy advice? To answer these questions, we outline the legal framework and present central findings of selected regional case studies.

#### *Experiencing Assisted Reproductive Technologies in the Digital Age*

As having children is considered an inherent stage in family development, inability to procreate can be considered as a crisis on both a family and an individual level. Receiving infertility treatment is also a life event that may result in significant emotional distress as well as long-term embeddedness into a professional, medical context. Thus it is equally imperative to concentrate not only on how patients experience their own childlessness, but how they perceive their successful or unsuccessful treatments within the medicalized and institutionalized 21<sup>st</sup> century.

Present paper (funded by OTKA-K108981) investigates everyday life experiences of infertile women who have decided to seek medical treatments which employ assisted reproductive technologies (grounded in a volatile relationship with the health care facilities), based on a systematic and in-depth qualitative analysis of topic related on-line discussion group messages. A central focus is on how the participants make sense of their conditions and treatments, what questions they find worthy of discussing and how they communicate among their own internet community. Theories of individual construction of technologies, concepts of the changing doctor-patient role and theories of rising consumerist attitude guided the research, focusing on the ART treatment within the context of the Hungarian health care system. The research investigated the constructions, tones, themes, portrayed topics and problems of the individual contributors, focusing on the newly evolving patient-doctor relationship, whilst not neglecting the dynamics of the online group.

This unique research design permitted studying the discourse of the participants in a natural, non-controlled environment, where the presence of the researcher had no influence on the results.

Main findings suggest that while lay expertise and condition based knowledge is rising in the digital age, the supremacy of trust towards medical professionals and institutionalized medicine is fading, a new dynamics in attitudes towards treatments is emerging as we speak.

*Well-Being of Displaced Workers after Reemployment. Survey Evidence from Switzerland's Manufacturing Sector*

Employment fulfills some of individuals' fundamental needs such as regular activity or social contacts and provides them with a social identity. As a consequence, if workers lose their job, their well-being is likely to be substantially affected. This leads us to the question whether workers are able to regain their former level of life satisfaction when reemployed.

Previous research has shown that this may not be the case for all workers. It has been assumed that the quality of the new job plays a paramount role in how displaced workers experience the transition into reemployment. In this paper, we investigate how job loss in the aftermath of the Great Recession affects workers' subjective well-being and whether there are increasing inequalities in life satisfaction among former colleagues.

Our paper is based on a survey of 1200 workers displaced from Switzerland's manufacturing sector in 2009. The workers were surveyed two years after their job loss which enable us to study their occupational transitions. The design of the study tackles potential bias by surveying the entire workforce of companies that closed down completely and by combining survey data with data from the unemployment insurance register.

We find that those workers who were reemployed at the moment of the survey are on average much happier than the still unemployed. But there are substantial differences among the reemployed and not all individuals were able to regain their former level of life satisfaction. We show that some aspects of the job quality explain these differences better than others. However, job quality alone does not explain the entire variation; other factors such as changes in workers' social relations or health conditions also seem to influence the unequal consequences of the Great Recession for workers affected by job displacement.

*How 'Ethical' Is Ethical Consumption? Self-Interest and Activism In Organic, Local, and Farmers' Market Food*

The theoretical literature on the citizen-consumer conceptualizes ethical consumption as a spectrum of behaviors and attitudes that vary in the extent to which they are civic-minded or focused on self-interest and maximizing consumer choice. Although each act of consumption allows for a range of activist and self-interested motivations, there has been scant empirical work investigating how these motivations factor into everyday consumption habits. This paper seeks to improve our understanding of ethical consumption through an analysis of consumer behaviors and motivations as measured through their self-reported consumption habits. Using survey data (N=1200), to explore patterns in organic, local, and alternative (e.g. farmers' markets) food procurement, we show the conditions under which ethical consumption is more self-interested or more civic-minded. We find that organic food consumption is more self-oriented than are local or farmers' market food consumption, which are more other-oriented. We further complicate a binary analysis of ethical consumption as self-interested or activist by showing that it can also manifest as "caring consumption" (Miller 1998; Thompson 1996) or "precautionary consumption" (MacKendrick 2010). In these instances, specifically for mothers shopping for young children, ethical consumption is neither straightforwardly self-interested nor civic-minded.

*You Want to Do an Interview? You Know What I Am Doing – I Am Working! Mixed Mode and Nonresponse in Organizational Surveys in German and British Hairdressing and Barbering Markets*

For many research questions especially in organizational and economic sociology, the unit of analysis is not an individual person but the organization (i.e. the individual business). When analysing organizations, one very often thinks of large international companies with a highly educated personnel who are proficient in English and use email and the internet in their daily work.

However, one should not forget that in many businesses, employees and even the shop owner are neither highly educated nor necessarily proficient in any language apart from their own native language nor do they necessarily use the new media in their daily work.

How does this influence nonresponse? How do reasons for nonresponse differ from survey of the general population or organizational surveys in large companies? Which is the appropriate survey mode in order to minimize nonresponse? What other measures can be used in order to maximize response rates.

Using the hairdressing and barbering markets in four European cities (Birmingham and Glasgow in the UK, Dortmund and Frankfurt in Germany) as an example, we discuss these questions.

The aim of the study was to sample the whole population of hairdressing and barbering businesses in each of these cities, and we had mailing addresses and telephone numbers of all businesses and email addresses of part of the cities. Starting from this, we used a mixed-mode design (online, postal and telephone survey), experimenting among others with different questionnaire lengths and interviewer types.

*Mobilizations across Boundaries: Latinos and New York's Environmental Justice Movement*

In this proposal, I argue first, that while the U.S. environmental justice (EJ) movement has been painted mainly as an African-American struggle, there is a strong, undervalued Latino contribution in New York City. Second, there are transnational dynamics in Latino environmental activism in New York (between the diasporic community and the home country) that may serve as a model for other immigrant activists in New York. Finally, as a political scientist, my focus is on the results of Latino (EJ) activism on particular policies, programs, and projects.

I am interested in the several decades of Latino (especially Puerto Rican) social/environmental justice activism in New York and the transnational processes between mainland and island activists. While Puerto Rican activists are not, technically, transnational given the island's political status, their behavior is similar to transnational Cuban or Dominican networks (e.g. Duany 2011) or environmental justice networks working on both sides of the U.S.-Mexican border (Carruthers 2007).

I begin my overview with the public health and sanitation campaigns of the Young Lords in the late 1960s early 1970s and how this coincided with a growing environmental consciousness in Puerto Rico over the excesses of industrial development in one of the most densely populated places on earth. I next chronicle how Latinos have been at the forefront of conflicts over urban greenspace—particularly for culturally relevant greenspace with *casitas* and community gardens—starting in the 1970s. In the late 1980s, I chronicle several "classic" EJ battles over disproportionate siting of noxious infrastructure (e.g. incinerators, waste transfer stations, transportation hubs, and energy plants) in poor neighborhoods. I end with the "victory" of sorts in Vieques, which ended the Navy presence in 2003 but where justice activists still fight to remediate sixty years of military toxics.

*Asef BAYAT: Life as Politics: How Ordinary people Change the Middle East*

Prior to 2011, popular imagination perceived the Muslim Middle East as unchanging and unchangeable, frozen in its own traditions and history. In *Life as Politics*, I argue that such presumptions fail to recognize the routine, yet important, ways in which ordinary people make meaningful change through everyday actions. The book shows how the subaltern groups in the Middle East such as the urban poor, Muslim women, the youth and others strive to enhance their life chances in the everyday life by resorting to discreet and dispersed activities that I call 'non-movements'. While the non-movements-- the collective action of non-collective actors -- constitute the salient feature of subaltern politics in normal times, they may assume collective and audible forms when the actors find fitting opportunities. They may even coalesce and merge into much broader political movements and uprisings. *Life as Politics* navigates from the politics of ordinary people in communities, courts, and on the streets to the eruption of mass uprisings and revolutions in the Middle East. Drawn on over a decade of research and reflections, the book's geographical scope extends from Iran to the Arab world, in particular Egypt.

*Enigmas of Struggle in Neoliberal Times*

Extreme inequality is a hallmark of neoliberal times. How to fight against it? The paper focuses on the paradoxes of struggles against neoliberal inequality. It proposes that while the 'market society' has contributed to waves of spectacular revolutions and protest movements in recent years, the dissent has taken place not just against, but also within and often shaped by the neoliberal logic. Consequently, the mainstream oppositions have been mostly limited to protestation against what they do not want, failing to articulate a vision of what they actually want and how they can achieve it. It is largely in the marginalized communities, those least influenced by the neoliberal logic, wherein a measure of relative autonomy and somewhat alternative arrangements in working life and life-world may be realized. The paper draws largely on the experience of the Middle East in the past few years.

#### *Othering and the Poverty Discourse. Narratives from the Periphery of Mexico City*

Together with the analysis of the material basis of poverty, it is necessary to understand the symbolic and relational dimensions that contribute to create, maintain, and reproduce deprivation. This paper is based on ethnographic work conducted in an area of concentrated poverty in the periphery of Mexico City. Through in-depth interviews with neighborhood residents exploring perceptions, experiences and life trajectories, the analysis attempts to dismantle the myths, stereotypes and stigmas on the poor and their places that underlie the public discourse of poverty.

From a sociological perspective, the paper seeks to understand how the poor coexist with, resist and adapt to a dominant discourse that stigmatizes and denigrates them, daily and systematically. It explores the processes and social mechanisms through which the poor are constructed as *others* (othering) and its implications for the experience of poverty, social policies and social coexistence. It examines how the dominant representations of poverty contribute to legitimize, consolidate and reproduce social distances, obscuring the political and economic nature of inequality, wage deterioration, job insecurity and the limited dynamism of the labour market. It is not only a question about the extension of poverty, but about the high levels of tolerance for inequality that characterizes the Mexican society, in particular, and Latin American societies in general.

#### *The Impact Of Economic Empowerment On Women's Risk Of Intimate Partner Violence In Turkey*

Violence against women; a major violation of women's human rights; is defined as "any act of gender-based violence that results in, or is likely to result in, physical, sexual or mental harm or suffering to women, including threats of such acts, coercion or arbitrary deprivation of liberty, whether occurring in public or in private life" by the United Nations. Sadly, women are at great risk of facing violence where they should actually be the safest: their homes. Violence against women is a major issue in Turkey. The National Research on Domestic Violence against Women (NRDVAW) carried out in 2008 in Turkey showed an increase in the most extreme form of violence against women in Turkey in the last decade: femicides where women are killed by partners or close male members of their families. The NRDVAW also shed insights into the other types of domestic violence women experience. According to this nationwide survey, 39% of women aged 15-59 experienced physical violence at least once in their lifetimes. Moreover, 15% of women reported experiencing sexual violence; 44% reported emotional violence; and 27% reported economic violence. This study aims to focus specifically on the linkage between economic empowerment of women and domestic violence. Although there is vast literature on the issue; the conclusions reached are far from being parallel. While some findings suggest a preventive effect of economic empowerment on domestic violence, some suggest otherwise. We further aim to see whether economic empowerment, specifically house or land ownership act as a deterrent for men about perpetuating violence; through the "tangible exit option" it provides for women. We will also attempt to see the effect of economic empowerment on physical and economic violence in a multivariable setting. Further analysis will provide information on how exit seeking behaviors differ by economic empowerment.

#### *Professional Bullying - Do Ethics Matter? Ethics In Research As a Way To Cope With Excessive Evaluation Anxiety (XEA) and Bullying*

This paper explores the XEA phenomenon proposed by Donaldson and his colleagues<sup>[1]</sup>, and presents a guide for identifying and managing it. XEA can be a distractive factor and have negative consequences such as preventing access to important information and data, compliance and cooperation problems, false reporting. XEA is always a negative influence as opposed to "normal" evaluation anxiety which can be either negative or positive (i.e., causing positive stimulation, awareness, and a desire to improve performance).

In the course of evaluating a new training program, we encountered difficulties that were manifested by professional bullying and caused by what we discerned as XEA. After reflecting on the evaluation process and these difficulties, we reexamined the evaluation contract. We found that most of the contract's technical aspects (timetable, methodology, etc.) were addressed, while ethical aspects were taken for granted and neglected. We assumed that the lack of a detailed contract that addresses ethical aspects (rights, obligations, commitment, etc.) was the trigger for these difficulties including professional bullying. We suggest that formulating an acceptable contract which addresses both "ethical" as well as "technical" aspects and clearly defines these components may enable coping with difficulties emerging in the process of evaluation and reduce XEA and bullying. Furthermore, we have developed a guide that contains: (a) XEA signs, consequences and ethical guidelines for reducing XEA and (b) strategies for XEA management and possible applications and solutions in evaluation contracts that contain "technical" and "ethical" aspects. We believe that this "toolbox" may be useful for coping with complex situations like professional bullying in research.

#### *Assessing French Expatriates Attitudes. Common Meanings Versus Complexity of Situations in Casablanca and London*

This presentation proposes a multi-scale and multi-level analysis about 'expatriates' from a multi-sited ethnographic research and semi-structured interviews among French teachers in Casablanca and London. The situations of French teachers abroad are particularly interesting to grasp the complex meanings of what are empirically French 'expatriate' attitudes. The reality appears at three interrelated scales: individual, institutional, and socio-historical.

Firstly, the attitudes and the feeling of belonging appear connected with the imperialist function of teaching French language or following French programs. Thus, individuals are face of their cooperation with the French imperialistic mission, more or less aware of it, and dealing with this position. Individually, the forms of acculturation or tensions with hosting society are reflected by professional status, that are more often influenced before the departure itself, and closely related with the backgrounds and the representations of traveling. Secondly, extracting the individual experiences from structural differences in both places, it appears two main differences following employment institutions. On one hand, the professional status, especially for those practicing within the French schools abroad (that are under French administrative supervision) emphasizes strong differences: economical conditions, responsibilities, social status, subjective space-time definition, and consequently, various everyday lives at local, national and transnational scales. On the other hand, others conditions, status, and everyday lives are provided by the status of the school, especially for those practicing in local schools, private or public. Thirdly, the position of individuals in local and global social structures is nearly related with socio-historical national backgrounds, historical international relations and current global competition.

In this view, how considering French people as 'expatriate' or 'migrants'? Which reality are those words' meanings reflecting? In depth, this presentation suggests empirical data to highlighting the semantic distinction usually made by French people themselves among people into motion in the field of international migration.

#### *Interrelations of Migrants to/from the South and to/from the North: Reflecting on Social Change and Crisis*

This presentation aims to discuss the connection between two forms of migration which are most often studied separately in migration research: migrations from the North to the South and migrations from the South to the North. From two research projects, one on French migrants in Morocco, and the other on Moroccan migrants in France, this paper will discuss the interrelations at work between Moroccan migrants going from South to North and European migrants

going from North to South. The studies indeed show that encounters between migrants and the local Moroccan or French population shape migration paths from South to North and vice-versa

This paper will also explore how migration choices are related to the collective and familial history of the migrants encountered. Some of the French migrants in Morocco reveal to have been motivated to migrate because of their family past, by the fact that number of them had ancestors who had lived in Morocco during the colonial period. The Moroccan migrants in Europe on the other side were also motivated in their migration by their complex experience of transnational collective and familial history in the colonial era. Because of these experiences, both familial and national, the encountered migrants had been connected to the "North" and the "South" long before their physical migration.

These cross-cutting perspectives will raise the following questions: how do the interrelations at work between migrants in/from the South and in/from the North affect migration flows? How does the past, here the colonial experience, connect individuals to/from the North or the South even before their physical migration? How is this interaction affected in times of crisis and how is it reflected in an unequal global context?

[u.beck@lmu.de](mailto:u.beck@lmu.de))

#### *We Are Not Living in an Era of Cosmopolitanism but an Era of Cosmopolitization*

Most of the time, discussions are blocked by misunderstandings. 'Cosmopolitization' does not reflect the experience of a privileged minority, and treats that as the new reality of the world; it is not a view from a highly specific *somewhere*, namely the European Enlightenment; it is not intended to convey the shallow political message that 'we all are connected', nor does it normalize imperialism and existing global power relations.

I define the notion of 'cosmopolitization' as different modes of simultaneous inclusion and exclusion of 'the global other' - 'the global other' is in our midst. 'Cosmopolitization' is descriptive not prescriptive; it is not about ethics and philosophy ('cosmopolitanisms', 'multiversalisms') but about *facts*. There is nothing as informative as a significant example to illustrate this: *fresh kidneys*.

The success of medical transplantation (and not its crisis!) has swept away its own ethical foundations and opened the floodgates to an occult shadow economy supplying the world market with 'fresh' organs. The excluded of the world, the economically and politically dispossessed - refugees, the homeless, street children, undocumented workers, prisoners, ageing prostitutes, cigarette smugglers, and petty thieves - are lured into selling their organs and this way becoming even physically included and socially excluded at the same time.

It fundamentally affects and transforms all kinds of *intermediate institutions* worldwide, like family, household, class, local cultures, ethnicity, generation, labor, elites, publics, schools, villages, cities, sciences, monotheistic religions, and nation-states. And a cosmopolitan turn in social sciences.

In the name of neo-liberal capitalism and the basic democratic right to unlimited choice, fundamental values of Western modernity - the sovereignty of the body, the human being and the meaning of life and death - are being sacrificed without anyone noticing this for what it is: a process that symbolizes our age of cosmopolitization.

#### *Bridge Assumptions and Situational Mechanisms*

Each rational action theory - whether held either in its narrow/strong or in its broad/weak form - has to clarify how the opportunity structure of the social situation should be linked to actors' individual motives - however the latter are defined. To do so, bridge assumptions specifying to which extent material resources, power, norms, or rights of the social situation pre-structure individual action have to be constructed. However, in numerous empirical investigations bridge assumptions are completely missing or underspecified. One reason for this might be that hitherto, the question of how to construct bridge assumptions has not been answered very clearly. Although the necessity of bridge assumptions is demonstrated in every rational choice textbook, there has been surprisingly little attention to methodological aspects of their construction. An exception is the mid-90s debate on the question whether bridge assumptions should be formulated in a theory-rich way - i.e. by means of presupposing actors to strive for universal final aims such as social and physical wellbeing (Lindenberg 1996) - or on strictly empirical grounds (Opp 1996; Kelle/Lüdemann 1996). We consider this debate to be only the starting point on the way towards a methodology of constructing bridge assumptions.

In the present contribution, we first use evidence from published multilevel studies to *establish the phenomenon* (Merton 1987) of missing or underspecified bridge assumptions in contemporary quantitative sociological research. Second,

we refer to the theory of social rationality (Lindenberg 2001, 2008) to suggest a strategy of how to formulate bridge assumptions in a theory-rich way. We intend to reconstruct both focal and background goals and how the latter might either foster or attenuate the relative salience of the former. Moreover, we demonstrate how the *desires, beliefs, and opportunity* (DBO) model (Hedström 2005) can be used to disentangle different forms of situational mechanisms.

#### *The Consequences of Ignoring Measurement and Aggregation Error in Random-Effects Age, Period, and Cohort Analysis*

Quantitative research in the social sciences making use of individual-level data to form contextual level indices stands at risk of falling prey to both measurement error and aggregation error (Marsh et al. 2009). Measurement error emerges when observed indicators measuring the same construct(s) are summed up to one or more indices without specifying the underlying latent variable, the factor scores that link the latent variable(s) to the observed indicators, and related disturbance terms. Complementary, aggregation error emerges when a manifest or latent individual-level variable is aggregated on the contextual level instead of estimating it immediately on the contextual level.

We elaborate on the consequences of neglecting both measurement and aggregation error in multilevel age, period, and cohort analysis using German Media Analysis (MA) data 1978-2009 as well as German Politbarometer (PB) data. Regarding the MA, we first analyze the association between individuals' leftist and rightist party preference on the one hand, and usage of leftist and rightist quality papers on the other hand (cognitive consonance effect; cf. Festinger 1957). We use cross-classified random effects models to disentangle age, period and cohort effects (Yang & Land 2006). Next, we use additional PB data to estimate doubly-latent measurement models for political involvement by period and cohort controlling for both measurement and aggregation error. We store period- and cohort-specific latent means of these between-level models and merge it to the MA data in order to account for the variance of the cognitive consonance effect over time. Finally, results are compared to more 'naïve' accounts of contextual-level index building.

#### *Biographical Narrations, Discourses and Collective History of Palestinians in Jerusalem's Old City and in a Palestinian Refugee Camp*

During their initial self-presentations, many Palestinian interlocutors, who granted us biographical-narrative interviews, were barely embarking on 'individual' processes of narration and were often only marginally talking about their own life courses. Instead of, they were arguing about historical events and processes referring to a collective history shared by all Palestinians. This is one of the biggest empirical challenges of our trilateral research project which is supervised by Prof. Gabriele Rosenthal (Göttingen).

In this presentation, we want to introduce how we approached these empirical challenges. By looking more closely at two localities - the Old City of Jerusalem and a Palestinian refugee camp in the West Bank - we highlight and compare rules of talking and commemoration in self-presentations. The questions that guide us are: What are the relations between these rules of talking and the inhabitants' collective history, their current situation and the life courses of the interviewees? How do these relations shape 'individual remembering'?

Based on our empirical reconstructions, we want to shed a light on the similarities and differences of the dominant we-discourses in those two local contexts. On the one hand, inhabitants of both localities negotiate images of the self and the other in relation to the long-term conflict between Palestinians and Israelis. In both localities, we have furthermore identified similarities in who is not following the rules of a hegemonic we-discourse. These inhabitants can be considered as outsiders in the sense of figurational sociology because of their different social position. On the other hand, there are considerable differences of the we-images in the two local contexts. These are related to the history of specific local constellations of belonging to different Palestinian groupings (in these cases we have identified religious, political, generational and economic affiliations).

*Discretionary Birth: Assisted Reproductive Technologies and the Rationalization of Decision Making Around the Beginning of Life*

This study applies Machado's (2005) theoretical concept of "discretionary death" in order to generalize the notion of rational discrete decisions from the domain of end-of-life studies to ethical questions concerning the beginning of life. Birth "as deed" (ibid.: 792) reflects a "new in-between class of situations" for medical personnel and (future) parents where natural birth is complemented by a range of prenatal (and postnatal) medical techniques including among other interventions prenatal diagnosis and – in the context of assisted reproductive technologies – preimplantation genetic diagnosis. This is neither birth "without human intervention nor an unnatural" birth (ibid.). Just on the contrary these medical interventions and ART are intended to provide new opportunities for having children. As in the case of assisted dying this "is a realm of high social professional responsibility calling for normative regulation" (ibid.). The medical contexts of firms offering IVF and genetic analysis as well as hospitals and birth clinics make up a professional sphere where the beginning of life is partialized in discrete choices and reflects rationalization and optimization of formerly "intimate" matters and "natural" processes. Together with the increased application and knowledge about ART and discretionary birth technologies (DBT) the social sciences gain importance besides medical and bio ethics: While morality politics analyses the processes of gaining influence on public opinion by political leaders and interest groups, sociological and survey research focus on tendencies in attitudes as well as the use of ART/DBT and how birth becomes negotiable. This paper presents empirical evidence from a pilot survey in Germany (2013, n=900) on the semantic framing of the beginning of life and contextualizes these results in the light of a rising biotechnology industry and the implications for the meaning of the beginning of life in the process of discrete subsequent choices that become available.

*De-Capitalising Women Due To Development Induced Displacement: A Case Of International Fishing Harbour Project In Kerala*

Kerala is a well-known state in India for its human development index. As the shortage of land and population density of Kerala are bigger problems in Kerala, displacement due to development project affect the most marginalized people and it multiplies their vulnerability, particularly to women. Women are removed from their productive system, commercial activities and livelihoods due to displacement. Subsequently they lose both natural and human capital. This study tries to analyse the case of International Fishing Harbour project at Vizhinjam, Thiruvananthapuram. This study tries to analyse the problems faced by the women who lose their employment due to displacement and how it affects stress level of women. The present study could found that it affect their self-esteem and confidence in society and feeling of injustice and it deepened their vulnerability. The present paper also tries to analyse the practices which leads to ill-health of women. Here displaced women do not avail the monetary compensation but also lose of social networking. One side, women projected as the social capital of the state but on the other side they are voiceless and oppressed. Development projects tend to ignore women's needs and aspirations and are making the women from one form of subordination to other form. Loss of livelihood impoverishes them further but even among them women suffer more than men do. Women have received less attention in the developmental process of the country. Moreover, the prevailing cultural practices and socialization process, market situation etc devaluing women's critical contributions to the society. There is much effort is required to consider them with their own skills, strength and capacities to im-

prove their condition for an inclusive growth. A gendered approach is needed in the planning, implementation of developmental projects for the conducive development.

*Displacement and Protest Movements –the Kerala Experience*

Kerala is an Indian state located on the Malabar Coast of South West India. It is far ahead in the Human Development Index than any other state in India. Kerala has a great tradition of protest movements against displacement caused by large projects like Silent Valley power and irrigation project in 1970s. Development projects definitely bring displacement. The geographical constraints of Kerala intensified the magnitude of the problem. This displacement causes impoverishment of the local people and their surroundings. As displacement and protest movements have wider sociological implications, this study focuses on, namely, ICTT (International Container Terminal Project) and International Fishing Harbour Project at Vizhinjam (IFHP) in Kerala. These projects had been implemented in the midst of public protests. This study tries (1) to make a comparison of trajectories of mobilisation of these two projects (2) to find out whether the strategies used by the protestors helped them for getting proper compensation and rehabilitation, (3) to assess the nature and extent of these protest movements. Finally this paper examines the way in which it is faced by the Government. This study could found that this protest movement of people could really helped them to go ahead with their livelihood and sustenance to some extent. Both of these projects had been evicted a number of people from their land and thousands of people became landless and homeless. In this case, people demand only a fair compensation. They are not even aware of *culturocide* and *ecocide*. Orthodox development theory promises "growth with redistribution", while development policies have failed in practice to distribute growth benefits equally. The findings of the study reveal the lacunae in the policy with regard to development.

*Creating Certainty from Uncertainty. Paternalism, CSR and the Mechanisms of Employee Welfare*

What does it need for a successful employment relationship? How socially responsible can a company be towards its employees? Businesses face these questions when they hire and decide the scope of potential in-work benefits. In historical perspective, such activities were subsumed under a paternalist agenda, describing an employer's authority claim over an employee in exchange for stable employment. In contemporary perspective, corporate social responsibility (CSR) programs, management, and employee relations are framing the form of employment and define its scope. However, what is the link between these two perspectives?

The paper's answer comes from a systemic analysis of the employment related key CSR and historical paternalist activities of British and German companies. It is argued that a company cannot be socially irresponsible in its CSR employment activities and that, while management indeed professionalised from the historical paternalist relationship, the mechanisms of providing in-work benefits remained the same. CSR is a business' means to communicate with its non-business environment by ordering the complexity of demands and addressing some of them. In outcome, businesses gain legitimacy and present themselves as a good member of society; violating commonly held societal norms would prevent such a status. Moreover, businesses typically operate within prescribed economics and structures. They exist to turn profits and actions are chosen on the basis of their previous and likely future success; CSR is part of these operations. In the past, paternalist employers also used these two mechanisms: they conformed to societal expectations and provided benefits that were commonly held to be acceptable; and they used their own experiences to model employment in their companies.

The paper contributes to critical discussions of CSR by providing a theory informed analysis of options and limitations of employment-related welfare activities. It additionally contributes to comparative research of in-work benefits and shows their historical continuity.

*Violence and Dissidence. Political Imprisoned Women In The Former GDR*

As Ingrid Miethes (1999) study of the biographical background of former East German oppositional women has shown, there is a strange connection between experienced violence in the family and the genesis of dissident behavior in totali-

tarian systems like the former GDR. It is remarkable that one can find quite similar phenomena in our study of the biographical backgrounds from women who have been imprisoned for political reasons. There seems to be deep connection between violent social relationships mainly to male persons and the development of a dissident action scheme. In the presented paper will be argued that dissidence in totalitarian systems is not (only) based on a specific psychological character trait, but primarily a reaction based on biographical experiences (such as violence trajectories) and their relation with social frames. These frames are potentially built up by social discourses, like the socialist female stereotypes and are processed through biographical work (Riemann & Schütze 1991), which is influenced of violent experiences. For these women it is neither possible to adopt political indoctrinated worldviews nor to emancipate from cultural stereotypes. This results in "damaged social frames", which made these women incapable to find neither private niches, nor active actions schemes in the GDR. Violence, this is the central thesis made here, can damage social frames and results thus in a disorientation and passivity. This leads to the strange consequence that a private crisis can lead to political persecution in dictatorships like the GDR.

#### *Obstacles of Clinical Sociology in Iran*

In the domination of a single belief, which carries its own worldview system including beliefs about "ultimate reality, epistemology, ontology, ethics, purpose, etc.", and has a solution for social, psycho, economical and even environmental problems, it's difficult for any external new science to penetrate or sum up against these worldviews which became a denomination or sacred in some realms. Clinical sociology is not immune, but rather, is maybe on the verge of more anathematization.

In Iran, which Islamic law creates a huge shadow over all acts and interacts, and provides basement for any theory with its fixed solution, no new option can find its way, because should prove its compatibility with Islamic basic first.

But knowledge is embodied in people gathered in communities and networks. The road to knowledge is via people, conversations, connections and relationships.

Knowledge surfaces through dialog, all knowledge is socially mediated and access to knowledge is by connecting to people that know or know who to contact. In the fact, as Mikhail Bakhtin puts it, truth is not to be found inside the head of an individual person, it is born between people collectively searching for truth, in the process of their dialogic interaction.

We may obtain information from the 'sage on the stage' a book or CBT, but we learn on the playing field, where our identity is forged, opinions are validated, values mediated, beliefs formed and assumptions are tested. Because of that, we find clinical sociology can be useful for improving social behavior in Iran, but should approach its thoughts and solutions with basic Islamic concepts.

Based on this fact, we think clinical sociology if wants to find a gateway for improving the views and values in Iran, should correspond its solutions with the basic Islamic concepts which form the framework of Iranian society.

#### *Indigenous Youth: Fighting for Their Rights*

The main goal of this project is to carry out an interdisciplinary analysis of the meaning of violence for the indigenous youth of Reserva de Dourados, Mato Grosso do Sul - Brazil.

Violence in this population has different variants of those known in the Western society. This is extremely important for us to act within the cultural dialogue towards public policies proposals based on indigenous and human rights.

The constant traffic of that population between the cities and the border, makes it produce a hybrid discourse in which, often, acts considered normal and usual are appointed as violent, and with ambivalent attitudes.

A great example is the fact that youth, mainly women are beaten by their companions frequently. They know that, in the surrounding society, this is not considered normal, but, at the same time, "it has always been that way, since the times of our mothers." However, many times they rise against it and go in search of justice outside for help, but, soon, they repent and justify the beating: it occurred because the mate had drunk or used drugs.

This kind of ambiguous attitude represents the disagreement that exists in the negotiation between the Western values and those of the Indigenous People, in our case, the ethnicities Arawak and Guarani Kaiowa and Guarani- Nandeva.

The methodology of this research was based on action research between the health workers, the indigenous teachers who work in the Reserva, me and the Indigenous youth who attend the Youth Indigenous Action of Dourados. We held six workshops about the meaning of the violence and acts of violence and how we can avoid them.

#### *Political Tourism in the West Bank*

The spotlighting of the Israeli-Palestinian conflict by the international media and the relative accessibility of contested areas in the West Bank have turned it into an interesting destination for foreign visitors. In the past decade such tourists have become an integral part of popular demonstrations and other activities in such localities as Bil'in, Boudrus and Sheik Jarrah. In many of these places, local committees have learned to utilize international visitors as a political asset in their battle against injustice, be it land confiscation or house demolition. These tourists display diverse degrees of political awareness and motives, but regardless of whether they arrive in the West Bank individually or as part of an organized political initiative, they represent a new form of political consumerism in the arena of international tourism. Based on ongoing fieldwork in the West Bank, this paper seeks to address three questions: Does the mobilization of tourists for political ends as seen nowadays in the West Bank constitute a new phenomenon, and if so in what way is it new? Does this mobilization succeed in achieving its aims? Does it always promote just causes?

#### *Objectification and Anthropomorphism Of The Self: Self As Brand, Self As Avatar*

Two opposite ways of regarding the self in a digital world are as a branded object and as an anthropomorphized subject. When Marx condemned tendencies toward the objectification of people and the personification of objects, he was certainly not envisioning either the self-objectification that takes place when we treat ourselves as a brand or the reanimation of self that takes place when we breathe life into computer animations representing us. Rather than being pawns of capitalism, we see ourselves as becoming agents empowered through both of these processes. But just as Marx cautioned, there is still a dark side to objectifying people and personifying objects.

With expanding Internet possibilities, it is not surprising that we are being urged to manage our online "brand" identities. We are urged to attend to our packaging and product, our unique selling proposition, and self-promotions, co-branding, brand positioning, market segmentation, and our social media portfolio. Target audiences include our employers, friends, family, potential dating partners, professional colleagues, and institutions. Self branding takes place in online dating, but is also evident in personal web pages, blogs, social media, and photo and video uploading sites. The problems entailed in these presentations of self in everyday life are detailed and discussed.

Secondly, the paper examines the anthropomorphism of self that takes place when we create, use, and embrace avatars in online games, virtual worlds, and other venues. The human-avatar link is not just a projection from human to avatar. We create our avatars and our avatars create us. Our avatar's characteristics and behavior online carryover to the "real" world. Like the commodification of relations in self-branding, avatar selves often reduce human relations to prejudicial stereotypes from the real world.

The paper concludes with an appraisal of these new phenomena and reflections on future issues.

*Visualising an Interiority: A Self-Reflexive Process of Collage*

I propose a self-reflexive case study of a synthesis of the thinking through making, as an artist exploring her own ageing process and searching for a method of inquiry through creative practice which merges the making and the textual. Collage appears to offer versatility as it allows one to express subjective experience through reflexivity and its intrinsic multiple interpretations of the 'image'.

'Collage' is derived from the French word, *coller*, to stick, a familiar *cut and paste* process going back 1000 years to when Japanese calligraphers used torn bits of paper to embellish their written texts. More recently, it could be said to have paved the way for Postmodernism, which is itself almost 'collage-like' in that it disrupts our sense of reality and the generally understood aesthetic unity of things by reflecting the way we see the world, with objects being given meaning not from something within themselves, but through the way we perceive how they stand in relationship to one another. It does not preclude conventional 'artistic skill' but it does encourage creative exploration; therein rests its inherent attraction for artist/researchers as it offers the gift of multiple voices.

This study investigates the subjective experience of ageing through the gaze of an older woman artist, viewing her own transitioning, relinquishing and becoming, where the self is both subject and object, examining the inter-subjectivity of the micro within the macro. Working within the comparative safety net of generated images rather than articulating through the sometimes unforgiving precision of words, this paper illustrates the advantages and pitfalls of how collage might help untangle the complex and frequently unresolved inherent emotions.

**BELL, VIKKI\*** (Goldsmiths University, [v.bell@gold.ac.uk](mailto:v.bell@gold.ac.uk))

*Images & Ethics in Contemporary Argentina: The Art of Post-Dictatorship*

Presenting the guiding argument of my recent work in Argentina, this paper argues that aesthetic interventions can be understood as ethical endeavours that accompany but exceed any political-legislative or juridical project. Insofar as aesthetic endeavours constitute forms of 'memory work' they risk being understood as attempts to put the past to rest, or even as melancholic returns to the scene of the past to rehearse the stories encountered there. But this 'return' is not a real return and is not 'about' but is instead 'before Memory' in Derrida's sense. In other words, the concern is to respond to the past by enacting and inculcating a response-ability, an ethics. The examples I discuss concern the relation to the other characterised by Levinas' concept of the Infinite, and are therefore as futural as is possible. Thus while many artist activist interventions (such as the work of GAC and the *escraches*) have called for trials - Juicios y Castigo - it is argued here that all of the examples I have dealt with are interventions that exceed this. They also concern absolute justice. Drawing on examples from my book *The Art of Post-Dictatorship: Ethics and Aesthetics in Transitional Argentina* (2014, Routledge/Glasshouse) this paper will consider two sets of photographic portraits of *desaparecidos* from Buenos Aires and Córdoba.

CHAROENRUK, NUTTIRUDEE (University of Nebraska)

*Interviewer Variance Of Interviewer and Respondent Behaviors: A Comparison Between Calendar and Conventional Interviewing*

Past work in retrospective reporting in surveys has looked at calendar and conventional questionnaire interviewing in regards to interviewer variance on responses (Sayles, Belli, & Serrano, 2010) and verbal behaviors among respondents and interviewers (Bilgen & Belli, 2010), but interviewer variance on verbal behaviors has not yet been examined. In this research, we compare the interviewer variance of respondent and interviewer verbal behaviors between 165 calendar and 162 conventional interviews. The types of interviewer behaviors that were examined include those for retrieval probes, standardized associated behaviors, conversational behaviors, feedback, and rapport. The types of respondent behaviors examined include the use of retrieval strategies, probe disagreements, expressions of cognitive difficulty, conversational behaviors, and rapport. We find that almost all of interviewer variances of the behaviors differ significantly between calendar and conventional methods, the lone exception is for respondent laughter. The interviewer effects in all remaining respondent behaviors in calendar interviewing is higher than in conventional interviewing; however, the size of the interviewer effects for interviewer behaviors between methods are not in the same direction. By relating the interviewer variances on key verbal behaviors to their prevalence between the two interviewing methods, we infer whether the interviewer effects on the behavior were driven by the methods requiring different styles of interviewing, or by the interviewers themselves.

*Hacia La Construcción De Un Modelo De Análisis De La dominación En El Contexto Del Sistema Mundo Moderno/Colonial*

En este trabajo presento la discusión conceptual de la investigación Mi cuerpo en tu tierra, mi voz en tus labios: Análisis de la categoría Tercer mundo como dispositivo moderno/colonial de otrificación visto en la vivencia de mujeres no europeas habitando Europa.

A partir del análisis de diferentes perspectivas en torno a la interseccionalidad, así como de los conceptos colonialidad del poder, colonialidad del género y división internacional del trabajo, propongo un marco de análisis de la opresión en el contexto del sistema mundo moderno-colonial.

Propongo el concepto patrón moderno/colonial de dominación, donde incluyo la codefinición de las categorías clase/raza/género-sexualidad señalando su rol dentro de la estructuración de un modelo de sociedad específico; el sistema mundo moderno-colonial. Los dispositivos de poder allí incluidos determinan las formas de opresión estructuralmente ligadas a dicho sistema, no obstante no son los únicos que intervienen en la multiplicidad de formas que esta puede asumir.

Los dispositivos de clasificación y jerarquización a partir de la generación de diferencias -como la edad, la discapacidad, etc- pueden llegar a ser más determinantes en la configuración de la opresión en un contexto específico. Están categorías encarnan el hecho de que el patrón moderno/colonial de dominación aunque estructural no es absoluto.

El patrón de dominación reproduce la hegemonía eurocentrada del sistema mundo moderno-colonial, adicionalmente éste está en permanente interacción y codefinición con otros dispositivos de clasificación y jerarquización de los cuerpos. A través de la formulación teórica del concepto patrón moderno/colonial de dominación no busco señalar un modelo fetiche o un modelo universal para el análisis de las relaciones de dominación y las experiencias de opresión, por el contrario muestro que tal cosa no es posible.

**BELLO URREGO, ALEJANDRA DEL ROCIO\*** (Paris 8-Vincennes-Saint-Denis, [bellourrego.alejandra@gmail.com](mailto:bellourrego.alejandra@gmail.com))

*Hacia La Generación De Prácticas y Conocimientos Emancipadores. Construcción/Deconstrucción De La Perspectiva Decolonial y De La Medicinal Social Latinoamericana a Partir De Las Propuestas y Prácticas Feministas Antirracistas Latinoamericanas*

El sistema mundo moderno/colonial ha tenido repercusiones dramáticas en términos del buen vivir, por ello es vital generar conocimientos y practicas decolonizantes que desde la comprensión del sistema nos permitan evitar su reproducción. Esto implica imaginar realidades que no hemos conocido, y ello nos implica partir de la construcción/deconstrucción de lo que somos y conocemos a partir de la auto-observación y la escucha de voces críticas que hasta el momento no han sido nada, o no suficientemente, escuchadas.

En este sentido, las propuestas para entender y actuar frente a los dispositivos materiales/simbólicos de jerarquización entre grupos y cuerpos, en el sistema mundo moderno/colonial, construidas por La Medicina Social Latinoamericana (MSL) y las corrientes decoloniales, son las más conocidas y difundidas, lastimosamente los aportes en este mismo sentido venido de los feminismos comunitarios, los feminismos negros, los feminismos de las mujeres del tercer mundo, los feminismos de las mujeres de color etc, han sido poco o nada difundidos, o incluidos por estas dos corrientes.

Partiendo de lo anterior, a través de una investigación documental planteo caminos de construcción/deconstrucción de la perspectiva decolonial enfocada a la generación de conocimiento emancipador a partir de las propuestas y practicas ya existentes en América Latina. Desde esta perspectiva propongo una relectura de la MSL señalando a la salud como una plataforma clave para la acción decolonizante. Clave en el sentido de que esta como ha venido siendo entendida por la MSL, podría constituirse en una plataforma de observación y acción frente a los modos en que el sistema mundo moderno/colonial se materializa en cuerpos y pueblos concretos.

## PRES-3.4

**BELLO, WALDEN\*** (State University of New York, [waldenbello@hotmail.com](mailto:waldenbello@hotmail.com))

*Promoting a Progressive Alternative in Non-revolutionary Times*

My contribution will focus on the possibilities and constraints of the politics of reform in the Global South, using my experience as an academic, activist, and legislator in the Philippines as a case study. The issues I will touch on will be, among others, the articulation of the vision of an alternative in a setting where both socialism and neoliberalism have been discredited, the challenge of mobilizing

people for a progressive alternative in a non-revolutionary situation, the promises and perils of coalition politics with elite political parties, and the possibilities and problems in linking a progressive international agenda with a local reform agenda. Among the questions my intervention will seek to answer are: Where does the corruption and governance issue fit in a progressive agenda? How does one promote structural reform in asset and income distribution in a period when people's movements are weak? How does one link a local reform program to a strategic post-capitalist agenda? How does one promote a reformist foreign and global policy agenda that addresses climate change, the crisis of globalization, continuing interventionism on the part of the United States, an increasingly assertive China, and geopolitical rivalry between the United States and China.

FOLCHI, TIZIANA (Univefrsità di Torino)

### *Children's Autonomy and Parents Responsibility in Urban Spaces*

The aim of the proposed communication is to demonstrate that, despite the increasing attention to children's autonomy and the arising of policies devoted to this principle, a decrease in spaces of responsibility awarded to children is occurring, so that they have limited decisional power, a restricted use of public spaces, fewer "unsupervised" relationships within peer groups, dependency on adults and mandate to adults in their courses of action. The hypothesis of increasing risk of dependence of 9-12 years old children from adults' control is based on a research focused on Turin area, part of a national project on children's autonomy and adult's responsibility.

Analysis pointed at the different ways in which autonomy/dependence ratio, referred to the children's space management, is declined by adults, either in domestic or in public spaces. Variations are considered depending on children's gender and age, family social condition and type of neighbourhood of living. Different degrees of autonomy and responsibility are related to different family social condition.

As regards methodology, 46 in-depth interviews were carried out to 9-12 years old children son's/daughter's school grade and their parents contacted through two selected school, located in two different neighbourhoods and characterized by a different class composition. Four focus group, involving teachers of the two schools have been realized.

### *The Construction of Everyday Consumption By Children and Their Families*

This study aims to explore ways in which parental responsibilities are exercised, by analysing consumption experiences together with their accompanying negotiations and avoidance practices, as implemented by parents and children. In recent years, the issue of parental responsibility has inspired reflection and clarification in several disciplines and reflects changes emerging - at least in Western societies - in the social, cultural and legal regulation of family relations (Leira, Saraceno 2008).

A multi-method research analyses consumption experiences both qualitatively and quantitatively. A first research step concerns a series of focus groups with 29 children attending the last year of primary school (age 9-10). Then twenty narrative interviews and a focus group was carried out with their parents focusing on the theme of family consumption and negotiations with children. The thematic maps resulting from these two steps were used to elaborate a questionnaire for a survey that involved 494 children and 374 parents.

Results describe social representations of children and parents as consumers and practices of consumptions and negotiations. It highlights a typology of very young consumers which is highly sensitive to gender and cultural differences, where peer culture plays an important role to orient choices. Responsibility-giving and responsibility-depriving practises on the part of parents emerged during the description of day-to-day negotiations.

Children reveal competencies as to qualify them as *competent actors of consumption*, despite the image prevailing among the public at large. The exercise of parental responsibility reveals an ambivalence described in the literature (Qvortrup 2003; Hockey, James 1993; Jenks 1996; James, Curtis, Birch 2008) between child-protecting needs and the need to recognise and reinforce children's autonomy and responsibility. These aspects would seem to reflect the differing but often coexisting representations of children as passive subjects or individuals endowed with agency.

**BELOUSOV, KONSTANTIN\*** (Russian Academy of Sciences,  
[beloysovkonstantin@gmail.com](mailto:beloysovkonstantin@gmail.com))

### *Higher Education in Russia As Institute of Social Control of Student Deviant Activities*

Social control plays for the society a significant regulative function, is a complete mechanism of maintaining of public balance, facilitated with a wide range of tools, forms, methods of impact on undesirable to a society manifestations of human activity, which find first of all expression through social institutes. A social institute of education (higher education in particular) takes on special significance.

However many modern scientists say that an institute of education keeps actually from a realization of significant controlling function. Modern universities limit its objectives only to information transfer and miss the formation of character, moral and civic principles, and also could hinder the development of social qualities of the individual and its behavior, that have socially useful nature.

Few questions, which need its answers, acute before the system of social control in Russia. First, could modern universities be elements of social control? Does it exhaust its correcting, controlling potential?

It is fair to say about serious lag of the university system of social control from quickly developing proliferation trends of deviation among students. Few factors, (it is the author's opinion) can have a major impact. For example: attempts to silence or denial of the problem's existence; secondary importance of the distribution of deviant behavior among students before such problems as an improvement of the quality of the educational process; government support of social control programs and preventive measures place emphasis on schools, without affecting institutes of higher education ...

It appears that the initiation of a broad discussion in Russia, scientific understanding of the problem among specialists, practical activities aimed at implementation of coordinated preventive measures in the institutes of higher education could remove the existing tension and serve as a beginning of the formation of a system of social control and preventive measures at universities of Russia.

### *Arts, Popular Culture, and Chinese Migration in Spain. Dialectics of the Incorporation*

This paper discusses how the Chinese origin people in Spain it is present and active in the Arts and popular culture of the country. Besides that only very recently the Chinese population volume is significant in Spain, since the very beginning of his presence the art and popular culture have been a way for the Chinese incorporation to the Spanish society: circus, acrobats, painters; and very soon it also developed another phenomenon as some of the Spaniard magicians adopted Chinese names for their presentation into the public. This kind of two ways incorporation is still at work.

In this paper we will analyze how the Spanish arts and popular culture use the "Chinese" and how they are incorporated to the mainstream as well as to the marginal society. At the same time, Chinese in Spain are agents/actors/producers of arts and popular culture that interplay with the rest of the society showing an incorporation dimension where the class level is also at play. This dialectics of the incorporation will be analyzed through different artists and creators' cases studies.

### *Are 'New Wars' Rational? Symbolic Violence in Israel's Recent Wars*

The burgeoning academic literature on new wars is still grounded in the rationalist assumption that wars are a means of achieving material or ideal goals. However, this presentation argues that the new wars of the post-Cold War era of reflexive modernization and globalization are not rational purposively in their episteme but substantively (following Weber's separation between the two). Accordingly, unlike previous conventional or civil wars, the goal of new wars is not solving problems. Instead, they are symbolic expression of the idea that ethnic, ethno-national, or religious differences should be preserved, and conflicts along these lines are unsolvable. The presentation demonstrates this hypothesis through the case of Israel's most recent wars.

**S. N. Eisenstadt : The Challenge Of Social Change****S.N. Eisenstadt: The challenge of social change**

Social change was one of Eisenstadt's major areas of interest. In his view, the possibility of innovation and change is not something external or accidental to any institutional system. It is given in the very nature of the process of institutionalization and systems. He applies this principle of dialectical transformation to his analyses of the dynamics of civilizations and modernity. SNE perceives socio-historical transformations through an emphasis on the multiplicity and variety of forms that civilizations may adopt and where human agency and creativity play a major role. Hence, such developments are made possible by the emergence of new types of elite. It is in this perspective that SNE discusses inter-class and inter-elite struggles, demographic expansion, domestic and international difficulties of states. SNE's analyses favour cultural and ideological premises, SNE sees modernity as the emergence of a social reality where the legitimacy of the social order ceases to be taken for granted and becomes an existential *problématique* for people, as members of society. This perspective, which developed in Western societies in the context of given civilizational legacies, has not remained these societies' exclusive privilege but has quite rapidly conquered more and more spaces, intermingling everywhere with singular cultures. This is what qualifies for SNE's notion of multiple modernities. SNE, however, does not indicate anything that transcends modernity in the social world. Under this angle, the project of modernity can be seen as a variant of 'the end of history' theme. Modernity is not only 'on endless trial', but also 'on an endless trail'. Obviously, present-day globality, transnationalism and multiculturalism have tremendous influence on individuals - diasporans and non-diasporans - as well as on society. Are we now seeing signals heralding a new sequence of modernity or are they pointing out to a new era?

**Dominant Parties In Non-Western Countries****Dominant parties in non-Western democracies**

In general, it is assumed that dominant parties are able to maintain themselves in power election after election thanks to their immense power which they manipulate in order to retain their status. The current presentation refers to Kalder's *Crisis and compensation* and suggests that a major factor that accounts for parties to gain strength in non-Western democracies and remain in power for protracted periods stems from their capability to respond efficiently to ongoing social, political and economic challenges. This capability warrants parties' retention of dominance - or at least dominant influence - over the years. Even if they do not retain an exclusive hold on governmental power, they do imprint their perspectives on the setting's political scene as a whole. This presentation validates this perspective by analyzing the cases of Japan's LDP that has been (and still is) in power for decades, and Israel's Likud which succeeded to ousted the Labor Party from its dominant party position for 40 years.

**Negotiating National Identity: Inequality and Uprising**

In this colloquium, we intend to analyze the question of minorities in the North of Africa particularly in Algeria and Morocco. Our observation about this question has an aim to understand why the ethnic tensions and Arabic spring took place in almost all the Arab countries except in these two countries. Our study intends to predict basing on analyzes what would happen in the coming years. Our research terrain is both countries as they have several ethnic and political problems. Then, we ask the following question: What would the future hide as events for these two countries basing on the social change factor as a fundamental point. This sample "ethnicities in Algeria and Morocco"- as a second factor- are considered as elements influencing in the social cohesion and having as a possible result a real political, social and Cultural Revolution. As a matter of fact, we consider that the political borders are not coherent with the geographic borders. To understand this matter, it is necessary to study the internal factors in the two countries in the first place (social, psychological, political and cultural structures) as means of inequality in the society. In the second place, we have to study the external factors related to the globalization (the French and American interests in this strategic region). We try to understand if the failure of transformative politics is behind the ethnic incohesion and how this could introduce a revolution spirit in the two countries. We think that such failures often force minority groups to devise other means of self-protection. Basing on the Jacob Mundy's book on failure of transformative minority politics in Algeria, we will examine the question on inequality and its impacts on the social and political cohesion.

**Non-Standard Professional Workers and the Demand of Representation: Do Knowledge Workers Need Collective Organizations?**

Since at least 30 years, the processes of economic and social change in industrialized countries have been weakening the collective dimension of working conditions. This is especially the case for young non-standard workers experiencing a more individualistic relation with work and labour market. Indeed, the decreasing participation to unionism can be partly explained by the individualization of work. Italy is a particularly interesting case at this regard, as several labour market reforms took place since the end of the 90s pushing high-skilled young workers into non-standard contracts and positions.

The aim of the paper, based on a qualitative survey involving 75 young professionals living in Milan (Italy) and 16 organizations, is to understand whether high-skilled non-standard professional workers express a specific demand for representation, and what kind of answer traditional and innovative organizations are likely to offer.

Our leading hypothesis is that, as a consequence of a general disappointment towards politics and unionism and of the change of workers' social identity, young professionals do not refer to unions but pursue individual strategies to solve their conflicts within the labour market. Non-standard workers constantly refer to rhetoric on personal autonomy and freedom against the 'boring standard long life full time job' (not existing any longer in the real life).

Our results in Milan, the Italian metropolis which usually anticipate national changes in the labour market, shows a mismatch between job conditions of these workers that have strongly worsened in the last decades, and the awareness that these conditions are shared by a large part of non standardworkers, and their (in) capacity of collective representation and action. The lack of sharing a common place of work is one of the elements to understand this mismatch. Given this scenario, the possibility for unions and other associations to organize these workers is very unlikely.

**Leisure and Health**

Mental or emotional health refers to overall psychological well-being. It includes the way we feel about ourselves, the quality of our relationships, and our ability to manage our feelings and deal with difficulties. Good mental health isn't just the absence of mental health problems. Being mentally or emotionally healthy is much more than being free of depression, anxiety, or other psychological issues. Rather than the absence of mental illness, mental and emotional health refers to the presence of positive characteristics. Similarly, not feeling bad is not the same as feeling good. While some people may not have negative feelings, they still need to do things that make them feel positive in order to achieve mental and emotional health.

The positive characteristics of mental and emotional health allow us to participate in life to the fullest extent possible through productive, meaningful activities and strong relationships. Taking care of our body is a powerful first step towards mental and emotional health. The mind and the body are linked. When we improve our physical health, we'll automatically experience greater mental and emotional well-being. For example, exercise not only strengthens our heart and lungs, but also releases endorphins, powerful chemicals that energize us and lift our mood. The activities we engage in and the daily choices we make affect the way we feel physically and emotionally. If we maintain a balance between our daily responsibilities and the things we enjoy. If we take care of ourselves, we'll be better prepared to deal with challenges and feel good.

The purpose of this article is to examine the empirical evidence and describe theoretical perspectives that address under what conditions and why leisure acts can be therapeutic and contribute to mental health.

**Policing and Social Activism in Château Rouge, Paris**

The neighbourhood of Château Rouge in Paris's 18<sup>th</sup> arrondissement is home to a large foreign-born population of residents and has been called "Africa in Paris." However, while the neighbourhood is often labelled as "exotic" it has also earned a reputation for being one of the more dangerous and lawless neighbourhoods in Paris. In 2012, Château Rouge was listed as one of 15 "priority security zones" by the French government, leading to increased police action on unlicensed vendors, prostitution, theft, occupation of public spaces and drug trafficking. While the local government has created political and economic interventions that seek to solve these problems, local residents have taken to online blogs and forums to complain and raise awareness about what they deem to be Château Rouge's "real" problems: the failure of the police, the municipal destruction of old buildings and classic architecture for redevelopment, and "mono-commercial activity," or a lack of commercial diversity in the neighbourhood. However, while these online discussions often commence with a statement of support for the neighbourhood's cultural, religious or national diversity, it is evident that some of the products of Château Rouge's multiculturalism—halal butchers, African hair salons, "ethnic" grocery stores and a large concentration of African migrants—are a source of discontent for many residents. Based upon ongoing research in Château Rouge, this paper presents evidence of social and political policing efforts and government-led gentrification that attempts to control a "lawless" and "dangerous" neighbourhood while concealing growing discomfort with this "ethnic enclave."

#### *Pathways to Social Marginalization in a Scandinavian Welfare State*

This paper analyses different pathways to social marginalization in a Scandinavian welfare state. Conceptually, the paper builds on a multi-faceted life course approach which recognizes that, first, marginalization involves economic, social, and cultural deprivation and, second, routes to marginalization are complex. Empirically, the project draws on longitudinal data from Danish administrative registers which covers the population of cohorts born between 1983 and 1988 over an extended period of time from 1999 to 2013. We follow each cohort in a 9 year period from the age of 16 to 25 years-old. This period is crucial phase in the individuals' life course as they make their transition from adolescence into adulthood. We tie data from many different registers, thereby providing longitudinal data with comprehensive indicators on different dimensions of social marginalization. We link data on psychiatric disorders, drug and alcohol use, homelessness, crime, and demographic and socioeconomic information. Methodologically, we apply latent transition analysis (LTA) to categorise the individuals into different typologies of life trajectories. LTA is a type of longitudinal analysis that explores change in latent classes of individuals over time. Results reveal six distinctive types of pathways to social marginalization. Adjusting for a wide range of socioeconomic factors and individual vulnerabilities family background is still a significant predictor for social marginalization.

#### *Are Some Nations More Creative Than Others? a Macrosociological*

Bibliometrical studies show systematic differences in the scientific impact of nations, as measured in their shares of highly cited publications. They show similar differences between countries' academic institutions in terms of their bibliometrical impact. Even though creativity cannot be equaled with bibliometrical impact, and high impact not necessarily with groundbreaking research, the systematic differences – even if checked with funding of research per capita – indicate that there are institutional differences that shape the possibilities of both universities and individual researchers and teams to do research that influences the agendas of different disciplines. We argue that there is a systematic relationship between institutional properties and the average creativity of a nation's academic organizations and their scientists.

This presentation, based on ongoing research of the interrelations between institutional properties and scientific impact, explores these differences by comparing the institutional set-ups of three Nordic countries: Norway (with low scientific impact), Sweden (medium-high scientific impact), and Denmark (high scientific impact) along the following dimensions: structure of the research system, patterns of recruitment and promotion in universities, the recruitment and powers of academic leadership, composition of academic positions, and national/international mobility of faculty.

It is concluded that even seemingly similar research systems – as the three under scrutiny – display systematic differences that foster different academic identities as well as search and network behaviors, and that these impact the aggregated level of scientific impact but also the creative environments of their universities and the individual scholar's capacity for devising and executing research that challenge the frontiers of knowledge.

#### *Protest Mobilizations at the Beginning of the 21st Century: J14 as Part of a New Global Cycle of Protest*

In the aftermath of Arab spring, throughout Israel there were massive protest, indeed, on a per capital basis, the "cottage cheese" revolt, or J14 (June 14), can be seen as part of the Global cycle of protest. According to Schechter (2012) three phases of the Israeli J14 can be identified: 1) The public phase, 2, Immediate Post – tent city phase, and 3) Long lasting projects born out of the protests. Like many, if not most of these movements, the mobilizations were responses to neo liberal globalization, which has had adverse impacts on Israeli youth, especially rising costs of living. But like many of these movements, they were not simply workers, or even socialist unions, but a wider range of actors, especially youth, not just seeking a better standard of living, but dignity, recognition of their humanity. But did these movements have any impact? Let us note that to gain the support of many, the occupation of Palestine, a huge drain on the economy was not made an issue. But that said, the "success" of Lapid, limiting the "victory" of Netanyahu must be noted. While he remained in power, that power was weakened. More recently, the likelihood of the USA and others to negotiate with Iran, and the growing discontent over the Palestinian issues, seem to have made a weakened Bibi more bellicose and intransigent than ever. **Noting parallels with New Dawn in Greece and the Tea Party in the USA, which have been losing actual support**, it might be suggested that while the movements of 2011/12 may not have resulted in short term change, or perhaps things even worsened, these movements have just been the opening shot in more long term progressive mobilizations.

#### *Holding West African States to Task on Gender and Violence: Domesticating Unscr 1325 through National Action Plans and NGO Advocacy*

The United Nations Security Council unanimously passed Resolution 1325 (UNSCR 1325) on women, peace, and security in 2000. This resolution recognized women's involvement in efforts to maintain and promote peace and security and the right of women and girls to protection from human rights abuses such as gender based violence, and prosecution of perpetrators for such crimes. It stressed the importance of integrating a gender perspective and a greater gender balance at all levels of decision making and power structures in peace keeping, peace building, and post-conflict reconstruction. This presentation will examine what progress has been made to implement and institutionalize this resolution in selected West African states. National Action Plans are one of the key ways that governments take steps to implement UNSCR 1325 into policies and programs, irrespective of whether they are recovering from conflict or engaged in peace keeping activities. Women activists also make use of this document to pressure governments to include women and a gender perspective in peace negotiations, to promote gender friendly legislation, increase women's representation in decision making bodies, including elected office and the judiciary, and to advocate for equal rights for women (Cockburn, 2007; M'Cormack-Hale, 2012). Drawing on primary and secondary documents drawn from United Nations, NGO reports, and scholarly publications, we will examine initiatives governments have taken to formulate and implement National Action Plans, reduce sexual and gender based violence against women, repeal discriminatory and statutory customary laws, conflict prevention, prosecution and punishment of perpetrators, provision of adequate budgets to effectively implement policies, and monitoring and evaluation frameworks. Our analysis will be informed by sociological and feminist conceptual and theoretical approaches applicable to West African contexts.

#### *Changing Caring Practices and Ideals: The Effects of Intergenerational Transmission and Migration on Transnational Family Life*

This paper combines a life-cycle and migration history perspective to explore the influence of intergenerational transmission and transnational caring arrangements on changing ideals and practices in family life. By investigating past and

current family life of African parents in the Netherlands, the paper aims to identify how migration and individual family experiences intersect and impact on emerging transnational family ideals and practices.

The paper focuses on Angolan and Nigerian parents in the Netherlands with children abroad. The history and migration trajectory of parents from respective countries differs and influences the economic and emotional challenges they face in the Netherlands and with regards to caring for their children. These differences in the crises and mobilities are described, yet the analysis goes beyond country/group level variation. The paper explores how individual family history impacts on transnational family life. To what extent do parents view transnational caring arrangements as new phenomena in the family? Are experiences with fostering, rural-urban migration or separation through war - to different degrees applicable to Angolan and Nigerian migrants - experienced as precursors of the transnational experience? How do childhood experiences affect the imagined roles and responsibilities of parents, and how does distance affect these ideals? To what extent is migration perceived and hoped to be part of their children's lives? What do parents hope or fear will be their children's role in caring for them at old age?

To answer these questions about the ways that individual life histories intersect with intergenerational transmission and migration, the paper uses 'family life history' interviews with 2x15 parents from respective countries. This methodology combines in-depth semi-structured and life history interviewing techniques. The research forms part of a comparative programme on transnational child caring arrangements with African families in various European and African countries.

#### *The Logic of Relative Frustration. Boudon's Competition Model and Evidence from Online and Laboratory Experiments*

In their well-known study of social mobility in the army, Stouffer et al. report the paradoxical finding that soldiers in the US Army were more satisfied with promotion opportunities in branches with low upward mobility compared to high-mobility branches. Similar puzzling phenomena have been discussed by classical social scientists such as Tocqueville and Durkheim. Boudon suggests a game theoretic model clarifying the conditions under which the so-called Tocqueville's Paradox—i.e., the diffusion of relative frustration and, consequently, a drop in aggregate satisfaction under improved social conditions—appears. We conducted online and laboratory experiments to test model predictions, making our study the first empirical test of Boudon's competition model as far as we are aware. First results from the laboratory show that when opportunities increase aggregate satisfaction remains constant. This contradicts model predictions as well as the common belief that satisfaction increases linearly in relation to opportunities. The online experiments have not yet been conducted at the time of writing this abstract.

#### *Beyond Intersectionality and Masculinity As Proper Objects? the Case of Hip-Hop in Sweden*

In the last 25 years, sociological gender research has seen the development of two important research fields: intersectional scholarship, and the sociology of masculinity. Yet, there has been a lack of mutual engagement between these bodies of research. Intersectional theory and research has primarily focused on differences and power asymmetries between women, in terms of race, class, sexuality, and to some extent age and (dis)ability. The sociology of masculinity, on the other hand, has typically been more concerned with the critique of 'hegemonic masculinity' or the 'hegemony of men'. This paper seeks to contribute to an emerging use of intersectional analyses focusing on men and masculinity. It draws together findings from a study of how the categories of race, class, gender and sexuality are constructed, negotiated and intersecting in the case of hip-hop in Sweden. The study is based on discourse analysis of a broad sample of rap lyrics from the last two decades. Based on this empirical research, this paper offers a series of reflections on the implications of intersectional analysis for the sociology of masculinity: Does the established notion of 'masculinities' in the plural imply that masculinity studies are always already intersectional? Or does an intersectional analysis challenge the very metaphor of plurality in accounting for multiple and intersecting inequalities? And to what extent does the 'addition' vs. 'constitution' dichotomy in intersectionality theory suffice in relation to masculinity? In raising such questions, I argue for moving beyond intersectionality and masculinity studies as separate projects or 'proper objects', to use Butler's phrase.

#### RC05-116.2

**BERGGREN, KALLE\*** (Uppsala University, [kalle.berggren@soc.uu.se](mailto:kalle.berggren@soc.uu.se))

#### *The Intersectional Politics of Masculinity: The Case of Hip-Hop in Sweden*

Critical research on racialization in contemporary Europe demonstrates the extent to which dominant discourses displace sexism, homophobia, foreignness, and other unwanted characteristics onto non-white men. But how are such attributions negotiated and challenged? Over the last two decades, hip-hop culture has emerged as a central site for the articulation of resistance to racialization, by what Fatima El-Tayeb calls 'European Others'. While research on hip-hop in Europe has tended to foreground rap artists as street-style postcolonial intellectuals, less scholarly attention has been devoted to how notions of gender and sexuality are implicated in resisting racialization. This paper presents findings from a study of rap lyrics from hip-hop in Sweden over the last twenty years. Drawing on an intersectional perspective, it seeks to challenge mono-categorical analyses of either racialization or masculinities, by focusing on the enmeshed negotiations of race, class, gender and sexuality. The analysis shows how male artists often challenge racialized discourses, but in ways that simultaneously draw on racialized stereotypes as a means for performing heterosexual masculinity. Furthermore, attention to female artists' critique of the sexism of their male colleagues, and queer analysis of male homosocial desire, reveals how hip-hop is often very radical and conservative at the same time. In this way, I seek to complicate our knowledge of how racialization and masculinity are constructed, negotiated and challenged, by focusing on what I call an 'intersectional politics of masculinity'.

#### *Factors Affecting a Prolonged Working Life for the Older Work Force. the Swedish Case*

Sweden is facing the challenge of an aging population and an increasing dependency ratio. The issue of prolonging working life is therefore a top priority. Sweden has made major changes in the pension system to create incentive for participation. During the last decades the participation rate for 55-64 years has increased significantly. Beside the altered pension system and a general trend of a healthier population, also changes inside working life is suggested to explain the increasing participation rate of older. However, the mechanisms that retain the older work force are still unclear.

This paper will study mechanisms behind the older work force's decision to stay employed. Two hypotheses are discussed. Firstly, the decision to stay is a function of the type of work one have. The explanation for a larger participation rate is therefore a compositional effect implying a larger share of white collars jobs in the occupational structure. The second hypothesis is that it has been a general improvement in the working conditions making it possible for a larger share to continue to work.

Data used are *The Panel Survey of Ageing and the Elderly* (PSAE). It is a panel that was first launched in 2002 and with a second wave collected in 2010. PSAE is a comprehensive survey that covers besides working life data, also data on incomes and living conditions. Focus is on employed 50-59 years in the first wave 2002 and investigates factors that make them still employed in year 2010. The rationale for the delimitation to 50-59 years old is that the age category is entitled to pensions 2010. In 2002 are 1704 included. However, due to drop outs between the two waves is the effective sample of 878 persons. 59.5 percent are still in employment 2010.

**BERHEIDE, CATHERINE WHITE\*** (Skidmore College, [cberheid@skidmore.edu](mailto:cberheid@skidmore.edu))

#### *Gender Differences in the Path to Full Professor at Two Liberal Arts Colleges in the United States*

This paper examines whether gender, rank, and barriers to promotion affected how satisfied faculty at two highly selective private liberal arts colleges in the northeastern United States were about their opportunity for advancement in rank. A work climate survey was sent to the entire population of 341 tenured and tenure track faculty at the two colleges, one formerly all male and the other formerly all female. The response rate was 70%, yielding 237 respondents. Multiple regression was used to examine factors predicting faculty satisfaction with their career progression. College of employment, gender, rank, and promotion barriers were significantly associated with faculty satisfaction with their opportunities for advancement in rank. Faculty at the former men's college were more satisfied with their opportunities for advancement in rank than faculty at the former women's college. The former men's college has two pathways for promotion to full professor, including one that does not require a significant publication re-

cord, while the former women's college does not. While gender had no effect at the former men's college, female faculty at the former women's college were less satisfied than their male peers with their opportunities for advancement. In contrast, rank had no effect at the former women's college, but associate professors were less satisfied than full professors with their opportunities for advancement at the former men's college. These results suggest that more support for associate professors and female faculty from the time they are tenured until they are promoted to full professor would improve their satisfaction. Colleges need to provide sufficient resources, including time, to enable faculty to complete the work necessary for promotion to full professor. They also need to provide feedback to associate professors about their progress towards promotion to full professor. Finally, they need to protect associate professors from too heavy a service burden.

#### *Public Support for Harvesting Mountain Pine Beetle Infected Trees in British Columbia: Economic Impact or Environmental Attitudes?*

The mountain pine beetle (MPB) epidemic is the largest recorded outbreak in British Columbia's history currently covering almost 10 percent of British Columbia's 9.2 million hectares of forest. The problems it poses are not merely ecological but also social and economic. An evaluation of the public's perceptions of MPB management alternatives provides decision-makers with information needed to make publicly acceptable decisions concerning the use and recovery of affected areas. A survey was administered to 312 respondents, half in Prince George, a more forest-dependent community, and half in Kelowna, a less forest-dependent one. This research found considerable public support for increased harvesting of MPB infected trees. The public appears to have accepted the position of the Council of Forest Industries as well as the federal and provincial governments that increased harvesting is the appropriate approach to managing the outbreak. Though public debate and policies often emphasize the economic consequences of natural disturbance events, concern for the economic impact of the MPB was not associated with support for harvesting. Instead education, age, and environmental value orientation distinguished support for harvesting MPB infected trees among respondents in these two communities. The OLS regression results revealed that an ecological modernization viewpoint was the strongest predictor of support for harvesting. Respondents who scored high on this environmental attitude index downplayed the importance of environmental concerns and relied on economic and scientific progress to solve environmental problems. The driver for supporting increased harvesting appeared to be a belief that human intervention can solve environmental problems. These findings support norm-activation theory's explanation of environmental concern. This research also demonstrates the value of examining the social determinants of public support for strategies for managing natural disturbances as part of the policy making process.

#### *Differentiated Implementation Of Human Rights: A New Research Agenda*

One of the major issues attracting the attention of scholars studying global norm regimes is under what conditions and how transnational regimes impact state behavior. Focusing on the human rights regime, we propose to broaden the research agenda of the literature dealing with the implementation of norms in domestic settings by re-conceptualizing implementation. We show that the research examining the institutionalization of human rights norms within the local sphere uses the state as the unit of analysis and therefore implicitly assumes that the processes of implementation are uniform and consistent across the population. We introduce the term "differentiated implementation" to capture variances of implementation across different social groups within a given society (descriptive level), and use perspectives and methods from the sociology of inequality to explain specific patterns of implementation. We present two case studies to illustrate our argument -- the right to vote in the US and the right to work of people with disability in Ireland. Our effort to connect the implementation literature with the sociology of inequality can encourage human rights scholars to examine the impact of local structures and processes, and prompt inequality scholars to explore the global human rights context

#### *Young Researchers in Germany: Different Forms of Examination and Evaluation of Academic Careers*

To be under examination is a quite common experience for young researchers. In the German university system, young researchers are confronted with examinations in a narrow (e.g., the doctoral exam), as well as with examinations in a broader sense (e.g., regular evaluations of teaching, peer review). From our perspective, it is important for a comparative sociology of examinations to look at different forms/formats of examinations and evaluations within specific fields in the Bourdieusian sense. Thus, we intend to compare the various formal and informal processes and instances of examination and evaluation young researchers experience during their careers. In the same vein, we draw on phenomena of trust/mistrust in the academic trajectories.

In our presentation we will (a) differentiate between forms of examination and evaluation which are typical for academic careers in Germany. We will then focus on (b) how young researchers experience these different forms. Finally, we will ask (c) how young researchers cope with different forms of examination and evaluation. The presentation is based on a research project on academic careers in Germany with a special focus on trust funded by the German Federal Ministry of Education and Research (BMBF). At the current stage of our project we mainly use qualitative interviews to analyze the relevance of trust for academic careers.

#### *Exploring the Predictors and Outcomes of the Adulthoodification of Adolescents*

The purpose of this study was to assess the predictors and outcomes of children who are asked to perform adult roles during their childhood and adolescence. Adulthoodification is the exposure of youth to adult knowledge and roles within the context of their families. In the most extreme forms, adulthoodification can be termed parentification, where the child and the parent have essentially switched roles. In its less extreme forms, adulthoodification can be beneficial as the adolescent child gains skills toward independence, adulthood, and employment. In 2007, Linda Burton provided a model of adulthoodification that was written from ethnographies. Burton's (2007) Conceptual Model of Adulthoodification of Economically Disadvantaged Families was partially tested in this study. Using the first and third wave of the National Longitudinal Study of Adolescent Health (Add Health), the relationships between perceiving oneself as having been adulthoodified in adolescence and family context in adolescence (e.g., parental time, parental physical and mental health, parenting skills, family size, family structure, family poverty, neighborhood safety, family closeness, culture, and immigrant status), as well as adolescent attributes (e.g., age, birth order, gender, physical and emotional maturity) were examined. In addition, outcomes of being adulthoodified in adolescence (responsible behaviors, mental health, risk-taking behaviors, and civic participation) were assessed as participants reached emerging adulthood. Results showed that the having healthy parents, having parents who lack parenting skills, and having family closeness were the strongest family context predictors of adulthoodification. Adulthoodification was also predicted by the adolescent's psychological availability, lack of autonomous decision making, and working less within the home (suggesting outside employment). Adulthoodification was negatively related to the outcomes of living autonomously in adulthood, the number of transitions of emerging adulthood (e.g., education, marriage, etc.), number of sexual partners the subject had, but positively related to smoking marijuana and binge drinking. Future directions are discussed.

#### *Crisis As Marketization: Social Policy In Southern Europe (2008-2013)*

The marketization of social policy as evidence of a larger paradigm shift is especially evident than in austerity-ridden eurozone countries. Ireland, Greece, Italy, Portugal and Spain are comparable in that a short-term, large-scale change in social policy is currently being undertaken. With the significant exception of Italy, all cases have entered the eurozone as relatively recent cohesion countries with specific welfare models that did not fit neatly into traditional categories advanced in the welfare state literature. Recently, they have arguably entered a path-dependent process of convergence towards marketized social policy. The introduction of market mechanisms in benefits provision, healthcare, education and housing has driven protest and initial evidence suggests that marketization in these contexts is producing new cleavages while reinforcing gaps which had seemingly disappeared. These countries, where unequal social relations were the norm for most of their modern histories, now face an externally-induced push towards

marketized social policy without accompanying compensation mechanisms, such as strong civil society participation rates and institutionalized conflict procedures.

In this paper, we test this convergence hypothesis by tracing social policy orientations and transitions in the context of larger institutional change. As these countries now face critical junctures, they are important test cases on the impact of external shocks to domestic social policy and the consequences of pushing market mechanisms into welfare provision in the context of unpredictability in political and economic outcomes.

### *Hesitant Secularists: The Politics of Secularism and Post-Secularism in 21st Century Portugal*

How secular is Portugal? Is it a post-catholic polity, transitioning from mono-confessionality to religious pluralism? Is it, in that sense, a post-secular polity? Recent events suggest that post-secularity might underpin a specific mode of governance to a larger and deeper extent than previously thought. Research on the religious field in Portugal has been dominated by Church-centric frameworks, eschewing Bordieusian field theory in its richness; moreover, that research stream has rarely taken steps towards a keener understanding of intersections between religion, religious traditions and public policy. As a consequence, debates on the categories of secular, secularism and secularity are limited to discussions on crude distinctions between the separation of private and public spheres, without regard for contemporary discussions on varieties of secularism, the emergence of post-secularism as a descriptive term as well as a mode of governance, and the redeployment of religion into a richer societal landscape where, as Charles Taylor states, it is one among many options in the collective knowledge and meaning-making pool. This is quite clear in Portugal, where the religious field has faced significant reconfigurations since the early 1990s. Moreover, corporatist modes of intermediation bring secularism to the fore as a relevant conceptual tool to scholars envisioning the emergence of new formations of the secular in polities where the usual tropes of secularization theory were hardly ever applicable. The Portuguese polity is an interesting test-case in this regard, as its regulatory environment regarding religion has evolved largely according to governance procedures that have at their core normative visions of what is secular, non-secular and perhaps post-secular. The interplay between these categories in a largely unknown conceptual territory and empirical context is thus the object of this paper.

### *Financialization in the Backyard: Shrinkage, Welfare State Restructuring and New Housing Investments*

The paper discusses the interplay of local planning policies, welfare restructuring and global financial markets in the "making" of social segregation. It builds on an empirical study in Halle-Neustadt, a shrinking New Town in East-Germany and uses a mix of survey data, interviews and document analysis and as well as fieldwork.

In Halle-Neustadt, the paper argues, different developments come together: First, Neustadt has experienced dramatic population losses, which stimulated large scale demolition programmes as well as planning policies which aim to transform parts of the neighbourhood to a green space. Second, Neustadt has experienced two waves of privatisation in the last two decades, leading to a complete change of ownership structures. Thereby, municipal and cooperative owners have been largely displaced by national and international financial investors which hold their stock as an asset and aim on short-term gains, rather than long-term development. Third, welfare cuts have put more pressure on welfare-recipients to accommodate in cheapest housing available on the local market which led to a "business-model" profiting on low, but state-subsidized, rents in peripheral estates.

The paper discusses how these developments work together to produce new concentrations of poverty households in a prototypical shrinking city. With this, we expand on the already fairly developed debate on the financialization of urban development and provide new insights on (a) financialization in shrinking, low-demand markets, and (b) the relation between planning, state-restructuring and financialization in a German context. We demonstrate that the political economy of housing follows different dynamics here which are owed to both the weak-market situation and the path-specific restructuring of the German planning and welfare system. We conclude that research should put the state more into the centre of explanations and take different paths of state restructuring as well as different socio-economic contexts more serious.

### *ICT Infrastructures For Social Public and Political Participation*

Diffusion and deployment of high-speed Internet and related services are considered a key element for fostering a smart, sustainable and inclusive growth and taking advantage of a digital single market for households and businesses and overcome the digital divide.

This contribution is bound to explore the link between ICT diffusion and smart growth, putting in evidence how high-tech information technology is a necessary but not a sufficient condition for a true smart development. By means of first-hand quantitative as well as qualitative data deriving from the research project, conducted in Piedmont region in 2010-12, and also on European and national surveys on ICT diffusion this paper explores to what extent ICT can really induce high intensity knowledge activities and services able to promote social participation and cooperation.

This paper will highlight how a cooperative game between the different social, institutional and economic actors can improve the quantitative and qualitative diffusion of ICT infrastructures and give rise to effective vertical (interaction among Regions, provinces, municipalities) and horizontal (interactions between institutions, public companies and non-profit organizations) forms of e-government and e-governance aimed at creating a social and cultural capital. Furthermore on the base of 40 case studies of territorial Wi-Fi facilities it will be put in evidence how the creation of these infrastructures, highly placed in a territorial context, can manage to create a social model which combines technology and technological capabilities with social relations, giving rise to interesting forms of cooperation among social actors in promoting both the growth of citizens services, new economic innovative activities and interesting forms of participation.

### *Contrasted Cases: Childcare in France and Germany*

#### **Contrasted cases: Childcare in France and Germany**

Children under six need adults to take care of them and teach them the basics of social life, which they also learn by themselves in playing – a very serious occupation. Sociologically speaking, childcare organisation is not only about who will take care of a given child, but also through which kind of *social relation* with him/her. Razavi's *care diamond*, used by Ochiai to compare childcare organization in East Asian countries, distinguishes four main types of social relations. In continental Europe also, ways of organising childcare differ widely. In some countries: Portugal, Spain, Italy, Ireland, but also Germany where public childcare for young children is almost non-existent, the traditional 'familialist' pattern remains. Thus women as mothers have no choice but to stay home (or remain childless). By contrast, in Scandinavian countries but also in France *public* care of children is highly developed and subsidized; mothers can keep their job and pursue their career (or study). The French *école maternelle*, local preschools where children from age 2 to 6 are taken care of by well-trained personnel during 'normal' working hours, is a success story. While free of charge and *not* compulsory, 98 % of children aged 3 to 5 attend it. For the nation's budget the cost is 5.000 euros per child/year, totalling 0.8 % GNP. But as a result French (and Swedish) birth rates are 50 % higher than the German one. Children in France do love their neighbourhood's *maternelle*; and this is where children from migrant parents, who do not speak French at home, learn it. Of course it helps them when entering elementary school, compared with migrants' children in 'familialist' countries who will only start learning host society's language at six.

### *Why Empirical Sociology Needs Life Stories*

#### **Why empirical sociology needs life stories**

Whatever continent they live in, women and men will act so as to try and make their life better. This universal tropism orients most of their individual *courses of*

*action*: the succession of steps an individual actor takes to try and reach one of her/his significant goal(s). Indeed it takes planning, mobilizing information and means, finding support, focusing efforts, anticipating obstacles, (re)defining tactics and strategies to move a project forward through months and years. Examples are: getting a degree; looking for a decent job; moving upward in organization ('career'); finding a place to live; attaching to oneself a desired partner; buying a flat; raising a child (long and tricky course); divorcing; changing one's job; setting up one's own business; fighting an illness; getting rid of some addiction; becoming an activist of some cause; emigrating and settling in another society... All these courses of action aim ultimately at changing one's *social status*: from student to graduate, unemployed to employed, bachelor to married, childless to parent, ill to healthy, from passive to active citizen... In a constructivist perspective, millions of such courses of action contribute together powerfully to shape societies and their history. However *none* of empirical sociology' standard methods has been designed to observe a course of action. Indeed it takes *narrative* interviewing with actors to try and reconstruct, admittedly with imperfections, what they *did*, with whom, in which context(s), how they did it (and why). For instance, only through series of (focused) life stories – the damned method? – collected in the same *social world* may one understand sociologically what are its inner workings, how they are re-produced, how they change. Furthermore these informative testimonies will cross-check each other, solving several validity issues.

[john.berten@uni-bielefeld.de](mailto:john.berten@uni-bielefeld.de))

#### *Social policy by numbers – numerical tools in global social policy making*

The paper investigates the role of a special class of tools in the formulation of global social policy: the use of numbers and quantification. We argue that numerical tools, beyond their technical function of supporting decisions, shape or even constitute the 'social' in the global sphere, and that they enhance the legitimacy of policies that make use of them. We draw on recent sociological theories of quantification and numbers, on world society theory and on the constructivist theory of social problems. Empirically, the paper flows from an ongoing research project on basic social protection worldwide, a field replete with quantitative tools of policy formulation and implementation. We compare three types of international organisations (IOs) as to the degree and the varieties of numerical tools they use in designing and spreading social protection policies worldwide: lending IOs (World Bank, Asian Development Bank, the latter producing the Social Protection Index for Committed Poverty Reduction); standard-setting IOs (ILO); and non-governmental advocacy IOs (HelpAge).

We pursue two questions: In which ways are social problems and related social policies constructed by numerical tools as globally comparable and applicable? How do numerical tools create legitimacy for policies advanced by IOs, making up for the lack of electoral legitimacy (e.g. the strong role of quantitative communication in achieving the unlikely global consensus on 'social protection floors' by the ILO in 2012)? Overall, we hypothesize that these practices change the meaning of 'the social' as compared to conventional national social policies, initiating socio-technocratic 'policies by numbers' in both global and national arenas.

Key words: global social policy, world social theory, policy by numbers, international organisations, international non-governmental organisations

#### *Figures of Hope in Supporting Terminally Ill Relatives*

The 'end-of-life' notion doesn't really make any sense to relatives who take care of a seriously ill person, even when the latter suffers from a life-threatening disease. The risks of aggravation of the physical or mental condition and the bare perspective of death always go hand in hand with a kind of hope that organizes the horizons of thinking and influences the ways of acting. This term of 'hope' does not here refer to afterlife or religious representations. Rather, it refers to an analytical category useful for understanding the ways these close relatives support the ill person as well as the relational balance between all the individuals concerned: as early as a diagnosis of a potentially fatal condition is made, what kind of emotions are suitable to be shared with the ill person? Is it necessary to intensify one's presence? Is it appropriate to communicate openly with children, friends or coworkers? For how long? And on which grounds is it possible to assess the consequences of actions taken and attitudes adopted during this period of time filled with uncertainties? This presentation will address these questions. It is based on an ongoing empirical research, entitled "Supporting a dying relative: between working and end-of-life care" (September 2012 – August 2015) and fi-

nanced by the Swiss national science foundation, through its national program on end-of-life ([www.nrp67.ch](http://www.nrp67.ch)). Drawing from about sixty in-depth interviews with informal carers who conciliate their professional activity and the support of their ill relative, this communication aims at presenting an analysis of how the various components and forms of the 'hope' category segment and organize the day-to-day life during this period of temporary vulnerability, a period that can be obviously associated with the 'end-of-life' denomination only after the ill person's death.

[ludovic.bertina@gmail.com](mailto:ludovic.bertina@gmail.com))

#### *French Catholic Environmentalists and the Church: Suspicion, Expectations and Mutual Reliance*

The French Catholic environmentalists are in an ambiguous position halfway between political ecology as supported by the Green French Party and a Catholic field largely hostile to any environmental issue. It results from this position an aversion to political commitment, as I could perceive it during my qualitative survey of forty French catholic environmentalists met in Catholic movements concerned by the environment.

Far from leading to a denial of any political commitment, Catholics avoid the obstacle, and promote a commitment of the Church on environmental issues. Sometimes seen by activists as a political force able to mobilize a significant part of French population, they also highlight Church skills as international actor capable of producing a meta-political discourse overstepping the borders that can be understood by all Christians in the world.

The Church of France faces these expectations, positioning itself as a concrete objective and neutral actor, ready to restore a democratic dialogue between the government and environmentalists (especially in Bure, future center of nuclear waste disposal, or at Notre-Dame des Landes).

The links developed between environmentalist believers and Catholic Church illustrate, in a specific way, the complexity of relationships between social movements and institutions. Far from being reliant to the institution, (Cf. D. Hervieu-Léger, 1979), there is an indivisible bond that connect institution to social movements. In theory, the political commitment demanded by activists should be confronted to the expertise wanted by religious bodies. However, this polarity is not absolute. And inevitably it ends up, at the crossroad, with an interdependence that will result in a form of commitment in the expertise wanted by Catholic institution concerned about the "signs of the times" (Cf. W. Ossipow, 1978) while the discourse of militants called by the institution turns into expertise to remain audible. (Cf. S. Ollitrault, 2008).

#### *Parent-Child Relations in Young Adulthood: Evidence from Switzerland*

In times of economic crisis, insecure labour markets and the rising importance of tertiary education, young adulthood is characterized by prolonged dependency from the parental generation, making it necessary to renegotiate the subtle balance between autonomy and attachment. While parental resources like socio-economic status or cultural capital are well known to shape the career opportunities of young adults, research about their influence on ties between adult children and their parents still remains sparse. However, recent relevant additions to the Swiss *TREE* survey ("Transition from Education to Employment") now offer the opportunity to investigate intergenerational family relationships of young adults.

This study will therefore focus on two concepts of intergenerational solidarity that seem salient and stable across the life course as well as through the layers of society: affective solidarity (emotional closeness) and associational solidarity (contact). How do the crucial transition markers, such as the achievement of financial and residential autonomy, influence parent-child bonds? Will ties loosen, once independence is established? Or does the relief of achieved autonomy actually enhance feelings of attachment? In what way do individual, familial and societal determinants explain different patterns?

The overall hypothesis, basing on need and opportunity structures of individuals and their parents, suggests that financial or residential dependence of young adults strains the intergenerational relationship, whereas a (financially) secured situation leads to higher emotional closeness. Using the *TREE* panel data, multivariate analyses of the relationship between 26-year-old respondents and their parents have been conducted. The results support the main hypothesis, but also show remarkable differences in young adults' intergenerational family relations, both due to life course events and broader familial and societal contexts.

**BERTOOG, ARIANE\*** (University of Zurich,  
[bertogg@soziologie.uzh.ch](mailto:bertogg@soziologie.uzh.ch))

*Transitions in Regional Context: Structural and Cultural Difference and the Influence of Family Ties*

**Transitions in Regional Context: Structural and Cultural Difference and the Influence of Family Ties**

Ariane Bertogg ([bertogg@soziologie.uzh.ch](mailto:bertogg@soziologie.uzh.ch))

Rather than a state, Switzerland can be viewed as a number of diverse regions with different languages serving as natural borders. Cultural and economic exchange with the respective neighbouring countries has contributed to intensify that diversity. Due to low poverty and a stable economy, youth unemployment rates are relatively low in comparison with other European countries. Nevertheless, parental resources shape the career opportunities of young adults and thus their integration into society. With the rising importance of tertiary education, adolescents remain dependent from their parents for a longer time before they manage to establish independence.

Using data of the Swiss survey *TREE* ("Transitions from Education to Employment") this paper analyses young adults' transitions in their specific regional context, focusing on coresidence respectively residential independence. The research is guided by following questions: Are there different nest-leaving patterns in different regions? How can one explain these differences with cultural and structural features of the regions? Are there similarities with the neighbouring countries? And last but not least: What role does the family play in these decisions?

Several studies suggest that there is a strong link between family cohesion and parent-child-ties and a successful accomplishment of the major transitions during adolescence and young adulthood, respectively the timing of their occurrence. Therefore an interplay of parent-child closeness and young adults' moving-out-behaviour can be assumed, which will also be considered in the analysis.

The analysis of the situation of 26-year-old young adults shows remarkable contrasts between the regions as well as gender gaps (with women leaving earlier than men) and reveals a broad influence of cultural (e.g. religion) and structural (e.g. employment insecurity) factors as well as familial influence.

## RC47-769.16

**BERTOLO, MARIA CARLA\*** (RC47, [carla.bertolo@unipd.it](mailto:carla.bertolo@unipd.it))

*Subjective-Life As Protest and Change*

In late modernity we observe a relocation of places of conflict: the higher locus of resistance against subjection and dominion seems to reside in the "personal subject". Given the impossibility for a Movement, as known until the '90s of the last century, the change takes the form of a process for empowerment, self-reconstruction (integrating emotions, sensations, sensitivity, reason), and recognition of their own expectations, needs and wishes, for a life that one believes it is worth living.

The Subject is the encounter of the individual with self-consciousness; a self-production, accomplished through reflexive processes for subjectivity and individuation. Becoming a Subject requires efforts to sustain the ability to look at oneself and assume responsibility in the absence of meta-protections (religion, ideology ...). This call for the possibility to tap into emotional, cognitive and symbolic resources which are no longer available in the market-society, in order to address and support a process between two poles: the deconstruction of Me (social determinate) and the growth of one's own conscious individuality, which is a prerequisite to the action for a socio-cultural change.

An exponentially increasing number of women and men react to contemporary civilization by choosing Body-Mind-Spirit practices in which women and men can find resources for a claimed *subjective-life*, coping and opposing the dominant Western economic-cultural orientations. A turning point, necessary for the reconstruction of subjectivity and self-determined life which has to do with states of consciousness, emotions, sensations, feelings, ethos and involvement in social matters.

From a survey on people engaged in activities like Yoga, I can argue that their concern doesn't mean an utilitarian individualism nor an expressive individualism, but a way to generate space and contents for a relational subjectivity. Values, symbols and practices B-M-S are sources for substantiating the inter-fusion between meaningful relations and autonomy: a movement of "subjectivities-in-network".

*What Roles for French Fathers in Different Familial Arrangements?*

Over the last few decades, family arrangements have become more diverse in France: mono-parental, same-sex, migrant, bicultural and step families. This new context redefines the roles of fathers within the family and outside, in relation to work and social and care institutions.

Within the framework of a research project about parenthood (with the financial support of the French National Family Benefits Fund), we used data from the French longitudinal studies of children (more than 18 000 children born in 2011) and we interviewed 60 families of different types: large, with step-mothers and step-fathers, migrant or bi-cultural and same-sex families. We chose families with a new born baby because birth situations put at stake family roles and the links between families and institutions are reinforced at children's birth.

According to our first results, the major differences between the family types involve the form of parenthood: more or less reflective, authoritarian or negotiated relationships, more or less linked to gender.

The communication explores different ways of being a father, in relation to family structures, from two perspectives:

- How do fathers contribute (and want to contribute) to children's care and education?
- What do mothers expect from fathers?

Key words: fatherhood; families; institutions; France

**BESIO, CRISTINA\*** (Technical University of Berlin,  
[cristina.besio@tu-berlin.de](mailto:cristina.besio@tu-berlin.de))

*The Research Project and Academic Careers*

This contribution analyzes "researchers" as an important type of knowledge workers. We focus on the "research project" as a widespread form of financing and coordinating research activities not only in the natural sciences, but also in the social sciences and even in the humanities. The institutionalization of project work transforms the practice of research, which no longer takes place as a "freely roaming" activity guided by the interests of the scientists, but as a sequence of clearly defined tasks delineated by deadlines and milestones.

In this context, one may ask: Do projects change academic careers as well? The hypothesis is that they are relevant in different respects:

1. Projects require new competences. As projects should be carefully planned and monitored, researchers must be able to behave as managers. Moreover, in order to obtain project grants and to communicate results, it is necessary to have the ability of translating complex findings into convincing statements.
2. Projects also influence scientific reputation, which no longer relies exclusively on publications, but also on project funds obtained.
3. At the beginning of academic careers, projects provide more people the chance to engage in research activities and be socialized in science practices in an early phase. Later on, projects allow more experienced researchers to obtain funds to engage in autonomous research on specific issues.
4. Since project planning and financing require time, the number of academic positions with managerial and administrative tasks increase in both universities and funding organizations.

Under certain circumstances, project work opens up new opportunities and scientists become an autonomous "self-entrepreneurial" workforce. In other cases, researchers experience these new arrangements as a burden. We analyze in particular how projects affect women's careers.

**BEST, HENNING\*** (Leibniz Institute Social Sciences,  
[henning.best@gesis.org](mailto:henning.best@gesis.org))

KRONEBERG, CLEMENS (University of Cologne)

*Two Versions of the Low-Cost-Hypothesis: Theoretical Foundations and Empirical Implications*

This paper critically discusses the theoretical foundations and empirical implications of the low-cost-hypothesis (LCH), and extends the hypothesis. The LCH postulates that the effect of attitudes on behavior varies with the costs at stake in the situation. The effect is deemed to be higher in low-cost-situations, compared to high-cost-situations. We argue that a closer look at the literature reveals two distinct versions of the LCH, which have not been disentangled so far. The first, "simple" version can be derived from a standard expected utility model. In this model, attitudes and tangible behavioral costs exert independent effects on the net utility of the action alternatives. A conditional effect of the attitudes that depends on the behavioral costs only exists with respect to the probability of choosing an action alternative. However, this dependence of marginal effects on the actor's initial level of utility or probability holds for any independent variable or utility argument. A second, "specific" version of the LCH postulates a variable-specific interaction effect between attitudes and costs. We point to the problems of previous approaches to deriving such a specific hypothesis and identify dual-process-theories as an alternative theoretical foundation that allows understanding the limited scope conditions of the specific LCH. The paper carries important conclusions for empirical applications of the LCH in diverse fields of sociological research and, more generally, for the decision-theoretic analysis of social action.

**BESTE, JONAS\*** (Insitute for Employment Research,  
[jonas.beste@iab.de](mailto:jonas.beste@iab.de))

*Dynamics of Income and Living Standard*

In poverty research, many different approaches of measuring poverty have been developed. The most basic distinction is between indirect and direct approaches. Indirect measurement concentrates on the resources available, while direct measurement tries to capture an actual deficiency. The resource approach based on income is the most popular indirect measure. The standard of living approach provides a direct way of measuring poverty. It refers to goods of the household and the pursuit of activities of household members.

The living standard is generated primarily from resources. However, similar resources must not lead to a comparable living standard. There are several reasons responsible for differences in the transmission. In addition to individual preferences, also debts and assets, support networks, education level, household composition and regional differences can affect this process.

At the transmission of resources into living standard also the course of time is of central importance. Despite strong fluctuations in income the living standard can stay on a nearly constant level due to foresighted economic activities. Even during periods in which the income falls (e.g. unemployment) the living standard can still be kept at the previous level and decreases only delayed.

This paper examines the relationship between available resources and the actual living standard of households over time. This implies the following research questions:

- How does the living standard respond to changes in the resources? Do households fit their living standard at temporary changes in income or do changes in living standard more depends on long-term changes?
- Are there differences between several dimensions of living standard?
- How do debts, savings, networks and education affect the living standard?
- And what is the short-term and long-term impact of changes in employment status?

For empirical analyses the Panel Study 'Labour Market and Social Security' (PASS), a longitudinal data set for Germany, is used.

*Mesurer Objectivement Le Handicap : Fiction Juridique Ou Utopie Contemporaine ?*

L'objet de cette communication concerne la construction juridico-administrative du handicap. En Suisse, l'essentiel des prestations sociales auxquelles peuvent prétendre les personnes en situation de handicap dépendent de l'assurance-invalidité (AI), qui prévoit des compensations « en nature » (principalement orientées vers la réadaptation) ou « en espèces » (sous la forme de rentes) en cas d'atteinte durable à la santé. L'AI s'appuie sur une conception avant tout économique du handicap, conditionnant le droit aux prestations à l'existence d'un préjudice financier qui se veut démontrable. Le traitement administratif des demandes consiste ainsi à vérifier l'existence d'une incapacité permanente de travail, à en quantifier l'ampleur puis à en déduire le manque à gagner correspondant. Pour être reconnu comme invalidant, les « désordres corporels » qui fondent la demande de prestations doivent entraîner une diminution manifeste de « la capacité de gain », conformément à la définition juridique de l'invalidité.

Cette communication porte ainsi sur une utopie d'un type particulier : celle consistant à vouloir mesurer les atteintes à la santé d'autrui sur la base d'une appréciation externe, réputée neutre et objective. En m'appuyant sur un corpus de données provenant de dossiers administratifs, de l'observation directe de pratiques d'enquêtes ou encore d'entretiens réalisés avec des médecins de l'AI, j'illustrerai les principaux leviers de cette « utopie en acte » qui, pour répondre à l'exigence d'objectivité et de lutte contre la fraude, tient soigneusement à distance la parole que les bénéficiaires potentiels développent au sujet de leur propre situation. A travers l'examen des dispositifs de preuve et de la construction des faits administratifs, il s'agit d'interroger les enjeux de l'ingénierie institutionnelle qui accompagne la vérification du droit aux prestations d'invalidité.

*Scientific Career Trajectories – How the US-Academic Field Affects the Researcher's Habitus*

It has been shown that there exist crucial inequalities in the distribution of financial resources among US-universities. With Pierre Bourdieu's concepts of field and capital universities can be described as actors competing for economic and symbolic capital what is also reflected in ranking positions. Research has also indicated that the level of prestige of US-universities plays an important role for academic career opportunities of PhD candidates. Based on Bourdieu's field theory I (1) constructed an academic field that indicates these inequalities on a macro

level by using Multiple Correspondence Analysis (MCA) to identify different prestigious groups of US-universities. In a second (2) step, data on researchers' career trajectories have been analyzed with event history analysis to detect significant factors of career paths according to the prestige of a researchers university. Finally (3) interviews with researchers shed light on different formations of habitus according to their position within the academic field.

*Interrogating the Encounter of Facets of Nationalism(s) with the 'Difference'*

This paper intends to address the discursive and representational facets of nationalism and their encounters with the 'different' ethnic-religious identities. Moving beyond the analyses on the repressive and restrictive aspects of nationalisms, critical scholars draw attention to 'how nationalisms are lived out in quotidian life, how these become part of the taken-for-granted social environment, how nationalisms produce particular accounts of history and cultural identity' (Puri 2004:60) [1]. New approaches, as Ozkirimli (2010) [2] terms them, underline the discursive and contested traits of nationalism and national identity. These approaches were mainly affected by the 'cultural turn' in social sciences which ensued by the increasing social movements in the late 20<sup>th</sup> century that questioned the homogeneity of national cultures and identities (*ibid*: 169). This emphasis on the heterogeneity of cultures and identities also led to the academic quest for the new forms of nationalism(s) in different contexts which also stands for the discursive and representational facets of nationalism(s) and their relation to minority groups.

Following Finlayson's (1998:105) [3] emphasis on the need for examination of 'the contents of nationalist discourse' and idea of exploring 'the ways in which nationalism(s) operates as a specific kind of ideological discourse', I aim to scrutinise how "Armenian question" in Turkey becomes a field to construct, reproduce and also challenge the discourse of nationalism(s) and nationhood. The critical discourse analysis of media representations of Armenians, as an ethnic and religious minority group, in Turkish national newspapers and the interviews concerning their ideas and daily experiences will allow me to explore the discursive and representational aspects of nationalism(s).

*Scales of Power: Garment Workers and Transnational Campaigns in Lesotho, South Africa and Swaziland*

This paper explores worker agency in garment factories in Lesotho, South Africa and Swaziland. The interest is to identify various sources of power mobilised by workers and the scale at which such power is exercised in order to respond to the extremely low wages paid by garment manufacturers, as well as a lack of state regulation of wages and working conditions. In the case of Lesotho, major campaigns around labour codes of conduct were used, but often stood in at the symbolic level for real factory-based organising – i.e. the global at the expense of the local. In the case of South Africa, a country that is seen as one with progressive labour laws, trade unions focus their efforts on institutional representation in national bargaining forums and "buy South African" campaigns at the expense of local level organising or transnational campaigns. In Swaziland, trade unions experimented with labour codes of conduct, but retreat into local organising after a negative experience with a supplier to the retailer Wal-Mart. The comparison highlights how different sources of workers' power related to scales of organising and suggest possible ways in which these could be mobilised more successfully in future. At the theoretical level, the paper engages the literature on labour geography (Andrew Herod and others), as well as sociological work on sources of worker's power (Eric Olin Wright, Beverly Silver, Jennifer Chun, and my own work with Rob Lambert, Edward Webster and others).

*Dysfunctional Schools: A Mentoring Framework*

During transformation (1994 onwards), the South African government instituted different interventions within Education as an attempt to redress learner

achievement and throughput. However, various researchers and opinion leaders still view the quality of education in South Africa as disparaging and deficient as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring framework through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises the generic mentoring framework can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of sustained transformation which gravitates towards whole school development and culture that envisions quality education for all.

#### *Purpose Capital© a Path for Self-Empowerment*

This study highlights importance assessment of self-relations as basis for deconstruction and reconstruction of behaviours to enable inner effectiveness. Using the outcome of a self-relations assessment and providing insightful understanding of purpose capital a path toward inner effectiveness can be encouraged within those that attend this module. All respondents indicated growth within their self and other relations; greater effectiveness within their workplace and enhanced relations in family and social life. Respondents also indicated a difference in self-perception and self-esteem and between intra- and interpersonal relations after attending the module. It was concluded that interventions aimed to enhance inner effectiveness should consider opportunity for self-relation assessment, inner reflection, reflexivity, and deconstruction-construction of self-behaviours.

#### *Socio-Economic Consequences of the Population Aging*

A number of able-bodied, young population has a large impact on economic growth factors of a country. In case of equation of demand and supply on labor market young educated population becomes the most important factor of social and economic growth in main spheres. Moreover a number of population of military age is important for bringing up to strength of Armed Forces. And, as the experience of Israel, the USA, Canada and Australia shows a gender does not play such a big role as before.

In order to examine an impact of an age structure on an economic sphere of a country we have looked through the data of research institutes and the Congress of the USA. The results of such examination allow us to draw a conclusion that an optimal age structure of population needed for economic growth and growth of consumption is situated within 35-54 age limit. Expenses of elderly people are considerably lower than those of able-bodied population which allows us to draw a conclusion of long-term geopolitical dividends of countries having young population.

On the contrary, intensive processes of population ageing and reduction of able-bodied population have a reverse effect on economic growth tendencies. Most countries with ageing population face a problem of budgetary shortfall for paying pensions, tax levy reduction, growth of costs in the spheres of social and medical services for elderly people. Thus, ageing population has a very negative effect on geopolitical and economic potentials of a country.

#### *Beyond Love: Gender Power and Desire Amongst Young Africans*

African teenage sexualities are often framed within the context of death, danger and disease with little attention to the affective investment young people make within relationship dynamics. In the context of HIV, sexual coercion and gender violence, the continued focus on teenage sexualities within the context of structural inequalities, gender power imbalances and the suffering of young women in particular remain important particular in South Africa where sexual violence has become a concern of epidemic proportions. Beyond representations that frame teenage sexualities exclusively within the domain of suffering, this paper seeks to demonstrate the ways in which teenage Africans make claims to love and the social processes through which love is articulated. Drawing on an interview study of teenage Africans in the KwaZulu-Natal province of South Africa, the paper shows how the construction of love creates possibilities in relationship dynamics that alter familiar versions of masculinity and embedded within care, negotiation and agency. Such newer versions of sexuality however are in tension with the continued vulnerability faced by young women in particular emphasizing the importance of attending to gender ideologies, economic dislocation and masculine power. Addressing teenagers as sexual subjects, as agents of love instead of agents of violence alone and constrained by social, gendered and economic processes is important in working with and developing interventions that seek to increase sexual well-being amongst young Africans.

