Andres Saul Gonzales Amaya from Engineering Geology, Lund University, were instrumental during the ERT measurements. The tests were carried out within the framework of the InfraSweden2030 project “Kvalitetskontroll av markstabilisering med elektrisk resistivitetstomografi” (Vinnova project id 2018-00649) which is funded by Vinnova, Formas, Ener-

gimyndigheten, SBUF, Trafikverket, NCC and PEAB. We would like to thank the involved personnel from NCC, SMG (Soil Mixing Group), MiljöGeo i Västervik AB and HydroResearch AB for the excellent collaboration. The computations were performed on resources provided by the Swedish National Infrastructure for Computing (SNIC) at LUNARC.
