

Disclosure of the use of AI Tools

During the thesis writing process, the authors are fully responsible for the research design, data collection, data analysis and interpretation, discussion, and the final content of the thesis. The authors used only one AI-based language tool Grammarly, specifically for language support, sentence restructuring, and improving the readability of the academic writing. No AI tool was used to generate empirical data, conduct interviews, perform thematic analysis, interpret the findings, revise and conclude the thesis, or finalize the study work. All literature searches, theoretical interpretations, coding, theme building, and developing reflections were conducted by both authors.

Authors thereby ensure the accuracy, originality, and compliance with the academic integrity guidelines of Lund University.