#### *Young Girls In South Africa: Addressing Sexual Risk In Primary Schools*

What role can primary schools play in the social protection of young children and how does this role interface with the home? This paper focuses on the ways in which a primary school and mothers of young children in extreme settings understand their role in addressing and supporting the social protection of young children from sexual violence. It draws on qualitative interviews with teachers, school managers and mothers to explore the school's potential in addressing sexual violence beyond the traditional role of teaching and learning to explore both the opportunities and the limitations of the school's pastoral work. The potential for the school to address issues around sexual violence was notable in teacher positioning within feminized understandings of their role in care-work which permits children to disclose sexual violence, well as a strategic interconnectedness of the school with the Department of Social Development. However, the opportunity structures are limited by the fear of intimidation in reporting sexual violence leading to silence, the prevalence of violent masculinities within the community, the lack of support from the education department and the inability to interface with parents to protect children. On the other hand, the interviews with the mothers illustrate their constricted gendered roles where grinding poverty, the cultural accommodation of male power, and gender inequalities intersect to reduce their ability to act and protect children. Given the burden of the complexity in supporting and protecting children from sexual violence the solutions cannot be left to the home and schools alone. A combined strategy that supports schools in protecting children from sexual violence, that interrogates the effects of gender power inequalities and economic conditions need to scrutinized to address and reduce girls' particular vulnerability to sexual violence.

#### *Utilization Of Shamanistic Services For The General Ailments In The Eastern Region Of Nepal*

Medicine, to the western mind, is based on the notion that science, with its methodology of research and experimentation, is potentially capable of combating any sickness and curing any disease. (Blustein, Harvey S, 1976)<sup>1</sup>

**Objective:** This study was designed to explore the practices of shamanistic services for the illness in the population and trace the plausible reasons for doing it.

**Methods:** A cross-sectional study was designed where total of 1985 women of reproductive age were interviewed face to face covering 10432 total population. The population surveyed was rural area in the six districts of Eastern Nepal.

**Results:** Substantial families were found to be utilizing the services of faith healers especially for the indigenously defined diseases which are attributed to evil forces or god and goddess. Modern health service utilizers gave the reason of service satisfaction, traditional healers gave the reason of tradition and beliefs and risky service utilizers gave the reason of affordability and accessibility for utilization of the services. Diseases defined indigenously were found to be

cured effectively that disease having somatic origin among the illnesses treated by shamans.

**Conclusion:** Despite of various efforts by government in delivering the basic health care in the community, large proportion of people in the rural area are still utilizing the services of faith healers and believed firmly that some indigenously defined illnesses are cured effectively. A Multidimensional study on these people and their healing practices can explore the rationale behind utilization and relevancies of their services in modern health care which will ultimately help to combat the evil of health life in the Eastern region.

### *Gender Discrimination: Female Feticide, Infanticide and Leisurely Attitude Towards P.N.D.T Act*

Gender discrimination: Female feticide, Infanticide and leisurely attitude towards P.N.D.T Act

Women consisting half of the human population have been treated as weaker sex in all the societies of India. They are victims of feudalistic institutional, traditional practices, cultural prejudices and religious extremism. The gender inequality is of grave concern to the issue of human development. According to UNICEF about 30 lacks case of female feticide are recorded every year. According to available statistics, about 12 million girls are born in India every year but 1.5 million girls die within one year. Another 0.85 million do not live to see their sixth birthday. Every sixth female death is specifically due to gender discrimination. It is alarming to note that India's sex ratio among the children aged 0-6 years declined from 976 females (1000 males) in 1961 to 914 in 2011. It is lower than the overall sex ratio of 940 females for 1000 males in 2011. Many districts have been recorded sex ratio of female child lesser than 850. This is the most disappointing indicator of the census 2011.

This paper aims to identify various factors responsible for feticide and infanticide and the leisurely attitude of educated woman towards P.N.D.T Act 1994 and 2003.

This study is being conducted in Varanasi city famous for old traditions and religious beliefs. This paper is based on the study of 1000 educated women. I have also included secondary data taken from different reports. Interview Schedule is being used to assess the attitude of educated women selected by random sampling.

The paper concludes with some suggestions which can be utilized for solving the problem of declining sex ratio in not only India but also the countries facing the same problem. To protect the right of girl child is to restore the universal justice.

### *Women Empowerment and Reproductive Rights*

#### Women Empowerment and Reproductive Rights

The historic convention on the elimination of all forms of discrimination against women (CEDAW) was followed by fourth world conference in Beijing in 1995. It was accepted that substantive equality for women is essential. Beijing platform for action (BPFA) was a commitment by nations towards the advancement of the cause of women's movement and also to eradicate all kinds of gender discrimination. In spite of the fact that being signatories to various international treaties and conventions little has been done at the grass root level for the empowerment of women.

In Indian context women have been facing many problems of gender discrimination, violence, disempowerment and are not aware of their reproductive rights that includes the right to health care, the right not to be subjected to violence, discrimination, the right to determine the number of children and their spacing and to be free from ill-treatment and sexual violence. Reproductive rights are founded on a number of international agreements including human rights documents.

#### Objectives –

1. To study the awareness of reproductive rights among women.
2. To analyze socio, economic, cultural factors influencing reproductive rights.
3. To analyze the attitude of educated women towards reproductive health and its dimensions.
4. To assess the implementation of reproductive rights and women empowerment.

The paper comes up with solutions and awareness programs which should be taken to protect reproductive rights for the equality, dignity and empowerment of women.

The study is being conducted in Varanasi city, one of the oldest cities of the world and full of old traditions and cultural values. I have selected 100 graduate women from different fields. I have also adopted case study method and selected 10 working women. Interview Schedule is used for the study.

### *Psycho-Social Experiences of Scheduled Caste Students at Higher Education Level in India*

Education in Indian tradition has not been open to all the downtrodden sections like scheduled castes. Even today, they are the victims of isolation, untouchability, social stigmas, and the trap of the poverty in the society. With the protective discrimination policy in place, few of them are getting education and very few of them do have access to higher education. Most of the scheduled caste students are suffering from the problems, like discrimination, humiliation, deprivation, sub-ordination and domination at different levels of education. On the way of exploring the psycho-social experiences, this study intends to look' is looking at the patterns of discrimination relating to humiliation, ill-treatment, stress and mental block experienced by the scheduled caste students at higher education level in the State of Odisha. This study is based on exploratory research; data triangulation is the method for the data collection. Thematic analysis and descriptive statistics are the data analysis procedures for this study. The bitter psycho-social experiences have a devastating effect on the academic achievements and performances of scheduled caste students at higher education level in the state of Odisha (India).

### *Gender Inequality and Changing Perceptions about Women in India*

The mandate for equal rights for men and women is embedded in India's Constitution. Gender equality is a constituent of development as well an instrument of development. It is a constituent of development as no country can be deemed developed if half its population is severely disadvantaged in terms of basic needs, livelihood options, knowledge access, and political voice. It is an instrument of development because without gender equality other goals of development like poverty alleviation, economic growth and environmental sustainability will not be achieved.

Gender inequalities hinder development. Ignoring gender disparities comes at great cost to people's well-being and to the country's abilities to grow in a sustainable manner, to govern effectively. Social hierarchies are embedded in social institutions which are designed to perpetuate them through control over the environment and the socio-economic resources. The gender inequality is manifested by the unequal power relations between women and men. Equality of control enables women to gain improved access to resources. Social equity can enhance livelihood security, productivity and sustainability of all members in building their capacity for their own development.

Equality of participation and control are the necessary pre-requisites towards gender equality. There are many special challenges still faced by the women, but progress has been made when gender equality is viewed over the longer term. Much more can be accomplished, however, when women's contributions are valued by society as a whole, when they have a more prominent role in decision-making, and when women and men work in partnership to achieve these aims. In this context, the paper attempts to highlight the gender inequalities and identify the recent trends in women's social and economic development in India. The paper will be based on secondary sources of data.

4 Keywords: Gender Inequality, Changing perceptions, Women in India, Women's development.

### *El Método Delphi y La Evaluación De Riesgos En Nanotecnología. Estudio De Expertos En Argentina*

Argentina cuenta con cuatro instituciones que se encuentran entre las veinticinco más productivas de Iberoamérica en nanotecnología: el CONICET, que articula la mayor parte de las relaciones dentro de esta red, la Universidad de Buenos Aires (UBA), la Comisión Nacional de Energía Atómica (CNEA) y la Universidad Nacional de La Plata (UNLP) [1].

Ante el incremento de la investigación y desarrollo de las aplicaciones de nanomateriales en Argentina, - en sectores tan variados como industria, agricultura, salud, defensa -, surge la necesidad de elaborar una investigación siguiendo los lineamientos y resultados de un estudio realizado en Alemania [2]. La evaluación en lugares de trabajo específicos, permitirá atender a las medidas de seguridad apropiadas y contribuirá a acrecentar el diagnóstico de riesgos y la creación de indicadores de evaluación estandarizados en el campo de la nanotecnología.

El principal desafío que se presenta a la Argentina es potenciar las conexiones entre academia y producción, ejecutar proyectos conjuntos de I&D dirigidos a consolidar las pequeñas y medianas empresas nacionales y su inserción en nuevos mercados regionales e internacionales. Un equipo de investigación perteneciente a la Maestría en Seguridad e Higiene Ocupacional de la EST -Escuela Superior Técnica- Ejército Argentino[3], está preparando dicho estudio bajo el método Delphi para ampliar las bases del conocimiento en la materia y ofrecer subsidios para generar un manual de buenas prácticas que acompañen el principio jurídico de precaución en la Argentina.

### *The Functions of Social Drinking and Eating in East Asian Societies*

East Asians are widely known for social networking on drinking-eating occasions. Does one's social drinking-eating networking (SDE-Net) generate similar or different kinds of social capital across East Asian societies? Analyzing the 2012 EASS module on network social capital, we explore sociological determinants and consequences of SDE-Net in China, Japan, Korea, and Taiwan. On the determinants, our ongoing analysis is designed to include both variables of the respondent's attributes (e.g., gender, age, education, & class) and those about their social relationships (daily contacts and New Year socialization). On the consequences, we will examine the extent to which SDE-Net affects an individual's financial decision, social engagement, and political participation. Our analysis is guided by a micro-level theory of social capital mobilization (Lin 2001), a macro-level theory of modernization (Inkeles 1974), and the accumulated knowledge of East Asian social networks (Bian and Ikeda 2013).

### *Network Social Capital in East Asia: An Eass Survey Module*

Contributing to the hotly debated concept of social capital, we developed an East Asian conceptual framework of network social capital for the EASS 2012 survey. The core idea is that East Asians are the cultural creators of social networking. This means that East Asians are both heavily dependent upon their interpersonal networks for social engagement and social trust, among other forms of social action, and make considerable instrumental and emotional efforts in cultivating new ties in order to expand, adjust, and enrich network social capital. There are sixty questions constructed in our 2012 EASS module on network social capital. This presentation will focus on the contents of and hypothesized interrelationships among these measure, with the support of preliminary findings from the data analysis.

### *From Here to Utopia?: Ethical Tourism, Civil Society and Global Citizenship*

In the light of increased interest – academic and public alike – in the potential of travel to create a platform for transformative social engagement and ethical consumption, this paper offers a considered reflection on notions of cosmopolitanism and global citizenship and how these reveal themselves in the context of 'ethical' and 'responsible' forms of travel. Specifically, it interrogates claims that certain 'ethical and/or 'responsible' forms of travel carry with them the potential for progressive change aligned with cosmopolitan political ideals, and that such travel reflects the rise of a new 'active citizen' exercising a global civic responsibility and moral commitment towards the people, places and cultures they visit. Consideration is also given to the manifold ways in which the discourses and practices of ethical tourism have aligned themselves with a variety of new social movements, geared towards bringing about more just, sustainable and participatory forms of tourism. Finally, it considers whether the embrace of non-mainstream forms of tourism as a means of re-balancing the unequal relations of power between mobile and immobile peoples, based on the ideals of justice and reconciliation, genuinely heralds the potential for tourism to contribute to the nurturing of civic and participatory forms of citizenship. In the process of doing

so, it asks whether such forms of travel and civil society advocacy do indeed serve to extend and re-shape the meaning of citizenship, constituting new forms of solidarity and transnational bonds that are not reducible to 'ethical consumption' or enacted primarily through the mechanism of market exchange.

### *It's the Party, Stupid! Why the Success of Female Politicians Depends on the Intra-Party Democracy*

It's nothing new that women in politics throughout the entire world are under-represented. In addition to numerous other factors, this phenomenon is often explained by macro-structural factors such as party affiliation. A central theme in regard to the effect of parties on the representation rate of women is that the odds of women in political parties on the left side of the spectrum are particularly high. Furthermore, the effectiveness of the proportion of women in politics is discussed. It is also necessary to realize that, in the studies, particularly female politicians are observed and the nomination perspective is spared. But the nomination perspective is very important; on this level especially, women must overcome the barriers placed within certain parties, which are often higher than in others. That's why focus on the nomination perspective can explain the underrepresentation of women in the various parties. The aim of this paper is therefore to examine this question in an analysis of the nomination processes and electoral successes of women in 15 countries at 18 national elections with data from the Comparative Candidate Survey (CCS). The analysis shows that party affiliation provides a key contribution to explaining the underrepresentation of women in politics. However, it is also clear that the electoral system in particular, or the question whether the candidates compete on a constituency or on a party list, provides another key contribution to this explanation.

### *Exploitation and Resistance: A Comparative Analysis Of The Chinese Cheap Labour Electronics and High-Value Added IT Sectors*

China is frequently considered to be an example of successful developmental catch-up. And yet, the country's impressive growth rates are to a large extent based on the super-exploitation of its workforce. In recent years, Chinese workers have started to resist these exploitative conditions. The purpose of this paper is to analyse the dynamics of resistance within the wider structural conditions of the global political economy.

Empirically, this paper will provide a comparative analysis of the electronics sector based around Shenzhen with the IT sector in the area of Shanghai. While the former is predominantly based on cheap labour, assembling electronic goods for export – see, for example, Foxconn and the assembling of Apple products – the latter relies on a more skilled workforce manufacturing high-value added goods. To what extent and in what way condition these rather different locations within the global political economy the form and contents of resistance in these two sectors?

Conceptually, this paper will be based on a historical materialist, neo-Gramscian analysis, which starts through an analysis of the social relations of production and the different ways of how these two sectors are integrated into the global political economy. In turn, this will then allow us to identify key social class forces and provide the structural background within which these forces struggle against exploitation at the work place, the form of state and world order levels of activity.

### *Selling Places: The Right to the City in an Age of Market Oriented Urban Management and Planning*

Since the beginning of the so-called cities financial crisis, market oriented policies have been adopted by local administrations in order to deal with the constraints of such crisis. Moreover, this strategy has been taken in different places as the only way to face the complexity and also the increasing problems linked to the ongoing process of world urbanization. This paper discusses such process in Brazil, taking as case study Rio de Janeiro metropolitan area, specifically the case of the "Operação Urbana Consorciada" (which can be freely translated as "Urban Consortium Operation") of Niterói city – former capital of Rio de Janeiro

state – a huge urban project that intends to privatize the management of its central business district. The paper gives an overview of how such project has been presented and discussed with local dwellers, highlighting the strategies and struggles that have emerged from the process. It shows that the adoption of strong market oriented strategies to face financial crisis has brought huge constraints to those groups who have been struggling to the right of city, spoiling of democratic decision-making processes. The paper has three parts. The first one gives a broad view about the present Brazilian urban process, focusing the discussion on Rio de Janeiro city, mainly in its docklands area seen as a model to the cities located in its metropolitan region. The second part presents the case of the "Operação Urbana Consorciada" of Niterói city. Finally, as preliminary conclusions, it shows how urban democracy has been considerably spoiled, considering the market oriented urban policies.

*Validating Segregated Observers: Mapping West Bank Settlements From Without and Within*

In this paper, I argue that segregation affects the process of collecting empirical data, and therefore shapes the content of scientific and technological knowledge. Through a comparison of the maps of Israeli settlements made by two premier non-governmental organizations (NGOs) in the West Bank, one Palestinian and one Israeli, I demonstrate how segregated landscapes not only separate populations, but they also serve to reproduce disjunct observations among cartographers who map areas, and use technologies, that ostensibly are the same.

Since 1967, Israel has occupied the Palestinian Territories and hundreds of thousands of Israeli settlers have moved into segregated communities in the West Bank. However, it is difficult to produce reliable statistics for the expansion of these settlements, because this requires the ability to make observations on the ground—a practice which is often as segregated as the region that cartographers seek to map. Israeli efforts benefit from the infrastructure the state provides, and take place largely *within* Israeli settlements, thereby depicting Palestinian areas from *without*. In contrast, Palestinians work *within* Palestinian communities, but must map Israeli settlements from *without*, including recording the locations of buildings which they may only be able to view from a distance. In theory, such segregation should not affect the data collected, but in practice it has a profound effect on the resulting maps.

This research contributes to work which analyzes the role of international forms of knowledge in entrenching the Israeli occupation. In addition, to Science and Technology Studies (STS) and the sociology of science literatures, I provide a conception of the ways that empirical knowledge is geographically produced, as well as socially constructed. Overall, I aim for a better understanding of how the materialities of knowledge interact with imbalances of power, with the goal of enabling landscapes that are more epistemologically diverse.

*The Role of Religion in Economy: A Theoretical Analysis*

The analysis of the role of religion in welfare, often directs our attention to the study of the relationship between religion and economy, and its various aspects in particular. Sociologists, seeking for more complete analysis, often refer to the models of economic theory and applied economics incorporating the element of religion in their analyses. However, insufficient understanding of the nature and structure of theoretical economic models, frequently leads to the development of an approach that omits or misrepresents many important elements, such as the nature of human action, the implications of the religious adherence for the action, etc. In our work we present some results of our research on the relationship between economics and religion in the context of models of Economics of Religion, and their weaknesses. Based on this study, we can observe the major flaws of the adoption of some theoretical models of religion, mainly due to the differences and reductionism in the anthropological assumptions which support, necessarily, all these models. Hence an sociological study, which adopts, implicitly or explicitly some anthropology, will be conditioned by the statements adopted by other science theorist. This paper, in addition to identifying the elements that need to be taken into account in the study of the relationship between the economy and religion, seeks to define the theoretical elements of the underlying anthropologies concerning the economic and sociological models to provide a framework necessary for the scientific analysis of the role of religion in the welfare of the people.

*Feeling and Acting 'Different': The Role of 'Affect' in Indigenous Facilitators' Film-Making*

Participatory video can raise new levels of self-perception and can contribute to forming, transforming and reconstructing the identity of those involved (Bloustein, 2012; Luttrell, Restler and Fontaine, 2012). What emotions, in particular, are provoked by facilitating a PV project in one's own community?

This paper draws on empirical materials (videos and photostories, interviews, informal conversations, participant observation, email exchanges) collected within the ongoing Project COBRA (<http://projectcobra.org>). Five indigenous facilitators have been hired on a 3 years contract to help their communities in Guyana to identify 'community owned' indicators of sustainability through the use of PV. Work with facilitators has repeatedly highlighted emotional issues: pride, satisfaction, strong commitment, but also anxiety, fear of gossiping disapproval, sense of social pressure and fear of community jealousy, suspicion or stigma. These emotional states can be understood in the light of the multiple identities which being part of a PV project can engender. Being paid a salary for promoting community participation, being trained in using advanced and unfamiliar technologies, having access to transportation and fancy communication tools, as well as having to engage with a new, abstract, foreign language through the project theoretical frameworks can make facilitators to be perceived (and perceive themselves) as "insiders and yet outsiders" in their own communities. This has the potential to introduce an emotional distance between themselves and their family, friends and neighbors, and can lead them to conceal certain aspects of their emotionality.

The paper analyzes diversity of emotional states of the five COBRA facilitators, and how they are tied into a variety of relations, practices and exchanges, and bound to the micro-dynamics of community life. In so doing we investigate the distinctive 'emotional terrains' within which these facilitating experiences are embedded in.

PENG, YEN-WEN (National Sun Yat-Sen University)

*Unisex Toilets for All? the Sexual/Gender Ideology of Public Toilets in Taiwan*

The purposes of this paper are to analyze the progression of Taiwan's gender-equal toilet movements, experiences of sexual minorities in using public toilets, and attitudes of the general public toward using unisex toilets.

In 1996, some feminist students groups in Taiwan launched the Women's Toilet Campaign using the slogan and action of "Occupying Men's Toilets." They successfully attracted public and media attention, and the government promptly amended the related building codes. Concerns of number and quality of women's toilets, however, presupposed the legitimacy of sexual segregation of public toilets without challenging the dichotomy of sex, the reinforcement of stereotypical gender performance and the inconvenience for transgender people. In 2009, several LGBT groups initiated another toilet campaign advocating for unisex toilets in public space. It has not earned any response from the government yet, but how the general public and transgender people react to unisex toilets is a question worth probing.

The problems brought by sexual segregation of toilets (Browne called it genderism) has been increasingly recognized, but the resistance from the general public to use unisex toilets is seemingly huge. Kogan suggested to introduce a third toilet labeled "other" where people with disability, parents with children, LGBT, or anyone who refuse to use traditional toilets would feel comfortable. Without abolishing women's and men's toilets, this alternative may be acceptable for the general public. However, the problem of ghettoization still exists. Sexual minorities might be questioned more severely when using traditional women's/men's toilets.

Public toilets are typical spaces segregated by sex. By examining the unisex toilets dilemma, this paper will reflect on the legitimacy of sexual-segregated public spaces, social exclusion, and the mutual construction of gender and space.

**BIJEN, GORDON\*** (University Of Western Sydney, [g.bijen@gmail.com](mailto:g.bijen@gmail.com))

*Designing "Community": The Significance Of Place and Urban Design In Public Housing Renewal*

In the US, UK and Australia public and social housing providers are embarking on large-scale estate redevelopment projects. These projects are often presented as an urban panacea - intended to solve a large and multi-faceted urban 'problem' - namely the tenant and asset management challenges that have left many estates as 'homes of last resort' in recent decades. In Australia, these 'renewal' projects are achieved by using mechanisms within the planning system to increase dwelling density on-site. By changing the tenure profiles to increase the 'social mix', the state hopes to attract private investment through the introduction

of private market housing into formerly public housing estates. These policy objectives will see public to private housing profile changes, with the introduction of up to 70% private dwellings in some projects (Housing NSW, 2011). The built form of these states is undergoing massive change, with new construction replacing existing dwellings. Previous research has sought to understand the impact of social mixing policies (Arthurson, 2002; Briggs, 2008; Goetz, 2000; Imbrosio, 2008) or have championed a heavily materialistic understanding of urban design and renewal (Jacobs, 1961; Newman, 1972; Duany and Plater-Zyberk, 1994).

This research seeks to uncover the significance of 'place' and 'urban design' for residents and built environment professionals in estate redevelopments by approaching these concepts from three directions: *experience*, *discourse* and *spatial form*. This 'trialectic' (following Lefebvre, 1991) draws on three distinct research traditions: phenomenology; discourse analysis; and spatial analysis. This approach is being taken in an effort to induce the multiplicities of place and present the lived experience of residents through the public housing renewal process.

#### *Welfare State or Participation Society: 40 Years of Monitoring the Social State of the Netherlands*

Since 1973 we monitor the life situation and trends in quality of life (QoL) of citizens in the Netherlands. Using and combining a broad set of social indicators, this gives a good overview of the trends in the social state of the country. In this 40 years period the welfare state in the Netherlands has changed continuously and profoundly. The recent economic crisis is just one in a row of global crises in this period. It may be argued that not only financial constraints and risks caused by the crisis forced to reconsider the welfare state. Fundamental shifts in societal views on the role of the state in protecting the vulnerable and on citizens' own responsibilities too were drivers for renovating the welfare state. In 2013 the Dutch government introduced the term 'participation society' that should replace the welfare state. Citizens should be more active to take responsibility and to support their fellow citizens when they are in need. In this presentation we analyse major changes in social (in)equality and social policies in the Netherlands since the seventies and we discuss whether the welfare state is at danger.

#### *The Meaning of Home and Practices of Home-Making: An Example of Turkish Migrants Living in Germany*

Drawing on twenty qualitative interviews and five participant observations at home settings with migrants from Turkey in Germany, this paper will illustrate the meanings attributed to the idea of home. For most individuals the idea of home 'often remains as the uninterrogated anchor' (Morley, 2000:2) and indicates stability and is attached in location, whereas mobility challenges all these ideas about home. If home is conceptualized as both a physical space as well as a symbolic perception of belonging, it is obvious that international migration experience alters individuals' ideas of home which this paper discusses.

The preliminary results suggest that respondents perceive home as a 'shelter', 'a place where they can be themselves'. In addition, how they decorate the home space will be elaborated. For instance, the living room is considered to be 'the most important room' because although it is a private space, it is the 'public' space of the home.

**BILECEN, BASAK\*** (Bielefeld University, [basak.bilecen@uni-bielefeld.de](mailto:basak.bilecen@uni-bielefeld.de))

#### *Who Cares the Elderly? Migrant Women at the Crossroads Between Family and Welfare State*

Drawing on qualitative interviews in ten households in southern Turkey, Antalya with employers of live-in migrants who care the elderly in the family, as well as the migrant caretakers, this paper examines the dynamic relationship between migrant caretakers and the elderly with an intersectional perspective taking into account of age, gender, class, and ethnicity. Given the country's changing migratory patterns from being an emigration country to an immigration and transit country, Turkey attracts migrants from its neighboring countries at a steady increase rate, which makes it as an interesting case.

Elderly care is closely interlinked with a country's formal welfare provisions and informal protective schemes. Turkey is usually described as having Southern welfare model, characterized by low level state penetration into the social sphere as well as lack of social assistance provisions. However, with the introduction of recent healthcare reforms, this perspective needs further elaboration not only on the formal regulations level but also at the access and use of such regulations of the individuals. Therefore, family and welfare policies in the area of domestic

work and care will be elaborated. Despite novel social assistance schemes, the existing cultural system in Turkey still favors caring the elderly at home particularly by women, who are usually daughters, daughter-in-laws and recently migrant women to some extent. Migrant women are usually from former Soviet Union such as Armenia, Georgia, Moldova, the Central Asian Republics and to a lesser extent Russia and Ukraine, who often work undocumented in tourism and household sectors.

#### *Deployments of Intersectionality in Masculinity Studies: A Power/Knowledge Analysis*

Intersectionality is increasingly used as an analytical tool to complexify the categories of men and masculinities, to shed light on the processes producing marginalized, racialized and deviant masculinities. The paper examines the deployments of intersectionality in masculinity studies and its effects to attend to three problems that are encountered in the current state of feminist scholarship on intersectionality: 1. the increasing delegitimizing of intersectionality through its conflation with identity politics and/or the framing of intersectionality as endorsing essentialist identity categories; 2. the whitening of intersectionality in which the critical race analytics becomes optional; 3. the depoliticizing of intersectionality through its disciplinarization and institutionalization. Based on an extensive analysis of the ways in which intersectionality is used in masculinity scholarship, the paper asks whether these problematic tendencies are also observed in this field of knowledge. If so, what are their specific configurations and their specific effects? Does the current engagement of masculinity studies with intersectionality help to consolidate or to confront these problematic tendencies?

#### *Social Mobility and Fertility: Parity Transitions in Sweden*

This study explores the relationship between social mobility, both *intergenerational* and *intragenerational*, and fertility in Sweden over the last decades. Scholars have developed a rich set of theories and mechanisms through which mobility plausibly influences family size. The original focus was on upward mobility and the relationship was expected to be inverse. After three decades of research in the mid-20<sup>th</sup> century, literature that focused on trying to disentangle these mechanisms yielded surprisingly few consistent results, which was argued to be due to unaccounted variation in the institutional settings, theoretical ambiguity as well as significant limitations in the methods and data at the time. This project aims to revive the debate using better equipped data and methods as well as expanding the theoretical discussion to include the important work from the last decades on gender, work and family.

In prior mobility and fertility research, scholars analyzed the total number of children alongside the occupational class of adults and their parents at selected moments in childhood and adulthood. The timing of these measures reflected data availability rather than theoretically relevant moments in the life course, which meant researchers could not observe the order of events. This very important limitation of past research can be avoided in this project because Swedish data provide information on the timing and order of these childbearing and mobility events.

Specifically, the Swedish Level-of-Living survey (LNU) data (2000, 2010) provide the opportunity to study both inter and intragenerational mobility and fertility, which has scarcely been studied in Sweden. This study will be based on the biographies of the 1950-1985 birth cohorts, which means childbearing will be observed roughly from 1970-2010. Both men and women will be analyzed separately.

#### *The Transition Generation's Entrance to Parenthood: Patterns Across 27 Post-Socialist Countries*

The age at which men and women enter parenthood has increasingly become of interest as we witness the postponement of parenthood across a variety of contexts. A large literature has developed on factors related to the age at first birth, both in terms of variation over time within a population and between subgroups of a population. Fewer studies have tried to explain variation across countries in the average age at entering parenthood, despite large and persistent differences in countries sharing contextual similarities and differences. We aim to fill this gap

and learn more about how social, cultural and economic forces influence when adults experience one of the most significant life course events.

We use micro-data and contextual indicators to explore differences in the timing of parenthood over a wide range of post-socialist countries. We focus on men and women who entered adulthood during the transition from communism in 27 countries. These countries represent six diverse geo-cultural regions. Using multi-level hazard models, we observe the differences between countries in the average timing of parenthood and how much can be explained by compositional factors, values and attitudes. We also observe the influence of economic context on first conception risks. Our results indicate that later entrance to parenthood in Eastern and Southeastern Europe compared to Russia, Belarus, Moldova and Ukraine is related to positive economic developments. Earlier entrance to parenthood in Central Asian Republics is related to religious affiliation. We find no significant differences in the timing of parenthood for the Caucasus, whereas no measures account for the earlier entrance to parenthood in Baltic States.

### *Migrant Women and Their Families in Italian Urban Contexts: Substantive Citizenship, Gender Regimes, Meanings of Social Spaces*

The global crisis concerns the socio-economic, institutional and symbolic structure of European citizenship. It reopens crucial questions about the stratification of native Europeans, already mixed by the migratory flows from South to North. In contrast, the strategies practiced by the migrants reveal them as European citizens, even if enrolled in not-completed, differentiated and fragmented forms of citizenship. The dynamics of urban life transculturation have produced practices and meanings for the recognition of rights and differences that constitute new forms of substantive citizenship. The city is organized memory. The every-day life of migrant women and men with their families – that embed their work and caring relations, their transits and spaces of aggregation and their use of the institutions – has contributed to redefine the sense of the places of everyone, from "the feeling of home" to the territories recognized as physical and symbolic homeland or as land of exile. In this context, meanings, practices, social hierarchies related with gender relations, class distinctions, and cultural-linguistic stratifications has been also redefined. The Gender Order reveals a multiplicity of arrangements that challenge the universalism of the European Human Rights System and the permanence of stable identities.

The paper – based upon qualitative research conducted in medium-small Italian cities characterized by high migratory density – concerns the ambivalences and tensions within the citizenship practices of migrant women and their families. The strategies adopted by the migrants to cope with the crisis contribute to redefine their way to remain in Italy as well as their transnational networks. "To feel at home" and "to feel at homeland" are invested with a multiplicity of contemporary meanings, some of which indicate forms of resistance to the critical circumstances.

### *Symbolic Violence within Different "Gender Regimes" in the Europe of Globalized Migrations*

This paper discusses Bourdieu's approach to the reproduction of symbolic violence towards women within different "regimes" of women's freedom considering different pattern of accessibility to women's body. We are especially concerned with the risk of racialisation of gender-based violence through emphasis on "our" rights, in the mainstreaming European discourse. How is symbolic violence towards women reproduced in the Europe of globalised migrations, in which regimes of women's freedom confront supposed forms of traditional patriarchy? However, in various groups of women, the meanings applied to "violence" may diverge greatly, according to normative and cultural perspectives, and in particular as regards family control over women's bodies and gender display. Migrant women are exposed to a double challenge of loyalty: to their communities of origin, and to the system of presumed universal rights. The two systems are represented as internally homogeneous, but groups or communities of migrant origin have highly differentiated patriarchal characteristics. Moreover persisting phenomenologies of violence against women, even in the most egalitarian European countries, highlights how post-patriarchal patterns still reproduce symbolic violence. The post-patriarchal structure of gender relations is far from being questioned. The theoretical key to this work aims at overcoming interpretative dualisms and neo-colonial approaches on symbolic violence towards women considering the pluralism of European societies, without losing sight of the distinctions within the hierarchies of symbolic power between men and women, native-born and migrants, dominating and dominated. Bourdieu's approach on symbolic violence allows us to re-interpret classic feminist theories as the "traffic in women" of Gayle Rubin, the sexual contract of Carole Pateman and the Iris Young's discourse on gendered experience of living body.

### *Twitter As a New Battleground: AK Party Vs #Occupygezi*

Established in 2001, The Justice and Development Party (AK Party) is a political group that has created extensive impact on the political scene in Turkey by manufacturing a new type of hegemony. Since 2002, AK Party has increased its vote share in all three general elections and earned political power for "establishing government", "governing" as well as "restructuring political-social-economic and cultural institutions". For this purpose, AK Party also facilitates ICT for the restructuring of the society, politics and economy and embeds the technological change and transformation to its self-transformatory politics.

In May-June 2013 there was an "occupy!" movement first in İstanbul, then Ankara. This movement labelled as "#occupygezi", "#direncezi", and flourished in whole social media. This social media movement can be considered as the most visible quake in AK Party's longstanding hegemony. For Party, this movement has been perceived as a "coupdetat", defined in mainstream media in a parallel context. User generated content produced by the citizens during movement are misinterpreted by the Party elites. Regarding with this perception, the Party strategically labeled social media as "evil media/troublemaker" by using a conspirative discourse against itself. Moreover, the ruling elites of the party guided and organized their supporters to occupy social media for the sake of Party and the Prime Minister Erdoğan. As a consequence, the hegemonic struggle between the party and the "others" (i.e. activists, NGOs, opposition parties, authors, artists, academicians) transmitted in a new environment, in this case Twitter. In this paper we will briefly summarize both the political positions taken among Gezi Movement and the ideological stand point (such as conservative democracy) of AK Party. In order to clarify and analyse this hegemonic struggle, the Twitter usage modalities of Erdoğan and some members of the government will be examined by discourse analysis both during and after Gezi movement.

## RC22-386.1

**BINDER, STEFAN\*** (Utrecht University, [s.binder@uu.nl](mailto:s.binder@uu.nl))

### *'Positive Atheism': The Production Of Non-Religion Through Philanthropy*

In current debates in the sociology of religion a consensus has constituted itself which rejects the juxtaposition of the religious and the secular as a stable binary. The alternative is then a perspective which takes into account not only the simultaneous co-production of religion and its other but also empirical findings which seem to disrupt the binary altogether. The proposed paper takes this as a starting point for analysing the activities and conceptual rationales of the *Atheist Centre*, a South Indian non-religious organization dedicated to "social change" via the eradication of "superstitions" and the propagation of "positive atheism as a way of life".

The activities of the *Atheist Centre* are situated in a genealogical and pragmatic context of socio-religious reform in India where philanthropy and social activism are the constitutive frames within which the secular-religious binary is both challenged and reproduced. The *Atheist Centre* characterises itself as part of a larger "Gandhian" movement for social change and betterment. The paper retraces the complex transformation of the explicitly spiritual discourse of Gandhi's philanthropy – in itself an attempt to transcend the secular-religious divide – into a project of "secular social work". Furthermore, it will be shown that the philanthropic activities of the *Atheist Centre*, i.e. practices based on and striving to overcome social inequalities, are not just incidental but foundational and operative for this transformative process.

This paper argues that the historical production of the secular is (1) played out through the construction of binary antagonisms as well as (2) simultaneous mediations or disruptions of these binaries and is always (3) embedded in structures of social inequality. The empirical case study retraces the historically and socio-culturally specific production of a conceptual distinction of "superstition" versus "positive atheism" which informs the idea of "ways of life" in need of eradication or propagation.

**BINDER, WERNER\*** (Masaryk University, [werner.binder@mail.muni.cz](mailto:werner.binder@mail.muni.cz))

### *Collective Intentionality and Methodological Individualism*

The concept of "collectivity" has been central to our discipline since its beginnings – just think of *Klassenbewusstsein* (Marx) or *conscience collective* (Durkheim). Nevertheless, the notion of collectivity has mostly been taken for granted and thus remained ambiguous and under-theorized to this day. What distinguishes a collective belief from individual beliefs shared by actors? Or is there no meaningful distinction? Even though collective forms of action and shared mental states should be of eminent interest for most sociologists, few attempted to theorize these concepts properly. In the last years, however, "collective intentionality" be-

came a hotly debated topic among social philosophers. The philosophical use of the term "intentionality" refers not only to the intention to act, but also to the content of mental acts such as believing, desiring or feeling. Drawing on the recent philosophical debates, I would like to analyze the concept of collective intentionality and discuss its ontological and methodological consequences. Starting from the extreme positions in the discourse on collective intentionality – which can be labeled "reductionism" and "holism" – I will primarily discuss John Searle's and Margaret Gilbert's accounts on collective beliefs and actions. Searle offers a strong reading of collective intentionality that claims to be compatible with methodological (and ontological) individualism. Gilbert stresses the importance of mutual commitments for the constitution of "plural subjects" which highlights the inherent normativity of collective intentionality. The arguments of both authors can be brought together in a sociological conception of collective intentionality that has strong similarities to the Durkheimian *homo duplex*. Collective states and actions always entail a normative component. Collective emotions and beliefs are not only shared, but one feels an obligation to share them. Though ontologically anchored in individual bodies, "collective intentionality" turns out to be a fundamental sociological term, underpinning such concepts as cooperation, norm and communication.

#### *Success or Failure?: Competing Concepts of Heritage Value in Lijiang Old Town*

It has now been six years since the Old Town of Lijiang, in Yunnan Province, UNESCO World Cultural Heritage Site since 1997, received a negative review from the World Heritage Committee's reactive monitoring team, citing the overuse of tourism and the exodus of members of the local Naxi ethnic group as having seriously detracted from the value of the Old Town as a World Heritage Site. Since that time, in heritage circles Lijiang has become a case example of World Heritage management gone wrong. However, within China both officially and popularly, Lijiang is considered one of Southwest China's greatest successes in bringing development to an impoverished minority area in the far reaches of China's borderlands. In this paper, I will review the different discourses present in the Old Town of Lijiang regarding the value of cultural heritage to demonstrate why UNESCO's failure has likewise been Yunnan Province's success. This includes elaborating the value of cultural heritage from the viewpoints of the World Heritage Committee, the Chinese State, and the tourism industry itself. Finally, I will describe what all this has meant to the Naxi people of Lijiang, and how the intersection of these varying values have come to be interpreted by and affect how Lijiang Naxi understand themselves and their relations with others.

**BINGMA, VANGILE\*** (University of Pretoria, [vangile.bingma@up.ac.za](mailto:vangile.bingma@up.ac.za))

#### *"You Mustn't Regret the Past, You Mustn't Fear the Future; You Must Rejoice the Present": Survival at the Margins*

Around the world youth are negotiating everyday life under difficult socio-economic and socio-political conditions. The consequence of the aforementioned has been a growing and protracted youth unemployment problem. Drawing on a qualitative case study that investigated male early high school leaving in a township in South Africa, this paper answers the following question: how do unemployed male youth negotiate everyday life?

The narratives of the male youth point to desperate conditions within which they negotiate daily survival. Furthermore, their observations of their social world provide anecdotes of what peers in similar circumstances are engaged in. The desperate conditions are captured by coping and survival strategies such as informal trading, cleaning garbage bins, substance abuse, theft and collecting scrap metal. The paper reaches the following conclusions: 1) the male youth are negotiating multiple-marginal-positions within their social world, 2) the state of "wait-hood" characterising their lives entrenches destructive social practices, and 3) the stalemate in policy direction around youth unemployment is not only perpetuating dependency, it is producing complex social problems that a finality in youth unemployment policy will not contain.

**BIRZLE, MAIKE\*** (University of Basel, [maike.birzle@gmail.com](mailto:maike.birzle@gmail.com))

#### *Coping Unpredictability – Hope and Orientation of Burkinabe University Graduates in Times of Uncertainty*

This research examines the self-concepts and strategies of action of university graduates in Burkina Faso, who find themselves in uncertain situations due to the vast unemployment rates. Motivated by the wish to find well-paid jobs, which will allow them to live the life they want to live and to meet the expectations of their

families and of society, they pursued university studies despite the costs and the expenditure of time as well as the unfavorable study conditions. Thus, university studies involve various risks, yet still the aspirations connected to an university degree outbalance the anticipated difficulties. University graduates are hoping for a golden opportunity, be it in the private or the public sector, bearing the possibility to fulfill one's wishes concerning the future.

Given their uncertain situation, university graduates face major difficulties in planning their life, yet they hope that their situation will change in the foreseeable future, be it by the grace of god or by the emergence of new possibilities. The hope for a possible, maybe unforeseeable change is what drives them in evolving various strategies which on the one hand might increase their chances on the labor market, but on the other hand also include certain risks.

Based on six months of empirical field research in Ouagadougou, this paper investigates how hope informs the anticipation university graduates have concerning their future life courses as well as the trust on which their navigation through omnipresent uncertainty towards an anticipated brighter future is based, and also on the various risks those strategies might contain.

#### WG01-895.3

**BISHOP, JOHANNA\*** (Wilmington University, [johanna.p.bishop@wilmu.edu](mailto:johanna.p.bishop@wilmu.edu))

#### *Collective Memory of Operating Experience*

The nuclear power industry has been in existence for over fifty years. Despite the mishap at Three Mile Island, the accident in Chernobyl, and the catastrophe at Fukushima, this industry with its self-regulating model has operated more safely and productively than most fossil fuel industries. The nuclear power industry is aware that its survival depends on its ability to share operating experience to prevent recurrence of past errors. This begs the question *How does the nuclear power industry use operating experience?*

Capturing and disseminating operating experience constitutes an organization's collective memory. Problems at one nuclear plant are documented and stored to be shared with other nuclear power plants. Lessons learned from Three Mile Island, Chernobyl, and Fukushima provide impetus for actions at all nuclear power plants as each plant analyzes its vulnerabilities. Identifying and sharing with the industry, a plant's potential for mishap and taking action to mitigate disaster becomes part of the nuclear power industry's collective memory.

The nuclear power industry's collective memory exists in its operating experience database, and becomes a living entity through the training function. Using case study methodology and extensive interviews with training instructors, this study examined how significant industry mishaps are remembered in the training function of one nuclear power station, and how remembering past operating experience informs a current nuclear power industry workforce.

#### *Managing Tolerable Risk: How Are Significant Organizational Mishaps Remembered in the Training Function of the Nuclear Power Industry?*

Retaining lessons learned from organizational mishaps is important to organizations that use high risk technologies. High risk technology organizations, such as the nuclear power electricity generation industry, rely on their collective organizational memory of mishaps to prevent future mishaps and protect the safety of the public. The 1979 accident at Three Mile Island (TMI) nuclear power plant was a defining moment in the nuclear power industry in the United States. Since TMI, the nuclear power industry has emphasized using operating experience to remind workers potential mishaps. The 1986 explosion of the Chernobyl nuclear reactor developed an awareness for the need for international collaboration in establishing uniform operating standards for nuclear power plants so as to ensure nuclear safety. The nuclear catastrophe at Fukushima in 2012 reminded the world once again about the risk of nuclear technology.

Using the theoretical lens of collective memory and commemoration, this study explored how workers in the training department of the nuclear power industry retain memory of significant organizational mishaps by focusing on what workers pay attention to, what stories they tell about organizational mishaps, as well as how mishaps are categorized and commemorated, and the role management plays in helping to retain operating experience of significant events.

This case study combined interviews and document analysis, as well as ethnographic observations of training conducted at a nuclear power plant site to learn how significant industry mishaps were remembered.

### *Leisure, Tourism-Development and Environment Interface: Uttarakhand Tourism in India- Reflections*

Uttarakhand with an area of 53484 Sq. Km., is the ninth Himalayan state of India. Located on the fringe of two international boundaries, the state of Uttarakhand is known for its innumerable tourism destinations including various hill stations, wild life centres, national parks, adventurous sports and pilgrimage tourism centers. The mission of the state government is to develop Uttarakhand as a tourist hub and the 'tourism' as the core- sector for employment generation.

In this very context the main objective of this paper is to analyze, 'leisure, tourism- development and the environment interface' and its pervasive environmental, economic and social impacts on the stakeholders, the tourists and the people dwelling in the place of tourist destinations.

The study goes with this hypothetical proposition that, 'the sustainable tourism strategy can only serve the mission of tourism development along with its triple principles (the environmental, economic and the social) and also satiate the need and purpose of tourist.

The study concludes that; the leisure, tourism-development and environment are interrelated phenomena. It is the leisure that paves the way for tourism, and correspondently the tourism accentuates development and also accelerates the pace of infrastructural development to cater the need and objectives of the tourists as well as of the man power engaged with tourism practices. The consequential impacts of the whole of the tourism practices are viewed on; (i) the over all environment of the place of tourist destinations (ii) the economy of the stakeholder and of the human resource (iii) the society and culture of the places of tourist destination, and (iv) the tourists. The ground realities exhibit that, despite incomparable prospects in tourism sector the target of sustainable tourism development is unachieved rather hampered in the state of Uttarakhand due to nonobservance of the universally 'accepted principles of sustainable tourism'.

### *Experiencing Obesity in an Unequal World: The Muted, Desiring Body Under Neo-Liberalism*

There is a well-documented social gradient in obesity, seen clearly amongst socio-economically disadvantaged women and children, but also amongst men. The prevailing discourse from contemporary health policy, views obesity (and also the gradient) as an outcome of an individual's failure to exercise control over appetite and desire, irrespective of social position. Whilst this is challenged from political economy perspectives where the gradient is seen as a product of living in an obesogenic environment, there are few qualitative studies which locate the experiences of living with obesity in the context of social inequality.

This paper addresses this, drawing on data from biographical interviews with obese adults living in socio-economically disadvantaged parts of northern England. We found that participants sought to position themselves as responsible, autonomous agents when accounting for their weight and we describe the often painful biographical work undertaken where food practices and life histories were positioned in opposition to mainstream discourses of personal failure. We suggest these accounts can be viewed as weak forms of protective resistance, against 'hostile' anti-obesity discourses.

We also describe two additional themes. Firstly, we report on participants sometimes visceral but muted accounts of the enjoyment and desire associated with consuming food. We suggest that whilst these practices can be understood as providing sources of comfort and pleasure for self and others, they also had another purpose which was to establish spaces for agency and control in lives shaped by disadvantage. Secondly, we highlight how 'excess' food consumption and 'poor' decision-making around food can be understood in the context of the growing literature around decisions made under scarcity and precarity. Finally, using Lazarato's notion of the 'entrepreneurial self' under neo-liberalism, we argue that living with obesity in an unequal world not only constructs embodied identities but also shapes capacities for discursive resistance and protection.

### *More Than a Club's President. Why Does the "Ethos of Honor" Still Pay off in Portugal and Brazil?*

The personas of the presidents of clubs still remain under-scrutinized in sociological and anthropological literature on sports. Which is all the more surprising since clubs' management constitute places of (besides sporting) social, economical and political resources accumulation and trade, therefore being outstanding sites to observe how society and the specific worlds of politics and sport intertwine at diverse plans, situations and national and even international contexts.

The paper to be presented intends to contribute to fill this gap, focusing on two (major) illustrative cases in Brazil and in Portugal, Eurico Miranda, president of Vasco da Gama between 2000 and 2008, and Pinto da Costa, president of FC Porto since 1982. Incisively, the purpose is to show that historical and sociological restitution of such rather controversial characters – charismatic and often portrayed as "outlaws" by adversaries and diffuse social representations – cannot be accomplished apart from the study of deep-rooted transformations that both Brazilian and Portuguese societies faced in the last thirty years, including their inclusion in various power and culture worldwide networks, i.e., their participation in diverse global arenas.

In this setting, we shall favour an approach that allows us to enhance a straight comparison between Brazil and Portugal. We will then work from the assumption that the "ethos of honor" housed (or incorporated) in the successful management of both, Eurico Miranda and Pinto da Costa, can only be found in societies without a solid public sphere, i.e., societies in which the meaning of action and the conception of common good are not produced by an universal and codified morality; hence, societies pervious to "selective grandeur".

### *"Messi, Messi, Messi", Why Does Cristiano Ronaldo Hear What He'd Rather Not?*

It's not unusual for Cristiano Ronaldo to hear Messi's spontaneous calling when he goes to play away. But bringing up Messi's name to tease him has indeed happened in his own backyard. Just recently, while preparing to play an international game for Portugal in the northern town of Guimarães, a Portuguese fan annoyed him maliciously again giggling and crying softly for Messi. Cristiano Ronaldo, wisely, just walked away, skipping any kind of confrontation. Why is this so? What, concerning common thoughtfulness, separates both players? Why do fans feast on Ronaldo's celebrity figuration while leaving Messi to enjoy impressive widespread praise and cult?

The reason for this, we shall argue, has to do less with the icons they personify, or, in other words, the continual permeation of sport by entertainment coding, where "delay of gratification" is unwelcome, that shapes sports social worlds nowadays, or even a frantic dispute gathering diverse social categories about who's the best football player in the present day, than with a sharp opposition that divides the field of sporting (possible) grandeur. We refer to the antagonism between professionalism and amateurship, measured or assessed both through the sense of competence versus (self-)interest and by the sense of talent and vocation versus offstage hard work and training outcome. We'll be doing a sociology of football's recognition that shapes itself in a sociology of football's values and normative senses, or, in other words, a sociology of orders of worth, that piece together a unique hierarchy of social esteem. In doing so, we'll be probing expert and non-expert contrast representations of both Cristiano Ronaldo and Lionel Messi as we believe worth-yet-not-fully-fulfilled-sport's-greatness, as all identity "loci", is always congealed (or at least hardened) through comparative procedure and judgment.

### *Investments in Land – Balancing Profit, Aid and Ethics*

Norway owns and controls two large investment funds, the Norwegian Government Pension Fund – Global (GPF) and Nordfund. Both of these funds are involved in the agricultural sector and land investments in various ways.

Being one of the largest of its kind, GPF has a value of almost 4.7 trillion NOK (US\$780 billion) and holds close to 1.5 percent of the global equity market. On a day-to-day basis the Bank of Norway Investment Management (NBIM) focusing solely on profit and exposure to risk does investments on behalf of the Ministry of Finance. NBIM is investing broadly, and is not focusing on particular sectors. If GPFs invests in agriculture or land, it is merely a reflection of the market and the general rush for agricultural commodities and land. The ethical board of GPF monitors investments by NBIM. However, unlike tobacco, weapons production and companies involved in child labor to mention but a few, is not among the categories the ethical board are told to follow closely.

The much smaller Norwegian Investment Fund for Developing Countries (Nordfund) has a mandate to invest in profitable projects and sustainable businesses in

developing countries, focusing on both profit maximizing, and economic growth and poverty reduction in developing countries. When Nordfund gets involved in land-related issues, such as palm oil production, is done on the basis of close considerations related to economic growth and business opportunities in that area.

This paper looks closer at some of the paradoxes that surfaces when large investors are aiming at both ecologic and social responsibility and maximizing profits at the same time. We will also describe and discuss some of the existing mechanisms for influencing investment behavior of these large global players, both domestically through the government controlled bodies, and internationally through conventions such as the OECD ethical guidelines.

#### *The Capability Approach and the Agency / Structure Discussion in Sociology How to Understand Efforts to Combat Social Exclusion?*

This paper argues that the Capability Approach of Amartya Sen and Martha Nussbaum can enrich sociology by linking human agency and structure. Finding ways to capture the linkages between agency and structure (or alternatively; between micro and macro) remains a never ending story in sociology, despite efforts by some of the sharpest minds in the discipline. Proposed ways of capturing the linkages often turn out to be biased towards agency or structure, leaving the contours of the other vague and indeterminate. Alternatively, the proposed solutions are in practice blending or fusing structure and agency into one. The Capability Approach is frequently perceived as being individualistic, i.e. only concerned about the individual's effective freedom to live the life he or she has reasons to value and desiring to live. Sen do, however, emphasise that people's possibilities to convert given opportunities or resources into desired functionings do not solely depend on individual characteristics (e.g. having a physical or mental impairment) but also on the structures (e.g. of a physical, social or attitudinal nature) that people face or within which they find themselves. The paper clarifies how the Capability Approach can contribute to a better understanding of factors hampering or facilitating human agency – both individual and collective – and the processes reproducing or transforming the structures people face. As case the paper discusses the efforts of persons with disabilities to combat exclusion and achieve full participation in society on an equal basis with others.

**BLACK, GRANT\*** (University of Tsukuba,  
[grant.black@yahoo.com](mailto:grant.black@yahoo.com))

#### *Student Self-Concept and the College-to-Work Transition in Japan*

Although the youth employment rate for Japan compares favourably with other OECD-member nations, job seeking has been following a trend of increased risk. Changes in the labour market and hiring practices have meant the wearing away of Japan's traditional life-long employment system. For university graduates the process of securing employment has become more complex and is now fraught with greater uncertainties.

Along with a decline in Japan's position in the global economy, students in tertiary education have been recording declining interest in the international arena. To counter these trends, the government has sought to develop closer ties between universities and industry. The Ministry of Education, Culture, Sports, Science and Technology (MEXT) believes it can improve Japan's competitiveness by supporting the development of new graduates with skills ready for global business. Through competitive large-scale programmes such as Global 30 and the Project for Promotion of Global Human Resource Development, MEXT has made significant public investment in promoting internationalisation at selected elite Japanese universities.

This presentation will report on initial results from a survey investigating identity, individualisation and internationalisation for Japanese students in tertiary education at a large national university in Japan. The study explores student perceptions of internationalisation and global skills for their transition to the workforce. The study is important toward greater transparency for tertiary education in Japan on performance, internationalisation and employment outcomes.

A 40-question survey was developed in part based on questions from the UK Understanding Society study and recent global human resources surveys from Manpower and McKinsey. These were rendered into Japanese and added to a Japanese-language core of established biographical data questions. The principal research themes are: a) Student self-concept of employability skills/future employment; b) The role of the university for future employment; c) Internationalisation; d) Gender and national culture in the Japanese labour market.

**BLAIN, MICHAEL\*** (Boise State University,  
[mblain@boisestate.edu](mailto:mblain@boisestate.edu))

#### *The Cold-War As a Mode of Subjection: Power / Knowledge Dynamics in the Age of Empire*

Hardt and Negri (2000, 2009) argue that modern forms of Empire provoke power struggles among sovereign states for global hegemony as well as resistance from the multitudes. Actors who resist Empire are ritually defined as "terrorists" by the agents of the US power elite who are tasked with the management of contemporary Empire (Domhoff 2010). Blain (2009, 2012) argues two modes of power and subjection come into play in these power struggles. The first type is victimage ritual rhetoric designed to motivate masses to support warfare to destroy "the enemies of empire." The second type of discourse is associated with the social and psychological sciences and the bio-political practices of national security "experts."

A main finding was the role a small number of "terror" journals in the discursive formation "terrorism." They published many influential texts prior to the 9/11 attacks and WOT. They continue to exercise a disproportionate influence.

Table 1 Percent Influential Journal Articles (> 5) by Type of Journal Pre-9/11 (1960-2001) and WOT (2002-2012) in *Sociology Abstracts*

	Pre-9/11	WOT	Totals
Journal Type			
'Terror'	36.9	5.8*	11.8
Other	63.1	94.2	88.2
Totals	n = 63	n = 277	n = 340

Note: Source *Sociology Abstracts*, 1960-2011. \*Z test for column proportions, p < .05

In conclusion, two dangers are discussed. First, the WOT has reduced the problem of political violence to "terrorism" and the ritual victimage of Islamic subjects. A second danger is the way the dynamics of Empire tends to reduce knowledge to its auxiliary function in the project to produce powerful regimes of governmentality, intensifying surveillance and the detention of the "suspicious." On the other hand, there are grounds for hope. A huge amount of critical research is going on in response to the WOT.

CLASTER, PATRICIA NEFF (Edinboro University)

#### *Racial/Ethnic Variations in Adolescent Aspirations: The Relative Influence of Parental Involvement*

Previous research on the occupational and educational aspirations of adolescents have noted that teenagers' desires in regard to their future statuses are often influenced significantly by family and parental characteristics. In this study, we examine the relative effect of parental involvement upon adolescent aspirations. This involvement comes in a variety of forms, including direct involvement (such as helping their child with their homework) and indirect involvement (such as participating in parent-teacher organizations). Using data from the High School Longitudinal Study, the relationship between parental involvement and adolescents' aspirations is examined, with particular emphasis upon racial- and ethnic-group differences. The analyses demonstrate that significant differences exist in the aspirations of adolescents, across the various groups, and that the social and cultural capital of parents vary substantially, as well. Asian and White adolescents are shown to have higher aspirations for educational attainment, and for working in a professional career, as compared to their African-American and Latino counterparts. Across all of the groups, significant gender differences are also shown, with female adolescents expressing higher educational and occupational aspirations than males. While structural characteristics such as household income and parental educational attainment are positively associated with adolescents' aspirations, parental involvement is shown to also be significantly associated, suggesting that the direct forms of social capital are, indeed, influential in the development of adolescent aspirations. Distinct racial/ethnic patterns are revealed in the findings, with cultural capital traits (e.g., language used in the family, recent immigrant status) being significant related to both levels of parental involvement and adolescent aspirations. Overall, the relationship between parental involvement and adolescent aspirations is shown to vary considerably across racial and ethnic groups. The results are discussed within a social capital paradigm, and the potential long-term implications for adolescent aspirations and eventual status attainment are addressed.

**BLANCHARD, JEAN-FRANÇOIS\*** (Université Européenne de Bretagne, [caudan.blanchard@aliceadsl.fr](mailto:caudan.blanchard@aliceadsl.fr))

*La Visibilité Dans L'espace Des Réseaux Numériques Est-Elle Un Avatar De La Corporéité ?*

Le domaine de la visibilité, ce lieu où l'on donne-corps en livrant à la perception cognitive, peut-il être analysé comme un terrain de convergence entre les formes sociales matérielles de corporéité et leurs avatars virtuels dans les techniques de l'information et de la communication ? Les aspirations à la visibilité – individuelle ou collective – dans l'espace des réseaux numériques ne s'abstraient pas de toutes formes de corporéité et de leurs attributs symboliques et esthétiques.

La communication se propose d'aborder cette question sous les angles anthropologique et phénoménologique. Le terrain étudié est constitué à partir d'un corpus de sites, blogs, réseaux sociaux dans un domaine d'usage précis : le web en langue bretonne (200 000 locuteurs). Il est complété d'entretiens. Les inférences entre langue, visibilité, corporéité seront explorées dans un contexte où les représentations du corps associées à la langue émergent comme une forme de filiation inversée. Symbolique et imaginaire interagissent autour d'une reconstruction identitaire dans des cadres sociaux. Sur le web, le fait linguistique se trouve étayé par un discours iconique articulé autour des formes sémiologiques du corps et son appartenance culturelle. Les registres empruntés par ce discours sont tantôt ceux de l'ironie, la dérision, tantôt ceux d'une représentation symbolique et esthétique – au sens kantien, porteuse de valeurs, tantôt ceux d'une idéologie traçant les contours d'une altérité. Les sources en sont les références du passé et l'espace créatif du jeu.

La médiatisation des formes de corporéité est ici en question. Le virtuel ne s'oppose pas au réel, il vient le compléter. Dès lors il est proposé dans une démarche heuristique de réinterroger les clivages tels que corps- esprit, nature-techniques et d'ouvrir l'espace des techniques du corps au champ de la perception cognitive dans les réseaux numériques dès lors qu'ils font sens et s'analysent en faits sociaux.

**BLANCK, JULIE\*** (Sciences-Po Paris-CNRS, [julieblanck@gmail.com](mailto:julieblanck@gmail.com))

*Mutual Influences Between a Social Movement and a Specific Organization in France: The Case of the National Radioactive Waste Management Agency (ANDRA),*

This paper aims at mobilizing the sociology of organizations and the sociology of social movements in order to analyze interactions and mutual influences between a social movement and a specific organization in France, the National Radioactive Waste Management Agency (ANDRA), about the technical deep repository project for radioactive waste. It deals with a key period for this organization (1989-1992), when the radioactive waste management system was called into question and faced a global crisis following a social mobilization.

The deep repository project was moving into a technical phase of geological exploration, with a local presence on four sites, which pushed the organization to confront local populations. The launch of the geological reconnaissance gave rise to local social movements, who joined together at the national level to oppose the repository project. These social movements managed to block the project by combining the mobilization of local elected representatives and violent actions. The government proposed a moratorium to suspend the project.

Thus, the social movement succeeded in having a direct influence not only on the progress of the project, but also on the organization of the Agency, through specific claims made at that moment. Those claims were adopted by political power and led to an institutional change through a law: political leaders saw in the social rejection of the project a questioning of the institutional system, not a questioning of the technical solution. This is why political powers used the law to put an end to the social deadlock and also to relaunch the technical project. It is interesting here to analyze the link between social movements, claims and their institutional consequences, which transformed ANDRA into a public institution, independent from the Atomic Energy Commission and from waste producers. In return, this institutional and organizational change helped political stakeholders counter the social movement.

## RC04-84.6

**BLANCO, EMILIO\*** (El Colegio de México, [eblanco@colmex.mx](mailto:eblanco@colmex.mx))

*Mexican Teachers and the Educational Reform: Scapegoats of the Neo-Liberal Discourse?*

Since 2012, Mexico is undergoing an unprecedented process of educational reform. The newly elected government has managed to reform the Constitution and pass several laws concerning the educational system. Basically, this reform intends to regulate the teaching career through high-stakes exams, which will be used to make decisions on hiring, promotion, and eventually firing.

The reform has gained support among public opinion, powerful economic groups and the media. The latter, in particular, tends to present teachers and teachers' Union (SNTe, for National Union of Educational Workers) as corporatist, ineffective and even lazy: workers who enjoy undeserved privileges and do not hesitate in endangering children's education to keep them. This view has spread among the population.

Nowadays, the reform faces considerable opposition and mistrust from many teachers. Some fractions of the SNTe have taken the conflict to the streets of Mexico City. They organize impressive meetings, block main avenues and routes, and elaborate radical discourses, thus enabling mass media to reproduce prejudices against teachers and ask for harsh repression. One of the results of this conflict is the deterioration of social trust between citizens and teachers.

In this paper, I intend to analyze and identify the main views around this conflict in the mass media, and the different images of teachers that are so constructed. I would also describe the ways teachers react against dominant discourses and build a narrative of their own. Finally, I will explore if this confrontation reaches the local level and affects the relationship between families and teachers in specific schools.

For this, I will perform analysis of the main written media in Mexico City, as well as interviews with intentionally selected teachers from the primary and secondary levels.

## RC36-620.3

**BLASKO, ANDREW\*** (Uppsala University, [Andrew.Blasko@gamlatorget.uu.se](mailto:Andrew.Blasko@gamlatorget.uu.se))

*Disrespect, Self-Deception, and Knowledge*

The general issue to be discussed is whether media can shape interaction, especially within systems of cognition. The particular medium that will be examined in this respect is power. The specific question to be addressed is: Why do people tend to believe that they know purely objective things, and that the world in which they live consists of things – and people – whose natures are more or less unchanging, even if individual things themselves are not? The focus will be upon whether and how the exercise of power can potentiate the process of interaction such that particular types of interaction tend to occur rather than others. It will be argued that the addition of such potential to interaction can lead to specific types of meaning being constituted in interaction that may facilitate the functioning and propagation of a seemingly alien power over us.

People believe they know objective things with stable natures because they have forgotten that they live in a world of meaning that they have created themselves – and it is the state of existing social relations that causes them to forget this fact. When human relations and human creativity become ossified into products of human activity that appear to exist independently of their creators, people do not attain the awareness that all we perceive and know is transitory precisely because we have created it as it exists for us. Heidegger has written about the forgetfulness of being. We are instead concerned with a type of imposed forgetfulness that has led us to misunderstand our own creative and productive powers as the objective power of an external and seemingly eternal world that is beyond our control.

## RC36-629.3

**BLASKO, ANDREW\*** (Uppsala University, [Andrew.Blasko@gamlatorget.uu.se](mailto:Andrew.Blasko@gamlatorget.uu.se))

*Integration, Manipulation, Alienation*

The general issue addressed in the present discussion concerns the ways in which interaction within systems can be determined by forces, processes, and media apparently beyond the voluntary control of individuals. The particular focus in this regard is the medium of power. We will ask whether and how the exercise of power, especially subjection to power, can potentiate interaction such that particular types of interaction tend to occur with a significantly higher degree of probability than others. We will argue that the addition of the subjection to power as a potential to interaction can lead to specific types of meaning being constituted in interaction that may facilitate the functioning and propagation of power.

In addition, we will also question whether and how the exercise of power in the form of the submission to power can act as a formative force upon the operations of the imagination, perception, and cognition by making the constitution of certain types of meaning significantly more likely than others. This restricts not only the types of meaning that can emerge in what seems to be the objective world, but also types of self-reference or self-awareness as well as possibilities for future action on the part of individuals so affected. This results in social life operating with a determining causality to the degree that social integration constitutes subjection to power, the restriction or reduction of alternative ways of thought and action, and the perpetuation and expansion of alienation in both subjective and objective forms.

*The Need For Land Tenure Rights For Indigenous Populations In Tropical Rainforests*

For centuries tropical rainforests have been inhabited by indigenous and other forest dwellers who have depended on the forest for their home, livelihoods and culture. As a result they are better equipped to manage these areas than other members of the community. The reality however is that regardless of this long standing relationship formal land tenure rights have rarely been granted to these people and ownership mainly vests in the state. As these forests are being destroyed at an unsustainable level it is necessary that developing countries provide indigenous people with land tenure rights so that these forests can be effectively managed and protected.

**BLECHSCHMIDT, ALEXANDER\*** (Goethe-University Frankfurt/Main, [Blechtschmidt@em.uni-frankfurt.de](mailto:Blechtschmidt@em.uni-frankfurt.de))

*Against the "People Power Church"? Contemporary Forms of Organized Nonreligion and the Debate on Reproductive Health in the Philippines*

After being heavily debated for more than 10 years in- and outside congress, current president of the Philippines, Benigno Aquino III., signed the so-called "Reproductive Health Bill" (RH Bill) in December 2012. However, firmly opposed by the Roman Catholic Church (RCC) and its public organ, the *Catholic Bishops' Conference of the Philippines* (CBCP), the now called RH Law is still waiting for its implementation. The RCC's/CBCP's influence as a "moral compass" (Bautista 2010) or "public religion" (Casanova 1994) in this Christian dominated nation is grounded in its prominent role during crucial historical events and political transformations, e.g. the "People Power Revolution" in 1986. Such events and their interpretations led to a "religio-nationalism", a discursive "process of co-construction between Catholic identity and national identity" (Natividad 2012), which enables the RCC/CBCP to shape public and political debates. Such debates like the conflict over reproductive health issues, in which various social actors articulate their own notions of morality, nation, and modernity, provide an ideal framework to analyze church-state relations and the local intersections and complex dynamics of religion and modernity in the Philippines from a social scientific perspective.

In my paper I will focus on nonreligious groups like atheists, humanists, and freethinkers which have emerged in the Philippines within recent years. Although constituting different forms of organized nonreligion with different agendas, they find common ground, for example, in their fight for secularism, LGBT rights, and their engagement in the debate on the RH Bill/RH Law. By looking at their criticism of the RCC's/CBCP's position on reproductive health policies through ethnographic fieldwork and a relational approach to nonreligion (Quack 2014), I show how they try to delegitimize the Church's strong public role by breaking up the aforementioned "religio-nationalism" and by offering an alternative, modernistic-scientific moral/social framework.

**BLOK, ANDERS\*** (University of Copenhagen, [abl@soc.ku.dk](mailto:abl@soc.ku.dk))

*Assembling Urban Risks: Climate Adaptation, Scales Of Change, and The Politics Of Expertise In Surat, India*

The risks of climate change become tangible and urgent in cities – and accordingly, climate adaptation has risen on urban political agendas worldwide, including in vulnerable coastal cities of East and South Asia. Drawing on ethnographic fieldwork and invoking debates on 'assemblage urbanism' (Fariás, McFarlane), this paper analyses the contested politics of expertise by way of which Surat, in the Indian state of Gujarat, has been reshaped over the past few years into a regional model of climate change 'resilience', within local-global networks of urban design, planning, and power. Mediated through unequally structured transnational policy mobilities, the work of resilience-building is shown to revolve around local economic-political elites, who deploy consultancy knowledges to render particular urban risks (in-)visible, in ways conducive to specific forms and scales of middle-class 'development' in the city. In turn, the paper shows how this local elite-driven climate politics is contested by two alternative socio-technical coalitions and assemblages: on the one hand, groups of globalized engineering professionals look to embed Surat as a 'test-case' of low-carbon transition in the global South; on the other, groups of city-based activists and critical professionals seek recognition and redress of more 'proximate' hazards (pollution, poverty, lack of infrastructure). In analyzing how competing urban risks come to be assembled through heterogeneous knowledge practices, the paper highlights the different visions and commitments to 'scales of change' (Jiménez) thereby enabled and furthered. By thus allowing us to grasp the situated tools and knowledges through which 'large-scale' processes of socio-political change – development, low-carbon

transition, justice – are shaped and contested around specific urban places and spaces, the paper suggests that assemblage urbanism contributes valuably to new critical explorations of technical politics and sustainability in the city.

*The Politics of Urban Climate Risks: Theoretical and Empirical Lessons from Methodological Cosmopolitanism?*

In the face of global climate risks, world cities are increasingly being positioned, in academic and policy discourse, as strategic spaces for orchestrating the expertise and governance capacity needed to steer societies towards more sustainable and low-carbon futures. This paper reviews existing theoretical and methodological approaches to the study of urban climate politics, by way of asking what contribution Ulrich Beck's theory of world risk society – and principles of methodological cosmopolitanism – make to such epochal conversations? Three existing analytical frameworks are singled out for their importance: low-carbon transitions literature highlight generic socio-technical dynamics of 'greening' urban infrastructures; urban policy mobility approaches document growing inter-city networks around climate and sustainability; and actor-network theory (ANT) work on architectural controversies engage the localized politics of specific urban 'riskscapes'. While each framework point to local-global interdependencies manifest in urban climate risk politics, this paper suggests that all of them remain under-theorized from the point of view of their specific dynamics of 'cosmopolitanization'. To counter this deficiency, the paper draws on Beck in outlining the contours of new 'cosmopolitan urban risk communities', seeking to define their main analytical constituents and point to emerging empirical realities. To this effect, on-going studies into major European and Asian port cities – positioned as 'ambitious' spaces of political experimentation on climate risks – is used to illustrate how a shared transnational risk imaginary (e.g. of future sea-level rises) may help spur new forms of trans-boundary solidarity, while reworking existing patterns of urban competition and inequality. Reflecting on such research practices, the paper points to the need for reworking methods of multi-sited ethnography and comparison as central parts of a 'cosmopolitan' approach to urban climate risks.

*"Fear and Trembling": Talking Emotions with Young Born-Again Muslim Activists in Pakistan*

There is now a broader acceptance, in Sociology and Political science, that instrumental behavior alone fails to explain social movements: emotions should be brought back in. Yet, and beside Jasper's (1997) "moral shock", collective action scholars have generally paid more attention to the "emotion work" (Hochschild, 1979) undertaken by the *entrepreneurs* of a mobilization, or to their "sensitizing devices" (Traïni, 2010), than to the role played by emotions in facilitating individuals' receptivity to a cause and, consequently (but not necessarily), their participation to any form of socio-political mobilization. In other words: how does an emotional *predisposition* to translate into effective protest? This study aims at contributing to our understanding of the interlinkage between emotions and protest at the micro level by following an ethnographic political science and an emic perspective. The empirical lens through which this will be done is the politicization of young "born-again Muslims" in Pakistan (a country where self-reform and activism in the name of Islam has become one of the main channels of contentious politics amongst the urban youth). This case-study will help us to address three broader issues. Firstly, the paper will deal with an unavoidable methodological question - how to access emotions? - and identify five ways of doing so with interview-based narratives. Secondly, it will defend the need to locate emotions in situations (Frijda 1986, Aranguren 2013): "talking emotions" is talking about them in specific settings, interactions, and temporal episodes. Finally, the paper will conclude on the importance of exploring the dialectical relationship between specific emotions (fear and appeasement, love and hate, shame and pride, for instance) in order to make sense of individuals' commitment to a cause; an important path opened up a decade ago by Gould (2001).

*About Efficiency of Prevention Campaigns to Fight Cancer*

**About efficiency of prevention campaigns to fight cancer**

My paper is based on statistical data concerning mortality rates caused by cancer in France, focusing on social categories, age and risk behaviors groups and on a two-month immersion in an oncology and palliative care department. A complementary qualitative study about prevention was conducted with nursing students.

Over the last ten years, French public authorities have implemented prevention campaigns in order to reduce risk behaviors (2007 Act) and fight cancer (Can-

cer Plans, since 2003). In order to reach the entire population, innovative campaigns were not only broadcast on television through advertisements but also on the packaging of food, tobacco and alcoholic products. Perception of these new health messages were positive, however, risk behaviors have not decreased. Regrettably it has been shown that this type of campaign approach has been ineffective since the tobacco usage has increased from 2005 to 2010.

According to the results of many investigations, members of the lower social classes and the elderly are more affected by cancer, yet these people have been found to be less concerned with these prevention campaigns. Impression may be they "choose" not to follow the guidelines proposed by public authorities. That shows the importance of social classes, age and sexes determinism (Bourdieu 1979, Bihr and Pfefferkorn 2008). The few changes in risk behaviors are less the product of individual choice, but rather the result of constraints such as health problems, obesity, etc.

One might then think of new types of "prevention campaigns" with egalitarian goals, which would not be limited only to simple quotes such as "stop smoking" or "eat fruit and vegetables", but whose purpose could be to promote "self-care" and to develop agency of people. This means to act on both economic and cultural dimensions of the concerned groups.

### *New Values, New Moral Attitudes, and New Dilemmas? the Metamorphoses of Professional Ethics Among French General Practitioners in a Renewed Primary Care Governance Context*

French private GPs' values have been historically structured by the ideological frame of the so-called "médecine libérale". Although they have consented to collective conventions and regulatory fees, their individual consciousness is supposed to support professional ethics in the service of the patient. Public regulation has been suspected in damaging their professional commitment. This traditional settlement has been destabilized by new governance principles introduced to regulate (more from above than from inside) the professional autonomy through new professionalism criteria. We would like to examine how different types of reforms raise different ethical issues.

Some reforms have sought to give more content and opposability to classical professional morality (about continuous training, accountability, independence from the firms, respect for patients' rights, fee moderation or acceptance of poor patients). Other ones have been presented in the name of rationalization or public health, but have equivocal moral implications on the way GPs treat their patients. For instance patient lists have been introduced for each doctor, and more prevention is required, both should lead GPs to develop a more collective perspective on the population they are in charge of and use systematic procedures: does it affect their consideration of patients' personal complaints? does it make them aware of social inequalities in the care they dispense? A third kind of reform has introduced financial incentives and may threaten altruist motivations by treating GPs as common self-interested economic agents.

How do GPs deal with the moral implications of these inflections of their mandate, which intersect with concomitant changes in their own inclinations? Do they reaffirm classical professional ethics or adapt it? Does it lead to coherent changes in shared professional ethics, to new individual dilemmas, or to "moral fragmentation" between different medical sub-cultures? Our analysis will be empirically based on 100 interviews focused on preventive care.

### *The Tortoise and the Hare? Long-Term Continuity vs. Rapid Shifts in Gender Equality*

Undoubtedly, women's relative position has been improving almost globally in recent decades. But how can we predict fast vs. slow shifts in most places or the possibility of a dizzying descent into inequality in a few others? Examining recent changes and historical patterns through the lens of my theories of gender stratification and gender and development, I suggest that we examine structural variables, the bedrock of gender stratification: women's relative economic power (defined as control of income/other assets – my theories' key variable) and the kin-property system. Historically, women have done best where they control income and the kinship system is bilateral or matri-oriented (so that women inherit and marital residence often is with/near the bride's female kin). This pattern prevails in most of Southeast Asia – and largely so even in Indonesia despite ~700 years of Islam. Regionally, women's economic autonomy and overall position long have outshone most of Europe and proved better than in almost all world areas where inheritance goes wholly/disproportionately to men and the bridal couple lives with/near the groom's male relatives. This includes 75% of sub-Saharan ethnic groups, almost all the Middle East/North Africa, and most of South Asia (Kerala State, India is the strongest exception). A common phenomenon in

these patri-oriented countries is that women lack effective land rights, even if laws have been passed giving them theoretical rights (e.g., India). A sudden burst to full gender equality seems unlikely even in Scandinavia but a steep ideologically-propelled slide could happen in conflict countries where women lack economic power and the kin-property system is highly unfavorable, e.g., a repeat of what happened in Afghanistan under the Taliban. Overall, however, women's rising economic power should prove more consequential in driving gender equality than changing social norms and growing proportions of females in parliaments and schools.

### *Title: Commodification of Citizenship and Racialization Processes*

The widening of the worldwide inequality gap is paralleled by an increase in the commodification of citizenship. The emergence of official economic citizenship programmes (aka "citizenship by investment") as well as the illegal trade in EU passports ("buy a EU citizenship" schemes) are similar strategies of eluding the ascription of citizenship through recourse to the market. As the -- real or perceived risk -- of more people gaining access to citizenship of wealthy countries increases, so does the racial criminalization of migrants to core regions -- most prominently, the European Union and the United States, regardless of the citizenship regime of the country of arrival. Thus, the ethnic profiling of Moldovans in the European Union is directed against immigrants suspected of having abused the right of blood in order to acquire citizenship, by trying to prove Romanian ancestry in order to acquire a EU passport. On the other hand, the ethnic and racial profiling of immigrants who come to the US to give birth targets pregnant women accused of having abused the right of soil to the same purpose. The scandalization of "forged descent" in one case and of what could analogously be called "forged ascent" in the other is simultaneously a statement about the immutability of the ascription of citizenship through both bloodline and birthplace for the wider population, and ultimately a denial of equal opportunities for upward social mobility at the global level.

### *The Proliferation of Composite Indexes*

This paper aims to reflect on the impact of the hipper-proliferation of composite indexes in society. First, although methodological problems have been amply identified decades ago (MacRae 1985; Porter 1995), most composite indexes are increasingly being constructed to support decision making without caveats. The impacts of their use are largely unknown, although by now they are expected to be found all across society (Boavida et al. 2013a; Boavida et al. 2013b). Second, the fast and steady creation of new indexes in the last decades also present significant risks because they can lead to erroneous interpretations of the results (Benoît Godin 2008; Grupp & Mogee 2004a; Grupp & Mogee 2004b; Grupp & Schubert 2010a; Freudenberg 2003; Jesinghaus 1999; Nardo et al. 2008; Munda & Nardo 2005; Nardo et al. 2005a; Munda & Nardo 2009; Saltelli 2007; Katz 2006).

Increasingly, more expertise is needed to interpret the composite indexes, not just at the macro and sectoral level, but also at the individual level (Boavida 2011). One of the main problems with the composite indexes is their launching without proper guidelines for their use. This is particularly visible in the public sphere, where debates abound with abusive citations of indexes and ranking positions of countries, regions, sectors and even politicians' acceptance rates. Although less visible, there appears to be a underlying attitude to compare personal decisions with existing rankings uncritically of the measures being involved (Booyesen 2002; Feller-länzlinger et al. 2010; Dahler-Larsen 2013). Therefore, we will understand the amount of expertise present at the time of the comparison, to be able to understand the extent of their misuse.

This paper is part of a research project, and will elaborate on the way different groups use and are aware of limitations of composite indicators. Several methodologies will be used, such as literature review, interviews and surveys.

### *Working to Establish 'Normality' Post-Transplant*

Objectives: To explore patients' perceptions and experiences of 'normality' and the influences on this at three time points post-transplant.

Methods: In-depth interviews with 25 patients at three months, one year and more than three years following kidney transplant. Patients' accounts were compared with Sanderson et al.'s typology of types of normality in rheumatoid arthritis patients.

Findings: Post-transplant, patients worked hard to re-establish normality, albeit in a 'reset' form. This normality was a very personal construct, shaped by a wide range of factors including age, gender and personal circumstances. Some patients encountered significant challenges in regaining normality, both at three months for those experiencing acute and distressing side effects, and later relating to the long-term side effects of transplant medication and co-morbidities. However, the most dramatic threat to normality (disrupted normality) came from episodes of rejection and transplant failure.

Conclusions: The main types of normality achieved vary for different conditions. Moreover, despite improvements in health post-transplant and opportunities to build a new, reset normality, the participants recognised the need to pay careful attention to the spectre of future ill health and transplant failure. Transplant failure was therefore a source of disruption that was central to their illness narratives and perceived as an ever present risk.

#### *Migration and Home As Absence, Feeling and (Re)Construction: A Conceptual Overview*

My paper aims to take critically stock of the literature on migration and home(s). International migration is a promising topic for inquiring "where home is", and why this matters. The constructions of home and of its absence – as a place, a relational configuration or a way of feeling – are central to the migrant life experience. Extended physical detachment from what used to be home, and the search for new domestic arrangements, are both constitutive of it. Unsurprisingly, the notion of home resonates widely, and with mixed emotional tones, in migrants' biographic accounts. However, the ways in which home is re-constructed, (re)placed or projected into the future are extremely diverse and case-specific. While some literature has increasingly highlighted the immaterial bases of migrants' feeling-at-home, most studies point to their persisting need to emplace home in distinctive geographical locations and material (domestic) arrangements.

Generally speaking, the housing solutions encountered by migrants abroad may be little conducive to a sense of domesticity. The critical point, though, is how their sense of home is reconstructed and turned into real social practices over time – and how this "homing" interacts with their relational conditions and socio-economic achievements abroad. Myriad case studies, but few comparative analyses are available on these issues. The same holds for the persisting significance of the homeland as an elicitor of home feelings, particularly for first-generation migrants. In fact, the study of migrants' pathways of home physical and symbolic reconstruction could be fruitfully intersected with recent revisits of the shifting forms, functions and boundaries of the home. Against this background, my paper aims to advance an interdisciplinary debate marked, so far, by extended but scattered and unsystematized empirical bases. Once theoretically unpacked, the notions of home, home-feeling and home-making have still much to say on migrants' life conditions and prospects.

#### *The Non-Contractual Side of Care, Unpacked. Emotional Work and Shifting Care Boundaries in the Narratives of Immigrant Caretakers in Italy*

My paper aims to theoretically revisit the everyday negotiation of professional, emotional and ethnic boundaries between dependent elderly and immigrant care workers. It builds on my own research on home care in Italy – a country marked by increasing concentration of feminized and ethnicized labour in this labour market niche. As part of distinct case studies, I have collected about 300 in-depth interviews to immigrant caretakers, most of them Eastern European and live-in, over the last decade. A striking commonality across their narratives lies in the divergence between their formally defined brief and the emotional work they do display and enact. In order to make sense of this variable gap, I will elaborate on the concepts of boundary-making and emotional work. As a result of differences in ethnicity, social class, age and generation (and often gender), a variety of boundaries are negotiated in everyday interactions between immigrant caretakers and clients. The process whereby their views, needs and habits are mutually constructed, and asymmetrically accommodated, holds significant emotional implications. How the emerging emotional configurations are amenable to mutual manipulation, and what control immigrants exert on them, are issues in need of deeper and more sophisticated understandings. To be sure, the faceted configurations of emotional labour and boundary-making – as quintessential to this extra-contractual dimension of care – are reluctant to any ready-for-use classification. However, a better understanding of their influence on the quality of care, and on the rights, interest and needs of those involved, is necessary at many levels – including the need to move the debate on immigrant care beyond pietistic, victimizing or merely "technocratic" accounts. The consequences of emotional

(over)involvement on immigrants' conditions and life trajectories are also to be revisited along these lines, as I will do in my paper.

**BODE, INGO\*** (University of Kassel, [ibode@uni-kassel.de](mailto:ibode@uni-kassel.de))

#### *Organized Heterogeneity in Disorganized Fields: The Case of Child Protection Services in Germany*

Much of what has been developed in organizational field theory has long been applied to well-organized sector obeying to a clear-cut set of logics that cohabit peacefully after all (e.g. bureaucracy and professionalism). Many of these fields have a public service background. For a while now, however, multiplicity has given way to heterogeneity here in the sense that logics inhabiting such fields come to sit uneasy with another as they trigger decisions or policies pointing to opposite directions (ensuring revenue or giving priority to observed needs, for instance). What is more, new institutional logics encapsulated in quasi-market regulation tend to 'disorganize' established field structures and seem to leave permanently the players of a given field with either-or constellations. Drawing on a research project conducted between 2010 and 2013 that has investigated developments in the sector of child protection services in Germany, this paper presents patterns of what has been referred to recently as institutional work, with an eye on two sorts of organizations: public hub agencies with an administrative remit and non-profits entrusted with service provision. The material consists of an interview-based, in-depth investigation of selected settings, embracing the entire set of agencies relevant to child protection in a given area, with a hermeneutic approach informing its exploitation. The analysis suggests that there are various responses to this 'organized' heterogeneity of references (e.g. managerial standards or templates channeling decisions) throughout the field under study; however, most are about processing ambiguity by provisional and peace-meal action through which these references and the underlying institutional logics become fuzzy themselves. Hence the disorganization of organizational fields goes alongside the blurring of those cognitive foundations on which they are built.

**BOEDIONO, KUSHARIYANINGSIH C.\*** (University of Indonesia, [kboedio1@binghamton.edu](mailto:kboedio1@binghamton.edu))

#### *Forest Resources and Local People Livelihood*

The decision of the Indonesian government to implement Law No. 22/1999 on Regional Governance in 2001 has resulted in the delegation of authority to the regional governments and a more decentralized political power as well as more localized decision making on natural resources' utilization, including in the forestry sectors. However, a number of studies on the implementation of decentralization in the forestry sector show that impacts of the transfer of authority to the regional governments have been mostly negative on the environment. The efforts to protect the environment, i.e. forest resources, are also facing serious threats from "the oil palm trend" which is replacing "the log trend". After more than 10 years of the implementation of decentralization policies, the current conditions at the local level have shown that not only the share of the region's natural resource revenues has increased but the pressure to utilize these revenues to alleviate poverty and social inequalities has also become greater.

As environment and society shape one and another, the first part of the paper explains, using political economy approach, the causes of widespread environmental destructions after the implementation of Law No. 22 in January 2001. In the second part, this paper will analyze, based on Buttel's (2003) argument, the role of activism/movements and state environmental regulation, particularly in the forestry sector; as two basic mechanisms in supporting the process of environmental reform. In the last part, this paper proposes a mechanism defined by Martel (1994) as "decentralized community with institutionalized co-ordination" as well as explores, as suggested by Frickel and Davidson (2004), linkages between the state (particularly governments at the provincial and district level) and specific civil society actors (involved in environmental justice movements or act as environmental knowledge professionals) in enhancing state interest in sustainability and improving the local people livelihood.

**BOEHME, JULIANE\*** (WZB Berlin Social Science Center, [boehme@wzb.eu](mailto:boehme@wzb.eu))

#### *From Unknown to Known Objects- Cultural Knowledge in Action*

We know how to use objects in our everyday-life. Normally it's not problematic because we just do it. But if someone ask us why (we know that) it is getting more complicated because it's hard to reflect about our own routines of practise. In line with Garfinkel (1967) I assume that everyday activities aren't arbitrarily but organized and we can learn a lot about the routines if we disturb them. The irritations of the routines offer insights in the ways people try to fix the crisis situation and to come back to "normality". It's curious but we learn more about the normal way of doing things if we disturb them as if we just try to observe the normal way of acting.

To provoke an irritation of the routines of meaning construction of objects I gave unknown objects to small groups of students and asked them to find out the use of these things. I used video analysis methods to keep the details and to be able to recognise situational procedures of handling the uncertainty in the material world. The results show that the meaning of the unknown objects emerged in a communicative construction which strongly bases on different forms of cultural knowledge in action. Interesting examples are the search for contexts of use which are in a pragmatic manner connected with imagined or real experiences and body knowledge as a way to test and create ideas for the "right" use.

*How to Measure Quality of Life? an Integrated Approach in the Netherlands*

**How to measure quality of life? An integrated approach in the Netherlands**

The Netherlands Institute for Social Research uses a composite index to describe and monitor developments in the quality of life of the Dutch population. The SCP Life-situation Index (SLI) is used to measure objective aspects of individual quality of life. In constructing the index, we depart from the view that quality of life is a multi-dimensional concept. SLI is composed of indicators from eight domains (dimensions): health, housing, social participation, culture leisure activity, consumer durables, sport activity, vacation, and mobility. Education, income, paid employment and self-sufficiency are considered as "resources". They can be used by citizens to improve their life situation.

We use non linear canonical correlation analysis to combine the indicators into the index.

SLI is based on micro-data, stemming from survey research. With these survey data we are able to give a summarizing insight in the different domains of the life situation at the individual level. We can also break down the life situation for different social groups (enabling us to compare income groups, educational levels and household types). In our view quality of life has an objective and a subjective part. Using micro-data also provides the opportunity to explore the relationship between objective wellbeing (as measured by the index) and subjective wellbeing (happiness and satisfactions).

The paper focuses on two of the major issues we come across:

1. *How to measure quality of life?* Why did we choose not to include subjective indicators? Does it change the results if we did?

2. *How to combine the indicators.* The life situation index is constructed statistically, using nonlinear canonical correlation analysis to get the weights. But there are other ways to do so. Does using alternatives lead to different results?

## RC33-575.1

**BOELHOUWER, JEROEN\*** (Netherlands Inst Social Research, [j.boelhouver@scp.nl](mailto:j.boelhouver@scp.nl))

*Measuring Wellbeing Across Countries – Can It be Done?*

**Measuring wellbeing across countries – can it be done?**

There are no widely adopted definitions for the concepts of wellbeing and quality of life. First, I discuss the correspondences and differences between measures of wellbeing and quality of life, like the *Gross National Happiness* of Bhutan, the *Happy Planet Index* of the New Economics Foundation, the *Better Life Index* of the OECD and the *Human Development Index* of the UNDP. I also compare these measure with the *SCP Life-situation Index* which is used in the Netherlands. When describing the quality of life of the Dutch with this index, a conceptual model is used, which is centered around the index. In this conceptual model the view is taken that quality of life has an objective and a subjective part.

The conceptual model of the SCP Life-situation Index can be used to describe how objective and subjective wellbeing are related. In this model a causal relation is proposed between capabilities (or resources, like education, income and paid work) and objective quality of life (as measured by the SCP Life-situation Index, which combines indicators on health, housing, social participation, etc). Next, a causal relation is proposed between this objective wellbeing and subjective wellbeing (happiness). This model is tested for the Netherlands and the results show that the model works.

In the paper I will use the European Social Survey to look at whether the model can also be used for other European countries. Though the model can be used, there are differences between countries, for example in the weights of the indicators.

## WG03-918.3

**BOERSMA, SANNE\*** (Erasmus University Rotterdam, [boersma@fsw.eur.nl](mailto:boersma@fsw.eur.nl))

*Visualizing Society: Immigrant Integration Expertise As a Sphere of Calculability*

This paper regards the field of immigrant integration expertise in Western Europe as a *sphere of calculability* (Mitchell, 2002) in which projections of future conditions of society are visualized in images such as tables, graphs and designs. The expert images produced by monitoring institutions and social scientific networks can be understood as crucial sites where (future) differences of national populations crystalize and gain plausibility.

In social scientific studies and reports of immigrant integration, produced both on national and European level, the future condition of national societies in Western Europe is problematized and discussed by the growing presence of the 'non-western' or 'immigrant' population. For example, a Eurostat working paper of 2010 on the foreign-born population in EU countries states that "the share of foreign-born is likely to more than double by 2061", which emphasizes a stable trend of 'non-western' presence in national societies. The images in the reports demonstrate socially constructed differences and a careful maintenance of these differences, expressed through standardized categories of alterity (Castoriadis) vis-à-vis a homogenous 'native' population in national societies. As such, the contested (future) condition of society is stabilized.

This paper seeks insight in how future projections of 'non-western' presence in West-European societies come about and how the field of immigrant integration expertise can be perceived as what Timothy Mitchell has called a "sphere of calculability" i.e. framing, drawing limits, measuring and visualizing (Mitchell, 2002). By doing ethnographic research at the "centres of calculation" (Latour, 1987) in combination with document analysis this paper aims to show how immigrant integration is made into a field of challenges, strategies, demand and importance, subsequently effectuating particular logics of visualizing national societies.

## RC01-30.1

**BOGNER, ARTUR\*** (University of Bayreuth, [artur.bogner@web.de](mailto:artur.bogner@web.de))

*Analysing Real Conflict Scenarios Empirically – Experiences from Ghana and Uganda*

Armed conflicts are phases or processes of armed escalation within much longer (and often large-scale) social processes, parts of much wider synchronic and diachronic contexts that may be conceived of as "dynamic systems", "figurations" or "self-organizing" processes – including long-term as well as shorter-term processes. Their analysis is essentially identical to the investigation of socio-cultural structures under specific perspectives, especially regarding the chances of armed collective violence and fluid and multipolar balances of power (between diverse centres of social power and various makers and executors of conflict management or *violence management* respectively). This paper by a figurational sociologist will discuss the methodology of investigating and forecasting real conflict scenarios empirically with a focus on practical research practice and with regard to the relations and combination between qualitative and quantitative instruments, thick and 'wide' description, different models of causation (and the historical-social world) and between disparate concepts of so-called micro- and macrosociology.

The research settings of northern Ghana and northern Uganda, and comparisons *between and inside* these regions may serve well to illustrate the difficulties and challenges of analysis and forecasting that are interrelated to the complexity and highly dynamic nature of conflict figurations – with regard to quantitatively and qualitatively problematic data bases and contested concepts and methodologies. They may also serve to show the opportunities for sociology and comparative research that are connected with empirical conflict analysis and the study of real conflict scenarios. The paper will argue that in order to exploit these opportunities numerous preconceptions and dichotomies in the social and cultural sciences need to be overcome – e.g. the divide between macro- und micro-sociological concepts, and between sociological, historical, political-science and ethnographic methods of data collection and analysis.

## RC09-168.4

**BOGNER, ARTUR\*** (University of Bayreuth, [artur.bogner@web.de](mailto:artur.bogner@web.de))

*Eisenstadt and Elias: Static and Dynamic, Competing and Complementary Accounts of the Social World in the Modern Age*

The complicated interrelationships between particularity and generality, the abstract and the concrete, or atomistic and holistic conceptions of causation, 'history' and society continue to afflict the socio-cultural sciences. This also applies to the relations between 'modern culture' and its diverse 'actualizations' as well as relations between competing conceptions of the social world without and within history. Elias's and Eisenstadt's works belong to the sustained and coherent efforts among sociologists to explain the defining qualities of the world in the modern age and their genesis. Some understand their theories as retreats of the post-WWII modernization discourse. Although there is some truth in this perspective, it should not deflect from the fact that Eisenstadt's has been the perhaps most elaborated attempt at revising the essential constituents of this discourse,

whereas Elias's theory represents a radical alternative (of pre-Parsonian and pre-war provenance) to it, in terms of basic terminology and basic vision of the social world as well as its methodology – in a manner reminiscent of the polarity between Kantian and Hegelian epistemologies or concepts respectively. Whereas Eisenstadt refined and differentiated the concept of modernity, Elias generally abstained from using this term and suggesting a total break between the modern and the preceding periods and emphasized long-term continuities and patterns in European and human history, while anticipating some central ideas of the recent discourse on globalization. Whereas Eisenstadt focused on the implementation of "cultural and political programmes", Elias emphasized the unanticipated consequences of actions and the unplanned nature of collective processes and phenomena. The paper will analyse how far insights and concepts of two eminent scholars of historical sociology are mutually compatible or complementary as well as explicate their methodological, conceptual and material differences.

#### *Effects of the Visual Presentation of Don't Know Options in Rating Scales on Responses. Comparing Results of a Papi and an Online Panel Experiment*

Several studies show that in self-administered settings respondents use both, verbal information as well as nonverbal, visual features of rating scales within the question response process. Nonverbal, visual scale features (VSF) are for example font, size, color, or graphical display of the rating scale. However, the findings of the existing studies are not consistent and thus, there is still much to learn about the specifics of personal and situational settings that make respondents susceptible for VSF.

This research examines attitude strength and demographical characteristics as potential moderators of the effects of VSF. Two randomized experiments were conducted varying the visual layout of a five-point agreement-disagreement rating scale. Three different visual layouts were tested in each experiment: a. the *don't know* option is separated from the other scale categories by a clearly visible vertical divider line, b. the *don't know* option is simply added to the right hand side of the scale, and c. no *don't know* option is offered. The first experiment included 307 German students using PAPI mode; the second experiment included 450 respondents of the GESIS online access panel.

The assumption is that respondents are influenced in their selection of the middle, extreme and don't know response category by the VSF. By means of multilevel analysis, the likelihood of selecting these categories are estimated for both studies separately. For the paper-and-pencil experiment significant effects of the VSF on the likelihood of response category selection was found; attitude strength shows to be a strong moderator of the VSF effects. However, in the online setting these findings could not be replicated; demographic variables have no or just little moderating effects.

#### *The Cuisine Culture from a Polish Perspective. How Popular TV Programmes Use Cooking to Create a Modern Lifestyle and Present the New Middle Class*

In the aftermath of the events of 1989, Polish society faced many changes. One of them was an invasion of global cuisine culture. I would like to research how did the typical Polish city change under the influence of the culinary culture and TV cooking programmes? I am interested in how the culinary culture is currently used to promote the values of the consumerist society, such as competition, rivalry, pleasure, and entertainment.

I would like to present the examples of the popular TV series "The Cooked" and "The Kitchen Revolutions". Both of them play a very important role in changing Polish attitudes to cuisine and its meaning in social life. The programme "The Cooked" presents young representatives of the new middle class from big and global cities which are the beneficiaries of the Polish transformation in 1989. They treat the cuisine culture as a very instrumental way to present their social status and proof of their place in the global community.

The second example is a TV series called "The Kitchen Revolutions". The main character is a famous Polish chef who visits different restaurants in Poland and helps the owners change not only material aspects of their restaurants, but also the owners' general attitude towards the cuisine culture. The process of changing the material and aesthetic vision of restaurants also creates opportunities to compare global imagination about cuisine culture with the local tradition of nutrition.

Both popular TV programmes create possibilities to define attitudes towards inequality and the differences between the global cities and other parts of the country. The cuisine culture and its popularity can be treated as an instrument to understand the process of changing the rules of lifestyles and construction of the new middle class in the new democracies.

IRANZO, JUAN MANUEL IRANZO (Sociologist)

#### *Violence Against Women and Femicide: Sociocybernetic Approach*

In spite of the existence of significant regional differences, gender and domestic violence data (including psychological abuse, physical assaults and femicide) are so regular and stable that the phenomenon can be considered 'structural' and 'systemic'. First of all, we should admit that conflicts of interests, a frequent 'zero-sum game situation frame, structural conditions of stress and imbalance of physical, economic, and/or symbolic power, inadequate emotional and cultural resources to deal with conflict, and inappropriate 'scripts' for communication and other forms of face-to-face interaction make intimate partnership a context prone to conflict breeding 'accidental' violence.

This paper presents, we present the first steps of our research program is the design of sociocybernetic model. It gathers all relevant variables at all three structural levels, weighted by their predictive power according to path-analyses. Conflicts are frequent in intimate partner life, but it is only a precondition of violence. Violence and femicide are the result of personal, micro-social and socio-structural and cultural variables that, in some triggering circumstances, get aligned and form a 'trajectory of accident' from aggressor to victim.

This vision shows that true severe violence results from a continuous story of abusive ritual interaction oriented to establish and preserve a position of domination and control. More research at micro-sociological level is needed to identify really predictive variables. Path-analysis to weight them a sociocybernetic can help to build explicative-predictive models that could help to design better preventive public policies. This research could also help to move farther away from former 'pathological culture' and present 'bureaucratic culture' on intimate-partner gender violence towards a 'generative culture' able to foster a social 'cycle of learning' among all participants, from couple members through lawyers, psychologists and public officers, to all members of society.

#### *Has the Globalized Sperm Banking Industry Committed the Baudrillardian 'perfect Crime'?*

Assisted reproductive technologies constitute a fruitful soil for cultural Sociology theorization. In particular, the sperm donation industry is a unique arena in which personal emotions and dreams encounter the constraints of technological and medical reality as mediated through economic transactions. The article proposes some sociological insights into the sperm donation industry, derived from a qualitative study of sperm donor profiles in nine sperm banks from Europe and US. We started our analysis acknowledging our a priori assumption of semen commodification. We content analyzed extended profiles and conducted a visual analysis of baby photos of 135 randomly selected donors who appear in the catalogues. Browsing for the ideal donor while reading the 'perfectionized' profiles is a technology which aptly illustrates Baudrillard's concept of "hyper-reality". Borrowing Baudrillard's terminology we argue that extended donor profiles are not "real"; rather they are hyperreal. These profiles are an "authentic fake" of the fathers and families desired by women in today's postmodern era. We examine the way the sperm industry uses personification practices as a tool to add an emotional context, resulting in a re-enchantment of the postmodern spirit. Inspired by Jean Baudrillard's and Eva Illuz's writings as well as Zygmunt Bauman's insights on 'liquid modernity', we show how sperm banks de-commodify sperm, personify donations, and add an emotional context to the economic transaction. Sperm donor profiles are a meaningful and important postmodern text; as such they deserve to be interpreted by means of sociological theorization. As products of socially constructed mechanisms, analyses of the ways these profiles are displayed and produced certainly communicate much about the contemporary spirit of 'liquid modernity'. This creates a powerful re-enchantment mechanism counterbalancing the alienation and disenchantment characteristic of donor insemination technology and the postmodern spirit in general.

**BOKSER LIWERANT, JUDIT\*** (National University of Mexico, [judit@liwerant.com](mailto:judit@liwerant.com))

#### *Diasporas In Times Of Multiculturalism and Transnationalism*

The magnitude and scope of contemporary processes of social, political and cultural change and their related, multidimensional and contradictory nature pose renewed challenges to sociological theory. Current processes of change transcend national frontiers and relate and interconnect societies. Globalization and transnationalism refer indeed to the new conditions derived from radical changes in the way time and space have ceased having the same influence on the

way in which social relations, identities and institutions are structured. The role of countries and borders between States become diffuse, porous and permeable and global connections are intensified by virtue of the fact that they are shared with great velocity in multiple places.

Amid these trends, migration became a source of social transformation. Contemporary migration encompasses steady as well as repeated and circular, bi-local and multi-local movements. Expanded mobility, multiple relocations, sustained interactions enhance exchanges of economic and social resources, cultural narratives, practices and symbols between communities and societies. Migration has widened the spectrum of encounters between individuals and groups carrying distinct communal organizing principles, historical trajectories, models and logics of the collective. It thus poses equally new challenges to Multiculturalism,

Aiming to account for singularity (as differing from exceptionalism) we claim the need to focus on the collective dimension and on the institutional underpinnings of transnationalism and its structural effects in order to account for past and present cases of re-diasporization and explore the transition from ethno-national diasporas to ethno-transnational ones.

LEVELS, MARK (Maastricht University)

### *Ethnic Inequality in the Labour Market: The Transferability of Skills and Degrees*

Migrants are less successful in the labor market than natives, relative disadvantages that are often referred to as "ethnic penalties." Previous research estimated these penalties using education as a proxy for skills. However, highly educated individuals are not only rewarded by employers for their skill levels, but also for the signaling value of their degree. Although most studies that estimate ethnic penalties usually acknowledge the existence of these two mechanisms, empirical work that incorporates this is extremely scarce. In this study, we include a measure of both cognitive (numeracy, literacy) and non-cognitive (motivation) skills, which allows us to separate mechanisms that explain the educational payoff of migrants. This increases our knowledge of how the transferability of skills and degrees affects ethnic inequality in the labor market. We analyze both unemployment risk and income.

The paper furthermore contributes to the literature on ethnic inequality in the labor market by explaining variation in ethnic penalties across countries with varying institutional contexts. Studies that structurally analyze variation in penalties across countries are scarce, and there is no comparative work that analyses the role of skills in reducing ethnic penalties across countries. We identify three institutional conditions that are especially important in explaining cross-national variation: the educational system, labor market flexibility, and immigration policies.

Empirical analyses are based on the PIAAC 2013 data (Programme for the International Assessment of Adult Competencies). The data include detailed measures of cognitive and non-cognitive skills. Furthermore, the PIAAC allows for a cross-national analysis.

### *Meditation and the Art of Hermeneutics. Approaching the Notion of Subject and Object in Research on Non Subject-Object Phenomena*

Even though in the last 20 years an increasing interest of academics in the spread of Buddhism in 'the West' can be observed and enough has been said about this process to establish Western Buddhist Studies as a new academic discipline, there is still a limited knowledge about the meaning of Tantric Tibetan Buddhist meditation practices, especially as performed by the 'Western' Buddhist disciples.

Leaving the common misunderstanding of Tantra as „esoteric teachings bloated with sex and power“ behind (as suggested by Herbert V. Guenther 1974: 12), the paper is aiming to relate to the core of the Tantric Tibetan Buddhist meditation, in particular to the so called Meditation on the Nature of Mind (Mahamudra and Maha Ati), and comprehend it as an advanced scientific and synaesthetic (cf. Helmuth Plessner 1923) performance leading the Buddhist practitioner to the dissolution of subject-object duality in perception of the phenomenal world.

The paper will work toward a methodological repertoire in order to approach the field of studies on meditation practice(s) from the viewpoint of a participative social scientist. It'll explore the possibilities of synchronising the methodology of meditation and the phenomenological practice of social science. It'll search for further ethnographic means of „not speaking about“ (cf. Trinh T. Minh-ha) as well as for videography as a tool of hermeneutic knowledge production in the tension between on-this-side-of and beyond the subject-object division.

BOLL, KAREN\* (Copenhagen Business School, [kbo.ioa@cbs.dk](mailto:kbo.ioa@cbs.dk))

### *Result-Based Public Governance. Challenges in Developing and Using Daily Performance Measures*

Within the public sector, many institutions are either steered by *governance by targets* or *result-based governance*. The former sets up quantitative internal production targets, while the latter advocates that production is planned according to outcomes which are defined as institution-produced effects on individuals or businesses in society; effects which are often produced by 'nudging' the citizenry in a certain direction. With point of departure in these two governance-systems, the paper explores a case of controversial inspection of businesses' negative VAT accounts and it describes the performance measure that guides the inspectors' inspection (or nudging) of the businesses. The analysis shows that although a result-based governance system is advocated on a strategic level, performance measures which are not 'result-based' are developed and used in the daily coordination of work. The paper explores how and why this state of affairs appears and problematizes the widespread use of result-based governance and nudging-techniques by public sector institutions.

BOLTANSKI, LUC\* (EHESS, [boltansk@ehess.fr](mailto:boltansk@ehess.fr))

### *Towards an European Neo-Conservatism? From the Formation of an Economy of Authenticity to the Renewal of Nationalist Ideologies*

The implementation of neo-liberal policies in Europe, and their devastating results, have triggered, during the last ten years, numerous critical reactions, particularly in the intellectual and political fields. But this renewal of social critique has not yet had any concrete effect on the actions of the power elite, belonging to the left as well as to the right, whose members use the argument of "necessity" to justify their conservatism. On the other side, the critical stance has had only very weak support from the social movements and, particularly, the labor Unions, whose energies are absorbed by their efforts to survive. In the vacuum created by a demoralized Europe and by an ineffective social critique, there have emerged ideologies, coming from the extreme right and even, sometimes, from the left, that have shifted from the critique of economical neo-liberalism to the critique of political liberalism. They stress nationalism, supported by a strong State, and on the valorization of moral authority and tradition. They are, above all, strongly xenophobic and racist.

This neo-conservatism is conditioned by socio-economic changes whose precise analysis seems particularly urgent. The first and most visible change is the decline of industry, which dismantles an "old" proletariat given over to unemployment and precariousness. The second change, is the development of new economic forms which create wealth by exploiting the patrimonialization of sites or "terroirs" whose "authentic" character is distorted by forms of commodification and/or through the extension of cultural industries of luxury brands. These two economic processes have political effects that promote reactionary and xenophobic positions. Groups and social classes whose interests are linked with industry accuse "foreigners" of "robbing" the work of the "real" French people. Groups and social classes involved in the process of patrimonialization accuse "foreigners" of polluting "authentic", "ancestral" and national places and values.

BOLZMAN, CLAUDIO\* (Uni Applied Science Western Switzerland, [Claudio.Bolzman@hesge.ch](mailto:Claudio.Bolzman@hesge.ch))

### *Older Immigrants Living in Switzerland and Forms of Ambivalence Around the Retirement Period*

The sociologist Abdelmalek Sayad (1991; 1999) has defined ambivalence as part of the immigrant condition. According to him, since most of international migrants are not considered as full citizens in host States neither in home States, their situation tend to be ambivalent on many dimensions. For instance, they expect to come back once to their home country, but they also know that their economic, social and familial conditions make this option highly improbable. Thus, they tend to postpone this issue for a later period of their lives. When they retire however, the question of return can arise again. Thus, it can be argued, retirement may represent for immigrants not only a social transition, from work to retirement, but also a possible spatial transition, from living in one country to settlement in another country. In that sense, it can be considered as a double change in life course that can generate new dilemmas and ambivalences in couples and families. This paper explores how older immigrants from different origins (Italy, Spain, Portugal, Latin America, Africa, Kosovo) and living in Switzerland perceive

this ambivalence and how do they deal with it. Analysis is based in data from a quantitative survey carried in 2011 (immigrants from the 3 EU countries) and from qualitative interviews (immigrants from all origins) carried in 2012 and 2013. Main trends and differences between older immigrants groups are presented and discussed.

[fb319@cam.ac.uk](mailto:fb319@cam.ac.uk))

### *Framing a Moral Protest in a Secular Country. the Civil Society Mobilization Against Homosexual Marriages in France*

The introduction of same-sex marriages has recently occupied the political agenda of many countries. The public debate on the question has illustrated the enduring impact of religious values in the political sphere and the greater mobilization of religious civil society groups in contrasting the legalization of homosexual unions. This paper will investigate the socio-political discourse of civil society actors involved in the protests against the introduction of homosexual marriages in France. The activism of groups with a religious background was one of the most salient political phenomenon in the French political life in the latest few years. The broadness of the protest was so vast to be described as a fundamental experience for an entire generation. The study of the French mobilization offers the opportunity to come across some intriguing sociological issues. Why the social protests in defence of a family model upheld by the Catholic Church were so strong in one of the most secularized countries in the world? Why Catholic values had a prominent role in a public policy debate in a country where the separation between politics and morality is a paradigm of the political life? Why the traditionally weak French civil society demonstrated such a strong activism?

This paper will investigate the framing process of the discourse of the social actors involved in the French protests against homosexual marriages. Then it will discuss the intellectual and political reasons that contributed to give an ample resonance to their ethical and religious values. Finally it will compare the discourse of the French mobilization with other social protests against the legalization of same-sex unions in other Western countries.

### *The Financialization of Welfare States. the Case of Complementary Social Insurances*

The process of financialization of capitalist economies has recently interested many welfare states. The reforms of the social protection introduced in the latest two decades have given greater importance to the role of the financial sector as a welfare provider. An increasing number of families rely on the revenues of their financial investments to get those social services previously provided by state authorities. A paradigmatic example is given by the several complementary insurance schemes increasingly diffused in several Western and developing countries. Their introduction was generally supported by governments and labour unions that believe the financial sector may provide workers those economic resources that current welfare states find difficult to guarantee. However the process of financialization of welfare states could enlarge the already existing income inequalities, strengthen the increasing social stratification, and intensify the process of dualization of the social protection that is interesting many welfare states.

This paper will present a comparative investigation of the diffusion of private complementary social insurance schemes in France, Sweden, and the UK after the onset of the latest economic crisis. It will discuss the political debate about their introduction. Then it will evaluate their likely impact on the process of segmentation of the social protection. Finally it will broaden the conclusions drawn from the case studies previously considered to other developed and developing countries.

### *From Art to Urban Politics – and the Other Way Round. the Art Festival "Paratissima" and Its Complex Relationship with Processes of Urban Regeneration in Turin, Italy*

Art can be a mean of claim, empowerment, participation, protest. But what happens if such forms of art are then adopted as tools of urban regeneration? This paper focuses on the relationship between art, civic participation and urban regeneration processes analysing the social impacts and political appropriation of an alternative, non-institutional yearly art event in the city of Turin, Italy.

In order to move away from its fordist past, the city of Turin has betted on culture, creativity and entertainment as core elements of a new path of development. In this frame the City launched a contemporary art fair for international galleries, "Artissima", taking place every year in the first week of November.

Against its institutional, elitist approach, a group of young artists founded in 2005 "Paratissima", an alternative, parallel open art exhibition, affirming the freedom and the social value of art. In 2008 Paratissima moved to San Salvario, a multicultural, mixed neighbourhood looking forward to emancipating from its problematic past. The event took place into empty stores, shops, internal yards and streets, mingling art and everyday-life in unconventional spaces, tackling local social issues and involving inhabitants, shopkeepers and social associations. Occurring there ever since, it has contributed to re-shape the neighbourhood and to attract new flows of people and investments in the area.

Relying on interviews and ethnographic fieldwork, the paper analyzes the ambivalent relationships between Paratissima, other forms of civic participation and the neighbourhood social and cultural fabric, highlighting benefits and criticisms of short and mid-term influences over the neighbourhood's transformation. Moreover, it examines the processes that have brought both the local authorities and the organizers to consider this format as a successful and replicable model of urban re-development, and it problematizes the path towards institutionalization that this event, born as critical and alternative, seems to have taken.

## RC21-381.5

**BOLZONI, MAGDA\*** (University of Turin,  
[magda.bolzoni@gmail.com](mailto:magda.bolzoni@gmail.com))

### *Whose Street Is This? Commercial Gentrification, Symbolic Ownership and Legitimate Uses of Public Spaces in a Changing Neighbourhood of Turin, Italy*

This paper aims at investigating the interactions between commercial landscape, symbolic ownership and everyday practices in upgrading neighbourhoods. Focusing on the neighbourhood of San Salvario (Turin, Italy), it argues that commercial transformations have a major role in challenging established uses and representations, and in framing claims, visions and actions of different sets of actors over the same urban space.

Despite a long tradition of studies on gentrification and neighbourhood's transformations, only in recent times the role and the socio-cultural impacts of changes of commercial and recreational landscape have been taken under careful examination. Processes of commercial upgrading should not be read only as markers but as active agents of change. New stores, cafés, clubs and night spots embody a powerful discourse that legitimates some uses, images and users while excluding others. In this frame, the street becomes a crucial space of friction, contestation and negotiation where broader dynamics constantly interact with everyday practices.

Right next to the city centre and the central railway station, San Salvario's neighbourhood has recently turned from a multicultural, mixed, problematic area into the new core of leisure and consumption of Turin. The opening of new cafés, clubs and night spots has challenged the identity of the neighbourhood and the established uses of public spaces. In this setting, relying on almost two years of ethnographic research, the observation of via Berthollet allows us to examine dynamics and everyday practices of contestation, claims and negotiation over the legitimate uses and representations of public spaces. The analysis highlights the relevance of both space and time dimensions and it unveils the constant interactions between complex sets of actors, such as the established users of the street (mainly foreigners), the new users (mainly university students and young urban middle class), the residents, the commercial entrepreneurs and the local authorities.

[gbonelli@uol.com.br](mailto:gbonelli@uol.com.br))

### *Street Level Brokers: Shrinking the Occupation of Despachantes in an Era of Global Managerialism*

The paper focuses on the occupation of despachantes documentalistas (document clearing agent) in São Paulo, Brazil, which was first regulated in 1854, by the Brazilian Emperor, differentiating these services from the work of customs agents, occupation that were established by the Portuguese Crown, in 1809. The township despachantes were in charge of collecting taxes, and forwarding legal documents for real estate, business and vehicles. Since then, their selection and work have been under state control. In 2002, the National Council of Despachantes Documentalistas was organized as a collective project to professionalization.

They used to think about themselves as supportive of the government, acting as brokers for their clients to the public officials. Nowadays, they share a negative public image associated with payment of bribes and illicit practices. This traditional way of providing document clearing services have undergone transformation. As a result of deregulation policies and privatization of public services, the forwarding of identification documents are now provided by large enterprise firms that manage the Poupatempo posts and bank agencies, which receive the payments of taxes, fines and duties.

The impact of the global neoliberal agenda on the local occupation of despachantes has reduced the size of the group in three times during the last twenty years.

In the new context of north – south professional relations, despachantes are being replaced by paralegals, a global occupation that has been introduced in Brazil, providing work to a large group of law bachelors without the credential to practice.

The research fieldwork is based on document analysis; data collected at the Regional Council of Sao Paulo Despachantes on their 3.429 members; qualitative interviews with leaderships of two competitive professional associations and a survey with 100 despachantes in the state of São Paulo.

#### *Transnational Lives of Pinays on the Canadian Prairies*

Filipino women or Pinays are, undeniably, the most visible mobile group of temporary foreign workers in Canada and elsewhere today. They are also the most highly socially integrated group of women from Asia due to intermarriages and a western colonial legacy. Over three hundred years of Spanish rule and fifty years of American tutelage have made the Filipinos the "little brown Americans" whose use of the English language, practice of liberal-democratic politics, and adherence to Catholicism shape their trajectories as "citizens of the world". Filipinos have become one of the most desired group of non-white workers and immigrants for their distinct ability to integrate in western societies, to be "at home in the world". The plight of Filipino women has indeed attracted much attention from scholars, practitioners, and policymakers. But a nuanced approach to how racialized Filipino women negotiate the limiting social structures of inclusion facilitates a broader appreciation of the meaning of migration in their lives.

This presentation explores the migration, identity, and community of Pinay in the prairie provinces of Alberta, Manitoba, and Saskatchewan. While Filipino women have become the mainstay group for case studies on the Live-in Caregiver Program (LCP) in Canada and its consequent phenotypical constructs of the "nanny," "caregiver" and "domestic worker", I extend the prevailing dominant discourse of their positioning as "servants of globalization" to the grounded experiences of community participation, activism, volunteerism, and negotiating multiple identities in making meanings of their quotidian transnational lives.

#### JS-44.19

#### *Inclusion, Race, Ethnicity, Culture and Global Higher Education: International Comparisons*

Equity vs. equality is an ongoing debate across all social structures. Education is and always has been at the center of the debate; equity as the means and equality as the end. Education as a means has been an excellent tool to move toward the end, but without justice as a bridge the struggle continues. Therefore both means and end must be linked by a "bridge of justice" to be effective. Inclusion of disenfranchised groups by prestigious higher education institutions holds real

promise as an important bridge to achieve justice, equity and equality in societies around the world.

The International Comparative Education Project asks, "How well are universities in South Africa, England and the US preparing students to work and live with increasing racial-ethnic diversity? We compare student experiences across international higher educational contexts to determine whether and how universities: (1) build bridges across diverse social groups, (2) provide student learning opportunities to interact with diverse communities, and (3) facilitate growth in students' cognitive, social, civil, and democratic skills and value-orientations. While national studies examine how universities prepare students for an increasingly global society, little research studies these issues cross-nationally.

Seeking to address this gap, we asked students at the University of Cape Town (N=98), Oxford University (N=74), Occidental College (N=122) and UCLA (N=1,135) to complete online surveys about experiences and outcomes related to campus diversity. The goal was to assess inter-group and intra-group relations as related to diversity and point to the experiences and interactions most effective in preparing students for meaningful participation in diverse, global, free market economies. Data was analyzed using SPSS. Measures used have been validated in previous research.

#### *Les Transformations Du Travail Professoral : Origines, Fondements Et Enjeux*

Les universités font l'objet depuis au moins deux bonnes décennies d'une transformation majeure de leur mission, dans la foulée de la mise en place de ce que plusieurs ont considéré comme étant une société néolibérale (Freitag, 1995). On parle de plus en plus de performance, d'efficacité, de compétitivité, de productivité, etc., pour spécifier les valeurs autour desquelles on voudrait réorganiser le travail professoral. Or ces valeurs, qui prévalent dans le secteur privé, amènent avec elles de nouvelles contraintes qui ont des impacts directs sur le sens même du travail des professeurs d'université (entre autres chez les jeunes professeurs). Comme l'indique Lebuis, « les nouvelles professeurs et les nouveaux professeurs sont projetés dans une culture organisationnelle et dans des pratiques gestionnaires qui n'étaient pas celles qu'ont connues leurs collègues à leur entrée à l'université, que celle-ci remonte à plus de trente ans ou même à seulement une dizaine d'années (2006, 57). On en demande beaucoup et de plus en plus aux professeurs d'université. Ainsi observe-t-on une tendance à l'augmentation des problèmes liés au stress et à l'anxiété en milieu de travail. Dans son dernier rapport, l'Association canadienne des professeurs et professeurs d'université (ACPPU) en arrive aux conclusions que le niveau de stress et d'anxiété chez les professeurs d'université est très élevé et tend à augmenter de manière croissante. Dans le cadre de cette conférence, nous allons présenter les témoignages que nous avons recueillis à la suite d'une collecte de données conduite auprès de professeurs d'université en 2012. Nous avons effectué 17 entrevues auprès des membres du corps professoral d'une université ontarienne (Canada). Nous allons mettre en lumière, à la lumière des témoignages recueillis, la nature des contraintes et des pressions qui pèsent sur les professeurs dans leur quotidien en mettant au cœur de l'analyse les transformations globales de l'université.

#### *Regard Sur Quelques Stratégies De Déconnexion Chez Des Infirmières Hyper-Débordées*

Les discours faisant état du fait que les TIC sont censés « libérer » le travailleur de toutes contraintes temporelles et spatiales sont largement répandus. Pourtant, de nombreux travaux scientifiques (en sociologie ou en communication) viennent montrer que les TIC tendent plutôt à contraindre les travailleurs avec comme résultat une augmentation de leur niveau de stress. Force est de constater, sans toutefois tomber dans le piège du déterminisme, que les TIC induisent un ensemble de pressions supplémentaires sur le dos des travailleurs. Les travailleurs du secteur de la santé n'y font pas exception. Sur le plan micro-sociologique, on observe de manière caricaturale des individus qui sont pressés, soumis à la montre et constamment en mode « multi-tâches ». Il y a certes des « gagnants » (les « chrono-compétiteurs »), mais il y a aussi des « perdants » (qui implorent). Ce qui conduit à voir dans le rapport que chaque travailleur entretient avec son quotidien une inégalité entre ceux qui « s'en sortent » et ceux qui « s'engouffrent », entre autres entre ceux qui « déconnectent » et ceux qui ne « déconnectent pas ». À l'aide de témoignages recueillis auprès d'infirmières « hyper-débordées » au cours de l'automne 2011 dans un hôpital de l'Est de l'Ontario (Canada), nous allons nous intéresser, aux différentes stratégies que ces infirmières ont mises individuellement et/ou collectivement en place pour se soustraire occasionnellement aux aléas du travail quotidien de manière à « sortir la tête de l'eau ». Un regard spécifique sera porté au « bricolage » quotidien,

aux « micro-formes » de contournement des règles et à la « créativité » des infirmières pour « survivre » dans un environnement hyper-stressant.

#### *Globalising Patterns of Professionalisation and New Groups in South Africa*

Transformations at the level of societies, cultures and economies affect professions in different parts of the world in different ways. In some senses these transformations reflect the interactions between the macro (global developments) and the micro (country developments). Key to the transformations witnessed in the South African economy and society is the post-apartheid project of racial and to a lesser extent gendered transformation. A primary purpose of this paper is to consider how this transformation project is affecting South African professionals and the organisations that employ South African professionals. Thus the paper will examine recent developments in professions in South Africa. Four key developments have been identified. Firstly, the state led project of the professionalisation of the public sector as a strategy to raise standards of service delivery. Secondly, the fall in unionisation levels of traditional manufacturing sector workers and the subsequent rise in unionisation levels of teachers and other professionals. Thirdly the emergence of professionalisation of new groups (for example security guards) as a strategy for organising workers. And, fourthly the strategies developed by the state, professional bodies and educational/training institutions to effect racial transformation in the composition of traditional professions.

#### *Social Investment Policies in Times of Permanent Austerity*

The objective of this paper is to identify the political conditions that are most likely to be conducive to the development of social investment policies. It starts from the view put forward by theorists of welfare retrenchment that in the current context of permanent austerity, policy is likely to be dominated by retrenchment and implemented in a way that allows governments to minimise the risk of electoral punishment (blame avoidance). It is argued that this view is inconsistent with developments observed in several European countries, where some welfare state expansion has taken place mostly in the fields of childcare and active labour market policy. An alternative model is put forward, that emphasises the notion of "affordable credit claiming". It is argued that even under strong budgetary pressures, governments maintain a preference for policies that allow them to claim credit for their actions. Since the traditional redistributive policies tend to be off the menu for cost reasons, governments have tended to favour investments in childcare and active labour market policy as credit claiming tools.

Policies developed in this way while they have a social investment flavour, tend to be rather limited in the extent to which they genuinely improve prospects of disadvantaged people by investing in their human capital. A more ambitious strategy of social investment seems unlikely to develop on the basis of affordable credit claiming.

The paper starts by presenting the theoretical argument, which is then illustrated with examples taken from European countries both in the pre-crisis and in the post-crisis years.

#### *The Potential of the Capability Approach for Developing a Sociology of Democracy*

The capability approach emphasizes the tight connection between democratization and social justice, thus providing an essential clue in the "agency vs. structure" debate. In *Development as Freedom* (1999), Sen insists on the constructive value of democracy that, ideally, should allow all people to effectively take part in collective decision-making processes, i.e. to express their viewpoints, wishes, expectations, etc. but also the information and knowledge they have about the issue under scrutiny, and to make them count. In other words, democratization should permit all people (agency) to be part of the construction of the social fabric (structure), thus contributing to a more reflexive relationship between agency and structure. The paper focuses on the potential of such a perspective for developing a sociology of democracy; it both discusses its normative foundations, and suggests analytical tools for its implementation in the empirical enquiry. At normative level, Sen's fascination for democracy has raised sharp criticisms: real democracy does not match Sen's ideal at all; only active deliberators are allowed to enjoy the full benefits of democracy (cf. Cohen's objection of athleti-

cism), etc. In *The Idea of Justice* (2009), Sen strives to answer these criticisms: he develops a notion of democracy as public reasoning, emphasizes the relevance of issues such as the informational role of democracy, the inescapable plurality of principles and the needed focus on tolerant values. The paper assesses to what extent these developments take up the normative challenges raised by the criticisms. At empirical level, the concept of "capability for voice" as a basis for the sociological use of the capability approach is presented, and the factors facilitating (or impeding) its effective implementation are identified, thus providing an analytical grid for the sociological enquiry of democracy and participation.

#### *Amsterdam: How Just Is the Social Housing Sector?*

The role of the social housing sector in the Netherlands is changing, it becomes smaller and more exclusively targeted to lower income groups. In Amsterdam, where half of the housing stock is owned by housing associations, the effect of these changes will have a great impact on the city. Susan Fainstein argues in *The Just City* that the social housing system is a key element that makes Amsterdam a just city. But how just is the social housing sector in Amsterdam? And what impact will these changes have on the chances to move in the city and the spatial division of the city?

The distribution system of social housing in Amsterdam is based on waiting time. The longer the waiting time, the higher chances are to find a new dwelling. The waiting list is long, the mean waiting time is 15 years.

Previous research indicate that in general younger households, households with a higher income and non-immigrant groups tend to have higher chances to move. Our first findings indicate that this is also the case within the social housing sector. Although waiting time is the basis of the distribution system, our findings show that waiting time is not a relevant factor in explaining the chances for households to move.

In Amsterdam the segregation levels are rising. The social housing sector does not seem to contribute directly to the income-segregation, but our first findings indicate that it does influence the ethnic segregation in the city.

The analyses are based on the biennial survey 'living in Amsterdam' (17.000 respondents) combined with the actual moving behavior of the respondents. To reflect on the outcomes of these analyses we look at the actual spatial distribution of housing and households based on register data.

#### *Imagination of Nation in Multi-Ethnic Situation: Understanding Ideological Conflicts and Ethnic Exclusions in the Imagination of 'bharat Mata'*

#### **Imagination of Nation in Multi-Ethnic Situation: Understanding Ideological Conflicts and Ethnic Exclusions in the Imagination of Bharat Mata**

The idea of nation has traversed a long path of contradictory conceptualization based on the perspective adopted and the context where it is done. Debate on the precedence of nation and state is continued along the basic question of the idea of nation itself. Historical specificity lead to precedence of nation before state in Europe, but state formation followed by attempt to create a corresponding nation is more visible in the case of post colonial countries of Asia and Africa, although exceptions are also visible. The post colonial state formed mainly with the formulation of the colonial masters, which are many times not suits the ground realities thereby opens the scope for ethnic assertions among multiple groups. This lead to two important questions: the validity of state formation in the multi-ethnic situation and what leads to the formation of the nation? Although both questions need special attentions but addressing the second question can also lead to some clues to the first question.

We see that the imagination of *bharat mata* in the Indian context as separate nation is totally different from the western idea of imagination of a nation. Rather than simple imagination, it is more to do with *darshan* which has more to do with seeing beyond the eternal reality. Such philosophical underpinnings of the imagination of the Indian nation lead to emergence of distinct nature of Indian imagination which has more to do with dominant Hindu ideology, and thus excluding all others who don't come in its fold. This inherent exclusion that takes place in the imagination of *bharat mata* is manifested as routine part of life thereby became tragic.

*Differential Subalterns in a New Social Movement to Prevent Bauxite Extraction on the Niyamgiri Mountain in Eastern India*

The Niyamgiri movement in Eastern India witnessed the participation of several kinds of actors, ranging from indigenous villagers to European governments. This paper will examine how those threatened by environmental risks, such as inhabitants of the region around the mining project against which the movement was launched, responded through symbolic action, legal mobilization, 'pure politics', media activism and contingent alliances with political parties. Across these strategies, the trope of indigeneity as symbiosis with Nature can be traced as a theme countering the philosophy of industrialized development of which the proposed mining project at Niyamgiri was to be an example, as well as a tool encouraging/facilitating state and trans-national sympathy for the protest movement. The operationalization of this theme by non-indigenous inhabitants of the region around Niyamgiri, the legacy of the presence of this theme in Indian culture, and official state reception of it in legal, legislative and discursive terms, will constitute the paper's first layer of analysis. The second layer of analysis will focus on why non-indigenous actors who had valid reasons of their own for opposing the mining project, chose to rally around this theme, and project the cause of the indigenous villagers who were threatened with the loss of their land, to the forefront of the movement. This analysis will be undertaken with the help of subaltern theory and new social movement theory. The non-indigenous villagers will be analysed as differential subalterns and the Niyamgiri movement as a new social movement. Indigeneity as lying in the space of tension between exclusion and freedom, will be explored as a potentially useful concept for the provocation of public debate on the validity of mainstream industrialized development – the paper will analyse whether indigeneity then remains a legal/strategic instrumentalization or goes beyond to become a call to broad-based cultural critique/renewal?

*European Environmental Cosmopolitanism As a Call to Indian Gandhian-Style Democracy: The New Environmental Nation-State As Soft Power?*

Zygmunt Bauman offers a persuasive argument of the importance of Europe's post-imperial cosmopolitan role in world politics. Part of a legacy that traces itself to Immanuel Kant, this stance can be argued to be a form a soft power – a way to consolidate legitimacy in the global moral economy. This paper will argue that in the Indian context, and with pertinence to a particular case, it has been received as a call to a similar response. The case concerns the struggle of what was highlighted as an indigenous community protesting against the acquisition of their sacred mountain by a UK-based mining company. The Norwegian government and the Church of England among others, disinvested in the company and also tried to apply diplomatic pressure on the Indian government to ban the company's mining project – to which the Indian government responded amenably and with an official acknowledgement of the role of the Norwegian government in influencing its decision. However, in further developments related to the case, the Indian Supreme Court issued a landmark judgment that was perhaps as much diplomacy as jurisprudence – it asked for an environmental referendum at the level of the village councils of the indigenous community, which would decide the fate of the mining project. In data collected in relation to this case, many informants emphasized that the government's stance was more influenced by the management of its image in the international public sphere than it was by domestic imperatives. The paper will argue that the government's actions were in fact a way to go beyond the European cosmopolitanism to which it responded, and showcase support for a Gandhian-style grassroots-level environmental democracy – thereby enhancing its own stock of diplomatic soft power.

*Knowledge Challenges for Responsible Supply Chain Management of Chemicals in Textiles*

A great number of chemicals are used along the complex supply chains of textiles. Since many of these substances are hazardous to human health and the environment, dealing with knowledge-related challenges plays a central role for achieving a responsible governance of textile supply chains. Although previous research enables identification of general organisational commitments and capabilities facilitating aspirations of responsible supply chain management (RSCM), the challenges in various contextual settings need more detailed scrutiny. In this study, we investigate which knowledge requirements and knowledge strategies textile procuring organisations experience and apply when striving to satisfy expectations from external stakeholders as well as from internal pressure. We describe these challenges regarding chemical risks in the supply chain and analyse how the efforts potentially relate to expressed commitments as well as perceived capabilities for responsible supply chain management (RSCM). We lean on literature on Supply Chain Management and Sustainable Supply Chain Management in order to analyse the knowledge process. Empirically, the paper builds on a qualitative study of medium-sized Swedish textile procuring organizations. Participatory observations and a series of semi-structured interviews were conducted with staff responsible for environment, procurement, and CSR, as well as with other actors that in various ways engage in developing policies, instruments, and knowledge of relevance for RSCG. The empirical results show that several textile procuring organisations express serious commitments towards achieving RSCM. However, most organisations feel they lack capabilities in rising to the challenge. There seems to be a poor state of knowledge on many substances and inherent difficulties in both gaining knowledge on chemical risks as well as facilitating a responsible management upstream complex supply chains.

*CAN Cultural Festivals Create Sustainable Tourism ? A Study Based on Festivals in North EAST India*

Festivals are integral to culture .Culture formats festivals, reflecting traditions ,belief and faith of the communities in its celebration. Festivals brand communities, display culture in all forms, preserve ethnicity and identity that create potential for tourism markets .Tourism is gaining momentum across the globe owing to growing subsets of tourism. Festivals, events and cultural tourism is a marketing mix and economic phenomenon, that creates innovative tourist avenues for developing nations. In India, Assam tourism policy banks upon the festivals and cultural heritage of the state as tourism product promotion. The deviation is from simple celebration to commercialization. In this context ,the study is a research on festivals that showcase culture in art, dance forms, traditional handlooms and handicrafts, jewellery, etc that is hypothesized to impact on creation of tourism .

Method: The centre of the study is the touristic and commercial hub of Guwahati city, a major destination for all North East States in India and gateway to South East Asian countries that forms India's Look East Policy. Guwahati holds several cultural festivals that attracts tourists. Therefore the primary databased study have selected tourists to understand their perception of sustainability and the issues that interest them to visit a particular cultural festival at repeated intervals and those that fail to create such an interest. Convenience sampling is used to distribute the structured questionnaire to the respondents. The questionnaire comprising of both open and close ended questions is developed specifically to gather information regarding knowledge of sites, accessibility, location, transportation, traditions, gastronomy, publicity, expectations and motivations of such visits. The study is expected to reveal inspiring factors and deterrents of tourist attendance .The research will create value addition that is expected to innovate in products, processes and marketing associated with festivals that can raise intellectual capital of community members.

*"Maternity Capital Program" in Russia and Its Outcomes: Gender Perspective*

This paper (based on the collective project) examines the implementation of the Maternal Capital Program (MCP) in Russia (2006 - 2016). MCP - the most prominent measure of Russian family policy in recent years - is the monetary benefit aimed at support of the family with two and more children. It is targeted basically on mothers and has to be spent on purposes predefined by the policy-makers. MCP is gendered and has gender consequences. We show that instead of promoting work-family balance for working mothers and gender equality, MCP is primarily aimed at encouraging the traditional role of the woman as the mother

and the main subject of care. Interestingly enough such policy takes place in the context of economic growth in Russia.

The empirical data are the documents of MCP and 36 interviews with mothers who are eligible for MCP. The questions are: how the social policies are perceived by families, how MCP is used. The researchers control biographic situations as household structure, material conditions, housing situation, health status of children and parents, education and employment of parents, support from the older generation, availability of childcare institutions.

The analysis is based on the feminist approach aiming to investigate if the political measure empower women and helps to achieve gender equality. The structure of the paper is as following: The first part presents the discourse analysis of MCP. The second part focuses on the practices of implementation of MCP. In the third part, a broader perspective is reconstructed on the basis of interview data which represents the citizens' attitude towards the conducted social policy and its gender consequences.

### *"Building a-Where-Ness: Housing Access Strategies of Internationally Protected Individuals"*

#### **"Building a-where-ness: housing access strategies of internationally protected individuals"**

Alongside citizenship there is an increasing number of legal statuses that are temporarily limited among which refugees, asylum seekers and internationally protected individuals. These categories share the same territoriality with citizens, although they have limited rights. Most importantly, they have different access possibilities to such rights.

Despite the creation of a common European asylum system, issues regarding reception and integration of refugees and internationally protected people are still heavily relying on nation state decisions and their policies. This happens within a context of restructuring of welfare and decentralization of competences from the central level to regional and local levels that addresses not only the territorial dimension of policies but also the actors involved in their implementation, leading to a subsidiarization of social policies (Kazepov, 2010).

Temporary protected individuals are caught in a mechanism of bureaucratic and juridical obstacles that displays itself as multi-layered according to different territorial levels: interestingly the fact that the rights of these categories are anchored at the national and even the supra-national level (EU Regulations, Conventions) does not necessarily imply a correspondence at the local level.

Through the findings of a multi-sited research in two local societies in Europe, Turin (Italy) and Berlin (Germany), this contribution means to offer an insight on how boundaries are produced within both cities, and what practices are enacted by internationally protected people in the process of access to housing policies. It is going to point out how the interplay of normative settings on different scales hinders the access of internationally protected people to public services at the local level.

**BORVORNSOMPONG, PAIRUCH\*** (Srinakharinwirot University, [deepairuch@yahoo.com](mailto:deepairuch@yahoo.com))

### *"Vanz" Phenomenon*

Vanz behavior or behavior of male teenagers who like to increase speed of their illegally modified motorcycles in order to make a loud noise "Vanz" and illegally race on public roads at night is a social phenomenon in Thailand. This phenomenon is an infringement of human rights, social order and laws because it interrupts and harms to other people and property.

This problem is seriously being solved by law enforcement; however, it cannot be solved by law enforcement only because it is social pathology which needs an understanding of problem system, cause and social impact.

The research result suggests that Vanz is a social combination of teenagers to form their social identity and social space. This behavior can reflect myth or false consciousness of teenagers by creating social recognition and identity, for example, trying to be outstanding person in order to get female teenagers' attention, without paying attention and taking responsibility to society.

While the above problem is continuing, Vanz gangs have their own self concept that their behavior is not a problem or an infliction. Moreover, there are several kinds of Vanz behavior, such as showing illegally modified motorcycles, riding for social combination, illegally racing for attention and racing for betting. Therefore, an overall understanding of this phenomenon is needed in order to know and categorize teenagers into problem group and risk group. Also, the problem is multi-facet which cannot be solved by only one solution.

Therefore, the problem should be clearly understood and target groups of problem solving should be clearly categorized. Guidelines to solve the problem should be various strategies which are designed by participation of concerned organizations and their awareness. Traffic regulations must be strict and be the

same standard. The concerned organizations should collaborate to prevent, support, enhance and suppress the problem.

### *Scale, The Silo Effect and Intergovernmental Cooperation: Institutional Analysis Of Global-City Development and Ecological Sustainability*

American global cities include only 25 percent of the U.S. urban population, but are at the nexus of U.S. and world economies and culture. While recognized as compelling world stages and mighty seats of power, they also contain the ingredients of a "full-spectrum problem" for public policymaking. They exist in huge scale, overwhelming complexity, and in paradox regarding globalization's forces behind urban development and the limits of ecological carrying capacity. Furthermore, their urban governmental jurisdictions are often mismatched with the problem's central elements, and policy outcomes frequently reflect difficulty achieving cooperative intergovernmental behavior. This paper examines the ability of multinucleated urban government in dealing effectively with issues of scale, complexity and paradox, and to identify criteria necessary to improve policymaking for global cities.

As previous research suggests (Boschken, 2013, 2008), global cities are a special case in the American urban experience. Due to the skewed configuration and momentum imparted by contemporary globalization, they have evolved along a different path than America's other metropolitan areas. This path is characterized by their centrality in a corporate global economy and by the enrichment of other conditions regarding political culture, lifestyle and consumption. But, most important, American global cities have enormous footprints extending beyond their regional confines, enabling globalization's developmental requisites to influence a nation's entire socioeconomic and ecological condition.

Although atypical in these respects, global cities are similar to other cities in their polycentric governmental structure, consisting of general-function city and county governments, special districts, and regional planning, development and regulatory agencies. Although superior to a unitary bureaucracy in dealing with complexity and systemic interdependencies, multinucleated government nevertheless raises concerns about collaborative, integrated, evidence-based policymaking. This paper examines intergovernmental impediments to collective policymaking and poses structural-design reforms that could improve policy response to the problems of scale, complexity and the sustainability paradox.

**BOSHOF, NELIUS\*** (Stellenbosch University, [scb@sun.ac.za](mailto:scb@sun.ac.za))

### *Mapping the Categories and Overlapping Roles of Publics/ Stakeholders in University Research in Nigeria and South Africa*

University researchers are increasingly faced with the challenge of multiple demands from both the publics and stakeholders of their research, and often these two groupings overlap. Publics are interpreted as the receivers of a research message, i.e. the target audience or intended beneficiaries. Publics are not necessarily passive receivers because they may also be involved in the production, tailoring, communication and transfer of the research message as well as in the actual research that generated the data/information for the message. Publics are also stakeholders to the extent that they may have a direct stake in the creation, dissemination or uptake of the message, and/or in the creation of the research behind the message. The aim of the current study is to map the different categories of publics/stakeholders in Nigerian and South African research published between 2010 and 2012, and to demonstrate their overlapping roles. The first focus of the paper is a bibliometric analysis of research articles by universities in the two countries, extracted from the Web of Science, and highlighting the role of funders and collaborators in the research. The second focus is more specific, as it investigates the co-occurrences of publics/stakeholders at different stages of research (creation, transmission and uptake) and how these relate to other factors of research production, such as research field and the nature of the research (curiosity-driven research; research addressing grand challenges; and research contributing to economic growth, job creation and innovation). The methodology for the second focus involves an electronic survey of the corresponding authors of the published research articles.

### *Participation of Women and Girls in the National Science, Technology and Innovation System in South Africa*

The importance of documenting data on the inclusion and participation of women and girls in a society's science, technology and innovation (STI) system cannot be underestimated. The paper presents results from the Gender Equality and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa's reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender machinery has been put into place and operates in all the realms of government. A lack of funding, human resources' constraints and insufficient co-ordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematics at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women's participation in the STI system in South Africa. South Africa has an aging, predominantly white male, scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country

#### *Different, Marginal or Discriminated? Representation of the Family and Practices of Parental Responsibility in the Opinion of Same-Sex Parents and Their Children*

In the variety of family configurations that characterizes contemporary pluralistic societies, homo-parental families stand out as a "social laboratory", as they are confronted with new, complex psychological and social problems. Moreover, in Italy they construct parenting in a condition of anomie, owing to the lack of social and legal institutionalisation.

In the paper, after giving an overview on the orientations expressed by sociological and legal culture on the concept of parental responsibility, we present some findings from a pilot study conducted with Italian same-sex parents and children born or grown up in homoparental families. The aim was to investigate parents' and children's social representations of their family and practices of parental responsibility. Adults and children were in depth interviewed and involved in focus groups. More specifically, we interviewed 4 couples of gay fathers and 6 couples of lesbian mothers, we involved 7 children - aged 9-12 - in two focus groups and finally we individually interviewed 2 girls over 18.

Adults and children were asked to talk about their daily life in order to identify the practices of parenting and the representations with regard to the dynamics governing the roles and practices of different parental figures. We detected norms, values, upbringing style, child care, and disciplinary practices, and their experience with respect to agencies of socialization, especially school.

#### *Opinions and Representations of Rights in Children with Visual Impairment. Findings from a Research Conducted in Italy*

Young disabled people are subjected to a dual risk of social marginalization because of their age and disability. This risk is closely related to the conception we have of children and of disability. Current approach in childhood and disability studies considers children and disabled people as active members of society, subjects with rights, capable to express their opinions, identify their needs and claim rights. This tendency is stated - among others - in two international legal documents: the 1989 UN CRC and the 2008 UN CRPD.

But which representations do disabled children have of themselves, their agency and rights? We can assume that such representations are related on how they/ we define childhood (an age characterized by incompleteness and vulnerability rather than an age whose components are competent social beings) and disability (an internal condition of individual rather than an external condition determined by structural and organizational circumstances).

To answer these questions we planned a research with Italian visually impaired 12-18 year-old children that integrates quantitative and qualitative methods. First, we will carry on a web-survey with a national sample of visually impaired children. We will ask questions on their knowledge, representations and respect of their rights at home, school and in their spare time. Second, we will conduct 12 focus groups and 30 in depth interviews to identify, analyse and look for solutions to issues concerning violations of their rights. Some children will be involved in the research-planning in order to implement a web-platform accessible to them, and to identify the topics to be addressed. For all these respects, the research contributes to the field of study related to the sociology of children's rights (aiming to investigate the "common sense of law" developed by children in their everyday

normative and legal experiences), and the field of participatory and emancipatory research.

#### *On Justification of Child Treatment*

On justification of child treatment

Since a government decision in 2009 Sweden has a national policy for parental support, attended by the Swedish Institute of Public Health and strongly oriented to parental interventions that are evidence based (which is defined by the authority as "interventions that have been checked with high-quality research and have proven to give results"). Furthermore the Swedish Institute of Public Health states that "support of good parenthood" is one of the main targets for the public health interventions.

In my paper I analyse the definitions of child and childhood in the national policy for parental support and in three of the proposed, so called "evidence based" parental educations (whereof two are directly imported from USA, with none adaptation to a Swedish context).

My research aims to investigate how different definitions of a child - and "good parenthood" - is used by the authorities to legitimise a certain - and preferred - kind of parental treatment of the child. When is the child's behavior seen as a problem? How, and from which professional perspectives and national contexts, are the parents taught to act in these situations? And why are they taught to act like this (how are the insisted action justified)?

Theoretical as well as analytical I am influenced by Michael Foucaults archeological discourse analyses (highly applicable in a field so composed by investments in scientific findings) and Luc Boltanskis and Laurent Thévenots six orders of worth.

#### *Developing Capacities for Sustained Transnational Environmental Activism*

Most environmental problems are extremely long term and have cross-border implications. For environmental non-governmental organizations (ENGOS) to achieve significant impact on environmental governance cross-border and sustained activities are required. **The purpose of the paper** is to identify key barriers and possible pathways to develop *sustained* and *transnational* environmental activism among ENGOS operating in strikingly different political contexts.

Our analysis is based on qualitative methodology and empirical analyses of ENGOS in six countries (Sweden, Germany, Poland, Italy, Slovenia and Croatia) and two regional contexts, the Baltic Sea and the Adriatic Sea regions. The study is based on document analyses and semi-structured interviews with representatives from 4-6 key ENGOS in each country. The theoretical framework departs primarily from social movement theory.

The paper reveals intriguing similarities and differences between the countries regarding ENGOS' abilities to develop sustained and cross-border activism. We pay particular attention to differences in opportunity structures for resource mobilization. The last decades, the European Union (EU) has emerged as a key opportunity structure that in various ways facilitate cross-border collaboration and capacity building among ENGOS, particularly in Central and Eastern European (CEE) Countries. However, the EU also considerably shapes the conditions for ENGOS to set independent long-term agendas. With the exception of Germany and Sweden, ENGOS rely heavily on their ability to develop a "project mind-set", which in turn requires fund-raising skills and procedures. Also ENGOS in Germany and Sweden make use of public grants. However, the fact that they historically have been able to mobilize huge number of members/supporters -which is still extremely difficult particularly in post-communist countries - have profound implications for abilities to develop transnational and sustained environmental activism. We discuss the role of (dis)trust (institutional vs. family-based trust), political culture and historical legacies to analyze these remarkably different conditions for resource mobilization.

#### *The Economic Impact of Cultural Events: Girona's Flower Festival "Girona Temps De Flors"*

Cultural events have taken on a growing role in territorial and tourist marketing of cities and destinations. In addition to its role in stimulating creativity, showing

the cultural heritage to the visitors or even being a learning tool, a cultural event can serve as a stimulus for local economic activity because as an attraction draws visitors who spend in a community.

At the same time, economic impact analysis is a frequently discussed topic in academic papers and journals to assess the relevance of the culture in the local economies. In many cases the positive economic effects described in these publications are used to justify a further development of tourism and cultural events.

The data presented here demonstrates the direct economic impact of the culture activities, such as organization expenditures and the wider economic benefits for the local tourism stakeholders. This thesis takes a deep approach and estimates the economic effects of one specific event; Girona Temps de Flors, by obtaining the data throughout a questionnaire used to assess the spending behavior of the visitors and its consumer profile during two editions; 2012 and 2013.

The economic impact model used was the input-output one, using the methodology provided by impact studies in two stages: first, through estimating private spending generated by the event's cultural tourism; and second, by calculating the overall economic impact. Not only the common methodology was used, but also some innovations have been introduced as for example the way how the mobile population was calculated, making comparisons in between two different editions and evaluating the economic sustainability of the event.

### *How the Mundane Challenges the Neoliberal Death of Public Space: The Unexpectedly Complex Social Lives of Los Angeles Private-Open Spaces*

In recent decades, Los Angeles has been a poster child for the neoliberal management of public spaces, choosing privatization, surveillance and uniform design over locally oriented, spontaneous and inclusionary practices. It is believed that this has decreased the number of public spaces in the city, but it has also reduced their quality by limiting access to certain well-behaved socio-economic groups and their activities. When looking back at their history, public spaces have been tools for expressing power in the city and as such, they have been marked by day-to-day negotiations for their representation and appropriation. This suggests that public spaces have never been totally opened, and that their social dimension is an important part of what defines them, in addition to their design and management. Recent research into five public spaces in Downtown L.A. studied mundane sociability through the observation of users, their interactions, and their strategies to control the space within formal surveillance. The results revealed that everyday uses by a variety of visitors weave a complex and dynamic fabric that defines each space. This paper focuses on two privately-owned-publicly-opened spaces, namely Grand Hope Park and the California Plaza, to show how their daily social lives are dynamic and differ one from another. Their social fabrics unfold at dissimilar rhythms, and present a set of unique informal rules negotiated within what seems to be a similar context of formal surveillance. This research challenges the claim of the recent death of public space but also the more recent affirmations regarding a re-appropriation of public space. Daily dynamic uses and interactions have continued to contribute to the development of a complex identity that is unique to each site and that calls for an end to the oversimplification of the definition of "dead" or "lively", "private" or "public" public spaces.

### *Montée Des « Risques Psychosociaux » Et Redéploiement De La Critique Du Travail : Opportunité Ou Piège ?*

C'est dans une conjoncture d'affaiblissement et de professionnalisation des syndicats que s'élargissent les formes de l'exploitation, qui se traduisent par des atteintes plus fréquentes à la santé mentale des travailleurs. Ces atteintes sont désormais catégorisées comme « Risques Psychosociaux ». Cette notion l'a emporté sur d'autres - comme la « souffrance », ou le « stress » - parce que les professionnels de la santé au travail et de sa négociation collective ont réussi à l'intégrer dans la problématique pré-existante des « risques professionnels ».

La montée en puissance de cette catégorie est à la fois une opportunité et un piège. Elle ouvre la possibilité d'interroger les facteurs collectifs de risque, à la source des difficultés psychologiques et individualisées des salariés. Mais elle peut refermer le débat sur les sources organisationnelles de ces difficultés en mettant l'accent sur la nécessité de « protéger » de ces risques les travailleurs vus comme opérateurs passifs, confrontés à un environnement hostile. Et donc d'ouvrir la voie à un nouvel hygiénisme. L'opportunité offerte de mettre en place des espaces collectifs de controverse sur les enjeux d'organisation, de qualité ou d'efficacité de l'activité n'est pas saisie. Les « RPS » fonctionnent alors comme un piège, tenant éloignés syndicalistes et représentants du personnel des salariés et de leur expertise que ces derniers détiennent sur le travail et les sources organisationnelles de leurs difficultés.

A partir d'une série d'enquêtes de terrains en cours on montrera le rôle des contextes d'action qui sont ceux des équipes syndicales dans l'éventail des situations rencontrées. Elles vont de l'intégration à des dispositifs managériaux visant à « soigner les travailleurs les plus fragiles » à des expériences d'écoute syndicale de l'expérience laborieuse, revivifiant à la fois la pratique syndicale et la critique de l'organisation du travail.

### *The Impact of Motherhood on Women's Retirement Income: Six EU Countries*

Concern with equity and adequacy in retirement income for men and women is a serious issue, especially due to the longer life expectancy of women in Europe and North America. Women not only face a higher risk of widowhood, but also the incidence of divorce has become greater. Older women, especially, are at risk of living in a single person household, a household that does not have the economies of scale of a two-person household.

Important factors in retirement economic security and equity are linked to the work life of women in comparison with men. Under current conditions women are likely to have not only a less stable work life but also more limited access to better pensions linked to a stable work life. The most important factor impacting a women's work life is motherhood in contrast to fathers who typically have a more stable work-life than non-fathers.

Initial results indicate that where there is greater protection for mothers to sustain their work-force activity to contribute to pensions systems during maternity leave or leave to caregiving their pensions will be more similar to those of men. This is the case of Sweden where gender equity and gender mainstreaming have been a long established as policy goal. In Germany, however, mothers typically drop out of the workforce and have very limited access to pensions based on their own workforce history. In Spain and Italy where mothers of this generation typically did not work, widows will be more at risk although these widows may benefit, from living arrangements with adult children which can protect them from poverty. The situation in France and Belgium will also be analyzed.

The data for this paper come from SHARE (Survey of Health, Aging and Retirement in Europe) which allows a detailed analysis of the six countries.

### *José Bové : An Online Campaign ?*

During the 2007 French presidential elections, José Bové runs as candidate. He does not belong to any party and he is not supported by any political organization. Through this particular case study, our goal is to question the idea of Internet as a tool of democratic renewal[1]

His campaign is partly based on an online petition, as a consequence of a failed negotiation between potential candidates at the far-left of the political spectrum This campaign highlights the increasing demand for political participation by social-movements' activists as much as it highlights the questioning of the representative pretensions from existing parties through the contestation[2] of the established political action rules.

In this context the Internet use can be considered as a way to challenge the legitimate political institutions[3] This communication analyzes the role of the Internet use during the campaign and the way this tool embodies all the dissenting political claims and its pretention to constitute a democratic legitimacy This part is focuses on the actions/interactions of gathering activists called "free-electrons".

These people, bound by their common use of the Internet, are known to be at the fore of the online petition asking for José Bové's "come-back". On a second time, this paper examines the day-to-day practices of these militants to show how a more traditional repertoire of actions remain and shape, complete or interfere with their online practices.

### *The Multidimensional Aspects of Intergenerational Transmission of Wealth and Poverty in the Long Run: France, 1820-1960*

There are only few, if any, studies of inequality in the long run even though it is widely acknowledged that intergenerational mobility fluctuates a lot. At the same time very few studies explore the way different kinds of capital are transmitted between generations. We take advantage of a large genealogical sample (we have detailed data on wealth at death, education, occupation, and mortality for fathers and their children over a century and half) to study the transmission of different form of assets in France in the long run. The period under study is characterized by major structural changes—industrialization, expansion of wage labor, self-growing professional women—as well as by economic and political shocks. All these changes have deep and lasting effects on wealth structure, on the return of various kinds of wealth and portfolios, and on the relative importance of different types of capital.

We will address the question of the effect on individuals of a given generation of receiving capital from the previous generation. First, we will consider the transmission of material wealth, studying those who get any wealth versus those who get nothing before looking at the amount of inherited wealth. Second, we will take into account the composition of the inherited wealth (real estate, financial assets or working material for instance). In particular, we aim at differentiating the effect of transmission as a whole—or transmission of any type of wealth—from the transmission of particular goods (for instance any kind of land versus the one the individual has worked on with his father since his youth). Third, we will consider non-material inheritance—mainly education and occupation—and its interactions with wealth. We will investigate if other types of capital compensate the absence, or the scarcity, of wealth or if, conversely, inequalities are cumulative.

### *Conceptualizing the Globalization of Local and National Class Structures from the Case of Tokyo and Japan*

The internationalisation of markets and the acceleration of the circulation of people (both, of course, within controlled regimes) has quite naturally led observers to speculate on the emergence of a global class structure, in addition to the increasingly studied impacts on national class structures of the spatial reorganization of world economic activity. In this way systems of social stratification, too, are concerned by globalization defined as a general process by which the world scale becomes relevant. The proposed paper takes up the question of globalization and class structure at the level of a large, internationally-integrated city, in this case Tokyo. In the case of 'global places' such as Tokyo (and New York, London, Hong Kong, and many others), a further interrogation is whether globalizing processes do not apply to them with greater intensity than to the surrounding national society as a whole; this is sometimes expressed using the image of a city 'floating free' at some point in the future. Specifically, the paper discusses the challenges involved in conceptualizing and operationalizing three closely-related aspects of the question: the possibility of increasing homology between the class structures of connected nations; the possibility of transnational class positions that exist in relation to positions in more than one national system; the possibility of individual agents simultaneously holding positions in a national and a transnational system of stratification, which may not be congruent. Strategies for clarifying these questions empirically are proposed. The example used is empirical research in progress about social-structural change in Tokyo, with research on other comparable cities referred to for contextualization. Social structure is approached descriptively using data-analysis methods and a social space model, while the background phenomena of globalization are accounted for with the help of concepts from political economy (especially regulationist analyses) and the geography of fragmenting/uneven development.

BOURQUI, MIKAEL\* (University of Oxford,  
[mikael.bourqui@sociology.ox.ac.uk](mailto:mikael.bourqui@sociology.ox.ac.uk))

### *Redevelopment and Reinvention in 'low City' Tokyo*

The term 'gentrification' in the case of Tokyo has been applied to a process, begun in the early 1980s, of construction of high-rise residential or mixed-use complexes in formerly industrial areas (especially along the Sumida river and Tokyo Bay waterfronts). The developers behind these projects are among the largest corporations in the country. While some of the most prominent ones involve typical brownfield sites such as freight yards, most are built by consolidating many small plots, and they replace a vernacular landscape of small factories, shops, and low-rise wooden housing. This landscape, emblematic of Tokyo's traditional 'low city' areas, now exists in the gaps between towers of apartments marketed to white-collar commuters, alongside new parks and shopping facilities created as part of these developments to fulfil 'public space' commitments. While the 'low city' landscape is pushed to the margins, there is interest in promoting a nostalgic image of it to drive local tourism as a way to compensate for the decline in manufacturing employment. This may be encouraged by developers and local authorities, as with the promotion of the 'Tokyo Skytree', a combined tourist attraction and broadcast tower opened in a formerly run-down area by a consortium of rail and TV companies, as part of a 'low city' travel experience. There are also community-led initiatives to market local culinary and other culture to visitors. Using photography, maps, and visual media including advertising, this paper documents these three contrasting visual aspects of the 'new' low city: the urbanism of concentrated capital, surviving old commercial/residential building stock, and the materialisation of revived local character (sometimes as simulacrum or museum). It aims to throw light on the local transformations brought about by this model of urbanism and critically evaluate its contribution to community life and maintaining or promoting social diversity.

[Regine.Boutrais@anses.fr](mailto:Regine.Boutrais@anses.fr))

### *The Environmental Health Impacts of Technologies, a New Way to Contest Science?*

The rapid development of technologies, such as biotechnologies, nanotechnologies and radiofrequencies (namely mobile phones, Wifi, relay masts, etc.) available on the market coupled with the insufficient risk assessment of their potential negative impacts on health result in a growing public concern and distrust in the general benefits of science and technology. Uncertainties and scientific controversies related to the consequences on human health and biodiversity of these emerging environmental and bio-physical hazards (such as the presence of GMOs and nanomaterials in food or manufactured products or the increase in electromagnetic fields) are rising. They question scientific "technocratic" expertise and more largely the gap between science and society. Various groups (NGOs) contest the use of these technologies and traditional risk governance. They demand a better transparency in the decision-making process as to technological choices and a more democratic governance of public policies in the field of environmental health. Several participatory initiatives of upstream engagement of these NGOs have been conducted such as public debates, dialogue committees, etc. to try to regain trust in the institutions and in the process of health risk assessment. This communication will present and analyze the processes set up within the French Agency for Food, Environmental and Occupational Health & Safety to foster dialogue with civil society in this field.

## RC47-777.2

BOUTRAIS, RÉGINE\* (Université Dauphine,  
[Regine.Boutrais@anses.fr](mailto:Regine.Boutrais@anses.fr))

### *The Mobilization of Collective Actors Around the Stake of Environmental Health*

Various sanitary crises (such as asbestos, contaminated blood, madcow disease/BSE, etc.), industrial accidents (Tchernobyl, Seveso, Bhopal, etc.), and the rapid development of new technologies (biotechnologies, nanotechnologies, electromagnetic fields...) induced a growing public concern on the links between environment and health. This global environmental and biophysical change resulting from the transboundary proliferation of pollutions and the subsequent contamination of air, soils, water or food with disseminated toxic substances is suspected to cause a significant increase in the prevalence of environmental diseases: such as cancers, neurodegenerative and cardiovascular diseases, allergies, endocrine disruption, loss of fertility, obesity, antibiotic resistance, etc. Individual and collective actions around these issues are growing in France to promote public awareness and debate on environmental health issues. Through the recent creation of a number of dedicated NGOs (doctors, women, students) and the reconfiguration of traditional movements (environmentalists, consumers, patients, families) by

setting up a network, these actors endeavour to influence policy-makers and gain the attention of the public. The case study of this emerging social movement for the stake of environmental health will focus on the strategies of these new actors, their interactions, and the new repertoires of action they develop, showing their social and technical innovative capacities, to resist a model of society with endangers human's health.

#### *Statistical Representations and Stereotypes of Youth Labour Market Participation. Insights from Australia*

Statistical data can have important explanatory power, and with the rise of 'evidence-based' policy such forms of knowledge have become more influential. As Boehm and her co-authors (2012:316) observe: 'Knowledge generation is not neutral, but it is influenced by social and political relationships that enact and generate knowledge'. Using youth labour market data as a case study, this paper will explore how statistical categories create and reinforce normative understandings of life stages, in this case, the period between 15-24 years of age. For example, the Australian Bureau of Statistics uses the category 'fully engaged' to describe those who are in 'fulltime employment, full time education or training at or above Certificate III, both part-time employment and part time education/training, or both full time employment and full time/training'. The number of people in this group is subtracted from the population of young people within certain age groupings – such as 15-24 or 18-24 – to calculate those who are 'not fully engaged'. In government and other reports, this group is often referred to as 'disengaged' or 'inactive'. In everyday usage, these terms have negative connotations. This paper will examine how the use of statistical categories such as 'fully engaged', 'disengaged' and 'inactive' in policy discourse in Australia - and elsewhere - reinforces negative stereotypes about young people and obscures the processes that shape young people's lives.

[penelope.susan.bp@gmail.com](mailto:penelope.susan.bp@gmail.com))

#### *The New Organising Model in Political Advocacy; Australia's Experience*

This paper considers some initial findings from a qualitative study examining the ways in which the new, techno-social organising model in progressive advocacy groups has changed the nature of political participation in Australia. Specifically, the paper draws on the findings of an ongoing participatory case study of *GetUp* – a campaigning organisation which describes itself as "... an independent, grass-roots community advocacy organisation which aims to build a more progressive Australia by giving everyday Australians the opportunity to get involved and hold politicians accountable on important issues" (*GetUp*, 2013). Established in 2005-2006, *GetUp* is a prime example of new member-driven, internet-mediated campaigning organisations that continue to challenge traditional notions of democratic participation with novel membership engagement practices. This paper discusses early findings pertaining to one of the study's key research questions – *How do GetUp members understand their own activism and their relationship to the organisation?* Data collection methods employed have thus far included participant observation, document analysis, in-depth, semi-structured interviews with *GetUp* members and with elite professional campaigners, and thematic analysis of membership survey responses. Early findings suggest that members are drawn to *GetUp* because they do not feel that their voices are 'heard' by their political representatives or by mainstream political processes. *GetUp* appears to 'give its members a voice' and to foster a sense of community and shared values. I propose, furthermore, that *GetUp* can be viewed as one of an archetypal category of political advocacy groups which have emerged primarily in modern western democratic countries over the past two decades in line with the ever-increasing dominance of the Internet as our primary means of communication.

**BOYER, ROBERT\*** (Institut des Amériques, [robert.boyer@ens.fr](mailto:robert.boyer@ens.fr))

#### *Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation*

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitalisms have underestimated or ignored in-depth analyses of Asian capitalisms from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping Andersen, which can be qualified of "welfare orientalism" (Takegawa, 2005). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these

three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affected such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new "regulation mode" able to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, a new basic compromise should concern the wage-labor nexus, for the sake of both social justice and dynamic efficiency. New forms of welfare are emerging in Asian capitalisms, as political answers to demands from various groups. They may become a distinctive feature of these forms of capitalisms but also the main source of divergence among them.

[kmb Boyle@uga.edu](mailto:kmb Boyle@uga.edu))

#### *"Victims" and "Survivors" of Crime: The Effects of Labeling Unwanted Sexual Experiences on Mental Health*

Despite a high level of general interest in stigmatized identities, sociologists have given little attention to victimization as a stigmatized identity. How adoption of this identity influences one's self-sentiments, behaviors, and mental health has been largely unexplored. This is important because criminologists document that women who acknowledge as "rape victims" have different post-assault outcomes from those who do not acknowledge. This study applies affect control theory, a formalized theory of symbolic interaction, to examine the relationship between labels and sentiments, post-assault behaviors, and mental health in a survey of undergraduate college women. While previous studies generally use dichotomous measures of rape acknowledgment, neglecting other labels of the event, this study measures multiple event labels and links these labels to shame, anger, PTSD, and relationship termination. Results show that calling the event "sexual assault" or "rape" is associated with heightened PTSD, yet only "rape" is associated with increased shame. This suggests that the label "sexual assault," which is also associated with relationship termination, is more benign and helpful than "rape." Being a "victim" and calling the perpetrator a "rapist" are also associated with shame and PTSD, most likely because these are stigmatized labels that cause identity disruption and anxiety. Finally, "survivors" do not have increased shame or PTSD. Instead, this more powerful and active identity is associated with anger and relationship termination. This study generally supports rape workers' and activists' move towards calling women "survivors" instead of "victims." However, the two labels are correlated and share similar predictors, revealing the complex nature of rape acknowledgment. General social psychological processes explained by affect control theory increase understanding of this process. Implications for the effects of labeling traumatic experiences on emotion, mental health, and identity are discussed.

**BRACAMONTE, NIMFA\*** (Mindanao State University,  
[nimfabutuan@yahoo.com](mailto:nimfabutuan@yahoo.com))

#### *The Gender Dimension in Mitigating Climate Change in Mt. Malindang Rainforestation Project (Phase III), Southern Philippines*

The socioeconomic monitoring for Phase III of the Rainforestation Project was carried out on April 20-24, 2012 employing survey, key informant interviews, observation, and secondary data among the indigenous peoples (IPs) of the Mt. Malindang Range Natural Park in Oroquieta, Southern Philippines. This phase followed up on the employment and income effects and looked into improvements in the living condition, access to social services, attitudinal changes pertaining to the environment, and the role of IP women in the rainforestation project. It also investigated the social articulation effects to the beneficiary communities in two core and three buffer zones.

The establishment of village forests, vermiculture, goat raising, and the planting of indigenous species of trees on steep slopes and around old-growth forests to protect biodiversity are climate change adaptation projects that have taken the pressure off the forest. Poverty reduction through food security and livelihood security of the people living in the communities increases climate change adaptation and makes people more resilient to disasters.

Findings of the study also show strong women involvement in the nursery and in the rainforestation site. Working in the village forests is more compatible with the performance of the Subanen women's role in child rearing and doing household chores. Of the five team leaders in the project, two are women team leaders indicating the project management's thrust in women's capability to nurture the environment.

**BRADLEY, WILLIAM\*** (Ryukoku University,  
[william@world.ryukoku.ac.jp](mailto:william@world.ryukoku.ac.jp))

*Cosmopolitanism Rebooted? Theorizing a Post-National Solidarity*

Cosmopolitanism has been mooted as a possible transcendence to the supposed demise of multicultural theorizing by some authors (Beck, 2007; Held, 2010). Others have argued that its Western origins and bias limits its usefulness as universalizing theory to promote global solidarity (Pensky, 2007), while in contrast some have suggested that it is best complemented by a creation of solidarity "from below" (Kurasawa, 2004) or by focus on "everyday" forms of non-elite cosmopolitanism (Nava, 2002).

In this paper, I focus on criticisms of a free-floating cosmopolitanism, emphasizing an anthropology of the everyday worldliness viewed as a political project. In other words, the elite form of cosmopolitanism's chief weakness can be traced to its lack of a rootedness in the political struggles of working people in the face of economic and social injustice. These cannot be remediated simply by foci of liberal multiculturalism's tolerance and recognition but potentially only in a more radical projection of conviviality with otherness that recognizes the other in oneself (Hage, 2012). This involves a conundrum that the newcomer "other" is already part of one's community, not separate. Therefore the question is not only of creating identities that surpass nations or borders, but ones which facilitate understandings of the self in communities replete with multicultural differences of post-national immigrant societies.

How to generalize such understanding across contexts is a key problem. One avenue suggested is that the construction of identities compatible with global and transnational phenomena (as opposed to substantive and more national-oriented identities) promotes the type of relationality conducive to acceptance of global humanism (Pries, 2013).

However, another problem ensues as transnational imagined communities can also harbor anti-humanist attitudes and tendencies as illustrated both by exclusive enclaves (the super rich international elite, typified by Davos) or reactionary anti-immigrant populists, unified as political parties or in online groups.

*Japanese Higher Education's Fragility: Bureaucracy and Risk's Dialectic*

The scope of risks facing Japanese higher education institutions stems from both local conditions and global developments. Among the local factors are the steady decline of the 18-year-old population, difficulties in establishing internationalized programs to attract more foreign students, government disinclination to increase funding due to high deficits, strong linkages with vocational orientations and post-graduate employment guarantees, and underdeveloped graduate school education. Other more global risks include the growth in online education, for example MOOCs, administrative overload as a result of expanding academic and non-academic functions of universities, and challenges resulting from the trilemma (Kariya, 2011) of costs, equality of opportunity, and quality assurance.

Strong central bureaucratic management by the Ministry of Education (MEXT) is a notable feature of Japanese higher education in the form of *shido* (guidance), so that, for example, universities must follow stringent guidelines to implement new programs and create new departments. In addition to this layer of administrative control from outside and above, many universities rotate management positions within the organization. Insiders who have worked for long periods in the same university often become presidents, vice presidents, deans and heads of centers, and top administrators. The emphasis on strong administrative stability entails that risk is customarily dealt with from a defensive posture, i.e. risks are preempted wherever possible by lengthy discussion and delays in action. A recent example was the discussion at Tokyo University of changing the start of the academic calendar, reported with much fanfare in the media, to the autumn to match many other countries, which, after much consideration, was deemed too radical.

In the paper, I analyze the admixture of a strong bureaucratic management facing risks to higher education in a dialectic relation whereby the risks threaten to become more ad-hoc and unpredictable by failure to act in a timely manner.

*Citizenship Responsibility Sociology In English Higher Learning: Empowering Students and Teachers Giving Hope Of Eliminating Institutional Constraints To Critical Higher Learning*

University class social life is a system with connected individuals and groups who choose to participate or not and relate to one another in any number of ways. People are what make a system "happen," and without their active and

involved and invested participation, any system exists primarily if not solely as an idea with some physical reality attached. People make systems happen, and systems lay out paths of least resistance to shape people's participation. The foreign language (e.g. English in the Japanese setting) classroom can be used for communication and interaction development and knowledge construction where the main goal is neither operational (i.e. skills) nor epistemic (i.e. knowledge acquisition) but phronetic and affective. Student understandings, indeed teacher understandings, of everyday life and society in a sociological study environment are not distinct from how they experience their own immediate study society as it unfolds. University foreign language sociology in English study can be directed towards defining (or redefining) and molding relationships in a community. Social life flows from relationships, and we as university educators need to consider how we approach higher learning and how our approach contributes to furthering social constraints over people, or how our overall teaching approach can help empower students and teachers (ourselves) to give promise of eliminating or at least alleviating inequities in higher educational practice. This presentation will map a path of higher learning (i.e. a sociology in English) that empowers rather than constrains people to participate in their learning.

*Understanding the Meaning of Living with Parkinson's Disease in an Australian Community Setting from the Perspectives of the Person Diagnosed and Their Partner/Carer*

Parkinson's disease (Pd) is classified as a neurodegenerative disorder characterized by non-motor and motor symptoms, which can include sleep disturbance, depression and cognitive impairment, as well as tremor, muscle rigidity and body slowness. Observable motor symptoms lead to a diagnosis; the majority of people diagnosed are over 65 years of age; and no two cases are considered to be the same. The cause and pathogenesis of Pd is unknown and current medical treatments can only provide the person with temporary symptomatic relief.

In 2011 it was estimated that over 64,000 Australians were living with Pd; this population is expected to grow at 4% p.a. over the next 20 years; and there is a lack of community awareness of Pd. A literature review to date has found there are no sociological and qualitative studies that report on the social dimension of people who are ageing and living with Pd in an Australian community setting.

Enmeshed with senescence, embodied Pd is made knowable in the context of a disease-specific health care framework. Within their life course the person diagnosed and their partner/carers embark on a quest to minimize suffering, know the future and maintain independence. Interviews and focus groups are used to gather empirical data on these perspectives. Grounded Theory is then used to examine how each person constructs meaning within interrelated elements of biology, mind, self, symbolic interaction, society and social change.

The purpose of this study is to construct an interpretive schema that describes Pd as a perspectival and social experience. A pilot study has been completed and informs a larger study, which is due to commence in October 2013 and will be reported on at the Congress. This research forms part of a doctoral thesis that aims to add to knowledge on living with this chronic illness.

*Public Sociology and the Rights of Citizenship in Brazil: Critical Assessment and Historical Perspectives*

Public sociology is at the origin of the formation of the modern Brazilian sociological field. Between 1960 and 1970, at least two important institutions of sociological research (the Center for Labor and Industrial Sociology at the University of São Paulo, CESIT, and the Brazilian Center for Analysis and Planning, CEBRAP) developed the praxis characteristic of public sociology building up links with extra-academic audiences, in particular, radical trade unions and progressive social movements. The purpose of this presentation will be to reconstruct the theoretical and political links between these experiences in public sociology and the current engagement of the Center for the Study of Citizenship Rights (Cenedic), public sociology institute founded at the University of São Paulo in the 1990s by sociologist Francisco de Oliveira. Thus, we intend to debate some tensions between the academic research and social movements fighting for the rights of citizenship which resurfaced with unprecedented strength in Brazil in June 2013.

*Assessing the Impact of Social Network Sites' Usage on Bridging and Bonding Social Capital*

When a computer network connects people, it can be referred to as a social network. Close relationships and social support are defined as social capital (SC) and are of prime interest for many sociology scholars. The recent widespread use of Social Network Sites (SNSs) may have SC implications. The concept of 'virtual social capital' suggests that there are off-line advantages that virtual community participants stand to gain from their online contacts. Putnam's (2000) concepts of bridging and bonding SC provide a framework for measuring the outcomes of SNSs' use: *Bonding* SC is exclusive and occurs when intimate friends and family members extend emotional support, whereas *bridging* SC is inclusive and occurs when individuals from different backgrounds make connections through social networks. SNSs' use can vary in terms of number of sites and levels of intensity. Hargittai & Hsieh's (2010) typology, which considers the number of different sites respondents use and intensity of use, was applied in the current study. The objectives of the study were to investigate how users' social practices on SNSs differ from offline social practices and whether different levels of online engagement have an effect on the quality and quantity of offline bridging and bonding SC. Analysis of a web-based survey completed by a diverse group of 127 adults (47 men and 80 women; ages 22-61) found that those who reported frequent use of several SNSs benefited the most in terms of bridging and bonding SC quantity. However, findings also indicated that male participants tended to benefit the most from using SNSs, due to the fact that a large portion of their online contacts involved people with whom they also had face to face relationships, which thus contributed to bonding SC. Limitations and implications of the study are discussed.

*Developing a Risk Inventory for the German K.I.D. 0-3 National Prevalence Study of Psychosocial Burdens in Early Childhood*

Early exposure to psychosocial burdens in families with young children has been identified in the psychological child development literature as an important predictor of development deficiencies and a potential risk factor for child neglect and abuse. Its relevance, however, goes beyond the bounds of any particular discipline, not least because the concept is deeply embedded in the prevailing social and policy contexts of any given society. A federal action plan of 'early intervention' aimed at children from birth to 36 months of age has been in place in Germany for several years now and ongoing research activities are directed at improving both access to and help for parents in need of support. Nevertheless, it is believed that rather unreliable estimates exist of the prevalence of psychosocial burdens among the group explicitly and exclusively targeted by such initiatives: parents with children in the relevant age bracket. In order to improve the data basis for the federal action plan, a large-scale national prevalence study has been proposed for 2014. Two large pilot studies (n>1.500 and n>10.000), testing the application of a bespoke risk inventory in two different survey types, are underway as of late 2013. This presentation will introduce the conceptual development of said surveys and risk inventory, disseminate early results and reflect on the potential of the planned national prevalence study for improving service planning and risk screening at the local level and subsequently better aiming of early intervention services.

*Social Innovation Aspects of Human-Robot Interaction in Complex Manufacturing Systems*

The focus of our paper is the use of robotics in manufacturing industry with respect to its social innovation dimension. One of the aims is to identify relevant

research questions about the possibility of development of safer robot systems in closer human-machine intuitive interaction systems at the manufacturing shop-floor level. For example, the augmented reality approach provides major opportunities for human-robot interaction within safer environment. We try to contribute to understand the limits of cognitive and perceptual workload for robot operators in complex working systems. And we envisage increasing the knowledge awareness on the use of robots (as working tools or machines) at the shop-floor level in the manufacturing industry. In particular this issue will be highly relevant when more different robots with different roles and produced by different companies or designers are to be used in the manufacturing to a larger extent. The integration of such different technical systems needs further capacities in technology assessment. The social sciences approach to such assessment is of high relevance to understand the organisational dimensions of the human-robot interaction concept. The technologically dense environments applied to our approach refers to settings in which human actors/robot operators and technological artefacts (robots) work 'together' and where working and organizing are inextricably linked to the use of these technologies. Such integrated systems reveal new challenges for the design of work, organisations and also technologies. In most cases, they imply new processes of workplace innovation, with participative strategies and development of new forms of work organisation. When safety plays also a central role, the working life environment is improved. New concepts as responsibility, decision making, situation awareness and risk assessment are also included in such innovative processes. The discussion of outcomes will be based on empirical evidences and on the qualitative research approach that we undertook recently.

*Multi-Sited Approaches in Analysing Gender Constructions in the Migration Process: Based on the Example of Migration Between Cuba and Germany*

How to research the social construction of gender in transcultural research settings? The study of gender in transcultural research settings implies newly arising methodological challenges for interpretative research. In this paper I will present a biographical case study of Cuban migrants in Germany and their transnational ties to their family of origin conducted from 2006 to 2013, which indicates how gender categories and constructions are reworked and reinterpreted during the migration process. Especially the transnational and transcultural negotiation of gender and familial roles can be observed. Women of female headed families in Cuba for instance have to adapt to the nuclear family expectations in Germany while simultaneously economically supporting their family of origin and performing the role of the main breadwinner in Cuba. Also the appropriation of external ethnic- and gender categorizations and ascriptions of a Cuban or "Latino" man in the host society Germany can be observed in another case. Hence, the study of the changing or persisting gender categories in transnational migration reveals the need for a multi-sited approach, researching the social construction of gender in the sending and in the receiving society and the mutual influences and exchanges between these two. Thus, in my paper I make a plea for a multi-sited perspective in the reconstructive analysis of biographical interviews focusing on both societal and cultural contexts, in which gender constructions are produced.

*The English Defense League and the Bloc Identitaire: Reflection on the Influence of State Policies in the Discourse of Extremist Street Movements and Their Future in England and in France*

The last decade has marked a significant change in the British political attitudes: along with the electoral breakthrough of right-wing extremist/populist parties such as the British National Party or the United Kingdom Independence Party, there has been a reemergence of the street extremist movement phenomenon with the creation of the English defense league (EDL) in 2009. While historically the British civic culture was a strong rampart against extremist ideologies, the events of the 2000s such as September 11th, the July 2005 London bombings, the financial crisis, the 2011 London riots and the rise of extremism/anti-immigration feelings in Europe have changed the mentalities. More recently, the scandal of Muslim grooming gangs and the murder of a British soldier in the street of London generated the largest rise in popular support in the EDL history. Focusing mainly in criticizing Islam, the EDL characterizes the neo-racist ideology by avoiding the old biological racist discourse and has black, gay, Sikh or Jewish members. Constantly using social medias and defending the British values and the white working class, the EDL uses civilisationism to critic the Muslim culture and often refers to "white victimage" to warn against Islam. France also recently experienced a rise in its extremist group activity including the "Bloc Identitaire" which appears to be the most influent. Like the EDL it mainly targets Islam and describes Muslims as unintegrated subjects willing to take over the law and the original culture. Because both countries share different integration models but have al-

most the same demographics trends regarding their total population and Muslim population, it is very interesting to focus on how national policies on diversity, and especially Islam, influence extremist group discourses. Whether it focuses on the veil/burka or construction of mosque, both states deal differently and undermine the way extremism reject multiculturalism.

**BRAULT, JEAN-FRANÇOIS\*** (Paris 8 University, [jfbrault@live.fr](mailto:jfbrault@live.fr))

#### *Feminist Disagreements: The Post-Colonial Confrontation Between Femen and Muslim Women*

Founded in 2008, *Femen* is a feminist Ukrainian protest group based in Kiev and in Paris, whose main political enemy is patriarchy. In their struggle for gender equality, Femen activists see religious institutions as a substantial tool of oppression against women; hence the current anticlerical position of the group. In Femen's approach, nudity is the best means to break free from male dominance, and they deeply believe that being topless can be empowering. Femen's mobilizations are always carried out in a spectacular way, in which they scream and shout provocative slogans that are also written on their naked bodies.

In my paper, I will mainly focus on Femen slogans that are addressed to muslim – especially veiled – women, encouraging liberation from both religion and male domination: "muslim women, let's get naked", "nudity is freedom", "bare breast against islamism", "topless jihad". Muslim women have answered Femen's injunction to liberate through nudity by creating a series of networks, accompanied by virtual and physical mobilizations, in which muslim women from all over the world post photos online featuring reactive slogans such as "Islam is my choice", "nudity is not freedom", "Femen stole our voice", "there is more than one way to be free".

Indeed, one can clearly see how Femen's mobilization has entailed a counter-mobilization led by muslim women, and under what circumstances the latter are questioning a hegemonic western idea of what a free body looks like. Far from being an isolated event, the current struggle between Femen and muslim women to define what "feminism" is and, by extension, what a free woman is, is not new. Rather, it alludes to a more deeply rooted antagonism that dates back to the colonial period.

#### *Contrasting a Market-Led Tendency Towards Social and Functional Separation. Outcomes of a Comparative Research in Milan, Copenhagen and Hamburg*

The redevelopment of inner city urban areas has been a main concern for European cities dealing with post-industrial restructuring in the last decades and large scale urban projects have been extensively and investigated by urban research. The raise of a complex interplay among different public and private actors as well as issues of social (in)justice have been analysed and discussed by critical research work with reference to the phases in which the projects and the master-plans have been conceived (see for example: Salet and Gualini, 2007; Fainstein, 2010).

While these large scale urban projects are now mostly implemented, it is worth investigating how spatial and social organization processes are developing in these new urban areas which tend to display a significant role in hosting a consistent number of those inhabitants who "return to the city" in a phase of re-urbanisation. In this respect, driving research questions may be: under which conditions, and with which expectations, do people decide to settle in the central city? What sort of city-space has been produced? How and why are uses influencing urban qualities? Which are the elements that allow and support a mix of functions and social groups in the face of prevalent tendencies towards separation and segregation?

Along these questions, we have been analysing redevelopment projects that have been explicitly targeting a mix of different functions and social groups, openness and accessibility of open public spaces and when the ambiguity of new categories and uses has been challenging consolidated urban planning traditions and regulatory systems.

The paper presents the results of a comparative empirical research which has been developed in three European cities by an interdisciplinary research group (urban sociologists, urban planners, urban designers) investigating how newly produced urban spaces are functioning in three large redeveloped urban areas (Bicocca/Milan, Islands Brygge/Copenhagen, HafenCity/Hamburg).

#### *Between Language and Music – an Intellectual Biography*

The author of 'Lost in Translation', Eva Hoffman, became famous with her painstaking, autobiographically informed analysis what it meant for a teenager in the late 1950ies to move from a country in Old Europe, Poland, to another one in the New World, Canada. At the time Eva Hoffman wrote her book thirty years after her actual move in the late 1980ies, she focused on narrating and reflecting the long way it took to get easy going with English as the language of a different world, especially when trying to 'translate' the emotional connotations of childhood experiences.

Twenty years later after this landmark in scholarly discussions of experiences of migration and multilingualism, Eva Hoffman wrote the novel 'Appassionata' (2009). A passionate and dramatic love affair between an American pianist and a Chechen partisan forms the story of this book, which is at the same time centred around extended reflections on music. Even though the autobiographical background of this novel is not at all obvious like in 'Lost in Translation', there is a strong connection between these two books.

In my paper I will reconstruct the intersections of cultures and nationalities, and more specifically of language and music in the biography of Eva Hoffman as particular ways to form and express fundamental experiences of an intellectual woman in turbulent historical times and circumstances.

**BRECKNER, ROSWITHA\*** (University of Vienna,

[roswitha.breckner@univie.ac.at](mailto:roswitha.breckner@univie.ac.at))

#### *Family Photo Albums on the Web*

The use of photographs, especially their distribution and arrangement in photo albums, seems to undergo deep changes brought about by the technological developments of computer, internet, and specifically so-called social media (Pauwels 2002, 2008). Even though the traditional way to create family photo albums, especially for the following generation(s) (Hirsch 2002), is still an usual and for the respective families important social practice (Rose 2010), the question is at stake whether the shift to so-called new media is changing the biographical meaning and relevance of these practices.

What is different in form and content in processes of creating a family photo album in the semi-public realm of the internet with exclusively digital or digitalized photos, compared to the haptic way of choosing, arranging and glowing photo prints into an album-booklet? How is the former biographical significance of these practices transferred or 'translated' to the new media? My paper will explore these questions with an in-depth case study from a social network site using a combination of visual and text-based methodologies and methods.

**BREGVADZE, LASHA\*** (Javakhsivili Tbilisi State University,

[lasha.bregvadze@tsu.ge](mailto:lasha.bregvadze@tsu.ge))

#### *The Place and Role of the Sociology of Law in the System of Science*

The century has passed since the publication of the monumental work by Eugen Ehrlich – *Grundlegung der Soziologie des Rechts* – which marked the foundation of the discipline, but methodological problems and disciplinary belonging of the legal sociology are still disputed. After the century it is still not clear where does legal sociology belong to – is it a sub-discipline of sociology, is it a part of juristic science using interdisciplinary methods, or has it already been established as an autonomous discipline beyond both sociology and legal science, thus representing an independent discourse with its own identity, subject matter and internal logics? As argued by neutral observers of the discipline, the majority of socio-legal scholars doing either empirical or theoretical work, are mostly legally trained, having major in law but also additional training in sociology. The majority of influential manuals and textbooks in sociology of law are produced by legally trained scholars, who use interdisciplinary perspectives. Also sociology of law as an academic discipline is mostly taught at the law departments. Nevertheless sociology of law is conventionally conceived as sub-discipline of sociology, what really neglects increasing and almost exclusive role of legal scientists for the establishment of the discipline.

It will be argued in the paper that conventional thinking about disciplinary boundaries of legal sociology has to be reconsidered under its current academic status, role and institutional autonomy. Both emergence of independent socio-legal discourse and its institutional autonomy legitimate this challenge.

The alternative definition of legal sociology will be proposed in the paper, stating that sociology of law represents an independent academic discipline beyond sociology and legal science, based on the observation of legal practices in social reality, having as its aim to criticize the positive law and propose alternatives for improving the modes of normative regulation in society.

One trend across OECD countries since the late 1990s has been the marketization of employment services. Intense price-based competition is increasingly used to govern these services. Based on an in-depth three-country comparative project, this paper examines the extent and trajectory of marketization in Denmark, Germany, and the UK since the early 2000s, countries that represent different regime types under both welfare regimes and varieties of capitalism theories. The paper also examines the effects of marketization trends on front-line staff and the character of services. We draw on qualitative interviews with public-sector purchasers of services and for-profit and non-profit providers and a detailed analysis of publicly available statistics and documents.

Marketization has taken place in employment services in each country. However, the marketization trends and their effects vary across the three countries due to a wide range of labor market and welfare-state institutions. For example in the UK marketization of employment services seems to intensify insecurity, reduce the salience of collective bargaining and create opportunities for profiteering by private owners of provision. Furthermore, for the unemployed, marketization seems to undermine citizen entitlements by producing more standardized programs of support, as well as creaming and parking effects that penalize those furthest from the labor market. These effects are to some extent also visible in the two other countries, even in Denmark and Germany representing very different welfare state regimes. However, the effects of marketization, especially on working conditions and the services delivered are taking other forms, making these effects more modest.

## RC15-261.9

**BRETONNIERE, SANDRINE\*** (CASI,[sandrinebretonniere@yahoo.fr](mailto:sandrinebretonniere@yahoo.fr))**JEAN, MIGUEL** (Centre Hospitalier Universitaire - Nantes)*Articulating Sociology and Clinical Ethics in the Study of ART: The Example of Oocyte Cryopreservation in France*

In France, bioethics laws strictly frame ART developments. Yet, medical research regularly challenges the adequacy of the law. In the case of oocyte cryopreservation, the 2011 bioethics law opened a door for the specific case of oocyte donation (donors – no longer required to have birthed children prior to gamete donation – have access to oocyte cryopreservation to preserve their own fertility); furthermore, the technique is also used for cancer patients, prior to infertility-inducing treatments. In December 2012, the French College of OBGYN stated that this technique should be made available to all women, arguing that the law is discriminatory. The underlying rationale is medical: this rising age average at which women have their first child is an important reproductive health problem, as fertility declines with increasing female age; ART using fresh eggs are unable to compensate for this natural fertility decline and egg freezing is therefore thought to be a timely reproductive insurance which should be an option for all women.

In light of this medical perspective, and amidst a vivid public debate on ART (focusing on access to ART for same-sex couples, and – to a lesser extent – surrogacy), what do women think of this fertility preservation technique? How do they perceive its social and ethical implications? We performed a preliminary electronic survey on a hospital web site, aiming at evaluating women's opinion of oocyte cryopreservation. Our working hypothesis is that the issue of reproductive justice (Bretonnière, 2013) is a predominant concern over medical or 'social' risks linked to potentially late motherhood. Departing from a strictly sociological framework, we will analyze the results of this preliminary study from a clinical ethics perspective (Fournier et al., 2012), based on the bioethical principles of autonomy, justice, beneficence, non-maleficence (Beauchamp and Childress, 1994).

## RC15-257.6

**BRETONNIERE, SANDRINE\*** (CASI,[sandrinebretonniere@yahoo.fr](mailto:sandrinebretonniere@yahoo.fr))**KERBOURC'H, SYLVAIN** (Centre d'études de l'emploi)*Women's Health Trajectories: Between Self-Reliance and Organized Healthcare*

A 2010 study conducted in Paris, France, revealed how women navigate within a highly organized – yet difficult to comprehend – healthcare system, both striving

to transform public health messages into health-inducing acts, and relying on state-sponsored healthcare priorities specifically linked to gender (perinatal care, breast cancer screening).

The women interviewed strongly relied on themselves to create global health trajectories, and not simply healthcare trajectories, encompassing past family habits when they considered them useful to their health, but also discarding family histories of ill-treatment to save themselves through the consolidation of their health. Health trajectories thus appear as a vector of self-discovery and subjectivity.

However, health is also a relationship to healthcare professionals and healthcare structures. This is the second key aspect of this study: women demand a personalized relationship with physicians, which goes beyond protocolized treatment schemes. As Pilnick and Dingwall (2011) have shown, though, women don't challenge the asymmetrical nature of patient-physician interaction. The physician's expert knowledge is sought and valued as such, but women concurrently ask that their profane, personal, body-anchored, knowledge of their health or ill-health be taken into account by their physicians.

We will thus show that women are forceful actors in the determination of their health patterns, relying on their own resources, while tapping into a highly sophisticated biomedical system into which they strive – on an individual level – to promote a more personalized patient-physician relationship attuned to the experiences of their own, singular, bodies.

## RC25-440.8

**BRETXA, VANESSA\*** (University of Barcelona,[vanessa.bretxa@ub.edu](mailto:vanessa.bretxa@ub.edu))*Stability and Change in Language Use during the Transition from Primary to Secondary Education in a Catalan Sociolinguistic Environment*

One of the current challenges confronting bilingual education has to do with pupil's reluctance to transfer their school-based L2 linguistic knowledge into their wider social domain. Whilst it is clear that bilingual education, in its multiple forms, can and does lead to successful outcomes (Baker 2006), the definition of success is often limited to the sociopolitical climate of the school, area or community and to the patterns of dominance relations between the two languages (Thomas and Roberts 2011). Nowadays, the successful of bilingual education in Catalonia is complex. On one hand, knowledge of Catalan among young people has increased significantly. However, knowledge is not seen translated into an effective growth in the use of Catalan inside and outside the school. Some authors have attempted to explain part of this process by examining the transition from childhood to youth.

This paper investigates the change in language practices that take place during the transition from primary to secondary school. It focuses especially on: identifying the most relevant changes that are produced in the linguistic uses in three domains: home, school and peer-to-peer, and examining the influence of sociodemographic and sociolinguistic environment in the transition and its sociolinguistic impact. The methodology for the study was based on a survey on language competence and use in Catalan and Castilian. The universe of the study is formed by 888 pupils aged between 11 and 13. The basis of the analysis is a panel comparison of indicators. Results show that in the transition from primary to secondary school there is an increase in the use of Castilian in all domains, from home to school. However, the use of Catalan is explained by the characteristics of the individual, the nature of the linguistic interaction and the availability of the language inside and outside the school.

How Do Local Elected Officials Negotiate Their Position?*

This paper addresses what it means to be a mayor in a metropolitan planning context. Specifically, by looking at the implementation of a metropolitan urban plan concentrating on transit oriented developments, we wish to highlight the interactions at play between local mayors. While pursuing goals related to sustainable development such as increased residential densities, mixed-use development, greater use of public transport, and the preservation of rural land and natural areas, mayors in the North American context also seek growth in the municipalities they represent. Given the contradictions at work, how do local elected officials collaborate to take part in the development of a metropolitan scene including issues of environmental protection? By trying to differentiate their cities, mayors endorse planning innovations. Our goal here is to highlight the alliances and oppositions between local elected officials in order to better understand the sociopolitical processes at work at the metropolitan level by looking at the Mon-

trealt Metropolitan Community, an entity that has adopted a metropolitan development plan in 2012. We also aim at providing a portrait of mayors' specific role in a context where major institutional reforms and increased citizen participation have forced new strategies of regional collaboration.

#### *Decolonizing Knowledge(s) in 21st Century Political Struggles*

The paper is a call for a deeper interrogation of how knowledge is produced and whose theory and practice are guide-posts for 21<sup>st</sup> century revolutionary change. In international knowledge production spaces such as the ISA, we need to put the issue of decolonizing on the table. Regarding political change, too often the same colonial assumptions are folded into social movements as the very knowledge systems that originally colonized. It is a call for traditionally marginalized voices to be heard, but also a call for interrogating the hierarchies reproduced in social movement spaces. What is clear regarding knowledge for whom, we must think more intersectionally, decentering the traditional ways of articulating social change. We must interrogate continued practices of heteropatriarchy, colonialisms: neo, settler and internal, in the context of neoliberal global capitalism.

#### *Interrogating Racism and Class in the Capitalist World System: Historical Formations and Contemporary Realities*

Racism and other 'isms' are deeply embroiled in a global, technologically-driven capitalist world order where the wealth and resources of the globe are held by a small elite of multinational firms and their comprador allies. These are historical formations with tentacles into the contemporary period. Moreover, there is an ideological structure of racial formations intertwined with global capital. At the core of world-systems analysis is an articulation of how capitalism has engendered underdevelopment in peripheries of the world consistently since 1789 through core-dominated techniques of enfolding the periphery in the world capitalist system according to the interests of the core (Wallerstein 1974). This is a historic process. Extending this analysis contemporarily, the dispossessed in advanced Western capitalist societies such as the United States, the dismantling of the social wage through destruction of social welfare, attacks on public education, the increasing incarceration and imprisonment of Black men (and women), and the structural consequences of wealth concentration in the hands of a tiny elite are part and parcel of the global politics of accumulation. Through austerity and uneven development the process unfolds internally within the U.S. Most recently this entails the bankruptcy and dismantling of an American city. A brief analysis of Detroit, Michigan is illustrative and examined in this paper.

#### *Sélectionner, Attirer, Sacrifier : La Gestion Du Logement Et De L'espace Urbain à Detroit (Etats-Unis) Et Saint-Etienne (France)*

Cette communication a pour objectif d'étudier l'impact des défis posés par les villes en déclin urbain sur le logement en tant que tel ainsi que le territoire urbain dans son ensemble dans deux *shrinking cities* (Detroit, Etats-Unis et Saint-Etienne, France). Cette comparaison permet de révéler des tendances et des stratégies différentes quant à la question du logement et la gestion du territoire municipal en crise.

A Detroit, le rétrécissement urbain (*rightsizing*) est devenu l'une des priorités sous le mandat de Dave Bing à travers le plan à long terme baptisé *Detroit Works Project*. La crise sans précédent qui frappe la ville (le taux de vacance a bondi de 120% en 10 ans) l'oblige à déployer un plan massif de démolition et de requalification de l'espace urbain. La ville étant composée à 85% de maisons et la très faible densité urbaine ont conduit le pouvoir local à cibler des « enclaves durables » autour de quartiers considérés comme stables. Cette stratégie a recours principalement à la gentrification le long du *Woodward Corridor* (lofts) attirant une 'classe créative' blanche et à la concentration d'investissements dans de rares quartiers de classe moyenne, mais délaissant le reste de la ville à majorité noire.

A contrario, la ville de Saint-Etienne refuse à ce jour de reconnaître un quelconque *rightsizing* de la ville : la démolition n'est pas à l'ordre du jour, le pouvoir local restant persuadé que la ville a le potentiel pour retrouver une dynamique de croissance. Ville assez dense et en majorité composée d'immeubles, Saint-Etienne place son renouveau autour de la valorisation de quartiers 'créatifs' situés au cœur de la ville et axés autour d'une offre de logements et d'équipements culturels de haut standing. Néanmoins, l'inadéquation de l'offre avec les car-

actéristiques socioéconomiques des habitants conduit aujourd'hui à un échec de la revitalisation urbaine.

[rachel.brickner@acadiau.ca](mailto:rachel.brickner@acadiau.ca))

#### *The Shifting Terrain of Grassroots Mobilization and the Future of Education Reform in the United States*

Public education has been a pillar of American society since the 19<sup>th</sup> century, but since the 1990s an education reform movement has promoted school competition and accountability metrics for students and teachers as critical to turning around the so-called "failing" American public school system. In practice, this education reform agenda has resulted in the proliferation of non-unionized charter schools, shuttering of urban public schools, and the narrowing of curricula in response to increased use of standardized tests. This paper is part of a broader project exploring grassroots resistance to this reform agenda.

To date, the education reform agenda has been driven by well-financed foundations that are displacing the political influence of traditional education actors (e.g., elected school boards, teachers' unions, and parent-teacher associations). As the results of the reform efforts become more concrete, however, a grassroots resistance effort of educators, parents, students, bloggers, and some elected officials has emerged to demand that well resourced, democratically governed schools remain a pillar of every American community. The future of education policy in the US will largely depend on how the balance of political influence shifts between the "reformers" and the growing grassroots resistance.

Drawing on data from fieldwork in Michigan, Illinois, and Wisconsin, where the grassroots resistance to the reform agenda has taken different forms and had different levels of success, this paper explores the factors that allow these grassroots efforts to successfully promote their vision of democratic public education. Specifically, the paper argues that four factors are critical: 1) shifting the "failing schools" narrative; 2) strengthening the relationships between union leadership, rank-and-file teachers, and the broader community; 3) finding a common frame that unifies the diverse demands of actors within the grassroots movement; and 4) building on the current social media presence while working to influence mainstream media.

#### *Born in Japan, Raised in America: Yuri and the Transnational Formation of a Genre of Lesbian Comics*

In 2007, Wired magazine published an article by Jason Thompson about how Japanese comics called manga had "conquered America." In 2012, Takashi Murakami, in an interview for the *Asahi Shimbun*, disagreed with this assessment, arguing that manga is "only being accepted by a small group of fanatics" outside of Japan. Whether conceived of as a torrent or a trickle, however, both Murakami and Thompson assume that the movement of contemporary Japanese popular culture is unidirectional, something produced in Japan which then arrives, already fully constituted, onto a distant shore. My research complicates this model of transnational flow. In this paper, I show how the current usage in Japan of the genre term *yuri*, for lesbian manga, originates from a history of transnational communication and cooperation between Japanese and Westerners. Although lesbians had been drawing autobiographically-inspired manga in Japan for years, they did not call it *yuri* until they made contact with Western fans of lesbian content in the early 2000s. These fans had been calling the Japanese artists' work *yuri*, and the once-isolated Japanese artists quickly began to self-identify as *yuri* creators. Soon afterwards, Japanese manga publishers began soliciting input from this international group in the development of new magazine anthologies like *Sun Magazine's Yuri Shimai*, thereby conferring legitimacy to the genre as well as providing a platform for content which was eventually licensed for re-publication outside Japan. In short, in the words of one informant, *yuri* was "born in Japan and raised in America" and would not exist at all in its current form were it not for a network of international exchange between Asians and American lesbians.

#### *Did Manga Conquer America? Implications For The Cultural Policy Of Cool Japan*

This paper explores the efficacy of an international cultural policy based upon the export of a nation's popular culture through the case study of Japanese comic books, called manga, in the United States. I begin by exploring the origin of the historical and theoretical underpinnings of "Cool Japan" and providing a concise account of the Japanese cultural policies in this vein. Then, drawing upon

participant-observation and seventy in-depth, semi-structured interviews from informants in and around the American manga publishing industry, I discuss in detail what is actually involved in publishing Japanese comic books in the United States post-2007. Arguing that what they do is first and foremost to make manga American, I conclude by discussing the implications of these findings for the likely fortunes of "Cool Japan" and any other cultural policy premised upon exporting popular culture.

#### *The Ambiguous Multiplicities. Crowds over, Across and within Individuals*

Crowds are not mere collections of people but a veritable 'state of the social'. But, how precisely to theorize crowd states? To tackle this question, I begin by reconstructing various ways in which, particularly at the end of the 19<sup>th</sup> century, crowds have been investigated, appraised and, ça va sans dire, feared. I seek to highlight which were the major political and ideological stakes of such attempts at apprehending crowds as social multiplicities. In particular, the Italian Positivistic School (Lombroso, Sergi, Ferri, Sighele) and the French School of Criminal Anthropology (Lacassagne, Fournial, Bernheim) are examined.

However, a similar exploration cannot content itself with cultural history, as it inherently triggers a deeper examination of some fundamental puzzles in social epistemology. In a sense, I propose to reverse the question about crowds and other social multiplicities into the question of that is an individual and how can the boundaries of the individual be drawn. Association, I argue, can be regarded as process of territorialization which institutes the individual by drawing boundaries which are made of a wide array of counter-balancing forces. The very difference between objects and environments depends upon such territorial acts.

Notably, such transversal vectors which determine the stand-off point between the individual and the crowd can never be found in a state of equilibrium. Rather, they show a kind of meta-stability; in other words, they form a fluctuating threshold of visibility. The constitution of social collectives, I submit as a provisional conclusion, can be best appreciated through a layered model whereby the individual is integrally reconstructed as a region located somewhere inside these thriving states.

#### *Latin American Social Movements: Research Agendas and Regional Constructions*

Unlike the debate in United States and Europe, the study of social movements in Latin America has never had a well-defined field of study in the social sciences to enable systematic discussion on notions, categories and controversies. However, social movements have been treated in a transversal way within a wide range of topics, approaches, discussions and disciplines, which, in turn, allowed a rather comprehensive and plural perspective. This paper seeks, firstly, to contextualize the sociological production on social movements in Latin America within the regional social theory. Secondly, we would like to identify and examine some analytical axis that has great potential for advancing the agenda of sociology of social movements in Latin America. In particular, we focus on the particularities of Latin American societies; the social and political regional thought; the diversity of contexts of action and the spatial and historical orientations; the socio-political and ideological matrices; and, finally, the practices, imaginaries and transnational networks that allow the establishment of a common collective action and the generation of a regional frame. In doing so, we discuss some research possibilities for the study of social movements in the Global South who are looking to construct regional research agendas that go beyond Western theories of social movements.

#### *If You're Not Religious, for God's Sake SAY so! Agonism in Secularist Activism*

When secularists talk about God, how does it sound? What do they hope to achieve? Grounded in fieldwork among British and American activists, this paper suggests that Anglo-American secularists talk to the pious to "constitute adversaries worthy of agonistic respect" (Connolly 2008) and not in search of consensus. I offer key ethnographic examples of agonistic interactions between secularists and their pious audiences, examining how ideas about language and communication - rather than ideas about God - drive discussions about faith, doubt and social cooperation.

New Atheism increasingly demands public recognition: The British Humanist Association's 2011 census campaign cheekily encouraged Britons to tick "no religion." "If you're not religious, for God's sake say so!" Another campaign responded to Christian adverts threatening sinners with eternal damnation by posting a counter-message on UK buses: "There's probably no God. Now stop worrying and enjoy your life." Protesters in Jesus costumes at the 2012 Reason Rally in Washington D.C. carried placards reading "Atheists do it better!" Comparing secularism in the UK and the US, Richard Dawkins opened the rally by critiquing the way we talk, not what we believe: "Don't fall for the convention that we're all too polite to talk about religion. Religion makes specific claims about the universe which need to be substantiated and need to be challenged and, if necessary, need to be ridiculed with contempt."

Following Cannell's call for more evidence-based studies of secularist practices (2010), my sociolinguistic and ethnographic analysis chronicles the polysemy (Taylor 2009) of the term "secularist," recording its use and meaning among Anglo-American activists [atheists, humanists, brights, skeptics and universalists]. Focusing on one small part of the project's overall findings about communication across faith and non-faith groups, this paper presents ethnographic evidence pointing to the heavy value secularists place on agonism in public discussions about religion.

#### *To Market We Go, but Where Are We Going? Investigating the Negotiation of Social Impact and Market Forces in Food Hubs*

Food hubs, a new form of values based food aggregation enterprise, are often positioned by their advocates as a solution to the concurrent problems of the loss of family farms, an urgent need to develop a sustainable food system, and the perplexing problem of persisting food insecurity in the global north. Noting a "skyrocketing consumer demand" for local food, United States Secretary of Agriculture Tom Vilsack has identified food hubs as offering "critical" services to farmers, and stated that the success of food hubs "comes from ... sound business sense and a desire for social impact" (May 2013). However, goals of sound business sense and social impact are not known for their easy affinity. With this in mind, this paper asks: How do the goals of promoting environmental sustainability, and enhancing food security support or detract from the goal of supporting family sized farms within both the philosophy and praxis of food hubs? This paper also provides preliminary investigation into the variable role of market forces, and the necessity of developing a financially viable enterprise, in shaping the institutional goals, policies, and practices of food hubs. Towards this end I will present preliminary research that draws from interviews with national food hub experts and leadership, and case study research with leadership and participating farmers of two food hubs. Findings will highlight the specific ways in which goals of social impacts (environmental, economic, social) are both achieved and inhibited when implemented in a market based programmatic context. I will conclude by suggesting needed next steps in food hub (e.g. values based supply chain) research.

JEANPIERRE, LAURENT (University Paris 8)

#### *Circulation of Social Sciences Between the West and Asia: A Contemporary Assessment*

The paper aims to introduce some of the findings of the Interco-SSH survey on the international circulation of Social and Human Sciences (a European Union project under the supervision of Gisele Sapiro - EHESS Paris). Albeit this survey

has primarily dealt with intra-European knowledge exchanges, an additional grant has allowed to broaden the focus and to take Asian-European relations into account (mostly from Japanese, Chinese and Korean case-studies). Two sets of empirical/theoretical questions will be tackled. The first one deals with the patterns of intellectual and scholarly exchanges: taking an historical approach, the paper analyzes both what authors, theories, books or concepts have been circulating between Asia and Europe, as well as what kind of students/scholars migrations have taken place. Given the asymmetrical nature of the scientific relations between the West and Asia in the recent decades, the paper's primary focus is on the European authors and texts that have been translated in Asia and have impinged on the various scientific fields. Yet, in a second moment, the paper also deals with the consequences of the contemporary political and economic rise of Asia in terms of scientific shifts. This new balance of power has already resulted in the growing influence of Asian universities as well as in significant changes in terms of academic migrations: has it also allowed for new theories and notions to emerge? What credit, in other words, should be given to counter-hegemonic attempts at creating social sciences in Asia that bypass their European origins? Due to the broadness of the scope, both in terms of historical approach and inter-national comparisons, the paper will engage with only a limited number of case studies, which accurately illustrates the main theoretical problems at stake.

#### *Water Governance and Climate Change: Perspectives for Reduction of Urban Water Supply and Sanitation Vulnerability in Rio De Janeiro Metropolitan Area*

This paper presents part of a collaborative research, which integrates Brazilian and French universities, in sustainable water management in urban areas. Our study is located within the interface of the so-called water resources management, that refers to the activities of use, conservation, protection and recuperation of crude waters, in quantity and quality, and water and sanitation services management (water supply, wastewater sewage, rainwater sewage). Thus, we start from the hypothesis that water governance in Rio de Janeiro metropolitan area faces two impasses: the preservation of water resources and the universalization of access to water and sanitation for all urban dwellers. Climate change adds a new challenge: adaptation and adaptive process in relation to water governance.

Even if there are still doubts about the incorporation of climate change scenarios into engineering projects for future water supply and sewage systems, due to uncertainties, this issue is becoming more and more important for planners. Different studies discussing the impacts of climate change in water supply system and in sanitation systems shows that Rio de Janeiro Metropolitan Area systems presents a series of social, environmental and institutional characteristics that renders them particularly vulnerable to the impacts of climate variability and change. On this basis, this paper first aims to investigate policies that are being introduced, by River Basin's Committees and by state and municipal agencies that are responsible for water resources and water services planning and governance, questioning if they are able to tackle climate change and to make urban water management more sustainable. This research is still in progress, utilizing, above all, resources of a qualitative nature: bibliographic reviews, elaboration of specific studies, conducting interviews and questionnaires among the key actors.

#### *Picturing Dark Tourism: Mostar*

The words disaster and tourism seem to be intrinsically paradoxical, yet visits to sites of disaster and death have grown exponentially during the past four decades. Lennon and Foley note that "dark tourism" packages disaster into an economic product that provides interpretation of the event as well as potential economic gain to a devastated community. The community of Mostar, Herzegovina is a postmodern disaster tourism site. Once a symbol of Yugoslavian multiculturalism, Mostar became a battleground in the Bosnian wars of the 1990s. Stari Most, a sixteenth-century bridge that was the largest single span masonry arch bridge in the world, crashed into the Neretva River on November 9, 1993 after being shelled by local Croatian forces. A collaboration of nations, NGOs, and transnational groups rebuilt the bridge; the Stari Most is again an iconic image of the city. Twenty years later, 'Old Town' is surrounded by former business districts that are filled with bombed buildings and signs warning of unexploded ordinance. These buildings have become another element of the photographic Mostar tourist experience. This paper examines the construction and use of photographic image in the dark tourist experience.

#### *Comparative and Global*

The project on Comparing Climate Change Policy Networks (Compon) investigates the reasons for cross-societal variation in the direction of emissions levels of carbon dioxide since 1990. The project consists of research teams in 19 cases (countries or the region of Taiwan) plus a coordinating and integrating team that has been collecting data on this question since the project started in 2007. The teams use identical research methods to allow for the most precise empirical comparisons. Phase One consists of the content analysis of how the three major newspapers in a society cover and frame the issue of climate change. Phase Two consists of a network survey conducted with the representatives of (50 to 100) organizations in state and society engaged with the climate change mitigation issue. This paper and its associated case reports present findings from Phase One, the content analysis. The cross-case analysis shows that between 1997 and 2010 the average global intensity of coverage of climate change rose steadily, while average coverage of reports by the Intergovernmental Panel on Climate Change rose and fell episodically with the reports. The 17 individual cases varied around their global average trend line due to a number of factors. Focusing on the years 2007-8, the cases showed dramatic variation in how they framed climate change, for example whether as an economic, scientific or other type of problem, and also in their major stances on how to respond to climate change. Their response stances formed clusters that revealed the major fissures in global field of climate change discourse.

**BROOKE, ELIZABETH\*** (Swinburne University, [lbroke@swin.edu.au](mailto:lbroke@swin.edu.au))

#### *Older Women's Worklife Transitions: Competing Regimes*

Background. Age discrimination legislation in Australia has proscribed compulsory retirement, additionally pension eligibility has been deferred to 67. Despite this legislation, embedded age-gender discourses interrelated with organisational processes continue to impede extended working lives. Organisational discourses were classified along a dimension from the ideal of age-free and gender-free to expressed attributions. These discourses interacted with organisational policy dimensions ranging from age-gender inequality to active age-gender equality practices. The paper asks how these discourses interrelate with organisational equality practices and discrimination.

Methods. These data were collected in an Australian Research Council research project, Retiring Women (2010-13). Structured key informant interviews were undertaken with a purposefully selected sample of 95 stakeholders including HR directors, professional organisations and unions in three sectors: academia, state services and finance. Interviews were held with older women retirees in these sectors. Comparisons were undertaken between organisational perspectives and retirees' reconstructions of their retirement transitions.

Findings. In the finance sector overt idealisation of gendered life course, passivity and unexpressed resistance by managers negotiating fractional trajectories coexisted with competing age-gender free discourses. In academia discourses privileged individualised late career flexibilities and normalised retirement transitions. State public sector discourses overtly supported age-graded workforce development, gendered caring responsibilities and inequitable age and gendered hierarchies despite diversity training.

Women retirees' accounts reconstructed retirement decisions as voluntary. Working life limitations included work intensity, self-definitions of retirement age, declining career opportunities and impaired health. Organisational practices did not contest or rearrange age and gendered hierarchies and structurally underpinned age-inequality practices.

Conclusion: Competing discourses were identified, with passivity and unexpressed management resistance predominant, reproducing age- and gender-inequality practices. Traditional age and gendered paths to exit were confirmed despite emerging age-free discourse. Anti-discrimination government policy should identify and then contest unexpressed latent discourse underlying organisational practices to structurally counter age and gender-inequality regimes.

**BROWN, DAVID\*** (Law Faculty University of NSW, [d.brown@unsw.edu.au](mailto:d.brown@unsw.edu.au))

#### *Justice Reinvestment and Inequality in Criminal Justice*

Justice Reinvestment is a relatively new concept which has gained political traction in a range of jurisdictions, particularly the USA, but also the UK, Australia and New Zealand. The basic aim is to redirect resources from imprisonment and reinvest them in high imprisonment neighbourhoods to build community infrastructure and programs that reduce crime and recidivism and to reduce imprisonment

rates. The concept emerged out of progressivist think tanks and has since been taken up by a range of political actors including Republican state governors and leading figures in the Christian right in the USA.

Its origins lie in an attempt to combat the extreme racial disparity in imprisonment rates, captured in the notion of 'mass imprisonment', where imprisonment is so widespread that it disproportionately affects whole (usually racial) communities. Recent critiques from some of its leading proponents suggest that this aim of Justice Reinvestment to redress the effects of mass imprisonment has been lost in the emphasis on recidivism and post sentence supervision.

Using the example of over representation of Aboriginals in Australian prisons, this paper will explore the extent to which Justice Reinvestment as a concept and as a practice and program, is capable of redressing historical and contemporary inequalities and discrimination in criminal justice outcomes.

#### *Exploring Chains of Trust and Mistrust Across Mental Health Services: Towards an Understanding of Virtuous and Vicious Circles of Trust within Organisations*

Levels of trust bear decisively upon the nature of healthcare practice. Trust relations between professionals and patients, as well amongst professionals and managers, create certain dynamics which can be supportive or obstructive for ethical care provision. Existing research denotes the mutual influence of different trust relationships across healthcare organisations, although the interdependencies between these different relations have not been explored in significant depth. This paper begins to fill this gap through analysis of trust relations in the context of mental health services within the English National Health Service. Developing from an initial conceptual framework, qualitative data from interviews with service-users, professionals and managers involved with three services providing care for people experiencing psychosis are analysed. The analysis points to interwoven chains of trust-building or trust-eroding dynamics across the different relations: managerial-professional relations, inter-professional relations, and professional-user relations. Overarching policy frameworks were especially active in shaping experiences of management vulnerability and corresponding working demands at the local-organisational level, in turn influencing professional relations with other professionals and moreover with service-users. Changing dynamics within one form of relationship often relieved or intensified experiences of vulnerability and uncertainty amongst involved actors. These shifting vulnerabilities and uncertainties resulted in modified practices which impacted upon other relationships in terms of trust. Considerations of time and communication, as both necessary for, and products of, trust, were also vital to virtuous or vicious circular dynamics within trust relations within the organisations. The erosion of time, communication and therefore trust has important implications for ethical practice within mental healthcare contexts.

[craig.browne@sydney.edu.au](mailto:craig.browne@sydney.edu.au))

#### *Contemporary Reification and Second Order Abstractions*

My paper proposes that contemporary forms of reification are increasingly conditioned by second order abstractions. The distinction between first and second order abstractions is initially analytical; because many of the same mechanisms are involved in the latter's constitution. However, second order abstractions involve a peculiar kind of reflexivity or doubling. The mechanisms of abstraction are increasingly becoming the objects as well as the means of abstraction; for example, global trade in currencies objectifies monetary exchange. Yet, this objectifying alters aspects of the experience of reification, since the first order processes of abstraction come to operate with reference to these second order developments. Further, second order abstractions do not just affect the relationship that subjects have to their own practices and those of other subjects, they generate new modes of reification in mediating institutions, like that of the state. One result of second order abstractions is greater distortion of the value system of first order commodity exchange. This distortion conditions the contemporary belief that action in relation to major effects of capitalism, like the ecological crisis and the power of global finance, is likely to have unpredictable outcomes and cascading consequences, which may contradict the intentions of agency. My analysis suggests that the implications of the major contemporary conflicts of capitalist society should be understood in terms of second order abstractions and this will be demonstrated in relation to recent instances of contestation, like anti-austerity protests and riots. Although my conception of second order abstraction has significant continuities with the major theories of reification, the sense in which it is necessary to revise other conceptions of reification, like those of Lukacs, Habermas and Honneth, will be explored.

**BROWNE, CRAIG\*** (University of Sydney,  
[craig.browne@sydney.edu.au](mailto:craig.browne@sydney.edu.au))

#### *Modernist Visions and Contemporary Modernities*

My paper argues that the nexus between history and the subject is central to modernity. I suggest that the modernist vision is one of the autonomous constituting of society and that this social imaginary informs modern oppositions to heteronomous social relations. It is with reference to this social imaginary that sociological theory has, in my opinion, sought to comprehend processes of social reflexivity and the possibilities for society to act upon itself. In particular, the modernist vision involves an extension of the idea of autonomy beyond the institutional domain of the political order and an appreciation of its social grounding. Significantly, modern perceptions of the limits to autonomy are based on the assumption that society derives from the action of subjects and that social relations of domination are amenable to change. However, as Castoriadis contends, modernity has been shaped by another imaginary, that of the rational domination and control of nature and society. The presumption that these two modern social imaginaries are interrelated and reinforcing has tended to be undermined by processes of social modernization. Jürgen Habermas once described comparable processes as resulting in modernity being 'at variance with itself'. I suggest that modernity remains a critical diagnostic category concerned with disclosing the immanent potentials of the present development of society and the distortion of these potentials. My analysis seeks to demonstrate this through an analysis of the changes in theoretical conceptions of the tensions and contradictions that pervade modernity and its dominant institutions, focusing especially on depictions of contemporary conflicts and dynamics of transformation. It concludes that influential perspectives, like those of multiple modernities and successive modernities, can be demarcated in terms of their interpretations of notions of collective self-determination and that this reveals differences in their conceptions of the relationship between history and the subject.

#### *The '10-Excess' Phenomenon In Responses To Survey Questions On Happiness*

Happiness in nations is typically measured in surveys using a single question. A common question is 'All things considered, how satisfied or dissatisfied are you with your life as-a-whole these days?' on a scale from 0 to 10. The distribution of responses typically follows a uni-modal distribution with highest frequencies typically between 5 and 8. Yet in some nations, and especially in Latin America, the percentage of 10 responses stands out and is higher than the percentage of 9 responses. This paper explores the prevalence of this '10-excess' pattern and checks some possible explanations.

#### *The Invisibility Indians In Rio Grande Do Sul, Brazil: An Ethnography Of Roundness Narratives Between Myth, Law and Education*

The issue of indigenous invisibility in Rio Grande do Sul is based on a set of elements that permeate the story of the Guarani, and kaingang Plow different ways. Among these stand out narratives produced by non-Indians and have recurring visions and idealized whose elements relating gaucho folklore. One example is the set of representations produced on the Indian missionary Tiaraju Sepe, from the late eighteenth century to the present. Throughout this text we wish to reflect on the interplay between myth, law and education through an analysis of the impact caused by the presence of indigenous students in Higher Education Institutions (made possible by the policies of racial quotas since 2007 UFSM), a context stretched by the relationships established between the invisibility of indigenous narrated in different ways, the plurality of cultural dynamics of the groups mentioned above and individual memories of some Indian students involved in this process forward to the new scenario we consider also invisibilizador Federal Law No. 12,711, 29/08 / 2012 and Decree No. 7,824, of October 11, 2012, governing the policy of social and racial quotas in Brazil.

### Local Environment, Innovation and SMEs in the Spanish Vocational Training System

This paper presents the results from the FPInnova project, "Vocational training and innovation system: the role of intermediate workers in industrial SMEs' innovation processes" (CSO2011-29410-C03-01), funded by the Spanish Ministry of science and Innovation. The aim of this research is to analyze the relationship between the training system and the regional innovation system of six Spanish industrialized regions. In the current context of economic crisis the study of the processes about the institutional and social construction of the economic model becomes more necessary. Education and innovation are part of the answer to the current challenges.

This research wonders how are the relationships between the training system and the regional innovation system, and what aspects could be improved.

Particularly, we want to study the relationship between the vocational training system and industrial enterprises of intermediate and high technology sectors in Spain, with special attention to its influence on innovation processes companies.

Methodologically, we have studied six Spanish regions with the combined use of qualitative and quantitative techniques. We have put the focus on VET centres and their relations with local SMEs. This approach, linked to the Regional Innovation System perspective, allow us to study the relationships between these actors and how these relationships shape the local environment. Here is an analysis of these relationships for two of these regions studied.

### Movilización Social y Populismo En América Latina. Una Aproximación Tipológica a Través De Casos Paradigmáticos: Chile, Argentina, Bolivia y Venezuela

La comunicación explora el tipo de relación que se viene estableciendo en los países de América Latina en la última década entre los tipos de reconstitución del poder político/estatal y las formas dominantes de movilización popular. De acuerdo a la literatura especializada, existen tres modelos típicos de vinculación entre Estado/sociedad que son dominantes en diferentes países de la región: el neoliberal, el neo-desarrollista y una variante más radicalizada, con diversas denominaciones y que asume un discurso ligado a la reactualización latinoamericana del socialismo. ¿Qué vínculos existen entre dichas variantes y las movilizaciones populares, teniendo en cuenta las redes sociales y los avances TIC, desarrolladas en los diferentes países? Para explorar esta relación, en base a la bibliografía especializada, analizamos casos nacionales representativos de las mismas: Chile, en la variante neoliberal, Argentina, en la variante neo-desarrollista, y Bolivia y Venezuela en la variante radical.

### Financial Oppression in the Context of Parental Separation

*Financial oppression* in the context of parental separation is a well-known phenomenon among professionals who work in the violence against women domain and among women's shelter organizations. In research, however, the issue is to a large extent unexplored. Concepts such as 'financial abuse', 'economic violence' and 'economic coercion' are used to describe actions that are abusive towards partner and children. These actions are nevertheless seldom in forefront of the analysis. How do victimized mothers and children cope with financially (and often in other ways) abusive fathers? Which parts of the separation process seems to open up for financial oppression from one parent towards the other and children? Further, how is this kind of abuse interpreted and handled by the court in disputed family law cases? In this paper, I present and comment on empirical examples from my ongoing dissertation project. The dissertation deals with professional and ideological discourses and practices around children who are exposed and/or subjected to violence in the context of parental separation and family law proceedings in the Swedish welfare state. The empirical base for the preliminary analysis consists of interviews with ten mothers who have experienced financial oppression in the context of separation and of a review of all court orders in disputes on contact, custody, residence and maintenance, from three districts courts in Sweden during 2010 and 2011. Theoretically, I draw foremost from feminist and intersectional perspectives on domestic violence and from childhood studies.

**BRUNO, LINNEA\*** (Uppsala University, [Linnea.Bruno@soc.uu.se](mailto:Linnea.Bruno@soc.uu.se))

### Kinship in Intersectional Analysis

*Kinship* is an established and extensively used concept in anthropology. In sociology including intersectional analysis, however, the term is nearly absent, despite its obvious connection to various dimensions of inequality. Previous sociological research on adoptions and on implementation of family law in disputed custody, contact and residence cases suggests that two disparate discourses on kinship compete; one that emphasizes biological kinship and another that draw from a constructionist perspective (Andersson 2010, Eriksson 2003, Ottosen 2006). The paper aims at discussing the gains and possible implications of using *kinship* in intersectional analysis together with age, class, gender, ethnicity and sexuality. Empirical examples from my ongoing dissertation project are used as illustrations of how such an analysis could look like. The dissertation deals with professional and ideological discourses and practices around children who are exposed and/or subjected to violence in the context of parental separation and family law proceedings in the Swedish welfare state. A central issue is how these discourses and practices are shaped by intersections of some of the abovementioned axes of privilege and oppression. The present paper draws from a review of all court orders in disputes on contact, custody, residence and maintenance, from three districts courts in Sweden during 2010 and 2011. A sample of in total 224 children who were present in cases with information on violence or some form of abuse was selected and further analyzed.

### Skill and the Capability Approach at Work

This paper briefly surveys how the capability approach originally conceived by Sen has been adapted and applied by different disciplinary perspectives for a range of purposes. Then, using the arena of the workplace and the issue of skill, the paper explores how a sociological viewpoint might contribute to the operationalisation of the capability approach.

Skill, in and for the workplace, is a significant plank in the economic growth strategies of many governments. Political economy views tend to dominate skill debates focusing on quantifying and comparing the outcomes of different policy regimes. Sociology, along with economics and political science, is a key contributor to political economy analyses. The paper outlines how using the capability approach to analyse high skills policy prescriptions highlights flaws in these visions. Importantly it is argued that this holistic view facilitated by the capability approach may better accommodate overlapping policy agendas and thus overcome issues of policy fragmentation. The paper then argues that sociology can augment and improve such discussions with a return to its core concerns for social processes and norm construction. Flowing from this it proposes that illuminating conversion factors may be the most important contribution of sociology to the practical and theoretical development of the capability approach. The paper then draws on workplace research to illustrate the importance of understanding and addressing conversion factors in order to enable opportunity freedoms (capabilities) for individuals, groups, communities and societies. Conclusions are drawn on the questions that sociology asks, the research methods that sociology employs, and the potential contribution to the development of the capability approach as an analytical tool and as a process of engagement with others.

### Widening Access to Higher Education – Social Inequality and Routes to Universities

German education policy aims to widen the access to higher education by raising the permeability of the German educational system. Yet the quota of so called non-traditional students, which do not have a general qualification for university entrance, is still very low, pending at about 2 percent. Despite some research on non-traditional students in the 1980s there is neither a decent knowledge about their study practice, nor about barriers in their studies or their way to universities.

Our presentation focuses the routes of non-traditional students to university. Inspired by the work of Bourdieu we analyze effects of social, cultural and economic capital on the duration from school-leaving until start of studies by comparing non-traditional students with those holding a general qualification for university entrance. Using event history analyses we show how social inequality influences individuals' routes to universities and approach reasons for underrepresentation of working-class students.

Our study "Passages from Employment to Studies – PETS" is a solid basis for analyzing this question as it focuses passages of students at the Department of Socioeconomics of the University of Hamburg. By comparing traditional and non-traditional students, data allow to analyze effects of different types of capital on routes to universities. Findings indicate that for traditional students higher social capital accelerates the process of entering university, while higher cultural

and economic capital slows it down. In contrast, for non-traditional students only cultural capital prolongs the process. Consequently upper class students tend to take more time for entering university, while little capital forces process acceleration. On the one hand this can be explained by opening the possibility for taking a sabbatical, if enough economic capital is available. Also higher cultural capital indicates a different mode of deciding for studies. On the other hand social capital seems to pressure students into ready-made routes.

#### *Innovation: Within and Between Systems*

Innovation is a complex phenomenon which is difficult to comprehend. Innovation researcher in economics introduced therefore the concept 'system of innovation' (SI). It started with the notion of 'national systems of innovation' (NSI) focusing on country specific institutions in the 1980ies and has been further developed by focusing on interactive learning up to the 1990ies and beyond. The SI approach has been quite successful and is now widely used. Its strengths are the holistic (i.e. systemic) and interdisciplinary perspective; its weakness the theoretical ambiguity. For example, most of the SI approaches emphasize the role of institutions and of learning, but both concepts are differently used. Institutions in SI approaches could mean organizations as well as networks of organizational and individual actors as well as formal/informal 'rules of the game'; and learning is likewise attributed either to individuals and their creativity or to organizations or to (mixed) networks. In this paper the theory of social systems (TSS) (in the version of Niklas Luhmann) is applied to the phenomenon of innovation. In TSS, innovation is basically defined as an evolutionary process in the interplay between a system and its environment, consisting of variation, selection and re-stabilization. Thereby, (i) variation occurs on the elemental level of social systems, i.e. communication units; (ii) selection occurs on the structural level of social systems, i.e. structures of expectations (i.e. difference to Darwin's natural selection through the environment), and (iii) re-stabilization occurs when 'innovated structures' are compatible with the social system (i.e. do not destroy the social system's survival, allows for the autopoietic reproduction of the social system). On basis of these distinctions, the idea of 'system of innovation' is challenged by the idea of 'innovation within and between systems'. The focus is thereby on the economic and the scientific system and their interplay.

**BUCHINGER, EVA\*** (Austrian Institute of Technology,  
[eva.buchinger@ait.ac.at](mailto:eva.buchinger@ait.ac.at))

#### *Luhmann and Constructivism*

Luhmann's theory of autopoietic social systems is increasingly receiving attention in the scholarly dispute about constructivism. "A reality that remains unknown": this is part of the title of an article by Niklas Luhmann that summarizes epistemological considerations on constructivism (scattered in his voluminous work on social systems theory, which he developed over three decades). His approach is not the denial of reality but a "de-ontologization" (ontology understood in the philosophical meaning of dealing with whether or not a certain thing or entity exists). Unsurprisingly, for those who are familiar with his work, Luhmann sees his contribution to constructivism in the elaboration of the system/environment distinction. At least since the so-called autopoietic turn (in which he re-conceptualized the idea of social systems by including notions such as meaning and self-reproduction as constituting features), issues such as openness/closure, re-entry, and observation have become pivotal. Thereby he aims at overcoming Immanuel Kant's transcendental philosophy. That is, the transcendental/empirical distinction has to be replaced with the system/environment distinction. Luhmann argues that the concept of environment, as well as the corresponding concept of system, was not available at Kant's time. Instead, the transcendental/empirical distinction was developed to overcome a self-referring circle in which everything is the object of knowledge. The paper explores the transition from Kant's "transcendental/empirical" to Luhmann's "system/environment" distinction to provide a deepened understanding of Luhmann's constructivist approach. Luhmann's construction of reality via the system/environment distinction is discussed with respect to preceding concepts provided by philosophical and system/cybernetic scholars such as Kant, Husserl, Piaget, von Glasersfeld, von Foerster, and Maturana & Varela. The innovativeness of Luhmann's approach is then critically evaluated. The text is a contribution to the positioning of this approach as part of the philosophical and systems/cybernetics constructivist heritage.

#### *Becoming a Dad: First Births and Attitudes Towards Fathering*

Definitions of what it means to be a 'good' father are changing. In the mid-twentieth century fatherhood was defined in economic terms and emphasised men's responsibilities as 'providers'. More recently, greater weight is placed on men's involvement in day-to-day family matters and their hands-on roles in mentoring and providing physical and emotional care to their children. Despite this, evidence still shows that women continue to take the primary responsibility for childcare, in particular when children are young. Previous research has found that key life-course events, such as the birth of a child, a marriage or divorce or completing education, may change an individual's gender-role attitudes. Understanding how attitudes towards the role of a father change with life course transitions, in particular the birth of a first child, is integral to gaining better insights into what motivates fathers to increase their participation in childcare, as well as understanding the stability of attitudes within individuals over the life course. We examine how the birth of a first child influences attitudes towards fatherhood amongst men and women using panel data from the Household Income and Labour Dynamics in Australia (HILDA) survey. Our results indicate that gender-role attitudes are not fixed over individuals' life courses and thus provide support to intra cohort theories of attitudinal change. In particular, we find that after experiencing a first birth women become less likely to agree that a father should be as heavily involved as in the care of his children as the mother, and men become more likely to question the capacity of a working father to have a good relationship with his children. We argue that these changes reflect the primary identities of men and women as 'providers' and 'carers' following a first birth.

[buchler@soz.uni-frankfurt.de](mailto:buchler@soz.uni-frankfurt.de))

#### *The Influence of Gender on Pathways out of Secondary School: Evidence from Australia*

The motivation for this research is twofold. First, women's increased educational attainment, relative to that of men, is expected to give women greater access to favourable and good quality positions on the labour market. Second, the growth of the service sector (and the reduced importance of the production sector) in post-industrial societies have been predicted to increase women's employment opportunities (and decrease those of men). Despite these changes women's disadvantage in the labour market is persistent. A common explanation given for these gender differences is women's greater responsibility for child care and unpaid household labour. However, differences in family responsibilities between men and women at the age when young people leave education and transition into work are largely negligible. This represents an important life-phase where gender differences can be examined when young people are already in the labour market, but before the gendered division of familial roles is expected to restrict women's participation in paid employment. Using data from the Longitudinal Surveys of Australian Youth (LSAY) collected from 1995 to 2006 this study examines gender in the school-work transition in two stages. First we examine the most common educational pathways and the distribution of men and women in these pathways. Second, we explore the characteristics of an individual's first significant job and how this is influenced by gender, education and a range of background variables (such as socio-economic background, language spoken at home, and school achievement tests). We expect gender to play a substantial role in shaping the educational pathways and first significant job outcomes of young people in Australia.

This research comprises the Australian country study for the second phase of the 'Education as a Lifelong Process – Comparing Educational Trajectories in Modern Societies (eduLIFE)' project.

#### *Fragmented Translation: Case Study of Max Weber's Reception in Poland*

Fragmented Translation: Case Study of Max Weber's Reception in Poland  
Fragmented translation is what happens when there the unity of the original is not preserved in the work of the translator. In fragmented translation, a body of ideas is misinterpreted as just a text. A text, unlike a body of ideas, can be cut into pieces, abridged, but most importantly it can be read as though it was never in the company of other texts.

I want to discuss the conditions and effects of fragmented translation on the reception of classics. I know the translator's work of my own experience: I have translated Max Weber, Norbert Elias, Charles Wright Mills, Mary Douglas and many others. In this talk, I will use the case of Max Weber.

Terminological, conceptual and stylistic decisions of the translator working on a text are circulated and create an illusion of completeness, even if the text itself is just a fragment. Such was the case with Weber's *Gemeinschaft und Gesellschaft* and *Gesammelte Aufsätze zur Religionssoziologie* in Poland. Incidentally, this made original works look uneconomically verbose, once they finally appeared in Polish several years ago. Another case is *Die protestantische Ethik* itself: it is currently

available in three different Polish translations, only one of which is full. Differences between them show that translator's decisions largely go uncontested as far as meaning is concerned. Double responsibility for meaning and for readability is universally accepted, but it is rarely mentioned that meaning is seldom controllable beyond a circle of most fastidious readers. Finally, where some parts are chosen, some are omitted and sometimes hardly read at all. This was the case of Weber's *Rechtssoziologie*.

Fragmented translation creates an area of shadow in which the body of ideas is lost, leaving behind just a loose collection of texts.

**BUCHOLC, MARTA\*** (University of Warsaw,  
[bucholcm@is.uw.edu.pl](mailto:bucholcm@is.uw.edu.pl))

### *The Protestant Ethic In Poland: A Book That Failed To Make Sociology*

There is hardly any debate as to Max Weber's status as a classic of sociology anywhere in the world, and the Protestant Ethic is probably his best-known work. Nevertheless, there are contexts in which the best known and the most referenced book may not play a role adequate to its apparent significance in the making of sociology. Weber's reception in Poland provided one of such contexts. The failure of Weberian inspiration may be succinctly summarized as follows: instead of providing historical, comparative and interdisciplinary insight for explaining the subtle link between culture and social action, it was used as a prop in scientific quest after a good footing for capitalist economic practices in a post-communist society.

In my presentation, I will substantiate my contention that Weber's book did not make sociology in Poland despite its popularity as a reference source. Among the most important factors which determined the state of reception of *The Protestant Ethic* I will address the following: (1) presentism of reading, (2) narrow interpretation lacking the background of Weber's greater sociological project, and (3) overestimating religious factor in Weberian model. I will discuss the development of sociology in Poland, including its historical, social and cultural aspects, in order to provide a tentative explanation why *The Protestant Ethic* failed to make sociology in Poland not only in the early 20<sup>th</sup> century or under communist rule until 1989, but also after the passage to democracy and free-market economy. In each of this periods, Weberian sociological imagery marked by a combination of a sense for history and culture failed and was replaced by a day-to-day reactive research, which did not make sociology, despite giving work to a large number of sociologists.

### *Household Wellbeing and Health in Two Types of Welfare Regimes: A Comparison of (Lower-) Middle Income Households Chile and Costa Rica*

The aim of this paper is to elaborate to what extent the logics of the opportunities as shaped by welfare regimes (the interplay of markets, the state, communities and households) play out for wellbeing. Health is crucial for wellbeing. Different welfare regimes provide different opportunities to deal with health issues. Chile and Costa Rica's organization of health care reflects the logics of their welfare regimes: liberal and social-democratic. We look at how households deal with health issues and what repercussions this has on their other life domains and wellbeing. We focus on households belonging to (lower) middle-income households. These are heterogeneous, as they belong to those having been heaved out of poverty over the past decades due to economic growth or to formerly middle-income households having experienced an increase in insecurity and downward mobility due to the changes in the model of Social Security linked to the change in economic model (abolishment of the Import Substitution Industrialization model). Such households struggle to maintain or improve their level of wellbeing and to avoid slipping downwards into even more precarious positions; they do not have sufficient financial means to cushion unforeseen events and are generally not target of social policies. Recent research has highlighted the socio-economic volatility of these households, yet little is known what this means for their wellbeing. Our research looks into the everyday life of (lower) middle-income households by means of qualitative interviews with the same households in 2008/09 and 2013 in Temuco and San José. Results suggest that the households in Chile were constantly preoccupied with how to deal with health issues and the consequences. This furthered anxieties and worries in other life domains. In Costa Rica, the basic security provided by the national health system of sufficient quality limited the spillover of worries into other life domains.

### *Bridging Uncertainty through Standardized Discussion Methods*

Social care professionals dealing with "their cases" are routinely exposed to multiple uncertainties. As frontline-workers, they are not only occupied with sorting the relevant problems but also with building and maintaining the fragile alliances to their individual clients. An additional difficulty in the case of social workers in youth welfare offices lies in the "packet-challenge" of reaching the child via working as cooperatively as possible with the parent.

This paper explores how standardized case discussion methods can serve as "save paths" and thus a bridging mechanism to bushwhack through the uncertainties of casework. Accordingly, I shed light on the effects and functions of standardized case discussion methods on interactional processes. It can be shown that the acceptance of this method varies depending on the deep norms of the professional experts using it. Therefore, I draw on the findings of my qualitative in-depth case study comparing three youth welfare offices. The method under examination regulates who is allowed to talk and prescribes permitted forms of participation at certain stages of the discussion (question, callback, suggestion, etc.).

It can be shown that the redistribution of speech rights by sticking strictly to the case discussion method bridges uncertainty in three ways. First, it creates a temporal "clearing" of the "normal confusion" of casework by offering expectable openings and closures of complexity. In terms of the garbage can model, it temporarily cleans up the streams of decision making. Second, it allows experts to explicitly deal with uncertainty by enfolded ambiguities, risks and chances in the presence of superiors without the need for early oversimplification. Third, it allows the tacit scanning of how strictly formal organizational rules are applied when the care plan needs to be approved, creating an 'informal reliability' for all participants.

[stefanie.buechner@uni-potsdam.de](mailto:stefanie.buechner@uni-potsdam.de))

### *Division of Attention and Division of Labor in Child Protection Services*

In recent years, the death of young children being processed as "cases" in youth service organizations (German: Jugendämter) has challenged politics and led to judicial and organizational reforms. Therefore, the vulnerable child has become a boundary object of risk management, prompting broad initiatives to improve child protection. This paper examines the introduction of special units or task forces in youth welfare organizations that deal with so-called risk-reports, mainly calls from citizens or institutions pointing to putative cases of children at risk.

This paper focuses on two insights of a qualitative case study in three youth welfare organizations, two of which work with specialized risk units. This division of labor goes hand-in-hand with a new division of attention and offers insights for the study of risk in case-based human service organizations.

First, it can be shown that the establishment of specialized risk assessment and processing units surprisingly did not lead to an asymmetric relationship between the members of the specialized units and "normal" case workers. By contrast, both sides cooperate on a strongly collegial basis. The second finding points to the different modes that specialized risk units have developed. Whereas one task force works on a mode that can be characterized as "emergency service", another defines their work close to what can be termed as "investigation service". The former mode adopts a clear cut one-zero scheme of risk assessment and underlines people processing aspects of their work, whereas the contrary is true in the case of the latter. Here, the deep rules of the team state ambiguities and uncertainties as "normal" and reject clear cut risk assessments while underlining the people-changing aspects of their work. These two arrangements in the distribution of attention through the division of labor lead to different forms of uncertainty and risk management.

### *Notions Of „Good Childhood“ – Reconstructing Generational Orders In Azerbaijan and Kyrgyzstan*

Our paper is based on ethnographic and half-standardized research in the two countries. In our research we have been attentive to the efforts to take influence on what is "good childhood" e.g. by international organizations and by foreign suppliers of educational opportunities, on one hand, and children's and parents' perspectives and practices, on the other hand.

Parents (as well as grandparents, relatives) in both countries are practicing an asymmetric generational order with strict demands towards children, youth and

young adults to fit into parental expectations. They are supported in this endeavor by the national educational system and its representatives. While doing so, adults refer to legitimations which they take to be given by "religion" or "ethnic tradition".

Based on children's and young people's view of the demands of these generational orders we can identify positive and negative implications of the generational asymmetry for children and young people. What is taken positive or negative is thereby depending on children's age, but not necessarily on gender although the burdens of the generational order normally weigh heavier on girls than boys.

We operate with a notion of "self"/"good life" in the interpretation of our results. While it may easily be objected that such notion is culturally and historically contingent, we can clearly show that children and young people themselves refer astonishingly enough to such notion while judging about the various qualities of the generational demands and the opportunities they offer to them or while trying to organize their lines of actions. We conclude that the really "other" perspective is the one of the child and the young people. It is a methodological challenge to grasp this perspective and to make this "otherness" available for theorizing and practice. The paper will give empirical evidence for both countries supporting such conclusion.

### *Where Is The Child In Child Protection? Professional Proceedings Beyond Victims*

The paper is based on the results of a project on professional interventions in cases of child maltreatment. More than hundred interviews with professionals (social workers, physicians, midwives) were carried out in five communities in Germany. In this way a data set consisting of 93 cases of suspected child maltreatment was collected.

Our results show that children are generally excluded from child protection proceedings and their voices are ignored. Therefore the rules and ways of this exclusion are analysed:

1. The exclusion of the child works via two main principles: (a) Child protection law addresses the restitution of parental competences and the conservation of the family. (b) The different professional programmes involved in child protection all eliminate children's point of view while focussing other perspectives. Social work is concerned with the relationship between professionals and parents. Physicians and midwives do only partially include the child, as they either take notice of the child's body as a 'corpus delicti' (as a bearer of traces for the physician's gaze) or as an object of parental care.

2. Against such background, traces of the children can only occasionally be found, as some social workers show empathy for the child's position. Institutions like kindergarten or day care serve as amplifiers of the child's need.

3. The information disclosed by children shows that they have a sense for the harm and disrespect as a person they are exposed to. All in all, the children articulate claims for a personal self being respected by others.

4. Furthermore, specific cases show how those occasional appearances of the child's agency are silenced by the professionals in the further proceedings. Children's agency was only not repressible in cases, when they were able to raise their voice at places / institutions outside their homes or when their behaviour continuously disturbed.

### *Experiences Of Neighbourhood Exclusion and Inclusion Among Older Residents In Manchester, UK: Developing Age-Friendly Neighbourhoods*

Developing environments responsive to the aspirations and needs of older people has become a major concern for social and public policy. This paper explores conceptual and empirical aspects of the age-friendly cities debate, with a particular focus on issues of place and space in urban settings. Exploratory findings are reported from an empirical study in a neighbourhood in Manchester, which sought to examine experiences of social exclusion and inclusion among people aged over 60. Drawing on a mixed-method approach consisting of questionnaires, focus groups and interviews, the paper identifies four issues in relation to the neighbourhood dimension of social exclusion/inclusion in later life: experiences of community change; feelings of security and safety; the management of urban space; and strategies of control. The article concludes by discussing conceptual and policy issues raised by the research, particularly in relation to the issue of developing age-friendly communities.

### *Experiences Of Place and Community Among First Generation Turkish Immigrants Living In Brussels, Belgium*

This paper aims to explore experiences of everyday life among first generation Turkish immigrants who are ageing in place in Brussels. The data for the present research are derived from a qualitative study in inner-city neighbourhoods characterized by intense deprivation. Drawing on semi-structured interviews with 23 Turkish people aged 60 and over, the paper addresses experiences of ageing and quality of life in their neighbourhoods; the variety of ways in which a sense of 'home' is created; the constraints and environmental pressures which may prevent people from developing a sense of 'home'; and the meaning of transnational ties for the experience of place. The results suggest that neighbourhoods, and the attachments older Turkish immigrants maintain with (multiple) place(s), have a significant influence on shaping the experience of exclusion and inclusion in later life. The article concludes with a discussion of three key themes: first, the impact of place on the quality of older Turkish immigrants' daily life; second, the idea of inclusiveness in everyday life among ageing immigrants living in disadvantaged communities; and third, the need for developing social policies that address the transnational interactions, the social needs and health care demands of a growing and increasingly diverse ageing population.

### *The Association Between Work Type/Status and Mental Health Care Use, before and during the Economic Recession in Europe*

Studies have examined the relationship between socioeconomic determinants and mental health care use. However, to date, little research has investigated whether these relations have changed over time and vary across socioeconomic structures and gender.

Between 2005 and 2010, a global economic crisis changed Europe's economic situation, with economic instability and rising unemployment rates as a result. Recent research has found that in several countries, the recession has increased the frequency of mental health problems particularly among families experiencing unemployment. The fear generated by the increased chance of unemployment, which may depend on type of job, is also associated with poor mental health. Despite the greater demand for mental health care, there is a risk that austerity may impact adversely on health care provision.

We have investigated the relation between unemployment, type of job and mental health and medical mental health care use in 2005 and 2010.

By using the repeated cross-sectional data of the Eurobarometer 248 (2005-2006) and 345 (2009-2010), we have performed gender differentiated multilevel logistic regression analyses.

Preliminary results suggest that compared to 2005, the average mental health status in Europe is worse in 2010 and the percentage that contacted a GP is higher, while in contrast, specialized care use is lower. Only unemployed women in 2005 have a higher general care use, irrespective of mental health. Contrastingly, in 2010 the unemployed men and women are more likely to contact a psychiatrist, also when we control for need for care. For men, this relation is stronger in countries with a lower unemployment rate. In addition, we found that male manual workers are in 2010 more likely to contact a psychiatrist than white collars and that the male self-employed have a lower general care use than the manual workers and white collars, both irrespective of mental health.

### *Faith-Based Organisations and Welfare Provision for Asylum Seekers in Australia*

Religion operates in multiple ways as it shapes the experiences of forced migrants. It is often a causal factor in migration, and may either facilitate or impede integration in the country of settlement. Religious identity also plays a significant role in responses to asylum-seeking, with faith-based organisations, or FBOs, providing significant support to asylum-seekers in Western countries. FBOs are ideal service providers because of their strong local contacts, their public legitimacy, theological motivations for service and material resources. In Australia, the state has developed significant contractual relationships with FBOs to deliver welfare services, particularly to refugees and asylum seekers.

This paper examines the role of FBOs in welfare provision to asylum seekers using fieldwork conducted in Sydney, Melbourne and Brisbane. Within each city, interviews and participant observation were conducted with practitioners at FBOs

who provide services to asylum seekers. The study sought to understand the way that religion shapes the organisational structure, ethos and motivations of the FBO and its practitioners. It also explored the way in which FBOs use religious resources in the construction of settlement programs, how they addressed the cultural specificity of asylum-seekers in program delivery, and how they negotiated their role as 'neutral' state-contracted service-providers while maintaining religious identity. The results of the study find that religion is often an important and explicit motivator for practitioner action. Results indicate tensions between practitioners who understand the work in a "human rights" frame and those who may narrate or understand their work theologically. The study also revealed multiple understandings by practitioners of the importance of religious practice to asylum seekers. Finally, the results of this study point to tensions that increased government contractualisation poses for FBOs who deliver government services to asylum seekers, as FBOs have traditionally been strong critics of government policy on asylum seekers.

### *Parallel/Alternative Orthodoxy in Russia: Inside Church, out of Doctrine*

Current Russian Orthodox Church situation is unprecedented: during soviet period church was constrained by the regime; at pre-soviet time official Church status did not conduce a free contention of theological ideas. Post-soviet time gives us unique situation: ultra-liberal and ultra-conservative fractions took shape and play without serious official (both church and state) pressure inside the Church. Both ultra-liberals and ultra-conservatives obviously stand beyond the allowable in orthodoxy theological latitude. Ultra-liberal fraction is not large, but ultra-conservatives are really numerous. So, authors focus concentrates on them.

There is no ideological unity in this fraction, but we can notice a few common features. First, hierarchy neglecting – patriarch and bishops has no respect in this community, withal mind of "ancient" considered as an ultimate truth. Really, we have a situation of forming an alternative Holy Tradition. Second, wide spread of apocalyptic moods, expectation of alarming "properties" (some of this "properties" did not come true yet). Third, monarchy minds, often linked with "tsar-God" heresies, where the Christ place occupies the last Russian emperor, whom they call "redeemer" of Russia. And last, but not the least, new technologies, especially in information sphere, phobias. Objects of these phobias are bar codes, Internet, mobile phones, credit cards and gadgets at all, electronic passports, individual tax number certificates etc. Special sort of phobias – phobia of total state electronic control over the society establishing.

We can meet ultra-conservative in every region of Russia, in many parishes and monasteries. This phenomena uprising caused by the few groups of reasons. Internal church reasons due to rapid growing of parish people number in 90<sup>th</sup>, when religious experience translation process was distorted. Social reasons were connected with post-soviet anomy intensified by economic difficulties, that provoke alarmist eschatological moods. And last, reasons caused with actual discontinuation state regulation of religious sphere.

### *Power Relation, Participation, and Local Government Reform*

This paper sourced from dissertation of presenter for doctoral studies in sociology in University of Indonesia (2013), which describes the Solo City mayor's (during governed by Joko Widodo, 2005-2012) action facing structural challenges (rules and resources constraints) to create inclusive populist policies in cases of arrangement of street vendors and resettlement on the banks of the Bengawan Solo. The approach used qualitative case study strategy with the individual (actor) as a unit of analysis which also presents the institution. By using structuration theory (Giddens, 1984) and the Polity Models (Tilly, 1978), the results of this study shows, although the head of local state government open wide enough space for public to participation in management of power (resources) in local reform, not all CSO (Civil Society Organization) and CSA (Civil Society activist) give positive respond. The factors that influence are ideology (radical democracy), mistrust with local state government because of past trauma, and doubt (skeptical) about the commitment of local state government. Additionally, the availability of alternative resources (money, networking, and people) is another important factor that affects. Finally, the right approach from the head of local state can reduce the resistance and rejection from CSO and CSA; and the most importantly, it's because the head of local state can gives strong evidence that he does not have a personal vested interest in the management of power does (actually led to serve people).

### *The Quest for Global Environmental Justice, Healthy Communities and Human Rights*

This paper utilizes an environmental justice lens to critically analyze the socio-historical connection between the global exploitation of land and the exploitation of people. The environmental justice movement has expanded beyond its initial challenges to environmental racism and advancing civil rights in the United States to become a global movement advancing human rights, sustainability, health equity, food sovereignty, equitable development, clean energy, and climate justice. Climate change is viewed as one of the single most important environmental justice issue of the 21st century. The most vulnerable populations who contribute least to climate change will suffer the earliest and most damaging setbacks because of where they live, their limited income and economic means, and their lack of access to health care.

Increased globalization of the world's economy has placed special strains on the eco-systems in many marginalized communities in the global North and South. Globalization makes it easier for transnational corporations and capital to flee to areas with the least environmental regulations, best tax incentives, cheapest labor, and highest profit. Despite significant improvements in environmental protection over the past several decades, millions of people largely in developing countries still suffer from the "Big Three" environmental problems: contaminated drinking water, untreated human excrement, and air pollution.

Loopholes in international conventions and treaties still allow transboundary shipment, export, and trading of banned pesticides, hazardous wastes, questionable recyclables, toxic products, and "risky" technologies. Economic extortion extends to the exploitative work environment of migrant farm workers, garment districts sweatshops, building construction trade, dirty low-paying industrial jobs, and the micro-electronics industry. Workers who suffer under substandard occupational and safety conditions have few rights protected by government. Global alliances have formed between the "victims" of environmental injustice and have elevated the environmental justice message to the international arena, including the United Nations, World Bank, World Trade Organization.

### *Difference and Belonging: Summer Camps Aid in Creating Nonreligious Identities in the United States*

The United States of America is ostensibly a secular country. In a seemingly paradoxical way, religions and religious beliefs have thrived within this secular environment, with Americans being some of the most religious people in the world. This leads us to question the place of nonreligious Americans within this secular but overwhelmingly religious country. To begin answering this question, ethnographic work was carried out at a nonreligious summer camp called Camp Quest in the summer of 2011. Camp Quest is an explicitly nonreligious summer camp that welcomes children of all ages as well as their parents for a weeklong camping experience. The nonreligious people who attended Camp Quest Montana in 2011 are engaged in a complex process of identity formation where they seek to distance themselves from their religious neighbours while adopting discourses that create feelings of belonging in a religion-filled America. The camp's explicit nonreligious position provides a space for the open discussion about participants' rejection of religious belief, while, in a seeming contradiction, Camp Quest Montana also encourages the participants to talk about nonreligious *beliefs* that are not dependent on religious beliefs as a frame of reference. The analysis of the data gained through ethnographic fieldwork at Camp Quest provides a clearer picture of the process of creating a nonreligious identity as well as the tension between these nonreligious Americans and the religious Americans that make up a majority of the population.

### *Local Meanings of Internationalization of Higher Education Under Economic Crisis: A Critical Case Study at a Swedish University*

The paper is an analysis of local meanings academic employees confer to internationalization of higher education at their own work place in a context of economic cuts and institutional restructuring. The argument is that internationalization of higher education is interpreted in this local context more as a controversial means to access resources rather than a meaningful translation of internationalization policy into practice. The fieldwork data gathered through participant observation at a social science department at a Swedish university indicate that the local meanings of internationalization are largely determined by two main aspects of the local context in which they are constituted: a) the local practices of decision-making, priority setting, and resource distribution at the university and departmental level; b) the increasing local participation of employees in forms of symbolic resistance to these decisions. The findings should be read in light of the author having had extensive collaboration with the department under study, a positioning that confers her the possibility to move away from the traditional role

of the researcher as a neutral observant toward a more participatory role that entails becoming critically engaged with the research field and moving the application of theory, methods and practice towards action and activism.

*Roma in Europe: The Politics of Collective Identity Formation* (paper based on forthcoming book with Ashgate Publishers, 2014)

The paradox of Roma people's identifications varying from strong assertions of Roma identity to complete negations of it triggers this paper's inquiry into the reasons why Roma identifications are so heterogeneous. The argument unfolding through the analysis of multi-sited ethnographic data is that the heterogeneity of Roma identifications is not random, but that it follows certain context-specific patterns. For example, at local level in a multi-ethnic locality in Transylvania, one could observe that within the same hetero-identified Roma group there is a tendency for differentiated and fragmented self-identifications; while at state level (e.g. in Romania) and at international level there is a tendency that blurs differentiations and that emphasizes a more homogenous collective identity of the Roma. This paper attempts to uncover the reasons for the large array of Roma identifications through the combined method of "thick description" (Geertz, 1973) and "multi-sited ethnography" (Marcus, 1995). The conjunction of these methods offers a contextual understanding of the complex dynamics of Roma collective identity formation at three analytical levels: the local, the state and the international.

The findings indicate that Roma identifications are contextual and more often than not they represent means in the struggle for resources available within different structural contexts. In such instances, Roma identifications become forms of agency in negotiating a better standing *vis a vis* other (often more powerful) actors encountered in the process of social interaction. The instrumentality of identifications and identity discourses of the Roma does not entirely dismiss the possibility of a genuine feeling of belonging to certain categories of self-ascription in the moment of identification. Such feelings could suggest an internalization or solidification of some self-identification practices as habitus (Bourdieu, 1992) or structural content.

*Governance of Ethnobotanical Resources in Siquijor, Philippines*

The study focused on mobilizing the *tambalans* and *mangangalaps* (faith healers and herbal collectors respectively) to take the lead in formulating a Community Based Ethnobotany Resources Conservation Framework Plan, hence, leading the conservation of medicinal trees and shrubs they have been utilizing. The methods included an organizational meeting, personal interviews, participatory field survey and identification, focus group discussion (FGD), and integrated consultation workshop with the *tambalans*, *mangangalaps* and other local stakeholders. The Siquijor Herbalists Association (SHA) was organized. Most of the *tambalans* and *mangangalaps* in the two barangays thought that ethnobotany resources are important source of income. However, since there has been no conservation effort, they realized that the resources are getting scarce.

The project initiated the creation of a Community Based Ethnobotany Resources Management Committee that formulated and developed a conservation framework plan. As an initial intervention to conserve the subject resources as embodied in the said plan, they established a Barangay Ethnobotany Resources Nursery through a collaborative effort by the local DENR, SHA, and concerned LGUs. Additionally, a database of ethnobotany resources was established comprising a total of 63 species showing photographs, local and official common name, family name, scientific name, parts utilized, intended cure, and method of preparation to serve as source of information on ethnomedical practices in the island.

Overall, conservation framework plan formulation was a participative approach, ensuring that needs, aspirations and culture of local communities, the concern of the LGUs and national government's policy and technical framework are duly considered.

*Preferences in Leisure Activity As Affected By Gendered Choice*

A review of the 10 year enrolment to both martial arts and dance classes was done to establish a trend. The study sought: 1) to determine if gender gap exists, 2) evaluate students' motivation in their leisure preferences, and 3) to establish whether gender orientation is salient in students' choice. A questionnaire was distributed to a total of 250 students currently enrolled in martial arts and dance classes. An in-depth interview was also conducted to randomly selected students. With regard to motive in their preferences, result showed that 'challenge of their body' and 'self protection' ranked first for the male and female enrollees in martial arts respectively. On the other hand, the dance enrollees noted that 'self expression' for the female and 'trying a different field' by the male students were reasons in their leisure choice. In addition, the interview notes revealed that the idea of femininity and masculinity were almost identical such as soft and gentle meant feminine while masculine were rough and persistent. Now that students enrol a leisure course because they want to, would pave the way to better learning that would actually benefit the physical body and lead to wellness and quality life.

*Multiple Secularities and Cultural Memories in Québec*

Contemporary contestations over secularity in Western liberal democracies frequently take shape as politics of memory in which accounts of the past are mobilized to legitimate privileges of Christian Churches in the public domain. Such mobilizations meet with legal challenges as there are increasing pressures to bring such privileges into harmony with fundamental rights (equality, freedom, non-discrimination).

This paper addresses the politics around cultural memory and laïcité in Québec and specifies three distinct accounts, carried by civil society protagonists, that feed into institutional responses to religious diversity ('heritage secularism', 'sceptical secularism', 'open secularism'). Using exemplary cases, it shows how these accounts are brought to bear on judicial dynamics and civil society activism. The paper is based on archival research and qualitative interviews carried out in 2012 and 2013.

*Invisibility As a Barrier to Collectivity: Argentinian and Indian Homeworkers*

Two, key and probably interlinked characteristics of homework are gender and the invisibility of homeworkers. However, invisibility in homework has received scant attention from scholars. This paper explores in/visibility in relation to women homeworkers: its links to their work experience and recognition as workers, and its interface with unions, NGOs, corporations and government. At the same time, it documents and compares relatively unknown instances of homework in Argentina and India to make a contribution to knowledge about homework, which is still an under-researched area.

Homeworkers are often portrayed as unorganised, and have been labelled 'unorganisable'. We argue that homeworker invisibility is linked to a lack of representation and agency at the grassroots, which presents a particular obstacle for homeworkers. Corporate responses to reports of poor labour conditions, such as child labour, focus on risks to the firm rather than the work conditions of homeworkers. Rendering homeworkers as invisible allows firms to make sub-

stantial changes to the organization of work without the need to consider the homeworkers.

What is the evidence on invisibility and how does it affect homeworkers? The paper draws from a range of data to address these questions. In Argentina, interviews were conducted with an NGO; the Ministry of Labour; a union body, and homeworkers in Buenos Aires. In India, interviews were conducted with homeworkers, NGOs, small contractors and Indian manufacturers in the South Indian state of Tamil Nadu. The data highlight how little attention has been given to the voice of homeworkers and demonstrate how this contributes to making these women workers invisible. This paper valorises the voices of homeworkers and situates their cases within a broader discussion of the barriers informal women face in developing collective strategies to be recognised as workers, and to increase their agency and voice.

#### *Collective Practices and Appropriation of Knowledge By Three Figures of Knowledge Workers*

We propose to analyse three figures of knowledge workers: art and entertainment workers in France, salaried-entrepreneurs and makers, of three points of view.

Firstly, we present the institutional framework. All of these workers are out of regular rules of employment. But their activity is framed by different institutional architectures. Art and entertainment workers are formally salaried but really quasi-independent. Salaried-entrepreneurs are formally salaried but really quasi-entrepreneur. Makers make autonomous spaces out of employment relationships.

Secondly, we analyse these figures not as professional groups, but through their practices of appropriation of knowledge. For art and entertainment workers, the discontinuous employment relationships constitute a precarious condition but at the same time, it is the condition for autonomous artistic and cultural production. For salaried-entrepreneurs the singular enterprise, Business Employment Cooperative is the space for production of common knowledge. Finally, for makers, free knowledge and co-production are the "core business".

In all of these experiences we can show how collective practices invent singular forms of resistance to the neoliberal model of "self entrepreneurship".

#### *Social Policy for Improvement of Standard of Living in Thailand*

Social Policy entails the study of the social relations necessary for human well-being and the systems by which wellbeing may be promoted. It's about the many and various things that affect the kinds of life that people can live. This paper presents the results from Citizen Survey on social quality in Thailand by using the ACSQ (Asian Consortium for Social Quality) standard questionnaire conducted by King Prajadhipok's Institute during the end of 2012 to explain the important factors affecting the public satisfaction on standard of living in Thailand and what kind of social policy should be formulated to enhance the wellbeing of Thai people. Since Thai present government concentrate mostly on so called "populist" policy which is considered to be different from welfare policy and there are a lot of controversies in Thai society. A lot of money has been spent to support the wellbeing of the people in rural area and the group of the poor. The results show that accommodation, employment, financial status and family life have positive impact on satisfaction on standard of living, whereas political participation shows negative impact. Therefore, the social policies that are appropriate for Thailand should be the strengthening the socio economic security that is related to those mentioned factors.

#### *Historical Perspectives On Risk and Morality*

Anthony Giddens argued that the 'risk society' presupposes the 'evaporation of morality'. But like other aspects of the sociology of risk, this proposition has never been empirically substantiated. This paper will historically explore the inverse relationship between risk and morality, focusing on the language of policy debates in the UK on contentious social issues. The balance between arguments grounded in more straightforward 'right' and 'wrong' and those based in risk and harm reduction will be analysed, focusing on four particular periods: the late Victorian, the liberalising legislation of the 1960s, the risk politics begun during the Thatch-

er/Major years, and current Coalition policy language – in view of Cameron's intent to 'remoralise' discourse. The intention is to cast new light on contemporary debates such as around drugs policy and 'policy-led evidence', where the tension between probabilistic calculation and moral judgement is marked, and to direct new theoretical attention to the useful contrast of risk to morality.

### RC01-29.1

**BURGESS, KEVIN\*** (Defence Academy, [k.burgess@cranfield.ac.uk](mailto:k.burgess@cranfield.ac.uk))

#### *Rational for Widening the Research Paradigms in Defence Environment*

To date, a large amount of the research conducted within defence organisations has been restricted both in terms of the research paradigms employed and the content areas covered. The paradigms have been predominately positivist and the content has tended to privilege investigations of actions carried out by uniformed military. This paper will argue that the imposition of the neoliberal agenda on most defence organisations has resulted in a civilisation and privatisation of defence. The consequences of this imposition have been so profound as to have altered the very way in which the military can conduct war. As will be demonstrated in the paper these changes in turn also warrant a change in the nature and frequency of the research paradigms used. The present reality is that the pace of reforms has outstripped the ability of researchers to stay abreast of these developments let alone to engage in sound, explanatory, theoretical development. Researchers have been further hampered by the predominance use of research paradigms and methodological approaches ill-suited to investigating the complexity of these developments and in particular the social systems involved.

Examples drawn from Iraq and Afghanistan will be used to demonstrate the limitations of existing research approaches to meet the current and future challenges associated with the ongoing nature of defence reforms and transformations. Emerging topics which are explored to justify a change in research approaches include the blurring of boundaries between and military and its suppliers; the increased dependence on contractors to generate military capability in the battlespace; and the raft of unresolved moral and ethical dilemmas as well as the jurisdictional nightmare that has followed as a result. The overall aim of the paper is to demonstrate why different topics require different research approaches.

#### *Supporting Family Farmers, Small Traders and Micro Entrepreneurs: Brazilian Local Experiences of Income Redistribution*

The inequality in Brazil remains huge. In 2012, the richest 10% concentrated 41.9% of total national income. Although improvements were made in recent years, the country's Gini coefficient in 2012 was 0.498, which still situates the country as one of the most unequal in the world. Social policies of the federal government such as the Programa Bolsa Família, the minimum wage increase and the reduction of unemployment have been able to reduce poverty and extreme poverty in the country. However, to reduce inequality is necessary that local governments also formulate and implement public policies aiming to reduce inequalities. This article describes and analyzes four municipal experiences who are facing these issues. The field research was carried out between 2012 and 2013 and in methodological terms, there was documentary analysis of the legal instruments that have created programs, analysis of quantitative indicators and interviews with government experts, representatives of the legislative power, members of opposition parties, small businessmen, traders, family farmers and the general population. Two of them, in Dracena (State of São Paulo) and São João do Arraial (Piauí), are related to family farmers and deal directly with the issue of poverty in small rural municipalities. The third, Cubatão (São Paulo), deals with the stimulation to local trade, through a new kind of social currency. And finally, the fourth case is Cariacica (Espírito Santos), an experience to stimulate local entrepreneurship, accompanied by a public procurement program directed to micro and small entrepreneurs. The effects of the four experiments on inequality are heterogeneous, but the results show that, at different levels, these policies have succeeded in stimulating local economic development and reduce inequalities in cities. They can therefore serve as interesting examples to reflect on the role of local governments in building a fairer society.

#### *The Brazilian Challenges for Effective a Sport Public Policy*

With the upcoming of the two biggest sporting events in the world - the FIFA World Cup 2014 and the Rio de Janeiro Olympic Games in 2016 - Brazil is experiencing a unique moment and fosters the discussion on the sport and the opportunities for its development.

The realization of these mega sporting events in Brazil brings to agenda the discussion of sports infrastructure in the country and the necessity to build a national sport public policy committed not only in winning another world championship in football or guarantee a better classification in the medals table in the next Olympics, but also a policy that ensures the practice of sports to all citizens.

This article presents the systematization of sport public policies adopted by the federal government in recent years that aims to contribute to the further development of the sport nationwide. The issue consists in the analysis of programs that encourage physical activity and sports, the payment of stipend for athletes (Bolsa-Atleta), tax relief to companies that support sports initiatives (Sports Incentive Law), improvement in national sports infrastructure and the science support for this area.

The results shows that the federal government has been increasing the incentive for high performance sport and ensuring better training and participation of Brazilian athletes in international competitions. Nevertheless, the sport practice is still a result of isolated initiatives. The challenge is to harness the moment that sport has in Brazil to foster discussion and seek to consolidate a national public policy for sport in the coming years.

#### 'Big Brother For People With Degrees': Interpassivity In Contemporary Activism

Since 2011, there has been a resurgence of activism across the globe in an attempt to resist what has come to be seen as an unjust and unfair approach to the global economy. *Occupy* was one of the largest 'movements', managing to spread across 951 cities and 81 countries in a matter of months following the initial call to camp at Zuccotti Park, New York (near Wall Street). This paper is based on interviews that took place with *Occupy: London* in May 2012 (just before they were evicted).

Mark Fisher has suggested that, interpassivity – when "the object itself takes from me, deprives me of, my own passivity" (Žižek 2006:24) – can be seen in examples of resistive culture (such as the film 'Wall-e' which "performs our anti-capitalism for us" (Fisher 2009:12). In this way, the current paper suggests that we could apply this to some forms of activism to explain why some people feel like they are part of such movements *without* 'properly' joining them on the ground. Analysing some of the interview data, we find evidence that some people might be allowing the other to 'relieve them of their passivity' towards resistance and turning it into a kind of privatised rebellion rather than any real action against the system.

#### Transnational Grandparenting By Minority Ethnic Groups Living in England and Wales

**BACKGROUND:** This paper examines the transnational grandparenting activities of middle aged (40-54) and older people (55+) from six ethnic minority groups living in England and Wales (Black Caribbean, Black African, Indian, Pakistani, Bangladeshi and Chinese). Within the sample of 1206 people, there were 1408 transnational relationships (dyads) with relatives overseas. Of the 1408 transnational relationships with relatives only 88 were between grandparents and grandchildren.

**METHOD:** Frequency and methods of contact (letter writing, telephone calls, ICT, visiting and receiving visitors, sending and receiving gifts, sending and receiving one of gifts of money, sending and receiving regular remittances) were used in exploratory latent profile analysis to identify transnational relationships types for all relative dyads. A four-class model was selected as the best fit to the data. The types of transnational relationships were characterised as *Infrequent Digital Communicators*; *Infrequent Telephone Communicators*; *Highly Connected Regular Benefactors* and *Occasional Bilateral-Bounteous-Visitors*. Thereafter, our analyses focus on the 88 grandparental transnational relationships. We explore differences between ethnic groups and the gender of the grandparental dyad (e.g. grandmother-granddaughter; grandmother-grandson; grandfather-granddaughter; grandfather-grandson).

**RESULTS:** Although the numbers are small, trends are observed with regard to differences in grandparental transnational relationship types between ethnic groups. A majority of transnational relationships between Black African grandparents and grandchildren were characterised as *Infrequent Telephone Commu-*

*nicators* (85%); whereas a majority of relationships between Indian grandparents and grandchildren were characterised as *Highly Connected Regular Benefactors*. Pakistani and Bangladeshi grandparents were more likely than grandparents in other ethnic groups to be *Occasional Bilateral-Bounteous-Visitors*. With regard to gender dyads, all transnational relationships were with grandsons and there were no significant differences in relationship types between grandmothers and grandfathers.

**IMPLICATIONS:** The implications of the findings for intergenerational transmission of cultural values between grandparents and grandchildren are discussed, taking into account the location of the grandchild.

#### Cross-Border Social Security Coordination, Mobility Of Labour

This paper analyses the mobility of labour forces between two European welfare states and its impact on earnings of residents-pensioners and mobile-pensioners. It examines the case of frontier workers in Luxembourg and Belgium. The results of the analysis show that structural differences in pension systems (e.g. retirement age, waiting period, benefit levels) affect mobile pensioners. The case of frontier workers in Luxembourg and Belgium illustrate that current legislation produces uneven effects on the earnings of former mobile workers. Labour mobility plays an increasing role in welfare policies and demands a new approach in national welfare states.

O'DONOGHUE, CATHAL (Teagasc)

#### Mobility Of Labour and Pension Outcomes: An Analysis Of The European Cross-Border Social Security Coordination

Pension systems were designed in a time characterized by stable labour markets and limited cross-border mobility. As the labour market becomes increasingly diverse, upcoming generations will be faced with challenges of differences in income taxation and social security systems, as these generate discrepancies in income. We argue that changes in life-cycle due to mobility of work to another country are happening and welfare state objectives need to address these changes.

Labour mobility plays an increasing role in welfare policies and demands a new approach in national welfare states. This paper analyses the impact of mobility of labour between the states, in the European context and questions whether the welfare state attains equally achieves its objectives on domestic and frontier workers. Despite accessibility of pension from different countries, due to difference in welfare objectives, the welfare of mobile pensioners can vary a lot. The results of the analysis show that structural differences in pension systems (e.g. retirement age, waiting period, benefit levels) affect the welfare of mobile pensioners. The case of frontier workers in Luxembourg and Belgium illustrate that despite legislation on coordinating the pension outcomes is in place, this produces uneven effects on the earnings of mobile pensioners and will in the future lead to more obstacles for the welfare of the upcoming mobile generation.

**BURLET, MÉLANIE\*** (ANACT, [melanieburlet@gmail.com](mailto:melanieburlet@gmail.com))

#### Lean Production : An Erroneous Conception of Work ?

In the 1990s, Lean production concerned automobile factories. Since it has spread to service facilities, hospitals and public services. French government has gone further by promoting and partially financing its implementation, especially in smaller firms in order to develop their competitiveness. However, it has progressively become a topic of public debate. Various experts and trade unions criticize its effects on working conditions, showing that the health of workers is sometimes more affected in context of Lean production than in traditional scientific organizations.

On the basis of about ten case studies, we point out a big diversity in forms adopted by firms that have resorted to Lean production. Its relevance depends on their own issues, the way changes were conducted or the characteristics of the initial organizational context. In consequence, it's difficult to provide a very strong opinion. However, we put forward that, on the one hand, Lean production has ability to introduce two fundamental aspects which clearly goes over Taylorism: the value-added of the ground as a key factor of success in performance's firms and the necessity to pay attention to workers by getting them involved in a continuous increase in customer satisfaction. But, on the other hand, Lean production doesn't take work into account seriously enough. Work is always standardized and the participation of workers is limited to find a solution to problems in a

binding framework. Finally, working conditions remain at the service of productive requirements and are not considered at the strategic level. Lean production doesn't truly question the scientific division of labor, which would suppose to completely redefine the conception of performance including social issues.

##### *Sport As a Thread in the Life of the Destitute*

A critical lens on the value and meaning of sport in the lives of what has become known as 'high risk' populations, does not often do justice to a meaningful understanding of the complexity of influences of a sport in lived-realities of people. In a study conducted over a five year period (2007-2011), tracing the impact of the GIZ/YDF sport-for-development programme in nine different African countries, 101 comprehensive case studies were compiled. Of these, 45 were selected based on the extensiveness of material available per case. The thematic analysis of life-integrated experiences three main themes was identified. These themes projected differential degrees of integration of sport-related experiences in the lives of participants and implementers (e.g. managers of NGOs, coaches, peer-educator and volunteers). The first theme relates to sports-related experiences as "encounters" which could be interpreted as an initial phase in the socialisation process, where it stayed at a relatively superficial level of engagement. A second theme demonstrates an increased entanglement underpinned by experiences of relative success, acceptance and recognition. This type of engagement proliferated into a myriad of associations and various degrees of sport-role integration. The third theme shows a deepening of commitment which happened by choice and/or socio-economic realities profiling the process as a viable option for survival. The differential depth and role-assignments are analysed to identify the mechanisms in sport and society.

##### *Career and Profession As Subversive Concepts at Mid-20th Century*

Mid-twentieth century sociologists showed great ingenuity applying the hegemonic concepts of career and profession to subvert commonplace ideas of success and progress. These concepts of career and profession in overlapping but different ways formed part of a cluster of modernising narratives distinguishing 'advanced' western nations from underdeveloped nations; they also distinguishing middle-upper sections of modern technological societies from uneducated parts of the labour market. These ostensibly descriptive uses of the concepts of career and profession were highly normative in two senses. First, they embedded a prescriptive ideal about what individuals should do or what constituted a worthy occupational focus. Second, such aspirations embraced by middle-class individuals was naturalised as the desirable modern route to success and fulfilment. Pioneering work by scholars such as Goffman and Becker re-purposed the notion of career as a tool to subvert everyday hegemonic assumptions, delineating instead trajectories of inequality. Similarly, Freidson and Johnson's re-framed professional benefit and 'goodness' as problematic against claims to naturalised legitimacy. The passage of time makes it possible to miss the radical nature of their critiques, intellectual work of great difficulty and adroitness against the grain of both civil society and prevailing academic views.

##### *Risk Knowledge Versus Uncertainty: Insights from Research on Health Issues*

Today dominant forms of risk management illustrate the central role of scientific knowledge in the organization of society in general and in public health activities in particular. This approach suggests that through the accumulation of formal knowledge, greater control over health can be gained. However, the ambivalent consequences of relying on abstract knowledge are more and more apparent. The increasing dependence of – lay and professional – individuals on mediated knowledge (for example screening or epidemiological results) discredits firsthand, experiential knowledge. Furthermore, the definition of health on abstract parameters, associated with a lowering tolerance to abnormal results or anomalous events, implies an expansion of 'at risk individuals' and can generate unnecessary interventions. At the same time, the role of uncertainty in decisions related to prevention is more and more debated around the diffusion of precautionary and worst-case scenario behaviours. Bringing together the literature addressing different individual and global health risks, this paper will examine the changing status of knowledge in their management, taking into account the role that history, culture and experience play in collective and individual reactions to danger.

##### *Stories of My America: Race and Nation in the Contemporary US*

This paper will explore findings from research done to understand contemporary perspectives on belonging and nationalism in the United States. It will explore the meaning of "America," what is unique about its character and possibilities, and its claims to being special in the history of nations on this planet. These intertwined issues are widely conceptualized in both lay and scholarly discourse as the spirit of American exceptionalism. Just more than one century after its creation, the U.S. nation-state expanded to become a global power, including a pattern of territorial expansion deemed by many to be imperial. By mid-twentieth century, the United States was the number one world power.

As the hegemonic power within the world-system, the U.S. was forced to reckon with contradictions within its own borders and how they reflected on its position as the world leader. Anti-colonial struggles that occurred throughout the globe were frequently viewed as aligned with movements for social change among marginalized populations within its borders. The nation struggled with the question of how it would be positioned and perceived in this new era of imperialism. How could the rhetoric of democracy be rationalized as interventions around the globe were intensified? The Reagan era provided narratives of benevolence and leadership that justified these actions in the eyes of many people in the U.S. By George W. Bush's Presidency, nationalism and patriotism were generally assumed virtues that trumped all else. Participant reflections are thoughtful, though often contradictory. Their words provide evidence of deep internal struggles about how the ideological narratives that people ascribe to sometimes explain but more often disregard the challenges they face in everyday life. These "Stories of My America" provide insight into the everyday struggles engaged to reconcile the rhetoric, reverie and realities embodied in the notion of an American Dream.

##### *Land Governance and Its Influence on Institutional Development in Santiago Del Estero, Argentina*

Over the last decades the rural landscape worldwide has been undergoing major changes. Vast tracks of land are appropriated by different (global) actors for diverse purposes. In Argentina, this ranges from investments for soybean cultivation, cattle farming, nature preservation and ecotourism. The impact of this phenomenon on the livelihood of **rural communities** in this area is enormous. These populations, who have been living on the land for many generations, often do not possess legal titles to the land and are threatened to continue to live as they did before. Although by law their rights are acknowledged when living on the land for over 20 years, these rights are often not respected. Land appropriation and land grabbing lead to marginalization of rural communities and create inequality. By means of combining literature on governance, socio-ecological systems and social sustainability, this paper looks at how rural communities in the province of **Santiago del Estero**, Argentina cope with the challenges arising from increasing **land** use and **acquisition** and how they advance their mobilization. The focus of this paper lies on **multi-level governance** processes within this socio-political conflict of rural communities. The challenges the communities face in terms of new boundaries, land management and use, cooperation and participation and ecological restrictions are central for evaluating the sustainability of the system. Major findings presented in this paper are that negotiations over land take place between actors with an unequal distribution of power, meaning that the rural communities are further neglected and political measures overrule local inhabitants rights. This conclusion calls for more recognition of the conflict by the national and provincial governments but furthermore, improved access to information for the rural communities to advance justice and equity in the governance of the commons.

##### *Constructing an Immigrant Narrative Between "Victim" and "Refugee" Status: Haitians Migrating to Brazil*

Haitian migration to the global north has been going on for few decades now. There is, however, a new trend toward Brazil, deemed as "forced migration" by the reception country. This paper analyzes the recent Haitian migration to Brazil, which started as a consequence of the 2010 earthquake. In so doing, we focus on how Haitians navigate the identities granted to them by international organization and states (e.g. Brazil, Organization for International Migration) in order

to achieve their project of migrating to Brazil to find job. We draw on fieldwork conducted in Peru where we followed Haitians going through to cross the Brazilian border—where Haitians are granted refugee status since 2012. We combine it with the analysis of the state policies, and the programs international organizations have set up to serve (or control) Haitian migration. In particular, we pay attention to the frames used by international organizations and states (e.g. "victims," "refugees") and how migrants themselves draw on them to achieve their migratory project. We want to highlight the mismatch (or decoupling) between how migrants are framed at the international level, and how their see their own migration. Focusing on the latter, we highlight that rather than passive actors, migrants navigate the frames to accomplish their goal that is finding a job in a new country.

#### *The Legal-Illegal Nexus: Haitian Citizens in Their Transit Migration through Peru*

The nexus legal-illegal is more fluid than migration literature indicates. Thus far, research on legality/illegality (Carling, Menjivar and Schmalzbauer 2012; Goshal-Boza 2012) has focused on the experiences of families with members with different migratory statuses, and/or how migrants from the same country enjoy different migratory statuses depending on the country of destination (e.g. Somalia). There is little on how migrants of the same nationality experience moving back and forth between these categorizations in their trajectory to a destination. We analyze the case of Haitian migration to Brazil to shed light on migrants' agency and the structural constraints they face. We argue that migrants themselves do navigate successfully (mostly) the fluidity of the nexus legal-illegal due to their "migration capital."

After the 2010 earthquake in Haiti, Haitian migrants to Brazil through Peru have called the attention of media, local populations, authorities and security forces. Ever since, changing approaches and ad hoc stipulations in the migration policies of Brazil, Peru and Ecuador regarding "administering" the flow, have created "legal-illegal" scenarios for Haitians. Concurrently, Peru requires visa for Haitians, and Brazil grants refugee status (1/12/2012). In this context, Haitians are both treated as migrant bodies (Chavez 2009) assuming almost passively the events caused by actors who take advantage, abuse them or profit on their needs (Peruvian Police, coyotes, others). Simultaneously, they "master the local legal logics" in order to avoid "restrictions to their projects" (Fonseca and Jardim 2010). We draw on a multi-method and multisite research conducted in 2013 to illustrate this case.

#### *Rethinking Lowrider Artistic Representations: An Aesthetic Response to Social Exclusion*

This paper examines ethnographically the construct of the lowrider vehicle as part of the barrio aesthetic. The central argument is that the display of lowriders can be better understood as an artistic response to institutional exclusion – an identity mechanism of resistance used to contest institutional oppression. The principles of the Borderlands theory provide exceptional insights into the analyses of aesthetic manifestations and social exclusion. We use this approach to theoretically frame lowriders' artistic representations as mechanisms of resistance to social exclusion. This study employs a qualitative triangulation method that includes participant observations, photo documentation, and ten semi-structured interviews. Between winter 2006 and summer 2007 data were collected from two lowrider car shows in the state of Michigan. One site was in the city of Lansing and the other was in South Haven. This study found that lowrider art works as a source of stability and structure for Chicana/o young adults who live on the margins of society. Isolated by the racial/ethnic larger order from mainstream space, the lowrider aesthetic represents an identity-building component introduced through family and friends – consciously or unconsciously – to question institutional exclusion.

### *Creative Disturbances in Urban Space*

A role for politics in urban space is to make seen that which is invisible in the relationships and structures of the city; to offer alternative thoughts on the use of space as well as question topographies of power that underpin it. Creative disturbances have long held a place in this form of politics yet recent debate in political and urban geographies has demarcated differences between political and cultural uses of public space, questioning claims of the utility of 'small' everyday creative interventions as opposed to Big P political acts.

This paper will argue that the efficacy of cultural politics can be theorised in terms of its contribution to a politics of presence, imagination and transformation. A politics of presence incorporates into creative interventions that which is not seen in the official discourse of the global city including ethnicity, age and gender. A politics of imagination centres on generative processes, that is, the imagining of alternative connections and uses of urban space. This aspect of creative interventions is working within established fields of 'what is resistance' and 'who has the right to the city'. Finally a politics of transformation is embedded in narratives of scale. A criticism of the effectiveness of creative interventions is that they are often unable to rise above the locality in which they are centred. This paper will argue through case studies of creative acts from Sydney (car culture among young men), Delhi (multi-media labs in marginalised communities) and London (graffiti knitting), that creative interventions can in fact generate a process of public pedagogy and reconfigure urban engagement that emphasises 'community', temporal alternatives, bodily engagement in production, and the aesthetics of public place-making.

#### *Migration As the Process of Care Exclusion*

In Poland, alike in other eastern and central European countries, caring functions are played by families and particularly by women. Women who work abroad exclude themselves from direct care of their children and elderly parents. Then their children and elderly parents are left on their own and tend to be excluded by the nearest. In such a situation they must manage on their own or look for strangers' help. Cultural norms make both parties (migrants and their families) notice the discrepancy between the obligations and execution of care duties. The presentation quotes the results of quantitative research (N=400) in Polish women migrating to Norway. It shows examples of care deficits and attempts to solve the problem

#### *"Becoming Expatriate" Foreign Assignments and the Role of Accompanying Spouses in Kampala*

Foreign assignments and expatriate lifestyles drew the attention mostly through publications coming from the field of Human Resources. Here the focus lies largely on the risks and costs of premature returns. It is claimed that expatriate assignments often fail and are in most cases caused by marital problems or family issues rather than work environment or poor performance of the employee. Therefore the foreign assignment apparatus of professionals and their families is not only tailor-made to support families but also creates perceptions about how to "live abroad" as expatriates. Spouses are seen as a crucial factor to guarantee the stability of family life and work performance abroad. Scholars have pointed to the influence and constructivist nature of preparation training and the importance of the 'deploying organization' in shaping expatriate identities (Hindman, 2007; Mense-Petermann 2012). Until today the aspired stability through support of expatriate spouses rests on a heteronormative perception of family and marriage. Furthermore, transnational companies through global assignment policies, especially through high wages and incentives create differences between expatriates and their colleagues and between expatriates and the local population (Mense-Petermann, 2013). By the same token, Fechter (2007) highlights the notion of privilege and detachment of the expatriate communities from the 'host society' and draws a link between colonial and contemporary expatriate lifestyles in non-western countries. This paper examines the role of accompanying spouses in the foreign assignment process and poses questions about how the relationship between the 'deploying organisation' and spouse is conceptualized. In addition I will draw attention to the ambivalence that derives from (economic) privileges on the one hand, and on the other marital dependency created by the "single breadwinner" who is the contract holder. For this purpose I will utilise the findings of my PhD research on the European expat community in Kampala, Uganda.

**RC05-106.14****BYFIELD, NATALIE\*** (St. John's University, [byfieldn@stjohns.edu](mailto:byfieldn@stjohns.edu))*Targets: The Existential Crisis of Black Male Youth in the U.S*

This article uses intersectional analysis and critical race theory to investigate how race, age, and gender intersect in black, male youth in urban areas in the United States to create life outcomes that likely represent an existential challenge for people in this social location. The prosecution of the federal-based War on Drugs in the 1980s led to a moral panic that categorized black, male youth in urban areas as the new "folk devils." The continuation of the War on Drugs has prolonged the "folk devil" status of black male youth over the course of the last two decades. This contributed to the tendency in this society for dominant forces to construct young black males as criminals. Their status as criminals has shaped their interactions with representatives of the state as well as with other individuals. It has made them targets, at a disproportionate rate, of laws intended to curb criminal behavior such as the New York State Stop and Frisk law being enforced by the New York Police Department (NYPD). This status also contributes to the racial profiling they experience from individuals, who deem them dangerous, particularly in non-black spaces and react to their presence with deadly force as in the case of Trayvon Martin. This paper examines significance of marginalization in these contexts to their future as members of that society.

**JS-50.4****BYRNE, ELLIE\*** (Cardiff University, [byrne@cardiff.ac.uk](mailto:byrne@cardiff.ac.uk))*Analysing and Interpreting Participants' Photographs of a Mental Health Hospital*

In this paper I reflect upon the analysis and interpretation of 377 photographs taken by research participants in my PhD study. Service users and staff in a mental health hospital were asked to use disposable cameras to show what they thought of their surroundings. The aim of the study was to explore the contribution of photography to understandings of the mental health hospital environment, in terms of both the research process and as visual data.

I began with a detailed methodological review of studies where research participants took photographs as part of the research process. This informed the iterative cycles of data collection which followed. Some participants took photographs on their own and did not take part in any form of interview (6). Others took part in follow up interviews where we talked about the photographs they had taken (7). Some participants took part in mobile photo-interviews where I accompanied them as they took their photographs, collecting interview data concurrently (4). In addition, two focus groups took place with people not connected to the hospital. The focus groups produced individual and group responses to a sample of images.

The focus of this paper is on the techniques of data analysis and the interpretation of visual images from different standpoints (e.g. researcher, photographer, third party). I found that certain images produced stronger reactions than others and I will use Roland Barthes' concepts of 'studium' and 'punctum' in order to theorise this. I will also discuss the possibility that, by unpicking of the content of a large number of photographs, 'thin' yet 'rich' descriptions of the hospital environment can be produced.

*Patterns of Trust and Distrust in Energy System Transformation*

Energy systems around the world are in transition. The need for renewable energy sources and – in some cases – devastating experiences with dangerous technologies has triggered public debate in favor of changing the dominant socio-technical regimes of energy supply. In question are existing technological, organizational and governmental paradigms. We can observe a lack of trust in technology (nuclear power), in organization (technocracy of experts), and in processes of liberalization, as well as in non-transparent relations between governmental actors and private stakeholders. All of this influences the overall confidence attributed towards the energy domain.

However, we cannot assume that the result of this transformational process yields trust and confidence in the "new" system. In case of the German "Energiewende", a growing discomfort already leads to a lack of confidence in reliability and security and, partly, to doomsday scenarios of expected major breakdowns. People start to prepare for the worst case.

With reference to the visions and goals of system transformation we have to expect a qualitative change of the relationship between the general public and the energy system. Particularly *in vogue* are ideas of "smart" technologies (smart grid, smart markets, demand-side-management) in order to implement multiple alternative energy sources and to increase distribution efficiency. The transformation into smart grid energy systems now is likely to cause a shift of modes from *confidence* to *(system) trust* among consumers who are supposed to take a more active role as "prosumers" despite intransparent technologies and markets.

Therefore, the sociological problem arises in a probable shift of disappointment attribution from external references (e.g. politics) to self-reference (own decision), making smart grids primarily a problem of increased choice between decision alternatives. This future outlook might entail the paradox experience with technology: A situation of empowered but distrusting users faced with uncertainty and decisional risk.

*Cultural Capital and Academic Achievement in Hong Kong*

Participation in high-brow culture (e.g., visits at museums or art gallery, attendance at an opera or classical symphony concert) has been of particular interests to sociologists of education in many Western countries as it has been widely used as a measure of cultural capital. In recent years, this high-brow cultural participation increasingly draws the attention of sociologists of education in other parts of the world: East Asia. Unlike evidence showing the positive effect in most Western countries, however, evidence in some East Asian countries suggests that excessive cultural participation may have negative consequences for academic performance. Yet more research is needed to establish the relationship between high-brow cultural activities and academic achievement in East Asian educational systems. In this study, we address this issue by studying the role of cultural capital in Hong Kong. Hong Kong provides a very unique setting of studying cultural capital because of its Chinese history and British colonial experience, which is often referred to as "a meeting place of East and West." In other words, Hong Kong's educational system has many similarities with those of other East Asian societies, for example, in terms of a highly competitive school setting and a heavy reliance on shadow education due to the high-stakes exams, while having many Western cultural characteristics influenced by the British Empire. Indeed, our analyses of 2000 Programme for International Student Assessment (PISA) suggest that cultural capital defined as high-brow cultural participation has a diminishing return for math achievement. We discuss a broader theoretical and empirical implication of this result beyond and above the context of Hong Kong.

*Results On Public Policies Against Poverty In Mexico: 1990 - 2012*

Results on public policies against poverty have not been successful to diminish it. In 1990, 21.4% of people in Mexico didn't have enough money to eat, 29.7% of people didn't have enough money to improve their capacities, and 53% of people didn't have enough money to have better conditions of life. Twenty years later, in 2010, 18.8% of people didn't have enough money to eat, 26.7% of people didn't have enough money to improve their capacities, and 51.3% of people didn't have enough money to have better conditions of life. Therefore, it is concluded that the public policies against poverty haven't been able to attack the causes of it, that's why it is necessary to review the design, conception an implementation of them.

This situation is the result of changes in the relationship between state and society and of course in the design of public policies against poverty.

In order to understand what happened with the public policies against poverty it is necessary to take into account the historical context in which they are designed and implemented. Nowadays, public policies do not fight against the process of pauperization, with changes in the economic model since the late seventies; all the countries have been involved in a competition to offer the best conditions to the investors, but not for population. Therefore, implementation of structural reforms has had a huge social cost. The challenge is abandon the assistance policies and design policies that give more alternatives to people to achieve better life conditions.

*E-Inclusive Active Aging: Citizens and Senior Volunteers in Telematic Society*

ENGLISH

This paper analyze the roles that represent the elderly in our society as citizens who participate actively in social and political processes. Similarly, it intends to dignify the elderly, and thus demystify negative stereotypes and prejudices of this life stage, what they symbolize elderly people not only as social achievement of our time by medical advances, nutrition or friendly policies general welfare, but social capital also usable for their knowledge and life experiences to the generations who share the same context.

To achieve these objectives, it examines the social participation through associations and senior volunteer, as phenomena of social empowerment, digital inclusion and intergenerational solidarity in aging societies by demographic changes, and telematics by technological advances that affect progress, growth and modernity.

The fieldwork was made in a Spanish region with demographic ageing where public and private institutions develop actions to achieve e-inclusion of citizens +65 years (17% of the population); so that reducing the digital gap and promoting the use of ICT to improve quality of life, social participation and cohesion.

SPANISH

La comunicación analiza los distintos papeles de los adultos mayores en la sociedad actual, como ciudadanos que participan activamente en los procesos sociales y políticos, desmitificando visiones negativas y estereotipos sobre esta etapa vital. Para ello se analiza su participación a través del asociacionismo y el voluntariado sénior, como fenómenos de empoderamiento social, inclusión digital y solidaridad intergeneracional en sociedades senescentes y telemáticas.

El trabajo de campo se ha centrado en una región española fuertemente envejecida en la que instituciones públicas y privadas desarrollan acciones para lograr la e-inclusión de la ciudadanía de 65 y más años; reduciendo así la fractura digital y promoviendo el uso de las TIC para superar la exclusión y mejorar la calidad de vida, la participación social y la cohesión.

*Who Learns from Whom? Environmental Intergenerational Relations*

The communication is a contribution to knowledge of social and environmental intergenerational relationships, specifically the role of grandparents and grandchildren in the acquisition and transmission of values, habits and environmental attitudes.

In advanced Western societies older people have regained some influence on the learning of their grandchildren. The lengthening of life expectancy, medical and health improvements and economic security guarantees due to the performance of the (increasingly reduced) welfare state, allow these groups to reach old age in good physical, economic and emotional. This allows them to devote their time to training activities, leisure and sports, but also help your children in all aspects, especially in raising their grandchildren, going with them a large number of hours per day due to long working double shifts and parents.

This common time they share grandparents and grandchildren can be used to transfer knowledge and new learning from each other. Much of today's grandparents have lived through times of scarcity and have learned to conserve and effectively manage scarce resources available, having generated habits generally keep still. Meanwhile Grandchildren were born in times of plenty and much of their education is based on consumption, comfort and opulence, but also have been influenced by their teachers and media in exercising habits that could called sustainable.

Our work, based on surveys and focus groups, aims to contribute to knowledge of how interact grandparents and grandchildren in the mutual transfer of environmental attitudes and habits; what kind of sustainable habits between generations reproduce. In short, try to know who learns from whom.

*Para Qué Estudiar Un Posgrado? El Valor De La Educación Ante La Falta De Oportunidades*

A los 25 años de edad las personas que han seguido una trayectoria escolar regular pueden inscribirse a estudios de posgrado, sin embargo esta posibilidad aumenta o disminuye de acuerdo con las condiciones socioeconómicas presentes y los valores atribuidos a la educación se corresponden con estas condiciones.

De acuerdo con indicadores de la OCDE (2011) México presenta una falla estructural en la educación pues en la primera década del siglo XXI, 29.5% de jóvenes que se encuentra en el rango de 25 a 29 años de edad no estudian ni trabaja y el porcentaje aumenta a 47.3% si se considera sólo el caso de las mujeres. Esto significa que casi la mitad de las mujeres que se encuentran en este rango de edad no participan en procesos de formación ni cuenta con un trabajo ya que pueden dedicarse y que significa para ellas acceder a un espacio educativo o laboral?

Chiapas es un estado de la República Mexicana que presenta los indicadores de desarrollo humano más bajos, entre ellos la educación. La oferta educativa a nivel de posgrado es reducida y sin embargo se observa que en los escasos programas educativos reconocidos por el Consejo Nacional de Ciencia y Tecnología (Conacyt) como "programas de calidad" motivo por el cual sus estudiantes pueden solicitar una beca económica, la participación de las mujeres es mayoritaria en comparación con la de los hombres.

En la ponencia se analiza por qué los estudiantes optan por inscribirse en alguno de los posgrados de la Universidad Autónoma de Chiapas. Se parte del supuesto que la decisión para estudiar en estos posgrados está mediada por la imposibilidad de encontrar trabajo o acceder a otro programa que, aunque les resulte de mayor interés, no pueden solventar económicamente.

**CADA, KAREL\*** (Charles University, [kcada@centrum.cz](mailto:kcada@centrum.cz))

*Public and Private in Transition: Debating Choices in Health Care Reforms in the Post-Communist Czech Republic*

The paper examines a public discussion on health policy reforms in the Czech Republic between 2006 and 2008. After the fall of communism, the first period of transformation focused mostly on basic market oriented reforms such as setting a pluralistic insurance model, decentralizing through privatization and setting a public/private mix for the provision of health care. Although health care changed significantly in the two following decades, the biggest reform plan was proposed after the parliamentary elections in 2006 when the right-wing government prepared several new proposals aiming both at the privatisation of large hospitals and health insurance funds and the cost containment of health care provision.

The reform was presented both as a way to save public funds and as an important step toward a health care system based on diversity and choices. The plan corresponded with a general shift towards a neoliberal paradigm in healthcare

focusing on consumer-oriented services accessed via the market and patients as self-responsible and rational actors in Central and Eastern Europe. While similar processes have attracted some sociological attention in the context of Anglo-Saxon world and Western Europe, little has been said about the post-communist countries.

Using a discourse analysis of parliamentary speeches, TV debates, and media articles the paper examines how health consumers and boundaries between private and public in health care provision were constructed and negotiated. The paper describes the contradictory rhetorics of both enhancing choices and steering choices in the proposed policy program and how the Czech public perceived those rhetorics. Health care is strongly considered by the Czech public to be a public good, which should be covered by the state. According to public opinion surveys, the public does not sympathize with market liberalism in the area of health care, even though it has accepted these principles on housing and employment.

**CAHYADI, ANTONIUS\*** (University of Indonesia,  
[ombo\\_2000@yahoo.com](mailto:ombo_2000@yahoo.com))

*Religions In Indonesian Public Sphere: Its Role and Relation With The State*

Indonesian public sphere has not ever been secular. It becomes a space of religion for actualizing itself. The debates among Indonesian founding fathers and mothers during State Constitution drafting had established such account. The Islamic faction supported Syariah law for the new independent state; on the other hand the secular or the nationalist groups preferred secular law. The compromise was achieved. Indonesia was neither secular nor Islamic state. Under Suharto's dictatorship, Islamic state supporters and also pro-democratic exponents were all suppressed. The 1998 Reformation opened a space for all groups and movements that had been silenced before, to sound their voices. Since then Islamic groups seems to have louder voices though than nationalist and non-Muslim groups. However it was quite surprising, in 2006 the Government officially recognized Confucianism as official religions of the State together with Islam, Protestant, Catholic, Buddhism and Hinduism. Furthermore, in the same year, the Government and the House of Representative stipulated the Law that acknowledged local belief adherents in state administrative system. It shows that religion plays significant role in Indonesian public sphere. It influences legal and political deliberation. The paper will discuss the existence and the role of religion in Indonesian public sphere. The politics of legal identity, in which religion has been used as identifying category of individual in public sphere, will be elaborated in expounding this account. Because of such politics, public sphere has been a contestation arena between official religions and other religions such local religions. In such space, religion has been constructed by dominant power, defining the existing power relations.

*Sex According To Law: Socio Legal Study On Local Regulation Proscribing Prostitution In Indonesia*

In Indonesia, prostitution is explicitly only proscribed in Local Regulation (*Peraturan Daerah*) level. It is prohibited in local level. In national level it is implicitly regulated. The Local Regulation proscribing prostitution is only post-Reformation 1998 phenomenon. It appears together with the fever of Syariah Local Regulation stipulation by the local Government that obtains its autonomy after the Reformation. Motivation for proposing such Regulation is blurred with political interest, financial motive and popularity gaining endeavor. Syariah Law becomes promising project gathering people's sympathy and money. In National level there are Penal Code and Law on the Eradication of Human Trafficking. However the Laws are implicitly proscribed the prostitution. Hence it is only several local regions and not all regions have regulations that make prostitution illegal. This paper offers qualitative description about the prohibition of prostitution in Indonesia. The Local Regulation that prohibits prostitution in Bantul Regency, Yogyakarta Province will be chosen as a case study. Applying socio legal approach the paper will offer analysis on Local Regulation level up to National level concerning the prohibition of prostitution and its implementation.

*A Modeler's Choices for Missing Not at Random Scenario*

Missing data are a common problem in longitudinal studies. For example, respondents may refuse to participate after the first wave of data collection was completed. It is well known that restricting analysis to complete cases may produce biased and less efficient estimates. Generally, there are three main

approaches for accounting missing data in longitudinal studies which include, weighting, imputation, and likelihood.

As a modeler, the key concern is whether the estimated parameters using any of the three approaches are different from their true values. If the missing cases do not have strong effect on the estimation, then it can be ignored. If the missing cases are not at random; however, modeling the missing and the responses as a joint distribution must be considered. However, testing the ignobility of missing data is difficult and complex. Therefore, the choice between using a missing-at-random (MAR) model and a missing-not-at-random (MNAR) model should be based on results of sensitivity analysis. Although over the last decade a variety of joint models and methods to test sensitivity have been proposed, applications of such models in social science research are still uncommon, partially due to the computational complexity and technical difficulties of implementation in regular commercial packages such as SAS, and STATA.

In this study, taking advantage of newly updated procedure PROC MCMC in SAS, we implement two MNAR models-- the selection model and the shared-parameter model with various indicators for sensitivity analysis. In addition, we also extend the two above models to nonlinear outcomes, such as Binary, Poisson, and zero-inflated Poisson. To evaluate the performance of our model, simulation studies are conducted with various setups. We also reanalyze the result published by Guo et.al on delinquency. The example provides a comprehensive modeling strategy for dealing with missing in longitudinal studies.

*Mortality Differentials Among Asians and Native Hawaiians/Pacific Islanders (NHPI) in the U.S*

Vital statistics provide opportunity to examine the health of diverse racial/ethnic groups within the U.S. Previous analysis using 1992 data demonstrated the importance of separating the Asian/Pacific Islander (API) category into component subgroups. Subgroup analysis found age-adjusted death rates ranging from 298.8 per 100,000 population for Japanese to 907.7 for Samoans. When examining smaller ethnic subgroups in the U.S., data from a single year can result in questions regarding the reliability of the estimates, as occurred in the 1992 analysis. Preliminary analysis of pooled mortality data from 2004, 2005, and 2006 from states collecting detailed race/ethnicity data found a significant difference between the age-adjusted death rates for Asians and NHPI.

**Age-Adjusted Death Rates per 100,000 by Race, Selected States 2004-2006**

White	Black	AI/AN	Asian	NHPI
742.8	935.0	732.9	449.7	650.0

Age-specific death rates of Asians compared with NHPI show higher rates for NHPI at each age except for those 85 years and older.

This analysis of the death rates confirms the need to separate the Asian and NHPI groups when studying their health. Since the number of the NHPI in the U.S. is relatively small compared to Asians, the substantially higher death rates for NHPI are not reflected in data when combined with Asian populations.

These preliminary results include only deaths where a single race is reported on the death certificate. The present study extends and updates the analysis to include the mortality of people for whom multiple races are reported. While multiple race was reported for only .5 percent of the population, significant differences exist by racial group with NHPI most likely to have been reported as multiracial, (49.2 percent).

This paper also discusses a national survey underway that will greatly expand the social and behavioral factors associated with health outcomes for the NHPI in the U.S.

#### *Achieving Social Resiliency: A Case Study on the Awardees of Bank of the Philippine Island's Most Outstanding Children of Overseas Filipino Workers*

A significant amount of research discusses and concludes a mix of both positive and negative finding on the predicament faced by the children of overseas Filipino workers (OFWs). This implies that they remain resilient in spite of their situation; hence, there is a need to investigate how they become resilient. Using a case study design and Pierre Bourdieu's forms of capital guided by the concept of spiritual capital, this research takes a closer look in understanding social resilience based on unstructured interviews of ten awardees of Bank of the Philippine Island's most outstanding children of expat Pinoys. Quantitative and qualitative data gathered in this study were subjected to analysis with the aid of SPSS and QSR Nvivo respectively. Findings reveal that each of them achieved socially resiliency because every capital that was explored is stable and durable. However, this research recommends the theory and the topic of social resiliency for further studies.

#### *Outlining and Applying an Intersectional Framework*

In this presentation, we begin by outlining an intersectional framework. In so doing, we demonstrate that such an approach is not a listing of experiences of multiple, fragmented groups, but instead uses power relations to tie together the similar and different experiences of elders. We then briefly describe some of the main intersecting systems of inequality, and how they relate to one another and shape old age experiences. In this regard, we pay special attention to two power relations. First, we focus on age relations, an inequality often ignored by gerontologists despite their interest in old age. Second, we discuss relations of sexuality, as this is often reduced to identity and not a power relation. We conclude by briefly demonstrating the use of an intersectional framework in an exploration of aging bodies.

**CALDEIRA BRANT DE SOUZA LIMA, MELISSA\*** (Centro de Desenvolvimento e Planejamento Regional de Minas Gerais, [melissa.sociais@gmail.com](mailto:melissa.sociais@gmail.com))

#### *Family Arrangments and Support and Academic Success: An Analysis for Public School in Minas Gerais*

Formal education is increasingly associated with human capital and individual achievement particularly so with a Neoliberal framework. Moreover, there is a tendency to off load responsibilities onto students and family members for poor academic achievement and ultimately retention. When analyzing curricular progress it is import to bare in mind that each student's academic career is closely related to his family background as well as the production and reproduction of social interactions that he/she experiences, hence tracing differentials within

educational institutions. This article aims to investigate the degree to which family arrangements and support influence retention rates in Minas Gerais, taking into account socioeconomic conditions, participation in the labor market, race, cultural capital and the institution resources. The quantitative analysis is based on a self-applied questionnaire completed by 9th graders studying in public schools during 2011. A significant portion of respondents reportedly lived in households headed by single mothers. These cases exhibit a higher retention rate than those in which the student lives with both parents. Given that the mother's educational attainment is an important predictor of student's retention we observe that children of mothers with an educational achievement inferior to 4th grade or with unknown scholarly exhibit a higher chance of repeating a grade in relation to those with mothers that completed high school. Another indicator of academic success was the level of parental involvement. Insertion in the labor market proved to be highly associated with retention. This should be highlighted given that 17% of respondents worked. Attending pre-school is an indicator of human capital but yet was not significantly diminish the chance of repetition. Being a female, white, with a higher socioeconomic status was positively related to academic success, as well as attending a rural public school.

#### *Filming the Revolution: Youtube Videos and Collective Action Framing in the 2011 Egyptian Uprising*

The uprising that toppled the Mubarak regime in Egypt was distinct from previous events of political contention. One of the things that made it so, as many analysts have argued, was the directly observable role that new media technologies played in the strategic mobilization of the #Jan25 protests and in the continuous documentation of the events during the uprising. This paper explores the mobilizing role of digital images of the protest events.

In this research, I investigate how the internal narratives of videos of the uprising—produced and circulated through new media technologies between January 25 and February 11, 2011—aided the anti-Mubarak protesters in constructing, negotiating and reinforcing discourses that idealized collective direct action and delegitimized the Mubarak regime. Based on my visual discourse analysis of eighty YouTube videos and online interviews with some Egyptian protesters, this paper looks into the making of the "people power" narrative. It explains how moving images of the event became a site for the construction of collective action frames, mobilizing ideas that warranted the revolution. It examines the dominant images and themes in the videos, revealing a politically meaningful overlap of visual and verbal layers of event signification. It argues that the selective highlighting and toning down of certain aspects of Egypt's changing state-society relations through visual representations of the uprising conjured up a coherent narrative of the eighteen-day event, in effect reinforcing the anti-Mubarak protesters' resolve to overthrow the Mubarak regime.

Through this paper, I interrogate the interaction between mainstream media reportage and citizen journalism, arguing that in the case of the Egyptian uprising of 2011, the simultaneous video production by professional journalists and amateur footage takers created a plethora of visual materials that corroborated each other. However, I emphasize the necessity of agency in harnessing the subversive potential of media images.

#### *Ombudsman: Bureaucracy, Sistem and Public Sphere*

Observing the increasing demand for social inclusion and participation in public sphere, we analyze the functioning of Ombudsman in Brazil. As a working hypothesis, we think they can act as channels opening cognitive of the subsystems that integrate Public Administration. We aim to establish an interdisciplinary dialogue between sociology, law and philosophy. For that purpose, we chose Max Weber, Niklas Luhmann and Jürgen Habermas to better understanding the relationship between the ombudsman and the public sphere. In Weber, we analyzed bureaucracy and patrimonial domination. Niklas Luhmann provides the foundation for understanding the social system. Habermas, in turn, offers arguments about the relationship between public sphere and participatory citizenship. To accomplish our purpose, we mapped the national system of ombudsmen in Brazil; analyze statistical indicators and visited some Ombudsmen of Justice. The data collected in the Ombudsman indicate that they can enable a kind of social control institutions expanding the social significance of public sphere participatory. Hopefully, with this debate, encourage research into new arenas of social inclusion connecting large areas such as sociology, philosophy and law.

*Parceirização Trabalhista: La Cooperación En El Sistema Judicial*

Las sociedades complejas producen alto grado de litigiosidad. El aumento significativo de la contingencia y del riesgo genera situaciones no normatizadas, para las cuales el intérprete necesita de parámetros innovadores para toma de decisiones. En este contexto, se analiza el proceso de acercamiento entre los jueces y procuradores que trabajan en lo que Enoque Ribeiro dos Santos llama *parceirização* jurisdiccional trabalhista. En este sentido, la comunicación entre dos sistemas parciales (Poder Judicial y Ministério Público) tiene el potencial de reducir la complejidad y formular juicios socialmente comprometidos. La reconstrucción de la manera de observar y reducir la complejidad del sistema de trabajo sigue la tendencia mundial en la búsqueda de soluciones jurídicas innovadoras. El juez y el procurador trabajan en nivel horizontal con un fuerte apoyo institucional. Dotados de un gran poder de acción, pueden contribuir para creación de fórmulas jurídicas innovadoras en sintonía con el movimiento de producción de reglas jurídicas transnacionales, ya que las normas de protección de la persona humana están fundamentadas en el sistema de protección internacional (ONU, OEA, Comunidad Europea, etc). Considerando que el sistema de protección de los derechos humanos y fundamentales posee fundamentación transnacional, podemos intuir que la aproximación entre jueces y procuradores puede marcar el comienzo de una nueva fase de interpretación y aplicación de la norma jurídica, basada en una hermenéutica abierta a la orden jurídica transnacional. Con estas reflexiones, decurientes de nuestro proyecto de doctorado, pretendemos contribuir al debate sobre las acciones de cooperación institucional en conformidad con el derecho internacional centrado en la protección de la persona humana como un bien cosmopolita.

**CALLENS, MARC\*** (Research Cntr of the Flemish Government, [callensmarc@gmail.com](mailto:callensmarc@gmail.com))

*Long-Term Trends in Life Satisfaction in Europe Explained (1973-2012)*

In our earlier research based on Eurobarometer micro-data (1973-2012) for eight European countries/regions we have found that in Flanders net time trends are more important than life cycle or generation effects. The results for Flanders also seem to indicate (1) u-shaped life satisfaction levels in the long run and (2) short-term life satisfaction fluctuations being dependent on economic booms and busts. But these results are not representative for other regions/countries considered.

With each of the three temporal dimensions considered (trend, birth cohort and life cycle), one can associate different economical and/or sociological explanations. In this paper we focus on the explanation of long-term life satisfaction trends (Easterlin-paradox, absolute income hypothesis, social trust, ...) across Europe.

We do so by enriching Eurobarometer micro-data (1973-2012) with appropriate macro-level time series such as unemployment rates, gdp, changes in survey methods, ... and applying Multilevel Hierarchical Age Period Cohort analysis techniques to explain the variances associated with the clustering of survey respondents by survey year and by region or country.

**CALLEROS-RODRIGUEZ, HECTOR\*** (El Colegio de Tlaxcala, [hcalleros.coltlax@gmail.com](mailto:hcalleros.coltlax@gmail.com))

*Homo Sacer: The American Indian Experience in the United States of America*

This research aims to study the relationship between indigenous peoples and the State. By using the concept of *homo sacer/ homines sacri* (Giorgio Agamben 1998), the study interprets the relationship of the American Indians with the United States of America. Based on a revision of the literature on the American Indians, the study aims at highlighting how the struggles of indigenous peoples over territory and natural resources relate to rights recognized by the international human rights frameworks: the Inter-American Human Rights System and the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). In this way, the main argument of this study is that international human rights law upholds the rights of the American Indians. This argument is tested against three cases: the recognition and protection of indigenous land rights on the basis of traditional tenure (The Dann Sisters' case before the Inter-American Commission on Human Rights), human rights violations (the case of Leonard Peltier, activist of the American Indian Movement) and the issue of indigenous nationalism (the case of the Hawaiian sovereignty movement).

*Managing Conflict in Indigenous Lands and Protected Areas in Mexico*

This study analyses indigenous land tenure disputes within protected natural areas (Montes Azules Biosphere Reserve and others). It does so by analysing the case of the *Comunidad Zona Lacandona* (Lacandon Community; Chiapas, Mexico) and the land tenure disputes in which it has been involved during the period 1972-2012. The study argues that the Lacandon Community (LC) has a micro-corporatist relationship with the state and that its creation has brought its beneficiaries (*comuneros*) into an ongoing dynamic of conflict and cooperation with the state, fellow indigenous landed communities, social and non-governmental organisations and guerrillas. By analysing its relationship with the state and the forty-year long conflict, the study presents the way in which the LC has defended its land rights within institutional channels as well as by means of contentious action. The study also shows how conflict has been dealt with within a political process and contributes to the theoretical understanding of the categories of micro-corporatism and political process as they are employed in those cases where indigenous peoples enter into conflict over land. Data for this study comes from interviews, agrarian archives, public information requests, newspaper articles, and ethnographies on the case study and its wider region.

*Managing Uncertainty in Public Health Service Regulation: The Case of Nice Technological Appraisals*

This paper examines the 'technological appraisals' carried out by NICE (National Institute for Health and Care Excellence) as it regulates the provision of new drugs within the English NHS on cost effectiveness grounds. Regulators must assess and manage risk in order to ensure the effective functioning of the transactions which occur under their jurisdiction. Recent studies have argued that this role is more one of managing uncertainty than managing risk, but few investigations have explored how uncertainty is dealt with at the micro-level. In the context of our study, probabilistic data is derived from existing studies into the effects of a drug and modelled into quality adjusted life years (QALYs) as a means of comparing the cost per QALY of the particular drug for specific patient groups. Ostensibly this is a highly rational process by which the regulatory process absorbs uncertainty. In practice, and as found in a scoping study, things are far more complex and uncertain. This paper draws on ethnographic data – interviews with a range of stakeholders (including clinical and patient experts and representatives of the drug manufacturers) and decision-makers (n=40), observations of public and closed regulator meetings, and documentary analysis – of the decision-making process around three very different pharmaceutical products. The study explores the various ways in which different forms of uncertainty – epistemic, procedural, relational and others – are perceived, considered, presented and tackled within these drug appraisals. Special attention is paid to various techniques through which uncertainty and complexity are reduced and/or bracketed-off and how these techniques manifest themselves at the micro-interactional level. We also explore how broader organisational pressures and relations are translated into features of decision-making and shape how actors co-construct and cope with uncertainty.

*Are There Bandits at Serra do Mar State Park? Conflicts, Strategies and Multiple Uses of Natural Resources in the Atlantic Forest, São Paulo, Brazil*

The history of the relationship between inhabitants and managers of the Picin-guaba Administrative Nucleus in the Serra do Mar State Park (SMSP) is characterized by conflicts related to the rights to permanence and to the use of natural resources. The SMPS is located in the northern coast of São Paulo State, the richest and more developed state of Brazil. Created in 1977, the park remained on paper until the beginning of the 1980s decade. At this moment, these inhabitants, rural workers and fishermen, were delegitimized and lost their rights to work and to continue their cultural and productive activities. Since then, the inhabitants were considered illegal or, on their own words, "bandits", due to the Brazilian law prohibiting the presence of inhabitants inside the Protected Areas with strictly

protection. This research aims to analyze the conflicts, strategies and organization of the different social actors (inhabitants, managers, members of NGOs and researchers) related to the Picinguaba Nucleus, the use of natural resources and the access to land. All these actors have their own interests, perspectives, struggles and action strategies, and organize themselves around them in a very complex and multi-level arena. This conflict caused new forms of social organization in the SMSP: local leaders arose and communal associations that aim the struggle for the inhabitants rights were created. Three issues are transversal to this conflict and the strategies followed by the actors along the years: land issue, identity issue and use and conservation of natural resources issue. Thus, the inhabitants were organized around the struggle for their right to land, and using categories such as traditional people. All of this in a context with a Protected Area with strictly protection, located in a region not only with high biodiversity, but with a history of use of natural resources and human occupation.

### *Causal Effects of Retirement Timing on Healthy Behavior*

**OBJECTIVE:** This article explores the effects of the timing of retirement on healthy behavior. Using panel data from the Health and Retirement Study (HRS), we test four theory-based hypotheses about these effects: that retirements maximize health outcomes and behaviors when they happen earlier, later, anytime, or on time. **METHODS:** We employ fixed and random effects regression models with instrumental variables to estimate the short- and long-term causal effects of retirement timing on average number of drinks per day. **RESULTS:** Early retirements—those occurring prior to traditional and legal retirement age—dampen healthy behaviors. **DISCUSSION:** Workers who begin their retirement transition before cultural and institutional timetables experience the worst healthy behaviors; this finding offers partial support to the psychosocial-materialist approach that emphasizes the benefits of retiring later. Continued employment after traditionally expected retirement age, however, offers only a short-term boost to healthy behaviors. These findings are consistent to previous research on the effects of retirement timing on subjective physical and emotional health. In combination, these findings offer some support for the cultural-institutional approach, but suggest that we need to modify our understanding of how cultural-institutional forces operate: Retiring too early can be problematic, but no disadvantages are associated with late retirements. Raising the retirement age, therefore, could potentially damage healthy behaviors of retirees by expanding the group of those whose retirements would be considered early.

### *The Multiplicative Effect of Individual- and Country-Level Unemployment on Life Satisfaction in 97 Nations (1981-2009)*

Although the negative association between unemployment and life satisfaction is well-documented, much theoretical and empirical controversy surrounds the question of how unemployment actually shapes life satisfaction. Previous studies suggest that unemployment may endanger subjective well-being through individual experiences, contextual conditions, or a combination of both. Drawing data from the World Values Survey, European Values Survey, and World Development Indicators databases for 400,917 individuals in 97 nations (1981-2009), we use three-tiered hierarchical linear models to test four competing theory-based hypotheses: that unemployment shapes life satisfaction through individual, contextual, additive, or multiplicative effects. Our results support a multiplicative interaction between individual- and country-level unemployment. Unemployed individuals are less satisfied than workers, students, retirees, and homemakers, but this life satisfaction gap varies in complex ways depending on national unemployment rates. We discuss these findings in light of previous theoretical models and combine them with the life course perspective to argue for a model where individual unemployment is understood in comparison with diverse labor force statuses that make up the life course and within the broader context of national unemployment rates. We conclude with suggestions for public policy to promote subjective well-being through individualized and contextualized plans addressing the negative consequences of unemployment.

### *Swedish Retirement Migrants To Spain and Migrant Workers: Interlinked Migration Chains and Their Consequences To Work and Care In Ageing Europe*

In Swedish public discourse, retirees born in the 1940s are considered a growing cohort of relatively wealthy consumers, with more cosmopolitan preferences and habits, and different demands compared to previous generations. Swedish retirees are part of a growing stream of Northern Europeans who migrate to Southern Europe to retire in the sun. This paper presents the preliminary results of an ongoing research project on the conditions of Swedish retiree migrants in Spain and of the workers who provide care and services for them.

We found that social networks, intermediaries and subcontractors are crucial to the organization of migration as well as for the provision of work and services in IRM destinations. In the private sector there are Swedish migrant workers, entrepreneurs and service providers offering the "trust" and "security" of a shared culture. In addition, there are Spanish workers hired by Swedish businesses as well as migrant workers from third countries. At the public and non-profit side, there are Spanish National Services, Town Council "foreign resident offices", voluntary interpreters, NGOs and charities surrounding the Swedish IRMs. Thus, Swedish IRMs, with little knowledge of Spanish language and institutions, are strongly dependent on intermediaries.

Spaniards and third-country migrants that provide work and services for Swedish IRMs have little direct contact with Swedish IRMs, partly due to language issues, and partly due to not being hired directly by them. They normally occupy low skilled jobs that are not considered acceptable by Swedish workers and entrepreneurs in the area.

Exploring the relations between streams of migrants who meet in Spain, and their intermediaries, this project explores issues of mobility and the globalization of care/service, of crucial importance to welfare states and the future of work, elderly care and retirement conditions in Europe.

### *Changing Residential Cohabitation Patterns Among Mexican Young before and at the Beginning of Their Marital and Reproductive Life*

In Mexico there is a long tradition for young people to live at home with their parents until marriage and leave the parental home after it, whether to form their own home or, to a much lesser extent, to incorporate to their partner's parental home, this last especially in the case of women. However, several recent studies suggest that such pattern has been changing over recent decades as a conse-

quence of the deep cultural, social and material transformations the country has experienced.

The aim of this paper is to analyze and compare the patterns and dynamics of residential cohabitation of three cohorts of young people around of time they start their marital and/or reproductive life. The central questions are: Have these patterns and dynamics changed in recent decades? If so, in what sense? Other topics of interest are: to what extent young married (or in consensual union) have residential independence? How much remain in the parental home or in-laws or other relatives? How many cohabit with their conjugal partner? With their children? How much do they return to the parental home after an early marriage/union dissolution?

To answer these and other questions we analyze life history data of a nationally representative sample of three cohorts of men and women born in 1936-1938, 1951-1953 and 1966-1968. The longitudinal and retrospective data come from the Mexican Retrospective Demographic Survey carried out in 2011.

The analysis will be conducted from the perspective of the life course and cohort analysis, with a focus on young people up to thirty years of age.

**CAMARENA-CÓRDOVA, ROSA MARÍA\*** (Universidad Nacional Autónoma de México, [rcamaren2001@yahoo.com.mx](mailto:rcamaren2001@yahoo.com.mx))

#### *How Do Mexican Young Perceive Their Well-Being?*

The purpose of this proposal is to approach the well-being conditions of Mexican youth from the perspective of their own point of view, that is, taking into account what young by themselves report to feel, perceive and evaluate about different aspects of their lives, mainly in the areas of education, family and work. We look to answer questions like: Which is the evaluation that young with different socioeconomic characteristics and life backgrounds make about educational opportunities they have had and the level of education they have achieved? How much are they satisfied with their job and labor activity? How do they feel about their family life? What about making their own decisions? and, more generally, How do they perceive their present and future life chances and life conditions?

The contribution is conceptually and methodologically guided by the notion of subjective well-being, which assumes that well-being depends not only on objective and material elements, but also on the assessment of them made by individuals over the base of their personal circumstances and experience. Accordingly, the interest topics will be analyzed and compared taking into account issues such as sex, age group, education, occupation, marital status and urban/rural residence.

Data comes from a survey applied in 2012 by the Mexican National Statistical Institute (INEGI) to a representative sample of individuals 18 years and over. In that survey, called Self-reported Welfare Module (BIARE) respondents were asked to evaluate by themselves different aspects of their own lives. For the purposes of this paper we focus on young aged 18-29 years.

#### *E-Inclusive Active Aging: Citizens and Senior Volunteers in Telematic Society*

##### ENGLISH

This paper analyze the roles that represent the elderly in our society as citizens who participate actively in social and political processes. Similarly, it intends to dignify the elderly, and thus demystify negative stereotypes and prejudices of this life stage, what they symbolize elderly people not only as social achievement of our time by medical advances, nutrition or friendly policies general welfare, but social capital also usable for their knowledge and life experiences to the generations who share the same context.

To achieve these objectives, it examines the social participation through associations and senior volunteer, as phenomena of social empowerment, digital inclusion and intergenerational solidarity in aging societies by demographic changes, and telematics by technological advances that affect progress, growth and modernity.

The fieldwork was made in a Spanish region with demographic ageing where public and private institutions develop actions to achieve e-inclusion of citizens +65 years (17% of the population); so that reducing the digital gap and promoting the use of ICT to improve quality of life, social participation and cohesion.

##### SPANISH

La comunicación analiza los distintos papeles de los adultos mayores en la sociedad actual, como ciudadanos que participan activamente en los procesos sociales y políticos, desmitificando visiones negativas y estereotipos sobre esta etapa vital. Para ello se analiza su participación a través del asociacionismo y el

voluntariado sénior, como fenómenos de empoderamiento social, inclusión digital y solidaridad intergeneracional en sociedades senescentes y telemáticas.

El trabajo de campo se ha centrado en una región española fuertemente envejecida en la que instituciones públicas y privadas desarrollan acciones para lograr la e-inclusión de la ciudadanía de 65 y más años; reduciendo así la fractura digital y promoviendo el uso de las TIC para superar la exclusión y mejorar la calidad de vida, la participación social y la cohesión.

#### *Reassembling The Cancer Clinic: Genomics, 'Actionability' and Emerging Diagnostic Configurations*

In social studies of diagnosis, genomic approaches have often been conflated with risk-based genetic testing and discussed in the context of expectations about how they will transform healthy individuals into at-risk patients. The development of 'high-throughput technologies' in oncology, in particular of clinical sequencing programs, highlights a different side of genomic diagnosis in action, one that is focused on creating new plans of clinical action for cancer patients, rather than computing statistical risks for asymptomatic patients. The paper will analyze how genetic results in cancer diagnosis are made 'actionable', and in particular how the introduction of sequencing technologies has led to new systems of classifications and new venues for deliberating on diagnostic actionability. The implementation of the new genomic diagnostic platforms mobilizes clinical research consortia, regulatory agencies, biotech companies and patient advocacy groups, and requires more than the mobilization of existing structures and arrangements. The 'data deluge' produced by high-throughput technologies necessitates the development of new statistical tools, the establishment of standardized registries and databanks to ensure their reliability, and a redefinition of the biomedical division of labor as manifested by the emergence of new lines of work and shifts in the traditional interfaces between clinicians, biologists, pathologists and patients. They have also led to the establishment of a public genetic diagnostic infrastructure as exemplified by the Stratified Medicine Initiative in the UK or the Molecular Testing Platforms in France. In this paper we examine recent developments in this rapidly changing field, focusing on the tension between clinical research and routine services, and between qualitative and semi-quantitative diagnostic judgments, which in turn refer to different modalities of regulation and objectification of clinical practices.

#### *Labour Regulation and Casual Work in Australia*

This paper examines the history of 'casual' work in Australia from the nineteenth century to the present. It explores the way in which the consolidation of protective labour regulation in the twentieth century, structured around a norm of full-time ongoing work (SER), still preserved space for a category of casual work. This space has been enthusiastically colonised by employers in several industries, initially small employers in the low-wage service sector, but then more widely throughout the economy. This in turn functioned as a lever for broader demands for labour deregulation and increased labour flexibility. The result has been an expansion of precarious work in a diverse range of forms, within the framework of a markedly fragmented employment structure and a porous regulatory regime. The paper looks in particular at the implications of the expansion of casualised part-time work, based predominantly on the labour of students and married women, in the retail sector. It examines employer labour-use practices and trade union responses, focusing on the period from the 1980s.

#### *Two Temporary Foreign Worker Programs in Australia: An Intra-National Comparison*

Australia is conventionally regarded as a land of permanent settlement, but temporary migration has become more important in migration flows in recent years. Two main temporary foreign worker programs (TFWPs), structured in different ways but both based on restricted rights to residence and social benefits, are currently in operation. The first is nominally aimed at skilled workers, though it extends to less skilled groups in industries such as restaurants and construction, while the second is a smaller, newer program designed for semi-skilled workers, predominantly in horticulture. This paper draws on a current research project on temporary migrant work and precariousness to describe the two TF-

WPs and their impact. The first program, known as the 457 visa program, is largely employer driven and only lightly regulated. Since its inception in 1996, it has proved popular with employers and the number of visa grants has soared. Whilst also well-liked by many migrant workers, who can bring immediate family and can readily move towards permanent residence status, it has been marked by numerous cases of abuse, either by direct employers or by recruitment agents. The second, the Seasonal Worker Program, involves entry into Australia for a shorter period (up to 7 months per year) and is more tightly regulated, with close government supervision as well as union involvement. It represents a complex response to pressures not only from horticulture employers but also from Pacific Island nations and Pacific workers. This program has faced problems in implementation, including low take-up rates and even repudiation by many employers. The paper argues that the two programs reflect alternative responses to dilemmas that are common to many TFWPs. Both reveal the difficulties in reconciling often-extravagant employer needs and demands for flexible labour with the human needs of migrant and local workers.

#### RC04-79.15

**CANALES, ALEJANDRO\*** (Universidad Nacional Autónoma de México, [canalesa@unam.mx](mailto:canalesa@unam.mx))

#### *Inequality and Achievement in Higher Education*

In Mexico, where poverty and inequality are characteristics, the equality is one of the most important problems speaking about results in higher education, even when has there been efforts in order to improving educational opportunities and equal access to school.

Scholarships and the compulsory education from kindergarten to upper secondary education have been actions in order to remedy inequality access to higher education schools.

However, personal effort, skills and abilities are considered like main factors as soon as the possibilities of access and retention in higher education compared with social and cultural background, because they are considered a more just form of selection by some people, in so far as they are as is based on examinations and tests that measure knowledge and personal skills.

The idea of merit argues that the positions and social and economic rewards most are based on the qualities and individual qualifications, it's means that people with higher skills and abilities should get social positions of greater importance and prestige. Nonetheless, a school culture grounded in meritocracy contains a lot of problems, as has indicated by François Dubet.

The current Mexican government, like its predecessors, seems to be interested in implementing actions to move forward in equal opportunities of access to higher education, but the issue about of results is still pending. This paper asks about questions like: if should we opt for the quality or equity? Could they be compatible? Should we sacrifice quality for the sake of equity and the principle must apply the effort and merit although it reinforces inequality?

**CANALES, ANDREA\*** (University of Santiago, [acanales@uc.cl](mailto:acanales@uc.cl))

#### *Class Differences in Graduation Rates in Selective and Non-Selective Universities in the UK*

Rational choice scholars widely use Boudon's (1974) distinction between primary and secondary effects to explain social class differences in educational attainment. Boudon (1998) posits that 'secondary effects' refer to the effect of social class on educational decisions, net of academic ability. On the other hand, scholars who study the impact of institutions on educational outcomes point out that institutional selectivity has a differential impact on students from different socio-economic backgrounds. However, there is no clear consensus regarding the direction of these effects. Whereas some scholars predict lower graduation rates for students from lower class backgrounds who attend highly selective institutions (Arkes 1999; Amber and Neathery 1999; Pell 2003; Deer 2005; Kieffer and Reimer 2008); others predict that the likelihood of graduating increases as the selectivity of the institution attended rises (Alon and Tienda 2005; Bowen and Box 1998).

Using student-longitudinal data from the Higher Education Statistics Agency in the UK, I assess in this paper through multilevel and matching techniques, whether the likelihood of completing a degree for students from different class backgrounds increases as the selectivity of the institution rises. The findings reveal that students from lower class backgrounds who attend highly selective universities have higher chances of graduating than their counterparts who attend less selective universities. In addition, the results show the existence of class disparities among students of comparable academic ability at the most selective institutions.

[1] Among this group, we find those who support the mismatch hypothesis. These scholars claim that there is a mismatch between minority students' academic preparation and the scholastic requirements of their institutions. Due to their lower academic credentials, students from minority groups have lower graduation rates than their counterparts with similar characteristics who attend less selective institutions.

#### *"Hotel House Is My Home". at-Homeness Practices in a Multiethnic Condominium*

The paper focuses on the everyday construction of domesticity 'away from home' in a large and isolated condominium, called Hotel House, primarily inhabited by migrants (95% of the residents) and situated in a small Italian city (Porto Recanati, Mc).

It firstly analyzes home-making practices as forms of spatial appropriation strongly related to emotion and nostalgia, as well to more pragmatic needs and material resources. Migrants living in Hotel House re-territorialize themselves inside the condominium breathing new life into their own memory, flavors and smells. They create new domestic spaces imbued by personal and collective identities looking for a sense of continuity and "comfort". As comfort we intend a 'background mood of well-being, trust and confidence' and the 'fit' we experience in relation to the space we inhabit and the practices we perform' (Noble 2005: 114).

The paper secondly outlines "at-homeness" practices (Seamon 1979) of people coming from different countries and related to different patterns of house ownership and analyzes "home" not as an essence but as a process of production, reproduction and construction of space, bearing in mind the importance of the socio-spatial dialectic (Soja 1980).

It thirdly highlights how these practices often break the boundaries between private and public spaces creating new "parochial spaces" and how these uses of spaces are frequently perceived by autochthonous people as unfamiliar, strange and disturbing.

In conclusion the paper intends to outline how people's relationships to their own domestic places are an ever-changing, dynamic phenomenon and how these re-territorialization dynamics are a central part of the human being-in-the-world.

#### *Assessing Gender and Racial Bias in Sentencing in Rio De Janeiro*

The paper will test the existence of racial and gender bias, and the possibility of an interaction between them, on criminal sentencing in Brazil, using a database of 19,176 prison sentences adjudicated in Rio de Janeiro between 1996 and 2006 for various types of crimes.

The main dependent variable is sentence length and the effect of several individual and contextual variables will be controlled for. Among these, we can mention: age of the offender at the time the crime was committed, number of previous prison sentences served, type of crime, whether or not the person was sentenced for a crime over the last 5 years (which determines the legal definition of *reoffending* in Brazilian legislation), educational attainment, marital status and whether or not the offender had a serious illness at the time of sentence. Another important factor to control for is whether or not the offender was caught in the act (in *flagrante delicto*), which is an important determinant of how the Brazilian criminal justice system proceeds.

In addition to that, we want to test whether severity of sentence varies across different courts and whether bias might be present in just some of them. In order to do that a crossed random effects model will be fitted to the data to allow for variation at both the court level and individual level.

TAJMA, ASAMI (University Roma Tre)

#### *Religion, Spirituality and Capital In Japan and Italy: The Pilgrimage To Ise and Crocifisso Di Bilic*

Religion and spirituality are fully present in the modern world, existing side by side in different forms throughout the world. We could say that they constitute, in the words of the Sociologist - P. Bourdieu, a form of religious/cultural capital which gives a country and a community its identity.

This paper wishes to join in the debate as to what role religious/cultural capital can have in relation to inequality.

The authors, departing from the theoretical distinction between religion, religiosity and spirituality, wish to hypothesise that the religious pilgrimage is distinguished by its allowing social inequality within a community to be overcome by a serious analysis of the phenomenon.

This theme will be explored by reference to two empiric investigations carried out in Italy (the pilgrimage to the Crucifix of Belici in Sicily and to the Madonna of

Divine Love in Roma) and in Japan (the pilgrimage to Ise) which have been studied through comparative analysis.

The empiric data will be analysed and the two examples (Japanese and Italian), each totally different from the other, will be compared. The distance between them, geographically, is enormous – as are the social conditions: historical, cultural, religious, etc. However, notwithstanding these differences, the motivations, the states of mind and the spirituality (the religious capital), which drive the pilgrims to set out on their journey, are essentially the same. Faith in itself is already reason enough to undertake this journey and to try to approach and to reach a sacred place.

Key-words: pilgrimage, inequality, religiosity/religion, capital

**CANTA, CARMELINA\*** (University Roma Tre Italy,  
[canta@uniroma3.it](mailto:canta@uniroma3.it))

### *Religion In Public Space: Laity and Religious Pluralism In Italy*

The role of religion in the public sphere is growing in the last years (J. Habermas, J. Casanova, etc).

The face of religion in the public sphere (laity) in Italy is very complex. This paper wishes to analyse the conclusions of the research, carried out by C. Canta, which explored the various forms of Italian laity.

Laity in Italy is declined in different forms in relation to the migratory process, to the phenomenon of 'de-secularisation' and 'post-secularisation', the emergence of a new consciousness of citizenship, the phenomenon of democracy, the growth of cultural and religious pluralism and the construction of new 'scenarios' of cultural and religious pluralism in the social institutions.

The arguments about this theme in Italy are very lively and are connected to questions which are becoming ever more important in the public debate: every day there is a dialectic between believers and non-believers, between different churches and religious denominations and between science and faith. It continues between those who assign to the politician a role limited to dialogue and mediation and those who would want, instead, its presence in the 'political sphere', between those who are the spokesmen of the relational instance and those who, instead, propose a separatist and 'ideological' prospective.

The subjects of the research were the accredited representatives and protagonists of society: intellectual, politicians in the Italian Parliament, leaders of the religious communities in Italy and young people belonging to religious associations. Thus there are four social and different worlds which influence each other (not always directly and consciously) and which bring with them various instruments to form the common images of laity in its different concepts and in its many narrations.

### *Minimum Income Protection, Poverty Reduction and Social Security: Cracks in a Policy Paradigm*

Poverty reduction rests on the mechanisms of horizontal and vertical solidarity and on prevention and repair of social risks.. In this contribution, we argue that in contemporary welfare states the poverty-reducing capacity of existing social security systems perceive inherent limitations. Focusing on Belgium, we present and discuss empirical indications of a persistent (over a period of at least 30 years) decline in poverty reduction through social transfers, particularly among households who are highly dependent on such transfers. Firstly, we show that prevention and repair have failed to contribute to a reduction in the proportion of work-poor households who are highly dependent upon social security and face a high (rising even) poverty risk. Secondly, we find that that given the fragmentation of social risks – in terms of both ex-post poverty outcomes and ex-ante social stratification – horizontal redistributive mechanisms through risk pooling have become less obvious, especially in respect of unemployment. Thirdly, it appears that the mechanisms of vertical solidarity also face inherent limitations. In a final section we summarize some important research questions for the future and potentially worthwhile policy avenues to resolve the question of how social policymaking might succeed in the future where it has failed in the past.

### *The Rise Of Spiritual Nationalism Among Urban Elite Christians In Contemporary China*

This paper explores the intersection of spiritual renewal and grassroots nationalism within contemporary Chinese Christianity through the case of Wenzhou "boss Christians"—an emerging group of Christian businessmen who have spearheaded the growth of independent churches in the coastal Wenzhou area.

Prompted by their success in the new entrepreneurial world, these elite male Christians strive to gain spiritual prestige and moral superiority in the Chinese church by employing a spiritual narrative of their post-Mao economic success and by articulating and spreading a new vision that they call "God's China vision". By elevating the status of Wenzhou city as a regional center of the world mission, they have started to fashion themselves as part of a new generation of charismatic urban church leaders. In active response to the Chinese state's nationalist discourse of modernity, they are convinced that China will rise not only in the economic sphere but also in the spiritual realm. The paper highlights a grassroots project of spiritual nationalism and links it to a redemptive process in which elite Chinese Christians seek to address and overcome victimization and suffering afflicted by secular state modernity. It concludes that post-Mao Christian development has come to be closely connected to national memories and nationalist imagination, countering the Chinese Communist insistence on secular nationalism.

### *Latino or Native American?: New Trends in Migration and Identity Formation in Native Americans from South of the Border*

This paper deals with a relatively recent phenomenon in American society: the immigration of indigenous peoples from south of the border and their opting for a new identity in the receiving country. That is why the title of our paper is *Latino or Native American?* Those are two identity options that these new arrivals have and that we will be exploring. Moreover, this phenomenon is also affecting the traditional view of Native American identity in the US, since in the past decades these new arrivals from South America and the Caribbean have been central in the growth both in the numbers of the Native American category and in the broadening of ideological/cultural landscape. We will focus mostly on research done in New Bedford, MA on the Maya K'iche community, which began to arrive in the United States in the late 1980's, at the height of a violent confrontation in Guatemala between an increasingly militarized state and predominantly Mayan guerrillas and civilians. But we will also touch briefly upon other groups that are arriving in the US from the south, such as Nahuatl, Garifonas, Mixtecos, and Aimas, among others.

### *Performance As Resistance: The Taino Show*

#### **Performance as Resistance: The Taino Show**

Jorge Capetillo, University of Massachusetts, Boston

Julian Jefferies, California State University, Fullerton

This presentation will show footage and analyze a ceremony organized to report on the results of mitochondrial DNA analysis to determine Taino (original inhabitants of Puerto Rico) ancestry on the population of Vieques, Puerto Rico in June 2012. Using a set of different techniques, the organizers, participants and the public performed the 'Taino Show': a game-show-like ceremony that served to resist imposed notions of identity, to re-imagine and invent traditions (Hobsbawm, 1983) and to assign a new racial hierarchy. The 'Taino Show' consisted of four different sections which will be analyzed and coded: (i) the selling of Taino artifacts; (ii) a lecture on Taino history; (iii) a game-show like performance, with the use of suspense, audience interaction where contestants 'competed' for identity for and were assigned their new identities; (iv) and a final prayer, bringing up issues of language reconstruction and the blending in of Christian tradition. Drawing from literature on the creation of performance as a political act of resistance (DeBord, 1959) and the invention of tradition (Hobsbawm, 1983), this paper will shed light on the new ways disenfranchised members of society attempt to contest and create new identities.

### *The Future Of Leviathan: Value Change and Attitudes Towards The Role Of The State*

Several studies have observed a syndrome of value change among different cultures during the last decades. This project investigated whether these changes

were also followed by changes in individual attitudes regarding the role of the state. Using data from the World Values Survey, we demonstrate that those attitudes are linked to more profound cultural aspects of these societies and also tend to change. Considering some evidences about the relationship between political culture and the political system we focus, then, on the political consequences of these changes in attitudes and how they can already be perceived today.

#### *Mining and Protestation in Africa*

Mining and protestation in Africa

Mining industries are wide spreading in Africa: South Africa but also in Mali, Burkina Faso, Guinée, Burundi, Democratic Republic of Congo. The governments, which rely more and more on these industries for public resources, largely support this mining economy. However, opinion at a grass roots level is quite different. Sub-Saharan Africa is becoming the stage of numerous contentious actions against mining industry. Marikana is one of the most well known recent mining protest but it could be seen as a "tree hiding the forest". For example, peasants are protesting in Burkina Faso because they have been expelled from their lands without any gratification to enable mining industries to prospect. Workers from Mali are protesting due to very bad work conditions they have to experiment in mines. Inhabitants in Zambia have set up a judicial action against an international company because of harsh pollution and polluted water.

The mining issue is of high relevance in Africa today. It is related to work, land issues, environment, neocolonialism, neoliberalism, transnational economy and strength of national state. This issue is producing new social movements, is fostering spontaneous collective actions and nourishing contentious politics and popular unrest of first interest.

This paper intends to focus on mining and popular unrest in sub-Saharan Africa. Based on a field work in Burkina Faso it will also use broad screening of African unrest related to mining. This communication will test the possibility of a typology, but moreover it will analyze the nature of this unrest. What does it say on the path and ways undertaken by protestation throughout the continent today? Are we facing a new way to mobilise the "weapons of the weak" (J. Scott) or is it a mighty movement of contestation of a political and economic order?

#### *Coexistence in Multicultural Japan: The Livelihoods and Trajectories of Africans in Tokyo*

For citizens of the Tokyo metropolis, the past three decades have brought significant change to the economy and ethnic composition of their city. Initially attracted by Japan's economic success, thousands of foreigners have since migrated to Japan and have made Tokyo their permanent home. Of these immensely diverse groups of foreigners, sub-Saharan Africans and their contributions to the Japanese economy and society have remained largely overlooked and unrecognized in most areas of discourse. Africans work in diverse areas, niches, and strata within the Japanese labor market and their presence is crucial for sustaining the existing infrastructure within the greater Tokyo area. This presentation will examine the social and economic roles of the African population in Tokyo and will explain how their presence has had significant ramifications for both the city of Tokyo and Japanese society as a whole. It will discuss the diverse range of livelihoods of Africans in Tokyo, the community's demographic composition, struggles with equality and integration, and also the trajectories and future possibilities for this community and their role in the Tokyo labor market and overall culture of the city.

#### *Croatia Case Study: Nationalism and Digital Activism in Croatia*

The idea that internet and digital media democratize the society (Jenkins and Thorburn, 2003) has been questioned many times from different angles. Henry Jenkins argues that convergence culture, based on the new media technology, helps consumers envision a liberated public sphere, free of network controls, in a decentralized media environment. Sometimes corporate and grassroots efforts reinforce each other, creating closer, more rewarding relations between media producers and consumers, sometimes these two forces are at war (Jenkins, 2006). The question to argue is if the new technologies endanger democratic political culture or they promise civic renewal.

It is true that the internet age and Web 2.0 technology has enabled the shift from one-to-many to many-to-many communication, which provides support for the heterogeneity of communicational content and activities. It brings the advent of more multidirectional forms of participation as well, which is very important for democratic societies. But, what happens when technology is used for digital activism which final goal is not democratic, when it violates human rights, when it promotes national or ethnic exclusiveness? What happens when digital platforms like Wikipedia.org or Metapedia.org are used to spread propaganda?

We define digital activism as the practice of using digital technology for political and social change, for promotion of different ideologies, for social mobilization towards promotion of democracy and tolerance, or exclusiveness and hate.

This presentation focuses on how particular groups in Croatia are taking the opportunities offered by new media for digital (civil and political) activism, to promote ideology of Croatian nationalism.

#### *Health Care Access Inequalities Among Pregnant HIV Positive Women*

The aim of this paper is to analyse the production of some health care inequalities and the capacity of the health system to mitigate them.

In order to do so, it focuses upon the unequal social relations that decrease the adherence of some pregnant HIV women to antiretroviral medication.

It is based upon a study that was led in French Guyana (South America) in 2009: semi-directive interviews were led with 10 HIV positive women and 33 health care and social workers following them.

The study reveals that, although the French social system allows all pregnant HIV positive women to get free antiretroviral medication, the adherence of many of these women is far from optimal, leading to a relatively high rate of infection among their new-borns. These women suffer indeed from a diversity of unequal relations that make it difficult for them to achieve an optimal adherence to medication. Most of these women are altogether:

- Immigrants without a residence permit : they are afraid of attending institutional health care centers because of the risk of permit control
- Struggling with harsh living conditions that make medication not a priority
- Concerned with the stigmatisation of their disease : they must hide infection, pills and hospital follow-up from sexual partners (from who they are economically dependent) and people around (to avoid social isolation)
- Not familiar with biomedical conceptions of HIV infection and treatment : some misunderstand the principles of biomedical treatment

The paper presents health care professionals' tips to help women with each of these difficulties and then improve their adherence. It suggests finally that professionals also enhance the self-dignity of the women when they offer them the possibility to give life and to actively preserve their child from prenatal infection (thanks to their adherence to medication).

#### *How They Rule Latin America? Comparative Analysis of Corporate Interlock Networks in Several Latin American Countries*

Research on corporate interlock networks around the world has revealed different network configurations across nations: cohesive networks in e.g., Italy and France, and dispersed networks in e.g., United Kingdom and Japan. Studies carried out showed that cohesive and dispersed networks are produced by different institutional contexts, which correspond to varieties of capitalism (Windolf 2002; van Veen and Kratzer 2011; Cárdenas 2012). However, this hypothesis seems not to fit in Latin America since institutional context (or capitalism) is similar (Phillips, 2004; Schneider, 2009), but corporate interlock networks differ between countries, e.g. cohesive network in Chile and dispersed in Argentina (Paredes 2011; Salvaj and Lluch 2012). The present research analyze, compare and explain the corporate interlock networks across Latin American economies in order to comprehend why corporate elites are interconnected by cohesive networks in some countries, and by dispersed networks in others. Research on corporate networks in Latin America has studied national economies separately and a systematic cross-national analysis is lacking in Latin America. Results obtained are also compared to previous research on corporate networks in developed countries. This paper contributes to theoretical debates on: corporate elite cohesion and economic organization (or variety of capitalism) in Latin America. At the methodological level, the project employ social network analysis to examine network configuration, and fuzzy set qualitative comparative analysis, QAP regression and structural equation models to analyze the factors that influence network configuration. Findings reveal the impact of family ownership, protectionist laws, revolving doors and business group structures on corporate networks.

*On the Theoretical and Social Conditions of Critique in Contemporary Society*

*On the Theoretical and Social Conditions of Critique in Contemporary Society*

Mikael Carleheden  
Department of sociology  
University of Copenhagen  
[mc@soc.ku.dk](mailto:mc@soc.ku.dk)

It is often claimed that critique is in a crisis. But, what kind of critique would be possible in contemporary society? The point of departure of the paper is that the theoretical conditions of critique must be internally related to the social conditions of contemporary society. Thus, conceptions of critique must be related to the epochal transformation of modern society. In order to grasp social change, I will use Boltanski's and his co-authors' distinction between critical sociology and sociology of critique, on the one hand, and their theory about the transformation of the spirit of capitalism (inspired by Peter Wagner), on the other. On the basis of this theory of social change I will discuss two of the most influential schools of critique; the Frankfurt school of critical theory (Horkheimer & Adorno, Habermas and Honneth) and the Foucault version of critical theory (Foucault, the governmentality school and Judith Butler). These schools of critical theory have their different weaknesses and strengths, but my overall claim will be that the former lacks a developed theory of social change, while the latter's conception of critique is undertheorized. Boltanski's own concept of critique is also still rather sketchy and lacks systematization. Hence, in order to work out a concept of critique for today I use the best parts of these three theoretical traditions - the Frankfurt school, Foucauldian critical theory and Boltanski's French pragmatism - and work out a consistent suggestion.

**CARLEHEDEN, MIKAEL\*** (University of Copenhagen, [mc@soc.ku.dk](mailto:mc@soc.ku.dk))

*On Theorizing: C.S. Peirce and Contemporary Social Science*

Social theory is generally seen as a necessary part of social science. It is institutionalized as a specialized area of research competence (e.g. conferences, working groups and networks, journals and positions) and plays an important role in the education of students (compare the amount of textbooks in social theory). However, the issue about *how to theorize* is only rarely explicitly addressed in the academic community. Social scientists discuss the content of theories, on the one hand, and empirical research methods, on the other. They only seldom discuss theory construction, that is, the logic or the methods of theoretical research. This paper aims to answer questions like: What do social scientists actually do when they theorize? How do they proceed when they construct theories? What does theoretical research involve? What makes theorizing scientific? Do we need methods in theoretical work? Is there a specific logic of theorizing on which such methods could be based? In the first part of the paper, Peirce's theory of scientific inquiry - in which he distinguishes retrodiction from both induction and deduction - will be used as a point of departure. The conception of retrodiction will be seen as especially relevant for understanding the logic of theorizing. In the second part, some influential schools of social theory - Critical Theory, Critical Realism, Poststructuralism, Cultural pragmatics, French Pragmatism and the Social Mechanism Approach - will be investigated and discussed from the Peircian point of departure in order to answer the above mentioned questions.

**CARPENTIER TANGUY, XAVIER\*** (University of Luxembourg, [xtanguy@gmail.com](mailto:xtanguy@gmail.com))

*Diplomats of Ideas and Networks of Norms: How European Think Tanks and European Foundations Are Shaping the Policy-Making*

The Paper aims to examine the production and circulation of ideas (as norms and values) across networks of non-state organizations (Think Tanks, NGOs, Foundations) spanning the Brussels policy-making areas and all European countries.

The main idea, here, is to present studies and researches presented at several conferences (IPSA, ISA, ECPR...) through Panels I have been organised and also through seminars specifically designed to gather academic informations on European think tanks. As such, it could be at first a kind of mile-stone regarding European think tanks and the researches done on this subject.

We generally agreed on the fact that, funded by private and public sources, these networks are organizational actors specialized in gathering and assembling forms of authority conferred by the more established institutions of academics, politics, business and the media. As a consequence, hybrid interstitial policy fields are emerging, where a variety of ideational entrepreneurs already play a major role in the conception and implementation of policy ideas.

Our Paper aims, consequently, through the presentation of several researches, to study the interplay of negotiations/impositions of ideas (values and norms) between political players at all scales. It could be, therefore, a valuable start for a discussion with researches done in other part of the world, also using think tanks as tools for observing the circulations of ideas/elites/norms and how a global governance is possibly emerging.

**THESEE, GINA** (Université du Québec à Montréal)

*Democracy, Social Justice and Education*

There is general agreement that democracy is, or should be, an important component to the educational project. However, it is difficult to ascertain what democracy is, and how it should be understood, developed, cultivated and implemented. The research in the paper takes the posture that how educators experience democracy themselves, especially in and through education, may have a significant impact on how they actually *do* democracy in schools. Based on studies of teacher-education students in Canada (English- and French-language samples), the USA and Australia, the presenters highlight the potential for transformative, critical, democratic educational change. We argue that extending critical engagement toward thicker democracy is still a possibility, despite the strictures of neo-liberalism, globalization and colonization, which are formidable obstacles. This paper: a) discusses the meaning of democracy in and through education; b) examines how teacher-education students experience democracy in education; c) interrogates the potential for democracy in and through education; d) develops models and analysis to highlight thicker forms of democracy that are informed by critically-engaged and epistemologically diverse concerns. The same instrument and methodology were employed by the researchers, seeking to understand how participants experienced democracy during their own educational experiences, how they understand democracy at present, and how they feel that democratic education should be cultivated within students and schools. The instrument includes open- and closed-ended questions, with the analysis having qualitative/narrative and quantitative components. The findings include an often extremely thin democratic educational experience for teacher-education students, and a relatively narrow definition of democracy as well as serious concerns related to social justice, addressing controversial issues, and the ability to align democratic educational work with educational reforms that seem to favour neoliberal objectives. The paper engages with sociological theory and concepts to further tease out the potential for education for (thicker and more critical) democracy.

**CARRA, CÉCILE\*** (PRES Lille Nord de France, [cecile.carra@espe-inf.fr](mailto:cecile.carra@espe-inf.fr))

*Du Problème Social De La Violence à L'école à L'expérience Enfantine*

La violence à l'école est dénoncée comme fléau social depuis le début des années 1990 dans les pays occidentaux. La mondialisation du problème social de la violence, via les instances et enquêtes internationales, renvoie la représentation d'une jeunesse dangereuse ou en danger de le devenir, et ce, de plus en plus précocement. Les explications sous-jacentes aux catégories utilisées relèvent d'une responsabilité de l'individu et de sa famille, souffrant d'un déficit de socialisation ou baignant dans une culture de la violence.

Toute autre est l'image de la violence à l'école lorsqu'on accepte de prendre en compte ce que disent les élèves sur ce qu'ils vivent à l'école. Nos recherches, depuis l'enquête qui a porté sur un échantillon représentatif de 31 écoles du département du Nord en France et 2000 élèves (et leurs enseignants) (Carra, 2009) montrent que la violence constitue une dimension significative de l'expérience des élèves en France. Elle se définit dans le rapport aux pairs se structurant lui-même dans les rapports d'âge et de genre en fonction des normes de socialisation enfantine.

L'expression des violences apparaît par ailleurs fortement différenciée selon les écoles, les inégalités sociales et scolaires pesant sur l'expérience de violence des élèves. Elle varie également en fonction des pratiques professionnelles. On est bien loin des explications mondialisées de la violence à l'école. Loin d'une violence générée par le seul individu, qu'elle relève d'un déficit de socialisation, ou d'une pathologie, le contexte socio-scolaire et les pratiques professionnelles sont à interroger.

Aborder la violence à l'école en s'inscrivant dans une sociologie de l'enfance conduit ainsi à une redéfinition des catégories dominantes (et adulte-centrées) et des problématiques.

*"Du Bois' the Souls of Black Folk: A Retrospective Classic?"*

Nowadays a sociological classic, W.E.B. Du Bois' 1903 *The Souls of Black Folk*, was virtually absent from sociology reading lists, let alone theoretical debates, until very late into the twentieth century. By that time, however, cultural studies on race and ethnicity had already become a well-established domain, with its own theoretical approaches, and a wealth of empirical research.

Yet this situation was soon to suffer a dramatic change. Between 1990 and early 2000, *The Souls* earns its place in the canon, with virtually all major race and ethnicity textbooks identifying it as one of its founding texts.

This paper is a first attempt at tackling this puzzle. Against prevailing theories of disciplinary canonization, which suggest books to inspire practitioners in a certain direction of research, the dissemination and subsequent canonization of *The Souls* occurs decades after the emergence and consolidation of cultural studies on race and ethnicity. Specifically, we ask: What does the history of this book tell us about the legitimizing role classical books perform in disciplines like sociology, even if retrospectively only? What do we gain from analyzing *The Souls* not only as a text with certain intrinsic qualities, but also as a book whose materiality includes the circumstances of its production and commercial edition in the turn of the century America, the geography of its circulation (namely, its translations and re-editions) and its material forms? Who were the social agents involved in this process – from commercial editors and professional translators to academic commentators? What motivated them? How is the reading of Du Bois by major contemporary race theorists, such as Patricia Collins or H. Winant, shaped by the history of this particular book? More generally, what are the implications of this genealogical exercise for the ways in which teaching and research are undertaken in the social sciences today?

*Gendered Division of Labour and Perceived Fairness*

Perceived fairness and the gendered division of labour

Research on perceived fairness about the gendered division of labour often showed that equity does not coincide with equality for most couples. Evaluations of justice depend indeed on various factors. According to social exchange theorists, perceived fairness arises when partners' relative contributions to paid and unpaid labour balance each other, regardless who does what and how the balance is achieved. According to the social-psychological framework elaborated by Thompson and Major, the sense of fairness depends, among other factors, on comparison referents, i.e. the standards against which the division of labour is evaluated. Finally, gender ideology perspective emphasizes the role of gendered social norms in shaping ideas about what is to be considered as just in the division of labour.

In this communication we investigate three aspects of the relationship between perceived fairness and the gendered division of labour: 1) how paid work, unpaid work and money can be exchanged in order to have a just division of domestic labour; 2) who and at what conditions is entitled to ask for a re-negotiation of the division of domestic labour; 3) the effect of interpersonal comparisons in changing a division of domestic labour that is considered unjust by one of the partners.

Studying these topics with standard survey data is problematic because it is difficult to disentangle the effects of various factors that are usually strongly interconnected. Further, there is also a problem of reverse causality between judgments and behaviours. Therefore we adopted an experimental approach implementing a vignette treatment within an online survey of dual-earner couples

with children. In depth interviews were conducted as well, in order to verify the adducted arguments.

*South-South Cooperation Under Analysis: Toward a New Pattern of International Relations?*

If till the mid 1990s, the North-South International Cooperation (NSIC) model, based on an idealized notion of progress and legitimized by the incontestable technical superiority of Central countries, remained hegemonic, after the end of the Cold War it would change. The increasing financial pressures over the traditional donors, their failure to assure the development of the underdeveloped countries associated to the consolidation of the New Economically Emerging Countries (NEEC), such as Brazil, India, Russia, China and South Africa, were factors that contributed to the consolidation of a South-South International Cooperation (SSIC) model. Characterized by: noninterference in internal affairs; respect for national sovereignty; absence of externally imposed conditionalities on the country for receiving aid, as well as respect for its historical and cultural singularities, the SSIC modality, whose origins lies in the Bandung Conference (1955) and to the Buenos Aires Plan of Action (1978), is gaining space between the NEEC also as a foreign policy strategy to help them to gain political status in the international scene. But despite being presented as a "benefit", contention persists regarding the symmetry in the relations between these new donors and those receiving aid. The present article examines to which extent the implementation of a Technical Cooperation Agreement established between Brazil, an emerging economic power, and Cape Verde, deemed as a peripheral country, in order to set up a Masters Program of Public Administration, in this latter country, has met the theoretical guidelines assigned to the South-South modality of International Cooperation.

*The New International Aid Architecture and the Triangular Cooperation for Development: Opportunities, Challenges and Risks*

A country internationally recognized as a rising economic power and example of success in the implementation of public policies in the areas of health, education and agricultural development, and one that is seeking to enhance its political status, Brazil is a major promoter (SEBID, 2001) of South-South international cooperation for development (ICD). A cooperation modality to which the literature (Aylon, 2013), associates: noninterference in internal affairs; respect for national sovereignty; absence of externally imposed conditionalities on the country for receiving aid, as well as respect for its historical and cultural singularities. In the field of international cooperation, the continuing financial pressures on the traditional donor countries, associated with the believe that economically emerging countries with expertise in South South Cooperation (SSC) would hold a broader and

more comprehensive perspective on the processes and mechanisms demanded for successful aid policies and, also, with the difficulties presented by the Least Developed Countries (LDC) to meet the Millennium Goals, have led traditional economic powers, such as Japan, United States, German and France, to establish triangular cooperation partnerships (TCP) for promoting the development of LDC, with emerging countries having experience in SSC, such as Brazil. Although presented as a "benefit", insofar as it would represent a complement and adopt the principles of SSC (Lopes, 2010), there is no guarantee that TCP will enable balanced relationships between partner countries (Alonso et al., 2011). By means of a theoretical approach, the present article aims at providing a comprehensive overview of opportunities and risks of Triangular Cooperation for Development in the scene of the New International Aid Architecture, which has its foundation on the Paris Declaration (2005), which represents the acknowledgement of the ineffectiveness of the North-South Cooperation (NSC) modality (Carrion, 2012).

[wcarroll@uvic.ca](mailto:wcarroll@uvic.ca))

### *Modes of Cognitive Praxis in Transnational Alternative Policy Groups*

Transnational alternative policy groups (TAPGs) are networks and centres within and around which counter-hegemonic knowledge is produced and mobilized among subaltern communities and critical social movements. Just as movements for global justice have developed and deployed their own collection-action repertoires, TAPGs, as organic intellectuals to an incipient and inchoate global left, have created, in parallel, a repertoire of alternative knowledge production and mobilization (alt KPM). Based on in-depth interviews with practitioners at 16 TAPGs, this paper presents eight *modes of cognitive praxis* and discusses how they interlink in the work of alternative policy groups. In combination, these modes of cognitive praxis can be seen as promoting a dialectic of knowledge production and social transformation: striving to produce transformative knowledge concomitantly with knowledge-based transformation. The eight modes are not sealed off from each other, but overlap and interpenetrate. Indeed, effective alt KPM typically means that a group combines various facets in a coherent counter-hegemonic project. The paper offers a comparison of the groups, highlighting the main modes of cognitive praxis each employs. Amid the diversity in KPM practices and projects, the comparison evidences tracings of a *double dialectic* in the cognitive praxis of alt policy groups: a dialectic of theory and practice, and one of dialogue. I conclude that it is in a forward movement – fostering solidaristic *dialogue* among counter-publics in combination with the iterative *integration of theory and practice* – that alternative knowledge can not only thrive, but have a transformative impact.

### *A Comparative Policy Analysis of Private Financing for Diagnostic Services in 8 OECD Countries Between 1990 and 2010*

#### Objectives

1. Analyze the interplay between public and private health insurance regulations for financing diagnostic services across 8 OECD countries between 1990 and 2010.
2. Assess how varying roles and regulatory regimes for private health insurance (PHI) potentially affect health inequalities.

#### Methods

Policy data on the financing and provision of diagnostic services in Australia, Canada, England, Finland, France, Germany, Italy, and Portugal were extracted from the Health Insurance Access Database (HIAD), a dataset of policy indicators characterizing the relationship between public health insurance coverage and private expenditure regulations since 1990. The HIAD data were collected through focused literature reviews of legislative and academic sources. Data quality was verified using a multi-stage content review procedure. Key policy indicators of the legality and regulation of private service delivery between 1990 and 2010 were extracted and analyzed in a spreadsheet to facilitate interpretation.

#### Results

Private provision of diagnostic services was legal in all 8 countries between 1990 and 2010. A ban on purchasing PHI was only found in Australia where private services are financed out of the patient's pocket. Among the remaining 8 countries, notable heterogeneity was found in the extent of private market regulation affecting access to care via: levels of coverage, types of PHI plans, regulations on premiums, limits on out-of-pocket payments, PHI enrolment, and PHI renewal. Policies ranged from extensive regulation of private markets in Finland, Germany and France to very minimal regulation in Canada and England.

#### Conclusion

Greater PHI regulation to counter inequitable financing and access to services, exists in health systems where it is widely used and an established means of covering the cost of care. Conversely, where PHI exists but plays a limited role, regula-

tion is minimal. Our findings suggest the function and regulation of PHI over time are appropriate indicators to examine inequalities in health systems.

### *"I Don't Watch the News Anymore and I Haven't Died": Ignorance As Strategic Resource in Dealing with Zoonotic Disease Risks*

In our research on the interface between animal health and public health, we have noted that lay people often strategically invoke notions of ignorance in positioning their own knowledge in relation to scientific, public health and media understandings of zoonotic disease risks. The period in which we conducted ten focus groups with UK citizens (2011-2012) was marked by a number of zoonotic disease events – past, present and future. These included: a recent swine flu epidemic, which prompted a large scale public health campaign; on-going concerns about future outbreaks of avian flu; a recent outbreak of E.coli amongst children visiting a petting zoo; and a number of incidents of foodborne diseases, the most notable being the E.coli contamination of beanshoots in Germany.

While referring to these events, respondents marshalled distinct discourses of ignorance and non-knowledge as an active choice and strategic resource, rather than a mere lack of understanding arising from passivity. In this paper we explore several forms of such expressions of ignorance, including: the intentional bracketing out of unknowns (e.g. as an 'ignorance is bliss' strategy for avoiding anxiety); awareness of lack of information that was considered unimportant (e.g. as a strategy for distributing attention to other concerns); and dynamic mindfulness that further knowledge may be dangerous (e.g. both because 'knowledge' may make daily decision making impossible and as a strategy for living with the perceived inevitability of new, emergent diseases).

### *Land Rights and the Place of Social Housing in the City: The Experience of São Paulo, Brazil*

In the 1980s, following the demands of social movements for urban reform in Brazilian cities, and within a context of a redemocratization of Brazilian Politics, a special land zoning law was implemented by a handful of municipalities as a strategy both to reserve vacant urban areas for social housing production and to urbanize precarious settlements. These areas were called Special Social Interest Zones (ZEIS, in Portuguese). In 2001, the Federal Government recognized this social zoning as an official tool to be used by municipalities in their Master Plans and Land Use Acts, and it has since been practiced nationwide.

With more than 890 thousand households living under subpar conditions, needing housing improvements or housing provision, the municipality of São Paulo started using this tool in its social housing and urban development policies in 2002, including it in its Master Plan. After a decade, years of housing boom, the issue has been continually criticized by real estate developers, landlords and conservative politicians, as well as used as a bargaining chip at the municipal Parliament. Meanwhile, it has become a rallying cry for social movements. Thus, the use of this tool has been subjected to a controversial debate around its effectiveness on adequate private or public social housing production.

Examining the city of São Paulo, this paper will discuss how this land policy tool has an impact on social housing policy today, discussing the role of the State, of private housing developers and of social movements. The importance of housing finance mechanisms will also be discussed, as well as the limits of this strategy as a way to assure a place for social housing in city limits, to avoid the gentrification of urban areas, and to assure the right to adequate social housing and to the city for millions of citizens.

### *Professional Aspirations of Teenagers in Switzerland: On the Crossroad of Gender, Class and Country of Origin*

Although class and country of origin differentials also characterize Swiss society, occupational gender segregation is the most pronounced and persistent form of division in the Swiss labour market, resulting in inequalities in income and career chances to the disadvantage of women. These three social distinctions – gender, class, and national origin – are present at the educational system, not only influencing pupil's educational attainment, but also the occupational aspirations of girls and boys enrolled in the Swiss compulsory schooling system.

In this paper, I aim to understand the structural mechanisms contributing to gender-atypical professional aspirations in this country. The focus is on the im-

portance of gender identities and their intersection with social class and country of origin.

To do this, I adopt a three-fold approach, linking the materialist feminism to the life course perspective by using an intersectional approach. My hypothesis is that the configuration of social class and country of origin systems modifies pupils' attachment to gender roles and identities, and creates a new set of rules. These in turn define which teenagers may target gender-atypical professions.

I use data from a survey carried out in Switzerland among a sample of more than 3300 pupils between the ages of 13 and 15.

*Justicia Ecosocial y Buen Vivir ; Nuevo Enfoque De Desarrollo Social Comunitario Integral e Integrador*

En vistas a explorar modelos y actuaciones de desarrollo comunitario ligados al territorio, en la búsqueda de expandir el concepto clásico de ciudadanía hacia un nuevo enfoque que incorpore la dimensión ambiental, sociocultural, comunitaria y el contexto ecológico, se trabajará, desde una perspectiva micro y macrosociológica, tendiendo puentes hacia nuevas nociones de justicia ecosocial y "buen vivir" como vías de reflexión, prestando atención al universo de riesgos globales y la dependencia del ser humano y su cultura con el entorno físico-natural, y reflexionando acerca del sentido comunitario de la vida en relación con la naturaleza, proyectado desde el paradigma de "buen vivir". Tomando como referencia el concepto de desarrollo a escala humana de Manfred Max Neef (1986, 2010, 2011) y las aportaciones de diversas escuelas Latinoamericanas, con la finalidad de encontrar elementos que configuren enfoques vinculados a dicho paradigma, que hagan converger principios de austeridad, justicia socioambiental, y su proyección al ámbito urbano. Nuevos modelos de prosperidad vinculados al concepto "buen vivir" inspirados en culturas ancestrales, pues cada vez más estudios nos demuestran que la humanidad no puede resistir, ni sobrevivir a riesgos que emergen de una sociedad sin límites, egoísta, consumista y medioambientalmente empobrecida.

Se profundizará sobre dicho concepto, en contraste con el de desarrollo sostenible de la Unión Europea, centrado exclusivamente en la dimensión medioambiental y su afectación a la economía, intentando en ocasiones justificar y manipular la dimensión ecosocial aquí aportada. Un contraste, con especial atención al sentido comunitario de la vida y en relación con la naturaleza proyectado desde el concepto de "buen vivir" en América Latina, reflexionando sobre otras formas de vida que lleven a reconstruir el modelo de prosperidad, tras el fracaso del modelo consumista imperante, e indagar acerca de qué podemos aprender de esas tradiciones comunitarias y cómo se están teorizando estos conceptos.

*Social Positions, Inequality and the Relation with the Future in Lisbon (Portugal)*

Social positions, inequality and the relation with the future in Lisbon (Portugal)  
Despite the spread of the belief that man can control nature and its own life, and the development of rational action, governing our collective future was minimal for long time. Ecological movements and institutions, and the social and cultural struggle for sustainability changed this picture. Nevertheless, these trends remain fragile, lacking connection to the population in general – after all, the necessary condition for its maintenance. It's, then, relevant to ask: are people worried and working to control their collective future? Which factors explain differences in the relation with the future among persons? Do inequalities of condition or opportunities matter for these differences? Which social positions and dispositions display a stronger orientation to the future?

These questions were introduced in sociology by authors like W. Bell, P. Bourdieu, A. Giddens and B. Adam. In general, they sustain that the cultural relation people develop with the future goes along their social characteristics, reflects on their behavior, and after on social structure. The counterfactual nature of the orientation to the future constitutes, then, an essential aspect of reflexivity and modernity. But this work lacks developed empirical test.

This is the framework for a recent survey on a representative sample of Lisbon. The main goal is to observe people's relation with the future through its values, social representations and practices, according to social composition. This includes analyzing practices of future planning, saving, ecologically guided consumption, and support for sustainability movements, also representations on who masters the future, personal concern about the future of life on earth and climate change, and attitudes towards the next generations.

In this paper we will present the first results of this survey.

*Exploring the Construction of Moroccan Emigrants' Cultural Identity through Their Social Interaction with LOCAL People in Spain*

Moroccan emigrants in Spain can be considered as a stigmatized institutional category. From a social constructionist perspective, we assume that all social categories are constructed and negotiated in interaction. In this social context, the purpose of this study consists of exploring the cultural identity of Moroccan emigrants living in Spain. In particular, it aims to examine the content of their cultural identity as expressed by them in their interactions with local people of Spain, and also to analyse the social processes underlying the construction of their cultural identities.

To fulfil these aims we use the Social Identity Approach (Haslam, 2004), which has been traditionally applied to a broad array of topics that explore social categories and associated phenomena such as prejudice, stereotyping, negotiation and language use.

We in-depth interviewed 20 Moroccan emigrants living in Spain using purposeful sampling and trying to diversify at most our sample by gender, age, education and socio-economic status. Our qualitative analysis highlights a strong cultural identity in Moroccan emigrants and sense of belonging to their country and culture of origin. However, the characteristics that they most emphasise as main attributes of the social category "being Moroccan" are very heterogeneous. This heterogeneity is explained by their social interactions, in particular by their perceptions of "the other" Spanish local people that provoke the salience of certain attributes of their cultural identity rather than others. Some important theoretical and practical implications arise from these findings.

*More Decent Work: Radical Participation In Organizational Life*

The challenges facing workers in much of the world include new forms of uncertainty, heightened competitiveness, and spectres of austerity. These global challenges stimulate new analytical approaches, re-theorizations, and a search for innovative socio-cultural visions, and practices, for work and workers. The International Labour Organization's (ILO) promotion since the turn of the 20<sup>th</sup> century of a core agenda of "Decent Work" gives international voice to aspirations for just economies and fair standards of work for all workers. Its pursuit of "decent and productive work, in conditions of freedom, equity, security and human dignity" have enduring relevance to virtually all dimensions of human productive endeavour and in diverse economic and national contexts. Yet advances toward the accomplishment of decent work continue to be slow, erratic and, moreover, frequently coercively opposed.

Amid readily visible economic concerns there arise further questions in regard to quality of work life and employment relations. Research reports deterioration of cultural qualities – of non-wage aspects – of work in many sectors including professional occupations in developed countries. In response, many call for a renewal of business and organizational ethics and a revitalization of employee participation in organizational life and in substantive decision-making. This paper particularly adds to discussions of substantive worker participation and organizational democracy. Crucially, it proposes that deep obstructions to the development of decent work and substantive, collaborative participation may lie in more than economic injustice and material inequalities. Drawing on Aristotelian, phenomenological and feminist philosophies it sketches a radical, extra-materialist, inter-subjective conception of quality of work and participation. That conception poses a substantive challenge to policy development and responsibilities for the qualitative organization and practices of work and workplace life.

*Trade Union Interests In Corporate Governance In Anglo-American Firms*

### Abstract

The participation of labour in corporate governance is institutionalized in a small number of countries, especially in European Union states, and variably constrained or systematically precluded everywhere else. Notably, the dominant model of corporate governance in Anglo-American contexts in recent decades exhibits a high prioritization of shareholder interest maximization. Much Anglo-phone business, economics, corporate and labour law literatures typically as-

sume that workers do not have, or warrant, a voice in governance. Workers' voice, where acknowledged, is expected to be expressed at the level of workplace decisions and employment relations, or through their shareholding interests. That assumed normative exclusion of workers' representation from high levels of firm decision-making has powerfully subordinated the valuation of workers' interests and their political expression. In Anglo-American contexts, finance economics has prevailed in corporate governance decision-making. However, since the financial crisis of 2008 and its aftermath the centrality of finance and shareholder sovereignty is now called into new question. Corporate governance is being brought into a political economic discourse and expanded agenda of interest and demand.

This paper addresses critical questions in regard to workers' and trade unions' interest in, and voice aspirations toward, corporate governance and high-order decision making in Anglophone contexts. The paper is part of a larger comparative empirical study of corporate governance in four Anglophone countries (United Kingdom, United States of America, Australia and New Zealand) conducted in 2012 – 2014. The paper specifically addresses Anglophone trade unions' interest in corporate governance. It discusses findings that indicate significant and various interests among national trade union bodies. It finds that lack of salience or lack of effectiveness of labour interest expression in corporate governance cannot be assumed as lack of interest in participation across Anglophone countries.

#### *Strategic Models and the Response of Government Agencies to Extreme Emergencies*

Government agencies that are tasked with responding to extreme emergencies are constantly battling with the tensions and trade-offs of centralized control versus decentralized decision-making. Many of today's emergency management organizations are a product of World War II and as such they have a military legacy which continues to structure their day-to-day operations well after their migration to the civil sphere has been effected. Since the post-War years, these organizations have grown in size and adopted models which were developed in business schools for the needs of private industry. Driven by the growth of managerialism, these models attend to very different organizational realities from those of the military and of civil service. This is over and above the reduction of specificity within management and organizational theories that already characterizes them.

In this paper, we focus on strategy and address how military and strategic management models organize the response of government agencies to extreme emergencies whilst also failing to address their core organizational problems. We are interested in the relatively recent creation of centralized organizations like the US Federal Emergency Management Agency (FEMA) as well as the practical life of strategic organization in front-line emergency management. To address how strategic models lacking specificity take on specificity in a practical domain of organization other than the one for which they were developed, we look at changes made to emergency management in the Australian State of Victoria after the catastrophic 2009 'Black Saturday' bushfires. In the public inquiry into the disaster, centralization became an important antidote for previous shortcomings in 'command, control and coordination', eventually leading to the creation of a State Control Centre (SCC). Yet, the specificities of organizing during extreme emergencies continue to demand decentralized decision-making.

#### *Empowerment and the Role of Space in Homeless Activism in Contemporary Japan*

Since the turn of the millennium authorities in Japan have conducted an increasingly intensive campaign to evict homeless people from parks and riverbanks. In response, activists and homeless people have demanded the right for the homeless to live in their encampments, or "tent villages", without fear of eviction. Using the struggles over the encampments in the Shinjuku underground passages in Tokyo in the mid-90s, Osaka's Nagai Park in 2007 and Tokyo's Miyashita Park in 2010 as examples, I argue that homeless activism offers important insights into how activists use space in the course of a political struggle and how this usage is related to transformations in the notion of publicness. Paying attention to how activists use space helps us to see that activism is not always oriented to participation in the public sphere. To bring this out I focus on three notions of space towards which activists in the homeless movement have been oriented: official public space, counter-space and no-man's-land. Officially recognized public space helps political challengers to project messages to a wider public but also imposes limits on the radicalness of demands and conduct. Counter-spaces are spaces for the provocative visibilization of behaviour that is subject to sanctions in mainstream public areas. No-man's-lands permit behaviour considered contrary to mainstream norms, but unlike counter-spaces they are not created in order to challenge these norms publicly; instead they thrive on official neglect. I argue that

each of these conceptions of space are needed to understand the development and the dynamics of homeless activism. I also argue that each of them has political import. In particular, access to alternative arenas such as counter-spaces or no-man's-lands has been important in processes of empowerment – the strengthening of people's self-confidence as political actors.

#### *Researching Intersectional Identities and Belonging through a Geometric Approach*

Researching the construction of skin colour declarations in Brazil, both skin colour and social class were apprehended during my data collection in 2006-2007. Several interviewees answered skin colour issues through social class, and several answered social class issues through skin colour too. My attempt to articulate both lead finally to offer a theoretical tool to approach intersectional identities in Brazil in terms of race/skin colour, socioeconomic position/social class, and sex/gender. Each dimension is described through a triangle; their articulation lead to a pyramid. Intersectional identities are analysed inside this geometric figure, through this "geometric" approach. First, this geometric approach is described. Second, I critically discuss this theoretical tool in order to identify to which extent it could be useful to research intersectional identities and belonging in general. To support this critical discussion, I use the example of the expression of identities and belonging in the specific context of sustainable housing.

#### *Sociological Studies of Language When Language Escapes: Some Challenges?*

This paper deals with inequalities regarding from whom discourses are considered and analysed. Notably, the aim of this paper is to critically discuss to which extent these inequalities might be methodological and theoretical challenges for sociological studies of language. The overall context is a research on sustainable housing, more specifically about how people define "sustainable housing", and to put the collected meanings into perspective regarding the established institutional language. Regarding the challenges that came across, I moved the interviews forward to focus on these challenges themselves.

This paper is based on two specific contexts, where the challenges emerged. The first is related to adults who suffer from heavy epilepsy and mental disorders, with an extended minority status. Discourses exist about them but less from them. I wonder how to collect their discourses, and then analyse them as a sociological material. I also wonder how to consider the boundary line between sociology of language, psychology, and speech therapy. The second context consists of an organization that combats poverty, including homeless situations and inadequate housing. On one hand, the participants directly challenged the sociologist regarding the use of their discourse as a sociological material. On the other hand, the participants clearly underlined that they want the sociologist to focus on the smallest common denominator they choose for their communication, i.e. without taking into account the individual variability of their discourses. I wonder how to deal with this *mise en abyme* of language under a sociological perspective.

**CASTAÑEDA SABIDO, FERNANDO\*** (UNAM, [sabido@unam.mx](mailto:sabido@unam.mx))

#### *Is It Possible to Have a NON Modern Sociology?*

##### IS IT POSSIBLE TO HAVE A NON MODERN SOCIOLOGY?

From its origin sociology has been well aware that it has a constitutive paradox. Its main object is modern society, but at the same time sociology is the product of modern society. There has been given many solutions to this problema, as many as sociological theories have been developed.

This paradox goes side by side with another paradox, modern rationality always implies its counterpart, irrationality. This idea is also an old argument as well, from romanticism to system theory.

Both paradoxes had have solutions in the way they interpret modern society. Although they are not very successful.

The developments of sociology in postcolonial societies, have made their interpretation of this paradox trying to reinterpret this history.

But I don't think they have a solution. The paper is aimed at reconstruct some of the arguments of these paradox and to analyse how is reinterpreted by postcolonial sociology.

*(De)Coupled Identities: Some Theoretical Reflections and a Few Empirical Observations on Exclusion and Inclusion Discourses*

Upholding (or opposing) power relationships implied by event models used in a discourse and accepting (or rejecting) social categorizations employed in referential expressions therein are two potentially linked language games. Validating (or overcoming) the communicative roles presupposed by the discourse is a third one.

Although, in each game, player and move definitions can be set in the game's own terms, and thus form an autonomous system, they can also be construed as mappings of the other games' players and moves, and they are often so conceived. That is the art of the games, to redraw their own domains and to project their own range of action. For such reasons, coupled player dichotomies often function as subjection or exclusion mechanisms, and decoupling them can contribute to equalize conditions.

Analyses of moves that have coupled or decoupled gender or ethnic identity dichotomies with other categorizations in Mexico's recent history support the view outlined above, which draws upon findings from various fields, mainly cultural sociology and discourse science. The main corpus consists of public interventions by and about actors of cases that have made the country face contradictions between different laws, between law and tradition or between law and aspiration (such as the revoked and the effective elections of Eufrosina Cruz).

The moves include subsuming one of the coupled dichotomies (as a whole) under a new superordinate or subdividing one of its poles into new hyponyms, which make the dichotomy less relevant. They also comprise ironically denouncing the consequences of the opposition or simply deconstructing it by introducing co-hyponyms or clines.

Comments on the argumentative and rhetorical resources used to effect the moves lead to identification of key problems in current conceptions of discourse and context interaction.

**CASTAÑOS, FERNANDO\*** (Universidad Nacional Autónoma de México, [zuno@unam.mx](mailto:zuno@unam.mx))

*(De)Dichotomizing Speech Situations, Semantic Fields and Power Relations: Some Theoretical Reflections and a Few Empirical Observations*

Given that a discourse presents a configuration of the possible, the valid and the desirable, accepting or questioning the communicative roles it presupposes often becomes a terrain of dispute. Subscribing production and reception conditions is one preliminary move in the game of approving the discourse. The same is true of the semantic relations implied in labels of social agents the discourse refers to. Who is seen to do what is modeled and how they are categorized entail options that will be endorsed by default.

Furthermore, since communicative roles and social categories tend to be coupled at the onset of a discursive exchange, their association is itself a matter the discourse has to deal with. If inconvenient, power relationships assumed by the use of social categories will have to be contested once the social categories are upheld by the very occurrence of speech. That is why discussing a discussion's setting is often as important as, and sometimes more important than, the discussion itself.

Hence, opening up a dyadic situation (constituted by an addressor and an addressee) by admitting witnesses, mediators or judges, or reducing a polyadic one by excluding third parties, are potential challenges to given social semantics and to established power arrangements. Conversely, (de)dichotomizing meaning or power are latent questionings to conventional communicative engagements.

Such view draws upon findings from various fields, mainly cultural sociology and discourse science; I claim it overcomes ontological and epistemological problems current views of discourse and context interaction have; and it is supported by observations on reflective discourse generated in key moments of regime change in different periods of Mexico's history, specially its pre-revolution years in the early 20th century, which are oriented by performative theories.

*Signing or Not Signing Articles? Transformation of a Professional Practice in Japanese Journalism*

This presentation aims at reflecting on the more and more frequent use of the journalists' signature in the articles of the Japanese press. Until the 1990's, unlike American or French tradition for instance, signed articles in Japanese newspapers

were the exception. Yet, since the 2000's, this practice has been gradually spreading in some newsrooms.

The gradual use of the signature pertains to a context of progressive transformation of the profession. The Japanese journalism experiences a transition from an *organizational pattern* symbolised by affiliation of journalists to a newspaper company (with long career and authoritarian intern mobility, for instance), to a *professional pattern* symbolised with careers that are not limited to one company.

By giving the journalists visibility beyond their organization, the practice of signing articles symbolizes the latter of these patterns. The main hypothesis of our research is that a sociological approach focusing on the signature can highlight tensions between the dominant *organizational pattern* and a *professional pattern* that tends to expand. This case differs from what is usually seen in most Western countries where *organizational professionalism* aims to compete with *occupational professionalism* (Evetts, 2003).

Through the use of interactionist methodologies and concepts, this paper focuses on two issues. First, from the actor's point of view, we will examine the consequences of the signature as a professional practice in the journalists' daily work. We will seek to understand the changes induced by the use of the signature within the division of labour. Second, we will assess this practice and its role within careers individualization process and its repercussion on the external labour market of journalist.

This work is a part of a PhD research. The key findings that will be presented were obtained through a qualitative inquiry and a participant observation in one of the biggest Japanese newspaper.

**CASTILLO, JUAN CARLOS\*** (Pontificia Universidad Católica, [jcastillo@puc.cl](mailto:jcastillo@puc.cl))

*Inequality, Justice Beliefs and Political Participation in Latin America*

A series of studies consistently show that socioeconomic status is related to higher rates of electoral participation. Such association implies a transmission of economic inequality into political inequality, threatening ideals of equality and even the legitimacy of the political system. Nevertheless, there are several elements that could affect this link and that deserve further attention. First, is not clear whether this patterns holds across other participation forms, for instance protest participation. Secondly, beliefs about how goods and rewards should be distributed in society might play a role in this realm, since those with a strongest preference for an egalitarian distribution could be more willing to participate in order to pressure for their demands. Thirdly, country level indicators such as the inequality level could affect the link between status and participation i.e. in societies with higher inequality the link between status and participation would be higher. The present study aims at addressing these issues in Latin America, the region of the world with the highest inequality indexes. A series of multilevel models are estimated based on data from the Latin American Public Opinion Project 2012 (N=28,021; countries=18), which in this last wave has a special focus on distribution and inequality. Preliminary results show that status variables such as the educational level are positively related with both electoral and protest participation. Furthermore, those with a strongest belief in redistribution depict a higher probability to participate. Nevertheless, the role of inequality as context level variable on participation does not show a clear direction in the analysis, which leads to discuss about considering further macro indicators (for instance democratic indexes) as well as to attend to countries' particular characteristics that could affect a stronger or weaker link between inequality, justice beliefs and participation. (Project funded by FONDECYT grant 11121203)

*Transition Town Initiatives. Possible Pathways Towards Urban Sustainability?*

Topic of this contribution is Transition Towns movement as an example of a possible top-down and bottom-up integration in creating sustainable development at the urban level.

Transition Towns initiatives are experiments in the re-location of resources on a micro scale. The goal of Transition Towns is to build resilient communities putting in place local practices aimed at environmental, food and energy sustainability, i.e. growing vegetables in urban context, self-production of energy and the use of complementary local currency. At the same time, the movement promotes a moral and cultural renewal of society, unfettered by promises of continued economic growth. Following the theories of Beck and Giddens, Transition Town movement sets up as a new sub-political actor (it was born between 2005 and 2007 in the UK and now has more than thousands of initiatives around the world), a risk society's offshot that build its own identity and goals from two global alarms: climate change and peak oil. In this sense, the Transition Towns can be taken as

a possible ongoing model of cultural sustainability, both conceptually and in its practices, currently feasible in hundreds of specific local contexts. Our questions are: may such grassroots initiatives represent significant catalysts in the spread of sustainable lifestyles in micro contexts (such as urban neighborhoods)? And, at the same time, the circle of relations triggered by Transition initiatives can become the object of a progressive instrumental attention from the political world, supporting it in building a sustainable city? Two case studies from Italy (Bologna Transition experience) and UK (York in Transition experience) will be presented.

#### *Los Significados De Consumo: Un Estudio Entre Los Grupos De Bajos Ingresos En La Región Metropolitana De São Paulo, Brasil*

Parte superior do formulário

La Comunicación tiene como objetivo presentar una reflexión sobre el impacto del acceso al consumo sobre la sensibilidad de una nueva clase de consumidores, de reciente creación en Brasil. Suponiendo que el consumo popular asume diferentes significados, de búsqueda a menudo distante de distinción, este proyecto tiene como objetivo desentrañar ellos, centrándose en los grupos de bajos ingresos. La asociación entre el consumo y las clases inferiores no fue sino hasta hace muy poco tiempo, algo muy común en las ciencias sociales, ya que no se prevé la posibilidad de que los trabajadores de bajos ingresos a comprar otros productos, además de las llamadas necesidades. Dos cambios que contribuyen a esta situación la asociación para ser colocado en la agenda: un cambio en el debate sobre el consumo, que se apartó de las explicaciones moralistas y trató de construir nuevas lecturas para la interpretación del fenómeno, libre de dualidad y polarización. (Appadurai, 2008; DOUGLAS y IRSHWOOD, 2004) y los cambios sociales derivados de las políticas de implementadas distribución del ingreso en el país, sin duda no implica el surgimiento de una "nueva clase media", teniendo en cuenta que la clase no es una variable sólo es económica, ya que implica valores (ethos) y prácticas (formas de utilización), pero un número de personas que llegaron a haber iluminado los bienes de consumo considerados "no esenciales", que hasta entonces se encontraban excluidos de este mercado. A investigación tiene como objetivo contribuir a la cartografía y la comprensión de los diferentes significados dados por el consumo entre esta nueva clase consumidores. Por lo tanto, elegimos como residentes universo empíricos en un barrio marginal situado en Santo André, grande de São Paulo.

#### *Doing Research on the Brazilian Military: The Experience of Social Scientists*

During the 1970s and 1980s, a group of Brazilian social scientists dedicated themselves to studying the role of the military in Brazilian politics. The political importance of this theme was obvious: starting with the military coup in 1964 until the transition to a civilian president in 1985, the military remained in the center of political power in the country. This group of researchers wrote scholarly works that would become fundamental references for the establishment of a field of military studies in Brazil. Furthermore, in the following decades, they also played important institutional roles, creating research groups and serving as interlocutors with the Armed Forces and, beginning in 1999, with the Ministry of Defense. This paper, based on oral histories' interviews, discusses the political and academic socialization of these social scientists and addresses questions such as: How did they become interested in military studies? What conditions did they face regarding access to research sources? What was their interaction with the military? What was the impact of their work and what reception did it receive?

#### *Socio-Ecological Inequality and Injustice: Blind Spot of Democratic Politics in Latin America (and Beyond)?*

A significant challenge facing the democratization process globally is posed by socio-ecological inequality and injustice (SEII). This paper examines the interrelations between SEII and democratization, focusing on Latin America and the Caribbean (LA&C). LA&C is experiencing rapid economic development leading to significant improvements in reducing extreme poverty. These successes are built on the basis of sustained institutional democratization after decades of civil-military dictatorships. However, the very process of economic growth that enables these achievements is at the root of some of the most pervasive and seemingly intractable socio-political conflicts in the region. These are conflicts caused by perceived or actual SEII, which I argue constitute one the major obstacles to the

democratization process. However, there is a persistent tendency in the literature to neglect, put aside or even dismiss the environmental dimension of democratization processes. Recent work about democratization, even when dealing specifically with social and economic inequality as factors that hinder or facilitate democratization, fail to pay attention to the significance of SEII. Also, analyses of the emergence of a "new left" and of "direct democracy" in LA&C, fail to account for the socio-ecological dimension of the process. This paper is based on recent and ongoing research aimed at making a sociological contribution towards a better understanding of these processes.

**CASTRO-VÁZQUEZ, GENARO\*** (Nanyang Technological University, [GenaroCastro-Vazquez@ntu.edu.sg](mailto:GenaroCastro-Vazquez@ntu.edu.sg))

#### *Enclaves Of Foreigners and Multiculturalism In Japan*

This paper analyses the relevance of the construct of 'celebration of diversity' to understanding the creation of enclaves of foreigners in Japan. Official policies that have permitted the geographical distribution of foreigners in the country have been largely underpinned by an understanding of multiculturalism that tends to celebrate diversity. Such policy-making acknowledges the existence of a full range of differences between locals and outsiders that results in the 'colonization of diversity' (Blackmore and Sachs 2007: 227) and leaves aside issues of equality and citizenship of non-Japanese people living in the country.

The paper contends that celebration of diversity entails a veiled form of colonization. Enclaves of internal others result in an efficient method to manage diversity by 'confining' difference within the borders of a particular geographical location. Assimilating into Japanese society appears to be a matter of 'personal choice' because foreigners do not have to take on any Japanese cultural characteristic and can enjoy and preserve their language, religion and habits within the margins of an enclave.

Moreover, enclaves of foreigners become a real teaching device that permits Japanese citizens observe a display of the rich tapestry of human ethnic differences and fully appreciate the uniqueness and 'ascendancy' embedded in their Japanese identity. Expressions such as 'coexistence' (*kyōsei*) and 'multicultural co-existence' (*tabunka kyōsei*) help justify the existence of territorial divisions where internal Others can express their cultural and ethnic differences. As Kibe (2011) contends, the Japanese understanding of multiculturalism tends to present locals and foreigners 'harmoniously' sharing the same country.

In conclusion, the paper highlights that multiculturalism *à la Japonaise* presents an intriguing parallelism with the multicultural approach mirrored in Disney films. This form of multiculturalism conveys a 'conflict free image of society' (Kellers 2001) that sanitises historical memory and minimises and simplifies class, race as well as gender differences.

#### *EU Responses to the Financial Crisis: Marginalizing Gender Equality?*

The European Union boasts a history of championing gender equality and a developed suite of policy commitments to gender mainstreaming (GM), embedded in multiple recent Treaties. These commitments to gender equality coexist awkwardly however with the economic and market-making imperatives which have formed the EU's *raison d'être* - the EU has a long track record of subordinating or co-opting gender equality aspirations into the service of economic ones (Pollack and Hafner-Burton 2000, Rubery 2003), particularly in 'technocratic' areas of economic policy, such as competition, de-regulation and Broad Economic Policy Guidelines (Hoskyns 2008, Pollack and Hafner-Burton 2000). Research has documented how policy makers often use economic imperatives to argue either the irrelevance of gender (Caglar 2008, Cavaghan 2013) or to justify their ignorance of how gender might be relevant (Schmidt 2005).

Given the EU's central importance as a champion of gender equality and the increased salience of economic policies after the financial crisis, this paper argues that feminist researchers must develop a fuller understanding of how the EU's policy responses to the financial do, or do not, respond to the EU's normative gender equality/GM imperatives. Using methods which drawn on the sociology of knowledge and interpretative policy analysis, this paper presents analysis of policy documents and processes with the EU Commission to explore normative commitment to gender equality, or the lack thereof, embedded within the EU's policy responses to the financial crisis, focusing on the methods of thinking and the gendered normative values and assumptions or 'gender knowledge' (Cavaghan 2012) which dominate amongst policy makers in these fields.

This kind of investigation enables an examination of the particular challenges which the increased dominance of economic and/or neo-liberal or logics present to gender inequality and the resulting reconfiguration of normative priorities within the EU.

Since at least 30 years, the processes of economic and social change in industrialized countries have been weakening the collective dimension of working conditions. This is especially the case for young non-standard workers experiencing a more individualistic relation with work and labour market. Indeed, the decreasing participation to unionism can be partly explained by the individualization of work. Italy is a particularly interesting case at this regard, as several labour market reforms took place since the end of the 90s pushing high-skilled young workers into non-standard contracts and positions.

The aim of the paper, based on a qualitative survey involving 75 young professionals living in Milan (Italy) and 16 organizations, is to understand whether high-skilled non-standard professional workers express a specific demand for representation, and what kind of answer traditional and innovative organizations are likely to offer.

Our leading hypothesis is that, as a consequence of a general disappointment towards politics and unionism and of the change of workers' social identity, young professionals do not refer to unions but pursue individual strategies to solve their conflicts within the labour market. Non-standard workers constantly refer to rhetoric on personal autonomy and freedom against the 'boring standard long life full time job' (not existing any longer in the real life).

Our results in Milan, the Italian metropolis which usually anticipate national changes in the labour market, shows a mismatch between job conditions of these workers that have strongly worsened in the last decades, and the awareness that these conditions are shared by a large part of non standard workers, and their (in) capacity of collective representation and action. The lack of sharing a common place of work is one of the elements to understand this mismatch. Given this scenario, the possibility for unions and other associations to organize these workers is very unlikely.

**CEBULLA, ANDREAS\*** (Flinders University of South Australia, [andreas.cebulla@flinders.edu.au](mailto:andreas.cebulla@flinders.edu.au))*Risk, Trust and Aspirations of UK Bankers at the Onset of the Global Financial Crisis: A Case of Extremes?*

Debates over the causes of the global financial crisis of 2008 have pointed at *institutional* and *individual-behavioural* causes; a methodological and conceptual dichotomy that is profoundly affecting risk research. Responsibility and also often blame for the Global Financial Crisis have been placed on banking institutions that failed to apply due diligence against a backdrop of inadequate regulation, or on individualised 'greed' facilitated by banks that incentivised excessive risk-taking.

But were bankers unique and possibly uniquely extreme in their risk attitudes and, thus, were perhaps recruited into the banking system for this reason? Or did the banking system facilitate or enhance a (latent) propensity for those entering the banking system to be or become extreme, perhaps 'money-hungry' risk-takers?

Using the British Household Panel Survey, this paper compares risk perceptions, trust and aspirations expressed by retail and investment bankers in the UK with those of the general working population at the brink of the Global Financial Crisis in 2008. In addition, using the data in longitudinal analysis, it explores whether bankers' attitudes towards risk changed as they spent more time in banking, asking whether institutions and exposure to their cultures shaped and possibly accentuated attitudes to risk taking.

The paper concludes with a discussion of the findings' implications for the study of risk and risk attitudes.

## PLEN-4.1

**CECENA, ANA ESTHER\*** (Universidad Nacional Autónoma de México, [anacecena@gmail.com](mailto:anacecena@gmail.com))*Inequalities and the Material Civilization's Epistemology*

Due to the growing gap of inequalities caused by the current material civilization and the ecological catastrophe that tends to prevent a long permanence of life on the planet, people all over the world have started thinking about a new kind of material civilization. To think -and to build- a non-competitive but complementary economy and to radically change our relationship with nature, not considering it an object but a subject, are the main axes of this transformation that implies, first of all, an epistemic dislocation.

I propose to examine from this perspective some of the real experiences and their horizons and world visions, posing them the question of inequality and focusing the different kinds of inequalities they could be reproducing or solving.

## RC31-532.6

**CELERO, JOCELYN\*** (Waseda University, [joyous\\_ph@yahoo.com](mailto:joyous_ph@yahoo.com))*Dual Futures: Double Integration? a Comparative Study of Filipino Mothers and Japanese-Filipino Children's Patterns of Transmigration and Social Integration*

**Keywords:** *Filipino mothers, Japanese-Filipino children, transnationalism, social integration, life projects*

The presence of transnational and intercultural families is a globalized phenomenon that ethnically diversifies societies and raises profound questions on social integration and belonging of immigrants. Over time, the first generation of migrants has redefined their socio-economic positions through acquired and enacted social capital (Bourdieu 1986), which consequently generates a range of influence on the second generation's life projects.

Filipino women represent one of the four largest groups of migrants in Japan whose intermarriage to Japanese men have produced children of both Japanese and Filipino dual ethno-cultural heritage called Japanese-Filipino children (JFC). Over the years, Filipino mothers have been reforming their image and widening their socio-economic participation in the mainstream society, although their minority status still curtails their visibility and political voice. JFC, on the other hand, are rather diverse groups of second-generation immigrant children in terms of socialization and economic experiences.

This exploratory study aims to compare and contrast Filipino mothers and their Japanese-Filipino children's pursuit of social integration by examining the linkage between their patterns of transnational migration and current and future socio-economic life trajectories. Using life vignettes obtained from in-depth interviews with (30) Filipino mothers and (30) JFC, this research analyzes the linkage between migration and parents and children's formulation of life goals and aspirations, considerations of the social, economic, and educational roles of Japan and the Philippines in their individual and family life, and levels of socio-economic participation in both societies.

The case of Filipino migrant mothers and JFC striving to build socio-economic futures both in Japan and the Philippines provides a micro-level context for examining how first generation and second-generation immigrants utilize transnationalism as a tool for (re)constructing life projects while dealing with uneven, ambivalent degree of social integration in both locations.

## JS-11.1

**CELIK, ERCÜMENT\*** (University of Freiburg, [Ercument.Celik@soziologie.uni-freiburg.de](mailto:Ercument.Celik@soziologie.uni-freiburg.de))*Circulation of 'Social Movement Unionism' Concept As a Case of Intellectual South-South and North-South Dialogue*

The Euro-America centric and hegemonic development of social sciences has been widely debated in various disciplines, but not significantly in labor sociology. Hence, there is a need for studies developing recognition of the experiences of labor movements in the global South, their relevance in the global North, and their scholarly interpretations in both the global North and South. This includes a focus on how the concepts in social sciences, particularly in labor sociology circulate. This two-fold process takes account of both 'learning from the periphery' and a 'mutual learning on a world scale'. The 'social movement unionism' (SMU) concept, which has been developed to describe labor movements in the global South in the 1980s and 1990s, and then later used as a model of union revitalization in both the North and South, sets a good example of such consideration. The paper reviews the labor movements in various countries i.e. South Africa, Brazil, Philippines, South Korea, the U.S.A., analyzes the scholarly use of the SMU concept, and attempts to apply the main arguments of the critiques of Eurocentrism to this case. Consequently, this paper argues that SMU can be regarded as an appropriate example of a non-hegemonic circulation of concepts in social sciences on a world scale, since it refers to an *alternative* trade unionism; represents cases of *learning from the south*; is based on *local* engagements and experiences; and develops through and acknowledges *multiple* cases.

*"All the Things You Are". How to Investigate Sociologically Human Dependence on Familiar Things and Places*

In the last two decades, the "pragmatic turn" in French sociology brought to a radical critique of the triad subject/object/representation to understanding action and knowledge. Bruno Latour's contribution, by stressing the key-role played by materiality in accounting for individual and collective agency, was crucial to this move. In parallel, Pierre Bourdieu started to explore the relevance in social life of an infra-representational relation human beings develop with their material world. He reduces however *the practical sense* to the non-reflexive reproduction of pre-existing social structures through *embodiment*. In our contribution we discuss how the concept of *familiar engagement with the environment* as theorized by Laurent Thévenot provides a frame to investigate *practice* in terms of a kind of reflexive human agency based on a specific dependency from the non-human environment, which is ensuring the human being with a fundamental sense of ontological stability. This enduring *consistence* assured by familiar engagement is necessary to the exercise of further capacities to engage with the world requiring to *perform* the separation of a subject *vis à vis* her environment. That is why in our opinion to recognize and to investigate this specific dependency is a crucial task for a new-materialist approach to the study of social life. The specific human-non human *entanglement* of the familiar engagement gives rise to a human agent as endowed by a *personality* to which *things and places*, personally appropriated through repeated use and frequentation, are consubstantial. It accounts for human experiences such as that of being at *ease*, but as well of longing and belonging and of *becoming* in terms of *flourishing*. However to investigate sociologically the experience of being familiarly engaged with the world raises a number of methodological challenges that we will discuss relying on our own fieldworks on political participation and environmental mobilisations.

## TG04-958.5

**CEVOLINI, ALBERTO\*** (University of Modena and Reggio Emilia, [acevolini@hotmail.com](mailto:acevolini@hotmail.com))

*Trading Uncertainty. Insurance As Risk Institutionalization In Modern Society*

Insurance is a core institution of modern society. Yet a sociology of insurance is still underdeveloped. Starting from the basic assumption that insurance is a way of trading uncertainty, the main hypothesis arises that the evolutionary advantage of insurance industry lies in increasing the self-produced uncertainty which can be absorbed in social systems through decisions. This implies the use of knowledge – statistics and probability theory – in order to sell ignorance. Such a paradox is made operative through the premium quantification. How can future uncertainty be reduced to a certain price? Premium itself is a double-side risk: for insurers the matter is to underwrite or not to underwrite; for policy holders the matter is to be or not to be insured. And both have to combine the uncertainty of expectations towards a determinate event with the uncertainty of events towards a determinate expectation. The only solution seems to be that of getting ready to cope with surprises. Some financial instruments such as weather derivatives and catastrophe options can be seen as an empirical evidence of this complex form of risk institutionalization.

ROYALL, FRÉDÉRIC (University of Limerick)

*Activists and Activism In The Occupy Movements In France and In Ireland*

In the autumn of 2011, attempts were made to set up Occupy movements in Ireland and in France. Aside from some initial displays of solidarity initially, the general public in the two countries paid little attention to initiatives and Occupiers enjoyed very limited success in mobilizing even a modest number of people. This paper argues that the reasons for the weak level of mobilization and of public support in France and in Ireland are related to movements' internal characteristics – their focus on non-hierarchical structures, the sociological make-up of their members, their tenuous and confrontational relations with potentially key allies, etc. This led to a situation whereby despite widespread feelings of anger and frustration regarding the state of the countries' social and economic affairs, activist failed to generate mass participation, they did not succeed in transforming their narrow interests into symbols that concerned society as a whole, and that they were never hailed as champions of the public good.

In this paper I look only at one specific aspect of the movements' failures: the movements' internal characteristics. The movements brought together leaders and activists that came from far different social milieus. This led to considerable tensions within the camps in a very short time and to the movements' very rapid demise. Limited by the small number of the occupiers that had relevant organizational experience and knowledge, and by the very severe internal tensions that led to ill-advised strategic choices, the movements never truly managed to widen their appeal.

The empirical investigation is based on official documents, on newspaper coverage in *Le Progrès*, *Sud Ouest*, and *Le Monde* (France) and in *The Irish Examiner* and *The Irish Times* (Ireland), and on in-depth interviews with French and Irish occupiers, organizers, civil society and alter-globalization activists, trade unionists, and political advisers.

KEIL, KATHRIN (Institute for Advanced Sustainability Studies)  
TABARA, J. DAVID (Global Climate Forum & ICTA-UAB)

*Socio- Ecological Risks and Governance of Resource Extraction in the Eurasian Arctic. Influences from and on Non-Arctic Regions*

The Arctic region is climatically one of the fastest changing regions worldwide, as exemplified by the decreasing extent and volume of Arctic sea ice. These changes are attributed mostly to cumulative effects of consumption and production patterns in industrialized countries beyond the Arctic's southern borders – specifically the increasing emission of greenhouse gases and Short Lived Climate-warming Pollutants (SLCPs). Warming in the Arctic may feed back on mid-latitude weather and climate by impacting storm tracks, which in turn can induce a series of feedback loops between climatic and socio-ecological changes in Arctic and non-Arctic regions. The warming climate also enables a number of economic and societal transformations in the Arctic, driven by the extraction of oil and gas resources on Arctic continental shelves, Arctic shipping mostly along north-eastern routes, and the expansion of Arctic tourism.

These changes affect regions beyond the Arctic, such as Europe, North America and Asia, creating new challenges for governance. Proactive and anticipatory capabilities are required to deal with these changes, which include adapting to altered weather patterns in mid-latitudes and related effects on crop production, tracking and limiting air pollutant and greenhouse gas emissions, monitoring air quality, and coping with potential rising sea level resulting from a melting Greenland ice sheet.

In this paper we present an original approach taken by the Sustainable Modes of Arctic Resource-driven Transformative Interdependence (SMARTI) project at the Institute for Advanced Sustainability Studies (IASS) as a strongly transdisciplinary attempt to deal with these complex issues in an holistic way. A wide range of stakeholders are being engaged in this process using a highly integrative approach across multiple disciplines. Our focus lies on the coupled social, political, and economic dimensions that define the governance processes and institutions needed for a more sustainable future in the mutually affected Arctic and non-Arctic regions.

\*\* Dr. Chandrashekhara .S

\*\* Professor & Chairman, Department of P.G. Studies and Research in Sociology Kuvempu University, Shankaraghatta - 577451. Shimoga District, Karnataka. India.

**Abstract**

Present article deals with the nature and extent of Alienation experiences by the Parents of so called elites such as professionals in IT industries and those settled in abroad. The study was conducted in the city of Shimoga in Karnataka state, India. The information was gathered with the help of interview schedule and questionnaire. 120 respondents were selected on the basis of proportional representation from among different caste groups. The data collected and analysed with the help of statistical tools and put to chi-square and C test. Major findings indicate that, culture and caste background proves to be differential deprivation as well sense of alienation among the parents. Secondly, even today sentimental bandage plays a vital role in life satisfaction apart from economic and positional achievements of their children. Further study indicates that parents residing in local area feels estranged themselves even in spite of they gets monetary help from

their children. Present research suggests that, realisation about achievement versus sentiments dialectic should be relieved by both parents as well as children the children also should not miss sentimental links with the parents otherwise it cost more to the both parents, children, human beings and society at large.

**Key words:** Alienation, Sentiments, Dialectic, Achievement, Life Satisfaction.

**CHAMBERLAIN, JOHN MARTIN\*** (Loughborough University, [j.m.chamberlain@lboro.ac.uk](mailto:j.m.chamberlain@lboro.ac.uk))

#### *Images of Activism and Protest in Modern Art: Towards a Visual Criminology of Risk?*

This paper examples images of protest in the work of graffiti street artists, such as Banksy and Osgemeos, as well as more traditionally documentary techniques of photo-journalism, in relation to examples of political activism and public protest in different countries worldwide.

Against the background of consideration of the criminological study of neo-liberal forms of governance, social indicators and professional and media-driven definitions of criminality and risk, the paper examines the value of visual and artistic documents for exploring the representation of everyday life and promoting an ethnographic form of narrative criminology focused on the life stories of the socially marginalized, excluded and disposed.

The paper explores how criminology as an academic discipline has yet to embrace methodological pluralism. While it is arguable that the study of crime and risk brings to the foreground the need to recognize the importance of answering the perennial question of "whose side are we one"? It concludes how in these high/post-modern times of globalized risks – such as the financial crisis, terrorism, health scares and global warming – focusing on "the visual" through the median of modern and contemporary art reinforces the need to develop a criminology of risk and uncertainty which is both politically engaged and methodological nuanced and robust.

#### JS-27.7

**CHAMBERLAIN, JOHN MARTIN\*** (Loughborough University, [j.m.chamberlain@lboro.ac.uk](mailto:j.m.chamberlain@lboro.ac.uk))

#### *Medical Regulation in the United Kingdom: Challenging Old and New Orthodoxies*

This paper explores recent developments in the governance of the medical profession in the United Kingdom. In particular, it focuses on the introduction of the performance surveillance and appraisal tool revalidation to monitor medical practitioners' clinical practice, as well as made changes to the hearing of fitness to practice cases by the GMC when a doctor is accused of medical malpractice.

The paper outlines how these changes have challenged several orthodoxies surrounding medical governance pertaining to, firstly, the role of the public and other health and social care professions in the regulation of doctors, and secondly, how social scientists have traditionally conceptualised contemporary trends in the relationship between the medical profession, the public and the state.

The paper argues that it is important for social scientists interested in the study of medical regulation to remember that current developments in the governance of doctors must be analysed within the broader socio-economic-political context. For recent reforms in medical governance are to no small measure bound up with a broader shift in how 'good governance' is conceptualised and operationalized under neo-liberal mentalities of rule as the state seeks to promote 'at a distance' a certain type of citizen-subject congruent with the enterprise form within the risk saturated conditions associated with high modernity.

The paper concludes by arguing that we currently sit at the apex of far-reaching changes in medical regulation, the full affects of which will not be known for at least another generation, and it is therefore vitally important to investigate contemporary reforms in medical governance while bearing in mind the need to challenge current conceptual orthodoxies within both professional practice and the academic literature.

**CHAMBERS, DONNA\*** (University of Sunderland, [donna.chambers186@gmail.com](mailto:donna.chambers186@gmail.com))

#### *Tourism Studies and Epistemological Decolonization*

In this presentation I seek to promote a decolonization of tourism studies. This requires taking seriously the 'epistemic perspective/cosmologies/insights of critical thinkers from the Global South thinking from and with subalternized racial/ethnic/sexual spaces and bodies' (Grosfoguel 2007:212). In other words, epistemological decolonization requires that one take into account the 'geo-political' and 'body-political' location of the speaking subject (Grosfoguel, 2007) which has thus far been largely ignored in tourism scholarship. This concept of decolonization bears a strong family resemblance to postcolonialism which is more widely utilised to understand tourism development in the Global South. However, decolonial scholars have proffered strong critiques of postcolonial theory for its heavy reliance on poststructuralist and postmodernist approaches which are considered to privilege European thinkers such as Foucault, Derrida and Gramsci, three of the 'four horses of the apocalypse' (Grosfoguel 2007:211). This privileging of Western thinkers has not advanced the goal of subaltern scholarship and further places eurocentrism at the fulcrum of critique. Decolonization is envisaged as a more radical project that seeks to change both the **terms** and the **content** of the conversation, to foster a different 'epistemic grounding' rather than seeking transformation within the context of the existing dominant Eurocentric paradigms (Mignolo 2007).

I argue that there is scarcely any evidence of this kind of decolonial critique emanating from tourism scholars and practitioners in and from the Global South. Rather, critiques of colonial/Eurocentric thinking emanate largely from Western researchers, who write about tourism in the Global South, often with little interaction with, and from indigenous peoples. I argue that tourism scholars in and from the Global South need to reject Western epistemologies about tourism as representing the 'God-eye' view thus enabling spaces to open up for an other way of thinking about, and doing tourism.

#### *The (vanishing?) Role of Phronetic Professions Faced By New Public Management in Dealing with Political Problems: Doctors, Architects, Magistrates*

This presentation will deal with a consequence of new public management and more generally bureaucratization of professional work which has not been much studied yet.

A former research shed light on the specificities of a kind of professions I named phronetic or prudential professions, using Aristotle's concept of Phronesis (usually translated with "practical wisdom" or prudence). These professions deal with singular and complex problems which put the work under an irreducible uncertainty. Actually, any human activity can be fulfilled prudentially. But phronesis explains some peculiar traits of "prudential professions". The main one is a high propensity of their members to get involved in debates or struggles to defend a peculiar normative conception of their work (for instance liberal vs. more authoritative educational patterns; palliative medicine vs. curative voluntarism; a justice for teenagers focused either on their education or on the protection of society etc.) This peculiar trait of some professions is a direct consequence of the large part phronesis plays in their work. As a consequence, the concept of Phronesis helps us to study further than usually the political commitments of professionals.

Identifying phronetic professions as a very specific sociological object makes new issues obvious in the debate about professions, peculiarly concerning the consequences of NPM. Professional work is or used to be an opportunity to launch societal debates. An issue is therefore the capacity of a society to be reflective about the ways of curing and caring, building the city or educate new generations. The presentation aims at showing that the possibility for professionals to commit in debates about their practice is jeopardized by NPM and more generally speaking by the bureaucratization of their contexts of work. What was often (or at least could be) a critical and ethic activity becomes more and more a more a technical one.

*CEDAW and Women's Rights in Post-1997 Hong Kong*

CEDAW has been applied to Hong Kong since 1996 when it was still under British rule, and after the transfer of sovereignty to China in 1997 continues to be applied to what is now one of China's "Special Administrative Regions". The passing of the Sex Discrimination Ordinance (1996), the establishment of the Equal Opportunities Commission (1996) and the Women's Commission (2001) are often cited as landmarks in Hong Kong's efforts to respond to CEDAW. However, NGOs have over the years produced shadow reports criticizing the inadequacies and systemic problems hindering full implementation of CEDAW's articles. This paper discusses the Hong Kong situation in terms CEDAW's role as a key instrument to the promotion of women's rights. In particular, how Hong Kong's unique relationship with China and neo-liberalism has resulted in two glaring issues: (1) the marginalization of new migrants and migrant workers, a large proportion of whom are women, and (2) the inability for legislators and government to push forth policies which could enhance women's situations. Firstly, the government's attempts to speed up integration with mainland China in terms of population, economy and culture has been met with unforeseen levels of resistance from Hong Kong people, fuelling exclusionary and racist attitudes amongst certain increasingly vocal sectors of the population. Secondly, the central government's reluctance to push forth constitutional reforms to speed up the process of democratization has led to difficulties for effective governance, creating further obstacles for women's full participation in the economy and in politics. The paper concludes with insights from the Hong Kong case regarding the limitations of CEDAW, in particular the over-reliance upon the state and related central mechanisms to take up a key role to promote women's full participation in society.

*Gendered Organization Perspective in Context: Female Officers in the Hong Kong Police 1950s to the Present:*

This paper examines the transformation of women's roles in the Hong Kong Police Force since their initial inclusion in 1950. Using documentary sources, secondary data, focus group interviews and in-depth interview data, I discuss policy changes in pertaining to women officers' roles and career development, and how they are perceived and experienced by retired and serving male and female officers. Using Gendered Organization Theory as the organizing framework, I discuss the extent to which organizational and human resources policies (e.g. equal pay, female officers carrying firearms, training of women in the Police Tactical Unit, the replacement of the pension system with the Mandatory Provident Fund system and changes in public order policing tactics) have benefited women's work conditions and career advancement options in the male-dominated occupation of policing. Findings suggest that the extent to which the Hong Kong Police can be described as a gendered organization has undoubtedly changed over the years, particularly in the minds of most of the officers interviewed in this study. However, gender remains a key structuring factor in shaping the work and career of male and female officers when actual organizational practices and policies are considered. In addition, organizational culture specific to particular periods also play an important role in how police officers understand and experience gendered organizational processes. The paper concludes by reflecting on the contributions of Gendered Organization Theory and its application to the case of the Hong Kong Police.

*Mismatch and Distrust: Institution, Interaction, and Increasing Doctor-Patient Tension in China*

On March 23, 2012, a medical resident in Harbin, north China, was stabbed to death by an angry young patient. This was, unfortunately, not an isolated incident. The statistics released by the Ministry of Health in China indicates that violent incidents resulted from medical disputes increased by 70 percent from 2006 to 2010. A survey conducted among patients in 30 hospitals in east China in early 2013 reveals that only 10 percent of the respondents said they trusted doctors. How do we explain patients' escalating dissatisfaction with doctors' services and the increasing tension between doctors and patients? In this paper, I argue that there are multiple factors that contribute to the poor doctor-patient relation, and among which mismatch and distrust are the paramount factors. Mismatch refers to two levels of discrepancy. First, it refers to the discrepancy between what the public expects from "public hospitals" and what the public experiences in these hospitals. This discrepancy is constituted by state policies and institutional factors,

particularly the financing issues of the healthcare system. Second, mismatch also refers to the discrepancy between doctors' expectation and patients' expectation. While doctors are longing for a dominance model of doctor-patient interaction as it is in Hong Kong, patients are expecting a bargaining model. Their discrepancy is produced by doctors' increased exposure to the medical world in Hong Kong in conjunction with the general public's increased awareness of their rights in a society with conspicuous social inequalities. The two levels of mismatch result in increasing distrust between doctors and patients that shapes their interaction. A vicious circle is produced by the mutual distrust between doctors and patients in their interaction. To mitigate the problem, I suggest that changes have to take place at the institutional level, in particular the first level of mismatch should be eradicated.

*Reflecting on Social Movement Unionism in Hong Kong: A Case Study of Dock Workers' Strike in 2013*

Traditionally, the trade unions in Hong Kong were politically divisive between the pro-Chinese Communist Party (Hong Kong Federation of Trade Unions or HKFTU) and the pro-Nationalist Party camps (Hong Kong and Kowloon Trades Union Council or HKTUC). Following the British colonial government's suppression of the riot organized by HKFTU by in 1967, independent trade unions have been established since 1970s. However, the independent trade union federation, Hong Kong Confederation of Trade Union (HKCTU) was not formed until 1990. HKCTU, with a mission to promote political democracy and social justice in Hong Kong and the Mainland China, was established by Hong Kong Christian Industrial Committee ("HKCIC"), a church-based NGO, and was supported by the international trade union movement. In the past two decades, HKCTU has spent huge effort to organize the marginal workers in the communities. This has given HKCTU and its affiliates the characteristics of social movement unionism. However, the social movement unionism spearheaded by HKCTU has not aroused much public attention until 500 sub-contracted workers in HIT, one of the biggest cargo terminal companies in the world, staged a 40 day long strike in 2013. This strike was organized by the HKCTU's affiliate; it gained tremendous public support and the union's strike fund raised more than HK\$ 8 millions (1.03 millions US dollars) from the public. This strike took place in the context of dropping strike rate in Hong Kong after most of its industries were relocated to the Mainland China. By studying this strike, this paper evaluates the effectiveness and limitations of social movement unionism in Hong Kong and its wider implications. The analysis of this paper was drawn from the author's participant observation as a core member of an activist group that supported the strike and his previous experience as a transportation trade union organizer.

*Género, Cárcel y El Estado Penal Mexicano*

Como consecuencia de la "Guerra contra el Narcotráfico" se han observado diferentes fenómenos en cuestiones de seguridad, violencia y relaciones de género en la frontera norte de México. Uno de estos es el aumento de detenciones y encarcelamientos de mujeres. Aunque la población femenina de las prisiones asciende a alrededor de 11 mil en todo el País y continúa representando un porcentaje menor que la población masculina, el porcentaje de mujeres apresadas por delitos relacionados con drogas ha aumentado de manera exponencial. Esta ponencia propone un acercamiento teórico a este fenómeno.

Como base tomo los postulados de Loïc Wacquant que estudian la emergencia de un Estado Penal y la reinvenición de la prisión con la función central de la gobernanza de los sectores marginalizados de las sociedad bajo el neoliberalismo, así como publicaciones que estudian la pertinencia de las teorías de Wacquant para Latinoamérica. Finalmente, pongo en diálogo los debates anteriores con el del feminismo transnacional.

La teoría feminista transnacional analiza las intersecciones del género con la raza, la clase y la sexualidad y se ocupa principalmente de cómo estos procesos se articulan con los flujos transfronterizos de bienes, personas, capital y culturas asociados con la globalización. La rama que se ocupa de la transnacionalización de los sistemas penales esboza una prisión global que es una manifestación local de flujos transnacionales de personas, productos, capital e ideas. Partiendo de la premisa de que tanto la prisión como las personas en ella son formados por factores globales, la prisión se entiende como "glocal".

Así, la ponencia ofrece una propuesta teórica para un estudio de caso de una de estas prisiones transnacionales, que se inserte en el debate de la emergencia de un Estado Penal neoliberal en Latinoamérica desde una perspectiva de género interseccional y transnacional.

*Cross-Border Labor Activism: Hong Kong-Based Students and Scholars Against Corporate Misbehavior (SACOM)*

From "Looking for Mickey Mouse's Conscience" (The Disney Campaign, 2005-present) to "Ending iSlavery" (The Apple and Foxconn Campaign, 2010-present), SACOM is devoted to organizing cross-border campaigns to amplify workers' calls for decent work in globalized China. In the summer of 2005, SACOM was born out of bi-weekly meetings of some 20 students from Hong Kong's universities during which we discussed issues such as the rise of global capitalism, under the guidance of three professors. Over these past eight years, SACOM organizers, students (including graduate students from the mainland) and scholars have joined hands to publish first-hand investigative reports to hold Apple, Foxconn, HP, Dell, Disney, Walmart and other multinationals responsible for worker abuses in their supply chains. The "fingers eating machines" were eventually replaced at the toy factory, a labor rights training program was conducted at two large electronics plants, and a short video titled "The Truth behind Apple's iPad" was shared among Foxconn workers and concerned global consumers through social media. International campaigning is needed to spread our message, while worker participation is indispensable if we are to creating a lasting impact at the workplace level. Challenges of capital and censorship by the Chinese state remain strong, putting direct pressures not only on workers but also our allies based in China.

SELDEN, MARK (Cornell University)

*Foxconn Worker Struggles in China*

The Taiwanese multinational corporation Foxconn, which recently soared to number 30 in the Fortune Global 500, holds more than 50 percent of market share in global electronics manufacturing. Its 1.4 million employees at 30 factories across China far exceed its combined workforce in 27 other countries that comprise its global empire. This paper assesses the conditions of Foxconn's predominantly rural migrant labor workforce, with particular attention to collective agency of workers and the changing character of the workforce.

A new generation of Chinese workers is at the center of just-in-time mass production at Foxconn and other producers. Our research examines the working lives of Foxconn workers on the basis of the intertwined policies and practices of Foxconn, international brands (notably Apple) and the local state, and the diverse forms of collective actions workers deploy to defend their rights and interests. Within the tight delivery deadlines, some workers leveraged their structural power to disrupt production to demand higher pay and better conditions. While all of these struggles were short-lived and limited in scope to a single workshop or factory, protestors exposed injustice of "iSlavery", garnering wide media attention and civil society support.

A distinctive feature of the labor force is a result of actions by local officials to mobilize 150,000 students as "Foxconn interns" through vocational schools. This helps fulfill corporate needs for short-term labor at times of peak demand, circumventing the law and dragging down social and labor standards. The industrial working class, now composed primarily of young rural migrants and teenage student interns, faces a formidable alliance of capital and the local state. In the "contentious authoritarian system", notwithstanding the resilience of the state in the face of sustained popular unrest over the last two decades, we highlight that precarious labor in its hundreds of millions is unstable.

*Changing Intergenerational-Caring Relations in East Asia*

This paper is based on both international and comparative research on intergenerational-caring relationships in which women simultaneously provide care for their frail elderly relatives as well as young children/grandchildren in East Asian societies. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of intergenerational care relations may increasingly become common in developed countries. East Asian societies are not exceptions. More over such intergenerational caring relations may possibly be more prevalent in East Asia than other European counterparts as facing with acute demographic changes, different family values and carer regimes embedded in the societies. Through the comparative analysis of data generated from mixed research methods (mainly semi-structured interviews and questionnaire surveys) in each society, this paper will investigate how these sandwich generations experience a

double responsibility of care, by analysing resources available to them from local policy configurations and from their personal and kin networks. We will extend our analysis to the influence of changing family-centred welfare regimes in East Asia on generational caring relations and experiences of women therein.

*Trust and Social Inclusion in Asian Societies - the Result of the First Wave Ssq Survey*

Using data from surveys on "social quality survey questionnaires" carried out in Hong Kong, Taiwan, Thailand, and South Korea between 2009 and 2011, this study investigates the relationship between trust and social inclusion. The data analysis of 4,807 questionnaires reveals that trust (the general trust, the interpersonal trust and the institutional trust) are linked to the extent of social inclusion people evaluates. Specifically, people always trust others report higher social inclusion. Trust in informal organizations (NGOs, universities, etc.) and trust in democratic systems (government, judiciary, police, etc.) are more closely related to social inclusion than trust in media, strangers or intimate relations (family, friends, neighbors).

*The Effect Of Socio-Religious Subcultures On Political Behavior: The Political Influence Of The Catholic Church In Hong Kong*

This paper seeks to examine the political influence of the Catholic Church in Hong Kong. Drawing the theory of religious influence formulated by Paul Djupe and Christopher Gilbert, this paper investigates how the church facilitates the development of socio-religious subcultures – collections of individuals who form attachments that persist inside and outside formal church structures. Membership in these subculture units opens up organizational channels that transmit political information, resulting in numerous salient conduits for political influence within a congregation. This study uses both survey and interview as research methods for a full test of the effects of the Catholic Church on the political behavior of their members. The research findings will provide a better understanding of how voluntary associations expose individuals to political information and norms, and how public opinion is formed and why people participate in politics.

*Hong Kong Police's Image and its Representations in Crime-Fighting and Order-Maintenance Duties: A Content Analysis of Newspaper Accounts in Post-Handover Hong Kong*

In Hong Kong, it is an open secret that the police officers always met public challenges and even suffer various humiliations in recent years. On the other hand, Hong Kong Police Force has recently won a credit of the Best Public Image Award. This paradoxical social phenomenon might be resolved by specifically dividing the representations of police image in undertaking crime-fighting duties versus order-maintenance duties. In doing so, this study asks: would it be that the representations of police image tend to be negative when the police perform their order-maintenance duties? Simultaneously, would it be that the representations of police image turn to be positive when the police assume their crime-fighting responsibilities? Against this background, this empirical project aims to investigate police image and its relation to the police's specifically categorized duties in Hong Kong. The qualitative and quantitative content analysis of local newspaper accounts are used as the research methods.

*Indian Youth, New Protest Movements and Social Media*

Protest movements have a good track record in both colonial and independent India. Youth are one of the important actors in such protest movements. On scanning the history of protest movements of Indian youth we find Naxalbari Movement, JP Movement (against the emergency rule imposed by the Central Government in 1975), Anti Reservation Movement (also known as Anti-Mandal Commission), All Assam Student Union (ASSU) as most important movements of

youth in India which have their impact on Indian Society. In the recent past, India has experienced Anti-Corruption Movement led by Anna Hazare in 2011 and Movement against Sexual Abuse and Rape of Young women after the Delhi gang rape case in 2012, in which young people have taken a lead. These movements were not only led by Indian youth but have great influence on Indian youth as well. Both the movements were different in nature from previous protest movements as they have used information technology and modern digital devices for various purposes. These two protest movements have used social media and mobile phone to a greater extent to mobilize the youth. The present paper examines the characteristics of these two protest movements and it tries to evaluate the dynamics of the movements and its methodology. The paper also explores the impact of these movements on youth in particular and Indian society in general.

##### *Youth Policy in India: A Dialogue Among Brics Partners*

More than one third of population in India falls under the category of youth and more than seventy percent population is below 35 years of age (0-35 years). Given to this age structure of Indian population it is quite reasonable to claim that India is a young country. This demographic bulge of youth is expected to continue till 2030. After noticing the rise in youth population from 1981 onwards, the Government of India has formally drafted a youth policy in 1988. It was revised in 2003 and recently in 2013. Focus of youth policy has been shifted gradually from development to empowerment of young people. The thrust of latest youth policy in India is to enhance the skills of young people so that they shall play the role of agents in the development process. The present paper examines the National Youth Policy in India with special reference to current youth development indicators. The present policies of Indian government for young people are examined to understand the socio-economic status of youth in India. A critical appraisal of youth policy in India informs us that there is still a big gap in educational and income opportunities between the upper caste youth, economically upper and middle class youth and the socially disadvantaged youth such as lower caste youth and economically lower income class youth. Finally, the paper also tries to develop a dialogue among BRICS partners with special reference to youth policies in their respective countries.

##### *The Role of Housing and the Neighborhood Environment on the Process of Social Exclusion/Inclusion: A Study with Reference to Sri Lankan Plantation Worker Community*

When the British colonials started the tea and rubber plantations in Sri Lanka, the local peasantry did not show interest to work as wage laborers. This led to the forced migration of a large number of South Indians to the plantations.

During the last 150 years, the economic, social and political context in plantations has changed drastically. The management of estates have changed hands from British companies to Sri Lankan government and then to local private companies. From the original position of stateless migrant laborers, the worker community has now achieved the citizenship of Sri Lanka.

However, the estate community remains alienated from the mainstream social, political, and economic life. The available quantitative data and the qualitative studies point out the strong socially excluded nature of the plantation community. Their production system, consumption patterns, educational attainments and other social development indicators confirm this status.

The community was originally provided with estate owned barrack type shelter called line rooms. Majority of the plantation workers still live in these compact and dilapidated housing units. The self help detached housing project implemented during the 1998-2004 period improved the living environment of around 14% families.

This empirical qualitative study carried out in a rubber estate located 40 km. to the south east of Colombo, investigates the role of housing condition on the social exclusion/ inclusion process of the community. It explains that the social stigma associated with line room environments strongly contribute to the socially excluded nature. The new detached shelters positively contribute to the social inclusion.

The study points out that the social capital of the community has a crucial link with the housing conditions. The families with strong bridging social capital have entered into the detached housing construction programme. It also shows that line rooms develop bonding capital and encourage social detachment.

##### *Gender and Higher Education in India*

The present review article seeks to probe into gender considerations and their implications for higher education in Indian context from cultural perspective. There appears to be fierce debate among the educationists and educational planners about the persistence or otherwise of gender bias, discrimination and the resultant gender inequalities in higher education in India. This article is an attempt to analyse and substantiate both the arguments based on supporting information available with various governmental and developmental agencies. Having analysed the debate in the light of contemporary social reality pertaining to the state and status of higher education and the major limitations and constraints in achieving the envisaged and aspired levels of expansion, excellence, quality and access for its inclusivity, the article reveals diverse ways in which gender considerations come to condition the statics and dynamics of higher education, including access, exclusion, distribution and composition and even the governance of institutions of higher education and the centres of excellence. An attempt is made to ascertain how the quantitative growth in women taking to higher education alone could be misleading and a misconception about the status of women's education without a corresponding change in the qualitative aspects such as relative importance and value of the courses in terms of opportunity for employment, importance of the sector that the courses offered can open for women, that is, the extent to which the higher education being accessed by women can empower them in true sense of the term.

##### *Intellectual Sexism: Gender Differentials in Academics*

Academics has emerged as a leading profession in India and there is increasing competition for academic positions. Higher education in India has witnessed phenomenal expansion since 1980s with establishment of large number of State and Central universities, Institutes of advanced studies, and numerous private and deemed universities. Pay are on par with other prestigious services in public and private sectors, rendering it highly sought after sectors of employment. It encompasses graded disciplines and positions with differential status, recognition and rewards. It is hypothesised that, distribution of academic positions and allocation of disciplines could be determined by the social forces and extraneous considerations among which gender is an important variable. The paper addresses this issue in the context of Indian universities in which the number of women faculty is on the steady rise in the last two decades. Data collected through interview of 362 women faculty members from 23 South Indian Universities reveals that, gender segregation of academic disciplines and positions are discernible with concentration of women academicians in soft disciplines as well as at lower academic positions. The hard core applied disciplines, being where the faculty could be more visible, receive more research grants, claim consultancy and patents have predominantly male faculty. Even in terms of cadre composition, the proportion of women faculty decreases with successive higher academic position. Study further reveals that, even among women academicians religion, caste and rural urban background are pertinent in determining the patterns of segregation subjecting women faculty to double discrimination.

##### *Meaningful Aging in the Middle of Nowhere: Community, Subjectivity, and the Elderly in Rural Japan*

By ethnographic research done in 2007, 2009-2010, and 2011, this paper illustrates the dreams and struggles of a group of aging residents in O town, a remote and depopulated town in Hokkaido, Japan. While they managed to pursue a better quality of senior life, their livelihoods have been largely damaged by the uneven geographical development under the neoliberal regime. The neoliberal regime has also created an urban ethics of entrepreneurialism that requires citizens to organize, operate, and assume the risk for business ventures. The entrepreneurial ethics has diffused in the countryside and formed a cultural hegemony that constricted the development of alternative ethics.

Working with members of a local organization "ODC," I found that the aging locals managed to encounter the rural predicament by searching for new meanings in their everyday lives. Members of the ODC have worked for 8 years on a project of local revitalization called the "Bochibochi Village" Project (BVP). The BVP aims to attract urban retirees to settle themselves in O town by offering a "slow living" lifestyle, cheap rent, and a communal farm. As voluntary helpers of the BVP, local residents introduced the newcomers to the natural surroundings and delicacies from mountain and sea. The ODC members expected the BVP to be a solution to the structural inequalities from which many rural towns in Japan have suffered for decades. In fact, the implementation of the BVP has created a "regime of living," a heterogeneous network that connects these newcomers to local livelihoods (e.g. fishery and dairy farm) and the ecological system of the surroundings. In other words, the BVP has created a new community that is deeply rooted in the local climate (*fūdo*). This community has provided both mental and material supports to

the participants who maintained their subjectivities against the ethics prescribed by entrepreneurialism.

#### *The Rise of Vernacular Capitalism: Neoliberalized Localities in Rural Japan*

This paper analyzes the formations of a unique mode of capital accumulation, vernacular capitalism, in contemporary Japan. The vernacular capitalism thrived on the basis of the uneven geographical development that dispossessed local cultures and resources to accumulate capital. Based on comprehensive survey of the literature and governmental documents, I claim that *chiiki* (region or locality), as a crucial motif of Japan's modernity, has been involved in the post-industrialization of Japanese society in which vernacular capitalism came into being. In the wake of neoliberal reforms, rural communities were forced to become entrepreneurs that creatively turn available cultural and natural resources into commodities to compete with each other in a cultural supermarket.

In this paper, I will first discuss the unique enthusiasm of consuming locality in contemporary Japan that implies a mode of accumulation through commodification of the local. To understand its political economic foundation, I will investigate the history of the five Comprehensive National Development Plans (CNDPs) to reveal how the state envisaged and managed localities in the postwar period of high economic growth. The transformation of CNDPs shows how Japan's strategy of rural governance has turned from "managerialism" to "entrepreneurialism" in the process of neoliberalization. That is, government collaborates with private capitals to form a "public-private partnership" for business ventures. Finally, I will delineate the strategies and struggles of rural communities under the neoliberal regime and how their efforts construct the substance of vernacular capitalism. In the conclusion, I will characterize vernacular capitalism with its four features: serendipity, entrepreneurial community, local branding, and the discursive complex of food, health, and environment. At the end, I argue that the inter-local competition brought by vernacular capitalism has become the major principle of rural governance in contemporary Japan. Although the competition pleased urban consumers, it caused new problems and challenges to rural communities.

#### *Behavior Homophily and The Dynamic Network Distance In A Combination Of Friendship and Antipathy Networks*

Studies have confirmed a strong tendency of behavior homophily in a social group. Prior research mainly focused on studying the association of a bunch of friendship network features and behaviors to confirm such tendency. However, interpersonal relationships are naturally managed in multiple ways, and social relationships change over time, same as individual's behaviors. Positive, high intimate friendship can play a significant effect on promoting behavior homophily; on the contrary, negative, low intimate antipathy relationship might downplay it. Thus, in this study, we, methodologically, recognize the necessity of change and multiplexity of relationship and behaviors to redefining the tendency of behavior homophily. Thereby, we aggregate structural network effects and transform them into an index of network distance from two opposed social relationships (i.e., friendship network and antipathy networks) in a longitudinal data to redefine the association of dynamic network distance in relationship multiplexity and group members' behavior homophily over time.

#### *Analyzing Public Attitudes Towards Sexual Assaults in Taiwan*

Analyzing Public Attitudes towards Sexual Assaults in Taiwan  
Sexual Assault

##### Abstract

Several laws and regulations concerning sexual assault have been passed in the last couple of decades in Taiwan. The meaning of sexual assault in the legal system has changed from offense of social morality to violation of sexual autonomy, emphasizing the importance of the consent of the involved individuals. However, the success of enforcing the reformed laws also depends on the awareness of the public about the law itself and meanings behind those stipulations. This paper utilized the data of Taiwan Social Change Survey conducted in 2011

to examine Taiwanese people's attitude towards sexual assault and study the discrepancy between those reactions and the newly-passed laws. The statistical findings show that most respondents agree punishing husbands forcing wives to have sex and teenagers having sexual behaviors. In contrast, there are clear variations about punishments against adults involved in sexual behaviors in the nature of ambiguous consent or power relations. Among socio-demographic variables, age stands out to have consistent effects on most attitudes. However subjective variables representing individual liberalism or protectionism are more important indicators than respondents' socio-demographic backgrounds. Taiwanese seem to uphold the ideas of "individual's consent" and "self-responsibility" more than the complexity of the power relationships and quid pro quo conditions embedded in sexual behaviors. These reactions differ from stipulations of the law. Thus it is difficult to conclude if feminism hinders or facilitates the progress of gender equality in Taiwan. We discuss the implications of the discrepancy between laws and attitudes of ordinary people in the last part of the paper.

#### *The Income Effect on Men and Women in East Asia*

The Income Effect on Men and Women in East Asia: Before and After the 2008 Financial Crisis

East Asian countries had known for having rapid economic growth as well as income equality during the development trajectory. The picture had become dismal in the late years of 2000 as income distribution had been favoring the rich in Korea and Taiwan. The real wages even declined in Taiwan since 2005. Globalization has made the world economies more vulnerable to external dynamics. East Asian countries are particular so as the international trade activities are crucial to the economic growth in the region. The 2008 Financial Crisis started in the U.S. and many Americans experienced immediate job and investments loss and mortgage foreclosures. In 2011 a later-on worldwide well-known Occupy Wall Street movement occurred and lasted for several months in New York City in the United States. People in other countries also experienced economic misfortunes caused by the Financial Crisis, such as Greece, Italy, Portuguese, and Spain. East Asia countries are no exceptions. The economic growth rates dropped and unemployment rate increased in Taiwan, Korea, and Japan in recent years. The author wishes to study the impact on labor income because of the financial crisis. This paper uses four waves of East Asian Social Survey (EASS), conducted in 2006, 2008, 2010, and 2012 respectively, to study the (possible) decline of work earnings in real values and the deterioration of income inequality in Japan, South Korea, and Taiwan. Specifically the paper explores if women workers suffered the most due to their vulnerabilities in labor markets, controlling for generational and class differences. Preliminary analyses show the increase of the proportions of labor in lower income categories and women being disadvantaged positions.

#### *The Increasing Role of Human Capital and the Decline of Institutional Factors in Shaping Occupation and Income Patterns in Market Reform: A Case Study of Five Factories in Dongguan, China*

This article examines social inequality among factory employees in different household registration (*hukou*) categories in a rapidly growing labor market, based on concepts drawn from both migration and market transition studies. The researcher uses survey data from five factories in Dongguan, a city on the southeast coast of China, to examine the determinants of factory employees' occupation and income. By distinguishing administrative staff and skilled workers from unskilled workers, an examination shows that rural households and individuals without political connections (but who are more educated) are increasingly competitive with urban households in the manufacturing sector. The results suggest the importance of individuals' manner and level of involvement in the labor market, in which the low entry requirement in the manufacturing sector reduces the influence of the *hukou* system and Communist Party membership on job recruitment.

#### *Charity and Social Exclusion in Taiwanese Education System for Disabled Students*

Under Special Education Act, no school is allowed to reject students with disabilities in Taiwan. Nevertheless, lack of accessible environment and assistants for disabled students are still common. To overcome the deficiency, Schools usually encourage parent, mostly mothers, to support their children's care needs in

school or ask classmates to be the "little angels" to support disabled students. This paper uses institutional ethnography to explore the social organizations of Taiwanese education system for disabled students and the experience of disabled students and. This paper will demonstrate that charity model in Taiwanese education institutions construct disabled students as "dependent" and "inferior." The discourse of charity will further marginalize and exclude disabled students in the regular classroom.

#### *Examining the Destination Effects on Immigrant Integration and Wellbeing: The Case of Vietnamese Marriage Migrants in Taiwan and South Korea*

Literature on international migration tends to focus on how migration impacts the sending or the receiving societies. Rarely have studies contrast the effects of different destinations on migrants, because of the difficulty obtaining comparable data and controlling the effects of origin. Depending on migrants' nationalities/ethnicities and different motivations for migration, destination effects that are significant to migrants' social integration and wellbeing range from country-specific economic conditions, regional cultural traditions, to socio-political policies. This paper uses mixed-methods to compare the integration experiences of Vietnamese Marriage Migrants (VMMs) who migrated to Taiwan and Korea for similar reasons and share similar sociodemographic backgrounds. Fifty-five qualitative interviews, four focus groups, and small-scale survey (N=403) were collected during 10-month field research. Other than the differences in Taiwanese and Korean societies' manner of organizing migration, preliminary analysis of qualitative data shows that three crucial factors determine VMMs' process of social integration and wellbeing in Taiwan and South Korea: (1) how their Confucian gender systems influence domestic women's social rights/roles/status and to what extents it applies to VMMs; (2) how these two societies fare in the regional and global economy, which affects the possibilities that VMMs achieve economic integration in the domestic labor markets; and (3) how national integration policies include marriage migrants of different ethnicities in reconstructing national identities, and specifically in addressing the integration of VMMs as they represent the largest migrant group without ethnic ties to the host societies. The paper ends with a discussion on how social welfare organizations and grassroots movements in Taiwan and South Korea may affect VMMs and other marriage migrants' integration and wellbeing in the long run. By untangling the effects of origin and destinations, this study suggests that policy adjustments can result in sustainable co-development for both the sending and receiving societies and improve migrant integration and wellbeing.

#### *Exploring the Role of Sport and Leisure in Lifestyle Migration Decision-Making: A Case Study of South Korean Migration to New Zealand*

Little is known about the key lifestyle factors involved in migration decision-making. According to Benson and O'Reilly (2009) and Benson (2010), lifestyle considerations, including sport and leisure participation, may play an important role in migration decisions. Yet, there is little explicit research examining the nature and extent to which sport and leisure play in lifestyle migration. Thus, this paper explores how both macro level social structures and micro level individual choices, influence lifestyle migration decisions of South Koreans moving to New Zealand. More specifically, the paper examines how South Korean migrants consider sport and leisure activities as factors within their lifestyle migration decision-making process. The findings highlight a variety of risk factors in South Korea which influenced migration including: (1) excessive competition and inequality (2) conflicts between North and South Korea, (3) obsession with education and (4) conflicts between traditional and contemporary values. As a result Koreans reflected on their lives with many realising that: (1) they could not live the (slow and leisurely) life they wanted; (2) they could not spend adequate time with their family; and, (3) they could not distinguish themselves from fellow Koreans who had similar social status and ability. Under such circumstances, South Korean migrants to New Zealand revealed that they were looking for a new/better/different lifestyle, and that sport and leisure activities played a role in the process of lifestyle migration decision-making.

#### *Parentocracy and the Life and Death of Secondary Education for All in Taiwan*

Since mid-1990s, the Taiwan government has implemented a populist educational policy, which was in fact initiated by the grassroots reform movement and aimed for "a universalized system of upper-secondary and higher education." After twenty years, the quasi-compulsory high school system is widely argued to have failed in carrying out its promise of equalizing educational opportunity among social classes.

While the "third wave" of Western educational development in late 20th century was characterized by an ideology of parentocracy promoted from top down, the current educational expansion in Taiwan has adopted, in contrast, an ideology of parentocracy formulated bottom up, i.e. from the liberalist citizens. Therefore, this paper provides a different point of view from that of Richard Pring's, according to whom secondary education for all is doomed to death due to a rigorous system of "testing." Specifically, it presents, first of all, a dialectic relationship between nationalism and individualism, and then, a corresponding relationship between the state's educational production mechanisms and the class-based parenting practices. Along these theoretical considerations, this paper analyzes how a civil ideology of educational parentocracy gave birth to the state policy of universalization of senior high school education (and college education as well), and how the former might lead the latter to such a dead end that marketization, accountability, and competition are all left in education. The author instantiates empirical research findings from Taiwan to support the argumentations formed in this paper.

#### *Ethnic Identity and Gender Differences Among Indigenous Youths in Two Single-Sex High Schools in Taiwan*

Many quantitative studies in Taiwan showed that indigenous youths owned high ethnic identity, but the relationship between ethnic identity and gender differences was not clear. Ethnic identity is constituted in every individual's living context, so it is necessary to explore the above findings in the individual context. In the article, the authors adopted ethnographic approach in two elite single-sex high schools from 2010 to 2012, and tried to explore the relationship between ethnic identity and gender differences, and to answer if gender differences existed and why they had differences through students' daily experiences.

The research found the boys outnumbered girls in strong indigenous identity, and there were more girls who were assimilated. The reasons were due to both of the cultural and school contexts. In the cultural context, boys belonged to the traditional age-set system in the community, and many cultural activities were still strongly relative to the age-sets. Therefore, boys had more opportunities or even obligations to participate in cultural affairs, and developed their ethnic identity through participation. Girls lacked formal social organizations traditionally, so girls expressed they felt they were like outsiders or visitors in the cultural activities. In the school context, a few indigenous teachers devoted themselves to indigenous education in the boys' school. Boys could share their cultural experiences in the formal or informal school activities, and they had more chances to get acquainted with other indigenous fellows. However, there were no indigenous teachers in the girls' school. There also were stricter rules in girls' behaviors, and girls' school life was usually restricted to their classes and academic studies. The results showed that the gender differences in ethnic identity were constituted by gender stereotypes and gender segregation in the patriarchy society.

#### *Confucianism and Discontents: The Repertoire of Disobeying in Recent Taiwan's Protests*

Confucianism is like a buzzword for the discussion of East Asia cultures. And yet people disagree on whether Confucianism is just a kind of state ideology, promoted by elites, or actual civil culture prevails in ordinary life. The paper thinks that the two layers of Confucianism can co-exist intertwinedly. In one level, where elite intellectuals are prominent, Confucianism exists as a body of systematic knowledge, philosophical ideas, and moral standard. In the civil level, it exists as if the underlying logic of people's daily practices, with an emphasis on folk wisdom and practical rationale, helping people manage their interactions and actions in daily life.

This paper will look at the relation between Confucianism, as state ideology and as civil belief, and the repertoire of protests. By repertoire, follow Charles Tilly's definition, an ensemble of contentious performances. This paper will study two particular kind of repertoires that have public's attention in recent social movements in Taiwan. One repertoire is *Guibai* or *Kwotou*, meaning to kneel down with one's forehead touching on the ground, and the other is throwing objects, like

eggs, animal wastes, and worn-off shoes at the high officials. *Guibai* and throwing objects all bring humiliation and embarrassment to the officials. However, *Guibai* does not violate the traditional Confucianism' notion of social order. How are the two possible reach the same meaning in protesting? How are their meanings being transformed in democracy and in the modern political system?

This paper will follow Tilly's methods to document the trend of repertoire changes in past ten years in Taiwan. I hope to demonstrate the repertoire changes can be understood in terms of rising discontents and the failure of institutional politics, and the ineptness of Confucianism to prescribe the norm in civil protests, and thus turned itself into political satire in streets.

**CHANG, PAUL\*** (Harvard University,  
[paulchang@fas.harvard.edu](mailto:paulchang@fas.harvard.edu))

*Repressive Coverage In An Authoritarian Context: Threat, Weakness and Legitimacy In South Korea's Democracy Movement*

While most studies on the repression-mobilization relationship have focused on the impact of the former on the latter, recent work has shown that characteristics of protest can influence state repression strategies. This article corroborates recent work on the repression of social movements and shows that both weak and threatening attributes of protest events contribute to the "repressive coverage" – the likelihood and severity of repression – of social movements in an authoritarian context. In addition, results from logistic regressions show that authoritarian states not only respond to weak status actors and situational threats but act strategically to repress social movements that challenge their political legitimacy. This article extends the scope of the repression-mobilization literature by differentiating the role of threat in eliciting repression in a non-Western democratic setting and showing the strategic dimension to the repressive behavior of authoritarian states.

[changshinock@gmail.com](mailto:changshinock@gmail.com))

*Global Environmental Change, Fishing Community Development, and Inequality: The Case of Jeju Island*

The paper aims at addressing unequal development of fishing community in Jeju Island, South Korea. For this aim the paper studies three fishing community associations in the island. The island's fishing community is a traditional livelihood unit consisting of fishers and women divers. The community forms along the coastal line of the island, which is about 200 kilometers long. It is organized with 100 fishing community associations (called *eochoongye* in Korean language), which are demarcated by regional, administrative boundaries. While the associations were established nationally drawing upon fishery law in 1962, the island's membership includes 12,994 individuals as of December 2011.

The unequal development of the fishing community in terms of economic output is conditioned by fishing ground difference. It is reported that fishing ground for each fishing community association differs in terms of geological characters and diversity in marine resources. Negative marine ecosystem change is an emerging factor that is likely to structure further development of the fishing community. The change has been visible particularly with stones along the coastal line having turned into white and unlivable for marine plants to grow on. The stones under the seawater are reported to exhibit the same problem. With plants being unable to grow, sea goods such as seashells and sea urchins which live upon the plants and women divers collect for their livelihood have significantly decreased. Fish has also disappeared with lack of sea plants they diet. While fishing activities by the community are getting challenged with negative marine environmental change, the activities are now increasingly turning into the objects for tourists' gaze and experiences. However the touristic development has not equally taken place across the associations. By looking into three fishing community associations, the paper clarifies unequal patterns in fishing community development in the global environmental change era.

[diean86@gmail.com](mailto:diean86@gmail.com))

*How the Higher Education Expansion Reproduce Class Inequality? the Case of Taiwan, 1976-2012*

The enrollment rate of higher education in Taiwan has approached 70%, which is one of the highest countries in the world. Did the harsh expansion of colleges improve class mobility of students? The findings show that though higher educational expansion generally provides more educational opportunities, the differentiation within the same educational level also appears; students from higher class have more opportunities to attend selective, cheap and prestigious public colleges, while lower class students only can enter higher-tuition and lower-rank-

ing private colleges. Besides, the enrollment rate of postgraduate schools has approached 26%, but the class inequality of students' background remains. The policy of higher educational expansion in Taiwan has not lessened the given class inequality, and even obscurely maintained the inequality. Engaging the literature on educational inequality and using data from the 1997-2012 waves of the Taiwan Social Change Survey, we posit Mixed-Effects Maintained Inequality hypothesis (M-EMI) and argue that both MMI and EMI hypotheses are supported during the process of higher educational expansion.

*Long-Term Effect of Parental Conflict and Parenting on Adolescent Health-Related Behavior Trajectory Patterns*

**Objectives:** To investigate health-related behavior developmental trajectory patterns in childhood to late adolescence and examine the long-term effect of parental conflict and parenting.

**Methods:** Data was obtained from the Child and Adolescent Behaviors in Long-term Evolution (CABLE) project. Participants included 1514 students followed from the 4<sup>th</sup> to 12<sup>nd</sup> grade (2001-2009) in Taiwan. Group-based trajectory model and multinomial logit model were mainly used in the statistical analysis.

**Results:** In 4<sup>th</sup>-12<sup>nd</sup> grade, four health-related behavior trajectory patterns were found among boys (n=776): persistently low(11.1%), low to medium(11.4%), medium and declining(39.4%), and persistently high(38.1%). There are also 4 but different patterns in girls (n=738): low and declining(12.3%), low to medium(24.7%), medium and declining(22.4%), and high and declining(40.7%). Parental conflict and parenting (parent-child interaction, parental support) in childhood had significant effect on the health-related behavior trajectory pattern in childhood to late adolescence.

**Conclusions:** Health lifestyle in childhood and adolescence usually persist to adulthood and difficult to change. In Taiwan, most students go to college after graduating from high school (10<sup>th</sup>-12<sup>nd</sup> grade). They have less time staying in family and living a more independent life, so making good health habits before going to college is important. We found four patterns of health-related behavior developmental trajectory in boys and girls. After controlling parents' socioeconomic and marital status, the long-term effect of parental conflict and parenting in childhood and early adolescence on adolescent health-related behavior trajectory still existed. Conflict with a spouse may let parents feel exhausted and invest less time to their children, thus fail to form health-related lifestyle. Based on our findings, we recommend that parents should give more support and parent-child interaction to help their children to form health lifestyle before they go into adulthood.

*Discourse Distortion in University Communication*

Universities are leaded to a world standardization of their activities, management and financing: the (non)-resistible construction of a unique higher education and research system. That construction is conducted under the slogan-keywords "autonomy", "new public management", "excellence", "modernity" while these words are contradictory with the reality they label. This distortion of language creates a bizarre newspeak, symptom of the double binds in which searchers, teachers and academic staffs are trapped.

The more significant double bind unites and opposes the ancient institutions, still legal and justifiable, with the new forms of organisation, management and evaluation to which the state supervision as well as the numerous "partners", in fact the new authorities enhancing new standards, constrain the academic authority to obey. This bizarre social discourse, mate of the neo-capitalistic re-framing of university, ratifies the path to extinction of university language. The paper will provide a description of some speech items and interactions specific of the new university communication.

#### *Employment Standards and Their Enforcement In Australia: Successes and Challenges In a Time Of Transition*

Over the last six years, the Fair Work Ombudsman (FWO) and its predecessors have revolutionized regulatory enforcement of employment standards in Australia. Historically, minimum standards were enforced by trade unions and relatively under-resourced labour inspectorates at the State and federal levels. Through its active, targeted detection and enforcement strategies, the FWO has been a highly visible presence in the labour market, and trade unions continue to play an enforcement role in certain industries and sectors. Nevertheless, there are areas of the labour market where both employment standards and their enforcement are inadequate, with aged care a case in point. While there has been some limited activity by the FWO in this sector, in community-based aged care, in particular, inadequate government funding works to limit the improvement of minimum employment standards and provides some pressure on employers to 'read down' existing entitlements. At the same time workers may be reluctant to insist on their rights - often because they are working with more vulnerable people than themselves. This paper will explore these challenges to effective employment standards enforcement with reference to the example of home care workers in the aged care industry.

#### *Transforming the Indigenous Farming Villages: What the Reform Policy for Food Security Brought to Their Sovereignties*

Global and national level concerns over food security challenge the farming life of the indigenous communities. This paper presents a qualitative study of three indigenous villages in western forest of Thailand. The indigenous Karen people have faced conflicts with the governmental official over the access to farming land in protected areas. Land used to produce their own food is a key concern for the Karen and security means availability, access, and use for a stable food production. On the other hand, the Thai national economic policies have driven agriculture into intensive farming, relying on chemical inputs and high technology. How did the indigenous Karen's community level reforms take place and increase availability, access, and use of the food? How did the stability of food production change over time at local level? Did the transformation bring fairness to the life of the indigenous community? Analyses reveal that small farmers like the indigenous Karen have shifted from a diversity of food for household consumption to cash crops. These agricultural producers face uncontrolled factors, such as costs of fertilizer, pesticide, land rent and market prices. Ironically today they sell their cash crops and must purchase low quality food at high market prices. My findings suggest that subsistence crops were thus destroyed by market mechanisms and local, regional and global policies. For the indigenous farmers, food sovereignty is the main topic in their negotiation with policy makers. I argue that food sovereignty and organic farming can only succeed with the full support from indigenous community. This research provides a critical perspective to such global-market-driven policies without concerns for negative impacts on the indigenous community for the purpose of simply increasing the amount of food production.

#### *Lack of Nostalgia Among Thai Marriage Migrants in the UK: A Gendered-Class Explanation*

Abstract  
**Lack of nostalgia among Thai marriage migrants in the UK: a gendered-class explanation**  
Chantanee Charoensri

Lecturer in Sociology  
Thammasat University  
Bangkok, Thailand

By the year 2000, a high percentage of Thai migrants to the UK, and maybe elsewhere in the world, are women. Among these, the number of women who migrated by means of marriage to local men is growing. This paper wants to show that whilst it is true that inter-regional inequality and socio-cultural factors, such as, gender equality, civic political culture and lifestyles do contribute to the overwhelming female emigration from Thailand; they are not enough to capture the heart of this trend. Supported by ethnographic data gathered in the UK between the year 2006-2010, I want to argue that this newly mass of Thai marriage migrants are pushed partly by their gendered-class experiences as rural Thai women of lower class. These experiences attribute to their migration understood from their point-of-view as an escape from class disrespect, isolation and relative deprivation. This structured experience also explains as to why their transnational attachment to Thailand is restricted to the women relatives in their hometown, whilst cultural attachment to their home country in general, displayed, for example, through nostalgia or the sense of belonging for the distant home; are missing.

#### *Biological Time, Social Time: For a Recognition Of The Concept Of "Biosociological Time"*

The purpose of this paper is to offer some reflections on the concept of "Biosociological Time", built in the course of my research on the variety of family. This concept is undoubtedly one of the major theoretical issue to explain families' trajectories. Through this concept, a new apprehension and understanding of social phenomena is proposed. It should open reflections on the role of the time as a link, a space of transition and a place of linking and unlinking. I am interested in the study of biological and social time through their interplay, while theories rather insist on their disjunction. The opposition between these two time scales is reminiscent of the one raised by Elias between "Individual and Society" and "Nature and Society" (1991). Like him, I think that "we cannot develop a theory of [...] human activity" regardless of how "the body is built and how it works", because at the end, "control of nature, social control and individual control form a sort of circular chain [...] [in the heart of which] no element can develop without the other." The time is then fabric of community life, as well as individual lives. It is this power of synthesis that allows lives to be lived and recognized in the common duration and the collective existence. Developing my reflection in reference to my precedent research, I will outline some proposals for future researches that should allow accumulating materials that will build this concept while proving its theoretical fertility.

#### *Contraceptive Sterilization: A Rational Choice?*

The rapid spread of medical contraception and new reproductive technologies in Western countries complete the process of separation between sexuality and procreation started in the early 20th century. It also contributes to strengthen the body sex medicalization, conceptualized by Foucault in terms of Biopower. Contraceptive sterilization is one of the links in this process, affording the opportunity to heterosexual individuals and couples to live sexuality without any risk of pregnancy and contraceptive contingency. The use of voluntary suppression of its reproductive potential is also involved in a rationalization of the reproductive and family life and recognition of a non-reproductive sexuality. In the context of this communication, we will question the notion of rational choice associated to the use of contraceptive sterilization in comparing Canada (Quebec) and France, two countries with very different contraceptive practices. If in Canada, the use of sterilization is the preferred method of those who no longer wish an additional child, in France, this kind of contraceptive choice remains marginal. So we will first analyze the motivations that led men and women in Canada and France to choose sterilization as a contraceptive method. Then we will look at the impact of this intervention on the representations and sexual behavior of sterilized people. These comparative analyzes will focus on interviews in Canada and France, between 2005 and 2007, with thirty-five women and men sterilized. While showing the influence of socio-cultural contexts in the decision to use sterilization, they will show how this intervention on the body can be chosen under the guise of family responsibilities and a family ideal, strengthening thereby a normative vi-

sion of family. In definitive, this paper will allow addressing the role of social and gender constraints underlying choices of sterilization and question the concept of rationality.

### *Big Data in Indian Social Context: A Case Study of Aadhar*

In the history of Indian society, the era of big data has commenced. The data is not from secondary sources but the source is the 1.2 billion citizens themselves in face to face situation. Collection and analysis of biometric identification of each and every one is creating a repository. This Big data is an attempt to convert Indian society into a system under constant observation of the government; which would have future use for the state, the non-government, the corporate, the media, political parties and the academic researchers. India is a highly diversified and unequal society where more than 70% people are living in villages, more illiterate than literate, the majority of urban population is in unorganized occupations and rural communities are engaged in agriculture and artisanship.

This paper attempts to explain the process and the problems of the big data through a case study of Aadhar. The project at the moment is generating massive amounts of data popularly called the Unique Identity Card or 'Aadhar' literally meaning 'the base'.

Through an analysis of secondary data, mostly from media, regarding Aadhar, the paper explores the future of this unprecedented social statistical exercise. Given the massiveness, even with pitfalls that are inbuilt into collecting, recording and distributing the social data in a society like India, the paper concludes that the identity of Indians so brought online in government records would impact the future of the democratic functioning. The marginal and traditionally deprived sections including women would hopefully be participating in their life activities and life stakes consciously with a defined identity. But a question is raised that continuous updating and revising the data, even if the collection is on, would result into sophisticated statistical tools and new patterns of citizen behavior may emerge.

### *Capabilities Approach for Educating Women --- a Flyover 'Mooc'*

Capabilities Approach for Educating Women --- A Flyover 'MOOC' Enabling of women is an extremely delayed and stuck in many cultures because of the gross inadequacy or lack of education - education in class rooms (training of skills and knowledge) onsite has traditionally and currently been monopoly of men because of the lags structured by the gender construct in underdeveloped and developing societies. Several experiments by government and non-government agencies including pedagogy of capability building have been tried and despite genuineness, failed. On site education in the West (USA and UK included) is becoming exceedingly costly beyond the reach of the middle classes. Student loan is critical; the institutions departing higher education have raised their fee. Media reports indicate that the phenomenon of deserted campus is a matter of time. To overcome this enrollment crisis the regular institutions are opening up for MOOC. This paper is an attempt to find out the possibility and description of a fly over through which the migration of education through MOOC can be targeted to the women in hinterland, to underdeveloped and developing regions and contribute inculcating capabilities among them. Such capabilities will have their usefulness being global and to mainstreaming the women population and finally making them self dependent. This should not be left alone to busy colleges and universities as there is no reason for them to do capability building among the needy. A fly over the busy paths of education is required which a two pronged sponsorship with the government and women organization as co-participants in MOOC to combine 'functioning' with social policy with emphasis on local change and deconstructing

the gender inequality through educating women such content which would help make them capable and dignified. Ishita Chaturvedi, Manjeet Chaturvedi

### *Impact of Leisure on Quality of Life and Social Development: Reflection on Urban India*

Quality of life has been vital for social development of a community. Earlier it was economic development, now it is a social development with better quality of life. Today, quality of life include safe existence, healthy life, non exploitative free thinking and good education with awareness and of course good and quality leisure. The creative utilization of leisure has been crucial to social development. Urban India has been accustomed with leisure in various manners. Traditionally people took pleasure in performing rituals, meeting kin and relatives or going for a pilgrimage. Of late things have changed. People have started combining leisure with pilgrimage, kinship with pilgrimage and so on. The present paper analyses a few cases taken in this regard in the City of Lucknow. It is clearly pointing out to the fact are in urban India the affluent section have more opportunity for creative utilization of leisure but in practice they do not avail it, whereas, the lower strata neither have avenues nor have financial support for creative utilization of leisure because they lack an average quality of life.

### *Health Care Equity In Taiwan: How Are Medical Schools Educating Future Doctors?*

Towards the end of the 20<sup>th</sup> century, the island nation of Taiwan had substantial gaps in health insurance and close to 50% of the population had little or no access to healthcare. Today, close to 100% of Taiwan's 23 million population enjoys almost free access to health care with no waiting lines, and National Health Insurance (NHI), a public insurance system administered by a single entity - the Bureau of National Health Insurance -- has a satisfaction rate of over 70% and is strongly supported across the political spectrum. The democratization of health care in Taiwan, the result of a decades-long process culminating in 1995 with the passage of NHI, contributed significantly to health equity by reducing utilization rate differences and morbidity and mortality differences for conditions preventable through the administration of medical care. However, no efforts were made to change the training or societal role of physicians to produce a professional type better suited to the new model of health care premised on egalitarian principles. Curricular changes are currently underway to overcome these deficiencies and strengthen medical students' grounding in humanistic principles. Whether these changes are also educating future physicians in an ethic of service that prepares them to contribute to Taiwan's commitment to health care equity is unclear. The goal of this pilot exploratory study is to understand how the medical school curriculum contributes to the good 'fit' of future medical professionals with an egalitarian system of care and to identify challenges to this fit. We explore what motivates students to pursue a career in medicine, how medical education shapes their initial motivation, and how consistent are their evolving goals and professional identities with Taiwan's conception of health care as a right. Our presentation discusses preliminary results of this ongoing investigation.

### *Dalit Feminist Theory: A Challenge to Multiple Hierarchies in India*

The early nineteen nineties in India saw the assertion of autonomous Dalit women's organizations both at the national as well as the regional levels, throwing up crucial theoretical and political challenges. The demands by Dalit, tribal and other lower-caste women were made for inclusion of their concerns in the mainstream politics as well as for analysis of the gender relations that are inflicted by the multiple and overlapping hierarchies in the form of caste, class and patriarchy. A significant shift in the feminist thought of the 1980s and 1990s at the international level was the increasing visibility of Black and Third World feminist work which stimulated and renewed national debate in India about the politics of caste following the implementation of contentious Mandal Commission report in 1989. At this time, the focus on caste acquired a new meaning in gender studies with the realization that within patriarchal male domination, caste-based mechanisms of oppression needed to be addressed in a more systematic and meaningful way and through Dalit women's own accounts of their experiences. This concern can be visualized in the contemporary democratic upsurge and the awakening of the

self-consciousness of oppressed women backed by the growing critical feminist theoretical and ideological paradigms of protest and resistance. This paper argues that Dalit feminist theory from the Global South (India in particular), like similar theories in the world, forms an important addition to the feminist theories as it challenges the multiple hierarchies that critically impact gender relations.

#### *Work, Family and Agricultural Economy: Changing Gender Relations in Northwest India*

In rural India, the percentage of women who depend on agriculture for their livelihood is as high as 84 percent. Women make up about 33 percent of cultivators and about 47 percent of agricultural labourers. Their work in agricultural economy in Northwest region of India has been indispensable. However, since a long period of time it was treated as insignificant, invisible and unrecognized as it was regarded as a mere extension of women's domestic work comprising of subsistence economy. It was the effort of women's organizations and other agencies in the 1980s and 1990s that women's subsistence work in agricultural economy began to be 'quantified' and 'counted'. This also led to the increase in women's 'work participation rate' substantially. Beyond this, it was realized that though women contributed significantly to agricultural economy, their control over resources remained marginal. Critical resources such as land were also unevenly distributed by gender. Women seldom enjoyed property ownership rights directly in their names. Given this scenario, their participation in agricultural work of various kinds affected gender relations within the family and kin groups. In the present times significant changes are witnessed due to globalization as this part of Northwest India is rich in world famous basmati rice. Many migrants, including women also come to this area during peak season. This paper examines the impact of agricultural work on gender relations within the family and the changes in them due to the process of globalization in Jammu region of Northwest India. The intersectionality of caste and class is also taken into account as most of these women belong to lower castes and poorer families.

#### *Professionalization of Medicine in India: Competing Systems in the Era of Globalization*

The paper attempts to examine the nature and development of the process of professionalization of medicine in India in the era of globalization. It also assesses the people's response to various forms of competing medical systems. The paper is divided into five parts like the following: (i) introduction; (ii) professionalization of medicine in India: an historical perspective; (iii) re-emergence of earlier existing systems and the case for alternative medicines; (iv) people's selective and careful response to different systems of medicine; and (v) conclusion. The professionalization of medicine especially the allopathic medicine started during the British rule in India, challenging the then existing systems of medicine like Ayurveda and Unani. But Allopathy succeeded in establishing its supremacy over all the other existing systems- making inroads in urban as well as in rural areas. The setting up of the AIIMS at New Delhi and decades later at a few other places like Bhopal have been the significant development to protect the people of India from some chronic diseases.

On the other hand the hitherto under-represented systems of medicine like the Ayurvedic, Homeopathy and Unani have also made a comeback, of course with the support of the government, under the umbrella term called AYUSH. India has seen a sort of re-emergence of these alternative systems of medicine with the support of various governments and thus acquiring legitimacy in the process. The patients have given a careful and selective response while going for their treatment under these competing systems of medicine for various diseases. The patients have skillfully combined and tried more than one system of medicine for the treatment of the same diseases.

#### *The Use of Internet and Youth Behavior ( With Special Reference to India)*

**The use of Internet and Youth Behaviour (With Special Reference to India)**  
The paper aims to understand and examine the relationship between the use of internet and youth behaviour. The paper is divided into six parts like the following: (i) introduction; (ii) the use of internet and the theory of gratification; (iii) the use of internet and the widening world ; (iv) the use of internet and other systems of communication ; (v) internet and youth behaviour

**in India-an analysis; and (vi) conclusions.** In the globalizing world today the social scientists have found gratification as one of the important reasons for the use of internet. The conceptual and theoretical relevance of the notion of gratification has been found as different in the Indian society in comparison to the western societies. Some of the important conclusions have also been discussed towards the end of the paper, these are like the following: (i) the use of internet has had its impact on the cultural behaviour of the youth preferring the new relationship than kinship relations; (ii) in India instead of seeking gratification the youth has found internet as useful for their studies; (iii) the use of internet has developed a sense of freedom among the youth; (iv) the youth has been able to combine the use of internet with their mobile phones and (v) it has been found as useful for purchasing books, laptops, different softwares and seeking admissions to different universities in India and the world.

#### *A Globalization of Extremes: The Middle Classes Facing the Return of Pareto Distributions and Power-Laws*

We are primarily taught that Quetelet's normal distribution is the key of social knowledge. This could be true for the middle classes but in the sociology of the top end of the economic distribution, this is entirely wrong: wherever the concentration of socioeconomic power is observed, the Gauss distribution gives no appropriate representation and the Gibrat's log-normal as well. This is more than statistical laws but the heart of the sociology of extreme classes where extreme values are outrageously overrepresented. CEO's compensation, wealth accumulation, position in the hierarchy of internet and fame, scientific quotations follow extreme distribution shapes. This is the realm of the Extreme value theory related also to advantage that go with the "Matthew effect" (the rich get richer and the poor get poorer) typical of hoarding processes on scarce resources. These processes going with the Pareto curve mean that the logarithm of the gains is inversely proportional to the logarithm of the rank in the hierarchy.

In the sociology of extreme classes, the Pareto law and power tail distributions are vital for representation of functioning of elite categories, of wealth concentration, accumulation and transmission. In the old industrial world, where old money (i.e. family wealth) is a central source of power, the normal distributions fail in the explanation of family structures functioning, assertive mating, homogamy, and economic power transmission. Here, the Extreme value theory reveals new realities. At the top we detect extreme concentration of wealth, ab-normal social behavior, including over-homogamy, or massive participation in the political sphere.

Today, the global emergence of an extreme class means the destabilization of the Quetelet based "Golden Age middle class" and of the "wage earner middle class based society" and the expansion of the Pareto based wealthy-power-elite as a global re-emergence of the model of the European Belle Époque capitalism.

#### *Static and Dynamic Inequalities in Europe: Intergenerational Mobility and Income Inequalities*

Although static inequalities and dynamic inequality have long-standing tradition in economics and social sciences, only few studies are devoted to the analysis of both dimensions simultaneously, especially in a comparative perspective. McCall and Percheski concluded recently that "the precise social and economic mechanisms underlying the relationship between income inequality and intergenerational immobility [...] are not well understood, and changes over the period of rising income inequality have been difficult to estimate precisely" (2010: 339). This paper aims at contributing to this gap by testing if the so-called Great Gatsby curve from recent economic literature (Corak 2013) - displaying the macro relation of (a) income inequality for different countries by the Gini coefficient on the x axis and (b) the generational earnings elasticity, i.e. the degree to which (dis)advantages are "inherited" over generations, on the y axis - can also be applied to sociological conceptualisations of intergenerational mobility, i.e. occupational mobility. We believe moreover that mobility patterns differ for the bottom and the top of the parental income range and examine these thus separately.

Our empirical contribution lies in the comparative analysis of 20 European countries based on the most recent 2011 module on intergenerational transmission of disadvantages of the EU Survey on Income and Living Conditions (EU-SILC). In this way, we are able to construct indicators of dynamic inequality and analyzing static inequalities at the same time (shares of incomes, percentile ratios and summary statistics of inequality). Whereas the first shows the fluidity of a society reflecting the mobility over generations (intergenerational mobility), the latter shows the socio-economic inequality at a particular point of time (hierarchy). We

investigate different dimensions of intergenerational mobility: the transmission of education, of occupational status/social class and of (simulated) income (ranks).

**CHAUVIN, SÉBASTIEN\*** (University of Amsterdam,  
[chauvin@uva.nl](mailto:chauvin@uva.nl))

#### *Carnal Framings: Race, Class and Crisis in a Multi-Ethnic Labor Group*

This paper uses in-depth ethnography to investigate the internal emotional effects of frame shift within a multi-ethnic labor-rights organization in the United States. The brief historical window opened by the 2006 national movement of coordinated mass street protests for immigration reform generated a sudden change in the discursive opportunity structure facing the group in this study, a Chicago-based worker center organizing agency day laborers. Whereas the group had previously made the "day labor worker" its central mobilizing figure, it was now enrolling day laborers of multiple backgrounds into the pressing fight for migrant rights. The shift was exacerbated by a political trip to Washington where the group almost exploded along ethno-racial lines. As the giant migrant marches had generated huge hopes among many activists and organizers concerned with reinvigorating progressive movements, a new immigrant-centered discourse threatened to dispossess black members of their implicit but traditional centrality within inner city organizations for which immigration had not previously been a theme of choice. That frame shift rather than job competition, ethnoracial animosity or organizational diversity, primarily accounted for the suddenly exacerbated cleavages within the group. Based on extensive participant observation both in day-labor agencies and in the worker center, this study illustrates the discursive conditions under which emotions can travel from the sphere of employment to that of protest. It emphasizes the multi-scalar layers of material, symbolic, linguistic, emotional and bodily contexts that give frames and frame shifts their political potency and intimate significance for the actors involved. It calls for further recognition of the carnality and multiple embeddedness of collective action frames, which matter to social movements not only for their external performance, but also for their internal cohesion.

#### *Moral discourses in medical travel*

Recent works that highlight the embodied aspect of medical travel have drawn on the conceptual frameworks of affect and authenticity. This paper will contribute to this line of works by drawing on interviews with medical travellers for cardiac procedures (to treat potentially life threatening conditions) and orthopaedic surgeries (for chronic and disabling but not life threatening conditions) in two Malaysian hospitals. I will focus on the discourse of moralities of these international patients in their experience of what is 'good' or 'bad' (and why it may be so) in their medical travel experiences. As juxtaposition, I will also draw from interviews with international travel intermediaries as well as hospital staff who have direct interactions with patients. The different discourses will be examined in order to tease out the tensions and collusions between (possibly) different sets of moralities, and to uncover the unspoken 'rules and regulations' that govern practices in medical travel.

**CHELLAN, NOEL\*** (University of KwaZulu-Natal,  
[chellan@ukzn.ac.za](mailto:chellan@ukzn.ac.za))

#### *Historical Formation Of Social and Economic Inequalities In South Africa – A Marxist Perspective*

Twenty years after South Africa achieved a democratic dispensation, it is still one of the most unequal societies in the world. Twenty-first century South Africa is still characterised by high levels of poverty, crime, HIV/AIDs, social and cultural racial polarisation, large volumes of economic wealth and land in the hands of the few, rampant corruption in both the private and public sector and high unemployment levels. August 2012 witnessed the black government of South Africa shoot and kill 34 striking miners in the township of Marikana. Whilst the relatively new democratic dispensation has delivered many new freedoms for the people of South Africa, the legacy of colonialism and apartheid is still evident in many spheres of South African life. For many decades South Africa's gigantic problems have been largely attributed to racial intolerance and antagonism. Whilst race has been a major factor in deciding the haves and the have nots of South African society, this paper argues that a Marxist analysis of South Africa is the most appropriate conceptual framework in which to truly understand the unequal nature of South Africa and more importantly to chart a way forward for a more equal and just South Africa.

#### *Body, Work and (gay) Desire: Unpacking Taiwanese Male Gay Masseurs' Labor Practices in Intimate and Sexualized High-Touch Services*

This study examines Taiwanese gay male masseurs and their labor practices in (sexualized) service industry. Specifically, it unpacks the intersection between body, work and un-controllable (male gay) desire embedded in the labor practice. Drawing upon in-depth interviews with 15 gay male masseurs, this paper focuses on the following three facets. First, it explores variation in the performance of intimate labor caused by the intersection of the sexualized service work with the racialized and classed specific service expectations of diverse customers. Through clients/masseurs interactions, we identify how social inequalities intersect with each other and how their intersection changes what they are. Second, the body/work relationship in massage parlors will be examined, paying particular attention to the "shadow-work" of employees and forms of aesthetic labor they embodied. By understanding how aesthetic labors are differently performed, we examine the extent to which gay male masseurs' constructions of work identities are (not) regulated by homo/heteronormativity. Third, this paper examines how labor practice in erotic service is complicated by the production of desiring labor, exploring how gay male masseurs construct and/or distance their sexualities from servicing the bodies of others. Through desire/work relationship experienced by masseurs we sketch out how the boundaries between intimacy and the commerce of sex and between public and private life are redrawn. This study hopes to provide insight into not only the importance of embodiment for current understandings of work but also the centrality of (gay) desire for the study of intimate and sexualized high-touch serving work.

#### *Women's (no) Naming Right Under the Shadow of Patronymy: A Study of Law and Social Change in Taiwan*

Patronymy is part of the cultural, social and legal mechanism of male supremacy, and a denial of women's equal right to name the child. In Taiwan, patronymy is a long-lasting tradition reflected in and constituted by the law, as the old children's surname law mandated that, with limited exceptions, all children shall assume their fathers' surname. The law was revised in 2007, which stipulates that children's surname shall be decided through parental agreement. This legislation is considered a hard-win success for women's equal rights, but the practices of it turned out to be a disappointment. Since the law came into effect, approximately only 1.54% of all newborns were given the mother's surname through parental agreement. Does this fact suggest that people's attitude toward surnaming remain unchanged irrespective of the change of law? Can legal reform promote women's naming right, or does it mostly function to reinforce patronymy?

We use data from the 2002 and 2012 Taiwan Social Change Survey to answer these questions. Our study finds that significant changes have occurred in people's attitudes toward children's surnaming. The change in people's attitudes, however, does not translate into the change of actions. We have identified double gaps -- gap between people's *attitude in general* and *behavior intention*, and gap between *behavior intention* and *actual action taken*. We also notice gender, marital and parental status, and gender equality consciousness differences in people's attitude, and identify the profile of people who might benefit from the new children's surname law. Our study leads to the conclusion that a liberal children's surname law might be accompanied by a positive change in people's attitude toward children's surnaming, but cannot actively promote women's equal right to name the child.

[cqy8@faculty.pccu.edu.tw](mailto:cqy8@faculty.pccu.edu.tw))

#### *A Study Showing Research Has Been Valued over Teaching in Higher Education Based on the Theories of Neoliberalism and Academic Capitalism*

Research has been valued and given priority over teaching for a long time in academia. In recent decades, the Taiwanese Ministry of Education has pursued objective and quantitative research criteria and has encouraged higher education institutions to ask teachers to publish papers in SSCI or SCI journals as part of the criteria for promotion and evaluation. This policy strengthens the concept that research has priority over teaching because teachers must devote more time to research than to teaching in order to be promoted and evaluated.

The purpose of this study is to explore the influences that cause teachers to value research over teaching. To achieve this purpose, the study will apply document analysis and questionnaire inquiry as research methodology. First of all, the study will collect and analyze the documents for teacher promotion and evaluation of ten different universities. In order to collect the differing requirements of the reward system in different areas, these ten universities' areas of specialty include general studies, education, medicine, vocational studies, and arts. Then, the study will use questionnaires to collect teachers' opinions of task priority and the time involved on research and teaching duties. The data collected from the above two methods will be analyzed and discussed based on the theory of Neoliberalism and the regime of Academic Capitalism. Some suggestions will be proposed according to the results.

#### *Buddhism in Taiwan Under Globalization: Diversity and Hybridity*

Taiwan's Buddhism has undergone significant transformations since late 1980s. Globalization has played an important role on the new constellation of Buddhism in Taiwan. In addition to the mainstream and local Chinese Buddhism, other traditions of Buddhism from the Tibet, Southeast Asian countries, and Japan have also established numerous centers and attracted many Taiwanese followers. Globalization has thus brought diversity and hybridity to Taiwan's Buddhism. In my paper, I will explore this phenomenon of Buddhism in contemporary Taiwan. I will adopt Nattier's (1998) classification of religious cross-country transmission as the analytical framework to identify how foreign traditions of Buddhism have been transported to and practiced in Taiwan. Then, I will investigate how these foreign traditions of Buddhism have influenced the landscaping of Taiwan's Buddhism. Finally, I will inspect how Taiwanese monks and nuns respond to these newly coming traditions of Buddhism, which shares some common teachings and practices with the local tradition but differ from one another in certain teachings and practices. In sum, Taiwan's recent transformations of Buddhism provide an interesting case for understanding the interactions among different traditions of Buddhism and its effects on the behavior of local tradition as well as local believers in the age of globalization.

#### *Justice and Claims in Popular Protests in China*

This paper studies the conceptions of justice in growing social protests in China. It examines claims made in popular protests, relying on a news database the author collected and constructed, with more than 3,000 mass protest events in 2000-13. It first describes the trend and characteristics of popular protests in contemporary China, and examines the protesters' notions of justice by analyzing claims raised in popular protests. Specifically, this study finds in urban China the biggest category of protest claims focused on income-related issues, accounting for about half of all protest claims. The other major protest claims included administration issues (e.g., government misconduct, specific government policy or regulations), rights issues (e.g., forced evictions, environmental issues, and student rights), and incidental events. In the rural areas the most important issue that emerged in the early 2000s and accelerated after the mid-2000s was linked to land seizures in suburban villages where local cadres underpaid or embezzled compensations due to peasants for the seizure of their lands. The second confrontational rural issue related to local government misconduct and cadres' corruption, followed by rights issues such as forced eviction, pollution and environmental protection, and so on. Then this study shows which factors were related to different protest claims in urban cities and rural villages, and discuss how protesters' notions of justice have affected their claiming choices and protest tactics.

#### *Cumulative Risk/CR and Developmental Outcomes Among Youths in High-Risk Families: Results from a Nationally Representative Taiwan Sample*

Comparing to single risk, multiple risks are more likely to increase Western children's adjustment problems. CR model has been used to understand the influence of multiple risks on children's development because of its theoretical importance and parsimony. However, there is no consistent finding regarding whether the CR has "linear (additive)" or "threshold effect (curvilinear)". Moreover, little research examines the associations between CR and different developmental domains for high-risk youths; far few studies test the moderating effect of eth-

nicity. This study addressed these issues by using data from an ongoing nationally representative Taiwanese youths sample (n=18831).

CR was created by 8 variables measuring different aspects of family risks. OLS regression models with gender, ethnicity, and Squared CR as independent variables were applied for each of two outcome variables (i.e. academic performance for delinquent outcomes). The findings support a linear model (Squared CR coef.=0.01, p=0.07 for academy model, coef.=0.001, p=0.92 for delinquency model) indicating those who experience more risks are more likely to develop negative outcomes. With one exception, a single risk as well as CR predicted both outcomes. The risk factor, losing someone during the great earthquake, only predicts academic performance but not delinquency. Moreover, with one exception, the effect of CR is similar across ethnic groups. The effect of CR on academic performance is lower among aboriginal Taiwanese comparing to the reference group, Minnan (coef.=0.11, p=0.02).

Although more research is needed to better understand the difference between aboriginal Taiwanese and Minnan, the research findings confirm the linear CR model, highlight the influence of CR on youths' academic and behavior outcomes and suggest potential differences among ethnic groups. Findings also support the comprehensive prevention for youths in high-risk families, particularly those experiencing multiple risks.

**WANG, WEI-PANG** (Tunghai University)

#### *Gendered Differences on the Attitudes and Solutions Toward Extramarital Sex in Taiwan*

Although it is commonly claimed that women's status are greatly improved and women's rights are well-protected in Taiwan, extramarital sex (EMS) is criminalized in Taiwan. Taiwan indeed is one of the few countries in the world that still keep adultery in its criminal law. Moreover, the campaign on decriminalization of adultery launched by Awakening Foundation is facing tremendous challenges from some other women's organizations and ordinary women in general. The debate to some extent is considered as 'women's war' (i.e. the war between the first wife and the 'other woman'), and men who engage in EMS are hardly problematized.

Using the data drawn from the 2002 and 2012 Gender Module of the *Taiwan Social Change Survey* (TSCS), this research intends to elaborate the gender differences on the attitudes and solutions toward extramarital sexual permissiveness in Taiwan. The following questions will be thoroughly investigated: (1) Do men and women differ in the tolerance of EMS in Taiwan? (2) Do gender differences in social-demographic characteristics and views toward gender equality explain some of the gender differences in the attitudes toward EMS? (3) Do men and women adopt different solving approach (such as compromise, consultation, or confrontation) when he or she found out that a marital partner was having an extramarital affair with someone else? (4) Whether the EMS-related attitudes and patterns change over the past decade in Taiwan. With the scrutiny of these questions, this research is not only able to establish the extensive understandings of EMS-related patterns but also able to examine whether the 'revealing intimacy' argued by Giddens (1992) exists in current Taiwan.

[mc153@mail.nsysu.edu.tw](mailto:mc153@mail.nsysu.edu.tw))

#### *Gendered Sexual Migration Across Taiwan Strait*

Globalization and the uneven development of global economy accelerated both transnational commercial sex and global sex tourism. Since late 1987 when Taiwan lifted martial law (1949-1987), every year there have been thousands of Chinese women coming to Taiwan either as marital migrants or undocumented workers, to seek a better life in a relatively richer and freer Taiwan. On the other hand, as a rising economic power in East Asia, Taiwan once served as a destination of sex tourism, now gradually appears as a sending country of sex tourists. Geographical closeness and cultural intimacy in terms of language and Han-ethnicity have served to turn China into a hot sex tourism destination for Taiwanese men.

Based on six years' empirical research on (undocumented) Chinese migrant sex workers in Taiwan and Taiwanese men's sex tourism in China, the paper aims to conceptualize transnational commercial sex and sex tourism as sexual migration to challenge the mainstream discourses regarding migrant sex workers and male sex tourists; i.e. the former as poor 'trafficked sexual victims' and the later as sexual subjects who exploit local women. I would argue that the framework of 'anti-trafficking' not only implies a strong sense of criminality and thus stigmatizes (undocumented) Chinese migrant sex workers, but also fails to recognize migrant sex workers as sexual subjects who are either struggling for a better life or simply for adventure. Moreover, the bilateral sexual migration is complicatedly shaped by gender, ethnicity and regional economic hierarchy. It is Taiwanese men travel to China to buy sex, and Chinese women to Taiwan for selling sex. I therefore would draw on an intersectional approach to carefully examine the ways in which

the gendered sexual migration is embedded in the cultural, socio-economic and political context between Taiwan and China.

#### *Legislative Behavior in the Aftermath of Disaster: Estimating the Effects of Cosponsorship Networks and Adaptation Cognition*

Legislation is one of the core components of policy constellation for realizing adaptation strategies and disaster management. However, compared to policy content analysis, studies examining how legislators respond and take actions in national law-making arena are limited. The present paper focuses on legislative behavior in the aftermath of Morakot Disaster of 2009 that was the deadliest typhoon to impact Taiwan in recorded history and has since stimulated nationwide debates about adaptation measures for moderating the impacts of climate change. According to conventional wisdom, positions of legislators are divided and grouped in terms of ideological proximity, party affiliation, and local interests. However, risk perception awakened by natural disaster may transcend such segmentations and forge a viable consensus in legislative chamber. It is assumed that bill sponsorship and cosponsorship networks of Taiwanese Legislature Yuan had formed a web of supports leading to more successful environmental legislations in the aftermath of Morakot Disaster. Based on these networks, the study applies network analysis to clarify the linkage between the network configurations of cosponsorship and the effects of adaptation cognition of legislators, in comparison with personal attributes effects. The expected contributions of the study are two-fold. It methodologically applies network analysis to gain deeper understanding about legislative behaviors in relation to disaster, and theoretically verifies the degree to which adaptation cognition upholds successful legislative actions.

#### *The Changing Patterns in Living Arrangements and Their Impacts on Intergenerational Transfers of Older Chinese*

Recent studies have claimed that coresidence with children in China has declined over time. It raises the concern that whether or not changes in such living arrangements will undermine traditional support mechanisms for older adults. Literature from China does not give a clear clue. This study seeks to extend our current understanding of living arrangement dynamics among older Chinese people by exploring the Follow-up Sampling Survey of the Aged Population in Urban/Rural China, a nationally representative data conducted by the China Research Centre on Aging in 2006. This study examined the associations between living arrangements and the probability as well as the amount that an older adult in China received monetary intergenerational transfers from children. Instead of the binary variable – coresiding or not – used in previous analyses, this study introduced a trichotomous variable (live in the same household, live in the same city, live in the same province) to measure potential effects of children's living distance from their parents on intergenerational transfers. In the first part of the multivariate analysis, I investigated the determinants of older adults' living arrangements. The results suggest that older adults who were desired to coreside and with more instrumental needs were more likely to live with children. In the second part of analysis, I found evidence that urban old parents living close by children are more likely to receive net transfers and to receive a larger amount of net transfers from children. However, the effects of living arrangements for rural residents were not significant. The analyses suggest that, living close by adult children is becoming the primary living arrangement for future older Chinese people. Moreover, living close by children, rather than co-residing with them, does not necessarily weaken intergenerational transfers and has become an important way of providing support in old age.

#### *Developing Indicators for Biocapital in an Era of Bioeconomy*

This paper aims to explore the frontier of developing indicators of biocapital, an emerging health-related notion with the rise of bio-technoscience. Different from other forms of capital, biocapital corresponds to a bioeconomy, in which biotechnology contributes to a large portion of economy. According to policy agenda proposed by OECD, elements of the bioeconomy include biotechnological knowledge, renewable biomass, and integration across applications, which are regarded as basic dimensions of the biocapital. As a concept *tout neuf*, biocapital is still too ambiguous to spread wide in the sociological community. However, it has been a trend for many countries to include the bioeconomy in their policy agenda, blueprints or visions for the coming decades. Like other forms of capitals, such as

social, cultural, human, and symbolic capital, biocapital is useful for sociologists to observe resource distribution in a society. To cope with potential problems associated with its even distribution, it is necessary to make the biocapital measurable. Several obstacles prevent it being measured. First, it is a multi-levelled concept ranging from individual, organizational, societal to national level. Second, it contains networks of heterogeneous actors to realize bio-technoscience in the society. Third, it is a concept beyond borders, crossing state borders, market borders and disciplinary boundaries. The paper suggests several possible approaches for overcoming the obstacles. First, experiences of developing intellectual capital are inspiring, as the biocapital consists of the bio-technoscience. Second, also known as external control of organizations, a resource-dependant perspective of organizational study is heuristic for developing indicators associated with hetero-network such as firm size, number, networking configuration, etc. Third, the perspective of innovation system is useful for understanding holistic situation of biocapital. There are some other potential approaches such as that of cultural capital utilized by Bourdieu, as well as those utilized for indexing social capital.

#### *The Venus-Mars Difference and Its Discontents: The Contextual Effects Of Gender-Ideology Gender Gaps On Life Satisfaction*

The study introduces a new way of exploring gender and subjective well-being transitionally. We argue that it is not the level of equalitarianism in a society that enhances life satisfaction of women globally. Rather, what matters is the relative distance between women's gender values and men's. This gap, a contextualized gender ideology, requires a multilevel analytical approach to examine the impact of a normative regime. Data from the 2004-2009 World Value Survey indicates a substantial ideational gap between men and women across countries. Controlling for individual socio-demographic characteristics through hierarchical linear modeling techniques, results show that the more egalitarian the majority of men are in their gender attitudes, the higher the level of women's life satisfaction. In contrast, women's overall egalitarian tendency has the opposite effects. When the two effects are taken together, the larger the Venus-Mars differences at the country level, the lower the subjective well-being of women in that country, regardless of their personal ideological positions. Interestingly, this macro-level gender gap has a negative effect on men's perception of their own well-being, as well. This negative effect of gender discrepancy is even stronger for older men. Although existing literature has shown a universal up-trend in gender egalitarianism, men's persistent reluctance of catching up in gender egalitarianism would significantly limit improvements in both men's and women's subjective well-being.

#### *The New Poverty and the Masstige Fad--How Fluid Class Identities Influence Fashion Consumption*

The macro-societal changes such as the economic recession in recent years are moving many people in the younger generation from the middle class to the working poor or the new poor class, which echoes the worldwide scholarly discussions of the "dwindling middle class" or the "M-shaped society." Taking a consumer culture theory (CCT) approach, this paper first investigates the consumption tendency of the new poor class consumers since they may retain their middle-class identities but find themselves with limited disposable incomes. The present study explores what happens when there is a break between consumers' class identities and their income levels. By conducting in-depth interviews among self-defined "new poor" consumers in Taiwan, we see how they distance themselves from class they don't identify themselves with, and deal with an ambivalence mindset. This study provides a snapshot of the new poverty milieu in East Asia also indirectly answers the question that in terms of consumption, is it shaped more by people's incomes or by their taste and identity?

Second, this paper argues that the inconsistency between consumers' purchasing power and class identities may provide an ideal market for the masstige (short for mass prestige) products which come with affordable prices and high-end images. By conducting a broadly-defined textual analysis of the communication strategies ranging from the advertising texts to store layouts adopted by the masstige fashion brands such as ZARA, UNIQLO, and H&M, we examine how the myth of "democratizing luxuries" is constructed and see if consumers perceive the brand image in the ways that the merchandisers intend.

By bringing in both industrial practices and consumers' perspectives, we better understand the role of mobile class identity in the field of consumer behavior, and uncover how the brands may leverage the ambivalent consumers' mindsets to tap into an emerging market.

*Research on the Potential Age Discrimination to the Senior Citizens in China*

**Background:** The "Law of the People's Republic of China on Protection of the Rights and Interests of the Elderly" has forbidden the discrimination and insults to the senior citizens in China. However, in daily lives, the elderly still have to confront various forms of discriminations.

**Method:** This is a qualitative research, using intensive interview research method. 28 senior citizens were interviewed in Beijing and Wuhan City.

**Result:**

(1) There are three different types of age discrimination: Positive, negative and "side-effect" discrimination. The positive discrimination is a behavior that directly insults the elderly such as scolding the elderly. The negative discrimination is the ignoring of the appeal of the elderly. The "side-effect" is a byproduct when helping the elderly. For instance, the deaf elderly may be grounded due to safety reasons. The negative and "side-effect" discrimination make up of the potential age discrimination.

(2) The family, community, society and policy are all involved in the potential discrimination. On the aspect of the family, the excessive care given to the elderly is a form of discrimination to their self-care ability. On the aspect of the community, those living high in the apartments or disabled are often not invited to the community activities. On the aspect of the society, the media and press reinforce the frail stereotypes of the elderly. On the aspect of the policy, the existing defects contribute to the discrimination of the elderly.

(3) In order to solve the problems of the potential discrimination to the elderly, the policy, media and press need a relevant change. The effects of the social work should be emphasized, too. This will be a hard and long-lasting task.

**CHEN, XU\*** (Wuhan University, [cxsw1986@126.com](mailto:cxsw1986@126.com))

*Research on the System of Long-Term Family Support for the Disabled Elderly in China*

**Background:**

The long-term family support is widely used by the disabled elderly in China. As the group of the disabled elderly expands, the problems of long-term family support become obvious.

**Method:**

Both quantitative and qualitative methods are used in this research. It combines the original data of Beijing of the "Second National Survey on the Disabled" with the records of indoor intensive interviews with 28 disabled senior citizens in Beijing and Wuhan city.

**Result:**

(1) Family support is of vital importance for the disabled elderly in China. There are five characteristics of the family support: family-orientation, structure of grade, complexity, concentration and long-term.

(2) The "family-orientation" depicts that most disabled senior citizens prefer family support due to the reason of income, filial piety, and the distrust of the non-family members. The "structure of grade" defines the relationship between the caregivers and the disabled elderly. The caregivers are mainly spouses, sons and daughters. The "complexity" means the family support is characterized by the core of "disability". Thus, we have to take various patterns of the family support due to the complexity of the disability. The "concentration" depicts the contents of the family support for the disabled elderly, which can be summarized as the basic support, daily living support, mental support and so on. The "long-term" means the family support is a hard and long lasting task.

(3) The defects of the family support are low-level quality, instability, negative influences on the children and so on. In order to solve these problems, we have to develop other forms of support, such as community and institution support.

*The Formation of Environmental Consciousness: From Conscious of Money to Conscious of Environment*

According to the *The East Asian survey on people's sense of culture, life and environment* (2010-2011) which was conducted by Doshisha Research Center for East Asian Studies, a relative high percentage of proenvironmental behaviors stem from the motivation of save money (Japan, 38.7%; Korea, 61.0%; Beijing city of China, 33.6%; Hangzhou city of China, 50.3%). While from this data we draw the conclusion that the environmental consciousness is not high, it is also valuable to focus on another consciousness, the frugal consciousness. The present study based on

the theory of balancing of interest, takes *Beichen* village of China as the research object, and aims to clarify the collapse process of frugal consciousness and the formation process of environmental consciousness in this village. The hypothesis in this paper is that people's behavior intention is the result of interest balance in one's mind. Frugal consciousness comes from the helplessness of the life but also is a rational choice when facing the reality. It is the result of interaction of production mode, life style, social norm and personal norm. These factors which play critical roles in frugal consciousness also supply some benefit on the formation of environmental consciousness. This paper divides the frugal consciousness into different types and discusses the ways that how to transform them into environmental consciousness respectively. The result of this paper indicates that in the formation process of environmental consciousness, balancing of interest plays a fundamental role and social norm is also an important driving force.

*Early Family Financial Stress and Adulthood Quality of Life: An Investigation of the Mediating Process*

Past research has shown the salient influence of early family financial stress or poverty on behavior adjustment and quality of life during adolescence and young adulthood (Conger & Elder 1994; Conger, Conger, & Monica 2011). On theoretical level, both family stress model (Conger et al. 1994) and life history theory (Belsky, Schlomer, & Ellis 2011) address that early adversity operationalized by low family SES, unstable family environment, and unpredicted social environment in late childhood and early adolescence contributes to involvement in crime and delinquency, excessive use of substance, and risky sexual behavior in late adolescence and early adulthood. However, little is known about the factors mediating the early adversity and later adjustments.

To address this question, current study is set to investigate this early-later link using a prospective panel study, Taiwan Youth Project (TYP). Using data spanning across 8 years (from age 13 to age 20), in this paper we plan to answer two research questions. Structural Equation Modeling (SEM) with tests of mediation will be used in data analysis and hypothesis testing. First, to establish the early-later link, we will explore the association between family financial stress at age 13 and happiness, self-report health, and depressive mood at age 20. Second, based on Côté's idea of identity capital (Côté 1996, 2002), we explore two possible factors (family cohesion and self-esteem) during adolescence that mediate the aforementioned early-later link. The results of current study can help developmental researchers better understand the mechanisms of the long-term effect of early adversity.

*Housing Low-Income People in Globalizing Taipei*

The idea of "becoming a global city" has strongly influenced the urban policies in Taipei, since the 1990s. The Taipei City Government has implemented several mega projects in the city; claiming to improve Taipei's global status, such as building the highest building in the world and creating a new financial district. Meanwhile, the squatters that used to be a part of Taipei's landscape after 1949, have rapidly disappeared and our displaced by luxury buildings and parks. Globalizing Taipei becomes the fertile ground of housing speculation and leads to serious problems of housing affordability. Recently, the post-2005 housing boom has triggered a strong social rental housing movement. This paper will firstly examine how "global city discourse" has influenced the urban projects in Taipei, since the 1990s. Then, it will explore the status of low-income housing in Taipei's urban policies. This paper will draw on several theoretical concepts, including the right to the city, neoliberalization in East Asian cities, and worlding cities, to discuss the problem of low-income housing in globalizing Taipei.

*Networking and Performance of Community Organization in Taiwan: A Social Capital Perspective*

Theory development on the social networks of groups is less typical compared to networks of individuals. Application of social capital theories on non-profit organizations is scant. Despite of the developing base of theory and evidence, many community organizations around the world have developed partnerships in a belief that organizational networking leads to social capital and enhances service capacity. The study asks (1) whether networking among community organizations is truly helpful to their service performance and (2) whether the effect of networking varies by certain organizational features of a organization.

The research framework is built with the literature review of social capital theories with a focus of organizations, community practice models, and case studies

on communities' networking. Networking is hypothesized as associated with performance. Two forms of networking, within and beyond community, are defined according to types of social capital. Two traits of performance include effectiveness of carrying out the services and innovation regarding the long-term service development. Key organization factors are leadership, community capacity, and funding sources. The direct and moderation effects of these organization factors are included and examined.

Studied are 640 community development associations (s) in Taiwan, a probability sample of a secondary face-to-face survey in 2011. The results of multiple regression analysis show that networking beyond community enhances a CDAs' effectiveness and innovation. Networking within community is found negatively associated with the overall performance probably because of the potential tension between a CDA and political entities in the same neighborhood. Additionally, the study finds the desirable effects of organization networking vary by certain organization factors. Networking beyond community enhances effectiveness of a CDA; such effect is strengthened by leadership and weakened by community capacity. Within-community networking leads to effectiveness improvement only for CDAs having mixed funding sources. Implications about applying a social capital perspective on community organizations and none-European-American societies are discussed.

#### *Bridging Differences: Feminist Alliance Framing of Peruvian Women's Health Movement*

How do divergent social groups build and maintain their alliances for collective action is the central question in this paper. To explain the networking and cooperation between social movements groups or even different social movements the resources mobilization theory and the political process approach emphasized on the external impulse for alliance and coalition's building. Meanwhile the constructive perspective put attention on the interaction and subjective aspects of collective identity. However, the long term alliance between divergent social groups can not be explained without considering their different oppression experiences that make the communication in alliance difficult.

Emphasizing the role of life-world experiences that intermediate the contextual change and the we-ness construction in an alliance, I argue the long term alliance of divergent partners requires a permanent discursive "leveling" of different experiences among participants. To outline this argument, I study the experiences of Peruvian women's health movement from 1980 to 2000. The collaboration between women from different social classes – NGO-feminist and the grassroots women-- suffered tension and conflicts as their activities extend from self-help groups to medical institutions. From an intersectional perspective I analyze the experiences of both groups, and show the dynamic framing strategy of feminist NGOs to bridge these different experiences and to maintain their alliance with the grassroots women.

#### *How to Become a Feminist Activist after the Institutionalization of the Women's Movement: Young Feminists in Mexico*

The institutionalization of the women's movement in civil society (in such organizations as feminist NGOs) and the academy (for example, gender studies majors at universities) offers a new context for the development of feminism. The main question of this paper is: how do today's young women develop their feminist consciousness and become activists within this new context? The study investigates the consciousness building and political activities of young feminists in Mexico City through qualitative analysis. The results reveal that the feminist institutions established in the academy and in civil society are crucial references for the development of young feminist activists in a controversial way: on one hand, they provide the field for feminist consciousness building, but on the other hand, they don't offer sufficient space for young feminists to play leadership roles in organization and political action. The inter-generational tension in the background of this context is also discussed.

#### *Intergenerational Transmission of Family Formation: Socio-Economic Differentials in the Timing of Marriage and Childbearing Among Young Taiwanese Adults*

Previous studies on marriage and family have consistently explored the familial and parental influences on the development of adolescent sexuality, mate selection, union formation, and eventual childbearing, either through family tradition or socio-economic consideration. In recent decades, since demographic and economic trends have been increasing social class disparities in children's access to resources internally and externally, the pathways of transition to adulthood have become more diverse and less predictable in Taiwanese society. Besides, the prolonged education and employment processes have significantly delayed the timing of family formation among young Taiwanese adults. This paper aims to explore the implications of increasing social and economic inequality for young people's adoption of adult roles, with main focuses on two life events including the timing of first marriage and following childbearing. Data are taken from the Taiwan Youth Project, which is a longitudinal panel study of 2696 students in junior and senior high schools since the year 2000. Since part of respondents has been married, it is an adequate timing to analyze their disparity on sexual attitudes and mate selection practices and major trends in the timing of entry into first marriage. We also compare the tendency for young adults from different social and economic backgrounds to choose partners of specific characteristics, and childbearing intentions and outcomes. Based on these results, we are able to examine the relative effect of perceived parental influence on their adult children's mate selection, union formation, and reproductive behavior in contemporary Taiwanese society.

#### *A Study On The Educational Policies On Afterschool Programs and Educational Equity In Taiwan*

Since the year of 1960, the educational policies started to focus on the issues of disadvantaged students and their schooling. How to disenthrall the struggles that disadvantaged students face during their daily school lives become the priority that educators and administrators need to consider especially the issues related to the afterschool programs. Like the Title I of ESEA in the United States and Educational Priority Area (EPA) in the United Kingdom, there are series of educational policies related to disadvantaged students and afterschool programs in Taiwan since 1995. In order to review the con and pro of the existed afterschool program policies, the principal investigator collects the theories related to disadvantaged students and schooling including Rawls, Coleman, Sen, and Young to figure the possible solution of afterschool programs and conducts a survey on the questionnaires on disadvantaged students and afterschool programs. Furthermore, the researcher host three focus group discussions to provide useful reflections from the quantitative findings. As the results, the author provides conclusions and suggestions to the further discussions, research, and policy making.

**Keywords:** Disadvantaged Students, Afterschool Program, Educational Equity, and Educational Policy

[ChenK708@newschool.edu](mailto:ChenK708@newschool.edu))

#### *Culture and Defensive Modernization in Thailand, 1855-1932*

How can "Siam/Thailand" be brought, as a new non-western case, into the corpus of comparative-historical sociological cases without falling into the trap of methodological nationalism (which glorifies its own agency behind its 'success story' of independence) and globalism (which sees its as a periphery within the capitalist world-system)? This paper traces the unfolding course of defensive modernization in Siam/Thailand through a critical (re)examination of four discourses and their accompanying sites of practice, i.e., the political economy, the discourse of civilization, the humanitarian discourse, and the postcolonial discourse. Situated within the overlapping spheres of the British and French imperial expansions and encroachments, Siam/Thailand (from 1855 to 1932) has been considered as one of the exemplary cases in which the modernization occurred as a direct response to the Western imperialism. Such form of modernization, nonetheless, still lacks a conceptual background and theorization. This paper aims to probe deeper into the case of defensive modernization in Siam/Thailand by integrating relatively recent case studies by Thai revisionists about Siam/Thailand in this period and by providing a new theoretical angle to analyze those cases. The main argument of this paper centers on the constitutive role of culture in the construction and elaboration of the programs of defensive modernization by the Siamese/Thai ruling elite. The three contributions that this paper gives are: 1) bringing empire, imperialism, and colonialism into historical sociology; 2) providing a new non-western case to the comparative-historical studies of modernization (beyond the old-fashioned paradigm of the "modernization theory") as well as state and imperial formations;

and 3) creating an ongoing dialogue with the macro-social theories that choose to walk a tightrope between the methodological nationalism and globalism.

##### *Young Workers: Accumulation Of Educational Resources and Professional Trajectories*

In 2009 thousand young workers of industry (processing, hi-tech productions) at 13 regions of Russia were polled; in 2010 a part of them were interviewed.

Accumulated educational resource (school education, professional training and training during work) has a direct influence on the achieved skill level and size of salary. However, growth possibilities are limited by technological possibilities of production. It stimulates an exit of a part of youth from working profession.

Among those who became workers having a large educational resource (full secondary school or secondary professional college) intensively accumulate a human capital and achieve higher qualifications; about one third of them are not stabilized in this status and aspire to leave working profession, this position is transit for them. But two thirds of such workers remain in production. However, the highest stability of working profession belongs to workers, having a small baggage of school education, preparation at technical college or at the courses - and to whom this base education prevents to move upwards on educational and qualification levels.

Typical trajectories "Horizontal" (57 % of a massive): low school education, training of working professions at technical college and at a working place leads to mass and low qualifications. Those not stimulated to professional advancement and study make the most stable personnel satisfied with a low salary work. Here stability is sooner forced - few alternative possibilities.

"Progressing" (27 %): large volume of school capital, intensive accumulation of educational-professional resources, achieving high qualifications. Partially "transit" workers are formed.

"Vertical" (16 %): base secondary education or secondary professional college, intensive improvement of qualification, most qualified personnel. Big educational ambitions are expressed in getting higher (or secondary professional) education (by correspondence course) that leads to achieving positions of a technician or an engineer.

##### *Social Justice in a Changing Society*

The BRICS states have different recent histories. Some of them, like Brazil, have been developing as market-based economies and emergent societies. Others, like Russia or China, came to development from the incipient stage of state socialism. The supposed difference between them underlies the main hypothesis of the study of social justice: former socialist societies tend to embrace the idea of distributive justice, the market-based are habituated in a market environment and therefore are more tolerant towards meritocratic forms of inequality. The results of the survey based on an All-Russia sample show tend to put the above hypothesis in doubt. The Russian population tends to endorse the idea of equity as the primary principle of social justice rather than the idea of equal distribution. In later stage of their evolution the socialist societies stressed the idea of equity and procedure much more strongly than the idea of equality. The Russian society is inclined towards the logic of accepting the difference in income if it relates to education, skills, work input and entrepreneurial skills. Procedural justice is viewed as an important guarantee of the equity principle. The difference in income must be linked to the measurable criteria such as the level of education credentialled by education institutions, the quantified amount of work, or skills confirmed officially as the grades or other occupational standards.

The perception of justice varies according to class or other social conditions. While evaluating their income as just or unjust the Russians tend to rely on the standards of their community or their social group rather than on some general principles. The general principles of equity are more salient in the groups dependent on the macro-context such as pensioners or students.

##### *Destination Dumping Ground: The Role of Housing Market Processes and Policies in Concentrating and Dispersing Disadvantage in South-East Queensland, Australia*

In Australia, where stocks of social housing are being gradually depleted, only those with the greatest need and most complex problems are eligible for public housing, with the remainder being forced to negotiate the private rental market. The effects of this are twofold: first, a growing concentration of social disadvantage within neighbourhoods containing social housing; and second, the movement of low-income and unemployed residents into peripheral urban areas where private rents are cheap. In both cases, this creates a perception among residents that their neighbourhood has become a 'dumping ground' for what Zygmunt Bauman in *Wasted Lives* (2004) sees as modernity's 'surplus, redundant, unemployable and functionless population'. In this paper, we illustrate how housing policies and processes inadvertently and deliberately contribute to the creation of these kinds of dumping grounds in two separate regions of south-east Queensland. The first - Logan City - is a low-income area with an historical concentration of social housing, unemployment and stigmatization that has recently been targeted for renewal in order to disperse disadvantage and create a socially mixed community. The second - Russell Island - is a popular retreat for retirees but its cheap land and low-cost rent has rendered it a last chance destination for those pushed out of other areas by the absence of affordable housing. While the history and circumstances of these two areas are very different, the dynamics of housing policies and processes means their trajectories are increasingly connected as attempts to reduce concentrated disadvantage in one area have flow on-effects for the other. Further, as we also demonstrate, the movement of populations is not necessarily accompanied by a commensurate flow of services, which compound existing forms of disadvantage through isolation, a lack of support and few options for moving on.

##### *School-to-Work Transitions before, during and after the Global Financial Crisis in Australia*

School-to-work transitions are becoming more complex as labour markets restructure due to technological innovations and closer economic integration between nations. Entry into the labour market is becoming increasingly contingent upon having appropriate educational credentials consequently, leaving school before completing secondary education may result in young people experiencing prolonged periods of precarious employment. Although the Australian economy weathered the recent Global Financial Crisis (GFC) better than many other advanced economies, in August 2009 the combined unemployment and underemployment rate for young people was double the rate for the working age population. During economic recessions, young people tend to delay entry into the labour market preferring remain in school until the economy rebounds and jobs are easier to secure. The flexibility of the Australian education system coupled with the availability of welfare payments for full-time students allows young people to transition between education and employment multiple times and provides a refuge from harsh economic conditions. This paper presents the results of analyses of the first 12 waves of the Household Income and Labour Dynamics in Australia data tracking the fortunes of three cohorts of young Australians: those who completed school prior to the GFC; those who completed school during the GFC; and those who completed school after the GFC to examine the effect of the crisis on school-to-work transitions.

##### *Cross-National Income Disparity and Life Expectancy*

This study examines cross-national relationship between income inequality and population health. It has long been speculated that income inequality is detrimental to population health due to material and psychosocial deprivation, given the robust relation found between income and individual health. Though test of this thesis initially corroborated a negative relation across counties and countries, whether the relation is causal in nature remains in question. During recent years, the thesis has brought under a more careful scrutiny with the use of more robust methodological tools due to the increased availability of longitudinal data and prevalence of corresponding statistical models. Most of the longitudinal studies reported null finding. However, longitudinal studies are also plagued by lack of comparable data and hence many of them can only examine the relation across limited number of countries and/or time period. In this study, a more comprehensive dataset, Standardized World Income Inequality Database (SWIID) with wider range of countries and time period together with improved comparability is analyzed. Given previous findings concerning the thesis, three hypotheses are tested: (a) income inequality has detrimental effect on life expectancy, (b) income inequality has a more detrimental effect on life expectancy if household gross (pre-tax, pre-transfer) but not net income inequality is used, and (c) income inequality's effect on life expectancy is not stable across different years. With the improvement of data coverage, fixed-effect analyses with Huber-White sandwich estimators are carried out to examine the thesis across about 150 countries and

16 years. Specifically, results only support the last thesis with unexpected positive effect of income inequality on life expectancy during late 90s but not later period. Potential explanations, limitations and future improvements are discussed.

#### *Collaborative Authors without Rights: Creative Consumption, Intellectual Property and the Governance of Global Cultural-Commodity Chain of Japanese Animation, Manga and Subcultural Goods*

While Japanese animation, manga and subcultures (for example, *hatsune miku* or *niconico dōga*) now became a widely discussed creative industry both within and outside Japan under the slogan of "Cool Japan," current discussion focused mainly on either its production or consumption side. Yet given the rise of the amateur derivatives creation movement (or *niji-sōsaku* in general discussion within Japan), the division between production and consumption is no longer distinctively clear. This new trend requires our re-conceptualization of the cultural industry.

Taking an economic-sociological view, this paper will take the framework of "global cultural-commodity chain" that derives from discussion on "global commodity chain" and "global value chain." Through interviewing with different players in the chain like managers of copyrights in established publishing firm, amateur manga writers and managers, as well as other players in the commodity chain, the research pays attention to different steps within the long chain of production, distribution and consumption of Japanese animation, manga and subcultural goods, which were now produced widely with the help of the internet. By locating and identifying major players in the distribution sector, the paper wishes to develop a more sophisticated picture of the newly developed cultural-commodity chain of Japanese subcultural goods, in which creative consumption will gradually be re-incorporated back to the production side. In the case of Japan, the global idea of intellectual property remains ironically contested among producers and consumers. Players rather take a more cultural-specific model of consensus-making instead of taking the concept of intellectual property right legally in organizing collaborative creative works. It presents a framework to analyze especially the impact brought by consumers, who actively participate in the amateur creation and distribution of these amateur products, thus transforming the landscape of the cultural industry as well as concepts like originality, copyright and cultural commodities.

**CHEUNG, YUK MAN\*** (Chinese University of Hong Kong, [agentchosan@hotmail.com](mailto:agentchosan@hotmail.com))

#### *Educational Dream in a Postindustrial Reality: Expansion and Restructuration of Secondary Schools in Hong Kong*

The paper examines and accounts for the main features of the expansion and restructuring of secondary school system in Hong Kong, amid the social background and theoretical discussion of post-industrial societies. Institutionalization of mass education and the rapid expansion of secondary school education emerged roughly at the same time of the rapid industrialization in the 1970s. The rapid transition to service economy in the late 1980s, in addition to the limited expansion of elite education in the tertiary sector in the 1990s, probably caused the rapid denegation of vocational schools and private schools. On the one hand, public and subsidized grammar schools remain as dominant or are even strengthened as high prestigious which led to higher chance of securing a place in the limited but expanding tertiary education. On the other, elite class tends to send their children to international schools in H.K. first and then university overseas. The above arrangement seems to fit the global model of modern institution of education but is relatively unique, if we compare the case of H.K. to other post-industrial societies with similar developmental path like Japan, Taiwan and Singapore, in which the state encourages resources reallocation via the diversification of the types of schools to avoid inequality or class reproduction of poverty. Amid the background of the coming of the ideas of neo-liberal educational reform in the 2000s, this paper explains why Hong Kong mainstream society will follow the simple rule of tightened competition via the education system on the one hand, and how the privileged class tries to gain status advantages by either exit from the local game or by supporting the current reform of privatization of some former subsidized public secondary school system on the other.

#### *Ritual and Religious Taste: Bodily Technique As the Key to Belief*

Sociologically speaking, religion is primarily understood in three-fold: belief, ritual and religious organization. In the sociology of religion, the ritual is easily downplayed, whereas the belief is often overemphasized due to the influences of

Western Christianity on this discipline. This paper, therefore, examines the role of ritual by analyzing the development of Taiwanese folk religion, paying particular attention to how traditional belief competes with, if not replaced by, religions in modern Taiwan. In response to the crisis of the religious legitimation, Taiwanese temples produce cultural capital by emphasizing the cultural value of their rituals. The "culturalized" ritualistic activities further create for the people a modern connection with folk religion. It is through ritualistic participation that the religious taste of folk religion is reproduced and maintained in the popular. This study will analyze why bodily technique is essential to the construction of religious taste, and how its practices contribute to the participants' traditional belief.

#### *Structural Influential Factors on Taiwan Females Participation in Politics*

This research is to explore the structural factors of Taiwanese women's participation in grassroots politics, especially to substantively present the complex local structure and context of female participation in the local grassroots elections in those cities and counties where Hakka ethnic groups clustered.

It presents stark difference with local features in Taiwan women's participation for different county (city) councilors elections. To analyze their participation in politics, neither can we ignore gender viewpoints, nor can we alienate ourselves from local situational context, especially those kinship, social clubs, networks, ethnic, local fictions, political families, association of farmers, fisherman and irrigation, and political parties of different areas. How to interact with different genders as to influence Taiwan women's local participation in politics, all of which is the key point this research is to explore.

In Taiwan, the key political tune set in major cities and counties where three Hakka ethnic groups clustered is first on geographical concept, then kinship and the last political party. Lineal kins and tribes primarily inherited by men, what if women's political participation doesn't represent lineal kins and kiths, will it represent gender or ethnic group? or anything else? What specific social connotation with these women participating local election? This study is mainly to explore the positioning in women's political participation, which is used exactly to answer the questions listed above.

#### *Sustaining The Women's Ghetto: Gendering, Masculinization and Feminization Of Newspaper Organizations*

This paper aims to explore the reasons why women are still unable to escape from marginalized, belittling and disadvantaged positions at work. Previous studies on gender and women's employment have acknowledged that the gendered construction of labour has either excluded women from the labour market or restricted them to the middle or bottom of the power structure within work organizations.

Using *NotT Daily* as an example, I argue that, apart from using the 'gendering' process, the organization may at the same time be attempting to feminize some particular units to intensify the gender segregation. In so doing, the organization may still appear to be segregated by gender, but the nature of the horizontal gender segregation is different from what it was before. To explain the differences, we have to employ feminization as an explanatory tool. In other words, to understand the way in which organizations are gendered, we have to examine the processes of both 'masculinization' and 'feminization', in order to acknowledge more clearly the difficulties women are confronting in the labour market.

In this article, I suggest that the women's page was feminized by two means: isolation and normalization. The women's page was isolated spatially. It was also isolated in terms of professional practices. The isolation reified the unimportance of the women's page in the sense that the women's page was a neglected and dead-end sector. The organization then normalized the labour process of the women's page to render the working routine of the women's page compatible with most people's daily routines (particularly schoolchildren), thereby making the women's page a women's unit inevitably shunned by ambitious people. And it is the feminization of the women's page that makes the women's page a women's ghetto.

#### *Is Globalization The Essential Force To Generate Localization? A Constructive Analysis*

While globalization has significantly extended its influence crossing the boundary between countries, many national states gradually lose their control over

sovereignty as witnessed by the fact that many countries voluntarily give up the control over the tax rate on the importing goods. This is mainly because they need to conform the rules of a global economic system, if they pursue a considerable amount of capitalist profit embedded in this system. This phenomenon indicates that globalization does not only generate a profound influence on economic sphere but also on political arena. It is argued that the combination between these two aspects is able to benefit advanced countries, particularly USA, for reinforcing their cultural hegemony. Consequently, such cultural exportation will erode the local cultures of imported countries that are the crucial element to sustain the national identity of their citizens. It is argued that localization is created to avoid this political crisis. However, such viewpoint may confine itself within a narrow view of top-down scope.

#### *Justifying Distinction: Becoming Adolescent Elite in "Meritocratic" China*

This study seeks to understand the mechanisms of elite distinction through education. Existing research on adolescent elites points to the crucial role of schools in elite status reproduction. Yet, the broader cultural contexts in which students and school are placed have not been sufficiently recognized. It is unclear how privileged students develop and identify status markers in a meritocratic culture that celebrates individual effort. Collaboration between family and schools to transmit privilege and students' costs in the process of elite formation while subscribing to meritocracy is in need of further investigation. Studies show elite distinction through demonstrating various forms of cultural capital, but have yet to examine the role of field in determining the value of cultural capital. China, with its similarly meritocratic ideal but different educational system from Western societies, provides an opportunity to complement existing literature and examine elite students in their broader context. Through year-long participant observation in classrooms and families and interviews with students, parents, and teachers in elite high schools in Beijing, this study provides an ethnographic account of elite formation during high school and sheds light on the mechanisms of educational inequality through the inspection of elite formation through education in China. Results show that students use academic criteria as an important measure of meritocratic effort to establish student hierarchy and actively defend their perceived boundaries. Parents and schools engage in labor division in the schooling process to instill privilege in disguise of meritocracy. Other than using academic ability as the primary marker of distinction, signals of status boundaries are somewhat similar with findings in the U.S., which points to the possible existence of a global elite culture shared by students across educational systems.

#### *Beyond Involvements in Romantic and Sexual Relationships: Effects of Self-Esteem and Parental Distress on Trajectories of Adolescent Psychological Distress*

What accounts for the onset and change of psychological distress that occurs between late adolescence and young adulthood? As emerging research has begun its attention to the effect of early involvements in sexual and romantic relationships on adolescent psychological well-being, we extend the *vulnerability model* and the *genetic hypothesis* and propose initial levels of psychological distress and subsequent changes over this period are partly a consequence of adolescent self-esteem and parental distress, both of which may be at least as influential as teen involvement in romantic and sexual relationships. Data were from longitudinal surveys of Taiwanese adolescents at age 16 with 3 follow-ups over a 6-year time period ( $n=2,314$ ). Psychological distress was assessed by Symptom Checklist-90 Revised (SCL-90-R). Growth curve models were used to predict the relationships between adolescent self-esteem, parental distress, and trajectories of adolescent distress, after taking early involvements in romantic and sexual relationships, influence of peers, school, and family, and adolescent risky behaviors into account. After a wide range of adjustments, the multivariate analyses indicated that positive self-esteem was associated with diminished initial levels of psychological distress in adolescents ( $\beta=-0.04$ ,  $p<0.05$ ), and also ameliorates their psychological distress over time ( $\beta=-0.01$ ,  $p<0.01$ ). In contrast, parental distress was not significantly associated with initial measurement of adolescent distress, but parental distress did exacerbate adolescent distress over time ( $\beta=0.01$ ,  $p<0.001$ ). In addition, living with both biological parents, and having a high level of family cohesion were associated with lower levels of psychological distress. Early involvements in sexual and romantic relationships, and risky behaviors of adolescents and their close friends were strongly related to higher levels of psychological distress. These results underscore the importance of an integrated psy-

chosocial perspective. Policies and interventions aimed at promoting adolescent psychological well-being are recommended.

#### *How Different Are the Young Women with Forced First Premarital Sex in Their Romantic Relationships? A Life-Course Perspective from the Taiwan Youth Project Surveys*

Studies have well established the negative relationship between forced first sex before marriage and a wide range of family, social, and well-being outcomes in non-Asian young women. However, due to the data inadequacy, surprisingly few studies have examined this relationship among Asian young women, and even less has been analyzed on the long-term consequences. Based on the life-course hypothesis, this study contends social norms prescribe the appropriate timing for important transitions and sanctions apply to non-followers which may produce long-term negative consequences. In East Asia, particularly in Chinese societies, collectivistic orientation has been proposed to be a salient social trait. Adolescents situated in this particular cultural context are exposed to strong normative influence. Conservative social norms expect Taiwanese youth to be well-behaved and not to practice non-standard behaviors in adolescence such as engaging in active sexual behaviors before marriage. Hence, forced sexual initiation in adolescent romantic relationships becomes a serious concern and it implies adverse public health and social consequences such as risky behaviors, psychological distress, and a higher probability of intimate violence or divorce after marriage.

Building upon Bronfenbrenner's ecological model (1979) and life-course theory, we use the longitudinal panel surveys of Taiwan Youth Project (2000-2011) and compare Taiwanese young women on a wide range of family, social, and well-being outcome variables from early adolescence to young adulthood in whether or not they ever experienced forced first premarital sex in their romantic relationships. Findings of this study will advance our understanding of how forced sexual initiation is shaped by a set of life-course outcomes in East Asian social contexts. Our study will also contribute to social and health policies and programs in the advancement of positive developmental outcomes of young women in Taiwan as well as in East Asia.

#### *Globalization and Nationalism at a Crossroads: The Identity Politics of Competing Imagined Economies Across the Taiwan Strait*

Even before the implementation of the Economic Cooperation Framework Agreement (ECFA) between China and Taiwan in 2011, the increasing rate of cross-strait economic integration and the potential volatility of Taiwan's ambiguous international status has been the subject of intense political debate and academic research. The island's shift away from an imagined community of 'One China' to part of an "imagined economy" inextricably linked to mainland China is not just a projection or re-grafting of national sovereignty onto the global scale, but rather an ongoing process of the re-imagining of space and scale, in which both concepts are mutually constitutive of one another. While the symbolic act of closer economic integration between two parts of a divided nation bring justification and legitimacy to *a priori* definitions of globalization as a project, at the same time, the process continues to stretch the traditional confines of national sovereignty. The aim here is to analyze how through the act of selection, specific historical periodizations have been reframed to form a dominant narrative of the relationship between national identity and the spatial limits of economic possibility for current contexts.

Specifically, this paper provides a discourse analytical perspective on the social forces and ideas that have sought to dominate the narrative of harnessing an externalized concept of globalization on the one hand, and harmonizing regional security and prosperity as a crucial cornerstone to national development on the other. Particular attention is made to the framing of post-2008 cross-strait trade policies by political elites both in support of and in opposition to deepening economic integration. It is argued that ideas of the imagined economy heavily influence the framing the possibilities of political action.

#### *Japanese Capitalism(s): Turning Points, Driving Forces and Consequences*

Following Chalmers Johnson (1982) seminal analysis, Japan is known and debated as prime example of a developmental state and state-led capitalism. However, a closer look to its historical development shows that Japan's industrialization is not a simple case of state-directed capitalism, but much more complex and marked by turning points. Already before its full reintegration into the world system and the introduction of Western technology, Japan experienced a proto-industrialization primarily driven by private entrepreneurs. During the late 19th century, this proto-industry was the economic foundation, which allowed Japan to embark on a modernization and industrialization path and to withstand colonization pressure by Western powers. The industrialization effort was embedded into the introduction of a nation state including modern administrative, educational, juristic and military institutions and was initiated by the state, but quite early key industries were privatized. Accordingly, the role of the state in economic development was surprisingly limited in Japan as a late-comer and up to the 1930s Japan's economy followed a liberal model. This changed fundamentally during the years of war (1937-1945), which saw the introduction of an increasingly state-managed economic system oriented towards the war efforts. The developmental state not only survived the years of U.S.-occupation (1945-1952), but after fierce social conflicts in the early postwar era state-led developmentalism became from the 1960s onwards the central piece of Japan's new social contract. Since the collapse of the bubble economy in the early 1990s and the following decades of economic stagnation, the model of Japanese capitalism is increasingly questioned and submitted to structural reforms. Abenomics is just the latest attempt to lead Japan back to developmentalism. This paper will analyze the driving forces behind the turning points of Japanese capitalism(s) and discuss its consequences for our understanding of the variety of capitalism.

### *The Saga of Japan's Foreign Trainee System*

In the late 1980s, Japan was transformed from a non-immigration economy into an immigration economy. Still, Japan has officially maintained a very restrictive labor migration policy. According to immigration law, Japan accepts only highly qualified foreign workers for selected occupational fields. However, in contrast to the law, the large majority of the new immigrants is working in lower qualified jobs. This discrepancy between official labor migration policy and real immigration flows is partly due to the introduction of several so-called side-doors, through which foreign workers for lower qualified jobs are de facto accepted. One important side-door is the foreign trainee system. It is officially part of Japan's ODA (overseas development assistance) and has even been promoted as an instrument to diminish the migration pressure between Japan and developing countries in East Asia. In fact, the foreign trainee system is a disguised guest worker program that is essential for a number of Japanese industries. As such it has been criticized severely, and the U.S. have even denounced it as a form of human trafficking. Although foreign trainees are numerically a relative small group among the new immigrants over the past quarter-century, the foreign trainee system is arguably the most intensive discussed labor migration program in Japan's migration policy making. Hence, the foreign trainee system is an ideal case study for analyzing the development Japan's labor migration policy. Based on interviews and primary sources, this paper studies developments and turning-points in the foreign trainee system as a central element of Japan's foreign worker policy. It will elaborate how ideational factors, the institutional setting of policy making and the regional embeddedness of Japan in the East Asia migration region have interacted and influenced each other in the foreign trainee policy formation and its implementation.

### *Integrating Care Regime and Migration Regime: A Case Study of Taiwan*

Care provision for the elderly and young has become an unprecedented challenge in recent years in Asia. Due to the rapid demographic transformation—including greater longevity, declining fertility rate, and ageing of population—many advanced industrialized Asian countries have put care onto the social policy agenda and redefine their roles in care-giving. Various institutional and policy measures have been made to provide assistance for elderly and child care, such as long-term care insurance (LTCI), parental leave, and increasing number of public day care centers. In order to meet the high demands for care workers in the labour market, some East Asian countries also start to recruit foreign care workers from other less-developed countries. Thus, different migrant care worker policies have been implemented to attract foreign labour into their social welfare sectors. During the process, these states' social welfare policies have been mitigated and influenced by their migration policies and vice versa. In this paper, I will use Taiwan as a case study. I will investigate how Taiwan's social care policy has been changing in the past two decades and explore its relationship with Taiwan's

migrant care worker policy which was first implemented in 1992. In addition, I will trace the policy debates on temporary migrant care workers and analyze the formation and transformation of Taiwan's migration policies in accordance with its social welfare policies. Lastly, I intend to tackle the ways in which Taiwanese government integrates its care regime and migration regime and redefines its role as a welfare state.

### *Making One Health Experts: The Formation, Reinforcement, and Transformation of Epistemic Communities*

This paper explains how an international One Health epistemic community was gradually assembled and shaped through the interventions of international agencies. In response to H5N1 avian flu outbreaks, the international community has gradually developed a "One World, One Health" approach, which was endorsed by multiple international agencies. These international agencies include the World Health Organization (WHO), Food and Agriculture Organization of the United Nations (FAO), World Organization for Animal Health (OIE), and other agencies. For the purpose of deliberating and defining One Health strategies, the WHO, FAO and OIE mobilized experts from their reference laboratories and collaborating centers. International agencies consciously affected the international expert networks, and previous affiliation with policy organizations hence becoming crucial bases for expert power and influence. This paper argues that the emergence of the One Health community has been intentionally constructed by international agencies, instead of simply growing out of shared understandings and goals. The study therefore challenges and extends Haas (1990, 1992)'s theory of epistemic community by revealing how an epistemic community co-evolved with global policy formation. In addition, I illustrate that although international agencies have attempted to expand the networks, experts affiliated with their laboratory networks are still crucial participants to define and fulfill One Health.

### *Health Professionals, Health Policy and Health Management Theory: The Big Disconnect*

In tandem national health system reforms in Western countries, management theories seeking to adapt health organizations to policy directions have evolved. Unfortunately, policy directions and management theories appear distant from the socialization of health professionals, and, as a result, relatively little change has taken place in the organization of health care delivery. This paper will combine several sources of information to paint a picture of the disconnect between health professionals and health policy and management. The first source is a review of the literature on the knowledge and attitudes of health professionals, especially physicians, towards health reforms and managerial interventions such as quality measurement and health information technology in different countries including, but not limited to, the US, France and Israel. Second, the author will report on empirical research ongoing in Israel on two main subjects: 1. how physicians, nurses, managers and policy makers view efforts to measure the quality of health care and report the results to the public, and 2. the process of introducing ehealth and mhealth into the Israeli health system and how this process is viewed by physicians, managers, policy makers and citizens/users. Third, the author will report on a bibliographic study of articles on health policy and management appearing in major medical journals such as JAMA and NEMJ using citation analysis to show that such articles are not, by and large, read by clinicians. While the overall hypothesis of this complex of research projects is that health professionals have been disconnected from the design and implementation of health policy and management innovations, the study will also test the hypothesis that countries with strong traditions of physicians and other providers working within the framework of National Health Services or large managed care organizations will be characterized by relatively greater health provider understanding, acceptance and implementation of managerial innovations linked to national health reforms.

#### *A Global Look at Mixed Marriage*

Mapping attitudes toward intermarriage—who is and who is NOT an acceptable mate—offers an incisive means through which imaginings of belonging—race, ethnicity, nationhood, citizenship and culture—can be critically evaluated. In particular, social constructions of race and difference involve discussions of purity, race identity and taboos against interracial sex and marriage. Drawing from qualitative interviews and ethnographic research in six countries on attitudes toward intermarriage, this paper explores these issues of intermarriage in a global context. Through a comparison of qualitative data I collected in Australia, Brazil, Ecuador, Portugal, South Africa and the United States, I offer a theoretical framework and provide an empirical basis, to understand the concept of intermarriage and what it tells us about racial boundaries in a global context. For example, in the United States, the issue of intermarriage is discussed as interracial with less attention paid to inter-religious or inter-ethnic, to the point that those concepts are rarely used. Similarly in South Africa, despite the end of apartheid decades ago, marriage across racial categories is still highly problematized and uncommon. Yet globally there is less consensus of what constitutes intermarriage—sometimes intercultural, interethnic, or any number of words with localized meanings. In South America and Australia, the debate seems to revolve more around indigenous status, citizenship and national identity such as who is Australian or who is Ecuadorian? As indigenous populations rally for rights and representation how does this change the discourse on what intermarriage mean? Looking globally, what differences matter? What boundaries are most salient in determining the attitudes of different groups toward intermarriage? How are various communities responding to intermarriage, particularly if there are a growing number of "mixed" families? This research on attitudes toward intermarriage adds to our understanding of constructions of race, racism and racialized, gendered and sexualized beliefs and practices globally.

**CHITOSE, YOSHIMI\*** (Nat Inst Population & Social Security, [ychitose@ipss.go.jp](mailto:ychitose@ipss.go.jp))

#### *Geographical Distances Between Adult Children and Parents*

It is well known that the percentage of multigenerational coresidence in Japan is very high among developed countries. In recent years, however, the share is declining. For example, 52.5% of the elderly coresided with one of their married children in 1980. Today (from 2011 data), the corresponding figure amounts to only 16.6%. In contrast to the reality, majority of empirical research on intergenerational relationship in Japan still focuses on the determinants of coresidence. Not much scholarly attention is paid on the geographical distance between parents and adult children who live separately. It is important to study the intergenerational distance since past research consistently indicate that intergenerational support transfers are influenced by the distance between the two.

Using the Fourth National Survey on Family in Japan conducted by the National Institute of Population and Social Security Research in 2008, I examine the dis-

tance between adult married daughters and their parents (if possible, also their parents-in-law), and what factors determine the distance. I take the effects of adult daughter's demographic and socioeconomic characteristics such as education, a number of siblings, sibling composition (birth order and gender), as well as regional effects into consideration. In particular, I focus on support needs of both daughters and parents. If possible, I will also use the previous surveys to see whether the geographic distribution between the generation has changed in the given time period, how the determinants of intergenerational distance between the two have changed over time. The study aims to address how the intergenerational distance is shaped by the needs of family members who do not coreside.

#### *Taiwan's Anti-Nuclear Movement after Fukushima Nuclear Disaster*

Two years after Fukushima nuclear disaster, the revitalized anti-nuclear movement in Taiwan has gained an unprecedented momentum. On 9 March 2013, 220 thousands citizens attended demonstrations in four cities. The turnout has shown a great leap in two years. In Taipei, the number of protesters has grown from 5 thousand in 2011 to 120 thousand in 2013. The activists are no longer limited to the veteran campaigners but include many new faces such as young people and various celebrities. However, living in a small island country with three nuclear powers plants in operation and the Fourth Nuclear Power Plant (NPP4) under construction, plus sharing similar geographic conditions with Japan, Taiwanese people seem to belatedly response to great nuclear risk. Besides, although the anti-nuclear veterans are advocate of a hard-line stand for nuclear-free policy, a certain amount of the protesters in 2013 demonstrations claim that they are 'not anti-nuclear but anti-NPP4 only'. This divergence has never been found in the three-decade-old anti-nuclear movement. How can we explain the revitalization of Taiwan's anti-nuclear movement after Fukushima disaster? Why does the stand for 'Anti-NPP4 only' appear? It seems that the accidents and problems newly discovered in the nuclear power plants and the political responses from the government and Taiwan Power Co. also play a role in stimulating or cutting back the movement. The paper will, first, explore the formation and strategies of the movement in order to understand how the movements gain its strength and challenge the nuclear-addicted government. Second, the authors will focus on why certain groups have focused on the goal of stopping the construction of NPP4 while some other organizations have made efforts to develop discourses to compete for the legitimacy over no-nuclear energy policy, energy democracy and alternative development. Finally, some predicaments of current movement will be discussed.

#### *Irrelevant or Interconnected?—the Environmental and Labour Movements Against Electronic Industry in Taiwan*

Since the early 1980s, the development of Taiwan's Science Parks where the electronic industries cluster has been seen as a model of the developmental state's capacity to hatch a strategic national industry through a process of upgrading and modernisation. The leading industries in Science Park, computer and peripheries, semiconductor and optoelectronics, have been successfully promoted by the government and the corporations as a clean high-tech industry, which is ideal to replace the high pollution one. The industry has been depicted as golden-hen of the national economy because of its economic success and hence Taiwanese society witness a significant expansion of electronic industry and the model of high-tech Science Park. However, the negative environmental impacts, hazardous consequences and social injustice, and the repression of labour right in the industry have gradually emerged since the late 1990s. As a result, the environmental movement activists, community neighbourhoods, farmers and fishermen and farmers' right campaigners have collaboratively worked in the movement against electronic hazards and the expansion of Science Park since 2005 and the campaigns for electronic employees' working rights have gradually emerged during 2008 economic crisis. Despite of relating to electronic industry, the two movements have seem remained irreverent in the beginning, but the gradually discovery of the impacts of electronic hazards on both workplace, community and environment, and the lack of social and environmental responsibilities of electronic capital seem to provide the potential interconnected relations between the two movements. This research concerns the relations between the environmental and labour movements in challenging the electronic industry in Taiwan. The author will explore the composition of activists and the trajectory of the two movements, and discover the difficulties and potentials for the formation of environmental-labour alliance challenging the electronic high-tech industry in Taiwan.

*Social Capital, Mobilized Information Networks, and Risky Investment*

This study reviews several Taiwanese researches that relate to the behavior of participating in risky investment from the view of social capital to the view of sociology of knowledge, and attempts to bring extant quantitative data into conversation with extant qualitative research. After comparing the former studies, I construct a model emphasizes on typology of mobilized information networks to explain the behavior of participating in risky investment. Since this paper focuses on how investors get information, I use the data of Taiwan Social Change Survey period 5<sup>th</sup> time 3<sup>rd</sup> (2007) and classify sixteen types of investors by distinguishing mobilized information networks into sixteen types. These types of mobilized information networks indicate each of the sixteen groups of investors has different "information-knowledge" social ability, by which investors recognize the reality of financial market. Without knowledge foundation, investors can just understand very limited information; without special information channels, investors cannot form complete information-knowledge. I argue that mobilized information networks can explain risky investment behavior better than general social capital capacity.

This paper controls several important social and economic status variables, and controls risk acceptance degree of investors as well, and then run following models separately: (1) use social capital variable as independent variable on risky investment behavior, (2) use social capital variable as independent variable on sixteen types of mobilized information networks separately, (3) let social capital variable be controlled also, and use mobilized information networks as independent variable on risky investment behavior. After comparatively analyzing the result, I prove the argument of mobilized information networks can explain risky investment behavior better than general social capital capacity.

*Taiwan's Labour Resistance and Organising in the New Millennium*

The research aims to explore the recent development of organised labour in Taiwan where has shown astonishing degradation of wages and working conditions in the new millennium. The independent labour movement has emerged from the democratic transition in the second half of 1980s. However, unlike the stories in South Korea and Hong Kong, since the late 1990s Taiwanese society has witnessed a continuous decline of union density and union influence at workplace as well as national politics. The crisis is clear: the independent union movement is losing its strength in traditional manufacturing sector and failing to represent workers in emerging industries such as electronic and service industries where in particular the irregular employment is prevailing. Several students of labour studies have identified the specific institutional and cultural constraints on Taiwan's union movement. However, the recent development of labour movement, regarding to how the movement breaks through the predicaments, is worthy to take a closer look. The author will first illustrate the efforts and crisis of the labour movement in the hostile institutional and political environment. Second, without a strong and solid national union federation, the role of local federation, industrial federation, and labour NGO will be discussed. Finally, the amendment of Trade Union Law in 2010 removed several rigid regulations on union formation and has encouraged a plenty of organising campaigns in largely unorganised industries. In final part the author will focus on these new organising strategies and evaluate their effect and possibilities.

*A Value Organization With The Sports - As a Candidate That Face Up With The Nation States and The Corporations Under The Global World-*

IOC claims that IOC is not a sport organization but a value organization with the sports. Although it is a fascinating idea, not well supported by the people out of the sports stakeholders. This idea is investigated from the organizational sociology approach. Religious community and Regional community were well recognized as the value organization in the history. Both of them could invent tradition and were the main bodies of the imagined communities. They still claim themselves as a value organization, however, the power and influence to the public are keep decreasing under the globalizing world. The global world prefers a value that set over the boundaries and not by God. Hence, the necessity of a value that can pick off an extreme nationalism and capitalism is well recognized and discussed as the quest for ideal value system, but not as an ideal organization that embody the value. Firstly, currently existing major organizations and groups based on Family,

Ethnicity, Religion, Army, Party, Union, Kingdom, Nation State, Corporation, NPO and Sports organization are compared for their nature and character by Purpose, Economical situation, Membership principle, Internal rule and governance, Invention and Share of a value and several other points. Secondary, by comparing the organizations that put God, Region or Sports as the core value, the necessary conditions to be a value organization under the global world is discussed. This investigation discovered that the organization with the sports as the core value has the similar nature and character with that of Religion and Regional community. Besides, an organization with the sports is more adaptive for a free membership and value diversity. Such nature and character are summarized as "Sports rationality" against "Economic rationality". The sports rationalism will naturalize the nationalism and capitalism, and then bring better harmony into the society.

*The Role of Population Policies in Fertility Decline: A Comparative Analysis of Lowered Birth Rates in Peoples Republic of China, the Republic of Korea, Japan and the United States*

This paper examines the rates of the decline of fertility in China, Korea, Japan and the United States in light of the countries' respective population policies. Specifically, the authors, using a sample of young students from one medium size city in rural surroundings in each country, gauge students' opinions on their desired number of children in the contexts of "ideally", "likely", and "realistically" number of children desired.

Students are currently enrolled in primary schools, middle schools, high schools, and universities in the four communities. The data also touch upon the students' current family size, parents' family size, families' Socio-Economic Status (SES), Parents' occupations, educational levels, as well as parents' place of birth.

At the core of this study is the assumption that population policies have indeed affected the size of the current families, thus the observed declining birth rates in the respective countries. Moreover, the authors suggest that the effect of the population policies upon the next generation of parents could be ascertained by measuring their attitudes regarding the "expected" number of children as reflected in their responses to the notions of ideal, likely, and realistic number of children envisioned for themselves.

Our data suggest a direct relationship between the respondents' expected family size and the current Total Fertility Rates (TFR) observed in the respective countries. The socio-economic impact of our findings with some surprising results will be discussed as well.

*Impacts of Immigrant Health Care Policy: Micronesian Immigrants in Hawaii*

The immigration policies of the host society and their foreign country relationships contribute to changes in the influx and composition of immigration populations, and the social context of the host society influences integration of new immigrants. Hawaii has been one of the primary destinations for Micronesian immigrants due to its geographic proximity, as well as the unique social entitlement and benefits endowed by the United States due to the Compact of Free Association between the Federated States of Micronesia and the United States. The friendly state health policies and exhaustive efforts of community health workers toward Micronesian immigrants, in particular, have helped them gain access to health care services in spite of their low socio-economic status and the cultural and linguistic barriers. However, in 2009 the State of Hawaii attempted to restrict access to the state's comprehensive Medicaid (public health insurance) coverage for Compact citizens. This study examines differences in incorporation and integration in health care access of Micronesian immigrants in Hawaii before and after 2009. The interview and brief survey data were collected with Micronesian immigrants and the ethnic community leaders, as well as local health care providers in 2005 and 2013. The results show the notable decrease in seeking professional health care services and increased perceptual barriers (e.g. fear and frustration) to health care access. Suggestions and implications are discussed.

*2012 Naggomsu-bikini Event' as a Social Performance*

This paper aims to approach '2012 Naggomsu-bikini event' not from an existing perspective of social movement but as a social performance proposed by Jeffrey C. Alexander. When a problematic situation occurs, members of society try to resolve it through a social performance. Analytically, a social performance consists

of systems of collective representation (background symbols and foreground script), actors, observers/audience, means of symbolic production, mise-en-scène, and social power. This paper demonstrates how the fusion and defusion of these components of social performance characterize the '2012 Naggomsu-bikini event'. The data demonstrates that the foreground scripts for '2012 Naggomsu-bikini event' were constructed from Korean traditional cultural structures and '2012 Naggomsu-bikini event' as a social performance evolved through five stages along with the fusion and de-fusion of all components of social performance. The methodological merit of this paper lies in the fact that it shows how cultural structures guide social actions in concrete historical events instead of remaining in the textual analysis of cultural structures.

#### *Hong Kong Family Play, Childhood Culture, and Social Reproduction*

Scholars have established that ethnography of family consumption practices is a fruitful way of analyzing parental beliefs and practices, meanings of buying to children, the commodification of parent-child intimacy and peer connections, and the reproduction of social class and gender differences and hierarchy. Post-developmental early childhood education scholars argue that the ethnography of children's play shows differences in children's capacity and involvement of play due to social and cultural differences. Power, as consumption practices, is integral to play. There is a convergence that scholars from different disciplines study consumption and play in context. Nevertheless, no one to date has used visual ethnography to examine the relationship of family play, social reproduction and market, although play is increasingly commodified in recent years.

In Hong Kong, people generally regard family as the most important component of human life, and children's status has changed from economically worthless to emotionally priceless. Emphasizing on academic achievements, scholars argue that Hong Kong parents are instrumental to children's play. Parents worry play may divert children's attention to study, but they increasingly ask children consume commercial eduplay and enrichment activities for alleviating parental anxiety and serving parents' hopes and aspirations for class mobility and maintenance. Both children and parents use various play commodities and activities to claim their power and status, to express distinction and to perform identity.

The research uses a visual-ethnographic perspective (analysis of family video diaries, video- and photo-elicitation interview, in-depth semi-structured interview and field study) to help fill the research gap by studying Hong Kong family (with children aged 3-8) play and out-of-school activities. In turn, the study aims to expand its analysis to larger social sentiments, relations and contexts: Hong Kong parenting culture, childhood play culture, market, intrafamilial dynamics, social belongings, social differences and reproduction in a context of social and economic uncertainty.

#### *Experience of Migrant Agricultural Workers in the Republic of Korea*

This paper examines the labour market experiences of migrant agricultural workers in the Republic of Korea. In 2003, the Korean government institutionalized a flexible foreign labour importation system, labelled the Employment Permit System (EPS), to address labour shortages in certain sectors of the economy, such as manufacturing, construction, agriculture and livestock and fisheries. The EPS serves the country's main framework for the admission of foreigners into low-paid jobs shunned by local job seekers. For this reason, the EPS intends to tie migrant workers with their employers. In principle, an EPS worker is required to work at the workplace s/he was initially placed. Mobility in the labour market is highly restricted. The Korean government regulates the supply of EPS workers in each sector, and mobility between sectors is prohibited. However, EPS workers employed in the agricultural sector choose to become undocumented to seek better-paying jobs in the manufacturing sector. While the EPS is designed to use foreign labour to maximize economic benefits, it has created tension between EPS workers and Korean farmers. The EPS also resorts to the principle of rotation; EPS workers must leave the country after the completion of their contract. While this paper draws attention to the precarious status of migrant agricultural workers in South Korea, it also highlights resistance strategies employed by these migrant agricultural workers. Both qualitative and quantitative methods are used to analyse the experiences of migrant agricultural workers in Korea. Questionnaire surveys are currently being conducted among both migrant agricultural workers and their employers across the country.

#### *Age Differences or Socioeconomic Disadvantages? Factors Shaping Negative Marital Outcomes in Cross-Border Marriages*

Cross-border marriages, sometimes referred to as international marriages, between younger women from less developed countries and older men from more developed countries have increased rapidly in the last two decades. Women from Mainland China have joined the trend and married out to places such as Hong Kong, Taiwan, South Korea and Japan. Being one of the most popular destinations for marriage migrants from China, this type of marriages have now constituted nearly 35% of newly registered marriages in Hong Kong in 2011. The marital quality of cross-border marriages have started to attract scholarly attention because age and cultural differences between the marital partners seem to be built into their union formation (the difference thesis). Furthermore, the mechanism of self-selection often means that men from lower socio-economic backgrounds are more likely to have a foreign wife because their economic disadvantage inhibits them to find a partner locally. Marrying a husband with a disadvantaged background also means that foreign wives may experience more financial stress compared with other women (the disadvantage thesis). Using couple data collected in Hong Kong, this paper compared the negative marital outcomes, measured by marital conflict and psychological aggression, of local and cross-border couples and tests the difference and disadvantage theses. Our analysis showed that foreign wives' financial stress, husband's traditional gender role attitude, and a 6-9 year old age gap between husband and wife significantly increased the risk of marital conflict and psychological aggression in cross-border marriages, thus providing some preliminary support to both the disadvantage and difference theses. We, however, did not find significant differences between local and cross-border couples in terms of factors that shaped their marital outcomes, hence providing some evidence that a large age difference and socioeconomic disadvantages may affect the marital outcomes of local and cross-border marriages in similar ways.

#### *How to Historicize the Invisible and Inaudible Women's Experiences? : Thesaurus Construction of Women's Oral History and Gender Politics*

Women's oral history has a distinctive nature in that these are based on the daily experience and women's life history. Generally women have tendency to narrate their life histories focusing on birth, marriage, childbirth, illness and death of family members. Researchers also have paid attention to interpret and analyze women's subjective experience and the character of women's narratives. So we are developing thesaurus of women's oral history in the light of the attribute of women's oral discourses. This will shed light on exclusion and marginalities of women's experience considering the implication of gender and sexuality, family and labor in women's life history.

This thesaurus will not only contribute to more specific date search for women's oral history researchers, but confront with existing classification and category in which it prescribe what is important and significant in history. The thesaurus construction of women's oral history in the feminist perspective will critically reflect on patriarchal prejudice, male-dominant norms, and the ideology of normative nuclear family embedded in classification and categorization itself.

#### *Uncomfortable Compromise Between Developmentalism and Welfarism?: Politics of Social Investment in South Korea*

While South Korea (hereafter Korea) has been experiencing unprecedented social risks together with the weakening stability of family and the labour market, a comprehensive set of social protection schemes has been introduced and expanded during the last two decades. In the process of building the welfare state, one of the noticeable aspects is the emphasis on social investment policies and social services, less favorable to cash-providing schemes such as pensions. Free childcare services, a range of active labour market programs, and the long-term care insurance are the significant outputs of the policy trend. The recent development of the Korean welfare state, however, leaves many interesting research

questions in comparative perspectives. The questions that this paper pays attention to are about the politics of social investment policies and also whether these policy developments are functional outputs against increasing social risks or political outputs in the course of emerging welfare politics. The Korean welfare state has revealed the vulnerability of its income maintenance schemes against 'old social risks' such as the highest old-age poverty rate among OECD countries. Comparing to other 'developmental' welfare states in East Asian region, one could easily notice that social investment policies and politics have been much more visible and stronger in Korea than any other countries. This paper will trace the origin and the development of social investment discourse in Korea and discuss why and how these social development policies and politics have been possible. In so doing, it will explain 'developmentalism', the important legacy of the Korean welfare state, and discuss how this legacy has been transformed in the waves of socio-economic-political changes. It will argue that it is crucial to analyze social investment politics to understand the dynamics and the identity of the Korean welfare state.

*Livelihoods On The Move: Understanding The Linkages Between Migration and Household Food Security In India*

Using the Sustainable Livelihood approach, this paper aims to highlight the role of migration as a livelihood strategy in influencing the food security outcomes among rural households in India. Food security is a key global challenge and India accounts for nearly a quarter of the world's 870 million undernourished people. A large majority of India's food insecure population resides in rural areas that is either landless or own small agricultural holdings and thus, excessively depends on wage labour to meet their income and food needs. However, the undeveloped rural labour markets imply that they have to seek the wage income in the distant labour markets. The traditional importance of migration in the livelihood systems of rural poor notwithstanding, recent years have witnessed an unprecedented surge in rural outmigration in India. It is important to note that the most dominant pattern of rural outmigration involves migration by relatively younger males while the other household members stay behind. From the perspective of food security, this pattern of migration implies that through channels such as remittances and changes in gender roles; migration can have a potential bearing on household food security outcomes. Drawing from the primary survey of 400 rural households in the eastern Indian state of Bihar, this paper attempts to highlight these linkages. The findings suggest that despite the distressed-induced nature of rural migration from Bihar, remittances contribute positively to household food security and food diversity outcomes. Not only migration income helps improve the ability of household to buy food from the market, it also provides additional resources to invest in agriculture which in turn, improves the own-production food entitlements of migrant households. The findings warrant policy attention to remove the barriers to mobility which could foster the food security outcomes of rural households in India.

*A Sociological Study of Nursing Profession: A Case Study of Baroda City of Gujarat State in India*

The role of sociology in the field of nursing profession continues to cast new light on many aspects of health and illness in society. Over the last 20 years, nursing profession has seen sociological knowledge as a valuable clinical tool, both in the diagnosis and prognosis of a wide range of illnesses and long-term conditions. The study of health and illness and of the professionals and other organizations devoted to health care is one of the most fascinating fields. Health is an important factor in assessing the quality of a society's life. Medicine and other health services are not only dependent upon the biological and physical sciences, but also on health service organizations, medical profession, and social organizations. By social organization, it is meant the interdependence of parts. Interdependent parts consist of some of the following tasks, roles and activities which are being undertaken by individuals in hospitals. Adopting a sociological approach, this paper tries to bring to light the role of nurses with others in role set in hospital as an organization. Paper also tries to examine the socio-cultural and economic background of the nurses from where they come and what factors motivate them to join this profession. The paper also focuses on aspects of role performance and interpersonal relationship among the para-medical staff. The paper also examines into the professional problems of nurses. The present study is based upon the primary data collected from 100 nurses working in the public and private hospitals of Baroda city in Gujarat state of India.

*Is This Our 9/11 Moment? Young Men and Gender Violence in India*

The December gang rape in Delhi has become India's 9/11 moment. It galvanised people around the country to come together in mammoth vigils. In Delhi, street protests so completely unnerved the police and the administration that roads to the iconic India Gate, where protestors of all hues had gathered in the heart of the city, were blocked. For once, people said, gender violence became a central concern. Despite the compelling magnitude of the rallies around this specific event, we need to track the political history of outrage and we need to ask if, like 9/11, the 2012 event of the gang rape stigmatised a group.

'Reform the boys' has become a battle cry. We also need to step back and ask if collective protest has unfortunately resulted in a form of colonial regulation of young working class men as 'objects' of reform emanating from above. The particular instance of the December gang rape is the terrain for discussing issues of larger concern – mainly- the way hegemonic and subaltern masculinities are produced. Popular responses to awaken state responsibility across the globe are linked with the production of regulation and control of young men. It is immigrants, especially young immigrant men, who are first created as 'outsiders' and then become the objects of control. The fear of young immigrant men is a global phenomenon which I explore to analyse gender violence in the public sphere.

This is by no means a way to obliterate the horror of gender violence. I do however see the seeming 'action' by the Indian state as subversion of protest. The intention to purge cities of migrants is thinly overlaid with the language of gender reform, high jacking the intention of protest replaced by a fear of male migrants.

*On Social Development and Economic Growth: Pharmaceutical Manufacturing in Kenya, Uganda and Tanzania*

During colonialism and into independence, the pharmaceutical markets in Kenya, Tanzania and Uganda have been dominated by Western multinational companies (MNCs). Today, in contrast, Indian pharmaceutical companies that manufacture generic versions of drugs control a large share of the market in all three countries. Indian generics directly contribute to social development in these three countries by making access to low-cost, high-quality medicines possible. But what impact does the availability of affordable Indian medicines have on economic development, particularly industrial upgrading? The literature on development has often expected tension between the goal of social development and the goal of economic growth because scholars assume that the efficient provision of affordable social services would have to come at the expense of local industry. Based on extensive interviews in Kenya, Uganda and Tanzania, in this paper I show that, under certain conditions, this is not necessarily the case. I find that three conditions are particularly essential for imports to contribute to local production: (1) that the 'social development' market – the one nowadays often funded by the Global Fund to Fight AIDS, Tuberculosis and Malaria and by the U.S. President's Emergency Plan for AIDS Relief (PEPFAR) – does not a-priori exclude local manufacturers, (2) that the drugs purchased are effectively monitored, and (3) that local manufacturers can gain access to technological know-how even when this technology is not easily provided by the market. All three countries show that it is only the presence of these conditions that allow for industrial upgrading to follow social development but a comparison between Tanzania, Kenya and Uganda is particularly useful because companies in these countries had access to technology through different means and different degrees of government support.

*Reconstruction of Opposition Norms and Social Inclusion in Indonesian Urban Poor: A Study of Street Vendors Restructuring in Jakarta*

The study discusses the implementation of policy on the street vendors restructuring in some strategic traditional markets in Jakarta. The implementation applies a new different approach which attempts to involve strategic stakeholders in planning of arrangement. The approach encourages stakeholders' participation in the whole stages of process. The approach creates debates of pros and cons among the stakeholders in the area of the market. The debates reflect a hidden structure of the market. The existence of actors such as thugs (*preman*) in various level forms an opposition norms which regulates the urban economic activities. The Jakarta local government, through the policy, has forced and reconstructed the existing opposition norms. Consequently, the policy results in resistances.

The local government accommodates the actors of the hidden structure into the restructuring process. The consistency of local government has reconstructed successfully the integration of hidden structure and opposition norms into the structure of state formal policies. The direct impact of such policy is the social inclusion of small scale urban economic actors who are also the urban poor groups. The pro-poor policy becomes a contrasting policy amidst the neo-liberal economic policy that tends to benefit the large scale capital. The study applies qualitative method by interviewing the economic actors and the policy makers. It is also supported by the secondary data collected from the Indonesia printed news media. The context of the study is Tanah Abang Market as one of the largest Southeast Asian Traditional Market.

*Reenergizing Fair Trade through CSA: A Sharing Economy Perspective*

Sharing, obviously, is an indispensable component of human history. But as the market economy became dominating over the past 200 years, production and consumption became highly atomized. People seemed to lose instincts of sharing and habitually adapted to "either public or private"—a dichotomized view of goods, which is apparently an ideological myth. In real life situations, there are a large number of quasi public goods like club goods or common pool resources (Ostrom, 2010). The recent revitalization of the sharing economy is gaining popular attentions (The Economist, 2013). It is largely a result of the IT revolution but currently further going offline, promoting various experiments in daily lives. The defining characteristic of the sharing economy lies in ownership transformation. Comparatively, the existing social economy, including fair trade, is still private property based, aiming at the internalization of social costs and benefits. For instance, the stress on environmental and labor standards, in the language of economics, is to achieve a comprehensive accounting of external costs, and reflect the "genuine prices" of commodities. Under the current study potentials of reenergizing the fair trade movement through its integration with community supported agriculture, an alternative economic activity that not only moves from "fair" to "cooperation", from "trade" to "co-production", but also carries a greater touch of the sharing economy, will be explored.

*Girl Child, Leisure and Outdoor Sports in Kolkata: An Intersectional Enquiry*

The social institution of sport reflects a society that presupposes the values, mores, norms, and standards of the majority and subsequently determines who can participate in sport and who can be identified as an athlete. Sport Sociologists consider sports as an important leisure activity which facilitates intellectual, physical and moral development of the young generation, especially children. Consequently, Sports and Physical activity were specifically recognized as a 'Human Right' in 1978 by UNESCO, supported by The Convention on The Rights of the Child in 1989, to provide equal opportunity for young individuals irrespective of their gender, religion and class to freely participate in any sporting activities.

The present paper addresses through intersectional paradigm how involvement in sports as an active leisure activity among girl children is predominantly proscribed in modern India based on their gender, social class and religion. India has failed to recognize the necessity and significance of 'active leisure' for majority young girls in the form of outdoor sports, hence incarcerating them within the domestic sphere of household duties and responsibilities as caregiver. The embedded patriarchal ideology consider girls incompatible to any sporting activities due to their physiological attributes, thus denying them access to pursue sports as a 'active leisure activity' compared to their male counterparts. Furthermore, the intersection of gender, social class and religious background intensify such stereotyping and discrimination of young girls, who are further marginalized and prevented from engaging in active leisure activities i.e. outdoor sports. Against this backdrop, with the help of 'narrative' analysis of 50 young girls in Kolkata belonging to the age group of 10-14 years, the present paper attempts to reflect how mutual compatibility of gender, class and religion buttress unequal prospects among girl children, accentuating deprivation and silhouette their identity and lived experiences.

*Women Athletes in India: A Tale of Intersectional Inequalities*

The present study aims to examine the relevance of analysing the multidimensional experiences of women athletes in India based on their gender, class and sexuality from an intersectional perspective. Intersectional paradigm during the last three decades emerged as a primary analytical tool among feminist scholarship, which explicitly acknowledged differences among women and how diverse social identities of women i.e. class, ethnicity, race, nationality, religion, sexuality, language along with gender intensify their subordinate experiences within varied spheres of social institution including sports. Susan Birrell advocates that 'sports' should be conceived as a critical arena for divulging multifaceted nature of discrimination on women athletes, influenced not by gender alone but also by their multiple social identities which are inextricably linked. In fact, a new proliferation of researches in North American and European societies adopting intersectional approach within sports sociology has brought to the fore on the 'multiple oppression' of women athletes. Conversely in India, the interrelationship of sports and gender and more specifically of sports and other social variables has remained an uncharted territory for sociological analysis. The 'secondary' or 'inferior' status of Indian women athletes which centres on the overriding importance of femininity is furthered by the complex union of class and sexuality. Thus, with the embedded patriarchal ideology as a devoted partner, Indian sociological discourses has legitimized its abortive outlook by failing to document the intersecting experiences of women athletes within the domain of sports. This paper, thus illustrates, drawing significant examples from Indian context like, the case of Baby Ghosh, Nisha Rani Dutta, under 14 girls football team and many more, how identities of gender, class and sexuality intersect to accentuate discrimination, reproduce disparate relations, which in turn shape the reality of lives and experiences for Indian women athletes.

*Alternative Visions of Social and Eco-Justice: A Feminist Reflection on Models, Process, Action Research and Thinking Circles, Proposal to Joint Session RC02&44*

This retrospective feminist analysis focuses on a series of thinking circles, action research and feminist networks that trace their roots back for over several decades. It could be argued that an initiating group was a network of feminists from the Economic South called DAWN, Development Alternatives with Women for a New Era. DAWN was clearly one group who held a leadership role, convincing people such as me to participate in the series of UN Conferences that came to be known as the UN Conferences of the 1990s. The Women's Environment and Development Network or WEDO also took on such a role. We started in Rio in 1992, and this reflection will focus specifically on the World Summit for Social Development. Its alternative thinking, such as the idea of conceiving of economics as "an enabling environment," came from our participation at its "PrepComs" and surrounding meetings that led to the 1995 Summit. The paper then builds from reflections on action research such as Nova Scotia Women's FishNet and different types of thinking circles operating at local, national and global levels. These include on-going thinking networks such as International Feminists for a Gift Economy and the Matriarchal Studies Network and focused thinking workshops such as the Wise Women's Workshop and one that produced the Pictou Statement, the "Feminist Statement on Guaranteed Living Income." The paper reflects on organizational models, process and content of these alternatives and explores the types of relationships within and between these and other networks.

*Creatives As "Urban Pioneers" – Towards the Empowerment of Socially Disadvantaged Neighbourhoods*

By the example of socially disadvantaged neighbourhoods in Berlin and Hamburg suffering from manifold social problems and from persistent negative images I will report from a research project investigating initiatives which are mobilised by "urban pioneers". These activists are creative people from arts and culture interested in places providing opportunities to try out ideas. They are fascinated by the atmosphere of wear and tear, see the potentials of places and want to actively contribute to shaping them. Even if at the outset they often follow their own approaches to life, they are highly aware of the social problems in the neighbourhoods and aim at achieving more quality of life and social inclusion for the locals. Thus, the activists do not intend to promote their individual interests, rather they strive to include inhabitants in order to achieve joint action. They aim at helping residents "to find their feet within this system", as one urban pioneer put it. Hence, empowerment is an integral goal of these pioneers. Some of the initiatives are short-lived, the most of them, however, are long lasting and well-organised.

While it is clear that the actors are unable to solve complex (social) problems in the short or medium term, their projects—such as the organization of innovative

art and cultural events, the founding of a cultural association, the organization of multi-cultural neighbourhood festivals, or the re-shaping of a public park—help to advance social, organisational and infrastructural transformation processes. Most notably, they challenge negative interpretations of place, renegotiating them, and help to promote collective processes of identity formation. If their activities are made a topic of public discourses, they may even influence external perceptions of the neighbourhoods.

It will be reported how the activists try to organize change together with other actors and partly against others.

#### *Local Perceptions of Vulnerabilities in Times of Climate Change. How the German Cities of Luebeck and Rostock Construct Potential Threats*

The paper reports from a research project studying coastal cities of the southern North Sea and Baltic Sea pursuing the research question of how local societies construct climate change. The results will show that local interpretations of climate change impacts may differ significantly irrespective of similarities in natural conditions. In the German city of Lübeck challenges of flooding and the vulnerability of the old city are recurrent topics in the local discourse. At the same time, however, Lübeck is portrayed as a city that has always defied the biggest challenges in its long Hanseatic history and that is traditionally well-equipped to cope with the climate change-induced threats to come. In the Hanseatic city of Rostock – only 100 km away from Lübeck and confronted with the same disaster scenarios – surprisingly, such a mode of interpretation does not play any role in the perception of climate change. The East German city perceives climate change much more as an opportunity. Long periods of warmth might help to make the region more attractive to tourists which will have a positive effect on the job market and will make the city resilient compared to its precarious economic situation.

Against this background, it will be argued that the conceptions of "vulnerability" and "resilience" which have been strongly influenced by ecology and natural hazards research need to be widened. A theoretical concept will be suggested that is enriched by cultural dimensions and particularly by the aspect of the social construction of reality implying that actors may develop different perceptions of potential threats as well as of precautionary measures – even though from the perspective of scientific scenarios the endangerment seems clear and proven. This does not mean, however, that materiality should be neglected which is why considerations from actor-network theory will be taken into account.

#### *Social and Labor Market Integration Processes of Young People during a Continuous Economic and Financial Crisis*

The proposed presentation research intends to focus on Greek Youth social and labour integration process, based on analysis of two important factors, namely, **social and cultural capital** on one hand, **youth agency** on the other. Strong social bonds constitute an important integrative factor for youth, in conjuncture with prevailing traditional social and cultural values. Public education (secondary and higher), as well as employment in the public sector, constitute, in this context, a primary social mobility strategy, which is mainly financed by middle class family income and sustained by the Greek public education system. However, given the current global economic crisis, and more particularly the Greek one, there is enormous liability to state finances, provoked by the accumulation of a staggering public debt and an increasing budget deficit. This has caused not only an imbalance but also a radical transformation of the current social setting. Rising unemployment, drastic decline in state employment, as well as social and employment risks push for an emergency rearrangement of both individual and family strategies. Youth's social capital is undergoing a deep transformation, characterized by an expansion of social networks on one hand, and a proliferation of loose social ties on the other, resulting in a boost for professional and geographical mobility. On the other hand, we observe groups of young people that tend to adopt social disobedience practices, as well as an active oppositional stance against the established social and political order, in the framework of their reaction to social risk and economic hardship. The emergence of new social media has significantly improved communication capabilities and, at the same time, has offered new opportunities for spontaneous mobilization of anti-government protesters.

#### *Japanese Colonial Food Regime from 1895 to 1945: The Historical Origin of Japan-Led East Asian Developmentalist Statecraft*

This essay examines Japanese colonial food regime, which primarily locates in Taiwan and Korea but geographically contains Manchuria and Southeast Asia, to pinpoint the difficulties of maintaining a stable food supply and the dilemma of minimizing the conflicts of interest in both of agricultural and industrial sectors that Japan encountered from 1895 to 1945. By embedding the colonial administration and agricultural policies into the history of sociomaterial practices in colonies and the dynamics of international relations in Asia then, I analyze how Japanese agricultural policies and its fruition was conditioned by the material endowments in colonies, such as population, climate, crops, rice varieties and so on, and, on the other hand, constrained by the western imperialists who competed to grab East Asia from the late nineteenth century. Based on this I argue that, while Developmental State scholarship provides an effective framework, especially exemplified by the comparison between Japan-led newly industrialized economies and Southeast Asian or Latin American countries, to demonstrate the significance of the state and its administrative measures in post-war prosperity, it requires more attention to the pre-war historical conjunctures which allowed the genesis and function of Japan-styled statecraft which should not ahistorically assumed. The exploration of the spatial-temporal background of Japan's colonial statecraft helps avoid the conventional dualism to evaluate Japan's legacies, as shown in the fierce debates among Japanese and Korean scholars about whether Japan contributes to the post-war economic miracles in its colonies. It also sheds light on the methodology of the comparative study of East Asia and other regions with a holistic comprehension of their respective dynamism. The focus on food will as well steer reconsideration toward the future challenges facing East Asia that may not be resolved anymore solely by developmentalist ideology and statecraft.

#### *Institutional Variations and the Perceived Importance of Networks for Status Attainment in US and China*

Using data from the World Values Survey (2005-2006), I show that perceived levels of the importance of networks for status attainment are higher in the US than in China. This suggests that networking, in the form of a 'guanxi' culture, may be overstated in China. I underscore the importance of institutional factors, drawing attention to important differences by job sector within each country. In the US, networks are perceived to be more important in the public sector than in the private sector. In China, networks are perceived to be equally important in both public and private sectors. I explain these differences invoking such concepts as liberal market economies and patronage jobs in the US and, institutional holes and political technocracy in China. The results illustrate that institutional factors are an important predictor of the perceived usefulness of social capital for status attainment.

#### *Social Justice on Sale in the Globalized Education Supermarket*

This paper is aimed at enquiring into the very demanding idea of social justice against the impacts of marketization and globalization on education. In order to do so the consequences of injustices resulting from the effects of global capitalism and the influences of education markets will be briefed firstly. Then the mission and myth of social justice relating to education reform will be detailed. Since the achievement of justice in a certain society often entails an injustice done to other societies especially in the era of globalism, the barriers and borders of social justice should not be neglected.

As regards globalization, the competition and cooperation of both domestic and international senses represented in higher education have shown relationship with the market principle. Educational systems, especially universities, facing the era of global economy characterized as "knowledge-based" have been required "to produce a workforce more adequately prepared to meet the challenges of globalization" (Rizvi and Engel, 2009). Under these circumstances, education policies for social justice will be challenged against their societal borders, not to say their practical barriers from within.

In this paper the idea of "global democracy" proposed by some authors such as D. Archibugi (1998), I. M. Young (2000, 2007), N. Fraser (2009), D. Held (2008, 2010) shall be borrowed and reconceptualized to help go beyond social justice. In doing so, some cases of education reform or education policies pertaining to social justice together with a few international conferences focused on the issue of education and social justice are to be analyzed to reveal the central problem of taking social justice as granted.

Keywords: social justice, global democracy, education markets, globalization

**RC09-167.4****CHUGG, ROCK\*** (Freelance, [rockchugg@hotmail.com](mailto:rockchugg@hotmail.com))*'Racist Friend: Consequences of Privatization Creep in Australia'*

In this paper, the privatization of Australian Federal, State and Local utilities is juxtaposed to the classics of aboriginal literature (Pritchard's *Coonardoo*, Gere's *Fringe Dwellers*, and Mudrooroo's *Wild Cat Falling*), and an evolving sociological canon (Goldmann's *Sociology of the Novel*, Green's *Literary Methods and Sociological Theory*, and Bourdieu's *Rules of Art*). For instance, Local participation in political decision-making has dried up like the well in *Coonardoo*, since the Council amalgamations from Australia's three tiered government paradigm. An abolition of Federal run Job Networks generates the dual labour market of *Fringe Dwellers*. And lastly, the State suburban Rail grid sell-off imposes a Northern Ireland style paramilitary regime upon an anonymous commuter population, like the protagonist of *Wild Cat Falling*. In contrast to official views of friendly Reconciliation during the age of indigenous Land Rights, Mabo, and a Stolen Generation apology, in an opposition that includes the UN some see the Northern Territory Intervention as the low point of a newly established Apartheid system in Australia. I argue that the plight of aboriginal peoples is becoming a model for wider repression of Australian citizens in general, exemplified in these three case studies of privatized essential public services. While a sociology of literature can point to the fetishistic (Goldmann), semiotic (Green), and capital (Bourdieu) factors in a theoretical discussion, in practice this new White Australia Policy, just as covert and unjustly inserted as the 20<sup>th</sup> Century original, suggests an increasing return of institutional racism.

The recent book by James Clifford, *Returns*, claims to be the third of a trilogy that began with *The Predicament of Culture* (1987) and continued with *Routes* (1998). The first volume marked a certain postmodern intervention into anthropological writing by invoking multivocality and authorial imagination. The second volume probed the changing transnational context of culture by emphasizing fluidity of borders, cultural spaces and identities in the ongoing process of becoming. The third volume explores, in the author's own words, "homecomings—the ways people recover and renew their roots." In essence, it represents an attempt to bridge roots and routes, or the local in the global, in ongoing negotiations of traditional futures.

The proposed paper will be an adaptation of a larger review essay on Clifford's trilogy, to appear in the journal *boundary 2*.

**RC44-739.15****CHUN, JENNIFER JIHYE\*** (University of Toronto,[jj.chun@utoronto.ca](mailto:jj.chun@utoronto.ca))**HAN, JU HUI JUDY\*** (University of Toronto,[Judy.Han@utoronto.ca](mailto:Judy.Han@utoronto.ca))*Protest Repertoires As Expressive Cultures: Reconceptualizing the Struggles of Informally-Employed Workers in South Korea*

Dramatic acts of resistance and solidarity are a mainstay in South Korea's public landscape, especially among the many precariously- and informally-employed workers in the country. Whether opposing the labour repression of authoritarian industrialization between the 1960s and 1980s or the market-driven policies of neoliberal democratic regimes during the 1990s and 2000s, workers and their advocates have relied on an array of protest acts to challenge the legitimacy of ruling authorities — from workplace strikes and occupations to hunger strikes and worker suicides. While many labour and social movement scholars have examined the instrumental, organizational and structural factors that promote strategic forms of worker collective action, much less attention has been paid to the expressive, embodied and aesthetic dimensions of workers' protests. This paper focuses on the characteristics of a new pattern of popular contention in Korean workers' already radical repertoire of collective action: the prolonged embodiment of emotional, physical, and financial hardship. In particular, we analyze forms of protest with strong expressive elements: religious and spiritual rituals such as head shaving ceremonies, fasting, and the Buddhist atonement ritual *samboilbae* (translated as three steps and a bow) as well as long-term occupations of symbolic sites such as construction cranes, church bell towers and building rooftops. By analyzing the affective and cultural life of protests, we seek to better understand why workers and their advocates choose to express their collective opposition through corporeal resistance and bodily sacrifice, and explore what such protest performances reveal about the expectations and aspirations of dissenting political subjects.

**RC44-725.3****CHUN, JENNIFER JIHYE\*** (University of Toronto,[jj.chun@utoronto.ca](mailto:jj.chun@utoronto.ca))*The Affective Politics of the Precariat*

What are the consequences of the new world of precarity on the political possibilities of collective transformation? In his influential 2011 book on the Precariat, Guy Standing argues that the lived experiences of chronic and pervasive insecurity for precarious-employed workers has undermined the collective politics of resistance and solidarity. Not only does the process of precarisation deprive workers of the affective ties and associational bonds associated with clear occupational and labour union membership, but the low-paid, insecure, and fragmented nature of precarious jobs intensifies the felt and embodied experience of "being rootless," denied the relations of trust, accountability, empathy and solidarity that characterized the previous era of industrial jobs that defines the class condition for the precariat. In this presentation, I will reflect on the relationship between precarity and solidarity by examining concrete efforts by precariously-employed workers to challenge the process of precarisation. In doing so, I pose alternative conceptual frameworks for identifying the political possibilities of solidarity and collective transformation in the age of global precarity.

**RC47-769.4****CHUNG, CHULHEE\*** (Chonbuk National University,[chulchng@chonbuk.ac.kr](mailto:chulchng@chonbuk.ac.kr))*Lenin and Wine: The Birth of "Civil" Movement Sector As a Institution*

This paper investigates the birth of the field of "civil movements" in South Korea, focusing on the rise of the Citizens' Coalition for Economic Justice that established its own niche in the movement field that used to be overwhelmed by revolutionary "Minjung" movements. Drawing on the perspective of the New Institutionalism, this paper examines the role of entrepreneur of the movement organization in creating the field of "civil movements" as a new institution. The success of the Citizens' Coalition is due to its two-stage strategy in the movement development. In the inception stage, the Citizens' Coalition chose a reserved strategy by presenting itself as non-political and oriented to the public good. Once the organization became stabilized, it launched hegemonic struggles against the Minjung movements shifting extant classification of democracy/anti-democracy to that of safe movements/dangerous movements, us/them, people/citizen, liberalism, social democracy/ radical leftism. This study has implication to the reestablishment of the relationship between the state and civil society in South Korea after the democratization in 1987.

**RC08-149.4****CHUNG, KAWOL\*** (The University of Tokyo,[kawol.c@gmail.com](mailto:kawol.c@gmail.com))*Development of Social Research in Japan from 1945 to the 1970's*

This study examines the originality of social research in Japan from 1945 to the 1970's. During this period, Japanese sociologists initiated social research adopting the framework of American sociology. This research was conducted in order to understand the sociologist's approach to research, which was necessary for the reconstruction of sociology subsequent to World War II. I will take a historical approach to this issue by considering the development of Japanese sociology.

Most studies deal with this era of social research mainly in the context of American sociology being adopted in Japan. However, this study refers to not only American sociology but also German theory of ideology because the development of social research in Japan was closely linked to Japan academia prior to 1945. This approach may also contribute to understanding the history of the sociology of culture in Japan.

This study first discusses the development of social research in relation to American sociology. It explains that the process of social research development partly depended on the course of quantitative research based on positivism. This study then analyzes the investigations of collective mentality, including the results of working-class studies and mass communication studies. This analysis reveals that some Japanese sociologists adopted the American sociological approach critically; furthermore, the results suggest that they introduced the German theory of ideology, from a historical perspective, to their work. As some Japanese sociologists applied both American sociology and the German theory of ideology to Japanese sociology, this study concludes that Japanese social research developed during this era had some originality.

*The Taste and Politics of Rice: Understanding the Construction  
Process of Quality Food in Taiwan*

Concern about the meaning of rice in Taiwan has been increasing in the recent decade. Meanwhile rice has become a product that satisfies more than the subsistence demand. The question of what constitutes demand involves the food choice of people; that is to say, by which criterion people decide to consume what food? This paper analyses the processes of constructing the quality of rice in order to understand both, the coding mechanisms and the struggles around the shaping of taste.

Through the concept of "qualification" the interaction between consumer and product can be understood; therefore, we can examine the active and passive actions of consumers in the process of constructing quality, and the formation of taste. Accordingly, we adopt the cultural economy approach to examine the transformation of the consumption of rice in Taiwan, especially the experiences and the recognition of rice in the sphere of exchange, in which the stable appreciation system has been shaped.

This paper suggests that the quality of rice has changed in history. The state and scientists have dominated the "qualification" of rice for a long time. During the recent decade this influence was bypassed. The change, including the "qualification" state, has moved from the sphere of production to the sphere of marketing, including the more influential process of aestheticization and ethnicisation. There were different actors in different periods dominating the legitimacy of constructing "good" food, which people took for granted and kept consuming. Further, the tastes were shaped in the internalization process in which the consumer, the provider, the state, and scientists were in struggle. Our exploration suggests that the material and symbolic change of rice in Taiwan, and the knowledge construction around "good rice," do reveal the power of the market to influence the production and consumption of food systems.

*Basic Theological Principles of Perfect Interpersonal Communion  
in Contemporary Orthodox Theological Comprehension*

To be persuasive for an orthodox Christian both theoretical reflections and practical implications concerning the social questions of Church life need clear theological substantiation. Grounding on main theological doctrines occupies a special place among the means of attaining such validity for orthodox Christian mind. Present paper is devoted to the consideration of the consequences of the number of basic aspects of the doctrine on God as the Holy Trinity for understanding of Church life by orthodox Christians. These consequences include the understanding of the personal way of being, and orthodox perception of perfect interpersonal relations and perfect communion.

It is the appreciation of human being as the image of God, which guides orthodox Christian to establishing a linkage between the doctrine on the Holy Trinity and his or her vision of proper Church life. In the sociological context of clarifying the significance of Trinitarian doctrine for orthodox perception of perfect Church life, a special attention is paid in the present paper to the so-called *social* understandings of the image of God in human community. This methodological approach makes it possible to deduce from the doctrine on the Holy Trinity four basic principles of Christian comprehension of perfect interpersonal communion and proper constitution of the social aspects of Church life. These four Trinitarian principles suggested and characterized in the present paper are *unity in difference*, *personal cause*, *personal fullness*, and *free giving*.

*Moving from Racism to Relativism: Paradigm Shift in the Accounts  
of the North American Indian Languages*

The history of the accounts of North American Indian languages and of the references to these accounts remains closely interrelated with the history of western modernisation and colonisation. The "exotic" otherness of those languages has been valued positively, as in cultural relativism, as well as negatively, as in the preceding racist doctrines. Nevertheless, all such references were typically made by commentators who typically lacked even a basic knowledge of the languages, as a result of which the evolving interpretations reflect the evolution of the main forms of prejudice and the standards of academic thinking over the past four centuries. We examine the accounts of selected linguistic properties of three families of North American Indian languages, i.e., Algonquian, Iroquoian and Eskimo, as

well as the references to these accounts in the humanities and social sciences. By illustrating the range of historically variable interpretations of linguistic data, we demonstrate the ambivalence of the methodological status of sources in interdisciplinary discursive contexts as well as the entanglement of linguistic references in the historically variable ideological and theoretical paradigms. In particular, we focus on the central motifs in the analysis of languages that are "exotic" from the point of view of typical properties of Indo-European languages, in the context of discussions regarding the correlations between linguistic structure and cognitive competence, culture as well as the construction of social reality. The analysis will cover accounts of languages and references to these accounts in academic research contexts throughout the last four centuries, and consequently they will be accounted for in terms of the historically changing conceptual and theoretical frames of reference.

*Changes in the Social Understanding of Quality of Life As a Result  
of the Economic Situation*

This presentation aims at describing some selected trends of changes in the social understanding of quality of life. The trends were identified in a program for monitoring the quality of life in one of the Polish cities. The program "Indicators of the Quality of Life in Poznań" was initiated in 2001, as one of the projects aimed at streamlining the work of the Town Council, maintaining contact between the authorities and the residents of the city and building up the image of the city.

The program is based on an idea of measurement of the most important domains of life, such as life situation of residents, communal infrastructure, health condition of residents, social exclusion, standard of living, social security, public security and crime rates, natural environment, leisure, work and income, education and population processes. The essence of the project is the simultaneous investigation of the actual situation by means of objective statistical data as well as the level of satisfaction with particular aspects of life.

The ten-year program allowed us to identify changes in the social understanding of quality of life. The most fundamental changes include:

1. changes in the significance of particular domains of quality of life for the general perception of quality of life
2. changes in the criteria of quality of life in particular domains of quality of life.

The presentation involves two major aims. It intends to show the changes in the perception of significance of particular domains of quality of life in opinions of respondents. It also aims at demonstrating the evolution of the significance criteria of particular domains, depending on the perception of changes in the economic situation, particularly with respect to the recent economic crisis.

*Toxic Leisure: The Future Expansion Of Leisure and Environmental  
Sustainability In The BRIC Economies*

In the half century since the end of the Second World War standards of living rose in the western world and most citizens became "middle class" living a lifestyle characterized by high levels of disposable income and a culture of consumption. One feature of consumer culture is the expansion of leisure activities accompanying the growth of an increasingly predatory form of capitalism in the industrialized economies of the West. One of the major effects of that predatory model has been global exploitation of the environment and an exponential rise in carbon emissions which in turn are having a major impact on global climate. At the present time we are on the brink of another major social revolution with the expansion of the middle classes in the "emerging economies" of the developing world. The significance of this social revolution in the BRIC economies, especially in India and China, is that the potential size of their middle classes could be larger than half the world population. While the environmental impacts of industrialization and urbanization in these countries attracts a lot of attention, the environmental effects of the expansion of leisure and the globalization of western leisure pursuits are often overlooked. All such activities have large ecological footprints: the consumption of new technologies, driving of automobiles, the expansion of golf and tourism. This paper is a series of case studies of the impact of these particular leisure activities in the BRIC economies.

*Social and Religious Differentiation*

Every form of society contains several types of stratification, of a political and economic, artistic and cultural, professional and religious nature. Therefore, religious phenomenology too is subject to these socio-experiential factors. Differentiation of functions, roles, aims and modes of action is also produced, directly and through example, inside the constellation of movements and the composite religious experiences that characterize the vast panorama of Christian and other religions. Were we to limit ourselves to the socio-territorial context of Italy alone we would soon discover that the Muslim like the Sikh, Buddhist and Hindu and the various other religions practiced here, all contain within their folds a variety of structures, rituals, customs, rules and beliefs and that Christianity, the country's numerically prevalent religion with its Catholic, Protestant and Orthodox congregations, is certainly no exception to the rule and that it too also contains a truly broad spectrum of forms.

##### *Origins of Italian Sociology*

How come Italian sociology, which contributed to the development of the very first studies of social sciences in Europe, lost ground and did fall behind other national European sociologies? Can a sufficient explanation be that the fascist movement was in power from 1922 to 1945? Or other reasons are at the origin of the impossible continuation of such a scientific approach? Are there subtle links between a quite promising starting phase of studies and the new steps which occurred by the middle of the twentieth century, after the slow down during the period between the two world wars, in the 1920s, '30s and '40s? Or shall we say that there was an interruption, a hiatus which separates the first moment, far off now, and a second moment, relatively more recent? Probably the past dynamics and those acting now are much more complex than might apparently seem without a deep investigation.

##### *Natural Disasters Discourse As a Profit-Making Mechanism of the Turkish State: A Case Study in the Karapınar Regeneration Project in Eskişehir*

Serious worldwide natural catastrophes lead scientists, governments, and civil society to intensify the research on prevention of disaster risks and provision of disaster reliefs. On the other hand, in the era of neoliberalism, natural catastrophes might provide political authorities to create a discourse on their forthcoming "fatal" "risks" in order to push profitable urban strategies which result in state expropriation, displacement of local populations, and applying large scale urban projects. In the last years in Turkey there has been a broad and fashionable campaign to regenerate 40% of the Turkish cities against the destructive effects of natural disasters. Especially after the Van earthquakes, killing 644 people in 2011, the government and its supporters found the justification for urban regeneration activities which they present as the "salvation" of the country, whereas, the lack of government's earthquake relief supplies and recent hunger strike of the earthquake victims, who were forced to leave their container houses, created large public debates.

Similarly, the Karapınar regeneration project in Eskişehir, which is applied by the public-private partnerships under the same campaign, is claimed to be the "remedy" for poor housing qualities of the quarter that is located under the "zone of risk". Yet, my ethnographic research reveals the enormous economic profits of the partners which they gain through the construction of luxury villas, a five star hotel, commerce and shopping centers, while forcing locals to move in new 10-11 storey buildings which will be given in return of monthly payments depending on the size and legality of their previous houses. However, the locals are already worried about the payments and the new living conditions in the multi-storey buildings next to rich newcomers while some have already decided to move elsewhere at the outskirts of the city.

##### *Photographic Monitoring As an Interdisciplinary Tool to Confront Objectified and Perceived Levels of Use within Protected Natural Areas: Methodology and Deontology*

This communication proposes a reflexive presentation of an interdisciplinary case study crossing sociology and oceanography. The recent creation of the National Park of the Calanques (April 2012) has raised debates regarding the increasing impact of leisure massification on biodiversity conservation. In this context, our research program has developed innovating tools to confront objectified lev-

els of use and perceived levels of use on the one hand, and on the other has evaluated the pressure and the impact of anchored boats on a protected sea grass, *Posidonia oceanica* and gathered the social discourses of users regarding their awareness about biodiversity conservation and their acceptance about related policies. To do so, were associated a qualitative (44 interviews) and a quantitative (133 questionnaires) field surveys and a one year photographic monitoring focusing on two hot spots in terms of overuse and conservation: The Sormiou bay and the Frioul island. The results reveal a gap between objectified and perceived levels of use, due to cognitive processes, socioeconomic and cultural factors (*habitus* effect and territorial identity). The photographic monitoring and the georeferencing of the sociological samples reveal a significant scale effect on both objectified and perceived use. This communication focuses on the interests and limits of the photographic monitoring as in interdisciplinary tool. The methodological implementation of the monitoring as well as its deontological implications will be discussed.

##### *The Refugee Body: Reconstructing the Body in the Context of Extreme Social Change*

The sociology of the body has tended to look at the "glamorized body", whether in sport, fashion or popular cultural activities such as body building. Missing from these studies is a concern with the suffering body in the context of drastic and unchosen social change and displacement, and how individuals who experience such traumatic changes re-imagine and re-create their body images. This paper looks at one such case: the refugee body. Two principle issues are raised. On the one hand the experience of the body in situations of deprivation, crowding, forced contact with strangers, mixing of religions, boredom, and often hunger and physical insecurity. On the other, strategies of reconstruction of the body image in these conditions and/or when undergoing resettlement, being "stuck" indefinitely in camps, or when attempting to create new forms of community in another country or upon repatriation: bodies in fact seeking for meaning and new identities in radically transformed or "spoiled" social contexts. The paper is both ethnographic and has practical implications for post-trauma and post-conflict situations by bringing to light forms of the suffering body that rarely appear in the sociological literature, but which have major intersections with issues such as recovery from real physical hard (including torture) and loss of home, and for issues rarely touched on in refugee studies such as sexuality and the ageing body in displacement situations. The paper will in theoretical terms bring together aspects of the sociology of the body, medical sociology and the sociology of development in a new configuration.

##### *Medicalization to and Fro: Informational Trajectories Around Performance Consumptions*

The stretching of the boundaries of medical intervention encompassed not only a growing catalogue of phenomena, but the functional span of that intervention. Expanding from treatment, backwards to prevention, and forward to enhancement, medicalization can be said to have logically paved the way for a commodified management of human performance, which pharmaceuticalization dynamics furthered still. However, ultimately that process also eluded the medical markers of normality that signaled those functional distinctions and, with it, the control of the agents that regulated the legitimate use of therapeutic resources for those purposes. In that sense, a medicalized genealogy of performance management through therapeutic resources does not entail a continued medicalized regulation of that phenomenon. Therefore, that arena constitutes a privileged site to observe to what extent and in what planes is medicalization still a driving and regulatory force in the expansion of a therapeutic plasticity in the management of our lives and bodies. With the professional, institutional and national borders of regulation of the production, distribution and access to therapeutic resources also eroding, this field could potentially represent a social reinvention of the use of therapeutic resources beyond medicalization. To assess whether that is the case, drawing on extensive and qualitative data from a study on youths' therapeutic consumptions for performance purposes, in Portugal, we will focus on the informational trajectories through which individuals organize those consumption practices. These trajectories will enable us to ascertain: i) to what extent are medical sources present in the social organization of performance consumptions, ii) what new roles they may take on there, given the displacement of their centrality in expanding infoscapes, iii) whether the rationales that govern individuals' choice and articulation of different sources of information to assess and access these resources may retain and prolong in new ways structural elements of their medicalized genealogy.

*Then and Now: A New Look at Methods and Findings from the 1974 Xenia, Ohio (US) Tornadoes*

As part of a project constructing a Community Resilience Index (CRI) intended to predict community resilience pre-event, we undertook a series of historical case studies. The goal of the case studies was to explore elements of community resilience from disaster events. We used field study data from the E.L. Quarantelli Resource Collection at the Disaster Research Center. This article focuses on the 1974 Xenia, Ohio, USA tornadoes. This case study was the most fully developed with 23 boxes of primary documents and interview materials and offers the opportunity for comparison with the May 2013 Moore, OK, USA tornadoes. To develop the case studies, we looked for specific indicators of emergent, creative activities, which previous literature identified as indicators of resilience. Case studies served as a proof of concept for the CRI model.

Researching historical disasters presents particular challenges. First, much of the data were in outdated or delicate format. A survey of children in Xenia was completed and the data were available on punch cards. Reports from various community groups were available for review on thin and faded paper. It was also challenging making sense of the data, given the shifts in terminology and theoretical orientations between 1974 and the present. This was especially relevant for this case study due to the focus on mental health. Disaster mental health policies and guidelines changed significantly since the 1970s. Nevertheless, this data set presented several advantages. We discovered that, while the data available was delicate and in outdated formats, there was more primary material available than some of the more recent studies. We hypothesize that this may be due to the influx of technological advances between 1975 and 2005. Since much material is now generated electronically, serendipitous field discoveries may be impeded, even as other data is widely available.

*Towards an Understanding of Social Capital in an Online Community of Filipino Music Artists*

Cyberspace has become a more viable arena for budding artists to share musical acts through digital forms. The increasing relevance of online communities has attracted scholars from various fields demonstrating its influence on social capital. This paper extends this understanding of social capital among Filipino music artists belonging to the SoundCloud Philippines Facebook Group. This study seeks to address the theoretical debate on the role of computers and the internet in mobilizing social capital.

As a frame of reference, this research explores several dimensions of social capital as proposed by Dudwick, et al (2006), namely, trust and solidarity, collective action and cooperation, information and communication, and social cohesion and inclusion. The study makes use of various qualitative data obtained from key-informant interviews and participant observation of online and physical encounters, analyzed using the case study approach.

Soundcloud Philippines has over a thousand members is composed of Filipino singers, instrumentalists, composers, arrangers, producers, multimedia artists and event managers. Group interactions are a mix of online encounters based on Facebook and SoundCloud and physical encounters through meet-ups and events. Benefits reaped from the community are informational, technical, instrumental, promotional, motivational and social support. Under the guidance of online group administrators, collaborative activities such as music productions, concerts and events transpire. Most conflicts and problems arising are resolved peacefully.

Social capital in SoundCloud Philippines is mobilized through (1) **Recognition**, wherein members appreciate and admire the talents and strengths of others and self; (2) **Respect**, wherein members maintain a harmonious flow of communications, make bonds and friendships, and treat others with respect, courtesy and with positive regard, and; (3) **Reciprocity**, wherein members offer their assistance and skills as much as they seek support from others, engage themselves in activities and collaborations and involve themselves in collective actions within the group.

*Inequality in Social Support: A Comparative Look at Compartmentalization in Close Networks*

Social support helps households manage everyday necessities, take advantage of opportunities, and ensure survival in times of crisis. Previous research finds that the majority of informal social support comes from close friends and family, and these networks are compartmentalized, with different kinds of ties providing different kinds of support (Wellman 1992, Small 2009). However, recent ethnographic work suggests that in low resource networks, certain relational expectations break down, leading to a wider search for assistance (Desmond 2012, Menjivar 2000, Smith 2007). In light of this, research must move beyond in depth case studies to compare relational effects across social groups.

Our research asks 1) how types of relations impact social support and 2) how the effects of relational types vary by social position. Here we distinguish between the characteristics of relationships and the characteristics of individuals. In doing so, our research considers not only how one's social structural position may influence the availability of resources within networks, but also how one's position may actually alter relational expectations surrounding social support.

We gain comparative leverage by using the Portraits of American Life Study, a nationally representative longitudinal survey with oversamples of racial/ethnic minorities in the United States (Emerson and Sikkink 2006). The survey provides ego-centric network data on up to four people the respondent feels closest to, excluding those in the same household. Using hierarchical models, we analyze 8,103 dyads nested in 2,185 personal networks to test hypotheses on how close ties formed through kinship, work, and civic organizations differentially shape social support. We then look at how the effects of these ties on support vary across economic groups, racial/ethnic groups, and across the life course. In general, we find that compartmentalization is more likely in high status networks, while disadvantaged groups must activate any and all potentially supportive ties.

*Coping with Uncertainty in the Field of Health in Arakan (Burma)*

Based on fieldworks conducted in Arakan (Burma), in a Theravada Buddhist context, my paper describes the approaches used by Arakanese people to cope with uncertainty in the field of health. According to the local conception a person's state of health stems from a complexity of factors such as the person's karma, his mind, the relationship he has with the community and the spiritual world, the climate, the food and the planetary influence. Because of the instable nature of these factors and the complex relationships uniting them, people never know for certain whether they are well protected against diseases or not and thus live in a permanent state of uncertainty. The effort to maintain the harmony at all levels and be protected by dangers is a matter of the daily rituality through prayers, offerings, good deeds, etc. Moreover, there are occasions where the risk of danger is higher and more concrete, whether because has been predicted by an astrologer or because the person or the community lives temporarily in a vulnerable state (during childhood and pregnancy or when the karmic and planetary situation is adverse). In these cases, people resort to short-time protections focused on the vulnerable factors: they wear amulets, avoid specific foods, etc. Despite these preventions it happens that they face diseases and thus try to restore a certain state of well-being by acting on all the factors they consider involved: they buy medicines, consult an astrologer to positively orient the planetary influence, appeal to an exorcist to chase the malevolent force away, etc. Although these recourses are intended to cope with uncertainty they also involve a part of uncertainty. The choice among different practices and healers and the relationship people have with them is always imprinted with a complex interplay between trust and mistrust, risk and hope.

*Subjective Action As Utopia: Horizontality and Autonomy In Youth Politics In Latin America*

Young people's political action in contemporary Latin America can be characterized by two key qualities: *horizontality* and *autonomy*. Horizontality and autonomy are not altogether new in Latin American political action. These qualities are reflected in the region's persisting aspirations to find alternatives to authoritarianism that has characterize both civil and military governments alike since independence until contemporary times. And these qualities have been espoused by social movements that emerged in the 1980s that sought to challenge longstanding social hierarchies sustaining authoritarian politics, including feminist, indigenous, environmental and urban neighborhood.

Yet, young people today give new meanings to horizontality and autonomy in their political action due to new conditions created by the dominance of the market and media, individualization, consumerism and globalization. Youth choose forms of political action that allow them to be directly involved in decision-making.

ing and to have freedom – personal and collective – from others' control. And young people see their own subjective action, rather than government action, as the solution to their demands and problems. By constructing their own action as utopia, not as a goal to work towards but rather as an inspirational starting point from which to act practically in the present, young people challenge longstanding notions of an ideal future society that have historically sustained political action in the region.

Drawing upon our own empirical studies as well as a systematic review of secondary literature, our presentation/paper will explore how young people in Latin America understand horizontality and autonomy in their political action, where these understandings come from and what the consequences of these are.

#### *The Economic Empowerment of Portuguese Women at the Crossroads: An Accomplishment Facing the Tourniquet of the Crisis*

The gradual integration of Portuguese women in the labor market has enabled remarkable levels of economic autonomy, producing profound transformations in their economic and social roles. In the 1960s, Portuguese women still shared the backward position of Southern European women. The evolution observed since then has brought Portuguese women closer to the status of their Scandinavian counterparts, while Italy, Spain and Greece have evolved at various and disparate rhythms (Maruani, 2000, pp.25, *Travail et Emploi des Femmes*, Paris, La Découverte).

The economic crisis is threatening the sustainability of that process. On the one hand, new generations of graduated women are facing more and more difficulties in entering the labor market, particularly in sectors more favourable to female employment, such as the public sector, including the education sector, which is also being severely affected by the sharp decrease in birth rates. On the other hand, the failure of many SME's in traditional manufacturing and services sectors is generating high levels of unemployment and inactivity for many middle aged and low skilled women.

Moreover, the government priority given to the elimination of state budget deficits in a short period of time is causing abrupt wage and benefit cuts and a general decline in public services with a very detrimental impact on the middle classes. The reduction of women's purchasing power is, in turn, damaging numerous domestic jobs traditionally performed by less educated women (housework, catering, care for children and other dependents, etc.).

In this communication we intend to characterize and discuss the on-going multidimensional processes that are threatening Portuguese women's achievements in terms of economic autonomy and empowerment.

#### *Towards an Embodied Sociology of Youth and Identity*

The body has become a key sociological theme of academic study. However, while the body has emerged as a central focus of much theoretical work, in youth studies the physicality and materiality of the body is more often than not taken for granted, or is an 'absent presence'. This paper contends that questions of identity and subjectivity, fundamental to youth studies, are connected to understanding bodies as sites of experience through which young people embody and actively respond to their socio-cultural and historical context. As such, young people's bodies are a contested site particularly regarding where the 'naturalness' of the body ends and the 'sociality' of the body begins. Nevertheless, the body often remains implicit, or as a site upon which societal inequalities play out, rather than an active force. Where the body is directly addressed in the study of youth, it is frequently identified as the locus of social or cultural 'problems', more often than not reflecting the concerns of Western culture, such as in the alarm surrounding childhood obesity and poor body image. This paper places young bodies at the forefront of sociological analysis. It highlights the active relations between bodies and the social world and focuses on bodily issues and how they shape identities for young people. It also corrects previous approaches in which the body is invisible or rendered inferior to the mind in a binary logic. Theorising the body has implications for youth identity research as all major structural inequalities such as gender, class, race, sexuality, dis/ability, and place are necessarily embodied. A focus on the body and embodiment can provide a way of exploring the threading and mediating relations between youth, identities and society and the complexities of human experience.

This paper is submitted for: 'Theme VI - Other Methodological and Theoretical Advances'.

**COHEN, DANIEL ALDANA\*** (New York University, [aldanacohen@nyu.edu](mailto:aldanacohen@nyu.edu))

#### *How Global City Labor Markets Are Undermining Low-Carbon Policymaking*

Climate thinkers from across the political spectrum have long argued that cities are uniquely suited to tackling climate change. But now, scholars are pausing to consider what Harriet Bulkeley calls a gap between rhetoric and reality in cities' low-carbon policy. I offer a new explanation for this gap by focusing on the way that polarizing labor markets in global cities subtly shape the urban politics of climate change so as to undermine potential alliances between middle and working class constituencies, alliances necessary for any government to push through far-reaching reforms. Based on 18 months of fieldwork, including over 100 interviews, in New York and São Paulo, and on secondary data on labor markets, wage levels, and consumption, I argue that well-meaning environmentalists have often ignored working class demands for collective consumption—including housing, and transit—while foregrounding those of middle- and upper-middle-class city residents. This despite the fact that working class political projects frequently make similar demands for liveable, compact cities—albeit it in a different language. I argue that evolving labor markets associated with Saskia Sassen's global city thesis offer the best explanation for this divergence. And I close by suggesting that the rise of Occupy Wall Street and Occupy Sandy in New York, and the explosion of protests sparked by transit price hikes in São Paulo, demonstrate that it may be possible to build a rapprochement between working and middle class urban political projects on the basis of resisting the growing inequalities fostered by global city strategies.

### RC21-365.6

**COHEN, DANIEL ALDANA\*** (New York University, [aldanacohen@nyu.edu](mailto:aldanacohen@nyu.edu))

#### *The Hidden Protagonists of the Low-Carbon City: A Social Backcast Approach to Urban Climate Governance*

How can we understand where contemporary urban politics are going in a warming world in order to find the best path forward? More specifically, why are cities struggling to slash carbon emissions despite widespread consensus that there are ample co-benefits to be had in doing so (Bulkeley 2011)? Increasing, social scientists interested in how thinking futures can influence the present are using the backcasting method first pioneered by Robinson (1982) and now discussed extensively in journals like *Futures* and *Technological Forecasting and Social Change*. To grapple with contemporary climate politics, I revise the *policy-centric* backcast and develop a *social backcast* approach. Since we know that the compact city low-carbon urbanists advocate requires radical changes to housing, transit, and land-use policy, I study not just urban climate policy entrepreneurs (the norm in urban climate studies), but also conflictual housing and transit movements that rarely (if ever) speak of climate change, but who advocate a similar transformation of the city (this group is much larger than the relatively small environmental justice community). Based on 18 months of fieldwork in New York and São Paulo, including over 100 semi-structured interviews with green policy entrepreneurs, housing movement activists, and state actors (both political appointees and career bureaucrats), I argue that prevailing accounts of urban climate governance have left out the most successful grassroots movement fighting, substantively, for a compact city; I explain why the policy-centric focus of urban climate policy entrepreneurs has blinded them to potential, poor people's allies; I demonstrate that absent a rapprochement between middle-class environmental and lower-class social justice activists, eco-apartheid is the most likely outcome of contemporary green politics; and I point to emerging examples of collaboration in both cities that warrant much closer attention.

#### *The Social Construction of Body in an Urbanization Context in Senegal*

The Senegalese lifestyle mutation by an urbanization process associated with the combined effects of demographic, nutritional and epidemiologic transitions (Popkin, 1997), has consequences on body conceptions: evolution of body size standards, new perceptions of sickness-death, food and sexuality (Thomas, 1990)

and emergence of a more demanding bodily appearance (Cohen, 2012), which need to be clarified.

To do this, we employed a cross analysis of qualitative and quantitative data (40 semi-structured interviews and two Factorial Correspondence Analysis – FCA 1 and 2 – on 593 subjects) by a comparative study implemented in a representative sample of Senegalese adults from Dakar and a village from the Kaolack region.

The qualitative study shows that sickness-death is less associated with persecutory from supernatural entities, widely questioned by more pregnant Islamic and modern values (Fassin, 1992). The food gradually loses its status as scarce resource, subject to the will of supernatural entities (De Garine, 1990). Finally, the reproductive sexuality is gradually replaced by Islamic and modern guilty quests of pleasure (Biaya, 2001). Then, the FCA 1 shows an association between the representation that human cannot control the sickness (1), the food has a sacred status (2), the sexuality is restricted to the reproduction in marriage (3), the desire to use one's body for the group (4) and the rural area (5) ( $p < 0.001$ ,  $n = 387$ ). The FCA 2 shows an association between the desire to control one's health (1), eat alone for pleasure (2), wear modern clothes (tight) (3), the desire to have a thin body (4) and the urban area (5) ( $p < 0.001$ ,  $n = 111$ ).

This has implications in the relationship to health, diet and aesthetics which fully reconfigure the relationship to the body (size): the big person is no longer associated with **well-being (sickness-death/health)**, **wealth (food/diet)** and **fertility (sexuality/aesthetics)**, but with **dysfunction, idleness and sexual undesirability** (Fischler, 2001).

**COHEN, MARK\*** (New York University, [mark.simon.cohen@gmail.com](mailto:mark.simon.cohen@gmail.com))

#### *The Late Nineteenth Century As Critical Juncture: A Comparison of Russia and Japan*

Around 1850, Russia and Japan were economically undeveloped countries with quasi-feudal political institutions. In subsequent decades, both states undertook programs for economic development and military buildup in order to compete with the capitalist powers of the west. This paper will compare the trajectories of these parallel state-led projects. While pre-existing domestic institutions and geo-economic relations had some influence, the outcome in each case was substantially determined by domestic political processes. In Russia, top-down reforms adjusted but fundamentally reproduced an essentially pre-capitalist structure of agrarian relations, generating political and economic pressures that would explode in the revolutions of 1905 and 1917. In Japan, the interaction of strategies of state officials, rural elites, and peasants generated a fundamental transformation in its agrarian economy—to an extent that political accounts of the Meiji state often do not do justice to. Comparing Japan's trajectory with that of Russia, instead of with an idealized conception of western European development, leads to the conclusion that state elites in Japan were able to secure a stable domestic base for their ambition to extend Japan's military power into northeast Asia *not* because agrarian social relations remained "semi-feudal" but instead because they became basically capitalist. The paper will thus show that the late nineteenth century was a critical juncture in which political actions and struggles had long-term consequences for the historical trajectories of not just Russia and Japan but also East Asia as a whole, because of the long shadows cast by both the Bolshevik Revolution and Japanese imperialism.

#### *Emigration from Israel, 1980-2010: Has the "Brain Drain" Intensified?*

The paper focuses on changes in the selectivity of immigrants from Israel to the US over time. Rising inequality (a proxy for returns to skills) in the US since the 1980s imply that the incentives for high skilled Israelis to immigrate to the US have increased over time, thereby intensifying the brain drain from Israel. To test this brain drain hypothesis, we analyze both Israeli and U.S. data. The Israeli data, Labor Force Surveys from 1980-2010 tell us the characteristics of the population from which the immigrants were drawn. The U.S. data, 5% PUMS Census data for 1980-2000 and 1% ACS data for 2006-2010, are informative of the size and characteristics of recent immigrants from Israel to the U.S. during this period. We focus on "recent" immigrants, namely, those arriving to the U.S. in the 5-year period preceding the census year (namely 1976-80, 1986-90, 1996-2000, and 2006-2010). The education and income of recent immigrants are indicative of the skills with which they have arrived in the U.S., before any meaningful economic assimilation has occurred. Comparing the gaps between the educational levels of native Israelis in Israel and their counterparts who immigrated to the U.S., we find no major changes in the educational selectivity of Israeli immigrants over time. By contrast, cross sectional quintile regressions estimating the incomes of recent cohorts of Israeli immigrants in the US provide some support for the brain drain hypothesis, but only until 2000: they show that the income advantage of recent immigrants

over demographically comparable US natives has increased over time among those at the top 25% of the distribution, but not among immigrants located at lower percentiles of the income distribution. This suggests that the unobserved, productivity-enhancing traits of the most skilled Israeli immigrants to the US have increased between 1980 and 2000.

#### *Development, Globalization and The Gendered Division Of The Work World: How The Logic Of Employers Shaped The Demand For Female Labor From Victorian Britain To The Contemporary Global South*

A persistent weakness in the Sociology of Development has been its under-attention to gender dynamics. However, there is a parallel weakness in the Sociology of Gender and Development of under-attention to the capitalist logic that motivates the decision to employ either men or women for particular jobs. The much-needed drive to restore women's agency to narratives of development has had the ironic effect of producing insufficient attention to capitalist agency and the discretionary choices involved in opening up economic opportunities to women.

This paper presents a demand side theory of occupational sex-typing. Male employers are conflicted between the dual imperatives of seeking the cheapest possible labor, which generally implies hiring women, and maintaining patriarchal preserves of male privilege, which implies reserving jobs for men. The structural forces which shape this decision have changed profoundly over time due to the dual (and conflicting) dynamics of development and globalization.

The author begins with a case study of two large Victorian British white collar employers to lay out a theoretical model of how cost structure and buffering from labor competition economically facilitates or hinders the introduction of women to traditionally male occupations. The findings from Victorian Britain are then contrasted with those from the twentieth century United States, and from the empirical literature on female employment in the Global South. The differential distribution of global wage competition and protection from such competition, the rise of commodity chains, the rise of education and its complex effects on the availability of adolescent labor, differential pressures to conform with either traditional gender systems or Western gender systems, and the increased importance of both proletarianized female self-employment and, male-run family enterprises that combine economic and patriarchal utilities – have led to a profound transformation of the occupational sex-typing process beyond what was observable in nineteenth century Britain.

#### *Late Victorian and Early Twentieth Century Economic Forward-Leaps and Collapses – How a Select Small Population of Nations Escaped Their Destinies for Better or for Worse*

Recent scholarship by Salvatore Babones and James Mahoney provides strong evidence that the relative ranking of nations in terms of economic development and standards of living remain relatively fixed over long periods of time. Nations that were rich in 1600 tend to be still rich in 1800 and 2010. The same holds for nations that were poor. The advantages that pertained to rich nations in the era of the Reformation have reproduced themselves up through the present day despite changes in modes of production and dominant technologies. There are a handful of exceptions, but they are just that – exceptions.

That said – these exceptions are of fundamental analytical importance, because they identify the key to what was essential to obtaining or maintaining core status in the various eras of capitalism. This paper identifies nations that had disproportionately high or disproportionately low economic growth from 1870-1950 – disproportionate given their level of development in 1870. Autocorrelation levels are high – and only a small set of nations show non-trivial differences in ranking from their 1870 position. Most of these tend to be nations that do NOT receive a lot of attention in traditional "grand macrosociological" histories of the evolution of the world system. England, France, Germany and Japan – traditional centerpieces of historical comparative sociological discussions make no appearance. Venezuela, Switzerland, Finland, Egypt and India all have stories to tell.

What seem to be the common themes? The rise of petroleum was extremely important. Not all petro-nations were able to make use of their resource – but those who did saw dramatic forward leaps. Debt crises were devastating. Some nations never recovered from the international debt crisis of the 1870s. The additional roles of arbitrage, war and colonial administration are considered.

### *Employment Success and Long-Term Aspirations of the First and Second Generation of Recent Refugee Arrivals: Evidence from Australia*

This paper focuses on the employment and social inclusion of humanitarian arrivals in Australia (for brevity, 'refugees' in further text). Previous research shows that refugees, in the context of a sharply skilled-focused Australian immigration program, have the worst employment outcomes of all immigrant categories. They suffer from higher unemployment, as well as under-employment and under-utilization of their formal qualifications. The employment woes are not always due to a lack of human capital (skills and language proficiency) but often to employment discrimination and channelling of refugees into undesirable 'employment niches' where labour shortages continually exist. The paper is based on an initial analysis of a survey of 500 refugees from South Sudan, Somalia, Congo, Iraq, and Burma, currently settling in Brisbane. The survey asked about current employment experiences and long-term occupational aspirations of recent (with a minimum of one year residence in Australia) refugee arrivals in Australia. In this context we also collect data on the ways in which parents communicate employment aspirations to their children. This collaborative project, funded by the Australian Research Council, started from the premise that appropriate employment is a key to successful settlement and social inclusion of immigrants, and that refugees, in most cases visibly different minorities in the Australian context, are especially vulnerable to social exclusion. As experiences of main Western immigration countries show, this is especially critical in the second immigrant generation. We therefore also explore the intergenerational communication in the refugee family and how it is affected by migration and acculturation in Australia and how this, in turn, may affect the educational and occupational chances of the second generation.

### *Financialization in the Backyard: Shrinkage, Welfare State Restructuring and New Housing Investments*

The paper discusses the interplay of local planning policies, welfare restructuring and global financial markets in the "making" of social segregation. It builds on an empirical study in Halle-Neustadt, a shrinking New Town in East-Germany and uses a mix of survey data, interviews and document analysis and as well as fieldwork.

In Halle-Neustadt, the paper argues, different developments come together: First, Neustadt has experienced dramatic population losses, which stimulated large scale demolition programmes as well as planning policies which aim to transform parts of the neighbourhood to a green space. Second, Neustadt has experienced two waves of privatisation in the last two decades, leading to a complete change of ownership structures. Thereby, municipal and cooperative owners have been largely displaced by national and international financial investors which hold their stock as an asset and aim on short-term gains, rather than long-term development. Third, welfare cuts have put more pressure on welfare-recipients to accommodate in cheapest housing available on the local market which led to a "business-model" profiting on low, but state-subsidized, rents in peripheral estates.

The paper discusses how these developments work together to produce new concentrations of poverty households in a prototypical shrinking city. With this, we expand on the already fairly developed debate on the financialization of urban development and provide new insights on (a) financialization in shrinking, low-demand markets, and (b) the relation between planning, state-restructuring and financialization in a German context. We demonstrate that the political economy of housing follows different dynamics here which are owed to both the weak-market situation and the path-specific restructuring of the German planning and welfare system. We conclude that research should put the state more into the centre of explanations and take different paths of state restructuring as well as different socio-economic contexts more serious.

### *Financing European Sustainable Urban Development: (un) Intended Policy Breakdowns?*

The paper critically discusses the financialization of sustainable urban development projects with Jessica instrument introduced by the European Investment Bank during the Cohesion Policy 2007-2013. We argue that the normativity of the concept of sustainability, as used in Jessica, is instrumental to entrepreneurial market based interests that have little or no impact in terms of social justice in cities. Using quantitative and qualitative data from a recent Study (Ramsden, Colini, 2013), the paper focuses on two cases London Green Fund and Poznan urban

regeneration in which Jessica has currently invested for the creation of holding funds.

The main criteria for Jessica financial investment, is that it must be applied in European cities in relation to integrated plans for urban regeneration in which public participation is strongly encouraged. The analysis of these two cases in the paper highlight three main potential policies breakdowns. First, the creation of highly complex financial mechanisms (which ostensibly have high transaction costs, lack of transparency, legitimacy and accountability) serves the purpose of excluding civil society, and undermining public debate around public moneys. Second, the accessibility to these financial investments imposes new forms of multi-level governance whose criteria of sustainability shape planning decisions at local level. Third, that new entanglement between state, civil society and the private sectors are created under the conceptualization of sustainability, but whose sole scope for relation is mostly driven by strategies for accessing public funding.

Building on current debate around financialization of the urban, the paper concludes that the neoliberalization of sustainability principles must be studied as multi-level phenomenon: with this the ultimate scope of the paper is to unveil the intrinsic tensions and contradictions of sustainable urban development by stressing its financial mechanisms as main drivers of the reproduction of inequalities.

### *It's Not Just (Her) Personality: Structural and Cultural Foundations of Impostorism*

The sense that one is an impostor—undeserving of one's successes or accolades—is a pervasive problem among high-achieving individuals from traditionally lower-status groups (e.g., women, first-generation college students, and members of many historically disadvantaged racial and ethnic groups). Described as a feeling of "intellectual phoniness" (Clance and O'Toole 1988:51), individuals who suffer from impostorism—also called perceived fraudulence, or the impostor phenomenon—have difficulty attributing their successes to their own ability or hard work. Rather, such individuals are convinced that they have reached their position in life by luck or by unintentionally misleading people to regard them as more capable than they actually are. Despite continued successes, these "impostors" fear that their true incompetence will, at some point, be uncovered. Although this fear is almost always unfounded, it has tangible adverse effects including vulnerability to both psychological distress and job burnout and may lead to relatively limited academic or professional career aspirations, influencing occupational sex segregation.

There is relatively little agreement on the origin of impostorism or why it is more pervasive in particular social groups. Because, to date, impostorism has been studied almost exclusively in psychology, research tends to treat it as a person-level construct and focus almost exclusively on antecedents related to family background (e.g., family dynamics, childhood environment) and fixed personality characteristics (e.g., neuroticism, perfectionism). However, the fact that there are high rates of impostorism among high-achieving, lower-status individuals suggests structural factors may play a role. This paper draws on work on sociological social psychology (e.g., status characteristics, self-assessments, and double-standards) to posit a more sociological explanation to account for increased incidence among particular groups and to suggest a research program to test structural and culture accounts for impostorism.

### *"They're Doing Their Own Things": Identity Processes in Fatherhood*

In this paper we explore the disconnect between "culture" and "conduct" of fatherhood. We are specifically interested in why changing ideas about fatherhood have had such a minimal influence on men's actual parenting. Our explanation lies in theories of self and identity.

We argue that key to this disconnect is the unique way that fathers' performances are evaluated because the definition of fatherhood is in flux. There is no identity standard to live up to. The lack of a widely-embraced and realized standard of a "good father" influences behavior in two distinct ways. First, it gives men little specific role direction or guidance in how to be a good father. Second, it allows fathers flexibility in choosing their reference group. Furthermore, when something keeps fathers from living up to their idealized vision, there is forgiveness and accommodation because fatherhood is about ultimately about articulating commitment and intentionality, even if they are unable to carry out those intentions.

We draw on social psychological theories to demonstrate the different effects of conditional versus clear definitions of fatherhood for both men's contributions to the household and their sense of self. Using data from in-depth interviews, collected as part of the Time, Love, and Cash in Couples with Children (TLC3) study, we find that the more vague a conception about what makes a good father is,

the more difficult it is—for either the fathers themselves or their partners—to evaluate a father's performance. By contrasting fathers who have abstract or conditional definitions of fatherhood with fathers who have clear, specific definitions, we demonstrate the negative effects of vague definitions and the importance of identity standards for caretaking behavior, relationships, and positive self-conceptions.

[isabel.collien@hcu-hamburg.de](mailto:isabel.collien@hcu-hamburg.de))

#### *(De)Racializing Identity Work in the Context of Diversity Policies*

Since the 2000s diversity policies have increasingly aimed at reducing ethnic inequalities in Germany. While several sociopolitical drivers for a deinstitutionalization of inequalities exist, the implementation of the policies strongly varies. The paper focuses on how racism influences the implementation of diversity policies and accompanying forms of identity work. Postcolonial and critical whiteness studies are merged with institutional work, a concept rooted in organization theory, to theorize upon how (de)racializing identity work reproduces or disrupts racism as a societal institution.

The paper builds upon a case study conducted in the public administration of a German city that implemented a diversity policy called "Intercultural Opening". Thirteen semi-structured interviews were conducted with employees and line managers throughout the administration. First, the interviewees' perceptions of Intercultural Opening were categorized. Second, the interviewees' positions towards racism were categorized according to three dimensions: (de)thematization of racism, perception of culture and self-positioning. Third, forms of identity work were mirrored against the background of postcolonial and critical whiteness studies.

The findings show that the interviewees' perceptions and implementation of Intercultural Opening strongly correlate with their position towards racism in Germany: a critical stance towards racism goes along with a broad perception. The concrete implementation and the accompanying forms of (de)racializing identity work seem to be strongly shaped by the interviewees' perception of culture and their self-positioning. Ethnic minority employees constantly have to negotiate role ascriptions in their identity work. Some proudly claim for themselves the role of an ethnic minority representative, while others only strategically apply it. Dominant ethnics are mainly busy masking their white identity. In some cases the identity work of dominant ethnics and ethnic minorities coincides. The paper discusses the ambivalent effects of certain forms of identity work that emerge even when interviewees seek to deconstruct fixed identities in their practice of Intercultural Opening.

#### *To Choose or Not to Choose: Questions about the Role of Gatekeepers in the Australian Healthcare System*

Since the 1990s and the spread of neo-liberalism across many of the world's healthcare systems, patient 'choice' has increasingly become a central topic of debate. One focus in the emerging literature concerns the capacity of patients to make choices about their healthcare service needs, and there is growing evidence of the influence of wealth, education, and geographic location on the production of greater levels of choice for some social groups of patients. Of less concern to date has been a focus on the role of 'gatekeepers' - health professionals, hospital administrators, policy researchers and policy-makers - whose actions directly or indirectly have an effect on patient 'choices' and thus shape patient trajectories as they make their way through the healthcare 'maze'.

This paper reports on a study, funded by the Australian Research Council, of gatekeepers in the Australian setting: a highly regulated, semi-market context where patients have the 'choice' to engage with private or public services and practitioners. Drawing on qualitative, in-depth interviews with a selection of private and public sector gatekeepers located in both low and high socio-economic areas, and employing Pierre Bourdieu's concept of the 'field', results point to the way the perspectives and actions of the gatekeepers are structured not only by their habitus and forms of capital, but their location within a specific social arena and its social rules of engagement. The study therefore reveals the particular salience of institutional and market location on the views and actions of both public and private sector gatekeepers, avoiding the tendency, well-established within medical sociology, to focus on professional self-interest as the sole explanation for the behaviour of doctors and other health workers.

#### *Programme Articulation As a Communication Strategy Element on the Theatre Field in Spain*

Throughout their programme, cultural institutions express their outlines and their vision of culture, selecting what it is considered essential and adequate for their audience. On this situation could be considered that the programme is part of the mission and definition of these institutions and should be reported as such as singular element.

Nowadays, on Spanish cities, some cultural institutions develop a certain specific role on the society; as social and cultural centres; as elements to identify society cultural attitudes; as well as educational centres and entertainment infrastructures. Therefore theatres are playing a special role on several cities in Spain, so that they are decisive in creating a theatre and culture experience and in influencing the culture consumption of the immediate society.

On a globalised world the proliferation of communication strategies of different kind of cultural institutions are basically essential on a contemporary crisis of the cultural sector. Spain and its theatre field is not an exception. Actually, throughout their programme, theatres express their outlines and their vision of culture, selecting what it is considered essential and adequate for their audience.

The model proposed for the analysis is based on three different aspects; the first one is the cases selection criteria; the second one is the analysis of the programme and the third one is based on the analysis of the communication done in each case. A comparison between programming strategies -based on the analysis of the documents but also on some in depth interviews- before will provide insights on whether the programme is influencing the theatre landscape not only in terms of the look specific performances but also in the content priorities and, therefore, in the message. Hence this paper focuses on the actual controversy about public theatres and their audience, relating the programme structures with theatre communication strategies.

#### *Social Media As a Key Element for Cultural Global Events*

Events have become an important channel for the exchange of cultural symbols at global level, with sporting events such as the Olympic Games, cultural events such as the European Capital of Culture and business forums such as the Cannes Film Festival helping to generate and circulate symbolic value. In doing so, many of these events help to configure the fields and the consumption in which they operate, either at global, regional or national level.

Actually most events, as well as cultural events, are taking place on several places around the globe transforming the uniqueness of one events developed on a certain time on a certain place, to be global events.

Social media, is a clear element used by these kind of events, but are this media used on the same way?. This research is focused on the analysis of social media use by one of the most global music festival in Spain, The Barcelona International Advanced Music and Multimedia Art Festival, Sónar. Some previous results underline the importance of these media to be connected not just with audiences then with collaborators, partners, artists and other stakeholders.

[enzo.colombo@unimi.it](mailto:enzo.colombo@unimi.it))

#### *Who Is a (good) Citizen? Who Is Italian? Rhetoric Of Inclusion, Exclusion and Belonging Among Young People In Italy*

The paper aims to explore the mapping of belonging and identification representations among both autochthonous children and those of immigrants in their later years of secondary education in Italy. It aims to analyse how specific articulations of ethnicity and nationhood contribute to define the social boundaries between 'Us' and 'Them'.

The analysis is based on qualitative data (narrative interviews) gathered among 118 young men (18-22 years old) attending Italian higher secondary school in Milan (Italy). While 74 of them have Italian parents, the other 44 are children of immigrants.

Discussing the criteria for obtaining citizenship, emphasis is placed on the *participative* dimension rather than on the dimension of attributed belonging. Citizenship remains an important formal question but requires an *active* attitude in order to be deserved. The 'honest life' then becomes the main criterion for granting citizenship. Citizenship has to be deserved, showing ourselves as respectable, economically-independent, observant of the law citizens. Differently from Marshall and his classical analysis, it is possible to note a marked shift of emphasis from rights to duties, undermining the inclusive and universal meaning attributed to citizenship. In fact, despite the apparently universalistic character of duty rhetoric, specific intersections of ethnicity, race, class and gender are important to fix the quality and amount of duties necessary for being recognized as 'good' or 'appropriate' citizens. In this way, "Italianness" is represented as a 'natural' characteristic

of the dominant group and ethnic and racial issues remain crucial when identification is the main contend.

Institutional elements – first of all a citizenship law strictly based on *jus sanguinis*, that considers children of migrants born and grown up in Italy as foreigners and migrants, refusing them full citizenship – contribute to transform ethnic origin, kinship and physical features into tools for differentiation and division between 'us and them'.

#### *Livelihood Survival Strategies: The Commodification of Cultural Objects During Disasters*

This study examines the commodification of culture as an adaptive strategy among local street vendors. As migration from rural to urban zones occurs as a result of disasters, competition in market areas increases. These forces produce constraints on the market's ability to absorb new vendors, but also create new opportunities. Vendors are forced to alter their offerings in order to compete. One adaptation has been to commercialize aspects of traditional culture to produce items specifically for the tourist trade. In parts of Ethiopia, this has included specializing in making traditional toothbrushes. While some are marketed to recent émigrés, others are carved more elaborately and marketed to tourists in the region. Some vendors have focused on creating new niches within traditional tourist items. In Mozambique, wood carvers have adapted a traditional tourist item, the three monkeys or "starving men" representing "hear no evil, see no evil, speak no evil," to include a fourth: "do no evil." This represents the impact of HIV/AIDS in local communities. These markets developed in areas heavily frequented by missionaries and NGO activity. This study tracks the trend of expansion and adaptation of marketed items and provides vendor impressions of adaptation to disaster conditions.

#### *Sexual Vulnerability Among Internally Displaced Woman in Northern Mozambique: Livelihood Options and Intervention Opportunities to Break the HIV/AIDS Chain*

This talk examines the prevalence of sexual harassment of and predation upon female street food vendors and other internally displaced women in Northern Mozambique. As a result of economic marginalization, women engaged in the informal sector of the economy are subject to additional risks and hazards then some of those engaged in the wage labor system, including sexual predation and HIV infection. This talk examines the social construction of working zones, the economic forces, and cultural practices that put these women at greater risk. Issues such as migration status, length of time in the area, and the need to engage in resource scavenging contribute to women's vulnerability. Findings demonstrate that internally displaced women's vulnerability is amenable to policy intervention that could reduce risks associated with street food vending and reduce the need to for women to engage in more risky livelihood options, such as prostitution or engaging "patrocinadores" ("sugar daddies"). This talk provides suggestions for policy makers.

#### *Valorising Equality: Politics and Equality Legislation in Crisis*

Can the cost of implementing equality legislation in organisations be calculated? Does the cost of NOT implementing the legislation need to appear somewhere in such a hypothetical equation? Is there a limit to the amount of equality that can be usefully achieved in organisations? Should organisations that seek to go beyond 'marginally productive' equality be discouraged or even legally prevented from doing so? To a sociologist these questions seem incongruous but they stem from a neo-liberal view of equality reflected in recent political discourse on equality legislation in Great Britain. The new discourse signals changing social policy on equality legitimised by the hegemonic view that austerity is the only response to economic crisis and premised by an underlying assumption that equality is profligate. Business case arguments for equality, which are underpinned by a concept of 'value-added', have dominated managerial discourse for some time but up until now they have had virtually no impact on equality legislation. Indeed, in policy terms, the 'monetisation' of equality stands in stark contrast to a proactive, 'reflexive' approach to equality legislation that was beginning to materialise in the years leading up to the economic crisis. Interestingly, powers to devolve some aspects of equality legislation in Great Britain to Scotland and Wales have highlighted the rift in these approaches. The effects of austerity measures on the intersections of gender, class, ethnicity and disability are becoming widely documented but little has been reported on the ability of equality legislation developed prior to the crisis to protect women from its disproportionate impact. In a period when it is argued that little separates the main political parties in the UK, this paper examines two quite different social policy approaches to equality legislation separated by only a brief time period but intersected by the economic crisis and a general election.

#### *How Mainstream Sociology Can Now Change in a World Context*

Starting from the Japanese Sociological Society's welcome initiative, this paper will reflect on how mainstream sociology can now change in a world context. Simply reproducing the dominant social-scientific models has produced distorted sociologies around the world, as those frameworks grow out of the unique social experience of the global centres of power in Europe and North America. Different social theories, research methods, and agendas for research are all generated from the social experience of colonization, cultural domination and neoliberal globalization, which in turn differ across the globalSouth. For bodies like ISA, the problem is how to bring different intellectual projects into dialogue with each other, in a context marked by global inequality and with US and European hegemony currently being restored through new forms of hierarchy and competition in the neoliberal university. Some recent examples of creative social-scientific work out of the South will be mentioned, including indigenous methodology, postcolonial gender theory, and research on neoliberalism.

#### *Rethinking Gender Theory in World Perspective*

##### Abstract

Rich and sophisticated analyses of gender have been produced around the postcolonial world. But the *theory* in this work gets little recognition in the current global economy of knowledge. Feminist sociology cannot treat global issues adequately until it appreciates the coloniality of gender, seeing the gender dynamic in imperialism and the significance of global processes for the meaning of gender itself. The agendas, concepts, methods and epistemology of gender theory can now be re-thought, as seen in formidable texts already written about land, violence, interpretation, social movements and other issues. An alternative economy of knowledge is emerging that can re-shape the global terrain of theory and its connections with practice.

*Conceptualising Privacy, Securing Identity: An Information Solution*

Data collection has long been a tool of nation state, ensuring accountability and informing public policy, and for the common citizen this has been crucial to the smooth running of day-to-day life. However, developments in international information politics driven by public safety, policing and national security interests have served to legitimise creeping advances in surveillance practice and the collection of personal data by those in power.

This paper confronts the problems associated with the collection and storage of personal information, the manipulation of stored identities and the socio-political impact of information and its control. Drawing empirical evidence from a selection of national cases including Ireland, it seeks to reconcile the tensions that arise, finding a new generation of understanding of the value of privacy, the nature of modern identity and the instruments we use to protect it.

The perspective draws on the liberal paradigm of privacy protection, aligning to the assumptions that privacy, and to some extent control of our private information, is important to our personal autonomy and identity (Westin, 1967).

Identity formation is closely linked to individuality, implying the existence of private space, in which one's attitudes and actions can define one's self (Clarke, 1994). Identity is also social and cultural and engrained in our membership and commitment to groups. As governments serve to individuate through imposed categorisation and classification, we lose hold over these freedoms. Identification processes deindividualise and the common man is increasingly vulnerable to social control and exclusion.

This paper investigates how the impact of ubiquitous surveillance practice on individual privacy and identity makes vulnerable objects of common citizens.

The paper presents recommendations for best practice for the protection of personal information, from a socio-political and cultural perspective, followed by a set of case-specific recommendations for Ireland.

*The European Citizens' Initiative: Promoting Active Citizenship in Transnational Discursive Spheres?*

European Union citizenship was introduced in the Maastricht Treaty as a form of activating citizenship. It has to be seen in light of the EU's democratic and community deficits, considering its double purpose of activating its citizens to engage in EU politics and creating a sense of awareness of European political community. Twenty years later, EU politics is still characterized by a fundamental gap between citizens and the EU institutions. The introduction of the European Citizens' Initiative (ECI) in the Lisbon Treaty raises relevant questions as regards both the democratic and the community deficit. From the outset, the ECI has been hailed as an innovation with the potential to bridge the gap between European citizens and the EU institutions. Such hopes are often connected to a deliberative understanding of politics where processes of communicative power formation in the public sphere are seen as a fundamental precondition for the legitimacy of the EU. The ambition in this paper is to assess the potential of the ECI as a bridge between citizens and institutions. We consider this bridge as, made of transnational discourses produced by knowledge exchange and transformation. Therefore we analyze how the ECI activates EU citizens by inducing them to (a) identify transnationally shared concerns, (b) set up transnational organizational structures, (c) contribute to the emergence of transnational discursive spheres, which may (d) promote new forms of citizenship. Theoretically, our contribution draws on a concept of publics as transnational networks of discourse by linking a sociology of knowledge approach to discourse to the Habermasian notion of the public sphere as a site of communicative power formation. Empirically, the argument of the paper is illustrated by reference to a limited number of examples of ECIs that will have completed their signature collection by the time of the submission of this paper.

*Georges Dumas: From the Psychology in the French Academic Field to the Intellectual Movement Between France and Latin America (1890-1930)*

This research aims to investigate Georges Dumas's trajectory (1866-1946), a man who was a professor, prestigious psychologist and French "cultural ambassador" in Latin America. The study of his trajectory allows determining, in a privileged way, the social and intellectual conditions of the institutionalization of "scientific psychology" in France and the relations between an academic group

and the Republican government. One of the main goals is to identify, through the social and intellectual dispositions of Dumas and the circle of scientific psychologists, how it happened that a professional ethos was produced - based on the identity of a "scientist-philosopher".

I intend to show that this ethos is the result of a cultural and scientific background, in general ended with Ph.D. titles in Medicine and Arts. These dispositions, created in the intersection of a literary culture and a scientific one, can be seen, in the social field, as a result of a slight differentiation of an academic elite regarding to the other ones. In the scientific field, the result was a moderate vision of the disciplinary specialization - looking forward to maintaining some continuity between natural sciences and social sciences; between sciences and philosophy. In the international field, these dispositions produced a coexistence of scientific practices focused on pairs and cultural practices focused on a larger public. Looking from the progressive differentiation between medical careers and literary or metaphysical philosophy, this positions can be taken as an expression of a distinguishing life style.

*Governing Agriculture Sustainability: Multi-Stakeholder Initiatives, Sustainable Intensification and Systematic Change*

Efforts to increase sustainability are increasingly being promulgated using non-state forms of governance. In the United States, there are currently multiple initiatives developing sustainability standards and metrics for agriculture. These include: LEO-4000, Field to Market, the Stewardship Index for Specialty Crops, the Sustainability Consortium, and the National Initiative for Sustainable Agriculture. Each of these initiatives is a multi-stakeholder initiative in that it includes a variety of stakeholders and uses democratic procedures. Using the sustainable agriculture initiatives as case studies, this paper examines whether multi-stakeholder governance is producing ecological modernization of agriculture in the United States. To do this, first, the ways that each initiative is framing sustainable agriculture is reviewed. Second, using Paul Thompson tripartite sustainability framework, the implications of the different proposed sustainability standards and metrics for United States agriculture is assessed. In concluding, we argue that the current sustainability initiatives are advancing a program of sustainable intensification, and do not have the capacity to generate systematic change.

*Poultry Grabs, Venture Capital, and Debt Bondage: Contracting Access to the Means of Production*

The paper applies a sociology of agrifood conceptual framework combined with a commodity systems analysis methodology to investigate the case of poultry grabs to inform discussion on the globalization of economy and society based on neoliberal restructuring. The topic of land grabs is a central discussion in the literature on agrifood globalization. The vertically-integrated poultry commodity system has been advanced as the model of agrifood globalization based on flexible accumulation in production and processing. The contract model of production most common in the poultry industry is a form of sharecropping that allows the integrating firm to control the production process without incurring the fixed costs of land and buildings, as well avoiding the responsibility and liability for labor and production externalities. The processes of vertical integration plus horizontal integration has resulted in a system of monopsony opportunism whereby the poultry corporations discipline the growers through debt bondage. Companies such as Tyson Foods, Inc. of the US, JBS of Brazil, and Charoen Pokphand of Thailand are diffusing this model into developing countries. Proceeding from a financialization of agrifood regimes framework, we investigate two cases of venture capital poultry grabs, one by Goldman Sachs in China and the other by TPG Capital in Australia, to illuminate the particular characteristics of the venture capital poultry grabs.

## Médias Et Pouvoir : Les inégalités Contemporaines

La « médiatisation de la vie politique » est liée indissociablement à la transformation du cadre politique des sociétés modernes situant progressivement la question des rapports entre médias et pouvoirs au cœur des débats. La relation entre médias et vie politique constitue de nos jours, un facteur important de la compréhension des enjeux liés aux pouvoirs en vigueur, un domaine idéal pour l'analyse socio-anthropologique du « politique » contemporain.

Les grands orateurs ont partiellement disparu, remplacés par des techniciens de la parole où la campagne électorale se présente comme une séquence privilégiée de construction de la réalité politique et signifie surtout l'imposition des symboles, d'images et de discours c'est à dire les constituants d'une mythologie politique contemporaine (où la logique de la *communication* semble l'emporter sur la « logique politique ») ; cette « mutation » va de pair avec une autre caractéristique importante du politique contemporain et qui consiste à la « gestion » (formelle) des exigences des pouvoirs économiques. Cette transformation se trouve au cœur de l'approche du sens du pouvoir dans la société « mondialisée ».

Le politique est ainsi « vidé » de son sens étymologique. Les inégalités contemporaines, ne s'expriment plus dans le jeu politique et les pratiques digitales y contribuent au nom de l'accès à l'information. On essaiera de voir les dimensions de cette constatation, en se basant sur l'analyse de la « rubrique politique » dans la diffusion médiatique en Grèce lors des « shows » d'arrestation des dirigeants de l'extrême droite : cette analyse montre que les inégalités contemporaines, n'ont pas de « discours » pour les exprimer et pour leur permettre de « lutter » contre.

### Violence Domestique Et Crise : Récits Filmiques

Un des sujets préférés des séries télévisées les plus regardées (parce qu'elles reflètent des questionnements « courants » sur la vie quotidienne), a toujours été la description de la vie familiale et surtout de la violence conjugale dans toutes ses formes (ex. dans la série « Desperate Housewives »).

Les résultats des recherches confirment que depuis le début de la crise économique, on assiste à une augmentation des demandes d'aide de personnes aux prises avec la violence conjugale. La « crise » est ainsi racontée aussi par les histoires de violence (vraies ou fictives).

Le facteur « multiplicateur » (qui est selon les statistiques la crise économique) est-il déjà traité dans des films et surtout dans des séries les plus appréciées par le public international? Nous avons choisi de voir dans cette recherche, non pas les séries qui traitent spécialement ce sujet (comme par exemple la série « Fred et Marie » - censée « sensibiliser » les publics sur la question) mais de voir au contraire comment ce sujet est (ou n'est pas?) représenté dans des séries qui s'occupent principalement d'autres questions, par exemple le crime ou les relations intimes des gens contemporains; dans le but de découvrir si ce facteur y est davantage présent et recensé; plus particulièrement, on s'efforce de dépister la « part de l'influence de la crise sur la violence conjugale récitée par la fiction télévisuelle », dans la mesure où elle indique le niveau de prise en conscience de ce facteur par les représentations contemporaines. Dans ce sens nous procédons à des analyses de contenu des séries très regardées par tous les publics; il s'agit surtout de séries à grande audience (abstraction faite des séries comiques) telles que : NCIS, Plus belle la vie etc.

### Youth Micro-Groups Between Offline and Online: Fulfilment Of Neo-Tribal Metaphor?

The paper proposes a photographic field research (offline and online) about some youth «micro-groups»: traceurs, emopunks, a crew of street artists and dancehall queens. In the contribution I make some considerations about the research technique, I give a brief description of each group, using the photographs and an online inquiry on web pages, myspace, etc. of the considered subjects. Some items allow to articulate a discourse on how the components of these groups realize the characteristics of participatory cultures (Jenkins): young people - thanks to the «forms of individual mass-production» and the «structures for dis-intermediation and distribution of contents», both allowed by CMC (Castells) - realize practices of «media belonging», «media expressiveness», «problem solving» and «flow sharing». The theoretical contribution considers the link between these groups and the Maffesoli's theory; can they be considered as realizations of the neotribal metaphor developed for «a contemporary paradox» or «the constant "go and come back process" established between the increasing massification and the development of micro-groups, called "tribes"? Micro-groups are like «many punctuation marks of the show of contemporary megalopolis». These are part of a discourse that interprets the social bond as tribal, which is expressed in a special way as a «succession of ambiances, feelings, emotions». The visual techniques

show that: each micro-group has a privileged place of meeting, both online and offline, where the body has a particular role in terms of physical competition and aesthetics. The «furmit - gegeneinander» is important, instead of «having a goal to be achieved, an economic, political, and social project to be realized» (Maffesoli).

### The Impact of the Global Economic Crisis on Homelessness in Spain. the Experience of Madrid

With more than three million inhabitants, Madrid is one of the largest European cities. Like in other major industrialized cities, Madrid has a significant number of homeless people. There are an estimated 2,000 homeless people in Madrid, among them roofless people without a shelter of any kind (homeless people in the strict sense of the ETHOS classification), and those people living in shelters specifically aimed at this population. This contribution analyzes the recent evolution of homelessness in the city of Madrid, paying particular attention to the impact of the global economic crisis since 2008. Data are drawn from the *Survey Night of the Homeless in the City of Madrid* between 2006 and 2012. In addition, the analysis presents the evolution of the profiles of the homeless people from before the crisis until now. This paper discusses the emerging trends regarding homelessness on the streets of Madrid in recent years and whether there has been a real change in the magnitude and the modes of homelessness. Given the persistence of the economic crisis in Spain, it can be expected that homelessness will remain an urgent social issue to be dealt with by the city of Madrid.

### Constructing Bodies through Basketball: American and Philippine Interactions

This paper addresses basketball and how it was introduced and promoted by the American government, during its occupation of the Philippines early in the 20th century, to construct body cultures through various discursive practices. Basketball was introduced into the girls' physical education curriculum in 1910, but soon after, the sport became a male preserve. The body served as a site of both assertions and contestations under the American regime. The American government through its school system was engineering the Filipino body. In this case, the body politic, as evidenced in the American colonial government, was producing corporeal subjects. What were the processes at work in socially constructing the body? From a sociological and historical perspective, this paper seeks to address the varied transformations that have occurred on the body, through an analysis of American discourses on the body. It seeks answers to questions regarding how the colonial regime imposed corporeal discipline on its colonized subjects. What were the notions of bodily normativity as introduced by the Americans? How was the corporeal body contoured by the body politic in the interest of shaping the nation-state? This work reveals several key themes regarding basketball and the body in the Philippines. Among them, first, is the conception that the body, the corporeal, is culturally formed. How one operates within one's body, whatever one's gender, is heavily influenced by culture. Additionally, the body was at the center of forces approaching it, both globally and locally. The body came to be seen as a site for the contestation of normative ideals.

### Success Stories from Youth Suicide Prevention in Australia: The Youth Work Contribution

Australia's suicide prevention initiative (NSPP) was an holistic approach which included youth work and also other services, and was pivotal to some changes in youth work delivery, to cross-government policy development and to changes social attitudes.

During the period of implementation of the initiative there has been an increase in employment of youth workers in schools and the extension of school based youth work programs, changes in the delivery of adolescent mental health services and the development of on-line virtual youth services that provide youth-friendly, positive mental health support, including peer support. As a result of the training element in the package, schools developed more stringent anti-bullying policies, and took a stand against homophobia in school, because

of the identified research link between homophobia and suicide prevention. This also flowed on to youth work funding for youth support groups.

The NSPP coincided with gun control (although it did not directly inform the policy, which was a response to a specific mass shooting). Since tighter gun controls were introduced in the late 1990s, there has been a reductions in suicides (including youth suicides using firearms, and no increase in the use of other lethal means). The main lethal means of suicide for young people in Australia is hanging, followed by poisoning. There is still some way to go, especially in rural and remote communities, where social attitudes are more entrenched and particularly Indigenous young people are more marginalised. The programs need further development and maintenance to address these specific inequalities.

#### *The Ambivalence Of Community: A Critical Analysis Of Rural Education's Oldest Trope*

The concept of community has been central to the discourse of rural education for generations. At the same time, community has been, and continues to be, a deeply problematic concept. This paper will interrogate the idea of community and look at the way it has been used historically in rural education. In fact, rurality and community are sometimes conflated as the rural imagery and place attachment is often held up as an example of the kind of solidarity that once existed before the advent of modernity and ubiquitous strangerhood described in the writings of many contemporary social theorists. Community is, in rural education discourse, a well-worn trope that connects pedagogical, curricular and political arguments to Deweyan pragmatism and the idea that a proper education begins with experience. What has followed is generations of rural education in defense of community, in resistance to urban-generated standardization, and support for local forms of educational practice which connect to and hopefully enrich local lifeways.

I argue that this rather simplistic place-based thinking tends to lend only partial support to cultural, social and economic development in rural areas for many reasons, but particularly because it is typically somewhat ignorant of wider global connections and contemporary theorizations of rural social space. I will argue that effective rural educational leadership needs to problematize the idea of community and develop it in ways that avoid playing into nostalgic and retrogressive notions of the rural. This argument is based on a conception of place that keeps in focus multiple and complex understandings of emerging postproductivist globalized rural spaces.

#### *From Private Initiatives to Public Goods: A Comparative Analysis of European Urban Agricultural Practices in the Age of Austerity*

Compelling evidence over the last twenty years documents a retreat from the public especially in those societies that wholeheartedly adapted a neo-liberal agenda and promoted the economization of everyday life. In Ireland and other European countries such as Spain and Portugal, massive speculation in the housing sector brought about near financial ruin in 2008. The ensuing imposition of austerity has forced these countries to come to terms with the stark social costs of the profligacy of the past. This paper suggests that one unintended (and indirect) consequence of economic retraction and austerity has been the growth of interest in urban agriculture. As the property market deflated, incomes dwindled, jobs were lost and those in jobs had to work harder than before, a 'grow it yourself' movement began to take off in Dublin and other urban centres around Ireland. Similar initiatives are also underway in countries across Europe, and in particular, in Spain and Portugal. Drawing on a case study of the city of Dublin, Ireland set against the European context<sup>[1]</sup>, this paper argues that the re-emergence of the urban allotment garden in and around the city after a long period in abeyance represents a reassertion of the public realm, although this reassertion is not without its internal contradictions. Allotments are perhaps best viewed as *liminal spaces* or *middle landscapes* that are mutually constituted through public and private practices which are held in tension with each other.

<sup>[1]</sup> The author will draw on data on Urban Agriculture Europe made available through COST ACTION TD1106 of which the author is a member. More than twenty European countries are linked through the ACTION focusing on a range of issues from governance to public policies to spatial relations in the landscape.

#### *Theoretical Reflections from Halbwachs' Perspective: The Religious Collective Memory and Its Political Uses*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

The French sociologist Maurice Halbwachs was in the 1920s the founder of the Sociology of Memory and was responsible to introduce a subject that has not been considered yet. Their formulations, roughly, try to demonstrate how the memory does not refer to static set of past events, but rather to systematic reconstructions shaped from the present condition. Assuming such formulations and inspired by the reflections from the chapter *La mémoire collective des groupes religieux* contained in inaugural book *Les Cadres Sociaux de la Mémoire*, this paper aims to develop an explanatory theory about the required relationship that religions (which are intended to be universal) have with their own religious memory in order to prevail their own interests and judgments over other collective memories related to others *social groups* - understanding *social group* as the halbwachsian concept that represents an intermediate category between the *individual* and *society*. The central idea is that although the religious memory wishes to be timelessly valid - due to its construction of moral truth about human life - it is constructed from the pressures from the social and political interests of the present. Namely, the religious memory, in order to satisfy their political interests to maintain its position within a society, would be concerned with demands arising from others social and political groups. By assimilating, occasionally, these external interests and values, religion reconstructs its own past, incorporating them to their own religious system of values. Nevertheless, religion assumes that this new set of values is linked to the religion historical origin, thus omitting part of its historical past. To exemplify the idea that religious memory is a product of constant total reconstructions that are presented as non historical, we use some historical cases concerning to the Catholic Church.

COMBER, BARBARA (Queensland University of Technology)

#### *Standardisation, Literacy and School Leadership: The Differential Effects of Policy*

One of the key goals of education policy reform in recent decades has been to improve literacy achievement and use standardised, high-stakes literacy assessments as a key lever. Despite the rhetoric of these reforms, however, there is little evidence that the achievement gap according to social class, is being addressed in any sustained ways. Furthermore, there is evidence of 'collateral damage' in terms of narrowing the curriculum and reducing teacher autonomy, especially in schools serving students who most struggle with achievement in standardised curricula.

Beyond these broad effects, little is known about how the discourse of standardisation plays out in different contexts—Which daily/nightly practices are constituted through the implementation of standards policies, with what effects? In this paper we explore this problem from the perspective of two school principals serving contrasting school communities.

This institutional ethnography shows that leaders working in different places—social, geographical, institutional—have different resources and discourses to draw on, and face different choices in their everyday work. The texts and practices of standardised assessment frame schools according to a constrained set of ideals which bracket out the important work that educators must do to address educational disadvantage.

We conclude that standardising policy practices may well be producing very different outcomes than they purport to address. Rather than producing an innovative educational market place, these policies are driving a context-less and narrow curriculum that further disadvantages those who most rely on schools for the development of social capital.

#### *The Sustainable Tourism Discourse - a Critical Discourse Analysis*

Despite the fact that the sometimes emotive debate on sustainable tourism in tourism studies continues (McDonald, 2009) sustainable tourism will almost certainly become the mainstream within a decade (UNESCO, 2013): two powerful organizations in the world of travel and tourism that already intensely promote sustainability in tourism development are UNWTO and WTTC. UNWTO defines itself as the leading organization in the field of tourism and is the agency of the UN which is responsible for the promotion of responsible, sustainable and universally accessible tourism. WTTC is the forum for the hundred true business leaders in the travel and tourism industry. Both organizations contribute to the maximization of the socio-economic contribution of growth and prosperity through sustainable tourism development, while minimizing its possible negative impacts on people, planet and profit.

McCool and Moisey (2011) raise many questions concerning the current definition of sustainable tourism in theory and in practice. Moreover, Mowforth and Munt (2009) state, among others, that sustainable tourism is not more than just a new concept of Western-defined pleasure, which does not truly change former

power relations and thus previous negative social impact of tourism on local host communities.

Critical discourse analysis (CDA) makes it possible to study the relation between a discourse and social developments in different social domains by empirically analyzing language within social contexts - ways of talking do not neutrally reflect the world, but rather play an active role in creating and changing it. With the help of CDA, this paper will A) display the current sustainable tourism discourse in relation to a historical and socio-political context and will B) give insight in the present social struggle of giving meaning to sustainable tourism, led by two world leading and powerful organizations in travel and tourism that both have different interpretations of the concept of sustainability.

#### *The Role of National Member States and the EU in Fighting Violence Against Women in 10 European Countries*

Domestic violence is an important source of premature mortality for women worldwide, with an estimated one in three female homicides committed by an intimate partner. Among women in high income countries it can be even higher, with up to 1 in 2 female homicides being perpetrated by an intimate partner. The aim of the paper is to discuss the role of the National Members States and the EU in advocating, promoting and monitoring policies against gender violence; the paper will also present existing quantitative data on violence against women in ten high income European countries (Finland, France, Germany, Italy, Netherlands, Portugal, Slovenia, Spain, Sweden and UK).

In the first part, we will analyze similarities and diversities in policies to combat violence against women, and the extent to which the different Member States, as well as the European Commission and Parliament have been players in policy-making. Items such as the National Welfare pattern, government funding, non-governmental actions and community responses will be considered. Is there a European Welfare pattern in this context? Or, rather, are policies against gender violence strongly influenced by national societies and local activist movements?

The second part of the paper will compare domestic violence rates between Northern and Southern European countries. Based on an updated review of existing literature and a survey of official statistics homepages, the paper will examine in-depth the latest available national or provincial prevalence figures in these ten countries. Where data allows, it will be examined which sub-populations, e.g. younger or older women, or regions have a higher risk of femicide.

#### *Enjeux Des Productions Artistiques Des Personnes En Situation De Handicap Mental*

Cette proposition de communication a pour objet les enjeux relatifs aux productions artistiques - dans le champ des arts plastiques - des personnes en situation d'handicap mental.

Les productions d'Art-thérapie se présentent comme des modalités de mise en oeuvre du concept foucauldien d'Empowerment de la santé, permettant à chacun de devenir acteur de sa propre vie, en vue de rendre la qualification d'handicap définitivement obsolète.

L'exposition publique et la conservation de ces productions permettent effectivement une inclusion dans le champ social. Mais elles suscitent des interrogations de deux ordres.

D'une part, interrogation relative au lieu d'exposition et de conservation : où exposer, comment conserver ? Dans un local périphérique à l'établissement de soins, dans un espace autonome, *a fortiori* dans un musée, relèvent de solutions différentes voire opposées. Les productions peuvent apparaître soit comme un témoignage de la médiation thérapeutique, une production co-écrite avec le personnel soignant, soit en s'institutionnalisant partager le statut des *musealia*.

D'autre part, il convient d'analyser les modalités selon lesquelles les œuvres sont exposées - ou vendues - . L'auteur de la production - ou son représentant légal - est seul titulaire du droit de divulgation. Pour certaines pathologies, le droit commun s'applique sans difficulté. En revanche pour des troubles rendant la personne particulièrement fragile et isolée, comment concevoir les protocoles mis en place pour protéger ces personnes ? En s'insérant dans le marché de l'art, le risque est dialectiquement de générer un processus de marchandisation au détriment de ces personnes.

Cette communication se fondera sur un panel d'entretiens conduit auprès de soignants dans des établissements français (Hôpital Sainte Anne, Hôpital Maison Blanche, à Paris, CHU de Toulouse), auprès des représentants d'associations (société française de psychopathologie de l'expression et Art-Thérapie), des directeurs de musées d'art brut à Lille, à Lausanne, sur l'analyse des protocoles en cause.

**CORREIA, TIAGO\*** (ISCTE-Lisbon University Institute,  
[Tiago.Correia@iscte.pt](mailto:Tiago.Correia@iscte.pt))

#### *The Divisionalized Professional Bureaucracy Model in Hospital Organizations: Challenging the Role of Professionalism and Managerialism*

Following up on previous reflections (Correia, 2012), this presentation seeks now to provide the debate with a more systematized reading of the adaptation of hospital organizations in the context of globalized managerialism, notably the implication for its design and functioning while a professional bureaucracy and for the interplay between managerialism and professionalism.

The presentation reports to a qualitative research whose fieldwork was conducted in a general public hospital during the process it adopted a corporatized model now dominant in Portugal. Direct observations were systematically made over a year and half from 2008 to 2010, followed by 26 in-depth, semi-structured interviews with all managers on the hospital's board of directors, doctors from internal medicine and from surgery.

Evidence shows a new, unpredicted organizational structure in Mintzberg's theory - the divisionalized professional bureaucracy - that combines *professionalism* and *balkanization* as prime coordinating mechanisms. Divisionalized professional structures are created within hospitals standing medicine and management closely together. Implications are discussed in the light of two fields of debate. One is health professions, as professionalism seems to be reinforced through the control of both managerial and self-regulated clinical tools. The other is management studies, as it is significant to find professionalism and balkanization coupled though they are conceived as barely articulable in theory. Therefore, the reflection allows to illustrate empirically how these organizations successfully adapt by following processes assumed not only as impossible but also as responsible for disintegrating large bureaucracies.

#### *Retelling Ones Life Story - Using Narratives to Improve Quality of Life*

During the last years research in the field of narrative based medicine showed the efficiency of using illness narratives to stimulate coping processes. Following this we examined the utilization of the narrative approach in persons with aphasia, a neurological language disorder. We developed an interdisciplinary approach of biographic-narrative work to improve Quality of Life (QoL). Many persons with aphasia experience reduced social participation and a loss of QoL. Although life story work can support processes of sense-making, only a few studies use a biographic-narrative approach in aphasic patients because of the impaired language abilities (Shadden, 2005). In our approach we target identity renegotiation and social participation through an adapted biographic-narrative intervention.

The study was set in a pre- and post-test-design with a follow-up assessment three months after the intervention. Five face-to-face biographic-narrative interviews and seven group sessions were conducted over ten weeks with a sample of 17 participants with chronic but different types of aphasia.

In accordance with our hypotheses, we found a significant and stable improvement in health-related QoL. Also self-reported states of mood as e.g. "happiness" grew significantly. The results show the efficiency of working with narratives as a supplementary method for improving QoL. The transferability of this intervention to other patients is an open question for discussion and further research.

The current work is supported by a grant of the German Federal Ministry of Education and Research (BMBF, FKZ 17S10X11)

#### *Cooperation and Reputation in Dynamic Networks: An Experiment*

We study the effects of 1) network embeddedness and 2) partner choice on the emergence of cooperation. Previous research suggests that, separately, both mechanisms can influence cooperation. Network embeddedness can promote cooperation through reputation effects, while partner choice allows ostracizing non-cooperative partners. In many social situations, however, both mechanisms are present. Such situations can be characterized as dynamic social networks. It is not yet clear how the combination of these mechanisms affects cooperation; both mutual reinforcement and mutual impediment can be argued. We address this puzzle by running laboratory experiments in which opportunities for partner choice and network embeddedness are systematically varied, such that the effect of partner choice and reputation can be compared, both in isolation and

combined. Results indicate that the evidence for reputation effects is limited, but that partner choice has a negative impact on cooperation.

**CORTES, SORAYA\*** (Univ Federal do Rio Grande do Sul, [vargas.cortes@ufrgs.br](mailto:vargas.cortes@ufrgs.br))

#### *Brazilian National Councils of Health and of Social Assistance and the Restructuring of Political Inequalities*

Fora with societal participation - such as participatory budgeting and public policy councils and assemblies - have been set up in Brazil throughout the last 20 years in nearly all governmental areas. Among these, stand out the public policy councils for being significantly spread across the country. They are present in municipalities and federation states; there are also 32 councils and two national commissions operating at the federal level of management. These fora are supposed to promote the democratization of the State and democratic governance at the different levels of government. The paper presents the results of a research aiming to verify to what extent this assumption can be confirmed, regarding the National Councils of Health and of Social Assistance. It presents an analysis of the workings of these councils, in 2010, using mostly data from the detailed minutes of their plenary meetings. It also examines councils' legal and administrative documentation and interviews with councilors. The study concludes that institutional history and pervasive patterns of political inequalities, in each policy area, limit the scope of democratization they foster. Public policy councils change some aspects of the sectorial structure of political inequalities, but in doing so they help to shape new ones.

#### *Co-Constructing Legal Formulations in Family Mediation*

We focus on the mediator's profession in family justice in Brazil, with a specific attention to the practice of *formulation*. It was originally described by Garfinkel & Sacks (1970:171) as the practice of "saying-in-so-many-words what we are doing (...)". In the ethnomethodological tradition it is a method used by participants in interaction to create intelligibility and solve problems of indexicality in the here and now of encounters.

In professional discourse, however, we can associate it with regular performances of participants, i.e., with their roles in an institution. We have selected moments when legal issues pop up in interaction via formulations. Based on a corpus of real interactional data of three mediation cases, amounting to a total of 6 pre-mediation interviews and 12 mediation sessions (approximately 14 hours of talk), we undertook a qualitative interpretative study, within the theoretical framework of Interaction Analysis. During the first phase of data analysis we counted on a collaborative work of the mediator in joint data analysis.

The study reveals that legal formulations occur when the mediator explains her own practice to participants, trying to make them adhere to the ongoing work, when she furnishes legal official explanations regarding rights and duties of parents, in a consultative mode, among other uses. Particularly, one type of sequence called out our attention: A wrong initial legal understanding which emerged in a utterance of one of the parties is changed by the mediator via questions and answers, which co-construct with parties a new legal point of view, making them collaboratively change his/her mind. Legal formulations are therefore associated with the more global issue of access to knowledge and (in)equalities, as the main conference theme indicate.

#### *Cultural Industry and New Forms of Capitalism*

It seems that relative agreement there is among scholars of social sciences that we are in a new period of capitalism, characterized by the rapid expansion of what Adorno and Horkheimer called as "cultural industry". Today this definition has been expanded comprising not only the phenomena linked to the mass media, from the original definition, but also find it more and more interrelated with the production of all kinds of goods and services whose "subjective meaning... to the consumer, is high in comparison with their utilitarian purpose", as defined by A.J. Scott.

Characterization of the cultural industry is having a central impact on the definition of the new stage of capitalism that some have called cognitive and other informational. Nowadays the cultural industry has become a source of study from different parts of the world. There are research on its participation in the GDP of the countries as well as discussions on the most appropriate way to measure it.

At the same time, other research evaluate new forms of inequality that is creating a society where the culture has become a valuable commodity. Bourdieu studies on the different forms of social resources private accumulation, on the "capital" and the enclosure of the groups of cultural producers in "fields" have been one of the most important tools for measuring these changes. The paper seeks to revise these transformations within the framework of a broader investigation into this new phase of capitalism.

#### *Socio-Demographic Portrayal of Same-Sex Couples: New Evidence from the 2011 Census of Canada and Spain*

The global movement towards the recognition of same-sex couples as family units has spread out across countries with very different legal traditions and cultures (Festy and Digoix 2004), but for the moment it is circumscribed to Europe, the Americas, and Australia. Even if legal recognition of same-sex marriages or partnerships implies an increasing statistical visibility, the difficulties in enumerating and portraying same-sex couples with available official data prevail (Festy 2007).

In this paper, we focus on Canada and Spain, two countries which have allowed the identification of same-sex couples in their census form since 2001. The strategy used is different: a specific item in Canada and an indirect path through the relationship between the members of the household in Spain. Moreover, Canada and Spain legalized same-sex marriage in 2005, which implies that the exposure time to marriage is the same in both countries. The joint analysis of the two countries allows comparing a) the effect of the two enumeration procedures and b) the likelihood of same-sex couples of getting married.

Using 2011 census microdata, we first analyze the socio-demographic profile of same-sex partners and spouses (age and education of the spouses; homogeneity and spatial distribution of the couples). Second, the article explores the differences between unmarried and married same-sex couples. Third, we focus on the household composition in order to obtain information on same-sex parenting patterns.

Preliminary results for Canada indicate that the proportion of married same-sex couples has increased importantly in this country in the last decade and currently reaches nearly one-third of all same-sex couples living together. They also show that the presence of children and educational homogeneity have a strong positive effect on the probability of being married instead of cohabiting for same-sex couples.

#### *The Brazilian Neo-Developmentism in the Canons of the Post-Industrial Era*

The purpose of this communication is to demonstrate the fundamental features of the Brazilian model called neo-developmentism over the last 10 years, supported by the theoretical neo-Keynesianism. This model enabled a considerable increase in the formalization of labor in Brazil which reached record levels, although is strongly supported by the general increase in precarious employment relationships through the growth of the service sector and outsourcing of work, having as component intensifying the use of new information technologies (TICs) in the execution of the work and its consequent financialisation. Finally, this model predicts the complementarity of economic and political relations between state and the market still has industrialization as a factor structuring the economy. The wounds created by this option societal development are strategically attenuated through the adoption of redistributive policies that aim to mitigate social conflict and ensure greater social justice and reducing social inequalities. The relative

success of the combination of social policies which simultaneously benefiting the poor and the destitute over the income transfer through real increase in the minimum wage, the increased supply of credit to all social classes, the scholarship program-family as the main social policy rescue of a sector called precariat, the strong incision over big capital with the maintenance of high interest rates, with the adoption of floating exchange rate policy and strict targets of inflation control and primary surplus to pay interest on the public debt markets, complement revenues from Brazilian neo-developmentism in the canons of global capitalism.

#### *Income Inequalities in Brazil: Changes in the First Decade of the Twenty-First Century*

Income Inequalities in Brazil: changes in the first decade of the Twenty-First Century

Unequal income distribution in Brazil, a country that is still one of the most unequal in the world, hasn't been news for some time now, as a number of different authors have registered. The unequal distribution rates affect families' living conditions, especially amongst the poor. That is why it is so important to continually evaluate the impact of income inequality on current Brazilian social conditions. The aim of this study is to analyze the general determining factors implied in the changes observed in domestic per capita income or just plain domestic income in the last decade. We have taken into analysis the period between 2001 and 2011, giving special emphasis to: 1) evolution and change in domestic per capita income inequalities in Brazil: national and international structural characteristics; 2) domestic income inequalities as characterized by sex; 3) regional aspects of domestic per capita income inequality; 4) social stratification and domestic per capita income in Brazil; and 5) the impact of socio-economic factors on domestic income. The analysis was undertaken using the results of the National Domiciliary Research by Sample – IBGE's micro-data (PNAD). Methodologically, the study aggregates two kinds of analysis. The first kind is a description of average domestic income variables; average per capita domestic income, sex, and occupation. The second is a linear regression used to test the effects of each independent variable (sex, age, race, educational experience, International Socio-economic Index of Occupational Status (ISEI), social protection, region and rural/urban, on the dependent factor, namely domestic income.

#### *Youth As a Complex Issue: Notes on Brazilian Socio-Demographic Characteristics*

Youth as a category is tied to a complex network of relationships as occurs in any given society. According to Sposito (2000), youth may not be categorized with any sort of precision, but this imprecision is exactly what makes defining youth relevant. The concept of youth is wrapped up in a complex representation thus it is understood in different ways and varies between different regions and/or countries. With this in mind, certain definitions will be taken into consideration so as to define the group that we consider as young in our study. Youth is a category that encompasses multiple social issues and brings may challenges for any society in terms of the kind of attention given to this socially defined segment. This concern links the study of youth with debates about major social and economic problems, since society still projects its future on youth, as part of a development ideal. In this paper we aim to analyze the general characteristics of the young population in Brazilian rural and urban areas, showing the differences among them by sex, education, working conditions, as well as the rates of violence and crime that draw a specific scenario for Brazil. The National Household Sample Surveys of 1989 and 2011 provide the principal data used in our study.

#### *Artistic Urban Interventions, Informality and Public Sphere: Research Insights from Ephemeral Urban Appropriations on a Cultural District*

Artistic intervention in cultural districts can be an outstanding viewpoint to understand the multiple layers of uses and segregations that bring everyday life vitality to the complex organisms cities are. Urban informality contexts can be fundamental for the expression of this diversity and to liminality strategies, particularly interesting in the case of artistic intervention, as artistic creativity is often about transgression, differentiation, and, therefore, conflict. Small initiatives that

develop in an informal and ephemeral way by artists who choose the city as stage for their work, exploring the ambiguous and flexible boundaries between public and private spaces are particular interesting, evidencing the usual conflicts verified on creative milieus but being also important to keep these places as vernacular as possible and to avoid gentrification processes.

In this perspective, this paper aims to discuss this relation between urban interventions, informality and public sphere appropriation, analyzing the way informal artistic dynamics can contribute to urban re-vitalization and to the enhancement of real creative milieus. Drawing on a research-action based methodology the authors explore the results and impacts of three experiences of urban intervention that they developed in three consecutive years in informal urban contexts in Bairro Alto, the main cultural quarter of Lisbon, Portugal. These ephemeral artistic interventions introduced in the city new spaces of public use, performing different public and private spaces, and bringing them to the public sphere, creating also "new" zones that re-gain a utility in the city, contributing to the vitality and symbolic centrality of this area.

After introductory and conceptual sections, where the ambiguousness of public sphere is explored and conceptualized, a methodological section centers on research-action methodologies and its potential. The three artistic interventions are then fully analysed, inquiring their purposes, results and impacts. Main findings and principles for urban planning are summed up on conclusion.

#### *Reputation Building, Gatekeeping and Cultural Audiences: Some Conclusions from a Survey to Lisbon's Municipal Cultural Offer*

The paper draws on some empirical results of a broader research project studying the audiences of cultural facilities and events of Lisbon's Municipal Cultural Agency (EGEAC). In the scope of this project, an extensive survey was applied, within one year to nine of the main cultural facilities in Lisbon city and to a set of specific events managed by City Council's cultural firm, providing data from around 6000 individuals that give us a comprehensive picture of the audiences of these diverse institutions (museums, theatres, monuments, event venues).

The aim of this paper is to understand the importance of reputation building mechanisms and gatekeeping processes in these specific facilities, and to comprehend their importance in the respective art worlds, departing from the answers provided to this survey.

Gatekeeping mechanisms and reputation building processes are well documented in the sociological and economic literature as fundamental to influence both cultural provision and cultural consumption. Through the analysis of the motivations expressed by the audiences, the image they associate to each venue and the cross-analysis of their declared cultural habits, we build a framework for the analysis of reputation building mechanisms that is the empirically tested with this data.

After introductory and conceptual sections, where reputation building mechanisms and gatekeeping processes in these art worlds are explored, we present briefly the scope of the study and the venues analysed. Then, the methodological framework of the survey is presented and main results concerning the used variables are analysed. A comprehensive analysis of reputation building processes is then made, crossing the results of the 10 facilities/events, and presenting the challenges they bring to the conceptual framework on reputation building and gatekeeping processes, by the side of cultural audiences. Main findings and principles for urban planning are summed up on conclusion.

#### *Gaúcho Traditionalism, Identity and Culture in Paraná, Brazil*

According to both scholars and movement leaders, the Gaúcho Traditionalist Movement that emerged in mid-20<sup>th</sup> century Brazil is today one of the largest movements of popular culture in the world. Thus, the research we present here – based on the study of current ideals of work and leisure within the specific context of a Centro de Tradições Gaúchas (hereafter CTG) in the state of Paraná, and the various events sponsored by this organization, such as rodeos, handicrafts, art and dance festivals, equestrian sports, among others, presents not only a rich case study of how people build identities through a non-profit civil society organization that seeks to foster and uphold traditions and customs identified as “truly emerging from a “gaúcho past” but also engages with key contemporary sociological debates. We look at the importance that CTG participation takes on in peoples’ lives in and of itself and in relation to other social institutions (eg work, family, school). Our field work has shown that participants’ strong commitment to and engagement in recreating and living “gaúcho tradition” often goes beyond common definitions of leisure and provides a comprehensive arena for sociability and agency, where particular understandings of rural and urban, modernity and traditionalism (among others) are constructed. Yet CTGs and their members are also a part of broader Brazilian culture and social life, where enormous changes – in such key areas such as gender relations, or societal discussions on poverty, inequality and political democracy – are underway. Thus, any simple “agency vs. alienation” dichotomy becomes impossible for us to sustain, as researchers and scholars who attempt a challenging analysis of the impact that MTG and CTG participation has not only on its members but on broader social and cultural trends.

#### *Naturalized Genocide. Study of Homicide in Brazil: Analysis of Historical Series and Correlations Ethnic, Cultural and Political*

The taxes of homicides in Brazil are raised between the most of the world: about fifty thousand annual deaths. In some States a significant fall in the annual number occurred in the recent years (São Paulo; Rio de Janeiro e Pernambuco) in others the number increased annually providing in the national total a stabilization in raised platform, annually superior to the wars as of the Syrian. The biggest falls in the number of homicides occurred in the States that had increased the number of prisoners. This work examines the behavior of the historical series of the homicides and the imprisonments searching to identify the existence of some possible correlation. The partial results suggest two strong general correlations and other relevant informations. A direct correlation, of same direction, with the investments of the National Program of Public Security with Citizenship of the Ministry of Justice (PRONASCI) and another inverse one, of contrary direction, in absolute numbers, enters the taxes of homicides and taxes of imprisonment. It is observed that the jail population and of victims have similar characteristics and there is not any explanation for absence of adequate politics. The data had been gotten next to the Health Department and National Department of Prisons (DEPEN) of the National Secretariat of Public Security (SENASP).

#### *Entrepreneurial Processes in Academia*

**Entrepreneurial Processes in Academia  
Young Academics in a New Public Management Regime and Gender  
Implications**

Ilse Costas Stephanie Michalczyk Céline Camus  
Management techniques are increasingly used in public sectors like administration and education. In higher education managerial thinking, rationalization

and commodification have transformed working conditions and the incorporate behaviour of young academics.

The implementation of New Public Management (NPM) in universities has deteriorated the situation of young academics. Reforms which should enhance efficiency as well as competitiveness of universities increase precarious work since then. Not only scientific management skills are relevant to a career, but “self-management” for a good performance according to new rules of scientific output regimes signify new challenges for young scientists. Quantitative performance indicators gain momentum and determine competitiveness. Market-related processes and control instruments were imported to academia, intensifying competition for higher positions. This could be detrimental to efforts to obtain gender equality in higher education and research.

Flexibility and self-management are essential criteria of a career in academia. The requirements of high flexibility and strong competition could let women become losers of this game – a tendency that foils efforts to increase female rates in academic careers. The typical “manager” is connotated with masculine properties and stereotypes, such as leadership, assertiveness, aggressiveness, competitive behavior elements as well as risk taking. Internalizing these gendered stereotypes, discouraging impacts on female academics’ self-perception and self-image are supposed to be the result – not to mention gendered ascriptions of decision-makers and gate-keepers (Beaufays 2003).

Considering the fact that women are underrepresented in academia, such NPM effects are getting increasingly relevant for the gender issue. Therefore we analyze concepts of NPM regimes in academia in France and Germany under a gender perspective. As a theoretical basis we refer to Foucault’s approach of governmentality (Foucault 1991) including the perspective of gendered power relations.

REINECKE, JULIANE (Warwick University)

#### *Embodied Protest in Occupy London: Between Homo Sacer and the Biopolitical Body*

In this paper we discuss the relation of embodied protest and public space in Occupy London. We draw on Agamben’s notion of the homo sacer – the excluded included life embodied by the figure of the homeless, refugee and so forth – to analyze how in protest camps embodied protest relates to resistance against sovereign power. Drawing on primary data gathered through participation observation of and interviews with participants in Occupy London, we investigate the extent to which the camp constituted a subversive space of excluded inclusion as protesters sought to position themselves as homines sacri – “bare life” challenging sovereign power. Yet, we also show how protesters struggled to navigate tensions between representing such “bare life” of the homo sacer and the biopolitical body. This lead not only to various difficulties in building protest community but also in the interactions with the general public and media. Particularly, tensions became manifest as the homines sacri of the homeless people joined the camp. We discuss the implications of Agamben’s biopolitical insights for the relation of resistance, public space and community building in protest movements.

**COTE, JAMES\*** (University of Western Ontario, [cote@uwo.ca](mailto:cote@uwo.ca))

#### *The Proletarianized University Graduate: A Paradox of Knowledge Economies*

The results of studies in many countries suggest that the time investment necessary to earn an undergraduate degree has declined over the past few decades to the point where full-time university students need only to treat their studies as a part-time commitment and they can still obtain high grades and graduate. At the same time, other studies find that great proportions of these graduates are seriously underemployed. These trends present a paradox in societies officially deemed “knowledge economies” by their governments, which also promote their mass universities as the drivers in the creation and management of new knowledge and thus economic growth. This phenomenon is not explainable by conventional liberal or conservative sociological theories. However, it is argued that a political economy perspective, in which mass-university graduates are seen to constitute a white-collar proletariat, explains why governments would turn a blind eye to both to low academic standards and high levels of graduate underemployment while still touting the mass-university degree as a social equalizer and economic driver. The implications of this paradox are discussed in terms of the economic utility of the prolongation of youth for Capital.

### *First Nations Theatre in Postcolonial Context: Interpreting the Fusion of Premodern and Postmodern Cultural Forms in the Americas*

The last four or five decades witnessed a remarkable renaissance of First Nations theatre across all the Americas. This hemispheric artistic renaissance is grounded in a postcolonial context that challenges the modern definitions of national cultures that had mostly ignored, eliminated and silenced the traditional and premodern forms of expressions of the pre-Columbian cultural traditions on the continent. Yet the renaissance of First Nations theatre shows not only that such traditions can be revived and transformed, but that the conditions under which they are performed blend easily with the most innovative experimentations of avant-garde theatre developed in the 20th century. The legacy of Antonin Artaud, Bertolt Brecht and Gertrude Stein can then be seen in the dramaturgical contributions of playwrights like Drew Hayden Taylor, Yves Sioui Durand and Monica Mojica, and theatre groups like Ondinnok or De-Ba-Jeh-Mu-Jig. The performative dimension of such a theatrical artistic renovation is also in touch with the political and legal transformations that accompany the wider cultural movement found in the contemporary postcolonial context of the Americas, and signals the presence of the transnational and transcultural processes at work in there. Using the conceptual tools of cultural pragmatics and hermeneutic theory, this presentation will focus on how the premodern and postmodern cultural forms converge and fuse in creating a hybridized theatre that reflects the transformation of the cultural hemispheric scene of the Americas.

### *Phylogenetic and Ontogenetic Processes in Mead: A New Sociological Understanding of Self in Society*

The legacy of G.H. Mead largely rests today on his conception of the self, on which most of the interpretations given to his social psychology have focussed; however, and strangely enough, his conception of society has remained in the meantime almost entirely ignored, or left unexplored in its fundamental determinations. In this paper, I want to argue that the concept of society has to be considered as the essential presupposition of Mead's theoretical presentation of the self. By drawing attention to the concept of society at work in Mead's evolutionary thought, I want to propose that the ontogenetic process of the formation of the self (in self-consciousness) relies on the phylogenetic process of the formation and transformation of society. These processes have then to be considered in their interrelation if we want to get a cogent sociological understanding of the self in society. As this interrelation between these two processes stands at the very core of Mead's theoretical enterprise, it is also at stake in his reformist political vision of the (trans)formation of society by self-conscious individuals. Using schematic representations of these processes, I also insist in this presentation on both less known published and unpublished papers by Mead that establish the connexion between phylogenesis and ontogenesis in his thought.

### *Human Rights and Civilisations*

In the last 30 years the Theory of Human Rights received many criticisms. The most important is the critique proposed from a civilizational point of view. This critique is advanced by many theorists from China, India and, generally, Asian countries. They said that a universalistic Theory of Human Rights is impossible without Asian Values and demand or propose a Confucian or Neo-Confucian Theory of Human Rights.

The same critique is advanced from an Islamic point of view. The critique of a Western vision of Human Rights here is not only a theoretical question but a practical one. The Islamic world had emanated the "Islamic" and the "Arab" Declaration of Human Rights.

Another criticism is proposed from the so called African Renaissance. In African culture (f. e. in Ubuntu culture) and civilisation there is a conception of Human Rights alternative at those of the Western world.

All this critiques says that: 1) the Human Rights conception is a western ideology; 2) in every culture there are the Human Rights. The consequence is the construction of a philosophical context dominated by relativism.

In this context we can appreciate the debate about Human Rights between J. Rawls (Law of the People), J. Habermas, S. Benhabib and many others. The central problem here is the question of Democracy. Is Democracy a "Western" or a "universal" value?

I would like to present the approach elaborated in my book *Global society and Human Rights*. This approach is based on two points: 1) every single culture and civilisation can find in a theory of Human Rights the valorisation of its particularity and 2) a construction of a universal perspective which can justify/legitimise the

cultural differences. The formula is: Unity and Diversity as a basis for a new and inclusive Theory of Human Rights.

WG01-896.1

**COTESTA, VITTORIO\*** (Università degli Studi Roma Tre, [vittorio.cotesta@uniroma3.it](mailto:vittorio.cotesta@uniroma3.it))

### *Universalism, Cosmopolitanism and Human Rights*

The global society of XXI century there are two main shifts. The first is a commitment to universalism, human rights and, finally, to cosmopolitanism; the second is a re-affirmation of local, ethnic, civilizational identity.

This is evident in the contemporary debate about human rights. A critique against human rights theory say that human rights are a Western ideology and express the Western vision of humankind, and particularly the individualism of Western society and his vision of private property. In this sense are relevant the critiques proposed by the so called African Renaissance, by Chinese neo-Confucian and Indian theorists and also by any Western intellectuals. Another point of these critiques is that in every culture and civilisation there are Human Rights. They demand f. e. that "Asian" or *Ubuntu values* are included in a new theory or conception of Human Rights. But these critiques implicitly admit that Human Rights are the general framework in which only these values can be legitimate. In other words, Human Rights, as general and Western vision of Humankind, must be integrated by other values. In this sense the Theory can be universal and not only a product of a single civilisation.

The question now is: can we produce such theory? Which are his characters?

A new and more inclusive and universal Theory of Human Rights can be two-fold: 1) this theory has to include all common values of cultures and civilisations but 2) it have to include also the diversity of cultures and civilisations. Unity and diversity: this is the main structure of a new and universal Theory of Human Rights.

This Theory, for his universal characters is open to a cosmopolitanist vision of citizenship.

### *Disparities in Homeless People's Health Care in France*

The French healthcare system is reputed to be one of the best in the world. In theory, it guarantees free access to medical care to everyone by offering specific medical security scheme for each social group. However, this nationalised system has increased disparities across social groups and classes. This paper will try to understand the reasons why normal patients and homeless people are treated differently. Homeless people are entitled to Social Security benefits, yet they often have poor health. This can be explained by the fact that homeless people develop particular modes of behaviour resulting from survival needs. Their living conditions adversely affect their health, but they often reject medical care. Homeless people usually refuse to go to the hospital or to see a doctor despite their need for proper medical care. Healthcare workers often encounter difficulties to understand what their demand is: most of the time, homeless people are ashamed to exposing their damaged bodies. They don't want to admit that they can't preserve their health while living in the street. They only have their bodies, and they are not able to take care of it. They may decline the help they are offered, whatever form it takes, in order to avoid the difficulty to show their troubles. In addition, healthcare can be denied to them in doctors' office or in hospitals, which is often due to their possible lack of hygiene or aggressive behaviour. Doctors or nurses are not used to this kind of patients and may encounter difficulties in taking care of them. Analysing the interactions between homeless people and healthcare workers displays how different their respective logics of action are. Plus, their perceptions of health, illness and body image much differ, which can cause misunderstandings and result in homeless people facing great health inequalities.

### *Moving from Ideas to Action: Community Actors' Local Implementation of Sustainable Urban Development in the Context of Montreal*

The city is a place where many environmental issues are emerging. And these issues are at the heart of disputes regarding access to green space or demands in the areas of quality of life and the environment. These disputes are rooted especially in the many meanings that the term sustainable development takes in the eyes of the different actors, with their differing ideological positions, and in the numerous difficulties in the implementation of sustainable development that have been discussed in the literature. Our paper focuses on the local implementation of sustainable urban development from the perspective of the discourses

and practices of community actors in the context of Montréal. The paper is based on the findings of a qualitative study that used semi-structured interviews with various community actors in the Rosemont neighbourhood of Montréal. Our objective is to understand how community actors in this neighbourhood are fostering the implementation of sustainable urban development at the local level. Our hypothesis is that these actors use the concept in a way that allows for a re-framing of the issues towards the implementation of sustainable urban development with a broader social scope by incorporating notions of justice, equity and democracy into it. In doing so, they are positioning themselves in opposition to a neoliberal vision of sustainability, where the environment and social inequalities are seen as externalities of development.

QUINN, MARTIN (University of Leicester)

### *The Use of Heritage in the Age of Austerity*

This paper uses evidence from research across the University of Leicester into the use of the 'Heritage Paradigm' to capture cultural value at local and regional levels. Traditionally, heritage has related to the management of historical assets regarded as central to the British national story. However, in light of the Localism Act 2011 and a restructuring of the executive governance of heritage assets, the UK now views heritage as central to a) place branding, and b) community empowerment. These developments present a way for regions to redefine their populations, economic relevance, and its legacies to the ends of 'inspiring' future economic prosperity. On a theoretical level, the pursuit of 'heritage value' has opened up democratic spaces to include a greater diversity than hitherto represented in official heritage discourse. On a practical level, the paper argues that the 'networked governance' approach, which includes heritage organisations, local communities, local authorities, universities, and private businesses, demonstrates an entrepreneurial approach to realise cultural value. Consequently, the heritage paradigm is less about securing the past, but about capturing cultural value as an over-arching economic rationale emergent from austerity economics. However, this approach is not without criticism, and the paper uses evidence to illustrate that conflicting relationships between public and private interests often limit its successful realisation. The paper will question the extent to which it realistically generates entrepreneurialism more broadly through examples that highlight the divergent rationales of public and private interests. To conclude, the paper argues, using evidence from Leicester City's 'City of Culture' bid that an entrepreneurial strategy to capture cultural value using heritage offers a legitimate means to promote cultural diversity, cultural creativity, and civic pride; but without a choreographed approach to working with the private sector these schemes can offer little to longer-term economic development.

### *Globalizing Forms of Elite Sociability: How Social and Service Clubs Foster Varied International Experiences*

Drawing from 50 interviews conducted in Paris and Milan, our research examines the expatriation practices, as well as the cultivation of transnational connections, cosmopolitanism and global class consciousness among members of elite social and service clubs: the Jockey, the Nouveau Cercle, The Travellers, the Automobile and the Interalliée in France; the Clubino, the Unione and the Giardino in Italy; and the Rotary, as the main and most selective "service club", in both countries.

Following two recent articles (2010, 2012) analyzing the multiple ways these institutions manage social capital as individual and collective resources for their members, this paper focus more specifically on international ties. We compare how – according to their respective characteristics – various elite social clubs promote different kinds of bourgeois cosmopolitanism and connections, while differing as a whole from the more recent internationalism of upper-middle class service clubs such as the Rotary. Indeed, such institutional differences have a strong impact on the individual experiences of their members traveling or living abroad.

Each club's peculiar ethos, practice and representations are related to the features of competing clubs through relations of mutual symbolic distinction; for example, some clubs emphasize the 'utility' of links while others prefer to stress their 'genuineness.' The varied forms of cosmopolitanism promoted by clubs partly replicate these logics of distinction, eliciting struggles over the authenticity or inauthenticity of transnational connections. Yet clubs also oppose each other according to the unequal emphasis they lay on international ties *per se*, potentially introducing a competing axiology within the symbolic economy of social capital accumulation.

These oppositions show that while the globalization of the upper class implies an increasing transnational mobility and the international deployment of social

networks, these are not strategized homogeneously among the European economic elite, and participate in the drawing of symbolic boundaries between its fractions.

### *The Elite and the Urban Poor. Self-Segregation and Representations of Poverty in Upper-Class Neighborhoods of Three Metropolises: Paris, São Paulo and Delhi*

How do the inhabitants of the most privileged neighborhoods of big metropolises see the poor? How do they distance themselves (both physically and symbolically) from them? Can their representations of the urban poor be analyzed as part of traditional or neoliberal repertoires of action and justification? To answer these questions, our paper will be drawing on 240 in-depth interviews conducted in 2012 and 2013 with upper-class and upper-middle-class residents of the most socially selective areas (both in the inner-cities and in the suburbs) of Paris, São Paulo and New Delhi.

The history of the forms of domination, the structure of the elites, and the characteristics of welfare policies are indeed tightly linked to the ways the upper-classes produce, perceive and justify a city's social-spatial order. Their representations of the poor – through frames, symbolic boundaries, logics of distinction and evaluation, narratives, etc. – are strongly influenced by the specificities of their country and of the metropolis they live in.

Therefore, on the basis of an international and inter-local comparative approach, we will present the differences between the cases studied. For each of them, we will also describe the particular articulation between five themes, whose possible mobilization as subjective reasons for self-segregation has been systematically tested in the interviews. These topics are: (1) insecurity and crime-exposure, (2) hygiene and the risks of contamination, (3) the attachment to a moral order that would need to be protected, (4) the naturalization (or racialization) of poverty, and (5) the various valuations of competition and merit vs. solidarity.

Our analysis shows how the rise of a neoliberal urban model, in Europe as well as in the Global South (in contexts characterized by the on-going displacement of the urban poor from the city centers), is also a matter of collective and individual meaning-making.

### *Discrimination and Work*

How do individuals perceive and experience discrimination at work? Based on a qualitative survey consisting of 200 interviews and 4 sociological interventions, we distinguish four registers showing that discrimination constitutes a trial that varies according to the social context.

According to a person's social trajectory and position, the experience of discrimination varies widely, thereby demonstrating the importance of access to equality. Indeed, whereas immigrants are objectively discriminated against, they do not feel this as discriminatory because they do not stake a claim to equality. In contrast, minorities experience the hurdles they face as being considerable sources of discrimination because they claim equal treatment. The same is true when comparing the working class and the middle class. The feeling of discrimination does not necessarily correspond to the nature of the trial one undergoes because the more people identify with society and participate in it, the greater and more unfair seems the discrimination.

According to the type of labor market, people feel more or less exposed to discrimination. In open markets such as the audio-visual sector, merit and talent are normally the only criterion. In recent years, this market has become much more accessible to visible minorities (actors, directors etc), despite their feeling a strong sense of discrimination. For each failure can be interpreted as the result of discrimination since it concerns the qualities of the person without the criteria for selection being completely clear. On the other hand, the segmented or closed markets, such as the ethnic business model, appear more protective. While they are objectively segregated, the "racial" organization of labor relations maintains more or less the feeling of discrimination.

It is through these situations that we will analyze the models of integration and the role that jobs play in it

**COUTINHO-SILVA, RACHEL\*** (FEDERAL UNIVERSITY OF RIO DE JANEIRO, [rachelcc@acd.ufjr.br](mailto:rachelcc@acd.ufjr.br))

*Peace Building, Risk and Vulnerability in Favelas of Rio De Janeiro*

The city of Rio de Janeiro will host two mega-events in the near future: part of the games of the Soccer World Cup in 2014 and the Olympic games of 2016. As a result, the State and local governments of Rio de Janeiro devised new urban policies for the favelas aimed at bringing public safety to the city. The most important is the program called Police Pacification Units (UPP), which has been put in place since 2008 in several favelas under the control of the drug dealers. Other important programs, such as Morar Carioca (Carioca Housing) and the PAC (Program of Development Acceleration) complement the UPP, focusing on housing, infrastructure improvements, and mobility within favelas.

This paper intends to analyze the impact of these programs on the building up of resilience and adaptive capacity in some of the communities where the pacification program was put in place. The paper focuses on the dimensions of risk, vulnerability, inclusion, safety and the construction of socio-environmental sustainability within the favelas and its surroundings. The study is based on empirical evidence from four favelas in Rio de Janeiro: Comunidade Dona Marta, Morro da Providência, Morro Pavão-Pavãozinho and Complexo do Alemão. It also uses data and information from government and non-government sources and when available, from the plans and designs put forward in these communities.

The proposed analysis as well as its implicit comparative nature will point out the advances and setbacks of these programs, and will indicate possible strategies for improvement. It hopes to contribute to better planning practices and ultimately to diminish social and environmental vulnerability of less privileged communities.

**COUTO, BRUNO\*** (University of Brasília, [brunogcouth@gmail.com](mailto:brunogcouth@gmail.com))

*The Relationship Between Intellectual Groups and National States in Latin America during the Nineteenth Century*

This paper analyzes how the aesthetic, cultural, political and social perspectives of intellectual movements shaped the social imaginary about modernization and national development in Latin America, especially in Brazil, during the nineteenth century, contributing on the setting of a political culture that had great influence on the consolidation of the Latin American states. The main objective of this research is to analyze the formation of homologies between intellectuals and political-economic elites during those centuries.

In Latin America, this process of alliance between intellectuals and political elites has developed through various stages, but, historically, the nineteenth century was a turning point. Since this period, Latin American states began to constitute themselves as modern orders par excellence, holding administrative control and, above all, symbolic control of the territory and the peoples living there. It's precisely at this crucial moment that the intellectuals movements, especially the literature and poetry, played a key role on the formation of a political culture that will give the theoretical and ideological foundations of the symbolic domination by state.

Those intellectuals made great efforts to incorporate the ideas that were being broadcast by the European avant-garde movements and rebuild it in favor of the development of a national art and a national culture. An art and a culture that should be the foundations of a national identity.

It was precisely by the activity of these intellectuals and the broadcast of ideas about the modernization and development of their countries, through the formation of an ideology about the means necessary for the constitution of a politically organized society (through a national identity based on art and culture), that the intellectual movements were incorporated by political elites on the process of strengthening of the Latin America states, exerting great influence on the formation of specific national "political cultures".

*Youth Creating Disaster Recovery: A Participatory Action Research Project*

Youth Creating Disaster Recovery (YCDR) is a participatory action research project designed to learn about disaster recovery from the perspectives of youth. Moreover, YCDR focuses on the potential of youth to act as powerful catalysts for change following disasters.

Funded by the Social Sciences and Humanities Research Council of Canada, the project has completed its first year of fieldwork in Joplin, Missouri and Slave

Lake, Alberta. Both communities experienced recent exposure to catastrophic disasters. On May 16, 2011, one third of Slave Lake was destroyed by a wildfire. Less than a week later, on May 22, 2011, Joplin was devastated by a powerful EF-5 tornado.

YCDR, a collaboration of Royal Roads and Colorado State Universities, uses participatory and creative research methodologies to elicit and explore the perspectives of disaster affected youth in the focal communities. The goal is to contribute to and refine existing socio-ecological theories of disaster recovery and generate evidence-informed, inclusive, and youth-centered approaches to disaster recovery and risk reduction practices and policies. YCDR is committed to empowering disaster-affected youth through this research and the development of peer-to-peer networking opportunities and a North American interactive web-based gallery dedicated to their creative stories of their disaster and recovery experiences.

In this presentation, we will provide an overview of the project and share some of the outputs (photo-stories, videos, songs, poems, etc.) created by the youth participants. We will highlight some of the early findings centered around four research questions: 1. What people and places helped youth to recover after disaster? 2. What activities/ actions were important to youth after disaster? 3. How did youth contribute to their own and to others' recovery? 4. What delayed or hindered the recovery of youth and what could be done to overcome those barriers?

**CRAIG, LYN\*** (University of New South Wales, [lcraig@unsw.edu.au](mailto:lcraig@unsw.edu.au))

JENKINS, BRIDGET (University of New South Wales)

*Grandparents Who Care for Children While Parents Work: Characteristics and Time Use Patterns*

Grandparents have historically underpinned the functioning of families raising children, particularly through emotional support and guidance. Recently, maternal workforce participation has propelled modern grandparents into a more active role, with many regularly caring for children while parents work. This trend has important implications for female workforce participation, and for childcare, workplace and ageing policies.

To date there has been little examination of regular care provision from grandparents' perspective. This paper addresses that knowledge gap, using the most recent Australian Bureau of Statistics (ABS) Time Use Survey (TUS) 2006 (N>4,000). It investigates whether grandparents who provide regular care for grandchildren while parents work differ demographically from other grandparents. It identifies which specific types of childcare activities regular grandparent carers undertake, and whether/how these compare with (a) non-regular caring grandparents; and (b) parents. It explores relationships between regular childcare provision and grandparents' time in other activities (including leisure, personal care and paid work), subjective time pressure and satisfaction with the way time is spent. All analyses consider gender differences.

Gender is the strongest predictor of whether or not grandparents will provide regular care while parents are at work, but age, income, education status, being married (for men) and employment status are also salient. As for mothers, a high proportion of grandmothers' care is spent in physical, hands-on, care activities. Like fathers, more of grandfathers' care time is spent in play or minding. Being a regular carer doubles grandfathers' time (to about 5 hours a week) and triples grandmothers' (to about 12 hours a week). However, grandfathers' care composition changes most, to include a higher proportion of travel (to school or day care). Regular care provision impacts on both genders' leisure, but only on grandmothers' housework, personal care and sleep. It doubles the likelihood grandmothers will report being rushed or pressed for time.

BROWN, JUDITH (University of New South Wales)

*Weekend Work and Leisure Time with Spouse, Children, and Friends: Who Misses Out?*

We explore links between weekend work and leisure time shared with partners, children, other resident and non-resident family, and friends, using the most recent Australian Bureau of Statistics Time Use Survey 2006 (n>4,000 households). Drawing a sample of employed persons (n=3903) we test associations between weekend work and shared leisure time on the day of work and also, to see if shared leisure time is made up on other days, over the following weekdays. We stratify analyses by family type, specifically i) couples with no minor children, ii) couples with minor children and iii) singles with no minor children. For all groups, weekend work is associated with significantly less shared leisure time on days worked. Results suggest some weekend workers recoup some forms of shared leisure time over the following week (particularly time with friends by men in couple families) but most do not. Indeed for some categories of shared leisure, notably with partners and with children, there were further negative associations on weekdays. There were gender differences in amount of shared leisure, but interaction terms showed that all else equal, in families with children, weekend

work limits fathers and mothers leisure shared with spouse and with children to a similar extent. We conclude that it is families with young children who are most affected by weekend work, especially Sunday work, and most especially when weekend shifts are combined with long weekly work hours.

#### *Indigenous Pathways in Social Research: Addressing Inequities Part 2*

Indigenous peoples are decolonizing research methodology so it serves their peoples' needs and aspirations. These needs are rooted in trauma created by colonial agendas that remove tribes from their land, break family bonds, and disrupt identity. Aspirations are about justice, the return of lands, and living as indigenous peoples. This panel of Indigenous researchers brings this agenda to life, describing how they are decolonizing research methodologies within their countries. Polly Walker is a Cherokee woman and Assistant Professor of Peace and Conflict Studies. Her presentation, 'Emplaced Research: Reducing Epistemic Violence toward Indigenous Peoples and their Knowledge Systems', explores research that engages in relationship with Indigenous people, the natural world, and the spirit of the place in which the research is carried out. Juanita Sherwood is an Aboriginal woman of Australia and Professor of Australian Indigenous Education. Her presentation, 'Complex trauma a conduit for inequity', examines pathways to prison for Aboriginal Australians that are often about mental health dis-ease as a result of unresolved grief, loss and untreated complex trauma. Hazel Phillips is a Māori woman from New Zealand and an independent researcher. Her presentation, 'Kāpo Māori counter narratives', will critically reflect on the implications of outsider research for Māori who are blind and vision impaired, and argues for an insider, kāpo Māori by kāpo Māori, approach to research. Sonja Miller is a Māori woman from New Zealand and post-doctoral fellow at Victoria University of Wellington. Her presentation, 'Mō tātou: doing it for ourselves', will describe how an Indigenous tertiary education initiative is improving access for Māori to marine science. Simon Passingnan, an Indigenous researcher in Papua New Guinea, will present on building Indigenous researcher capability through apprenticeship-style training. Fiona Cram, an independent Māori researcher from New Zealand, will provide final commentary in her presentation entitled: 'Decolonizing and Transforming Through Research'.

**CRANE, EMMANUELLE\*** (UNIVERSITY PARIS DESCARTES, [emmanuellecrane@yahoo.fr](mailto:emmanuellecrane@yahoo.fr))

#### *Enforcing French Law and Imprisonment or Implementing Aboriginal Justice in French Polynesia?*

This paper explores present day violence on women in French Polynesia and the current institutional mechanisms and responses to prevent and sanction criminal offences. Based on alarming statistics of Polynesians overrepresented in the prison of Papeete as well as recurrence of criminal activities such as sexual abuse, my paper will focus on establishing the correlation between local cultural practices, enforcement of « imported » penal institutions and the gap of resolving intrafamily violence in small polynesian communities. I will discuss what are the current discourses of gender-based violence in French Polynesia and consider if the cultural gap between French and Polynesian cultures can be filled/replaced through the introduction of aboriginal justice as it is experienced in New Zealand or Canada. While widespread aboriginal preference tends for "peacemaker justice", can violence towards women be lowered thanks to following community healing based on traditional teachings? Can aboriginal justice help perpetrators to take and develop responsibility for their own lives?

### RC32-555.1

**CREESE, GILLIAN\*** (University of British Columbia, [gillian.creese@ubc.ca](mailto:gillian.creese@ubc.ca))

#### *"I Was The Only Black Child In My School": Hip-Hop and Gendered and Racialized Identities In Vancouver*

This paper examines how second generation youth with parents from sub-Saharan Africa negotiate racialization processes and gendered identities in Metro Vancouver. The study is based on interviews with second generation African-Canadian men and women who grew up in metro Vancouver, and explores the gendered impact of growing up in neighbourhoods where they, and their siblings, were often the only African/Black children. Although Vancouver is a diverse multicultural metropolis, the African/Black population is both very small (about 1%) and hyper-visible. In this context, the second generation engages with representations of 'Blackness' widely circulated through American popular culture, and especially through hip-hop, which forms a central element of North American youth culture. Hip-hop constitutes the dominant frame of reference for representations of Black masculinity and femininity among non-African peers, providing spaces of

acceptance for African immigrant boys who can successfully perform hip-hop culture. In contrast, hip-hop culture provides few avenues of acceptance for African immigrant girls who must find other avenues of belonging.

#### *Re-Working Cosmopolis in Post-Colonial Cities: The Cases of Kolkata and Buenos Aires*

The paper questions how memories are re-signified through the making of space. However, we adopt a specular (yet not incompatible) approach to the usual concern with the construction of space through memories. The question concerns both the process of remaking space through the elaboration of collective memories; and how places came to be a relevant part of cosmopolitan memories (Barthel-Bouchier and Min Hui 2007). Nobody questions in fact the powerful contribution that symbolic place gives to the construction of collective memory since Halbwachs. However, the re-imagining of an urban space through global concerns, and the rise of a cosmopolitan, collective memory of place is another matter. Whether this is the case or not, is matter of a broad investigation. Citizens deal with their built environment, and national history in many different ways. There are times and opportunities when the elaboration process coalesce. The pages that follow offer an initial exploration of the fate of two rather different cities (Calcutta, former capital of the British Raj in India; and Buenos Aires in Argentina). The cities share a contested colonial past, that produced in both cases a peculiar modernist lay-out; and a troubled development in the last decades. These cities were chosen because they have some features in common in the context of social and political changes brought about by globalization. The aim is to discuss a few general warnings about the hybrid nature of postcolonial cities (Harris 2008), which are inspirational cases for reconsidering hybridity among the general qualities of the present era (Candini 1989). Asian and South American cities do are often considered precisely because they do not fit into the role model of capital accumulation in the process of modernization, and even less so in neoliberal times.

### RC35-609.1

**CREMIN, COLIN\*** (University of Auckland, [c.cremin@auckland.ac.nz](mailto:c.cremin@auckland.ac.nz))

#### *Historically Determined Apocalypse: The Struggle of Accents in a Time Born of Crisis*

Unlike Biblical prophecies or the Protestant belief in predestination, the more secularised apocalyptic prophecies today offer no redemption, spur no industry: provoke no revolution. Rather, they encourage a fatalism and misanthropy. Apocalypse, David Noel Freedman notes, 'was born of crisis'. Drawing on the materialist linguistic theories of the Bakhtin Circle, the paper aims to identify how apocalyptic thinking in this age of crises differs from that of the past, how it is being refracted through the prism of a dominant ideology and the potential consequences this has for how we think about ourselves and our relationship to the world. The paper considers the contribution of critical social theory in 'lifting the veil' on the material processes and relations that underpin apocalyptic thinking in this particular crisis formation. By challenging the fatalism and misanthropy that aligns with such thinking, the future itself becomes a space of ideological and political contestation.

### RC52-833.5

**CREMIN, COLIN\*** (University of Auckland, [c.cremin@auckland.ac.nz](mailto:c.cremin@auckland.ac.nz))

#### *The End of Employability: Occupying the Absent Centre of Labour in Precarious Times*

The most succinct definition of the reversal constitutive of drive is the moment when, in our engagement in our purposeful activity (activity towards some goal), the way towards this goal, the gestures we make to achieve it, start to function as the goal in itself, as its own aim, as something that brings its own satisfaction.

Žižek, S. (2000) *The Ticklish Subject*, London: Verso, p 304

It has been said that being exploited by capital is preferable to not being exploited at all. Utilising psychoanalytic concepts, the paper offers a theoretical account of the current dynamics of the labour market with regard to a subject increasingly 'surplus' to the needs of capital but compelled to 'improve' their employability. Describing employability as a master signifier, the paper argues that employability operates at the level of drive in that satisfaction lies in the aim (there is no object to attain) rather than the outcome (an actual job). Irrespective of whether we have a job, we cannot get rid of employability and we cannot get enough it; there is no end to employability because there is no job that can end dissatisfaction or be materially secure in duration and no movement currently able to force a more stable compact between capital and labour. The lack in the

specific employer symbolised by the job vacancy can be filled, it is the void of Capital that necessitates constant adaptation and renewal in which drive is located. The paper considers the consequences of this for the individual and the possibility of reframing the injunction for political purposes.

### RC32-555.8

**CRESPI, ISABELLA\*** (University of Macerata,  
[isabella.crespi@unimc.it](mailto:isabella.crespi@unimc.it))

#### *Gender Identities and Cultural Values in Multiethnic Families in Italy*

Living in a multiethnic family is a challenge that implies that the couple, the families of origin and the broadest social context allow and facilitate the possibility of combining differences and negotiation as best as possible. These families are a micro example of what is the meaning of living in a multicultural society nowadays at the macro level. Differences and similarities are played everyday in the life-course of the couple and their families and requires the entire family group itself (including previous generations) redefines the overall arrangement of cultural equilibrium: it becomes necessary to rethink relational dynamics, but especially to reconsider the hierarchies of values, both individual and familial, due to the different cultural belonging of the partners. Negotiation, therefore, is also about compromise, recognition and respect of differences, openness to dialogue and communication. The family dynamics of mixed couples are based on a continuous negotiation of the partners' historical and cultural differences. Identity is perceived as a set of "experiences of recognition, which allows each individual to recognise themselves over time and which no individual can disregard. They also require the creation of a new gender culture, able to turn difference into a valuable asset, which helps promote open minds and acceptance of the other. The paper shows the results of a research project which investigates 35 multiethnic families (with life stories collected for each partner 70 in total) living in the centre of Italy. In particular, the paper focuses on some specific questions: what connections can be identified between negotiation and conflict of reciprocal identities in the family life of multiethnic couple? How do cultural and religious values affect family and personal identity? What is the relevance of cultural and familial belonging for the partners when they begin their life together? How and if this changes during life-course?

### RC52-843.2

**CRESSWELL, ADELE\*** (Nottingham University Business School,  
[adele.cresswell@btinternet.com](mailto:adele.cresswell@btinternet.com))

#### *Structural Interests and the General Practitioner in the English National Health Service*

In England the responsibility for commissioning most health services has transferred to groups of general medical practices known as Clinical Commissioning Groups (CCGs). Interagency partnerships, called Health and Well-being Boards (HWBs), have also been introduced. The paper presents the findings of an empirical study based in an urban area serving more than 500,000 people. The study took place between November 2012 and November 2013.

It develops Robert Alford's theory of Structural Interests, which modelled the relative pattern of interests between doctors, managers, and patients, arguing that a dynamic of dominance, challenge, and repression exists between them. This study re-examines the patterns of complementary and conflicting interests that exist between these groups, with a particular focus on the implications for the general medical practitioner. It presents a nuanced definition of interests, recognising that these differ between types of General Practitioner. Karl E. Weick's sense-making theory is used to provide insight into how different legacies create different types of general practitioner, and that this in turn affects the formation of interests. It also argues that the interests of general practitioners and managers are often blurred associated with the spread of clinical leadership, and the emergence of the hybrid doctor-manager.

The study traced commissioning activities at three levels. Level one commissioning was at the level of the general practice and its approach to managing referrals and drug budget spend. Level two commissioning was those activities that doctors did in collaboration across an area to secure contracts for services from hospitals and others. Level three commissioning was those activities to commission and provide services in partnership with non-health agencies. All three levels included the commissioners' interpretation of a policy known as "Any Qualified Provider" designed to open the English NHS to the competitive market.

#### *Who Finds out and Contributes to Energy Decisions in Switzerland after Fukushima?*

Switzerland has a turbulent history with energy and nuclear energy in particular (i.e. many public demonstrations, popular initiatives on the subject, a ten-year moratorium accepted in 1990, etc.). After the Fukushima accident, the Swiss Federal Council opted for withdrawal from nuclear energy in the horizon 2035. The issue of energy was intensively addressed in the media after the accident, following mainly four frames for science-related policy debates: the frame of governance and public accountability, of scientific and technical uncertainty, of alternative path, and, less frequently, of economic development (Crettaz von Roten, 2013). Surveys after the accident reported that public opinion were negative about nuclear energy. Is there a long-term effect of the accident on the population, or does the wider pattern of concerns (such as economic crisis, climate change) push into the background the energy issue?

This presentation aims to answer those questions by examining a survey realized on energy in a big town of a French-speaking part of Switzerland in 2013. Is the political decision, which occurred after little public consultation, accepted by the population two years after? What is the public affective imagery of nuclear power? Does the population continue to inform and debate on the subject? Do we find that trust relationships towards various stakeholders have been modified?

#### *The Reappearance of Public Matters: Housing Experiences during the Post Earthquake Period*

Since the early XIX century, both house and domestic space have gone through a series of technological, programmatic and typological transformations in accordance with the changes in dwelling practices. These range from their progressive connection to utility networks (water, telephone, gas internet, etc.) to the change in number and proportion of places, in their relation with street space or the integration of new devices and technologies. One of the main consequences of this transformation has been the emphasis in private and intimate space as scenario for domestic matters with detriment to different ways of dwelling, which are more permeable to public space.

This presentation intends to understand how the nonuse of these spaces caused by the last earthquake that shook Chile on February 27th, 2010 questioned this compact, autonomous and multipurpose housing condition forcing its dwellers to (re)discover more spaces and practices that depend on the public scope. In the outburst of public/private categories after the earthquake and destruction of entire zones in the city as in Concepcion or Talca, urban conducts and their related spaces also damaged and tumbled down causing a new and transitory urban order where apparently contradictory situations cohabit. Because of the obvious enclosing of neighborhoods by residents, the fear for pillage and the privatization of streets, this presentation is focused on the counterpart of this situation that took place in the same place and nearly same geography. It is about the appearance of the idea of a "house" that is more permeable to the public sphere and, to a great extent, forced to shared uses, eradicating traditional boundaries (established, in fact, by law) that divide citizens.

#### *The Persistence of Gender Inequalities in Australia Workplaces: An Analysis of Two Generations*

Drawing on the two-decade Life Patterns longitudinal study that follows the lives of two generations of Australians (popularly known as Gen X and Gen Y),

through their transitions from education into the workforce, this paper investigates the factors contributing to gender equality in workforce participation and in the labour market. Focusing on female participants in the Life Patterns study, we draw on qualitative and quantitative data to examine the micro and macro explanations that underpin this phenomenon. Firstly, we briefly analyse the impact of social and cultural values in the development of egalitarian approaches to the field of education that have contributed to the expansion of the participation of women in tertiary education and, subsequently, the workplace. Secondly, we focus on neoliberal sensibilities and values underpinned by the concept of choice to understand the egalitarian values that exist alongside persisting gender inequality. Finally, we argue that while institutional arrangements are needed to address persistent inequalities around women's roles and participation at work, there is also a need to scrutinise social and cultural beliefs about work and gender to achieve greater equality.

#### *Constructing and Maintaining Campaign Boundaries: The Interaction of Organizational Identity and Image -- CANCELLED*

Recent studies of organizational formation have highlighted the centrality of organizational boundaries as manifest through dynamic interplay between internal and external forces. In this paper we draw directly on the work of Montgomery and Oliver (2007; 2005) and their theorisation of the process of group formation, particularly the role of centrifugal and centripetal forces in shaping organization boundaries. We seek to extend the insight offered by Montgomery and Oliver (2007) drawing on organizational identity literature to explore interactions between social identity and image. Whereas Montgomery and Oliver (2007) link social identity theory and institutional theory to the development of group boundaries, we argue that 'image' is central to the effectiveness of an organization which relies upon a balance between how organizational 'insiders' view themselves and how 'outsiders' view the organization (Albert and Whetten, 1985). Our empirical case is that of informal organization as we study a network of campaign groups that formed to oppose the development of a high speed rail line (HS2) linking two major cities (London and Birmingham) in England. Drawing on qualitative research we explore the process of group formation with a focus on the campaign network against HS2, in particular the evolution of organizational image. In so doing, we contribute to our understanding of the effective management of multiple organizational identities and explore how tensions are mediated at the organizational level.

#### *Runaway Train: Public Participation and the Case of HS2 -- CANCELLED*

In recent years, public participation has increasingly featured in policy decision making. While top-down, or formal methods of participation are upheld as an endorsement of democratic decision making, there is limited understanding of public participation as an informal, or organic phenomenon. This paper contributes to debates about public participation by exploring the interplay between top-down (formal) and bottom-up (informal) interactions between policy makers, planners and the public. In focusing on the motives and experiences of ordinary people as they seek to influence decisions around a prolific policy issue the paper engages with theories of deliberative democracy and public deliberation (see for example Bohman, 1997; Elster, 1998; Dryzek, 2000; Fishkin, 2009; Mansbridge et al., 2012). By exploring these interactions a more nuanced understanding of multidimensional public participation is developed, highlighting some of the challenges for policy makers when consulting about major policy developments and illustrating how the public might drive deliberations about a policy issue.

Our empirical case focuses on the informal participatory mechanisms that informed debates concerning the development of a high speed rail network in England (HS2). In particular we seek to understand 1) how social actors respond to formal consultation opportunities around high profile policy issues, 2) how social actors strive for public deliberation and 3) how 'informal origins' of participation emerge and develop.

#### *The Influence of US Corporate Interlocks on the Pattern of Congressional Lobbying*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

There is a long history of research into the relationship between US directorate interlocks and campaign contributions drawing PAC funding data, generally demonstrating the importance of such contributions to sectors reliant on government concessions in some form often associated with bipartisan hedging strategies, alongside some clusters of interlocks with deep-seated conservative funding patterns. But the extent to which contributions amount to policy advocacy are largely circumstantial and the notion of a close link has been hotly contested by protagonists.

Since 1995, however, the lobbying of Congressional decision makers has been subject to extensive disclosure requirements, including the formal registration of those engaged in lobbying activity and the publication of quarterly returns detailing clients and income from these, expenditure on lobbying, targets of lobbying and the issues of advocacy. This provides data on the actual domestic policy advocacy pursued by US corporates and thus a more rigorous basis for considering the relationship between directorate interlocks and corporate political activity than contribution data alone.

Building on earlier research on the central position of the large corporate director interlock structure in the pattern of lobbying of the UK government (Cronin 2012), this paper considers the position of the US interlocking director structure among the SP200 within the pattern of congressional lobbying in general. As in the UK, the US Corporate interlock structure proves to be remarkably central, albeit with strong House and issue delineations.

#### *Sustainable Social Development*

The question of Sustainable Development is still very contentious in the developing world. In South Africa, after *Apartheid*, political, economic, social and legislative re-dress were mainly aimed at dealing with inequality and discrimination, to create a broad participation base, and, in the process, enhance sustainability in the country. Currently, twenty years after democracy, these efforts have not yielded, by far, the positive results that were expected. This paper critically investigates this situation. Reasons for the gap - amongst others - include 'wrong' approaches (e.g., macro and top-down) are still being implemented, a huge division between policy and practice, 'inappropriate' ties between government and other sectors and poor service delivery.

#### *A Social Licence to Operate within the Iron ORE Industries of South Africa and Sweden: A Clash of Corporate and Community Cultures*

When analysing the effectiveness of Corporate Social Responsibility (CSR) programmes, other developmental projects and Stakeholder Engagement (SE) in local communities adjacent to the operations of large multi-national corporations, the clashing of 'corporate culture' and 'local culture' becomes increasingly evident. In this regard, the contentious issue of a **Social Licence to Operate (SLO)** strongly comes to the fore. A Social Licence to Operate (SLO) goes further than formal documentation and legislative requirements (e.g. a mining or a water licence or regulated labour practices), and focuses more on the real processes and practicalities regarding the **acceptance** of a specific company by the relevant community or communities.

This paper reports on the issue of a SLO within a comprehensive comparative study between the iron ore industries of SA and Sweden. Two main conceptual pointers guided the research: **firstly**, the processes followed from the side of the company in order to 'receive' a SLO, and - in the **second instance** - the capacity of and empowerment within the community to grant such a SLO. In terms of the communities, different approaches and models were scrutinised, e.g. top-down/bottom-up approaches, participation and communication, self reliance and resilience within communities.

**Key findings** of the research (from perspectives of both the company and the communities) will be presented in terms of **similarities** and **differences** between the industries of South Africa and Sweden. **Recommendations** are also being made in order to make the granting of a SLO a less cumbersome process and to 'merge' the two different cultures; in this regard, the role of different stakeholders (companies, communities, government and NGOs) have been highlighted by the research. **Methodologically**, a mainly qualitative approach (personal interviews with key informants of the companies and the communities, focus groups with community members and workers, as well as objective personal observations).

*Comparative Research in Prostitution Studies: Challenges and  
 Opportunities*

This paper starts with a critical overview of comparative research in prostitution studies. More specifically, it outlines the scholarship that has looked at prostitution from a comparative perspective in social sciences, exploring methodological approaches used, scales of analysis adopted, and consideration (or lack of thereof) for the shifting meanings of concepts, prostitution-related practices and cultures across the units of analysis compared. The paper asks what lessons have been and can be learned from doing comparative analysis in this field, and whether more work needs to be done to refine this methodological approach in prostitution studies. The second part of the paper presents an on-going project on "Comparing prostitution policies in Europe: Understanding Scales and Cultures of Governance" (2013-17 COST Action IS1209), discussing the rationale underpinning it, as well as the challenges encountered and opportunities offered in conducting comparative, multi-disciplinary prostitution research in practice.

*Transformation of the Urban Periphery and New Forms of  
 Production of Inequality in Brazilian Cities: A View on the Recent  
 Changes in the Dynamics of the Real Estate Market*

This article's objective is to discuss recent transformations in the periphery of Brazil's largest cities, considering the expansion of real estate, strongly supported by the government housing programme "Minha Casa Minha Vida" (MCMV). Using historical and theoretical analyses, we will demonstrate the shifting of the primacy of the contradiction between capital and labour, dominated by industrial capital, to the primacy of an urban contradiction, dominated by financial capital.

In that context, we will recollect and discuss the literary production which has problematized the formation of the periphery in the 1970's, interpreted as the process that decreases the cost of labour power reproduction and characterized by self-built housing, in a scenario of strong industrialization and high immigration rates. In this sense, the periphery was consolidated as an important instrument to amplify industry gains and expressed through the intense inequalities in the Brazilian urbanization.

Considering the recent dynamics, we will investigate the changes in the peripheries, produced by the dissemination of large housing developments aimed at the lower income population. The role of the State, through a policy of access to financing and subsidies to achieve a target number of three million housing units, was determinant in the intense real estate appreciation in these territories. To better understand this dynamic, we also need to comprehend the process of financialization and capital centralization in real estate, marked by the dominance of large and expanding real estate developers.

Our hypothesis is that the appropriation of the periphery has consolidated into an essential strategy in the amplification of the gains and expansion of real estate. As a consequence of this strategy of appreciation, the access to property in the periphery tends to become a temporary condition and seems to be imposing new inequalities, which we will discuss using different case studies from Brazilian cities.

*Teachers and Administrators Speak! Examining the Concept of  
 Social Justice in Education in a Neoliberal Age*

In this paper I explore the meaning of social justice for teachers and administrators in Australia. I take the concept of social justice from its theoretical isolation and put it in the immediate context of material disadvantages of rural schooling (e.g. lack of resources, high staff turnover) within the dominant neoliberal context in Australian education. Within the neoliberal project I focus particularly on the impact of three policy technologies –performativity, accountability and marketization- on the work of administrators and teachers. Drawing on the work of Iris Marion Young (1990) and Nancy Fraser (2008) I apply three dimensions of social justice: distributive, recognitional and participation to construct a plural model of social justice that overcomes the shortfalls of the liberal-egalitarian model -which usually equates social justice solely with distribution of resources. By examining administrators and teachers' voices, I offer an important contribution to understanding what is going on in rural schools, which dimensions of social justice are being applied and what the real needs are. These voices also reveal the contested

nature of the concept of social justice and its context-dependence, highlighting tensions between the different pressures in schools of neoliberal policy technologies, and its impact in the morale and work of school staff. Moreover, exploring the subjective element of social justice can make an important contribution to understanding how social injustices are experienced, tolerated and perpetuated in disadvantaged settings. It can also assist in outlining an agenda for change.

#### *Lasting Effects of Marketization in Welfare State Policies - the Brazilian Case*

##### **Lasting effects of marketization in Welfare State policies - the Brazilian case**

Brazilian social policies have undergone similar transformations suffered by policies of other countries during the 1990s. Despite the dismantling of the Welfare State in Brazil has taken place even before its consolidation, the idea that public intervention to solve problems of poverty and inequality should be guided by principles and practices from the market had strength in that period, organizing efforts and investments during the government of President Fernando Henrique Cardoso (1994-1998 and 1999-2002). For this reason, the opposition to discourses and policies has identified them with what has been classified as the neoliberal bias of those years.

The election of President Luis Inácio Lula da Silva carried much of this criticism. Through his two successive terms (2003-2007 and 2008-2011), the government discourse and some new policies have been developed based on the assertion that their guidelines differed from those of his predecessor, by recovering the centrality of the State and by the privilege of the poorest. The decline in poverty rates eventually left the image of marketization of social policies even more distant. However, would it be marketization a process as ephemeral as a political-partisan government program? Would be changing policies in the passage between governments enough to restore a background of social security policies, as advocated in a Welfare State scenario?

The paper aims to present the hypothesis of the research on which it is based. According to it the changes occurred in those 1990s have produced effects that have been limiting the later possibilities of social policies development. More than that, despite the advances of the government of President Lula, the conditions that underlie the process of marketization maintain their historical and social validity, simultaneously restraining more steady changes and creating new challenges to analysts.

#### *Neoliberalism Beyond Economics*

##### **Neoliberalism beyond Economics**

The 2008 economic crisis encouraged theses about post-neoliberalism. The idea of expiration of a period and beginning of another, in which hegemonic projects have succeeded, takes neoliberalism mainly as economic doctrine. Would not both diagnoses of few practical alternatives to neoliberalism and difficulty of understanding movements beyond its particular forms of manifestations be a sign that neoliberalism have been consolidated as more than a strictly economic set of measures, policies and practices?

The aim of the presentation is to put this hypothesis in debate, mobilizing three distinct – but potentially productive – approaches. The first and most comprehensive is the understanding of neoliberalism as a political rationality. The second reference is the idea of social neoliberalism, which designates a new function of

state, made explicit in its response to demands for social equality and justice. The third one refers to neoliberalism as a shared mental model, ie, a cognitive model oriented to ideological and practical articulation of social groups.

Despite the particularities of each one, the common point among them is the wider view of the social setting in which neoliberal economic policies gained strength. It allows analyzing the conditions that permitted such predominance as well as the required and perennials transformations regarding relations of power and domination, development of public policies and social relations.

These approaches do not discard diagnostics produced by scholars working on post-neoliberalism theses, but open new possibilities of considering them through another point of view. The gain, we believe, is the potential of observing the recent phenomena in historical and more comprehensive perspective.

### RC48-791.3

**CURATO, NICOLE\*** (Australian National University, [nicole.curato@gmail.com](mailto:nicole.curato@gmail.com))

#### *Crowdsourcing and Democratic Deepening: A Critical Appraisal*

The past three decades have witnessed a range of democratic innovations – from the much celebrated participatory budgeting in Porto Alegre to sit-ins to protect green spaces in Istanbul. Although the precise consequences of these innovations leave a mixed picture of success and failures, the importance of public participation and deliberation in political life has been generally considered important for democratic deepening.

Crowdsourcing legislation is one of the most recent additions to these innovations. In Finland and potentially the Philippines, ordinary citizens are given the opportunity to draft and/or comment on bills subject to parliamentary consideration through the use of technology. The lawmaking process is viewed to be more participatory, epistemically superior and responsive to citizens' opinions by aggregating the "wisdom of crowds."

While crowdsourcing legislation has the promise of creating more inclusive and direct forms of political engagement, my presentation aims to take stock of crowdsourcing's normative and practical assumptions using a deliberative democratic framework. It is argued – albeit tentatively – that while the crowdsourcing can be an innovative platform in collective problem-solving, it also creates and reinforces existing hierarchies in participation.

#### *'then the 25th (birthday) Arrived and at That Point I Wanted to Take a Decision about My Future': Time, Rhythmicity and Waithood in Youth's Uncertain Transitions*

Youth transitions literature considers the investigation of procrastination and interruption of (what used to be) linear paths as a core theme. From the classic idea of Erikson's moratorium (1968) onward, the notion that young people find themselves taking time before embarking on one path or another, or while doing so, has been seen as a constitutive element of transition, whether in erratic forms or under institutionalised shapes – such as 'gap years' spent travelling. However, while the need for exploration brings along openness to the future, forms of 'time taking' such as 'waithood' are more slippery and often hide ambivalent ways of looking at the future.

Departing from the notion of waithood, this presentation reflects on the rhythm of imagined futures as emerged in the analysis of 300 essays written by 18 year-old Italian students who were asked to imagine to be 90 and narrate their future lives (in the past). In this extremely rich material, two contrasting temporal narratives emerge in relation to the work dimension: one where aspirations result totally unrealistic due to the underestimation of time and efforts normally involved in developing those paths; another, where it is expected that a few years will be spent waiting for something to happen (a job to be offered, the 'right' mentor to be met etc).

Drawing on youth transitions literature, but also on studies on the life course and temporality (as in Brannen and Nilsen, 2002), this paper ultimately relates these themes with the context where they emerged, in an effort to reconstruct the meanings that young people give to the phases and rhythmicity of their transitions to adulthood.

**"They Think I Am a Free Lunch". Why Everyday Interactions Between Emigrants and Sending Communities May Actually Discourage Return**

The recent research on transnational fields has had the great merit of claiming attention to the important topic of the relations between Emigrants and the sending communities. Such research has documented how international migration is a factor of social change not only in receiving societies, the traditional focus of research, but also - and may be even more - in the places of origins of emigrants. The potentiality of such approach, however, have been unduly constrained by the widespread - and often implicit - tendency to assume that transnationalism is perceived as a challenge only in receiving states and societies. We will argue, on the contrary, that receiving communities show a deep ambivalence toward their emigrants. We will document how it is possible to identify in many sending communities a set of social mechanisms - operating at the kinship, interpersonal, communal and symbolic level - that severely constrain the maintenance and development of long-term transnational relationships. Such understudied mechanisms may actually weaken such transnational spaces and contribute to prevent return migration.

These arguments will be grounded in an analysis of the data collected in a long-term, ethnographic, multi-sited project on female migrations from some Eastern European countries to the household services sector of some Mediterranean countries. Researchers have carried out in coordinated way ethnographic observations of foreign careworkers both in the sending and receiving contexts over several years. A particular importance has been given to following some informants in their trips back home as well as carrying out ethnographic fieldwork in the place of origins while they were absent.

***The Implications Of Demographic Changes On Intergenerational Relations and Social Policies. The Case Of Mexico City***

Demographic changes have been experienced by societies all over the world. Senior people experience social exclusion, poverty and cumulative disadvantages. Now, Mexican population is ageing rapidly and this situation is a challenge for the government at both the federal and local level. At the local level, in Mexico City, the capital of Mexico with a population over 9.5 million, there were registered changes in the government policies in recent years. In Mexico City, the Party of the Democratic Revolution (PRD) came to power in 1997, implementing the social policy based on the principle of universality. In that context, two major programs of direct money transfers began, i.e. The Senior Subsidies Program (*Programa de Adultos Mayores*) and the *PrepaSi* Subsidy Program. Between 2001 and 2011, the number of beneficiaries of the Senior Subsidies Program has nearly doubled, from 250,000 in 2001 to 480,000 in 2011 and for 2013 the same limit, 480,000, remains. Theoretically, all Mexicans living in Mexico City aged 68 or more receive financial transfers, which is equivalent to 85USD. However, in Mexico there are at least 600 000 adults over 68 years, so 120,000 adults do not receive aid. The other program is the money transfer for public high school students in Mexico City, the *PrepaSi* Subsidy Program. Actually, a total of 210,000 teenagers receive money transfers that are equivalent to 30, 40 and 50USD depending on their school academic performance. The **question** is, how to design new old-age and youth social policies, different from those of money transfers that result to be costly for the local government, which will respond the demographic changes and improve the well-being of the elderly and the youth? The **hypothesis** is that money transfers are insufficient to fight poverty among the elderly and among the youth in Mexico City.

***Bangsamoro Challenge in the Philippines***

**Bangsamoro challenge in the Philippines**

In terms of ethnic relations, the Philippines - as other states in Asia-Pacific region - are characterized by extreme diversity. As many as over 168 ethno-linguistic groups are recognized there. To make situation even more complex, linguistic and religious divisions overlap each other.

Bangsamoro or Moro people are members of minority Muslim ethnic groups which constitute 5% of population in this predominantly Christian country. The most important ethnolinguistic groups of Bangsamoro are: Tausugs, Maguindanaos, and Maranaos.

Despite enduring activities to establish one independent Bangsamoro state, new patterns of Muslim inter-ethnic relations have emerged recently. This year Moro National Liberation Front (where Tausugs dominates) was involved in several incidents (Sabah Ride in February of 2013 and Zamboanga atrocities in September 2013) aiming to postpone peace negotiations between the Government of the Philippines and Moro Islamic Liberation Front (organization dominated by Maguindanaos). Even though both leading separatist organizations speak for Moro people, the tensions among Muslim ethnic groups seem to be more visible.
